CHAPTER I.—WHICH DESCRIBES AMONG OTHER THINGS A PAIR OF WHISKERS.

IN the writing of books, as all the world knows, two things are above all other things essential—the one is to know exactly when and where to leave off, and the other to be equally certain when and where to begin.

Now this book, naturally enough, begins with Mr Brimberly's whiskers; begins at that moment when he coughed and pulled down his waistcoat for the first time. And yet (since action is as necessary to the success of a book as to life itself) it should perhaps begin more properly at the psychological moment when Mr Brimberly coughed and pulled down the garment aforesaid for the third time, since it is then that the real action of this story commences.

Be that as it may, it is beyond all question that nowhere in this wide world could there possibly be found just such another pair of whiskers as those which adorned the plump cheeks of Mr Brimberly; without them he might have been only an ordinary man, but, possessing them, he was the very incarnation of all that a butler could possibly be.

And what whiskers these were! So soft, so fleecy, so purely white, that at times they almost seemed like the wings of cherubim striving to soar away and bear Mr Brimberly into a higher and purer sphere. Again, what protean whiskers were these! whose fleecy pomposity could overawe the most superior young footmen and reduce page-boys, tradesmen, and the lower orders generally to a state of perspiring humility; to his equals how calmly aloof, how blandly dignified; and to those a misguided fate had set above him how demurely deferential, how obligingly obsequious! Indeed, Mr Brimberly's whiskers were all things to all men, and therein lay their potency.

Mr Brimberly, then, pompous, affable, and most sedate, having motioned his visitor into his master's favourite chair, set down the tray of decanters and glasses upon the piano, coughed and pulled down his waistcoat; and Mr Brimberly did it all with that air of portentous dignity and leisurely solemnity which, together with his whiskers, made him the personality he was.

'And you 're still valeting for Barberton, are you, Mr Stevens?' he blandly inquired.

'I 've been with his lordship six months now,' nodded Mr Stevens.

'Ah!' said Mr Brimberly, opening a certain carved cabinet and reaching thence a box of his master's choicest havanas; 'six months, indeed! And 'ow is Barberton? I hacted in the capacity of 'is confidential valet a good many years ago, as I told you, and we always got on very well together, very well indeed! 'Ow is Barberton?'

'Oh, 'e 'd be right enough if it warn't for 'is gout, which gets 'im in the big toe now and then, and 'is duns and creditors and sich-like low fellers as gets 'im everywhere and constant! 'E 'll never be quite 'imself until 'e marries money—and plenty of it!'

'A American hair-ess!' nodded Mr Brimberly. 'Pre-cisely! I very nearly married 'im to a rich widder ten years ago. 'E 'd 'ave been settled for life if 'e 'd took my advice! But Barberton was always inclined to be a little 'eadstrong. The widder in question 'appened to be a trifle par-say, I 'll admit; also it was 'inted that one of 'er—lower limbs was cork. But then 'er money, sir! 'er jools!' Mr Brimberly raised eyes and hands and shook his head until his whiskers quivered in a very ecstasy.

'But a wooden leg!' began Mr Stevens dubiously.

'I said "limb," sir!' said Mr Brimberly, his whiskers distinctly agitated—'a cork limb, sir! And, lord bless me, a cork limb ain't to be sniffed at contemptuous when it brings haffluence with it, sir! At least, my sentiments leans that way.'

'Oh, ditto, certainly, sir! I 'd take haffluence to my 'eart if she came with both le—both of 'em cork, if it meant haffluence like this!' Mr Stevens let his pale, prominent eyes wander slowly round the luxuriant splendour of the room. 'My eye!' he exclaimed; 'it 's easy to see as your governor don't 'ave to bother about marrying money, cork limbs or otherwise! Very rich, ain't 'e, Mr Brimberly?'

Mr Brimberly set down the decanter he chanced to be holding, and, having caressed each fluffy whisker, smiled. 'I think, sir,' said he gently—'yes, I think we may answer "yes" to

 [*All Rights Reserved.*]

your latter question. I think we may tell you and admit 'ole-'earted and frank, sir, that the Ravenslee fortune is fab'lous, sir, stoopendious and himmense!'

'Oh lord!' exclaimed Mr Stevens, and his pale eyes, much wider now, wandered up from the Persian rug beneath his boots to the elaborately carved ceiling above his head. 'My aunt!' he murmured.

'Oh, I think we're fairly comfortable 'ere, sir,' nodded Mr Brimberly complacently; 'yes, fairly comfortable, I think.'

'Comfortable!' ejaculated the awe-struck Mr Stevens; 'I should say so! My word!'

'Yes,' pursued Mr Brimberly, 'comfortable, and I ventur' to think, tasteful, sir; for I'll admit young Ravenslee—though a millionaire and young—'as taste. Observe this costly bricky-brack! Oh yes, Young Har is a man of taste indoobitably I think you must admit?'

'Very much so indeed, sir!' answered Mr Stevens, with his pallid glance on the array of bottles. '"Three Star" I think, Mr Brimberly?'

'Sir,' sighed Mr Brimberly in gentle reproach, 'you 'ere be'old cognac brandy as couldn't be acquired for twenty-five dollars the bottle! Then 'ere we 'ave Jubilee port, a rare old sherry, and whisky. Now, what shall we make it? You being, like myself, a Englishman in this 'ere land of eagles, spread and otherwise, suppose we make it a B and a Hess?'

'By all means!' nodded Mr Stevens.

'I was meditating,' said Mr Brimberly, busied with the bottles and glasses, 'I was cogitating calling hup Mr Jenkins, the Stanways' butler across the way. The Stanways is common people, parvynoo, Mr Stevens—parvynoo; but Mr Jenkins is very superior, and plays the banjer very affecting. Our 'ousekeeper and the maids is gone to bed, and I've give our footmen leave of habsence—I thought we might 'ave a nice quiet musical hour or so? You perform on the piano-forty, I believe, sir?'

'Only very occasional!' Mr Stevens admitted. 'But,' and here his pale eyes glanced towards the door, 'do I understand as 'e is out for the night?'

'Sir,' said Mr Brimberly ponderously, 'what 'e might you be pleased to mean?'

'I was merely allooding to—to your governor, sir.'

Mr Brimberly glanced at his guest, set down the glass he was in the act of filling, and—pulled down his waistcoat for the second time. 'Sir,' said he, and his cherubic whiskers seemed positively to quiver, 'I presoom—I say I presoom—you are referring to Young Har?'

'I meant Mr Ravenslee.'

'Then may I beg that you'll allood to 'im 'enceforth as Young Har? This is Young Har's own room, sir. These is Young Har's own picters, sir. When Young Har is absent I generally sit 'ere with me cigar and observe said picters. I 'm fond of hart, sir; I find hart soothing and restful. The picters surrounding of you are all painted by Young Har's very own 'and—subjeks various. Number one—a windmill very much out o' repair, but that 's hart, sir. Number two—a lady dressed in what I might term dish-a-bell, sir, and there isn't much of it, but that 's hart again. Number three—a sunset. Number four—moonlight; 'e didn't get the moon in the picter, but the light 's there, and that 's the great thing—effect, sir—effect! Of course, being only studies, they don't look finished—which is the most hartistikest part about 'em! But, lord! Young Har never finishes anything—too tired. 'Ang me, sir, if I don't think 'e were born tired! But then 'oo ever knew a haristocrat as wasn't?'

'But,' demurred Mr Stevens, staring down into his empty glass, 'I thought 'e was a American—your Young Har?'

'Why, 'e is and 'e ain't, sir. 'Is father was only a American I'll confess, but 'is mother was blue blood, every drop guaranteed, sir, and as truly English as—as I am.'

'And is 'e the Mr Ravenslee as is the sportsman? Goes in for boxing, don't 'e? Very much fancied as a 'eavy-weight, ain't 'e? My governor 's seen him box, and says 'e 's a perfect snorter, by Jove!'

Mr Brimberly sighed, and soothed a slightly agitated whisker. 'Why, yes,' he admitted, 'I'm afraid 'e does box; but only as a amitoor, Mr Stevens, strickly as a amitoor, understand.'

'And 'e 's out making a night of it, is 'e?' inquired Mr Stevens, leaning back luxuriously and stretching his legs. 'Bit of a rip, ain't 'e?'

'A—wot, sir?' inquired Mr Brimberly with raised brows.

'Well, very wild, ain't 'e—drinks, gambles, and hetceteras, don't 'e?'

'Why, as to that, sir,' answered Mr Brimberly, dexterously performing on the siphon, 'I should answer you, drink 'e may, gamble 'e do, hetceteras I won't answer for, 'im being the very hacme of respectability, though 'e is a millionaire and young.'

'And when might you expect 'im back?'

'Why, there 's no telling, Mr Stevens.'

'Eh!' exclaimed Mr Stevens, and sat up very suddenly.

''Is movements, sir, is quite—ah—quite metehoric!'

'My eye!' exclaimed Mr Stevens, gulping his brandy-and-soda rather hastily.

'Metehoric is the only word for it, sir,' pursued Mr Brimberly with a slow nod. ''E may drop in on us at any moment, sir.'

'Why then,' said his guest, rising, 'p'r'aps I'd better be moving?'

'On the other 'and,' pursued Mr Brimberly, smiling and caressing his left whisker, ''e may be on 'is way to Hafghanistan or Hasia Minor

at this pre-cise moment—'e is that metehoric, lord. These millionaires is much of a muchness, sir, 'ere to-day, gone to-morrer. Noo York this week, London or Paris the next. Young Har is always upsetting my plans, 'e is, and that's a fact, sir. Me, being a nat'rally quiet, reasonable, and law-abiding character, I objects to youthful millionaires on principle, Mr Stevens—on principle.'

'Ditto,' nodded Mr Stevens, his glance wandering uneasily to the door again, 'ditto with all my 'eart, sir. If it's all the same to you, I think p'r'aps I'd better be 'opping—you know.'

'Oh, don't you worry about Young Har; 'e won't bother us to-night; 'e's off Long Island way to try his nooest 'igh-power racing-car 'e's driving in the Vanderbilt Cup Race next month. To-night 'e expects to do eighty miles or so, and 'opes to sleep at one of 'is clubs. I say 'e 'opes an' expects so to do.'

'Yes,' nodded Mr Stevens, 'certainly; but what do you mean?'

'Sir,' sighed Mr Brimberly, 'if you'd been forced by stern dooty to sit be'ind Young Har in a fast automobile, as I 'ave, you'd know what I mean. Reckless! Speed! Well, there!' and Mr Brimberly lifted hands and eyes, and shook his head until his whiskers vibrated with horror.

'Then you're pretty sure,' said Mr Stevens, settling luxurious boots upon a cushioned chair, 'you're pretty sure 'e won't come bobbing up when least expected?'

'Pretty sure,' nodded Mr Brimberly. 'You see, this nooest car is the very latest thing in racing-cars—cost a fortune, consequently it's bound to break down—these here expensive cars always do, believe me.'

'Why then,' said Mr Stevens, helping himself to one of Mr Brimberly's master's cigars, 'I say let joy and 'armony be unconfined! 'Ow about Jenkins and 'is banjer?'

'I'll call 'im up immediate,' nodded Mr Brimberly, rising. 'Mr Jenkins is a true hartist, equally facetious and soulful, sir.'

So saying, Mr Brimberly arose and crossed towards the telephone. But scarcely had he taken three steps when he paused suddenly and stood rigid and motionless, his staring gaze fixed upon the nearest window; for, from the shadowy world beyond came a sound, faint as yet and far away, but a sound there was no mistaking—the dismal tooting of an automobile horn.

''Eavens an' earth!' exclaimed Mr Brimberly, and crossing to the window, he peered out. Once again the horn was heard, but very much nearer now, and louder; whereupon Mr Brimberly turned almost hastily, and his visitor rose hurriedly.

'It's very annoying, Mr Stevens,' said he, 'but can I trouble you to—to step—er—downstairs—*with* the glasses? It's 'ighly mortifying, but may I ask you to—er—step a little lively, Mr Stevens?'

Without a word Mr Stevens caught up the tray from the piano and glided away on his toe-points; whereupon Mr Brimberly, being alone, became astonishingly agile and nimble all at once, diving down to straighten a rug here and there, rearranging chairs and tables; he even opened the window and hurled two half-smoked cigars far out into the night; and his eye was as calm, his brow as placid, his cheek as rosy as ever, only his whiskers—those snowy, tell-tale whiskers—quivered spasmodically, very much as though endeavouring to do the manifestly impossible and flutter away with Mr Brimberly altogether. Yes, it was all in his whiskers.

Thus did Mr Brimberly bustle softly to and fro until he paused, all at once, arrested by the sound of a slow, firm step near by. Then Mr Brimberly coughed, smoothed his wing-like whiskers, and—pulled down his waistcoat for the third time. And lo! even as he did so, the door opened and the hero of this history stood upon the threshold.

(*Continued on page 21.*)

FORGOTTEN ISLES OF THE WEST INDIES.

NO islands of the West Indies are less known than those of the Virgin Group. Yet possession of the westward isles has been the steady aim, for some years, not only of the United States, but of Germany as well. The equally interesting and as little known islands of the eastern section, bold, craggy, and high, like those to westward—with the exception of that low, flat island famed in the history of the buccaneers, Anegada or 'Drowned' Island—are among the colonies now forgotten by Britain, since their importance declined with the emancipation of the slaves, and the consequent great reduction in its exports. But it was in Virgin Gorda the Spaniards worked the first mine for precious metal in the New World.

St Thomas, St John, Santa Cruz or Ste Croix, Savana, Brass, and the lesser islands now again come into diplomatic history after more than one hundred and sixty years' existence under the rule of Denmark, the Government of which, under Frederick V., bought them in 1754 from a Danish trading company, into whose hands they had come by purchase, capture, or possession through settlers. For some few years during the Napoleonic war, however, they were held by Britain.

Few islands, even in the Caribbean Sea, with its annals of almost continuous war and piracy

throughout the seventeenth and eighteenth centuries, have witnessed such scenes as St Thomas in its early days. For, like its British neighbour, Tortola, to the eastward—St John intervening—it was originally settled by Dutch *boucaniers*—who took their name from their method of preserving the flesh of cattle by smoking it, as they had been taught by the Caribs—toward the middle of the seventeenth century; and they in turn were driven out by the French filibusters in 1667, after a savage struggle.

The Virgin Islands were discovered by Columbus in 1493, and named by him Las Virgines, after the Romish legend of St Ursula and her eleven thousand sisterhood, for then as to-day the islands and keys seemed innumerable. In 1586 Sir Francis Drake, in his memorable voyage to the Spanish Main, also named them the Virgin Islands, in compliment to Queen Elizabeth. But already their old inhabitants, the Caribs, had passed away, for the islands were, St Thomas included, wholly uninhabited. To-day the only evidence of that most interesting race in the Virgins is the heaps of burnt coral lying along the shores of rocky keys which now have not even a sign of vegetation.

There are picturesque towns in the West Indies which linger in the memory, but none can approach Charlotte Amalia, the capital of St Thomas, an island only twelve miles long and one to three broad. The writer remembers often making it from seaward in early morning, when the flush of tropical dawn was dyeing the blue heavens with floods of carmine, amber, and creamy yellow, and the land-wind was rippling the sea to windward into dark-blue wavelets. Through the haze the land loomed big. To the right lay Myhlenfeldts Point, with whitewashed lighthouse and ancient battery, rising grounds, trending steeply up to Bellevue and Flag Mounts, a blur of jungle, groves of trees, and cultivated land. As the steamer approached the narrow entrance there rose the dim, distant heights of Judgeberg, and Kiaer with its white tower; near to westward Crowell Point, with its signal-station; and, farther, French Hill—so called from the fight between the *boucaniers* and the filibusters in 1667—covered with patches of vivid greenery. Right ahead lies the harbour, where, with but little improvement, the greatest navy in the world could anchor all its ships in perfect safety at all seasons of the year. Beyond it is Charlotte Amalia, that peculiarly charming little town, orderly arranged along the north shore of the haven, but straggling up toward the mountain range behind. Its red-tiled brick and shingled houses gleam from behind rows of coco-nut and cabbage palms, silk-cotton and green fruit trees, but are partly hidden till the banks of woolly mist, dissolved into golden haze in the sun's rays, quickly clear away. On the west and east sides of the harbour, which is like a water-bottle in shape—the long, narrow neck of the bottle being the channel leading seaward—steamers and sailing-vessels are moored, with a liner belonging to the French Compagnie Générale Transatlantique, or the R.M.S.S. Company, or other line, just moving out from her jetty.

Here in 1788 was but a sleepy Danish settlement, the last resort of wild spirits in the West Indies; for justice, though slow, was sure, and the law was administered with a stern hand. But in that year Admiral Rodney captured the island of Eustatius from the Dutch—a vast capture—with upwards of one hundred and fifty merchantmen, for Eustatius was then the centre of trade, contraband and other, in the West Indies; and thus St Thomas became the depot for all commerce. In twenty years the free population of Charlotte Amalia increased from fifteen hundred to twenty-five thousand persons. As the letter of a great-granduncle of the writer states, 'Everything, contraband or not, is to be found here. India goods—tea, spices, Canton crape, Madras coifs, nankeens, &c.; wines, spirits, and preserved fruits from France; dried meats, medicinal waters, &c., from Germany; lumber, shingles, maize, salt fish, &c., from the States; the coffee, cotton, and rum of the Antilles—these, with articles of European manufacture, whether for use or luxury, from a toy to a steamboat, may find purchasers at St Thomas.' This spell of great prosperity was repeated for a brief period during the blockade-running days of the American Civil War, when the free port of St Thomas figured very large.

Along the water-front of the town lies King's Wharf, the landing-place of the numerous shore-boats that ply between the shore and the steamers' anchorage or the farther sides of the harbour, which sweeps eastward in a broad curve round a wooded savanna, where there are delightful residences laughing out on the water from their screen of foliage. Groves of palms forming covered walks intercept from view the houses rising from seaward with more or less acclivity. In other parts the red-and-yellow buildings stand out with striking effect where unscreened by greenery. Many picturesque dwellings are scattered in the neighbourhood, some on low eminences, others almost lost in the jungle, where they nestle on the hillside, here, on the very edge of the low sea-cliff, and there, towering over the port from the mountain-side. Indeed, when viewed from the water's edge, these, and the windmills higher yet above them, seem almost to hang over you.

The great trading street of St Thomas extends in a broad line parallel with the water-front for about a mile and a half, and has changed with the times; yet among the old-established firms one still finds in use the ancestral 'fireproof'—that is, a large stone building, into which

you enter by large, thick iron doors. These admit you to a kind of above-ground vault, where the merchandise is piled up to the roof for protection against the fires which used to rage but too frequently in the town.

Charlotte Amalia is, however, not at a standstill, and in American hands may become the show-place of the West Indies. Equally so it may outrival the other islands in its products; and its exports of sugar, tobacco, and cotton may far exceed those of slave days. The emancipation of the negroes brought ruin to the Virgin Islands, as well as to most of the West Indies, a few of which have won back their prosperity only in this decade. Often, in St Thomas, when one has left the road—that, among the wild and rocky hills extending east to west, and branching north and south, is washed rugged by the heavy rains—and takes to the track, one finds the remains of large gates, and what was once a wide carriage-drive, now wholly overgrown with trees of hardwood and prickly pear, mangosteen and cashaw, and undergrowth. This drive leads to the ruins of a large plantation-house of brick, including the remains of a coach-house and stables, with large slave-buildings attached. Nature has reclaimed her own again!

It was here, when one was following what had once been a carriage-drive leading to the neighbouring plantation, that a view was obtained of that which has partly prompted the Washington Government to bid for St Thomas and sister-islands. Through the overhanging evergreens and manchineel one saw the sea below and its tangled islets, hemmed in to westward by the blue highlands of Puerto Rico, only some thirty odd miles away.

Safe it is to assert that St Thomas, after a few years of United States pushfulness and organisation, already bearing great fruits in Puerto Rico, would become not only the 'Pearl' of the Lesser Antilles, but also a notable tourist centre. The island is healthy, and its soil is among the best in all the Antilles. It lies on one of the great trade routes, and is exceedingly picturesque from Nazareth in the east to Bordeaux and Botany Bay in the west. There could be no finer outlook than that obtained from Signal Hill, nearly in the middle of the island. The scenery from this spot is like a vision of fairyland expanding at your feet. The views of the haven and town and shipping, under various aspects, with the wild country around, are enchanting. The eye travels, too, along the irregular south and north coasts, with their many islets and rocky keys, out towards St John's, Tortola, José Vandyck, and other picturesque islands, their wooded mountains in the foreground, all laved by the silver waters, till sea and isle are lost in the blue-gray haze of distance.

It is worth noting that St Thomas, which may in time be developed into an important United States naval base, was formerly held in part by German colonists from the Duchy of Brandenburg. At this day it is lucky for Britain and her Allies that Denmark, some eight years ago, stoutly refused Germany's bid of eight million pounds for her colonies. There would now have been a Heligoland, stronger even than that in the 'wet triangle,' which would have commanded the sea lanes of the West Indies, and, southwestward, the initial approach to the Panamá Canal.

But within less than two hours' swift steaming there lies, east-north-east of St Thomas, the second oldest and most forgotten possession of ours in the West Indies; and it, in turn, commands the Atlantic approaches to the island on which the Kaiser and Herr Ballin have so set their hearts.

Rugged, rocky, with a harbour at Roadtown on the south side which could soon be rendered one of the best in the Caribbean, Tortola, once the property of James Hay, Earl of Carlisle and merchant adventurer, could be turned into a Gibraltar as easily as it was made an important strategic position in the eighteenth century. It was the age when fleets of British merchantmen, convoyed by men-of-war, swept up Drake's Channel, the finest and most striking sheet of sea-water in the New World, lying broad and fair between Tortola, Beef, and Scrub Islands on the north, and the charming fringe of keys, rocks, and islands on the south. West Indiamen, snows, and other merchant vessels gathered at the rendezvous under the lee of Peter or Norman Island, on its south side, to await the arrival of the naval escort. Strong batteries defended Roadtown; and Purcell Fort, Hodges Fort, and others held Drake's Channel under the protection of their cannon. To-day the ruins of the fortifications can hardly be traced among the giant growths, and the average Tortolan is careless of their whereabouts.

Few of Britain's forgotten outposts present features so novel and romantic as Tortola. A continuous mountain ridge for nearly all its twelve miles from east to west, with creeks, channels, and lagoons in almost every direction, its lofty green heights look down upon the picturesque chain of surrounding islands, with St John and St Thomas lying beyond. Tortola is now chiefly peopled by peasant proprietors engaged in raising cattle, growing vegetables, and burning charcoal, which they in the main trade with St Thomas. But a century ago the island was covered with sugar and cotton plantations, most of them managed by Scotsmen, chiefly from Greenock. Not until the development anew of the British West Indies is seriously and practically taken in hand will Tortola recover from the blow given by the emancipation of the slaves.

Were the famous epicurean of early nineteenth century Roadtown, who gave breakfasts noted

throughout the sybaritic West Indies, to return, he would perhaps find but little change in the long, so-called street of the town.

Still outlined on the silvery surface of the Road and waters beyond are the steep, dark-green hills rising high over creek and lagoon; the many-branched trees stand out against the sky, and palms with their graceful foliage show dark. Drake's Channel, spreading far and near, still seems to meet the heavens, except for the peep of the distant islands in the south-east. Still the one-storied, piazzaed houses of shingle straggle along, facing the beach and quay, some of them embosomed in greenery; while narrow and winding paths debouching from the street climb west and north-west over the mountains, looking down from precipitous crags over the luxuriant vegetation and the low street appearing close underfoot, with its mangroves, mountain-cabbage, and coco-nut palms.

Part of the interior of Tortola is almost as wild to-day as it was when the Carolinean Englishmen and Dutchmen of buccaneering bent settled there, and cut each other's throats. There is many a narrow savanna and gorge where the manchineel and bois immortelle and cactus again grow thick; and here and there a wilderness of tropical vegetation where the Scots sugar-planter once throve. The cotton-tree soon overgrew the ruins of his house, and the garden grounds became overspread with wild mangosteen and cashaw apples, plantain and banana trees, Barbadian vine, and American aloe, on the rare blossoms of which the bejewelled humming-bird loves to hover.

Virgin Gorda (with its lodes of copper, molybdenite, and gold), Peter Island, Anegada, and the fairyland of José Vandyck—they too are among our forgotten Virgins. The history of the group is the history of the decline and fall of the British West Indies, which alone, if properly developed and administered, would solve many of the food problems that the British Isles will have to face in the near future.

LA SIERPES.

By ANDREW W. ARNOLD,
Author of *The Attack on the Farm*, *Pepita*, *Père Mumbart*, *Henriette*, &c.

CHAPTER I.

'WELL, I suppose I must go and see about that horse,' said my comrade, Pierre Delnard, moodily, as we stood in the shade under the piazza of the Real Palacio at Barcelona one broiling day in July 1812. 'It's not a bad one, but I don't care for the colour; I don't care for an Isabelle*; still—— *Sapristi!*' he exclaimed suddenly in a very different tone, 'there are a couple of beauties. Do you see them? They are coming straight toward us.'

'Yes, *ma foi!* I see them,' I replied. 'Both are perfect in their way, but of the two I prefer the blonde.'

'Well, I don't,' said Pierre. 'There's more devil, more what they call *fuego*, in the dark one. What pearly teeth; what rosy lips! But do you know,' he continued with conviction, as they came nearer, 'I have seen the brunette before, and at the *quartier-général*, too. I suppose she's a *muchacha* there. It was droll. Fardonarelle—he thinks himself irresistible—and I were waiting in the *patio* for the General to come out, when this very girl—and I am certain it was she—came along the cloisters. "Ah, *chiquita mia*," he cried, and he was going to chuck her under the chin; but, *ma foi!* though she may look very *amoroso* now, you should have seen how she sprang aside, and the way her eyes flashed and her hand flew to her breast. She's got a *punalica*, and I'll warrant she knows how to use it. He very soon gave her plenty of space, I can tell you.'

It was evident, as the pair crossed the crowded *plaza*—for it was market-day—that they had some great and, from their manner, very pleasant secret. I had seldom, if ever, seen two girls walk more lovingly. The brunette, who was slightly taller than her companion, had her arm round the latter's waist; and they were quite oblivious as they came toward us to all the cries of the stall-holders as they tried to draw attention to their wares; the finest melons and the daintiest *turrones* (almond-cakes) were nothing to them.

Without doubt, to me the blonde was vastly superior. To keep off the blazing sun she held her fan above her in such a way that one could not see her quite so well as one would have wished; but the happy, trusting smile in those soft radiant eyes, as she looked up into the bright twin stars of her companion, was quite enough for me. Besides, from the quality and fit of her short black jacket and pink skirt, and the costly *arracadas*,† she seemed of a higher class than her friend, who had a shawl over her head, and appeared to be a superior sort of factory-girl. Close to us two urchins were spinning tops. 'La Sierpes!' suddenly exclaimed one of them to his companion as he looked up

* Very light bay.

† Huge amethyst ear-rings peculiar to Catalonia.

and saw the two girls. 'Sh! 'sh!' muttered a sunburnt peasant leading his donkey, as he shook his head and frowned at the boy.

The defeat of Marshal Moncey at Almansa by the monk Rico caused the latter to be the acknowledged leader of the guerrillas in Catalonia; but there was a young fellow, Juan Larlonez by name, who, from his audacity, and above all by his craftiness, by which he had truly earned his sobriquet of La Sierpes ('the Serpent'), was fast becoming as famous as the monk. There seemed to be no limit to the infernal artfulness of this clever, handsome young rogue. The most fantastic stories were told of him. Disguised as an old witch, it was said that he had actually one evening told Marshal Suchet and his *état major* their fortunes.

'Did you hear that?' I whispered to my companion, drawing him aside as the two passed close to us.

'No,' he answered; 'I was staring at the girl. Let us see which way she goes.'

'But she's not a girl, I tell you; it is La Sierpes.'

But he shook his head with an incredulous laugh. At a safe distance we followed the amorous pair, who, quite taken up with each other, walked closer than ever. Cleverly as the fellow was disguised, he had made serious *faux pas*. His yellow skirt should have been longer. Small as his feet may have been for a man, and finely moulded as his ankles were, the difference from those of his *belle amie* was apparent at once.

'Anyway, I've no time; but suppose it is La Sierpes,' said Pierre, 'it is no affair of ours. This is police work. You would have twenty *navajos* in you if you attempted to touch her, or him, whichever you like.'

'I know that. Who dreams of taking him here? But just think what it would mean in the way of promotion!'

'Well, I am not going to make a fool of myself, whoever it is. I don't believe that that snake would go promenading about in broad daylight with a girl, especially such a pretty one as that;' and, promising to meet me in the evening, he set off to keep his appointment. I saw the difficulties and the danger; but one never rises in this world by shirking them.

In the distance, coming toward me, I saw a *maréchal des logis* and a brigadier, smart fellows both of them, belonging to my own regiment. I saw the way they naturally gazed at the girls, and how they turned and looked at them as they passed.

'Sergeant,' I said sharply in a low voice as they saluted, 'have you seen any of our police?'

'Yes, *mon capitaine*, I saw one, if not two, a little way ahead of you.'

Then, to his astonishment, I told him what I knew. 'Look!' I continued, 'they have turned down that street. Go as quietly but as fast as you can, and find an *agent*.'

Then I told the brigadier to follow me at a short distance. It was a long thoroughfare that they had turned into, and it was not very crowded. The pair crossed to the shady side; and in a listless way I followed in the sun. Then they went into a narrow street. As I crossed the road I could see nothing of the sergeant or the *agent*, and I was about to tell the brigadier to wait for them, when he said he saw them, and, what is more, they saw him.

'Follow me, then,' I said; and we hastened on.

We were close upon the love-sick couple when they turned into a squalid yard, where, to my surprise, I saw a brigadier and two artillerymen loading a wagon of straw. Now was my chance. With a light step I sprang forward. 'Halt!' I shouted, with my left hand on the guerrilla's shoulder. The blonde gave a scream and darted away; while 'the Serpent' wriggled from my grasp, leaving a shawl in my hand, darted aside, turned, and fired. But I was ready for that, for my bullet struck his arm first, and, instead of my heart, his bullet, I found afterwards, had entered my foot. In a second the wily young rogue would have escaped up some steps leading to a loft. He had started, when I hurled my smoking weapon at him. It struck him full on the head, and he fell in a heap.

The whole incident had happened in a few seconds. At first the denizens of the wretched buildings were too surprised to do anything; but the sight of a hated *gavacho* * Frenchman attacking an apparently helpless girl was too much for the Spaniards, whose deadly *navajos* were quickly produced.

'Bind him!' I cried to the artillerymen as I drew my sword and faced a couple of Spaniards who seemed as if they would spring at me. Luckily at that moment the sergeant and a police *agent* arrived.

'Cut down any one,' I cried, 'who tries to get out or to enter;' for I knew our lives were not worth a *reale* if it got abroad that we had captured La Sierpes. The latter, quickly and securely bound with the linen torn from the skirts he was wearing, was placed in the cart. Then it was, for the first time, I felt I was wounded, and I had to be lifted into the wagon beside my unconscious victim. Once out of the courtyard, we galloped as fast as we could to our quarters, passing harmlessly through the crowds, who little thought the far-famed Sierpes was lying on the straw a prisoner.

The sight of a girl in the wagon as we entered the barrack-yard soon brought the troopers from their quarters; and, as the news of the capture of the dreaded young guerrilla spread, many were

* A name of the greatest loathing, derived from the Arabic word *gafa*, a leper.

the congratulations I received as I sat on a bucket with my foot under a tap of running water till the *médecin-major* turned up. Not till he had had some wine did 'the Serpent' regain consciousness, and then he refused to give his name, though his identity was soon established by a letter hidden in his corset.

Though my wound was a small one, from one of the bones being broken it was troublesome; and the *major*, after he had got the bullet out, told me that I could not be fit for service for a month. This was hard; but I went to sleep from the opiate the *major* gave me, highly pleased with my day's work.

Spanish barracks are notoriously unhealthy, and the one we Chasseurs occupied down by the harbour behind the Arsenal was horribly so. There were few cleverer officers on the *état major* of General Foy than my kind-hearted uncle, General Brunier of the Engineers. In Alsace we children always called him uncle, though he had married only a step-sister of my father.

Looking on me very much as a son, the General, as soon as he heard of the misfortune that had befallen me, very soon came, and quickly persuaded my colonel to allow me to be taken to his own quarters, which were in a fine old real Moorish house with a beautiful *patio* having a colonnade all round of very graceful columns, palm and orange trees, and a fountain in the centre that always played. The *major* admitted afterwards that the opiate he had given me was too strong, and when I became conscious, and heard the splash of the fountain, and the scent of jasmine and roses came through the open window, no wonder I thought I was dreaming.

'Now, Henri, my son, you will have a fair chance; only you will have to be quiet for a day or two. You did a fine thing in catching that rogue, who was quietly shot last night. Moreover, it appears, through your catching him, they have unravelled a plot that he had a hand in to blow up the house occupied by General Foy;' and my uncle went on to corroborate what Delnard had told me. 'Why,' he said, 'the young scamp actually went to the *quartier-général* dressed as a servant to examine the terrain, as they intended to get into the cellars from a neighbouring house. Renaud, the chief of the police, told me; he is coming to see you to-morrow, and I should not wonder if Foy comes too.'

Sure enough, Colonel Renaud came, and I asked him who the beautiful girl was, as she was really the magnet that had drawn the notorious guerrilla to his doom. She was, it appeared, a famous beauty commonly known as La Blonda; but her real name was Pedrilla Lebron, and she lived with her grandmother. It was she that La Sierpes used as an intermediary to communicate with his friends in the town; for, seated on her donkey, she would pass through our lines and take messages to her lover. For a sum which to her meant affluence all the days of her life, the old grandmother told all she knew, and at the same time agreed to let us know more. La Blonda, meanwhile, was placed in security, but kindly treated.

It was given out that the officer who caught the guerrilla was not badly wounded, and had rejoined his regiment; for if La Blonda had seen me or any one connected with me who had had a hand in the capture of her lover, our lives would not have been worth much.

To while away the time of my convalescence I got a guitar, and used to sit up in bed and play it. I had one gift, and only one, which I had any right to be proud of, and this was a fine voice. Nature had given me this, I suppose, as a compensation for my very plain features. I must have inherited this gift from my mother, who taught me to sing as a child. She was an heiress in her own right. Though my father was a banker in Strasburg, we always went to Paris during the winter; and when my regiment, after the campaign of Wagram, was quartered there, at her desire I had the very finest masters for singing. Thus the time passed very pleasantly, and in a week I was able to go down to the *patio*. This was a step onward; but what did as much as anything else was a visit General Foy was good enough to pay me. He was very kind, and told me, if I had a favour to ask, not to hesitate to do so.

The day following the General's visit I was resting in the *patio*, when an officer of the police and another of the *duane*, with a gentleman and his daughter, arrived. The girl was about eighteen, and strikingly beautiful. I was so much taken up gazing at her that I scarcely noticed the others, who were engaged talking to the doorkeeper.

Then they made their way to an entrance to a suite of *appartements* opposite those of my uncle.

'Well, sir,' said the officer of police to the stranger, a very strongly built man about fifty, with a handsome but determined face, who seemed to be in anything but the best of humours, 'I think you have every reason to be content. These quarters are better than the common jail, and it is no great hardship to keep within the town and report yourself once a week.'

I did not hear his answer, but I doubted if it would be a very grateful one. Soon I saw the face of the beautiful girl—even more of a blonde, perhaps, than the fair friend of La Sierpes—at a window on the second floor; and shortly after the two officers came down. But that the two strangers would have heard me, I would have questioned them about the new arrivals. However, I had not to wait long before I knew all I wanted, for the new-comers came down and went

to the doorkeeper, and in a few minutes they came straight to me.

'Sir,' said the gentleman, speaking in most excellent Spanish, 'permit me to tell you I am William Vandermeeren, merchant of Amsterdam. Alicante is occupied by the English. My daughter and I left that place on an English ship for Genoa. We were driven out of our course by some Barbary pirates. However, we escaped from them, but were eventually sighted and captured by a small French privateer. They treated us—at any rate, my daughter and myself—very well, and brought us here. But we should have been put in the common jail, only I mentioned to the authorities that Señor Vegara, a great banker of this city, would any day meet my bill for one hundred thousand *pesetas*. I had not much money upon me, but I used it judiciously. I went with an officer to the banker's. He, alas! is away at present, nor would they say when he will be back; but his son satisfied them as to my identity; though on his own responsibility he would not, in these troublous times, advance me any money. However, as a Dutchman, I am allowed out on my parole, but I may not leave the city. Altogether, it is a terrible thing for me. I have important affairs to see to at Genoa, and, above all, I must look after my daughter. The only valuables we have at present are my gold watch, and a bracelet that her mother gave her. I am only hoping that the price I get for the former may last us till Vegara comes back.'

He had spoken so fast, though I should say he was naturally of a very cool and phlegmatic temperament, that I had not been able to get in a word.

'I am sorry for you,' I interposed; 'but don't let the want of money trouble you. See here,' I continued, taking a note out of my pocket; 'there's a note for one thousand *pesetas;* that will keep you for a time.'

A flush came over his cheek. I thought at first he was angry.

'No, no,' he said, 'I will pawn my watch first; but do not think I am not grateful, deeply grateful. It was not for that I came to you, however. I am told that you know General Foy, that your uncle is on the staff, and that you are acquainted with the chief of the police. It is your assistance with them that I ask for.'

Now this was a very different matter. I saw the soft, almost beseeching, glance of the daughter, and the anxiety on the shrewd face of the father, as they awaited my answer. I told him that he overrated my importance; that I was but a captain of Chasseurs, with no influence whatsoever; and that it was really more an affair for the civil authorities. 'But, rest assured,' I continued as I saw the bitter disappointment on their faces, 'I will, I swear, do what I can for you.' And then I asked them what they thought of the city. It was the girl that I wished to draw out, but she was very reserved, and her father took up most of the conversation, till Zebedé, my Alsatian servant, appeared to help me upstairs. But I could not get the beautiful figure and the soft eyes of the daughter out of my head. That she should be Dutch too seemed remarkable. I did not profess to have much knowledge of the women of that country, but the few I had seen were of a very different type.

'Well,' said my uncle when I told him of the incident, 'if her father can draw bills for one hundred thousand francs he must be fairly well off. I should like to see the fair *señorita*. Don't you make a fool of yourself, my boy. You leave it to me. You need not fear; they cannot get away if they want to. Now I am off to dine with the General, and then we are going to the opera to see the new company that has come; but I shall not say a word about this affair to him to-night.'

So that evening I found relief in singing songs of a plaintive, love-sick description such as the Moors sang to give vent to their feelings in days gone by, and went to bed thinking that none of those in whose honour the songs were written could have been more lovely than the Dutch girl whose Christian name even I did not know.

(*Continued on page 28.*)

WOODPECKERS AND FORESTRY.

By James Ritchie, M.A., D.Sc.

THE spring of 1916, with its false starts and unwonted severity, played havoc with many of the more sensitive of the early-mating birds. Upon the woodpeckers it fell like a blight. The smiles of January and February had lured them from their winter shyness to set about the time-honoured courtships of spring; but spring frowned, and rain, frost, and blizzard broke up the happy couples, leaving many a separated bride and bridegroom to die of cold and misery. Yet, till last season, the woodpeckers have been making headway. Reports from many counties showed that they were becoming more common in several of their old haunts in England, and that they were colonising new localities; even in their northern haunts in the lowlands of Scotland isolated accounts seemed to show that they were increasing in numbers, and perhaps also in range.

What bearing has the presence, or the increase, of woodpeckers upon the problem of timber-values, which has already assumed an aspect

so important, and the significance of which will be multiplied many times with the renewal of afforestation which is to follow on the conclusion of peace?

It can hardly be denied that woodpeckers do some damage in the woods. True, all the British species select for the actual repository of their nests a portion of timber already in decay, the rotten core of this or that tree; but they have no compunction in seeking that rotten core even when they have to burrow their way through solid wood to reach it. The green woodpecker, or yaffle, in particular, will make for the hollow resonance which has answered his surface percussion through a considerable thickness of perfectly fresh wood. Now this wood, even though it be unsound at heart, is still of considerable commercial value, especially if the tree be old, of great girth, and suitable for the uses of the cabinetmaker.

But the actual perforation for the nesting-hole is not the limit of the damage done, for in chiselling his tunnel the woodpecker has destroyed a portion of the thin layer of sapwood which, like a fine garment under sackcloth, clothes the tree beneath the bark, and on the activity of which the growth of the timber depends. For many years after such damage, the new wood formed in the neighbourhood of the destroyed sapwood will be imperfect in growth, showing gaps and irregularities, and bearing signs of bleaching or discoloration sufficient to ruin it for fine purposes. Moreover, the open wounds of old nest-holes give easy access to bacteria of decay, fungus spores, and harmful insects, all of which again tend to the discoloration and deterioration of the timber. On a lesser scale, the same can be said of the slighter damage caused by the woodpeckers in their hunt for insect food. For in this pursuit, also, they frequently penetrate the sapwood, and the petty injuries, like the evils that men do, live after them, embalmed in future growths as 'bird's-eye,' 'gnarling,' and other unseemlinesses of colour and grain.

This may be regarded as the extent of the harm caused in our own country, where woodpeckers are among the rarer of birds; but where they are abundant in numbers and kind the tale of their enormities is much more serious. In the United States some two dozen species occur, and individuals are common; in a single season as many as twenty-two red-headed woodpeckers were killed, 'one after another, while attempting to make a nest in a church-steeple,' and finally a pair succeeded! In the States, therefore, are to be found the normal types of damage to growing timber, such as occur in Britain; but, owing to an increasing pressure of competition, many woodpecker individuals have seceded from their allegiance to nature, and have adopted the reprehensible practice of making nesting-holes in dressed wooden posts, telegraph and telephone poles, and even in the timbers of wooden houses. The nest-holes in the telegraph-poles may number from one to a dozen or more; and, as each hole is three or four inches in diameter, the poles may be seriously weakened. On a single section of the Southern Pacific Railway as many as three hundred poles had to be changed at one time on account of this damage alone, and in another case one hundred and ten out of two hundred and sixty-eight white cedar poles were found to have been perforated. The timbers of a small wooden school near Ukiah, in California, were so destroyed by small holes made by woodpeckers to contain acorns for winter food that in the course of a few years it was found preferable to erect a new building rather than carry out the necessary repairs on the old.

But, apart from this sort of illegitimate destruction, the natural damage caused to growing trees in the United States is serious enough, for it has been reckoned to exceed in value a quarter of a million pounds sterling yearly. The greater part of this damage, however, is due to the ravages of a peculiar group of woodpeckers —the sap-suckers—the three American species of which actually feed upon sapwood, to the destruction of the valuable timber of such trees as maple, walnut, hickory, and chestnut. Fortunately none of our British woodpeckers has developed so obnoxious a taste.

Every shadow has its light, however, and there is a bright side to the woodpecker's activities. The majority of his kind are confirmed insectivores. To be sure, even the insectivorous species have been convicted of vegetarian propensities, for (apart from the sapwood destroyed by the American sap-suckers) they have been found to feed on fruits—blackberries, raspberries, strawberries, and an occasional apple; on mast, acorns, beech-nuts, and hazel-nuts; and on seeds, sometimes, but rarely, including grain. Yet such must be regarded as a supplementary diet, unimportant from the economic point of view, since an examination of three thousand four hundred and fifty-three stomachs of woodpeckers, recently carried out by the United States Department of Agriculture, revealed the fact that even where the percentage of vegetable matter was considerable, it consisted mainly of the seeds of weeds and non-economic plants.

On the other hand, the animal food of the woodpeckers is of some economic significance, and bears weightily upon the question of successful forestry. At each stage in its history a tree is exposed to the ravages of insects, as seed, seedling, grown tree, and decaying stump; but such a statement gives little idea of the activity and quality of its enemies, for the insects have specialised in their objects of attack, so that roots, stems, and branches, growing shoots, leaves, and fruits, each become the sheltering and feeding grounds of their own

peculiar ravagers. Were the insects to have their own way unrestrained, every tree, long ere the birds were nesting in its branches, would be the home of thousands of individuals, if indeed it had not already fallen under its own weight through their depredations. Even with the checks imposed by nature on insect multiplication, the annual damage done in the woods of the United Kingdom by insect agency must total many thousands of pounds sterling; in the United States the destruction so caused to 'forest trees, and their crude or finished products,' has been estimated, after careful investigation, at over twenty million pounds a year.

Now, woodpeckers play a special part in nature's system of insect checks; for, while to other birds may fall the honour of the greatest slaughter, to the woodpeckers alone is given the facility of locating and dealing with the deep-boring, and therefore more destructive, insect larvæ. A British investigator has recently recorded that he finds 75 per cent. of the food of our woodpeckers to consist of injurious insects, the quality of which can be judged from a selection of their English names—pine weevil, pine beetle, black pine beetle, ash bark beetle, elm bark beetle, osier weevil, small poplar beetle, pine-shoot clearwing moth, birch clearwing moth, and so on. This represents the woodpecker's own feast; but, in addition, one must not forget to reckon, also in his favour, the enormous numbers of soft-bodied larvæ of boring beetles upon which he fattens his nestlings during their infancy.

These results entirely agree with those of the extensive inquiry of the United States Department of Agriculture, where, except in the case of a few perverted species, the weight of evidence was strongly in favour of the woodpecker as a destroyer of harmful insects. Indeed, he seems to select his fare with some eye to human approbation, for the report tells us that 'whatever sins woodpeckers may commit, the destruction of useful beetles is not one of them.'

A careful survey leads us to the discovery that when his sins are balanced against his merits, the scale unhesitatingly dips in favour of the good points in the woodpecker's character. Without his aid the damage caused by insects, and especially beetles, to growing timber would be increased manifold; and it would be ill, in view of these services, to grudge him house-room, or to remember against him the damages he himself causes, mainly in his quest for the real destroyers. Rather it would be wise for proprietor and forester to encourage the increase and spread of woodpeckers, regarding their prospecting bores less as malicious mischief than as wounds after the nature of those of the surgeon who cuts to cure.

THE SALT SMUGGLERS.

I THINK that in the old days in China more bloodshed and lawlessness were caused by salt smuggling than by the illicit trade in opium, and that is saying a good deal. But how dangerous and desperate a fraternity these salt smugglers then were this adventure of mine will, I think, serve to show. They had, indeed, actually succeeded in rendering one station (their especial *bête noire*), placed near the West River, quite untenable, of course to the great detriment of the imperial revenue. Their method was simple, but successful. They just patiently waited for a very dark night, when a heavy white mist had risen from the great river, and the European officer and his men were sufficiently off their guard to give them their chance. Then they promptly stormed the station, leaving all who resisted in it dead or dying, and, after looting it, coolly returned to their usual haunts! The last unfortunate European in charge having, as he put it, only escaped death 'by the skin of his teeth,' became a cripple for life.

Now, as soon as the news of this catastrophe was brought in, I, being young, and delighting in dangerous work, must needs apply to be transferred to what was then unofficially known as the Forlorn Hope; and, no one else being likely to do so, I was at once sent, permission also being given me to take sixty of my own foreign drilled men, provided so many could be induced to trust themselves in such a death-trap. As a matter of fact, however, every man-jack I had volunteered to go with me, so I was enabled to pick out those most suitable for the work. I also commandeered four new long brass 'nines' from store, with the spherical shell, round and grape shot, fuses, and good British gunpowder thereto appertaining, though not without doubts as to being called over the coals for so doing. For I shrewdly suspected that these desperadoes would have drawn the four iron 'teeth' the station possessed when they captured it.

But I must now describe the kind of place I found the Forlorn Hope to be, so that how things happened in the way they did may be comprehended. The strategic importance of the position was considerable; for not only did it command the great main road leading from one province to another, but its guns, if its gunners could shoot straight, would make the passage of the wide river they faced extremely dangerous for any smuggling craft, except on the darkest nights. The structure itself consisted of two very strongly built brick houses and, in official language, a small 'fort,' in reality a square stone tower such as wealthy bankers and pawn-

brokers build in Kwang-tung, and defend when needful by armed employés. All three buildings, though built at different times, were joined together, and formed one good-sized edifice. The tower had a flat stone roof, which was battlemented, and pierced with two embrasures on each side, its walls being loopholed for musketry-fire.

The station stood on rising ground, its front facing the main road, its rear the river. Between it and the river lay a small town, the principal shops and market-place of which stood on the bank of the stream, a few houses on its outskirts being about a quarter of a mile from the station. One only, a large house with a cemented yard by the side of it, enclosed by a wall, stood near the station, being only about thirty or forty paces from it. This was then empty, and, I suppose, had been occupied by the family of one of those killed in the last attack.

By the time I reached it my new home had been repaired, cleaned, and generally put into order again. But the wrecked veranda outside the officers' quarters in the two brick houses, which ought to have been rebuilt of the same material, was, I found, merely a most realistic imitation of brickwork in painted pine! Doubtless a squeeze of officialdom out of the contract! Nor was I long in discovering another; for, on going on to the roof of the tower, I found that, out of the four guns frowning from its embrasures, three were equally realistic representations of the real thing in painted teak. The fourth, though not a 'quaker,' was dropping through its rotten carriage, and would only be serviceable at close quarters. My predecessor, too, with mistaken confidence, had greatly enlarged the windows in his own quarters, even removing the iron-lined shutters, and substituting open venetian blinds for them. I noted also that the station, instead of facing the gap between the high hills, looked directly on to the side of one of them which was little more than half a mile away; so that, did the smugglers' muzzle-loading rifles and small smooth-bore guns have a range of even nine hundred yards, it would be commanded from the hillside!

There was, however, no cover nearer than the houses some quarter of a mile off, except, of course, the solitary one close to us. But the cookhouses and servants' quarters, which should have been inside, were outside the main building; so, as I meant to take no risks—that I didn't fancy myself, that is—I had the 'quakers' and the rotten carriage of the ancient gun chopped up for firewood, and that rusty weapon itself remounted and placed in the guardroom to command the entrance, the door of which was plated with iron externally. I had loopholes cut in the side wall to command the cookhouses too; and, as I couldn't pull down the empty house without paying for it, I rented it from its builder and owner.

Now, besides my sixty men, my interpreter, and 'boys' (servants), I had the services of a European 'instructor,' almost an invalid from lung trouble, but a very good and reliable man—a 'blue ribbon' man, too, a great rarity then—so that I did not fear to leave the station in his charge if necessary, for I took over all his outside work myself—which was fortunate, as it turned out.

But I am anticipating. For nearly four months after I took charge of the Forlorn Hope the whole district was so quiet that I almost fancied that its sobriquet must be a misnomer. So, being somewhat off my guard I suppose, I went out to a suspicious-looking craft some distance off in a light gig, with only half-a-dozen men, instead of in the longboat with its three-pounder and numerous crew. As I suspected, she proved to be a smuggler, so my carelessness resulted in an ugly cut on the head, a damaged gig—and a useful lesson. For, on our trying to board her, my helmet was slashed through by a 'chopping spear,' and a plank in the gig's bottom stove by a heavy round-shot being dropped into it. Most fortunately, however, the dinghy had followed us, her crew suspecting trouble; and these smuggling gentry had reckoned without our blue lights and signal-lamps. These the fort promptly replied to by dropping a spherical shell right across the smuggler's forefoot. Then, to our surprise, her crew instantly lowered their half-hoisted sails and surrendered.

But when I got on board I understood why well enough, and became as anxious as the master and the supercargo—their men had jumped overboard—to prevent another shell from arriving; for she carried a consignment of Chinese gunpowder in barrels, not nearly so good as British of course, but amply sufficient to send smuggling craft, gig, and dinghy sky-high! My men then pursued the swimming smugglers, and accounted for two—I think of set purpose—of the desperadoes, the men who had handled the sword-bladed spear and the solid shot so skilfully.

I hardly knew how to dispose of our 'seizure,' for my small magazine in the vault of the tower was full, and finally I decided to let my men stow the powder away out of sight in the brick cellar of the empty house, as that could be entered from the trap-door in the cemented yard facing the station. The barrels, after being safely stored, were covered in by heavy stones and logs of timber, old fishing-nets being thrown over the pile to screen it from prying eyes, lest the powder should reach its destination after all.

Now, ever since I had taken charge of the Forlorn Hope, I had had, almost needless to say, spies out afloat and ashore; but these had hitherto always reported that neither on the roads, in the tea-houses, nor amongst the shipping was there any unusual number of suspicious characters in evidence. But now, as if my seizure of their powder had started the game,

reports of gatherings of known contrabandists inland, and of smuggling craft lying higher up the river, began to come in. One day, as I sat at *tiffin*, a big *tankar* (seafarer), all covered with dust and perspiration, pushed past my outraged interpreter and horrified house-boys, and walked up to me. Hastily rising, I took him out on to the veranda, and then sternly demanded, 'What thing?' for such a proceeding would have caused him to cool his heels in the stone cell if he hadn't been a former hand of mine.

'To-night have got,' he laconically replied.

'How do you savey [know]?' I said.

'More better you look see, ca-pi-tan,' was all the answer I got, and without another word he saluted and marched downstairs into the entrance, where his severely wooden expression, stony glare, and absolute silence exasperated my inquisitive interpreter and much-interested sentry almost beyond endurance.

Meanwhile I hastily donned a Chinese jacket and bamboo hat hanging in the guardroom, gave some hasty directions to my petty officer as I slipped my gun into the hip-pocket of my white trousers, and then followed the Shantung seaman, who had had more than a nodding acquaintance with these salt smugglers 'once upon a time.'

A walk of a couple of miles over the hills brought us to a gap beneath which the broad river lay spread out like a panorama; and, following the direction of my guide's outstretched hand with my glass, I was enabled carefully to examine two craft lying just opposite us. They were typical smuggling craft, capable of carrying about two hundred tons of salt each, in build very much resembling two Brobdingnagian whale-boats, furnished with 'eyes' in the bows and overhanging cabins in the stern, their bright teak sides and yellow Muntz's metal sheathing, where it showed above the waterline, flashing in the sun. Besides their heavy main and fore masts, they had a small mizen perched in their sterns, and the fine grass-mats of their huge fan-shaped sails were supplemented by others of light canvas and duck, such as balloons, stun-sails, and jibs. A number of long sweeps (great oars) propelled them in calms, these being *pushed* by a large number of men who *stood* to work them, their numerous crews making frequent spells (rests) possible.

Eight twelve-pounder guns were on each broadside, with a twenty-four amidships. The side-boards (bulwarks) were very low, however, and the men who worked the guns, therefore, were entirely exposed to an enemy's fire. Racks for small-arms aft and amidships held a regular armoury of muzzle-loading rifles, 'tower' muskets, steel-headed spears, short swords, and double-barrelled pistols. But the favourite 'projectiles' for the guns were 'mixed shot'—balls of all sizes from an orange to a walnut, or iron bullets in mat bags. Two huge white flags with defiant inscriptions on them flew from the main and fore masts, both vessels, indeed, being in full 'war-paint.' This, and the fact that there were several large boats from the shore alongside, into two of which they were then busy lowering a six-pounder from the stern of each vessel, showed that the smugglers were preparing for a landing. That, of course, was sufficient for me; and to the sardonic grin and brief, 'Can do, capitan?' of my companion, I merely replied, 'Hi' ('Yes'), and walked quickly back to the station, the Shantung man lingering to make sure we were not being spied upon, though my Chinese garments and white leg-wear made this little likely.

As soon as I reached the guardroom the order to fall in was given, and within five minutes I had every man at work improving our defences. First I had all the lower windows built up with large stones, spaces between being left for firing through. Then, in case the great iron-covered entrance-door should be blown off its hinges, I had a barricade of ballast-stones and sandbags built up behind it, the ancient iron gun taken from the tower being built into this and crammed to the muzzle with bags of iron bullets on top of as heavy a charge of powder as it would stand. The ranges on to the mountain-side had already been marked off, and the distance to every other coign of vantage was known to a yard. Fire-buckets were filled and placed in my quarters, the wooden venetians to the windows being closed, and sandbags piled up behind them; the wretched sham of a veranda was also lined with sandbags, after it had been well drenched with buckets of water; the cookhouses were dismantled, the doors and all other woodwork being taken away. The civilian native staff had bolted at the first sign of trouble, 'going to report to the authorities' being their 'save face' for it! The house close to us I could not shift farther off, but I relied on its being situated right under our guns. Then, when everything possible had been done, I ordered an extra quantity of food to be served out at the men's evening meal, and invited my only European to take his with me, vainly wondering when I did so if either of us would have any need for another! Afterwards, when, looking from the tower, I observed a thick white mist rise from the river and spread for some distance beyond it, I thought the night was certainly an ideal one for a surprise attack, the darkness being so dense that it could almost be felt. It must have been a little after gunfire (nine o'clock) when a loud knocking at the closed and barred door sent me to a loophole to demand the business of the men who were hammering at it. But I got no satisfactory reply, and after being refused admission they went off.

'He wantchee see allo inside,' volunteered my new acting orderly, the Shantung seaman.

'Why?'

'So he can savey if you ready he.'

'You think they wanted to rush the station?'

'No, he road man makee come first topside.'

'You think the smugglers from upcountry will block the roads and occupy the hillside before the attack commences, then?'

'Hi,' shortly responded my informer, who, I was aware, knew a good deal more about these gentry and their manner of proceeding than he chose to tell.

For some time after this, however, nothing happened; but on going up to the roof of the tower to see that the guns and their ammunition-chests, &c., were all ready, I saw a number of glowworm-like points of light on the side of the high hill facing the station and the roads converging on it. These I knew to be torches and oiled-paper lanterns. Indeed, I had hardly got them into focus with my night-glass before the darkness was spotted with tiny red flashes, whilst the unmistakable *cheep* and faint thud of iron and leaden bullets on the walls of the station facing the hillside showed that the game had begun.

Then, evidently emboldened by our making no reply, the contrabandists descended lower, formed into groups, and fired together, the flashes from many muzzle-loaders clearly revealing their position. This was what I had waited for; and, the distance being known almost to a yard, spherical shell from the long brass 'nines' on the roof of the tower were soon bursting amongst them with such accurate aim that the hillside was quickly wrapped in darkness and silence once more. But though, between the dense white river-mist and the blackness of an unusually dark night, it was quite impossible to distinguish objects even close to the walls outside, and though every light was carefully screened, the more solid blackness of the main building was distinctly discernible, and enabled our assailants to keep up a most nerve-trying sniping. For out of the hundreds of bullets that pattered against the walls every now and again, several would find the loopholes and window apertures. Soon, too, sounds of cracking and straining on the roofs of the cookhouses caught my ear, and I ordered men to the loopholes commanding them. I was just too late, however, for even as their shots rang out, amid curses, screams, and the sound of heavy falls, there also came the sound of smashed earthenware from the end of the veranda that faced the outhouses. Then came flashes of fire, dense suffocating fumes of oily smoke, and an unbearable stench as the woodwork burst into flame; whilst the glare from it prevented me from risking my men on the veranda to extinguish the fire. For at least a dozen stink-pots had evidently been thrown successfully from the cookhouse roof at the wooden fraud.

But whilst we were occupied in extinguishing the burning window-frames and venetians to prevent the fire from spreading to the inside of the rooms behind, the beams supporting the veranda were burnt through, and the whole erection collapsed in one enormous blazing heap, which fell against the iron-plated entrance-door. So fierce were the flames that the door rapidly became almost red-hot, and the woodwork, being charred through, caused the hinges and bar-sockets to fall out of the burnt door-frame; whereupon the whole thing collapsed inwards on to the guardroom floor, where buckets of water had to be flung upon it. We were almost suffocated by the clouds of smoke that rose from the débris of the veranda, but these formed a welcome screen from the attention of the snipers. Exultant yells out of the darkness in front, too, showed that this fresh disaster had been witnessed and its significance grasped by our watchful enemies. But almost as quickly as the veranda had burst into flames it suddenly burnt itself out, when much denser volumes of thick black smoke, entering the doorway, completely filled the whole lower storey.

But whilst the débris of the door still sent up hissing clouds of steam, from out of the darkness and the smoke, with fierce yells and curses, poured a stream of men brandishing naked weapons, who rushed across the doorway anticipating an easy victory, not seeing (as indeed was impossible) the strong barrier of ballast-stones and sandbags, or the muzzle of the old nine-pounder, or those of some two dozen Snider carbines, that protruded from it. Suddenly a roar that reverberated like thunder shook the whole building, a long fire-flash pierced the dense smoke, whilst a storm of grape-shot and bullets swept away the front ranks of the stormers. Those in rear immediately bolted, screeching, cursing, and howling even more horribly, though with much more reason, than when they rushed in, my men promptly pitching after them the bodies of those who would never yell more.

This seemed for a little while to have called a halt in the progress of the attack, which enabled Gordon, my European subordinate, to attend to the wounded, he having at one time been a medical student. But whilst we were occupied in replacing the warped iron plating and charred teak backing of the entrance-door in its proper position, holding it there with beams and boat-chains, we had to leave my quarters unguarded for the moment, till sounds of the trampling of many feet, followed by the fall of heavy weights on the floor of the rooms, caused me to rush back, just in time to see the heads of wide bamboo ladders appear at each of their four windows, from which the sandbags and stones must have been pushed away by long bamboos.

Fortunately I had been followed by the best of my men, and as the leaders were springing inside from the ladders we rushed through the doorway. Then came the wickedest work of all, a hand-to-hand mêlée with cold steel, each man fighting to kill, quarter being neither asked nor granted. My men kept together by instinct, clubbing their carbines or using their sword-bayonets as occasion served. For a little time

it was pandemonium let loose. Then, finding that fresh stormers continually sprang in from the ladders, I shouted to Gordon to leave the wounded and rush up the boat-gun before things looked any uglier. This was speedily done, it having been first crammed with iron bullets upon an increased powder-charge; and then a dozen powerful arms quickly lifted gun and carriage up the stone stair on to the landing, and ran it along to the doorway of my quarters, to which my men, fighting desperately, still clung.

The smugglers meanwhile, in a closely packed crowd, were pressing them hard. But as the gun was run up we sprang back behind it, and ere our assailants had fairly grasped the situation in the smoke and semi-darkness, a jerk of the lanyard caused the squat little carronade to belch fire, with half-a-dozen pounds of musket-balls, into the thick of them. Before the smoke cleared from my now completely wrecked messroom, or the panic caused by that murderous leaden hail had subsided, my men, cheering shrilly, rushed it, bayoneting all within who failed to reach the ladders, which were then promptly drawn up. The little boat-gun had been dismounted by the overcharge, however, and its loss proved a serious matter, as, under a heavy fire from the snipers, we had again to block the windows and restore the front rooms to some sort of order.

But before I had seen this completed, my gunner called to me to come up to the roof of the tower at once; and when I had reached it, he asked me to stand at one of the embrasures facing the empty house and listen. Sure enough, the building was no longer empty; for, though there were no windows either on the side facing the station or towards the yard, and we could therefore *see* nothing, we could *hear* plainly enough the sound of heavy blows, apparently upon the inside of the wall towards us. I instantly sent word to have the loopholes and window-openings that faced it manned, and then ordered the gunners to depress the muzzles of the brass 'nines' till they would bear on the building. But, to my infinite disgust, we found that the embrasures—which had been partially built up after the last attack, to give more protection to the gunners, or to hide the 'quakers' better, as may be—would not permit of this. Meantime the noises within the house grew louder, that of falling brickwork now being added. Then they ceased for a few minutes, but only to be followed by a rumbling and creaking as if a handcart was being dragged across the floor. After that there was silence again. We listened for another ten minutes; but, as the house still continued to be wrapped in darkness and silence, I was about to leave the roof and go below, when two bright-red flame-flashes shot out from the wall facing us, revealing two ragged apertures in it lined with rice-bags, from which protruded the muzzles of two ship's guns, their discharge being quickly followed by the sound of falling brickwork below us. I guessed immediately the plan that was once more to wipe out all those in the Forlorn Hope, and believed the statement of my informers that the smugglers had joined forces with the banditti of the notorious Li-ah-sun, one of the most daring and successful, as well as the most cruel and blood-thirsty, of the bandit leaders who then terrorised not only the Delta district, but at times even British Koulung. He worked with the pirates usually, and always landed some of their guns to assist in a *tah-nging-foh*, as it was called—that is, a night attack such as I am describing. All this flashed through my mind instantaneously, but I cudgelled my brains in vain for a counter-stroke.

Meantime, however, I ordered the crew of the gun opposite our new enemies to see how close to the building they could drop a spherical shell. A pull of its lanyard quickly answered me, the shell bursting at least fifty yards in rear of it; but, strangely enough, the explosion was instantly followed by another explosion, which left hardly a visible trace of a party of banditti or smugglers amongst whom my gunners' shell had by pure chance exploded.

'Why, these men must have been carrying ammunition to the house!' I said to the Shantung man, who had followed me like a shadow through all the fighting.

'You have catchee that powder. No have got downside now,' he dryly commented.

'No, by the Chinese God of War! it's still *there*, and they don't know it,' I cried. For the idea I had so vainly striven to find suddenly came to me. 'Bird' (short for 'Bird of Ill Omen,' a nickname his saturnine expression and sullen disposition had gained him), 'I would give a bamboo helmet full of "clean Mexicans" [new dollars] to have a lighted joss-stick put to that powder.'

'*My* can do,' grimly asserted my acting orderly.

'But, Bird, it 's certain death for you, and most likely for all of us, as well as for these devils.'

'My can,' was the only answer.

I was still hesitating to sacrifice the 'Bird,' who had served me faithfully before, when I got a message from my petty officer that the wall was being breached by the fire of the two guns opposite. Now, once this breach should be enlarged sufficiently to be rushed, I knew that the back and front of the station would be attacked simultaneously, and our assailants, having such a superiority in numbers, would then overwhelm its greatly reduced garrison.

The 'Bird,' I think, read my thoughts; for, jerking his head toward the guns, he inquired, 'Can do?'

'Hi,' I said reluctantly; and a few minutes afterwards, whilst I was examining the repaired defences in my quarters, a black shadow glided by me, and, looking after it, I saw a powerful

figure, naked but for a dark breechcloth, black as ink, dripping with oil, and quite indistinguishable a few yards away from the surrounding blackness, drop lightly from a charred beam-end at one corner of the burnt veranda on to the ground and almost instantly vanish! These movements were noiseless; but, had they not been, the incessant firing would have screened them. Neither was the 'Bird' likely to be seen as he crawled snake-like across the thirty yards or so dividing that corner of the station from the fish-drying yard where the trap-door was, unless there were scouts out, and not then unless they actually stepped upon him, I thought. I hadn't much doubt about the 'Bird's' reaching his destination; it was the afterwards that troubled me. However, at considerable risk, I had an aperture made in the defences of a window facing the fish-drying yard, and stationed three men at it to drag him in or cover his entry with their fire. I could do little else to assist him in his desperate venture. Then I made sure that all the wounded were in the ground-floor of the tower, afterwards withdrawing my men into it, except, of course, the needful sentries. The frequent and heavier falls of brickwork from the wall facing the two guns, whilst greatly increasing my anxiety, clearly showed that there was little time to spare if the situation was to be saved.

Half-an-hour passed with leaden slowness. It seemed hours since the 'Bird' had disappeared in the darkness! Then another ten minutes went by, and then five more. I held my watch to the light to make sure; but only three-quarters of an hour had really elapsed since then. Gordon had just declared that despite all we had done with sandbags, fenders, and bamboos sharpened into points, the breach in our back walls was practicable were the stormers only determined enough; whilst I dared not sweep the space between with rifle-fire (the boat-gun was useless) till the 'Bird' returned, though the sentries at the loopholes in front had just reported that there were signs of a fresh attack from thence. Then a filthy object, half-caked with dried gray mud, and covered with black grease, slipped into the lanthorn-light as noiselessly as a great cat, with just a sullen 'Have makee do,' and a fierce glance over his shoulder as he showed me that his left arm had stopped a bullet.

I trusted that the dim light didn't give my drawn and set face away, for if both buildings went together, my men's deaths, I rapidly realised, would assuredly lie at my door. I bade the 'Bird' get his wound seen to; but he shook his head as he held up five fingers. But he was wrong; there was no five minutes' grace, for hardly had my men flung themselves down, as they had been warned to do, and scarcely had I jammed myself tightly into an angle opposite a loophole facing the guns, trying to keep cool enough to calculate the relative strength of Chinese and British gunpowder, but wondering instead if being crushed by fallen masonry was a slow and painful death or the reverse, when the solid walls suddenly seemed to tremble and vibrate as a blinding flash was seen and a terrific roar was heard, accompanied by a weird rumbling as of an earthquake, the shattering of every pane of glass, and the smashing of every breakable article. My eyes were fixed in horror on the violently oscillating walls of the house opposite, as, following that awful rumbling roar, violet flames shot from the gun-apertures, and great rents and chasms showed in them, till, with an appalling crash, they fell inwards under the collapsing roof, a curious yellow light and the villainous fumes of saltpetre leaking out from the pile of ruins. Every soul within was buried beneath the solid mass of brickwork that alone showed above-ground, for the explosive force of the powder had been greatly increased by the barrels having been buried under the dead-weight of stones and timber which we had piled on top of them. My men's excited cries found an echo without, where the mad rush of a crowd of smugglers past the station indicated that the panic which had set in as a result of the explosion had ended in a stampede.

So it came about that the Dragon Flag was hoisted as usual on the station next day, which few of us had expected to live to see, and some unfortunately did not. But the battered, breached, and burnt appearance of the building then, I thought, fully justified its sobriquet. However, the spell had been broken, and the Forlorn Hope for many a long day afterwards was left severely alone.

SIR WALTER SCOTT.

RACE after race doth seek the Elysian Fields,
O'er which with lavish hand thou cast the seed
Of thy rich thought, whose waving fruitage yields
For these dark days the charm our sorrows need.

Thy tranquil mind, with its abounding joy,
Doth rim the clouds with a horizon fair;
Yea, in the light of heaven without alloy
Thy jewelled words lie all unfolded there.

Master and friend, the hills of Scotland stand,
With the same glory gently overcast,
As when thy feet didst tread the Borderland,
And as thine eyes beheld them at the last.

From thy deep rest, oh, can thy spirit hear
The soft, glad murmur of those waters sweet?
At thy soul's bourne doth Tweed still linger near
To make the bliss of Paradise complete?

The midnight hour around thee sinks no more,
The sunlight sweeps the heights of endless day;
But near thy life God sets an open door
Through which there streams thy fragrant memory.

SEVENTH SERIES

IN OLD FRISCO.

By BART KENNEDY.

IT was a dear, delightful, easy place where no one was ever in a hurry, and where the sun was always brightly shining. Life really went along the lines of least resistance. If you had money, you had money; if you had no money, you had no money. But you lived just the same. People were easy and trusting and careless. They were possessed of none of the mean virtues.

I lived two years and a half in dear old Frisco, and it was the most delightful two years and a half I have ever spent. I first made its acquaintance through deserting a ship in port. And the town was such a delightful sunny town that I did not have the heart to leave it. Indeed, I would never have left it at all but for an uncalled-for lapse into energy.

The time I speak of was nearly thirty years ago, long, long before the great earthquake shook Frisco up. I hear that since the earthquake the town has fallen from the easy grace of restfulness into the throes of hurry and restlessness. But I sincerely trust that this is not so; for I hope to happen along some day to the dear old sunlit town, and I should be shocked were I to find the people rushing along the streets with a New York swiftness.

Why, we could tell the people who had just come from New York by the way they went along. They hurried so fast, and they seemed anxious and grabful. 'There 's a man from the East,' one of us would say, and we would smile the smile of the true knowledge that comes to those who take things easy. But I am glad to say that after a little the climate got in its fine work upon them. They became unhurrying and sensible, and I feel reasonably certain that the climate still exercises a benign influence upon rushful people. There was an earthquake, of course, but there could be no earthquake in the climate. The climate must be there now even as it was there in the year '87, when I was having a fine and easy life in the town. And I 'm inclined to think that the saying that is extant to the effect that Frisco is now a place of rush is a libel of a gross order.

There was the Palace Hotel, where the millionaires used to sit in immense basket chairs and skilfully manipulate their toothpicks after dining. Those were the days when you could tell a millionaire at the first glance. He wore a broad hat and a beard, and had about him a kind of a hayseed, ready-money air. At a glance you could see that borrowing from him would be a task the most herculean. But, as I say, he used to sit with his kind in the Palace Hotel, in the great *patio* or courtyard roofed with glass. Occasionally Napoleoni Galliani and I used to go and sit in those chairs just to feel what it was like to be millionaires. Napoleoni and I sang together in the chorus of the Tivoli Opera House. I was sorry when I heard that the earthquake had been unkind to the Palace Hotel, for well do I remember the sitting in the *patio*, and having the millionaire feeling gradually pervade my being. The hotel was on Market Street, a fine thoroughfare that ran from the Bay right up through the town. At the foot of the street was the Front, where were moored ships of all nations. And Nob Hill, where lived the nobs who had made their pile! Hereon were built great mansions, and many were the legends concerning the people who owned these palatial places. Some were said to have got their first start on the road to wealth by indulging in the highway robber industry in the spacious days of '49. Others were—— But it is not for me to repeat the fearsome legends concerning the nobs of Nob Hill. There are always weird legends anent people who acquire vast wealth.

Often I used to sally forth up Clay Street, with my trusty friend Napoleoni, to explore squalid and picturesque and mysterious Chinatown. It was not always safe to explore the quarter where lived the Celestials; but Napoleoni and I were a somewhat careless pair, and it was our habit now and then to go forth into Chinatown at night when our work at the theatre was over. A strange place it was. A true city of the Dragon lying in the heart of San Francisco. There were joss-houses, and strange-coloured lamps burning, and shops wherein were weird, curiously made-up foods, and fan-tan houses, and a Chinese theatre, and laundries wherein worked the Chinamen with their still, grave faces. In the daytime Chinatown was just as strange-looking as it was at night. Then you could see occasionally Chinese women hobbling along with the little Chinese children. These miniature Chinese were dressed in all respects

 [*All Rights Reserved.*]

as were dressed the Chinese grown-ups. The difference was that their faces were not grave and still. Children are children, it matters not of what race they belong to.

The Rathskeller! Ah, that was the place! It was on the corner of Eddy Street, and was near to the back of the Baldwin Theatre, where I once saw the great actor Edwin Booth play Hamlet. The Rathskeller was really a great cellar wherein were dispensed the long schooners of foamy lager and all kinds of appetising foreign foods. Many a supper I had there after the theatre with Napoleoni. The food was good and cheap. There were Limburger cheese sandwiches that were delightful, after you got used to them; and there was sauer-kraut, which I must confess I never got quite used to; and delicious potato salad that the Germans alone have the secret of making; and pumpernickel; and delightful sandwiches made out of chopped meat and chopped raw onions; and herrings done in wonderful ways. Here one could get food at once tasty and satisfying. At the Rathskeller one met all kinds of people. There were men from all parts of the world, and there were men of all classes. An air of joviality pervaded the place. I liked the Rathskeller very much indeed.

One night in the Rathskeller there occurred a dramatic scene. A well-dressed man, with blue, restless eyes, was arrested for killing some one in one of the Eastern States. He was sitting by himself at one of the small tables, when two men suddenly came up and grabbed him. He struggled to get his revolver, but with the aid of another man who came up they got him out of the Rathskeller. Rough things occurred in Frisco in those days. I remember—late one night, or, rather, very early one morning—going along Market Street with a friend. We had just passed by the front of the Baldwin Theatre, when two shots rang out on the other side of the wide street. My friend wanted to rush over to see what it was about; but I held him firmly, for the police, when they came up, would naturally be apt to arrest the first men whom they found on the scene. So we waited. And soon there came the sound of running footsteps, and a small crowd gathered; then we went over, and found that a man had been shot dead.

At the corner of Bush Street and Kearney Street the actors who were out of a job used to congregate. Here you could hear tales of the way the ghost walked or did not walk. You could hear legends of how audiences were thrilled and captivated by these sons of Thespis when they were revelling in engagements. Leather-faced comedians told of the way that they made audiences ill with laughter. These actors in nine cases out of ten had been left stranded in Frisco. Indeed, Frisco was a rock upon which many a theatrical venture split. The reason was that too many companies used to come. They were attracted, I suppose, by the glamour of the Golden West. Frisco was, to tell the truth, a very good show-town indeed; but the best show-town can have too many attractions in it at once; and therefore was it that the out-of-work sons of Thespis used to stand on that corner and tell one another tales of the one-time shining of their genius. They were happy, though hard-up. And they somehow managed to live; for occasionally they got small engagements, and they used to help each other out. Besides, at that time living in Frisco was very cheap indeed. If a man had five cents, he could go and get a large glass of beer and eat absolutely all he wanted at the free-lunch counter.

In that gloriously beautiful climate, a man, if he were put to it, could live for a day for ten cents. I can see these lunch-counters now surrounded by a dim sort of halo. They were laden with cheese and ham and corned beef and salads, and all kinds of tasty and satisfying foods. How the saloons were able to afford it I know not. But afford it they did.

Well do I remember the free-lunch counter at the Baldwin Hotel. There they charged ten cents for a drink; but you had this drink to the tune—I might almost say to the symphony—of a magnificent meal. I shall always remember the free-lunch counter of the Baldwin Hotel with deep and affectionate regard. No one needed to starve in Frisco in those halcyon days. For if you did not have the trifle to enable you to get the drink that gave you the free-pass to the free-lunch counter, you could always get it. Some one would be sure to give it to you. Or some one would ask you to have a drink, which was the same thing.

The out-of-work actors who adorned the corner of Bush Street and Kearney Street used often to talk of getting away to far-off New York. But to get to New York cost at least a hundred dollars. And I fear that there was no actor amongst them who would not have considered one hundred dollars too high and foolish a price to pay for leaving such a glorious and delightful and sunlit town as Frisco. Now and then an actor would express a yearning for the far-off Eastern States, but I fear that there was very little real yearn in his yearning. Frisco had got into his blood. And why I myself left Frisco I can never understand. I fear that I must have become foolish.

They did not pay ambassadorial salaries to chorus singers at the Tivoli Opera House. To be exactly truthful, my salary was but eight dollars a week. But eight dollars with the sun of California and the glorious free-lunch counters thrown in was worth the equivalent of eighty dollars in dim, smoky London. And when added to this was the fact that the people were really friendly toward one another, one need hardly point out that Frisco was a place fit for the gods to live in.

Many noted singers sang at the Tivoli. There

was Campobello, the baritone, a fine, big, sturdy Scot; and there was Tetrazzini, who afterwards became world famous. And there were others whose names now escape me. Tetrazzini, I may say, sang after my time in the Tivoli; but I mention her to show that great artists sang there. The audience were not overcharged to hear these artists, for the prices were but fifty cents and twenty-five cents. And you could listen in ease and comfort to the music. You could have your drink and your smoke as you listened to the trills of the soprano or the growls of the deep bass. The Tivoli was a grand place.

Down on the Front there was practised the gentle art of shanghai-ing, for Frisco was such a desirable place that men were not eager to go down to the sea in ships. Therefore it was not advisable at night-time to go on the Front and partake of too much stimulating refreshment; for, if you did, there was a danger of your waking up again with a throbbing head in the forecastle of some ship that had passed through the Golden Gates and was ploughing its way through the peaceful billows of the Pacific. Indeed, it was not always advisable at night-time to take a drink on the Front with a friendly stranger. For there had been cases known where 'knock-out' drops had been used to prepare the way for the landsman's entry into the merry sailor's life. Clerical gentlemen had been known to be shanghaied. All was fish that came to the shanghaier's net. He was a most democratic purveyor of the labour of men. An earl or a duke or a negro labourer was all the same to him. He had a strong belief in the simple and healthy life of the sea—for persons other than himself. Once, I may say, a shanghaier had been shanghaied by a rival shanghaier. A very large piece had been bitten out of the biter. He had been sent to China in a barque, thereby taking a copious dose of his own healthful medicine. The shanghaiers were men who had brought the practical joke into the realms of exact science.

On Sundays the people used to go out to the beautiful Golden Gate Park when the band played in a structure formed like a great shell. This park was some six miles away from the centre of the town, and one Sunday I remember experiencing what might be called a dull adventure. An English faker was doing an act with performing sparrows, and I was so enchanted with the ways of these intellectual sparrows that I gave their guide, philosopher, and friend, the English faker, the only coin I had in my pocket, which was a silver half-dollar piece. How I came to perform this act of idiotic philanthropy has never been quite clear to me, but I suppose I must have come under the domination of the faker's hypnotic eye. Anyway, I had to walk all the way back to my room in Turk Street, because I was unable to pay my fare on the tram; and I also had the dissatisfaction of seeing the English faker passing me as I was wearily plodding down Market Street, seated comfortably on a tram, with his cage of intellectual sparrows upon his knee.

I have heard many kinds of roaring, but the roaring of the sea-lions on the rocks of the Golden Gates was the most unenticing roaring I have ever heard. It sounded like a cross between the bassoon and the voice of a donkey. And there was something menacing about it. To go and hear the sea-lions roar at the Golden Gates was considered quite the thing for the people of Frisco to do. Any one who came to the town and who did not go to hear this entertainment was looked upon as one who had cast a slight upon the chief and most artistic attraction of Frisco. It was in a way something like going to Rome and not calling in at St Peter's. The people of Frisco were proud of their sea-lions.

About that time in Frisco there was a man of unique personality who had come very much to the front. He was an Irish truck-driver, and his name was Denis Kearney. He was a man of genius, and a great natural orator, and he took upon himself the mission of driving the Chinese out of Frisco. He made his speeches in the Sand Lots, and he would always begin his orations thus: 'The Chineeman must go!' And then he would let forth hot and vigorous and eloquent denunciations against him. He was really a most effective orator, and had a fine voice, and he would always end his orations with the phrase, 'The Chineeman must go!' The Chineeman, however, did not go; he stayed, and I doubt if even the earthquake shifted him. In the end, Denis Kearney permitted himself to drop his job of truck-driving.

In Frisco not only could you get free lunches; you could get free entertainments as well. There were little music-halls and music-cellars where artists gave all kinds of performances. All that you were supposed to do in these places was to buy a drink. And if you had no money, and were strong enough to ignore the scowl of the waiter, you could have your entertainment without even going through the formality of buying a drink. I once sang in one of these places for a month, and I was paid, I believe, at the rate of a dollar a night. In these places of entertainment there were often people of first-class talent. (Not that I lay such flattering unction to my own artistic soul.) The artists were mainly recruited from those who had come with companies to Frisco and been stranded, and there are famous artists now in America who have performed in these places, or 'dives,' as they were called. The audience was not a set audience. It was always shifting, coming or going. And whilst this kind of an audience is not exacting, it is the most difficult audience of all to interest. The stage people who did this kind of work got a very thorough training indeed in the art of compelling the attention of their auditors. It was not like a regular theatre.

If the people did not care for what was going on on the stage, they at once left.

The Barbary Coast was perhaps the toughest place in Frisco. It began at the upper end of Kearney Street, after one passed the Bella Union Theatre. Here were congregated hard characters from all over the world; and here was Bottle Kœnig's, the place where a great automatically played organ discoursed sweet music that softened not the savage breasts of the denizens of the Coast. Very often these denizens would add to the gaiety of things and to the chastening of themselves by indulging in knife and revolver play. But the police did not overburden their souls with worry so long as they practised this play upon themselves. If you were going along in that quarter, and the short, sharp, staccato music of the revolver broke in upon your ear, your best plan was not to allow your curiosity to tempt you to go forward and see what was the matter. Your best plan was to get with all the haste you could summon far to the windward of the belligerent music. For people who fight in the street with revolvers are usually too polite to hit each other. Their bullets, when they find billets, find them in the innocent passing stranger. I confess that I have a broad mind in these matters, but I must say that in my opinion street fighters of this kind ought certainly to be locked up. The Barbary Coast was the repository of some of the most untrammelled and venturesome spirits in Europe and America. But they had one shining virtue—they thinned one another out.

I, of course, had my hard times in Frisco. But a hard time in a beautiful place where the sun is always shining is nothing near so hard a hard time as it would be in a place of cold and fog and rain. When one was hard-up in Frisco one was enabled to see the humour of things.

Never will I forget the mutual adventure that I shared with a poet. He was but a spring poet, I admit, but nevertheless his verses had found favour with the Editor of the *Wasp*, and on a certain morning we saw these verses incarcerated in immortal print in the *Wasp* columns. The poet and I shared a room in Turk Street, and things for some time had not been coming our way. I had lost my job in the Tivoli Opera House through fighting with another great chorus artist, and the poet's contributions had in them too original a genius to find their way into print. How this poem had found its way into the *Wasp* on this particular morning was a mystery. But it was a mystery that filled us with jubilation. And we walked swiftly along Market Street, and turned to the left up Kearney Street toward the office where the *Wasp* had its being. My poet comrade was going to touch the Editor for the amount that was due to him through the publication of his immortal poem. I forget what the poem was about, but I remember well the high hopes that we had concerning the ample breakfast we would discuss when the base lucre for the poem was extracted from the Editor. On and on we went like one man, and, lo and behold! we were at the office of the *Wasp*. And the poet advanced in with an invincible expression illuming his poetic face. I waited outside. And I waited and waited. And at last the poet came forth. He did not sally out as he had sallied in. He came out slowly on weak and tottery legs, and in his face was a look that spelt plainer than any letters could spell the dread word defeat. I listened mechanically to his epic of woe, for it was indeed an epic. And it ran to the effect that the Editor could not pay for the poem because it was George Washington's birthday! It was against his principles as a free and independent American citizen to pay for contributions on such a solemn and holy day. Oh, shade of George Washington! It was baseness of the basest kind to use your immortal name in such a connection! We went sadly along Kearney Street, wondering where our breakfast would come from. I met the poet afterwards in New York, and he confided to me that the dread and fearsome episode had cured him of the poetic disease.

A character in Frisco at that time was a man of the name of Schonchin Maloney. Whether his weird front name was a nickname or a Christian name I don't know. But I know that he was a most individual person, and fond of argument. He used to carry a big blackthorn stick with a heavy knob, and you had, when arguing with him, to be careful that this knob did not collide with your head during the argument. For Schonchin had an awkward habit of wildly flourishing it when he was emphasising a point. Schonchin was a square-jawed Irishman, with very red hair that was always cropped close. He had a voice like a bull, and when raised it could be heard for a couple of hundred yards in every direction. He was a great character was Schonchin, and he was mighty in argument. Two or three times I entered the lists against him, but I had to retire very much defeated. His voice was too loud and enveloping, and too much skill was needed to avoid collision with the knob of his stick. Good old Schonchin! He ought to be immortal in the annals of Frisco. I wonder what became of him. I wonder if he is in the land of the living. He was one of the features of the charming town.

There was Chris Buckley. He was a most remarkable man, and he manipulated the politics of the town. He was a boss, and I have often wondered if he were really as black as he was painted. His figure was tall and graceful and erect. He had a fine brow, and his face was mysterious and subtle of expression. It was distinctly a face of great intellectual power.

And it was very pale. In it was nobility and the power of command. With the things that were said against him I have no concern. Rulers of men always have things said against them. I only give my impression of him. He was one of the most remarkable-looking men I have ever seen.

. . . . . .

I have wandered into many towns in my knockabout life. I have seen many, many places. But the place that I liked most of all was dear old Frisco. It was so sunlit and so beautiful, and the people in it were so kindly and friendly! They really had a human attitude towards one another. How it is now, of course, I don't know. The great destroying shock must have altered things. But I have a feeling that the dear old place is essentially the same as it was when I was there over a quarter of a century ago. I have a picture of it in my mind that is still clear and vivid. I see the great wide Market Street, stretching up from the Front miles and miles. And I see the ships in the beautiful bay. I see Oakland lying on the side of it, six miles away. I see Kearney Street and Bush Street, and I see again the actors standing on the corner. I shall never forget it. This place of sunshine! This beautiful isolated town lying on the edge of a vast ocean and a vast continent!

THE DEFINITE OBJECT.

CHAPTER II.—OF A MOURNFUL MILLIONAIRE WHO LACKED AN OBJECT.

GEOFFREY RAVENSLEE was tall and pale and very languid, so languid, indeed, that the automobile coat he bore across his arm slipped to the floor ere Mr Brimberly could take it; after which he shed his cap and goggles and dropped them, drew off his gauntlets and dropped them, and, crossing to his favourite lounge-chair, dropped himself into it and lay there staring into the fire.

'Ah, Brimberly!' he sighed gently, 'making a night of it?'

'Why, sir,' bowed his butler—'indeed, sir—to tell the truth, sir'——

'You needn't, Brimberly. Excellent cigars you smoke, judging from the smell. May I have one?'

'Sir!' said Brimberly, his whiskers slightly agitated. 'Cigars, sir?'

'In the cabinet, I think;' and Mr Ravenslee motioned feebly with one white hand toward the tall carved cabinet in an adjacent corner.

Mr Brimberly coughed softly behind plump fingers. 'The—the key, sir?' he suggested.

'Oh, not at all necessary, Brimberly; the lock is faulty, you know.'

'Sir!' said Brimberly, soothing a twitching whisker.

'If you are familiar with the life of the Fourteenth Louis, Brimberly, you will remember that the Grand Monarch hated to be kept waiting; so do I. A cigar—in the cabinet yonder.'

With his whiskers in a high state of agitation, Mr Brimberly laid by the garments he held clutched in one arm, and, coming to the cabinet, opened it, and taking thence a box of cigars very much at random, came back carrying it rather as though it were a box of highly dangerous explosives, and, setting it at his master's elbow, struck a match.

Now, as he watched his master select and light his cigar, it chanced that Young R. raised his eyes and looked at Mr Brimberly, and to be sure those eyes were surprisingly piercing and quick for one so very languid; indeed, Mr Brimberly seemed to think so, for he coughed again, faint and discreetly, behind his hand, while his whiskers quivered slightly, though perceptibly.

'You're 'ome quite—quite unexpected, sir!'

'Brimberly, I'm afraid I am, but I hope I don't intrude?'

'Intrude, sir!' repeated Mr Brimberly. 'Oh, very facetious, sir—very facetious indeed!' and he laughed deferentially and soft.

'I blew the horn, but I see he left his hat behind him!' sighed Young R., nodding languidly toward the headgear of Mr Stevens, which had fallen beneath a chair, and thus escaped notice.

'Why, I—indeed, sir,' said Mr Brimberly, stooping to make a fierce clutch at it, 'I took the liberty of showing a friend of mine your—your picters, sir. No offence, I 'ope, sir?'

'Friend!' murmured his master.

'Name of Stevens, sir; valet to Lord Barberton—a most sooperior person indeed, sir!'

'Barberton! I don't agree with you, Brimberly.'

'Stevens, sir!'

'Ah! And you showed him my—pictures, did you?'

'Yes, sir, I did take that liberty. No offence, sir, I'——

'H'm! Did he like 'em?'

'Like 'em, sir! 'E were fair overpowered, sir! Brandy-and-soda, sir?'

'Thanks! Did he like that too?'

'Why, sir—I—indeed'——

'Oh, never mind—to-night is an occasion, anyway—just a splash of soda! Yes, Brimberly, when the clocks strike midnight I shall be thirty-five years old.'

'Indeed, sir!' exclaimed Brimberly, clapping his plump hands softly and bowing. 'Then

allow me to wish you many, many 'appy returns, sir, with continued 'ealth, wealth, and all 'appiness, sir!'

'Happiness!' repeated Young R., and smiled quite bitterly, as only the truly young can smile. 'Happiness!' said he again. 'Thank you, Brimberly. Now take your friend his hat, and have the extreme goodness to make up the fire. I love a fire, as you know, but especially when I am mournful. And pray hurry, Brimberly!'

Forthwith Mr Brimberly bowed and bustled out, but very soon bustled in again; and now, as he stooped, menial-like, to ply the coal-tongs—though his dome-like brow preserved all its wonted serenity—no words could possibly express all the mute rebellion of those eloquent whiskers. 'Hanything more, sir?' he inquired as he rose from his knee.

'Why, yes,' said Young R., glancing up at him; and beneath the quizzical look in those sleepy gray eyes Mr Brimberly's whiskers wilted slightly. 'You're getting a trifle too—er—portly to hop round on your knees, aren't you, Brimberly? Pray sit down and talk to me.'

Mr Brimberly bowed and took a chair, sitting very upright and attentive while his master frowned into the fire.

'Thirty-five is a ripe age, Brimberly,' said he at last. 'A man should have made something of his life at thirty-five.'

'Certingly, sir.'

'And I'm getting quite into the sere and yellow leaf, am I not, Brimberly?'

Mr Brimberly raised a plump, protesting hand. ''Ardly that, sir—'ardly that!' said he. 'We are hall of us getting on, of course.'

'Where to, Brimberly? On where, Brimberly? On what?'

'Why, sir, since you ask me, I should answer—begging your parding—'eaven knows, sir!'

'Precisely! Anyway, I'm going there fast.'

'Where, sir?'

'Heaven knows, Brimberly.'

'Ah—er—certingly, sir!'

'Now, Brimberly, as a hard-headed, matter-of-fact, common-sense being, what would you suggest for a poor devil who is sick and tired of everything, and, most of all, of himself?'

'Why, sir, I should prescribe for that man change of hair, sir—travel, sir. I should suggest to that man Hafghanistan or Hasia Minor, or both, sir. There's your noo yacht a-laying in the river, sir.'

His master leant his square chin upon his square fist, and, still frowning at the fire, gently shook his head. 'My good Brimberly,' he sighed, 'haven't I travelled in most parts of the world?'

'Why, yes, sir, you've travelled, sir; very much so indeed, sir. You've shot lions and tigers and a helephant or so, and exchanged sentiments with raging 'eathen—as rage in nothing but a string o' beads—but what about your noomerous possessions in Europe, sir?'

'Ah, yes,' nodded Young R., 'I do possess some shanties and things over there, don't I, Brimberly?'

'Shanties, sir!' Mr Brimberly blinked, and his whiskers bristled in horrified reproof. 'Shanties! Oh dear me, sir!' he murmured. 'Shanties! Your magnificent town mansion situate in Saint James's Square, London, as your respected father hacquired from a royal dook, sir! Shanties! Your costly and helegant res-eye-dence in Park Lane, sir!'

'H'm!' said Young R. moodily.

'Then in Scotland, sir, we 'ave your castle of Drumlochie, sir—rocks, turrets, battlements, 'ighly grim and romantic, sir!'

'Ha!' sighed his young master, frowning at his cigar.

'Next, sir, in Italy we find your ancient Roman villa, sir—halabaster pillows and columns, sir—very historical, though a trifle wore with wars and centuries of centoorians, sir; wherefore I would humbly suggest a coat or two of paint, sir, applied beneath your very own eye, sir.'

'No, Brimberly,' murmured Young R., 'paint might have attractions; Italy none.'

'Certingly not, sir—cer-tingly not. Which brings us to your *Schloss* in Germany, sir.'

'Nor Germany. Lord, Brimberly, are there many more?'

'Ho yes, sir, plenty,' nodded Mr Brimberly. 'Your late honoured and respected father, sir, were a rare 'and at buying palaces, sir. 'E collected 'em, as you might say, like some folks collects postage stamps, sir.'

'And a collection of the one is about as useless as a collection of the other, Brimberly.'

'Why, true, sir; one man can't live in a dozen places all at once. But why not work round 'em in turn, beginning, say, at your imposing Venetian *palazzo*—canals, sir, gondoleers—picturesque, though dampish? Or your *shally* in the Tyro-leen Halps, sir, or'——

'Brimberly, have the goodness to—er—shut up!'

'Certingly, sir.'

'To-day is my birthday, Brimberly, and to-night I've reached a kind of "jumping off" place in my life, and—between you and me—I'm seriously thinking of—er—jumping off!'

'I crave parding, sir?'

'I'm thirty-five years old,' continued Young R., his frown growing blacker, 'and I've never done anything really worth while in all my useless life! Have the goodness to look at me, will you?'

'With pleasure, sir!'

'Well, what do I look like?'

'The very hacme of a gentleman, sir!'

'Kind of you, Brimberly, but I know myself for an absolutely useless thing—a purposeless, ambitionless wretch, drifting on to God knows

what. I'm a hopeless wreck, a moral derelict, and it has only occurred to me to-night—— But'—and here the speaker paused to flick the ash from his cigar—'I fear I'm boring you?'

'No, sir—ho no, not at all, indeed, sir!'

'You're very kind, Brimberly. Light a cigarette! Ah no, pardon me, you prefer my cigars, I know.'

'Why—why sir,' stammered Mr Brimberly, laying a soothing hand upon his twitching whisker, 'indeed, I—I'——

'Oh, help yourself, pray!'

Hereupon Mr Brimberly took a cigar very much at random, and, while Young R. watched with lazy interest, proceeded to cut it—though with singularly clumsy fingers.

'A light, Mr Brimberly—allow me!'

So Ravenslee held the light while Mr Brimberly puffed his cigar to a glow, though to be sure he coughed once and choked, as he met Young R.'s calm gray eye.

'Now,' pursued his master, 'if you're quite comfortable, Mr Brimberly, perhaps you'll be good enough to—er—hearken further to my tale of woe?'

Mr Brimberly choked again, and, recovering, smoothed his writhing whiskers and murmured, 'It would be a honour!'

'First, then, Brimberly, have you ever hated yourself—I mean, despised yourself so thoroughly that the bare idea of your existence makes you angry and indignant?'

'Why, no, sir,' answered Mr Brimberly, staring, 'I can't say as I 'ave, sir.'

'No,' said his master with another keen glance, 'and I don't suppose you ever will!'

Now here again, perhaps because of the look or something in Young R.'s tone, Mr Brimberly took occasion to emit a small apologetic cough.

'You have never felt yourself to be a—a cumberer of the earth, Brimberly?'

Mr Brimberly, having thought the matter over, decided that he had not.

'You are not given to introspection, Brimberly?'

'Intro—ahem! No, sir, not precisely—'ardly that, sir, and then only very occasional, sir.'

'Then you've never got on to yourself—got wise to yourself—seen yourself as you really are?'

Mr Brimberly goggled and groped for his whisker.

'I mean,' pursued his master, 'you have never seen all your secret weaknesses and petty meannesses stripped stark naked, have you?'

'N-naked, sir!' faltered Mr Brimberly; 'very distressing indeed, sir—oh dear me!'

'It's a devilish unpleasant thing,' continued Young R., scowling at the fire again; 'yes, it's a devilish unpleasant thing to go serenely on our flowery way pitying and condemning the sins and follies of others and sublimely unconscious of our own until one day—ah yes, one day—we meet ourselves face to face, and see beneath all our pitiful shams and hypocrisies, and know ourselves at last for what we really are—behold the decay of faculties, the degeneration of intellect bred of sloth and inanition, and know ourselves at last—for exactly what we are!'

Mr Brimberly stared at the preoccupation of his master's scowling brow and grim-set mouth, and, clutching a soft handful of whisker, murmured, 'Certingly, sir!'

'When I was a boy,' continued Ravenslee absently, 'I used to dream of the wonderful things I would do when I was a man. By the way, you're quite sure I'm not boring you?'

'No, sir—certingly not, sir, indeed, sir!'

'Take another cigar, Brimberly; oh, put it in your pocket; it will do to—er—to add to your collection! But, as I was saying, as a boy I was full of a godlike ambition; but, as I grew up, ambition and all the noble things it leads to sickened and died—died of a surfeit of dollars! And to-day I am thirty-five, and feel that I can't—that I never shall—do anything worth while.'

'But, sir,' exclaimed Mr Brimberly with a bland and reassuring smile, 'you are one as don't have to do nothing. You're rich!'

Mr Ravenslee started. 'Rich!' he cried, and, turning, he glanced at Mr Brimberly, and his square chin looked so very square and his gray eyes so very piercing that Mr Brimberly, loosing his whisker, coughed again and shifted his gaze to the Persian rug beneath his feet; yet when Young R. spoke again his voice was very soft and sleepy. 'Rich!' he repeated. 'Yes, that's just the unspeakable hell of it—it's money that has crippled all endeavours and made me what I am! Rich! I'm so rich that my friends are all acquaintances; so rich that I might buy anything in the world except what I most desire; so rich that I am tired of life, the world, and everything in the world, and have been seriously considering a—er—a radical change. It is a comfort to know that we may all of us find oblivion when we so desire.'

'Oblivion!' nodded Mr Brimberly, mouthing the word sonorously; 'oblivion, sir, certingly—my own sentiments exactly, sir; for, though not being a marrying man myself, I regard it with a truly reverent heye, and 'umbly suggest that for you such a oblivious change would be'——

'Brimberly,' said Young R., turning to stare in lazy wonder, 'where in the world are you getting to now?'

Mr Brimberly coughed and touched a whisker with dubious finger. 'Wasn't you allooding to—hem—to matrimony, sir?'

'Matrimony! Lord, no! Hardly so desperate a course as that, Brimberly. I was considering the advisability of—er—this!' And, opening a drawer in the escritoire, Young R. held up

a revolver, whereat Mr Brimberly's whiskers showed immediate signs of extreme agitation, and he started to his feet.

'Mr Ravenslee, sir, for the love o' Gawd!' he exclaimed, 'if it's a choice between the two, try matrimony first; it's so much—so much wholesomer, sir!'

'Is it, Brimberly? Let me see. There are about five hundred highly dignified matrons in this—er—great city wholly eager and anxious to wed their daughters to my dollars (and incidentally myself) even if I were the vilest knave or most pitiful piece of doddering antiquity. Faugh! let's hear no more of matrimony.'

'Certingly not, sir!' bowed Mr Brimberly.

'And I'm neither mad, Brimberly, nor drunk, only—speaking colloquially—I'm "on to" myself at last. If my father had only left me a few fewer millions I might have been quite a hard-working, useful member of society, for there's good in me, Brimberly; I am occasionally aware of quite noble impulses, but they need some object to bring 'em out. An object—h'm!' Here Mr Ravenslee put away the revolver. 'An object to work for, live for, be worthy of!' Here he fell to frowning into the fire again, and stared thus so long that at last Mr Brimberly felt impelled to say, 'A hobject, of course, sir! A hobject—certingly, sir!' But here he started and turned to stare toward the windows, as from the darkness beyond two voices were uplifted in song; two voices, these, which sang the same tune and words, but in two different keys; uncertain voices, now shooting up into heights, now dropping into unplumbable deeps; two shaky voices whose inconsequent quaverings suggested four legs in much the same condition.

'Brimberly,' sighed his master, 'what doleful wretches have we here?'

'Why, sir, I—I rather fancy it's William and James—the footmen, sir,' answered Mr Brimberly between bristling whiskers. 'Hexcuse me, sir—I'll go and speak to 'em, sir.'

'Oh, pray don't trouble yourself, Mr Brimberly; sit down and hearken. These sad sounds are inspired by deep potations—beer, I fancy. Be seated, Mr Brimberly.'

Mr Brimberly obeyed, and, being much agitated, dropped his cigar and grovelled for it, and it was to be noted thereafter that as the singers drew nearer he shuffled on his chair with whiskers violently a-twitch, while his eyes goggled more and his dome-like brow grew ever moister. But on came the singing footmen, and passed, full-tongued, wailing out each word with due effect, thus:

'My—sweet'eart's—me mother,
The best—the dearest—of—'em all.'

'H'm!' murmured Young R., 'I admire the sentiment, Brimberly; but the execution leaves something to be desired perhaps.'

'If you'll only let me go out to 'em, sir!' groaned Mr Brimberly, mopping himself with a very large, exceeding white handkerchief; 'if you honly will, sir.'

'No, Brimberly, no—it would only distress you. Besides, hark! their song is ended, and rather abruptly. I rather fancy they have fallen down the terrace steps.'

'And I 'opes,' murmured Mr Brimberly fervently, 'I do 'ope as they've broke their necks!'

'Of course, I ought to have gone out and switched on the lights for them,' sighed Young R.; 'but then, you see, I thought they were safe in bed, Brimberly!'

'Why, sir,' said Mr Brimberly, mopping furiously, 'I—I ventured to give 'em a hour's leave of habsence, sir; I ventured so to do, sir, because, sir'——

'Because you are of rather a venturesome nature, aren't you, Brimberly?'

'No offence, sir, I 'ope?'

'None at all, Mr Brimberly. Pray calm yourself, and—er—take a little brandy.'

'Sir!'

'Your glass is under the chair yonder, or is it your friend's?'

Mr Brimberly goggled toward Mr Stevens's betraying glass, picked it up, and sat staring at it in vague and dreamy fashion until, rousing at his master's second bidding, he proceeded to mix brandy and soda, his gaze still profoundly abstracted and his whiskers drooping with an abnormal meekness.

At this juncture a knock sounded at the door, and a chauffeur appeared, looking very smart in his elegant livery; a thick-set man, mightily deep of chest, whose wide shoulders seemed to fill the doorway, and whose long, gorilla-like arms ended in two powerful hands; his jaw was squarely huge, his nose broad and thick, but beneath his beetling brows blinked two of the mildest blue eyes in the world.

'What is it, Joe?'

'And what time will ye be wantin' the car in the mornin', sir?' he inquired.

'The morning, Joe? Who can say what may happen between now and then?'

'Shall I have her round at eleven, sir, or'——

'Eleven will do as well as any other time; let it go at that.'

'You was to see your broker, Mr Anderson, in the mornin' over them steamship shares, sir.'

'Shares, Joe, are a vanity; they weary me. Mr Brimberly yawns and you look sleepy. Good-night, Joe; pleasant dreams.'

'Good-night, sir!' and, touching his right eyebrow, Joe went out, closing the door behind him.

'And now,' said Mr Ravenslee, puffing languidly at his cigar, 'referring to the necessary object, there is a chance that it may be found even yet, Mr Brimberly!'

'Hobject, sir,' murmured Mr Brimberly; 'found, sir—to be sure, sir.'

'Yes, I intend you shall find it for me, Brimberly.'

Mr Brimberly's abstraction gave place to sudden amaze. 'Find it! Wot! me, sir—hexcuse me, sir—but did you say me?' Mr Brimberly actually gaped.

'You, Brimberly, of course.'

'But—but wot kind of a hobject; and where, sir?'

'Really,' sighed Young R., 'these are quite fool questions for one of your hard-headed common-sense! If I knew exactly "what" and "where" I'd go and find it myself; at least, I might.'

'But 'ow in the world, sir—beggin' your parding I'm sure—but 'ow am I to go a-finding hobjex as I've never seen nor 'eard of?'

'Brimberly, I pass! But if you manage it in, say, a week I'll double your wages, and give you a—er—a bonus into the bargain. Think it over.'

'I—I will, sir; indeed, sir!'

'Very well; you may go.'

'Certingly, sir.' Mr Brimberly bowed and crossed to the door; but, being there, paused. 'Double me wages I think it were, sir, *and* a bonus? Very 'andsome, very 'andsome, indeed, sir; thank you, sir.' Saying which Mr Brimberly bowed himself out, but immediately bowed himself in again. 'Sir,' said he, 'if you could give me some hidea, sir.'

'Some what?'

'A few 'ints, sir, as to the nature of said hobject—whether animal, mineral, or nooter, sir?'

'Well, perhaps "animal" might be the more interesting.'

'Now, as to gender, sir. Masculine shall we say, or shall we make it feminine?'

'Oh, either will do! And yet, since you offer so wide a selection, perhaps—er—feminine.'

'Very good, sir!'

'And you'd better make it singular number, Brimberly.'

'Certingly, sir; much obliged, sir! Will you be wanting me again, sir?'

'Not again, Brimberly.'

'Then good-night, sir; thank you, sir!' And Mr Brimberly went softly forth, and closed the door noiselessly behind him.

Being alone, Mr Ravenslee switched off the lights and sat in the fire-glow. 'Feminine gender, singular number, objective case, governed by the verb to love—I wonder!' And he laughed a little bitterly (and very youthfully) as he stared down into the dying fire.

(Continued on page 34.)

THE PROBLEM OF FUEL.

By E. Fearon.

FOR years past we have been using the world's resources with a lavish prodigality for which posterity will bitterly blame us, and which may handicap future generations very seriously indeed.

Timber, rubber, coal, iron, cotton, and numerous other materials were increasing in price largely because they were consumed in a wasteful manner without any provision being made for the future. Production has increased by leaps and bounds in the last sixty years or so; and as in the case of mineral wealth we are living on capital which cannot be replenished, it is only ordinary common-sense to make that capital last as long as possible, and not squander it recklessly, as we have been doing.

Whatever surprise science may have in store for the future we cannot say. It may be that catalysis will reveal new wonders to our children, or that radio-activity will show how to get our energy more economically than heretofore; but in the meantime we must accept things as they are to-day, and realise that power can be obtained from comparatively few sources—namely, coal, petroleum and kindred substances, wood, peat, &c., alcohol, water, and wind.

At present coal is a very easy first, and may be said to be the only source of power worth consideration. The quantity of petroleum used throughout the world is about 50,000,000 tons per annum—a mere fraction, comparatively speaking, of the world's need, equal to, say, 4 per cent. of the coal consumption. Wood, peat, lignite, &c. are used to some extent on the Continent, but cannot be considered as serious competitors of coal. Alcohol, in the opinion of many authorities, will be the fuel of the future, as it can be readily obtained from vegetable sources, and the supply augmented almost indefinitely; but for many purposes one can hardly conceive it taking the place of coal, and in any case it will be some considerable time before we are in a position to produce, say, 350,000,000,000 gallons of it, which would be the equivalent of the energy locked up in the coal used each year. Except in hilly or mountainous regions, where waterfalls may be used to some extent, water-power need not be discussed; and as the tides have not yet been harnessed, although the idea has been mooted, we can leave that element out of our reckoning. The possibilities of power to be derived from the wind have not, perhaps, been sufficiently exploited, except here and there for pumping water, and so on; but it is quite likely that in the future this source may be used a great deal more than at present, especially in

conjunction with storage-batteries where a constant supply of energy is needed. But, with the vast requirements of modern industry, wind-power is hardly likely to be able to fill the bill.

Hence we come to the outstanding fact that coal, and coal alone, is our only available source of energy; and, as will be seen, we are using it in a terribly wasteful manner, and it behoves the nation to take drastic steps to put an end to the waste at the earliest possible moment, since it can easily be shown that the three countries which lead the way in coal production also lead the way in commerce and importance. These are the United Kingdom, America, and Germany, which, between them, produce 83 per cent. of the total quantity of coal raised throughout the world.

Taking the figures for 1913, America heads the list with 560,000,000 tons, Great Britain comes next with 287,000,000 tons, and Germany is third with 190,000,000 tons—a total of 1,037,000,000 tons, out of a total for the whole world of 1,250,000,000 tons.

The world's coal consumption is rapidly increasing year by year; in 1903 it was 800,000,000 tons; ten years later, 1,250,000,000 tons, an increase of 56 per cent. Taking an average figure of 5 per cent. per annum, and assuming that the increase continues, a simple calculation will show that our reserve cannot last very long, for the latest figures for Great Britain gave some 170,000,000,000 tons available—that is, seams of not less than one foot thick, and not more than four thousand feet below the surface of the ground.

As a matter of fact, the increase for Great Britain has been at the rate of just over 2 per cent. per annum; but, even so, in a little more than thirty years the consumption will have doubled, so that by 1945 it will be 570,000,000 tons; and if this increase is kept up it will be over 2,000,000,000 tons by the end of the century! As the reserve would be correspondingly diminished, we should have come to the end of our resources by 2030—only one hundred and fourteen years hence.

No doubt this is an extreme view; but the often expressed opinion that our coal-supply, *at the present rate of consumption*, will last six hundred years is also illogical, as the evidence is all against its remaining at the present rate. Even at 1 per cent. increase, two hundred years hence we should be raising 2,200,000,000 tons per annum, if any were left to be raised!

Professor W. A. Bone, F.R.S., in a series of interesting lectures on 'The Utilisation of Energy from Coal,' referring to the foregoing, says: 'The serious aspect of the local coal question for Great Britain is not how long can our reserves possibly last, having regard to the probable long continuation of the present upward tendency of our annual output? but how long can we continue to get the available coal at a cost which will not place us as a nation at a disadvantage relative to our nearest competitor? From this point of view, the achievement of all possible economies not only in the getting but also in the transporting and utilisation of coal is of the greatest national importance, especially in view of the heavy burden which war taxation must inevitably impose upon commerce and industry.'

The question then arises, How is this economy to be effected? First of all, the whole subject must be brought home to the general public, who are almost entirely ignorant of the importance of it; secondly, scientific research must be encouraged and brought to bear on our present wasteful method of obtaining the energy available in coal; and, thirdly, power should be distributed from central stations equipped with the latest and best method of power production, instead of numbers of works each producing the power it requires by, in many cases, out-of-date and wasteful plants.

That there is a vast field for economy is shown by the fact that from one pound of an average coal there can be obtained about 13,000 heat units; and as the heat equivalent of a horse-power-hour is 2544 units, it follows that, if all loss could be avoided, it should be possible to obtain one horse-power per hour by the consumption of one-fifth of a pound of coal. But what do we find? According to an investigation undertaken a few years ago, the average consumption of coal per horse-power-hour throughout Great Britain was about five pounds; or, in other words, only 4 per cent. of the available energy was used, and 96 per cent. wasted.

Granted that it is impossible to secure theoretic results, yet it ought to be within the scope of a nation that prides itself on being practical and business-like to get more than a miserable 4 per cent. efficiency. Think what it means if even a humble 10 per cent. efficiency could be obtained. Some 65,000,000 tons of coal are at present used for power purposes in the United Kingdom; with a 10 per cent. efficiency, 26,000,000 would do the same work—a direct saving of 40,000,000 tons! Even with existing plants, some economy may be effected by the addition of superheaters, economisers, feed-water heaters, and so on; but what is needed is a comprehensive scheme to supply power, probably by electricity, to the host of small works that exist in our large industrial centres, and to relegate to their proper place—the scrap-heap—all those inefficient and wasteful low-pressure boilers and non-condensing engines which are swallowing up, year after year, our diminishing stock of coal.

If this were done, the coal could be obtained more cheaply, through being bought in large quantities; it could be gasified, so saving the ammonia at all events; and the resulting gas could be used for heating the boiler, to which would be coupled steam-turbines, with the result that power could be obtained by a consumption

of one pound of coal per horse-power-hour, as is done in a large power-station at Chicago, where a 35,000 horse-power Parsons turbo-alternator is at work. Up to units of about 2000 horse-power, gas-engines could be used economically, where, as at Sheffield, users of over 6,000,000 feet per annum could obtain the gas at tenpence per thousand feet. Take the case of a thousand horse-power engine working, say, ten hours a day for an average of two hundred and seventy days a year; then the cost for gas would be—assuming fifteen feet per horse-power-hour—£1687; using a coal-fired boiler, and assuming an efficiency for the steam plant of one and a half pounds per horse-power-hour, and coal at £1 per ton, the cost for coal only would be £1808, and on top of that would be firemen's wages, handling of the coal, clinker, and ashes, and other charges. For smaller units, where the coal consumption is probably three pounds or more per horse-power-hour, the gas-engine scores even more heavily. In the iron and steel industries, which use over 30,000,000 tons of coal per annum, a saving estimated at, at least, 10,000,000 tons might be effected by following the Continental plan of concentrating coke-ovens, blast-furnaces, steel-works, and rolling-mills into one plant, whereby economies resulting in a saving of ·75 ton of coal per ton of iron produced have been gained.

The domestic fire uses about 40,000,000 tons annually; and since it seems almost hopeless to expect the Briton to give up his open coal-fire, he might be urged to use the most economical grate—in his own interests, at all events—and insist on builders putting them into his 'castle,' especially the kitchen thereof, where it costs a small fortune to get a modicum of hot water and to cook an occasional joint!

That economies *can* be effected is certain, and it remains for the Government to *insist* on their being effected, else, as a nation, we are going the right way to land ourselves in the bankruptcy court; for, deprived of our coal, there is no doubt that is where we shall end.

Another correspondent writes as follows on 'Coal and its Substitutes:' The high price of coal is putting to the test the ingenuity of scientists in various parts of the world. Many experiments have been made to provide a solution. Experiments with oil have proved fairly successful, and water-power is utilised on a considerable scale at Niagara and on the Zambesi. Mr Arnold Lupton says that the tides may be yoked up as a successful competitor with coal when that article reaches £4 per ton. The supplies of oil will most probably be exhausted before those of coal; therefore we must look farther ahead.

All power and heat comes from the sun, and it is undoubtedly to the past and present heat given up by the solar orb that we must look for our future supplies. Locomotives and engines are only the horses of the sun. Solar heat fixed the carbon in the plants which formed the coal; and the heat absorbed in doing that work is now liberated to raise steam, &c.

Only a small part of the heat there contained is used; the rest is wasted. Economy is therefore needed. Future investigators must direct their attention to the sun and the economy of its vast reserves.

The rays of the sun which shone on the primeval world are now liberated and utilised as motive-power, and the vast reserves which the earth has locked up in its bosom can and will be used by mankind for its future benefit. It is, therefore, to the gases which are contained in the minerals of the earth that we look for future supplies of power.

The writer remembers, when a mining student some thirty years ago, giving out this idea to the mining professor. He did not actually laugh at the idea, but could not see its feasibility.

The argument was: since it is possible to obtain salt by boring holes to the salt-beds and bringing out the saline deposits, why then is it not possible (since the heat is contained in the gases) to obtain the necessary gases from the bowels of the earth without coal-mining as it is now known?

It is not an impracticable idea. The chemists of the future will probably find out some ways and means of solving this problem, just as they now produce the by-products. It would undoubtedly mean a great economy, since the wastage of power would be more under control, and used at will. Our huge reserves would therefore last for a long time. Seams of coal only a few inches thick would be utilised, and bituminous shales.

The world will certainly not perish for want of coal; but it is necessary to leave as large a reserve as possible for the use of future generations. The sun is undoubtedly the power of the future, and if our supplies fail us we may witness a migration of civilised people to the lands which are now desert, but where the sun sheds its beneficent light and power more generously than on our land. A novel method of obtaining power by the utilisation of the internal heat of the earth in a volcanic district was recorded in the *Iron and Coal Trades Review*. A thermo-electric power-house is in operation at Larderello, some twelve miles from Volterra, producing about 10,000 horse-power. The idea of using the available heat was first put into practice by Prince Ginori Conti in 1903. At Larderello steam issues from the earth in jets, and the Prince first utilised the steam as a jet impinging on a bucket wheel. Later he used the steam in the ordinary way in a reciprocating engine coupled to a dynamo. Encouraged by the results, he made use of a small part of the steam issuing from one of the largest jets at a

pressure of 75 pounds per square inch, and by this means obtained some 40 horse-power. The steam from this jet issues at a temperature of 160 degrees, and at the rate of 11,000 pounds per hour. The general results obtained were satisfactory, except that it was found that acids present in the steam rapidly corroded the engine. Borings were made to discover new sources of steam, some of which gave good results. In 1912 a turbo-alternator of 300 horse-power was installed, and was used to light the borax-works at Larderello. When the war broke out, the immensely increased cost of coal gave an impetus to further development, and the Prince ordered three steam turbines, two of which, provided with surface condensers, are installed. The natural steam, instead of being used directly in the turbines, is used to heat multitubular boilers giving a pressure of 23 pounds per square inch. The current is transformed up to 36,000 volts, and transmitted along five different lines to the towns in the neighbourhood.

LA SIERPES.

CHAPTER II.

AT the thought of seeing my new friends again, the sun that morning seemed to me to have more brightness, and the scent of the jasmine and the heliotrope as it came through the open window had even a sweeter fragrance than before; but, alas! I saw nothing of them till the evening, when they told me that Señor Vegara might not return for three weeks.

'My watch and Mary's bracelet will hardly tide us over till then,' said Vandermeeren, with a bitter laugh.

Again I told him not to bother about that; and this time, after some hesitation, he took my proffered note for one thousand *pesetas*. He was not a man of many words, but I could see how grateful and relieved he was. While we were talking his daughter came up.

'You know, *capitaine*,' she said after our first greetings, 'my father is passionately fond of music. Alas! I cannot play; but whenever my father is bothered, my brother, who is a fine musician, has only to sit down at the spinet, and all his troubles pass away. Well, you know,' she continued, 'last night father knocked at my door and told me to come, and we heard a man singing who has a most lovely voice, and we sat in the moonlight quite entranced; and, with the smell of the roses and the honeysuckle, it was like being in Paradise. Now, do you know who he is?'

I was quite taken aback with delight at her words, but as I was seated at the back in the shade she could not see my face very well. I do not know what prompted me; perhaps I was in high spirits at the thought that I, so plain and commonplace, could influence her so easily, or it may have been in pure mischief; but, anyway, I determined to mystify her and pique her curiosity.

'Oh yes,' I replied casually, 'you mean a Señor Cosa. He has a fair voice, but he's a conceited puppy.'

'It's more than a fair voice, my friend,' said her father.

'You are jealous,' said the girl; 'but never mind that. Do you know him?'

'Very well indeed,' I replied.

'Will you introduce us to him?'

'Certainly. And what songs did he sing?'

'The "Lament of the Moor" was one; but they were all lovely, and when he sang them I felt so carried away that I could have'—— But with a blush she stopped, though her bright eyes still shone with animation.

'Kissed him?' I put in slyly.

'Oh, I never said that!' she answered decisively. 'I meant I could have thanked him.'

At that moment my uncle came in, to whom I quickly introduced my Dutch friends; and while Mynheer Vandermeeren was telling him of his misfortunes, and begging my uncle to use his influence with the General to permit him to leave the town, I sat talking to his daughter, who, I found to my surprise, had been educated in London; and, with a certain amount of hesitation, she also told me that her mother was English.

'English!' I exclaimed. 'Ah, now I begin to understand!'

'What do you mean?' she inquired uneasily, in a low voice.

'Nothing, *señorita*; but I have always been told, though we French hate the English, that the women of that country are surpassingly beautiful, and now I can believe it. But I have never heard the same of the Dutch.'

Before she could reply, my uncle said he wanted me to copy out some papers; so he helped me upstairs, but not before I had told my fair friend that I would not forget to try to induce Señor Cosa to sing some of the same songs that evening.

'He's a shrewd, clever fellow, that Dutchman,' said my uncle. 'I should say he is rich, too. Naturally he wants me to speak to the General in his favour; but I sha'n't hurry about that. I will give you,' he added with a kindly smile, 'a little more time to make love to his daughter. She is certainly very beautiful, and I should say very charming. What I like about her is her frankness and her unconsciousness of her

beauty. Nine girls out of ten without half her looks would give themselves no end of airs. I don't mind your running after that type of girl; she is pretty, and quite different from La Blonda.'

I was glad to hear his kind words, for I had faith in his judgment, and it filled my heart with pleasure. Apart from his military capacities—he would not have been in the *état major* of General Foy if he had not possessed them—my uncle's shrewdness was only equalled by his kind heart. Besides that, he was a real connoisseur in pictures and works of art, so much so that my uncle Fritz, who was very rich, and was a collector, got him to pick up pictures for him in Spain, and some very good bargains he made for him.

As I had promised, that evening I sang almost the same songs as I had sung before; but to mystify them I sang in quite a different part of the building.

The following morning, as I was waiting for the *médecin-major*, I heard my uncle talking below to Mynheer Vandermeeren and his daughter about the opera. 'You should certainly go,' said my uncle; 'it is worth while for the soprano alone, and the other women are fair; though, as for the baritone, the quality of his voice is not to be compared with that of my nephew.'

'Your nephew!' they both exclaimed. 'Is it your nephew whom we have heard?'

'I suppose so, for there is no one else who sings here.'

'But he said it was a certain Señor Cosa.'

'Did he?' replied my uncle with a smile. 'Then he must have made up that name, just as we French, if we forget a name, often say, "Monsieur Chose."'

'Ah, General,' replied the *señorita* with a laugh, 'you'll see, I will get level with him.'

'Well, I don't think he will mind that. If you want to bring out his voice, get him to sing "*Fincho del Vino*" from *Don Giovanni*.'

But at that moment the surgeon arrived, so I heard no more of their conversation.

When I went down I found *la belle Hollandaise* making a water-colour sketch of the *patio;* but she left her easel on seeing me. 'Ah, *capitaine*,' she said in a merry, quizzing tone, 'and how's Señor Cosa this morning?'

'I believe he's getting on finely,' I answered, falling in with her humour.

'Yes, perhaps you think that father and I did not know who he was all along?'

'I won't speak for your father, but I am certain you did not. I wish it were otherwise, because'—I added slyly—'because I remember how you said you would like to'——

'No, no, no!' she exclaimed with a blush. 'You are not to put words into my mouth! But it was very artful of you, and the only amends that you can make for it is to sing us "*Fincho del Vino*" from *Don Giovanni*, or, say, one of Handel's.'

Just then her father joined us. 'Good-morning, Señor Cosa,' he said with a twinkle in his eye. 'Now we are going to have some good music. We have a spinet upstairs.'

'If you can only get some good music in the place,' I answered.

'We will see about that,' he said; and within a couple of hours he had found in a second-hand book-shop a book that contained a collection of the songs of Gluck, Mozart, and Handel, and among those of the last-named '*Del mio Caro Bacco amabile.*' This, of course, is not one of that great composer's best songs; but as I looked up at Mary's face when I had finished it I knew the lovely girl was half won. Yes, I had fairly sung my way into her heart.

Thus the weeks passed, and I fell more deeply in love with her than ever. I was soon able to hobble about, and in the evening we would stroll in the famous Rambla, and listen to the bands our regiments supplied; and sometimes, too, we, used to take a felucca and sail in the bay. We three generally went alone, but sometimes my uncle and Pierre, who, I may add, was a distant relation, came with us. Alas! the time was fast coming when I could return to my duties, for the *médecin-major* said I should be able to do so in a week.

Now I remembered that General Foy had said that I should not hesitate to ask him a favour; so, without saying a word to Mynheer Vandermeeren, I went to remind him of his promise.

'And what is it I can do for you?' he said in a kindly way.

I told him how my Dutch friend had been detained because he was on an English ship.

'Certainly,' he replied. 'Your friend is lucky to have such a pretty daughter,' he added slyly. 'I know all about it from your uncle; but, as a matter of fact, I shall want to see Mynheer Vandermeeren at six. I have arranged the matter with your uncle.'

Thereupon he had the *laissez-passer* made out, but dated four days later. Inwardly I wondered at this, and, after gratefully thanking him, set off to tell my friends the good news. Armed with this magic paper, I reckoned that from pure gratitude Mynheer Vandermeeren would agree to my marriage with his daughter.

I found him smoking in the *patio*. 'There,' I said, as I placed the order of release in his hand, 'in four days you will be free.'

He sprang from his seat, and for a moment could hardly speak from emotion. 'How can I thank you enough?' he said, still holding my hand. 'How can I show my gratitude?'

'Easily enough,' I answered with some hesitation; 'by allowing me to marry Mary, if she will only have me.'

'You are asking a great deal,' he replied seriously. 'She's the best thing I possess; she's

a jewel, and a beautiful jewel, too; but I will agree on condition that your creed is her creed.'

I was rather taken aback by this. 'My family are Lutherans,' I answered.

'That's good enough for me. Now go and ask her; she is sketching in the summer-house.'

I thanked him, and turned into the *allée* of a small though beautiful garden at the back of the house; but so nervous did I feel that I stood still. I knew she would marry me. I felt perfectly certain of that; and yet, now the time had come, my knees felt shaky, and I feared to go on. I thought I had better postpone the matter. I thought I had better sing to her; while she was under the influence of my singing she would be like wax in my hands. Then I thought of the order of release I had obtained. That would be a good card to play. I felt glad I had remembered it; and, taking my courage in both hands, though still uncommonly nervous, I turned into another path, and saw her in the arbour, which was covered with honeysuckle and jasmine; thus she formed a beautiful picture in a lovely frame.

'I have such news for you, *señorita*. I have seen General Fóy, and I asked him to give me a *laissez-passer* for your father and you, and I have got it. You will be free now,' I said.

'Oh, *capitaine*,' she exclaimed, 'I am glad! Is not father grateful?'

'Oh yes,' I answered, seating myself beside her, 'so much so that he said I might ask you something.'

Taken by surprise, she blushed, then turned pale and edged a little farther from me; but then she came back, and this gave me courage. 'He said, *señorita*,' I blurted out, 'that I might ask if you would marry me.'

Then I saw, as she glanced up timidly, the same light in her bright eyes that I had seen when singing to her.

'*Si, si*,' she answered softly, and my arms in a moment were round her neck.

'Well, Henri, as you two have been here an hour,' said her father, coming up with a happy smile on his face, 'I suppose it is all settled.'

On seeing him Mary sprang to her feet. 'Yes, father,' she cried, kissing him, 'it is all right;' and as we sat round the table that day for *déjeuner*, there were not three happier people in all that great city of Barcelona, or, I imagine, in all the world. Though I had no idea why General Foy wished to see my future father-in-law, the last-named seemed to know, but he gave no reasons.

My uncle was delighted at my engagement. 'You are young, *mon enfant*,' he said. 'You only think of her beautiful face and splendid figure, her gaiety and good-nature; but I am older than you, and I can tell you that she has other qualities than those which appear on the surface. If you were in trouble or danger, I tell you that girl would risk anything for you.'

He was right, as I was to find before we were married. Then I asked why General Foy wished to see Mynheer Vandermeeren.

'Ah, that's another affair. I was obliged to keep silent on that point; but there's no harm in telling you now. Vandermeeren lost his wife in Cadiz nearly two years ago. Being a heretic, according to the law she was not allowed to be buried in the ordinary way; so when the tide was low she was placed in the sands without even any sort of service. This is the real origin of Vandermeeren's visit to General Foy. In this country he keeps his religious opinions to himself; but he has never forgotten his loss. It has eaten into his heart; the memory of it still rankles. You have heard him speak of Vegara the great banker, and also of his son. Rich as the firm may have been, now, owing to the war, it is in difficulties; that is why the father is away trying to get assistance from relations at Madrid. Vegara has a very beautiful ward named Christina Zarlala. She has in her own right an enormous fortune. It is owing to Vegara's foresight that it is so large. His son Antonio is betrothed to her. It is important that they should be married. With only a portion of her money he could keep the bank going till less troublous times come. Vandermeeren, who knows Vegara intimately, has often stayed with him in his beautiful villa outside the town, and on more than one occasion he has driven with him to the convent where Christina was educated. For safety and *pour les convenances*, for his wife is dead, he placed the girl in this convent, which is five leagues from here. Of course, the Mother Superior knows of her wealth.

'Well, about a week ago young Antonio got a letter from his fiancée, who is only seventeen, telling him that she had received a higher call. She saw now all the hollowness of the world and the wickedness of the Flesh and the Devil, and she was going to become a nun. If ever there was a girl who, Vandermeeren says, was full of gaiety and life, it was Christina. Antonio at once showed the letter to Vandermeeren, and begged for his help. I have seen the letter myself; it is in her handwriting, but it is all spelt correctly, which proves it must have been written from a copy. To tell you the truth, I don't think much of this Antonio. He loves her, of course; he is certainly handsome enough to please any girl, but he is a helpless sort of fellow, and in my belief he is an arrant coward. Then all Vandermeeren's bitter memories of how his wife was treated came out. He came to me, and told me that the convent is enormously rich. Moreover, they have a few, but only a few, very fine pictures and some exceedingly valuable plate. The building is in a very inaccessible place, but the Dutchman maintains that he

could take us there; so I spoke to Foy, and that's why he is going to see him. But all the arrangements are made; I am in command, and will have half a squadron of your regiment, and Delnard will have command of that. Vandermeeren and Mary are coming too, as he won't leave her here alone; and also Antonio, though he does not really want to come, because he considers it dangerous. You can come in the carriage with us.'

At six the next morning all was ready, and I saw Antonio Vegara for the first time. He had met Mary before, and he seemed very much surprised that she was coming with us.

'Ah yes,' she said, 'I am looking forward to a very pleasant drive.'

'A pleasant drive!' he exclaimed. 'You won't say so if we meet any *guerillos*.'

I was angry with him for putting such a silly idea in her head, and told her not to believe a word of it.

'Well, Henri, if there are *guerillos*,' said Mary calmly to me, 'I am very glad that I came, because you are not quite fit for service yet, and it is a great thing that I should be able to look after you.'

'*Bonita mia*,' I whispered, keeping down a smile, 'I tell you there's not a word of truth in the suggestion;' and she sat contentedly with her hand in mine, and spoke only of the beauty of the landscape in the early morning, as every now and then for some distance on our way from Barcelona we caught a glimpse of the deep-blue sea through the trees.

'We ought to be getting near,' said my uncle about eight o'clock.

'Yes,' said Mynheer Vandermeeren. 'I am looking out for a stream we have to go through. That stream goes right up to the convent.'

Soon we came to it.

'You see that wood?' he continued. 'The convent is in the middle of it. Now it's the first track to the left.'

'*Premier à la gauche!*' shouted my uncle to Pierre.

The latter galloped on to the vedettes. They may have been one hundred metres in front; anyway, my uncle saw them turn to the left, when we suddenly heard the report of firearms. '*Halte!*' he cried to the driver, and, leaving a few men with us, he rode forward. Mary sat calm; perhaps her little hand held mine a shade tighter, though she showed no fear, but Antonio turned as white as a sheet.

'I was a fool to come!' he cried. 'I shall tell them I was obliged to come.'

But his fears were quickly allayed, for a trooper soon returned. So little had a small band of guerrillas suspected our presence that our vedettes had suddenly come on them all seated on the ground playing cards, with their carbines against the trees. They fled at once, and practically no resistance was made, but we took three prisoners. When we drove up they were bound and placed in a cart we had brought with us to take away the pictures. Following the track, we were soon at the convent door.

In answer to the bell an old nun looked through the grille.

'It is the Señorita Zarlala we want,' said the General.

'There is no one of that name here now,' she told us.

'They have given her some religious name of their own, and they will get her off at the back,' said Mynheer Vandermeeren in a low voice in French.

'*Ma foi!* very likely,' replied my uncle, and he ordered Pierre to take his troopers round the high walls to the rear, while a brigadier with two men would remain with us; and then in a sharp voice he told the nun to let us in, which she did. Having shown us into a long, low room that seemed quite dark after the blaze of the sun, she said she would go and see the Mother Superior.

'We are being fooled,' said Vandermeeren after we had waited some time.

'I think so too,' replied the General. '*Allons*, let us see where the chapel is;' but at that moment the Mother Superior, a small, shrewd-looking woman of about sixty, came in and told us that the Señorita Zarlala was not to be seen, as she was ill.

'Oh, she is here, then?' replied my uncle.

'Yes; that was a mistake of Sister Caterina's,' said the Mother Superior.

'Perhaps it's a mistake about her being ill; anyway, we have a lady here who could verify that if I chose. But, madame, I am not here to talk. Bring her here, I say, at once, or I will order my men to fetch her.'

Turning to her companion in an authoritative way, she ordered her to bring Christina in.

'You will excuse me,' she said to my uncle. 'I have to see my father confessor on important business that your untimely visit has interrupted;' and she left us waiting.

'If you want those pictures,' said Mynheer Vandermeeren after a while, as Christina did not appear, 'you had better make haste; there is something going on. Perhaps she has sent for the guerrillas.'

'Ah, perhaps so,' exclaimed the General hurriedly. 'Let us go; you know the way.'

We had hardly entered the cloister when, at the end, we saw an old gardener and a nun, under the superintendence of the Mother Superior, carrying a picture about three metres in length out of the chapel door. The nun gave a cry on seeing us, and let it drop down.

'*Parbleu*, this is a *trouvaille!*' exclaimed the General, in admiration.

'Yes, that is the Memling triptych. The centre is the "Nativity,"' said Vandermeeren; 'and it has the "Flight into Egypt" and the

"Presentation of the Kings" on each side of it.'

Leaving one of the men to guard the picture, we hurried to the chapel, where, on a short ladder, the Father Confessor was busy at work loosening the supports of a large and very ghastly, but very characteristic, 'Descent from the Cross,' by Ribera. The priest was so intent on his business that he did not look round.

'I shall not be a minute now. Keep those French thieves engaged a little longer.'

'The French thieves are here,' replied my uncle, 'and we will help you to get it down.'

I kept my countenance, but the look of surprise and anger on the man's face was too much for Vandermeeren, and the chapel rang with his loud laughter.

'That makes two,' said the General to the Dutchman. 'Now, what else is there?'

'Well, apart from two Dutch works in the refectory and a fine portrait of the foundress which looks like a Bellini, though I am not sure, there 's nothing else but the plate and some very fine vestments.'

The quantity of plate and vestments was not large, but the quality was superb, especially a small gold chalice studded with jewels of the first water, that for workmanship might have been by Benvenuto Cellini. Then we returned to see about Señorita Zarlala.

'I will bring her in now,' said a pretty nun. With the Mother Superior at her side, Christina was brought in. The girl was strikingly beautiful, and radiant with health and strength; but she certainly looked more than seventeen. Keeping her eyes down, she advanced toward my uncle.

'Señor General,' she began in a low voice, '*Gracios a Dios, y la Santissima Madre de Dios, espontáneamente*'*—— Here she faltered, and looked imploringly at the stern face of the Mother Superior, who kept her eyes fixed on the girl. 'Of my own free-will I give up'—— But at that moment her eyes fell on her fiancé. She hesitated, and then, with a bound, she rushed toward him. 'Save me—oh, save me, Antonio, I implore you!' she cried in a heart-broken voice, and in a moment her arms were round his neck, and she was sobbing on the young fellow's shoulder, while the General gently reassured her, and told her she had nothing more to fear.

'For your sacrilege of this Holy House, Señor General,' said the Mother Superior, 'God will repay you if'——

It seemed as if her words would come true, for at that moment a trooper rushed in, saying our men had been surprised and attacked, and that Delnard had been wounded.

'All right,' replied my uncle calmly; and, warning the brigadier to bind the Father Confessor, and lock him up safely in the chapel as a hostage, he told me to follow him, which I did, after kissing Mary and telling her to have no fear.

(*Continued on page 40.*)

* 'Of my own accord.'

THE PAGEANT THAT I SAW.

WHAT words can tell, what tints display,
The pageant that I saw to-day?

Across wet gorse and wind-swept heath,
Where crouching homesteads lay beneath;
And, farther still, as I looked down,
The rain beat o'er the huddled town,
And gray the chimneys, spires, and mills
Rose from the pockets of the hills.
The murky mistiness, the dim
And brooding scene, seemed sad and grim,
To be a haunt of spring's. So, turning,
I crossed the moor. A track discerning,
I found another road which led
Through grassy valleys. Beech-trees spread
Their tenderness of early leaf,
And blotted out the sullen grief
Of looming cloud and weeping sky.
Curled fronds of bracken bent to spy
The tawny shroud around their roots
Of leaf and nut—the fallen fruits
And pride of autumn's bygone cheer,
Marking the death of yester-year.
Through the dry leaves and sleeping earth
Rose blue-bells, strong with glad young birth
Of pointed spears, whose purple-blue
Pierced the dead past with radiance new.
A blackbird trilled, a thrush sang gay
Clear notes, and cheered me on my way.
Shy rabbits dashed across the green;
A field-mouse darted out between
The maze of bramble, flower, and fern.
But here the path, with sudden turn,
Leaving the quiet wood's thick tangle,
Swept outwards at a mossy angle
Past cottages beside a stream
Where fish rose up with circled gleam,
And hovering flies and gnats made merry
Amongst the snows of gnarled white cherry.
And as along the road I went
The torrents of the rain seemed spent.
A silvery beam the dull haze broke,
And blue peeped through. Like wreaths of smoke
The gray mist drifted o'er the sky,
And great round-bellying clouds raced by;
Akin to galleons proud they rolled
Across the blue, all white and gold.
And golden, too, the chrysoprase
Of the lush grass with sunny rays
Was splashed. At length towards home I strode
Along the sandy ochre road,
Where traceries of purple shade
A broidered patterned carpet made,
And far away the blue of sky
Faded to mauve, in mystery.

Ah, pen and pigments both seem vain
To bring these glories back again!
No words can tell, no tints display,
The pageant that I saw to-day.

PORTUGAL'S COLONIAL EMPIRE.

NOW that Portugal is sending an expeditionary force to join the Allies, a few lines concerning her colonial empire and its military possibilities may be of interest. Four centuries ago, when Britain was a mere cluster of islands in the North Atlantic, Portugal was planting her colonies along the African coasts and away through India to China. No other Power had thought of the colonial question then. In the years afterwards the nation fell on evil days and was merged into Spain, whose plans of acquisition turned toward 'the golden Americas.' The last remnant of these which belonged to Portugal was Brazil, which in 1889 avowed itself an independent republic. Previously the chain connecting the two had been a slender affair, turning on the blood-sympathies of the royal families.

Portugal has been more successful in Africa, though first the Dutch and then the British secured possession of the Cape of Good Hope. More recently various European nations seized much that had been considered within the Portuguese sphere of influence, and at the Berlin Conference of 1884–85 the Powers of Europe decided that the vast Congo territory, which Britain, at any rate, considered should be in the hands of our Ally, should form the neutral Congo State, under the patronage of the king of the Belgians. Still, Portugal's share of the Dark Continent remains extensive, though, according to an American critic, its colonial government may not be brilliantly successful.

The great territory of Mozambique, comprising three hundred thousand square miles, with over three million of a population, is practically governed by British companies, such as the Mozambique Company, the Portuguese Nyassa Company, and the Zambesia Company. These concessionaires control the port of Beira, two or three important railways, and practically the whole navigation of the Zambesi and its tributaries. The companies govern in all three-fourths of the territories, and the natives are more likely to follow the orders of their officials than the national commands, of which, as Africans, they have not the least understanding. The mobilisation of the black population of this dependency would be a difficult matter; nor is it likely that the fighting-man of riverside jungles would make a great European warrior; but some tribes on the higher ground toward the great Lake Nyassa would make fine material for the drill-sergeant even for overseas adventure. However, the end of anti-German warfare on the Dark Continent is in view, and these lower-type peoples are not likely to be called upon even indirectly in the matter.

On the western side of Africa, the territory commonly known as Angola is Portugal's largest colonial possession. So vast is it that four countries the size of the British Isles could be carved out of its ample proportions. Though the low-lying coast strip is barren, extremely hot, and very unhealthy, the highlands of the interior enjoy a temperate climate and possess a good soil, and the great natural riches of the country only await energetic development to make of this colony a really valuable possession. The natives are Congo negroes, and belong to the great Bantu stock. What proportion of the four million inhabitants of Angola would be available for training and fighting in Europe it is impossible to say. Here, again, one has to bear in mind that for centuries the coast and its hinterland were famous as a slave-market—a sure sign that initiative, skill, and learning were alike at a low ebb. No one endeavoured, or wished, to enslave the Zulus or Abyssinians; under no circumstance except conquest could such tribesmen be docile and domestic.

North of British Sierra Leone, and entirely shut in on the landward side by French possessions, is Portuguese Guinea, a comparatively small and little-known colony, fourteen thousand square miles in extent, with a population of about three-quarters of a million. The national value of this colony also changed with the smashing of the slave traffic, and its outside trade is insignificant.

The last of the Portuguese possessions in Africa is practically the first and richest—the Cape Verde Islands. Here there is a coaling-station, which is chiefly utilised by local steamers. The men of the Cape Verde Islands prefer the labour of fishing or fruit-farming to that of coaling a steamer under a tropical sun. This duty, therefore, falls largely on the women, who, negro-like, prefer to carry their loads in baskets on their heads. The pace at which they trot hour after hour from the coal-dump, along the gangways to the hatches, is marvellous. A gang of men with barrows would have to be spry to beat

 [*All Rights Reserved.*]

some of the records put up. The ten small islands have in all a population of one hundred and fifty thousand.

There are two islands off the Niger coast which must be mentioned. These are San Thomé and Principe, where the growing of cocoa by slave or indentured labour has given rise to much discussion in Britain. One of the effects of Britain's closer alliance with Portugal may be the absolute suppression of pressed labour in any form in these small but extremely wealthy and fertile islands.

The Portuguese trader has long ago taken his flag from the Arabian coast and the Persian Gulf, where on the small island of Ormuz he made the first European settlement in that quarter. Here, as in India, where also he was pioneer, he has been succeeded by the Briton, whose absolute and final command of the Gulf lands is now certain.

Of the old Portuguese possessions in India, three small remnants are left in Goa, Damao, and the Isle of Diu. The total area is about sixteen hundred square miles, of which Goa accounts for nearly fourteen hundred, and the population is about five hundred and fifty thousand. Goa is 'down coast' two hundred and fifty miles from Bombay, but neither the town nor its hinterland is really remarkable. Into the East Indies the Portuguese four hundred years ago sailed the only alien ships; but in time the Dutch ousted them from all possessions except the 'larger half' of the remote island of Timor, the proximity of which to Australia is interesting. Portuguese navigators, indeed, discovered our island-continent; but the north coast, which they touched, is even to-day largely a sterile and uninhabited wilderness. There are five hundred thousand inhabitants on Timor; but the Europeans are mostly of Dutch extraction; and perhaps as a fighting asset the place must be said to be of little importance.

The sailors from the Tagus went east to China, and in the sixteenth century pioneered the first European settlement there, Macao. Their possession has been uninterrupted ever since; but it was only in 1887 that the Chinese Government officially admitted that this island and port were in Portuguese hands. Camoens, the national poet of Portugal, wrote his *Lusiad* there; but Macao seems rather more celebrated to-day as the place where the European can excursionise from Hong-kong, and become mildly interested in fan-tan and other gambling games of Chinese origin. There are some sixty-five thousand inhabitants on the five square miles of island.

With Macao closes the list of Portuguese dominions overseas. They are really extensive, making in all some eight hundred thousand square miles, and populous to the estimated number of nine millions. Portugal stands ninth in the list of colonial Powers for area, and thirteenth in regard to population. Yet these possessions are but a fragment of a noble possession lost in the decadent period of Portuguese history. After a succession of sailor princes had sent out expeditions to conquer and to trade, the country fell on evil political days. There were long minorities in succession, and finally Spain descended upon and conquered the leaderless land. The great overseas dream was forgotten, and the two nations were combined for the exploitation of America, which was a nearer task, and one which offered more immediate profits. The truly Portuguese colonies were neglected, and fell away. When the country regained its independence there was much setting of the house in order; but the lands which had once been under the flag could only be resumed by war, and war in Europe was too expensive a remedy. Besides, Portugal had a vast American possession in Brazil, which provided an outlet for all its colonising energy. It was not until this land declared itself independent and a republic that the hopes of Portugal changed; and in recent years Portugal has itself become a republic—a marvellous republic, for it has not forgotten its ancient friend and ally, Britain.

It was to save Portugal from French domination that Wellington led his troops in the Peninsular war; and since then, in crisis after crisis, Britain has stood as a true friend to the most western country in Europe.

THE DEFINITE OBJECT.

CHAPTER III.—HOW GEOFFREY RAVENSLEE WENT SEEKING AN OBJECT.

A CLOCK in the hall without struck midnight, but Mr Ravenslee sat there long after the silvery chime had died away, his chin sunk upon his broad chest, his sombre eyes staring blindly at the fading embers, lost in profound and gloomy meditation. But all at once he started and glanced swiftly round toward a certain window, the curtains of which were partially drawn, and his lounging attitude changed instantly to one of watchful alertness.

Now, as he sat thus, broad shoulders stooped, feet drawn up—poised for swift action—he beheld a light that flashed here and there, that vanished and came again, hovering up and down and to and fro outside the window; wherefore he reached out a long arm in the gloom, and silently opened a certain drawer in the escritoire.

Came a soft click, a faint creak, and a breath of cool fragrant air as the window was cautiously opened, and a shapeless Something climbed

through, while Mr Ravenslee sat motionless—waiting.

The flashing light winked again, a small, bright disc that hovered uncertainly and finally steadied upon the carved cabinet in the corner, and the Something crept stealthily thither. A long-drawn, breathless minute, and then the room was flooded with brilliant light, and a figure, kneeling before the cabinet, uttered a strangled cry and leapt up, only to recoil before Mr Ravenslee's levelled revolver.

A pallid-faced, willowy lad this, of perhaps seventeen, who, sinking to his knees, threw up an arm across his face, then raised both hands above his head.

'Ah, don't shoot, mister!' he gasped; 'oh, don't shoot—I got me hands up!'

'Stand up!' said Ravenslee grimly. 'Up with you, and shutter that window. You may have friends outside, and I'm taking no chances! Quick, shutter that window!'

The lad struggled to his feet, and, crossing to the window, fumbled the shutter into place, his ghastly face turning and turning toward the revolver that glittered in such deadly fashion in Mr Ravenslee's steady hand. At length, the shutters barred, the boy turned, and, moistening dry lips, spoke hoarsely and with apparent effort. 'Oh mister, don't go for to croak a guy as—as ain't done nothin'.'

'You broke into my house.'

'But I haven't took nothin'.'

'Because I happened to catch you.'

'But—but—— Oh, sir,' stammered the boy, taking off his cap and fumbling with it while he stared wide-eyed at the threatening revolver, 'I—I ain't a real thief—'cross me heart and hope to die I ain't! Don't croak me, sir!'

'But why in the world not?' inquired Mr Ravenslee. 'Alone and unaided I have captured a desperate criminal, a bloodthirsty villain—caught him in the very act of burgling a cabinet where I keep my cigars of price—and Mr Brimberly's, of course! Consequently to—er—croak you is my privilege as a citizen; it's all quite just and proper; really, I ought to croak you, you know.'

'I ain't desprit, mister,' the boy pleaded. 'I ain't a reg'lar crook; dis is me first try-out, honest it is!'

'But then I prefer to regard you as a deep-dyed desperado. You must be quite—er—sixteen! Consequently it is my duty to croak you on the spot, or hand you over to the police.'

'No, no!' cried the boy, his tremulous hands reached out in a passion of supplication, 'not de cops; don't let th' p'lice get me. Oh, I never took nothin' from nobody. Lemme go! Be a sport, and let me beat it, sir!'

All Mr Ravenslee's chronic languor seemed to have returned, as, leaning back in the deep cushioned chair, he regarded this youthful malefactor with sleepy eyes, yet eyes that missed nothing of the boy's quivering earnestness as he continued, breathlessly, 'Oh, I ain't a real crook. I never done nothin' like this before, an' I never will again if—if you'll only let me chase meself.'

'And now,' sighed Mr Ravenslee, 'I'll trouble you for the 'phone yonder.'

'Are ye goin' to call in de cops?'

'That is my intention. Give me the 'phone.'

'No!' cried the boy, and, springing before the telephone, he stood there, trembling but defiant.

'Give me that telephone!'

'Not much I won't!'

'Then, of course, I must shoot you!'

The boy stood with head up-flung and fists tight-clenched. Mr Ravenslee lounged in his chair with levelled pistol. So they fronted each other; but, all at once, with a sound between a choke and groan, the lad covered his face. 'Go on!' he whispered hoarsely; 'go on—what's keepin' you? If it's th' cops or croaking, I—I'd rather croak.'

'Why?'

''Cause if I was ever sent to prison it 'u'd break her heart, I guess.'

'Her heart?' said Mr Ravenslee, and lowered the pistol.

'Me sister's.'

'Ah, so you have a sister?' and Mr Ravenslee sat up suddenly.

'Lots o' guys has, but there ain't a sister like mine in all N' York, nor nowheres else.'

'Who are you? What's your name?'

'Spike. Me real name's Arthur, but Arthur sounds kinder soft an' sissy; nobody don't call me Arthur 'cept her, an' I don't mind her.'

'And what's her name?'

'Hermy—Hermione, sir.'

'Hermione! Why, that's Greek! It's a very beautiful name.'

'Kind o' fits her too!' nodded Spike, warming to his theme. 'Hermy's ace-high on the face and figure question. Why, there ain't a swell dame on Fift' Av'ner, nor nowheres else, got anythin' on Hermy as a looker!'

'And what of your father and mother?'

'Ain't got none; don't remember havin' none; don't want none. Hermy's good 'nuff for me.'

'Good to you, is she?' inquired Mr Ravenslee.

'Good t' me!' cried Spike. 'Good? Well, say, when I think about it I—I gets watery in me lamps, kinder sloppy in me talk, an' all mushy inside. Good t' me? Well, you can just bet on that!'

'And,' inquired Mr Ravenslee sleepily, 'are you as good to her?'

Hereupon Spike turned his cap inside out, and looked at it thoughtfully. 'I—I dunno, mister.'

'Ah! perhaps you make her cry sometimes?'

Hereupon Spike began to pick at the lining of his cap, and finally answered, 'Sometimes, I guess.'

'Would she cry if she could see you now, I wonder?'

Hereupon Spike began to wring and twist his cap in nervous hands ere he answered, 'I—I guess she might.'

'She must love you a good deal?'

At this Spike twisted his cap into a ball, but spoke nothing. Seeing which, Mr Ravenslee proceeded: 'You are luckier than I; there isn't a soul in the world to do as much for me.'

Spike gulped audibly, and thereafter sniffed.

'Now, suppose,' said Mr Ravenslee—'let us suppose she found out that the brother she loved so much was a—thief?'

Hereupon Spike unrolled his cap and proceeded to rub his eyes with it, and when at last he spoke it was in a voice broken by great sobs: 'Say, cut it out! cut it out! I never meant to—to do it. They got me soused; doped me, I think; else I'd never have done it. I ain't good, but I ain't so rotten bad as—what I seem. I ain't no real crook; but if you wanter croak me for what I done, go ahead! Only don't—don't let de cops get me, 'cause o' Hermy. If you croak me she'll think I got it in a scrap maybe; so if you wanter plug me, go ahead!'

'But what are you shivering for?'

'I—I'm just waitin', sir,' answered Spike, closing his eyes. 'I—I seen a guy shot once.'

Mr Ravenslee sighed and nodded. 'After all,' said he, 'I don't think I'll croak you;' and he slipped the revolver into his pocket, while Spike watched him in sudden tense eagerness.

'Whatcher mean to do wi' me?' he asked.

'That's the question; what shall I do with you? Let me think.'

'Say,' cried the boy eagerly, 'you don't have to do no thinkin'; leave it all to me! It's de winder for mine; I'll chase meself so quick'——

'No, you don't! Sit down—sit down, I say!'

Spike sighed and seated himself on the extreme edge of the chair his captor indicated. 'Won'tcher lemme beat it, sir?' he pleaded.

'No; some one else might catch you next time, and have the pleasure of—er—croaking you, or handing you over to the police.'

'There won't be no next time, sir!' cried Spike eagerly. 'I'll never do it no more. I'll cut de whole gang. I'll give Bud M'Ginnis de throw-down—on de dead level, I will, if you'll only let me'——

'Who's Bud M'Ginnis?'

'Say!' cried the boy, staring, 'don'tcher know that? Why, Bud's de main-squeeze wi' de gang, de whole cheese, he is—an' he kind o' thinks I'm de candy-kid 'cause he's stuck on me sister.'

'Ah!' nodded Mr Ravenslee, frowning a little, 'and is she—er—stuck on him?'

'Not so as you could notice it, she ain't. No, she can't see Bud with a pair of opry-glasses, an' he's a dead-game sport too. Oh, there ain't no flies on Bud, an' nobody can lick him either; but Hermy don't cotton none; she hasn't got no use for him, see? But, say'—— Spike rose tentatively and looked on his captor with eyes big and supplicating.

'Well, what now?'

'Why, I thought if you was tired of me chewin' de rag, and wanted to hit the feathers, I'd just cop a sneak. See, if you'll only lemme go I'll do de square thing, and get a steady job like Hermy wants me to—honest, I will, sir! Ye see, me sister's away to-night—she does needlework for swell folks, an' stops with 'em sometimes; so if you'll only let me beat it, I can shin back an' she'll never know. Ah, lemme go, sir!'

'Well then,' sighed Mr Ravenslee, 'for her sake I will let you go. Wait! I'll let you go, and never speak of your—er—little escapade here, if you will take me with you.'

Now at this Spike gaped and fell back a step in sheer amazement. 'Go wi' me—wi' me?' he stammered. 'You—go wi' me to Hell's Kitchen—to Mulligan's Dump—you! Say, what kind o' song and dance are you givin' me, anyway? Aw, quit yer kiddin', sir!'

'But I mean it.'

'On—on de level?'

'On the level.'

'Holy Gee!' and Spike relapsed into wide-eyed, voiceless wonder.

'Is it a go?' inquired Mr Ravenslee.

'But—but, say,' stammered the boy, glancing from the elegant figure in the chair round the luxurious room and back again—'but you're a—a'——

'Just a poor, disconsolate, lonely—er—guy.'

'What!' cried Spike, staring round him again; 'with all this? Oh yes, you're homeless and starvin', you are—I don't think!'

'Is it a go?'

'But say, whatcher want to go wi' me for? What's yer game? Put me wise.'

'I am filled with desire to breathe awhile the salubrious air of Hell's Kitchen. Will you take me?' Now, as he spoke, beholding the boy's staring amaze, Mr Ravenslee's frowning brows relaxed, his firm, clean-shaven lips quivered, and all at once curved up into a smile of singular sweetness; a smile before which the hopelessness and fear died out of the boy's long-lashed eyes, his whole strained attitude vanished, and he smiled also—though perhaps a little tremulously.

'Will you take me, Spike?'

'You bet I will!' exclaimed the boy, his blue eyes shining; 'and I'll do my best to show you I—I ain't so bad as I—as I seem—an' we'll shake on it if you like.' And Spike advanced with his hand outstretched, then paused, suddenly abashed, and drooping his head, turned away. 'I—I forgot,' he muttered, 'I—I'm—you said I was—a thief.'

'You meant to be,' said Mr Ravenslee, and, rising, he stretched himself and glanced at his watch.

'Are you comin' wi' me, sir?' inquired Spike,

regarding Mr Ravenslee's length and breadth with quick, appraising eyes.

'I surely am.'

'But—but not in them glad rags?' and Spike pointed to Mr Ravenslee's exquisitely tailored garments.

'Ah, to be sure,' nodded their wearer; 'we 'll soon fix that;' and he touched the electric bell.

'Say,' cried Spike, starting forward in sudden terror, 'you—you ain't goin' to give me away?'

'No.'

''Cross your heart—hope to die, you ain't?'

'Across my heart and hope to die I 'm not, and there 's my hand on it, Spike.'

'What!' exclaimed the boy, his eyes suspiciously bright; 'd'you mean you will shake—after—after what I'——

'There 's my hand, Spike.'

So their hands met and gripped, the boy's hot and eagerly tremulous, the man's cool and steady and strong; then of a sudden Spike choked, and, turning his back, brushed away his tears with his cap; also at this moment, with a soft and discreet knock, Mr Brimberly opened the door and bowed himself into the room. His attitude was deferential as always, his smile as respectful; but, beholding Spike, his round eyes grew rounder and his whiskers slightly bristly.

'Ah, Brimberly,' nodded his master, 'you are not in bed yet—good!'

'No, sir,' answered Mr Brimberly, 'I 'm not in bed yet, sir; but when you rang I was in the very hact, sir.'

'First of all,' said Young R., selecting a cigar, 'let me introduce you to—er—my friend Spike.'

Hereupon Mr Brimberly rolled his eyes in Spike's direction, glanced him over, touched either whisker, and bowed, and, lo! these fleecy whiskers were now eloquent of pompous dignity; beholding which, Spike shuffled his feet, averted his eyes, and twisted his cap into a very tight ball indeed.

But now Brimberly turned his eyes (and his whiskers) on his master, who had taken out his watch.

'Brimberly,' said he, 'it is now very nearly two o'clock.'

'Very late, sir—ho, very late, sir. Indeed, I was in the very hact of goin' to bed, sir—I 'd even unbuttoned my waistcoat, sir, when you rang—two o'clock, sir—dear me! a most un'oly hour, sir'——

'Consequently, Brimberly, I am thinking of taking a little outing'——

'Certingly, sir. Oh, certingly!'

'And I want some other clothes'——

'Clothes, sir—yessir. There 's the noo 'Arris tweed, sir'——

'With holes in them, if possible, Brimberly.'

''Oles, sir! Beg parding, sir, but did you say 'oles, sir?'

'Also patches, Brimberly—the bigger the better.'

'Patches!—hexcuse me, sir, but—patches! I beg parding, but'—— Mr Brimberly laid a feeble hand upon a twitching whisker.

'In a word, Brimberly,' pursued his master, seating himself upon the escritoire and swinging his leg, 'I want some old clothes, shabby clothes—moth-eaten, stained, battered, and torn. Also, a muffler and an old hat. Can you find me some?'

'No, sir, I don't—that is, yessir, I do. Hexcuse me, sir—'arf a moment, sir.' Saying which, Mr Brimberly bowed and went from the room with one hand still clutching his whisker very much as though he had taken himself into custody and were leading himself out.

'Say,' exclaimed Spike in a hoarse whisper and edging nearer to Mr Ravenslee, 'who 's His Whiskers—de swell guy with de face trimmings?'

'Why, since you ask, Spike, he is a very worthy person who devotes his life to—er—looking after my welfare, and—other things.'

'Holy Gee!' exclaimed Spike, staring. 'I should have thought you was big 'nuff to do that for yourself, unless'—— and here he broke off suddenly and gazed on Mr Ravenslee's long figure with a new and more particular interest.

'Unless what?'

'Say, you ain't got bats in your belfry, have you? You ain't weak in the think-box, or soft in the nut, are ye?'

'No; at least not more than the average, I believe.'

'I mean His Whiskers don't have to lead you around on a string, or watch out you don't set fire to yourself, does he?'

'Well, strictly speaking, I can't say that his duties are quite so far-reaching.'

'Who are you, anyway?'

'Well, my names are Geoffrey, Guy, Eustace, Hughson, and—er—a few others; but these will do to go on with perhaps?'

'Well, I guess yes!'

'You can take your choice.'

'Well, Guy won't do—no, siree—ye see, every mutt 's a guy down our way—so I guess we 'll make it Geoff. But, say, if you ain't weak on the think-machinery, why d'ye keep a guy like His Whiskers hangin' around?'

'Because he has become a habit, Spike—and habits cling; and speaking of habits, here it is.'

Sure enough, at that moment Brimberly's knuckles made themselves discreetly heard, and Brimberly himself appeared with divers garments across his arm, at sight of whom Spike stood immediately dumb in staring, awe-struck wonder.

'Ah, you 've got them, Brimberly?'

'Yessir! These is the best I can do, sir.'

'Say rather the worst!'

''Ere 's a nice big 'ole in the coat, sir,' said Mr Brimberly, unfolding the garment in question; 'and the weskit, sir, the pocket is tore, you 'll notice, sir.'

'Excellent, Brimberly!'

'As for these trousis, sir'——

'They seem rather superior garments, I'm afraid,' said Mr Ravenslee, shaking his head.

'But you'll notice as they're very much wore round the 'eels, sir.'

'They'll do. Now the hat and muffler.'

'All 'ere, sir; the 'at's got its brim broke, sir.'

'Couldn't be better, Brimberly.' So saying, Mr Ravenslee took up the clothes and turned toward the door. 'Now I'll trouble you to keep an eye on—er—young America here while I get into these.'

'Sir,' said Mr Brimberly, turning his whiskers full upon Spike, who immediately fell to shuffling and wringing at his cap—'sir, I will, certingly, sir.'

Now, when the door had shut after his master, Mr Brimberly raised eyes and hands to the ceiling and shook his head until his whiskers quivered. Quoth he, 'Hall I arsks is, wot next?' Thereafter he lowered his eyes and regarded Spike as if he had been that basest of base minions—a boy in buttons. At last he deigned speech: 'And w'en did *you* come in, pray?'

''Bout a hour ago, sir,' answered Spike, dropping his cap in his embarrassment.

'Ah!' nodded Mr Brimberly, 'about a hour ago. Ho! By appointment, I pre-zoom?'

'No, sir; by a winder.'

'A wot?'

'A winder, sir.'

'A—winder? 'Eavens and earth—a winder! 'Ow? Where? Wot for?'

'Say, mister,' said Spike, breaking in upon Mr Brimberly's astounded questioning, 'is 'e nutty?' and he jerked his thumb toward the door through which Mr Ravenslee had gone.

'Nutty!' said Mr Brimberly, staring.

'Yes. I mean, is 'e batty? 'As 'e got wheels?'

'W'eels?' said Mr Brimberly, his eyes rounder than usual.

'Well then, is 'e daffy—off 'is trolley?'

'Off 'is wot?' said Mr Brimberly, fumbling for his whisker.

'Holy Gee!' exclaimed Spike, 'can't you understand English? Say, is your brother as smart as you?'

'The honly brother as ever I 'ad was a infant as died, and—— But wot was you saying about a winder?'

'Nothin'.'

'Come, speak up, you young vagabone,' began Mr Brimberly, his whiskers suddenly fierce and threatening; but just then, fortunately for Spike, the door swung open, and Mr Ravenslee entered.

And, lo, what a change was here! The battered hat, the faded muffler, and shabby clothes seemed only to show off all the hitherto hidden strength and vigour of the powerful limbs below; indeed, it almost seemed that with his elegant garments he had laid aside his lassitude also, and taken on a new air of resolution, for his eyes were sleepy no longer, and his every gesture lithe and quick. So great was the change that Spike stared speechless, and Mr Brimberly gaped with whiskers a-droop.

'Well, shall I do?' inquired Mr Ravenslee, tightening his faded neckerchief.

'Do?' repeated Spike. 'Say—you look all to de mustard, Geoff! You—you look as if you could do things now!'

'Strangely enough, Spike, I rather feel that way too.' So saying, Mr Ravenslee took a pipe from the rack, filled it with quick, energetic fingers, and proceeded to light it, watched in dumb amaze by the gaping Brimberly.

'Brimberly,' said he, 'I shall probably return to-morrow.'

'Yes, sir,' said Mr Brimberly faintly.

'Or the day after.'

'Yes, sir.'

'Or the day after.'

'Yes, sir.'

'Or the day after that. Anyhow, I shall probably return. Should any one call—business or otherwise—tell 'em to call again. Say I'm out of town; you understand?'

'Out of town? Certingly, sir.'

'Referring to—to the matter we talked of to-night, Brimberly'——

'Meanin' the hobject, sir?'

'Precisely. Don't trouble yourself about it.'

'No, sir.'

'No, Brimberly. I'm going to try to find one for myself.'

'Ho, very good, sir!'

'And now,' said the new Mr Ravenslee, laying one white, ringless hand on Spike's shoulder, and pointing toward the open door with the other, 'lead on, young Destiny!'

AT THE STOR FOSS ON THE TANA RIVER.

By G. Lindesay.

SOME fifty miles up from the bleak Arctic fjord into which it discharges, the Tana, the finest salmon-river in Scandinavia, forms the series of heavy rapids known throughout Norsk Finmarken as the Stor Foss. Below that point, with the exception of one long stream at Saida, where the road from Nyberg, on the Varanger Fjord, comes in, there is no break in the smooth, slow-flowing current of the great river, as it winds northward

in majestic curves between low, birch-clad banks.

At the lower end of the pass, where, in order to ascend the foss, the canoes have to be unloaded, there is a fine, deep, rocky pool, in which it might be expected that salmon would rest after their long journey from salt water. But such does not appear to be the case, at any rate in spring, as not until well on in the season have I ever risen a clean fish in Neskutcheram Savo.

In the foss itself, when the water has run down to summer level, there are some of the best and certainly most sporting casts on the river (which, with its confluents, is ascended by the migratory fish for a distance of about four hundred miles); but in the snow flood these are quite unapproachable.

The passage of the great rapids—which are over a mile in length—must entail considerable additional effort on the part of salmon ascending in spring; nevertheless, the reaches immediately above are of little use for angling at that time of the year, and not until they reach the magnificent pools Biavra Savo, Galgo Guoika, and Ula Savo—about ten miles farther—do the big June fish rest for a space on their way to the upper waters, and display an interest in artistic combinations of fur and feather.

Having learned from experience that even the short and extremely rapid casts in the Stor Foss might run too low, I elected one season to try them for a few days when there was still a fair amount of water in the river, leaving my companion in possession of the lonely little cottage which stands on the Norwegian side of the Ula Savo.

The tent and various adjuncts necessary for a week's camping out have been brought down to the edge of the stream; the rods, a gaff, and a formidable 'priest' have been placed in the long Finmarken canoe which rides buoyantly alongside, and at either end of which stand my two favourite Lapps, stripped to the waist. I take my place amidships, and the next minute the light craft, propelled by vigorous thrusts from the birch poles, shoots rapidly up to the head of our home pool. The hour is 6 P.M., and the July sun is still far too high in the heavens; but before leaving I cannot resist going over Ula Savo just once.

In the neck of the stream, near the Russian side, a salmon comes short at the fly, and after taking out a few yards of line, falls off; then right out in the middle of the main current a good fish swipes the 'Durham Ranger,' and rushes downstream at a tremendous pace. The Lapp in the stern backwaters all he knows with his broad-bladed paddle, the one in the bows with his sculls; and, just as the catastrophe of being run out seems inevitable, the reel ceases screaming, and the situation is saved. When the gallant fish has expended a good deal of its energy, and seems to be fairly under control, I am landed on the rocky ledge that runs down the Norwegian side of the long pool; and ere long the Lapp, with a shout of triumph, gaffs out a magnificent Salar of thirty-eight and a half pounds, with sea-lice decking his silvery coat.

Faithful to its traditions, Ula Savo yields two more fish, a twenty-two and a twenty-six pounder; then we take our impedimenta on board and shoot off down the great rapid called Galgo Guoika.

There being a hopeless glare on the surface of Biavra Savo, we pass by that famous pool; and, without trying any of the other casts on the way, we arrive at the head of the Stor Foss about half-past ten.

As in these parts the midnight hour is of no use for salmon-angling purposes, even when the sun is well above the horizon, there is no time to waste. With the exception of the fishing-gear, everything is put on shore; once more the canoe glides out into the stream; and within five minutes I am fast in a twenty-seven pounder. This fish makes no attempt to go down, but fights out his battle for life among the big submerged boulders at the entrance to the pass. Ultimately, therefore, it is gaffed within twenty yards of where it rose. Stern foremost, and very carefully steered, we now drop down to the next cast, a most attractive-looking spot surrounded by rocky ledges, and with a sharp, rippling current throughout. Evidently the Lapps anticipate sport here, for they guide the canoe so as to disturb the water as little as possible; and they are justified, for with the assistance of a medium-sized Jock Scott I secure, one after another, four salmon, which weigh on an average twenty-three pounds apiece. Each, as it is hooked, is forced or guided downstream into a less contracted area, where it is played, and ultimately gaffed.

It being now past twelve o'clock, there is no use in descending farther. In high good humour at our success, the Lapps drive the canoe upstream at a great pace, and soon we are engaged in arranging the little camp. A few hours before, the thermometer showed a temperature of ninety-two degrees Fahrenheit in the shade; now ice forms on the lines and flies attached to the rods which stand ready for use close by. After a square meal of fresh salmon-steaks, grilled on a birch-wood fire, accompanied by the blackest of black coffee, there is only time for a very short nap. Then, about 1.30, I emerge from the tent. Another long summer day has begun, and under the benign influence of the rising sun, all nature is reviving after a brief period of suspended animation. The mosquitoes are on the war-path in untold millions; the lemmings—of which a great migration was last year in process of development—are everywhere in evidence; up among the birch-woods that

crown the heights on either side of the pass, cock ryper are crowing lustily; on the broad reaches of river away up toward the island, called Fossholmen, filmy wreaths of vapour flit hither and thither; in the shallows and eddies innumerable grayling are rising; a sullen plunge in the mist-shrouded water in front of the tent denotes the presence of a heavy salmon; high aloft in the clear air a mighty eagle is winging its way toward the wastes and tundras of Inner Finmarken; and the only other sound that breaks the silence is the hoarse roar of the Stor Foss.

When we reach the fine pool at Fossholmen, the vapour—held in such abhorrence by Norwegian anglers—has cleared away from the surface of the water; and on a snow fly, after a hard fight—in the course of which nearly one hundred and eighty of the two hundred yards of line on the reel are run off—a handsome female fish of thirty-two pounds is secured. On the way back to camp a small salmon of ten pounds is added to the bag; and after that we once more enter the Foss.

To describe in detail the morning's sport there would be tedious. Suffice it to say that at 7 A.M. we return to the tent with seven salmon weighing together one hundred and sixty-three pounds; and that, after we have been taken down a whole series of boiling rapids by a very heavy fish, it escapes when almost within reach of the outstretched gaff.

For three more days—or, rather, nights—the foss continues to yield good bags; but on the fourth there is a marked falling off, and so we return to Galgo Guoika and Ula Savo, having added several hundreds of pounds to the season's catch.

LA SIERPES.

CHAPTER III.

THE thick walls had prevented us from hearing the firing, but now we could hear the crackle of the carbines as we hurried out. We had really only three men with us, but my uncle, as soon as he came in sight and hearing of the Spaniards, turned and beckoned as if we had plenty, and shouted in Spanish, that they might understand, 'This way, my lads; now we have got them!' The enemy, seeing this—to our surprise we saw that there were not only guerrillas, but a few regulars among them—faltered. Rushing forward, I shot one with my pistol, and our men wounded two more. This decided the guerrillas to retreat, and the General and I and Pierre soon rallied our troopers, and drove them out of the buildings, but not before one of them had been set on fire. Unfortunately several horses had broken loose or had been captured. However, with our wounded, we got safely within the walls of the convent. The whole affair had been so sudden that Pierre, whose wound luckily was only a slight one, could give no very succinct account of how it had happened. He had placed the guards; but the guerrillas, approaching under cover of the woods, had shot one sentry, and the others, having fired their carbines, retreated to give the alarm to their comrades, who were calmly preparing their meal or looking to their horses; and the next moment the Spaniards were among them. Luckily, from a loft where they had rushed in their panic, some of our men had picked off two of the leaders; but it was only our arrival and the General's ruse that had turned the scale. Though we were safe within the high walls of the convent, our position was anything but pleasant. The presence of the regulars was a mystery, and the fact that we had no knowledge of how many of them there were made the situation worse; and the more we thought of the trap we were in the less we liked it.

What worried me was the danger to my darling Mary. I shuddered to think of what her fate would be if these ruffians fought their way into the building. The very size of it, too, made it all the more difficult, with our small numbers, to defend. We were aware that the news of our situation would spread like wildfire; and as wolves in a forest are attracted by the howling of others, so guerrillas—ay, and peasants—would come from afar, urged on by their priests and monks, whose very natural bitter hatred against the despoilers of their churches was ever smouldering.

'Now, Henri,' said my uncle to me, 'I admit we are nearly *au pied du mur;* but we have got that priest as a hostage, and we will string him up if the worst comes to the worst. I will make him tell them so; but there's only one thing to be done—we must get help, and as Delnard is wounded, you must go to Barcelona. Tell Foy how we are placed; tell him what valuable pictures, plate, and vestments we have got. Take one man, or two if you like, and choose your own horses. I give you *carte-blanche.*'

I knew the extreme danger of my mission. I knew the cruel torture that awaited me, perhaps even crucifixion, if I were caught; but the danger my darling Mary was in overruled everything, so I did not hesitate a moment. There was a man in the squadron named Bernon; he was born on our side of the Pyrenees, but I fancy his parents came from the other. Till he joined the army he had been a *contrabandista,* and spoke French or Spanish as it suited him. He was a bold, unscrupulous, and ready-witted rogue. He might have been promoted over and

over again, for he had no sense of fear, and seemed to court danger for the sake of it; but, perhaps from his early wild training, he could not bear discipline. It was only his love of plunder, the proceeds of which he soon threw away on dissipation, that kept him from deserting; but he was so useful in many ways that his superiors dealt lightly with escapades that would have been severely punished if committed by any one else. I sought him out, and his bright and merry dark eyes twinkled at the prospect. Besides, my uncle had instructed me to tell him he should have two hundred *pesetas* if we succeeded.

The first thing was for both to be thoroughly disguised, and for this purpose I changed clothes with young Vegara, who was highly pleased with himself in my sky-blue uniform; while Bernon used those of the old gardener and Vandermeeren.

'I understand the whole affair,' said Bernon. 'You, *mon capitaine*, will be an English officer come from Blake, and you want to know why your general has not heard from La Sierpes, who was sent to Barcelona some time ago. You follow me?'

'Oh, quite,' I answered, as I gazed in admiration at the ready-witted liar; 'but I know very little English.'

'Well, in that case you have come from Lord Wellington to act under Blake, and you belong to the German Legion.'

'*Mon Dieu! vous êtes rusé*,' I could not help exclaiming, as, of course, being an Alsatian, I spoke German.

'As regards the rest,' he continued, 'you leave everything to me. The great thing is to get out of this infernal place.'

The convent was a singularly flat building, and was so surrounded by woods that even from a small belfry one could not see the surrounding country; but we knew that Barcelona was due south, and the farm to the north of the building. We could see the Spaniards on this latter side near it, and also among the trees immediately opposite the entrance. My uncle resolved to make a feint in the direction of the farm to draw off their attention, while we slipped out to the south. After I had kissed Mary, and told her to keep up her courage, Bernon and I led our steeds to a little gate as soon as the firing began. Quietly leading our horses, we kept in the thickest part of the forest for what seemed to us an interminable distance; but at last we came to the edge of it and took our bearings. Though it was a longer route, we thought it safer to bear away to the west and make a detour.

All went well at first. We had got into fairly open country with hardly a dwelling to be seen, and had turned to the south again, and reckoned we were within two leagues of the city, when we saw a fellow with a long rifle. What's more, he had seen us, for he was frantically waving to some one whom we could not see.

'*C'est de l'audace, seulement de l'audace*, that will save us now, *mon capitaine*,' said Bernon.

'You are right; I know that; but remember I will leave most of the talking to you;' and, waving my arm to the guerrilla, and about six others who had now come into view, I rode straight toward them, followed by Bernon.

'*Tenga usted cuidado, gavachos*' ('Take care; there are Frenchmen about'), I shouted as I got near them, and I pointed away to the north. The bulk of them had their guns and blunderbusses levelled at us; but on hearing these words a very handsome, gaudily dressed, sturdy young fellow came toward us. We afterwards found out he was Diego Laraja, a well-known chief, better known as Cara Ancha ('Broad Face'), though I could not see, considering his good looks, why he should have got that sobriquet.

'Who are you? Where do you come from?' he asked sharply.

I met his gaze steadily and brusquely, as one who was used to being obeyed, and beckoned to Bernon.

'This is a distinguished officer on the staff of General Blake,' said Bernon. 'Nearly a month ago La Sierpes was to have brought us papers from Barcelona. The General has neither seen nor heard of him, nor got any answer. We have heard rumours that he is dead, but he would be a clever man who could kill "the Serpent." It is most likely, so we have been told, that he has spread that news himself. They say some girl has bewitched him, and that he is dallying and wasting his time with her; so the General has sent *el Señor Capitan* to find out for himself.'

In a moment the guerrilla changed his tone on learning who I was and whence I came.

'But, alas! it is only too true, *Señor Capitan*,' he said, addressing me. 'La Sierpes is dead.'

'Dead!' I replied. '*Que lastima!*' ('Oh, what a pity!').

'Yes, he is dead; but, *gracios á Dios, el garvoche* who killed him is also dead. We know that for a fact, though those French tried to keep it dark.'

It was not an easy matter for me to hear of my death in this way without betraying myself.

'But we must have the papers,' continued Bernon. 'I must act as guide, and take the captain to an address of an old woman named Corvalez, *numero* 16 *en el calle abajo*.'

'Oh, you have got to go there, have you?' replied Cara Ancha suspiciously. 'Now listen to me, my friend,' he said in a voice that showed he was not too well pleased. 'That old witch is the grandmother of La Blonda; she was the magnet that drew La Sierpes to Barcelona on any excuse he could get, and no wonder, for she is the most beautiful girl in the world. Have you seen her? Do you know her?'

'No, I don't,' replied Bernon.

'Well, I do, and this is what she told me: "Now that my beloved is dead, for one year I will listen to no man." I wanted her to keep this token,' and as he spoke the guerrilla held up a beautiful and valuable gold watch; 'but she would not take it. But remember La Blonda is mine, so you are not to go "plucking the turkey."* You had better not get making love to her, unless you want a taste of this,' he said, significantly tapping his dagger.

'Bah!' replied Bernon, 'she may be pretty, for all I know; but I have a far prettier bird in my cage. Why, Conchita—Conchita'——

In a second the fellow's bright *navajo* flashed out.

'Hold!' I exclaimed authoritatively; 'I have not come here for this sort of thing! Have no fear, my good man, that I shall allow any love-making on his part. Time is too precious, the game is too dangerous, for that. Give us the watchword and the countersign, and look out for us to-morrow. Trust me that I will, to please you, tell La Blonda that if there is any man who is worthy of her love, when her mourning has ceased, it is Cara Ancha.'

The guerrilla's eyes sparkled with pleasure and gratitude at this piece of flattery. Stepping forward, he wrung my hand. 'You will hardly require them,' he said, 'for from that hill you will see the sea and Barcelona before you; but "*Santissima Trinidad*" is the watchword, and "*La Venganza*" ("Vengeance") the countersign.'

Wishing him *con Dios*, I and my companion rode safely out of the trap we had fallen into. What pleased and very much surprised me was that the guerrillas seemed not to have known of the skirmish we had had that very morning with their comrades, or that the convent was actually in danger; and I put it down to Cara Ancha's thoughts being completely taken up by his beautiful friend in the city. The heat was overpowering; but we pressed on, and, entering the town, made straight for the *quartier-général*, where an aide-de-camp, on hearing the urgency of our mission, at once took us to General Foy.

The danger my uncle was in, and the value of the pictures and the plate, were quite enough for him, and he gave me an order to my colonel to start at once with all the men he could gather together. The colonel saw that time was everything, and without any delay he, a *chef d'escadron*, a lieutenant, and one hundred and twenty men were on their way.

(*Continued on page 57.*)

* To serenade. Though a common and ordinary expression, the origin of this phrase is obscure.

SOME ANCIENT ETRUSCAN AND GALLIC TOMBS.

By J. B. Underwood.

CHANCE has often been the friend of history and its students. In 1840, for instance, about eleven miles from Rome, on the site of the ancient town of Veio (according to Holstein, Nardini, and Ariodante Fabretti), a tomb was discovered called the Scaletta, in consequence of heavy rains having carried away the earth which covered it. In 1823 Avvolta discovered at Corneto, amongst the mounds called I Monti Rossi, a tomb through the enlargement of an opening due to some unexplained cause. Examining it, he saw the remains of a warrior stretched out in a sarcophagus, who at the contact of the air vanished under his eyes. About 1860, on an estate belonging to Count Baglioni, at Ponte San Giovanni, near Perugia, a man ploughing saw an ox disappear suddenly from sight. Hurrying to rescue it, with the help of some others, from the pit into which it had fallen, he descended, and found there the richest Etruscan tomb yet discovered, afterwards called the Voluni, the name of those who had there found eternal rest. The tombs of Chiusi saw the light of day partly through works of improvement, and partly through the mysterious gifts of a diviner.

It was not before the nineteenth century, however, that systematic investigations began to be made by private citizens and by the Italian Government to unearth these precious records of ancient history. Especial praise is due to Prince di Canino, son of Lucien Bonaparte, who, from 1829 to 1832 almost uninterruptedly, made excavations and researches at Vulci; also to the Duchess di Sermoneta, who, at her own expense, did the same at Santa Marinella and at Castel d'Asso in 1838. Prince Torlonia, in 1835, saw the unearthing of a grotto which took his name; and the Marquis Campana consecrated part of his life to the same work, and was instrumental in revealing a part of the most important necropolis of Veio and the truly marvellous grotto of the Rilievi.

By this we do not mean to say that excavations before that time were not made, or brought forth lesser results; for even as far back as 1507 we know of attempts which revealed various tombs at Castellina, in Chianti; but it is well to remember that only too often the fruits of these labours were lost during the flight of years.

Veio gives us a typical proof of this, as it was accorded the first place amongst Etruscan towns, and was for centuries the rival of Rome in war, and her mistress in arts and civilisation; indeed, the intimacy was so close that it is difficult to separate the two cities in the mind of the

historian. Notwithstanding so much grandeur and magnificence, which would have carried her to the heights of power if the wisdom of Camillus and his eloquence had not saved her Latin rival from her hate, in the time of Augustus Veio became the prey of most pitiful desolation, and hardly a century later was so forgotten that the annalists confess to ignorance of her position. Recolonised in times nearer to the Empire, Veio quickly returned to a decadence which was to cancel her for ever from the geographical map of Italy; and only in these last years has some memory of her excited the admiration of the world for what was once so grand and imposing a city.

Less known, but just as instructive, is the history of some tombs found at Sutri, discovered very early, in which the Romans had laid their dead both in pagan and Christian times. The turbulent epoch which followed the Empire saw these tombs inhabited by bandits, and to-day they are used as stables or cellars, and the sarcophagi found there are used for troughs and mangers.

We have always believed, as the school histories teach, that the Gauls were barbarians whose only pursuits were war and rapine. Modern excavations, however, have shown that, on the contrary, they were capable of civilisation, and that they preserved in their tombs, as if for a testimony to a distant future, all the precious bronzes of which they were proud, the taste for which they had acquired from the civilised nations with whom they came into contact. Some months ago, as the result of excavations under the direction of Professor Dall' Osso of the Archæological Museum at Ancona, at Montefiore dell' Aso, in the Marches, an archaic necropolis was unearthed, which has clearly proved that a hitherto unknown civilisation existed in the territory extending from the river Foglia to the Trento. A century before this district was conquered by the Romans its population was mixed with a Gallic element. The tombs discovered, especially in the valley of the Musone, between Osimo and Filottrano, which are nearest to the necropolis of Piceno (Picenum), show that the Gauls finally established themselves there, and lived and laboured in peace with the natives, with whom they had previously been at war. Many rich gold ornaments have been found near Montefortino and Filottrano, and scientific studies and observations must infallibly lead to others.

At San Filippo, near Osimo, in a recently discovered tomb of a young man, the most interesting objects found were some dice. A few weeks later a still more interesting discovery was made in the same district, of the splendid tomb of a Gallic matron, rich in magnificent objects. The skeleton was well preserved, the forehead low, and it was remarkable that there were traces of a wreath which must have encircled the whole head. Judging from the whiteness of her teeth, all nearly perfect, it is presumed that the lady died young. She must have been the wife of a patrician, and perhaps she traversed the streets of Rome, riding beside her victorious spouse, whilst the burning city resounded with the despairing cries of the fugitives. In this tomb were many articles for toilet use, and objects of gold, necklaces, brooches, and rings, amongst them a ring with a seal engraved with a flying Pegasus. There were also vases of terra-cotta and a mirror on which were to be seen vestiges of textile fabric covering it, possibly to protect its clearness from dust. All these objects are now in the Ancona Museum.

Another interesting tomb discovered in this district contained the panoply of a warrior and other objects of funeral equipment, more or less in a fragmentary state. The iron weapons consist of four lances, two daggers, a bludgeon, and several spears. The armour is formed of two great discs of bronze metal plates mounted on strong iron sheets, with traces of the rings through which passed the strips of leather which, crossing over the shoulders, kept it in place. Remains of the helmet and the leggings were also found. Amongst the funeral trappings are the personal ornaments in bronze and iron, consisting for the most part of buckles, an armlet, and a ring, in which is set an incised figure. There are also kitchen utensils, many articles in terra-cotta, cups and goblets with the characteristic horn handle, a large concave plate, and a number of very small vases of perhaps a religious or symbolic signification.

Another tomb of the same character has the remains of the war chariot placed above the skeleton, but little of it remains except the hoops of the wheels, the plates which strengthened them, the rundlets and the pegs of the yoke. Unfortunately this tomb, through having been comparatively near the surface, had been injured by agricultural labourers, and part of the objects brought to light by the plough had been thrown into a corner as so much old iron.

The tomb of a young girl shows the skeleton covered with a mantle made almost entirely of thousands of ivory, glass, and amber rings, and adorned with little necklaces. In this tomb were also found clasps made of large lumps of amber, bracelets, rings, and a quantity of pendent amulets of the most varied and graceful patterns. The perfect condition of these articles is such as to form a precious relic which may enable archæologists to reconstruct the ancient dress of the women of Piceno, and is a further proof of the truth in the words: 'Tombs speak where history is mute.'

THE OFF-CHANCE.

By TAFFRAIL, Author of *Pincher Martin, O.D.*, &c.

I.

IT had been a pretty little show, quite the sort of business they had all been longing for for months, but it had ended rather disastrously for the poor old *Dragonfly;* and Parr, her lieutenant-commander, was cursing himself bitterly for a reckless fool. His left arm hung in an improvised sling, for during the affair he had managed, somehow, to get in the way of a machine-gun bullet. It had drilled a neat hole through the fleshy part of his forearm; a stupid, silly-looking little puncture which throbbed and smarted abominably.

But it was not the pain of the wound which irritated him. It was the damage to his destroyer. She lay motionless like a log on the water, her stern practically level with the sea. She had an unholy list to starboard, and every man on board knew, from the sluggish feel of her as she lifted to the slight swell, that she was badly, if not fatally, holed.

The affair had begun at six o'clock in the morning, when a squadron of British light cruisers and a flotilla of destroyers had approached the hostile coast with the intention of making a sudden onslaught on a German destroyer flotilla reported to be in the vicinity. The enemy had been duly encountered, and the resulting engagement had been more or less of a mêlée, in which single British craft had found themselves in close action with single Germans. Several of the latter had been sunk, and the others, badly mauled, sent scurrying back to their base as fast as their engines could drive them; but when Parr had succeeded in reducing his immediate opponent to little more than a wreck, and had suffered a certain amount of damage to himself and his ship in the process, he was suddenly brought to his senses by a heavy burst of fire from another direction.

Then it was that he realised that his valour had outrun his discretion. He had chased his quarry too far, for on looking round he saw that the rest of the British squadron farther to seaward was hidden behind a wall of fog rolling in from the North Sea. Shoreward, the weather was still clear; but there, barely three miles away, a long, four-funnelled hostile light cruiser, a venomous-looking beast, with a great white wave at her bow, dense volumes of black smoke pouring from her funnels, and sparkling gun-flashes breaking out from her gray sides, was racing at full speed in his direction. She had evidently been sent out from Heligoland to support the German destroyers, and at the comparatively short range her shooting rapidly became too accurate to be pleasant.

Parr, firing his own guns in a valiant endeavour to keep her off, promptly turned seaward, and made off at full speed. He had about thirty knots at his disposal, and once he managed to get behind the bank of fog out at sea he would be safe.

But it was not to be. The German was going fully thirty-two knots, and before the mist closed down her gunners were doing excellent work. Spray fountain after spray fountain leapt into the air round the flying destroyer, and at last a shell, bursting aft, flung the after 4-inch gun clean into the sea, and killed every man who served it. The after-funnel, torn and perforated by high-explosive shell splinters, soon resembled a gigantic nutmeg-grater. A whaler suspended in her davits amidships was set on fire and utterly demolished; the topmast was cut through by a ricochet, and came down with a crash, bringing the aerial of the wireless telegraphy with it; while the canvas screens on the bridge, already torn and punctured in all directions by the stream of bullets from the hostile destroyer, were freshly perforated by splinters.

The loss in men had been heavy, for one officer and twelve bluejackets or stokers had been killed, and a round dozen wounded; a total of twenty-five out of a ship's company of about eighty all told. As a fitting climax, a 4·1-inch shell had penetrated into the engine-room just before the *Dragonfly* slid out of sight of her pursuer behind the friendly fog. The engine-room was instantly flooded, and both condensers had been damaged so badly that they could not be repaired. As a consequence the little ship had been brought to an absolute standstill.

They had had their revenge, it is true; for, when the cruiser came careering into the pall to finish off her work, the torpedo gunner, Mr Bowles, had fired a couple of torpedoes in her direction without waiting for orders from the bridge, and, more by good luck than by management, one of them had gone home. There had come the dull roar of a heavy explosion, and then the shrieking of escaping steam and an uproar of voices. The noise had died away, and a quarter of an hour later the creaking of blocks and more shouted orders showed that boats were being lowered. Then there were muffled reports from bursting bulkheads, and ominous-looking ripples travelled out of the fog toward the destroyer. Then dead silence.

The torpedo had done its work; but the *Dragonfly* was helpless. She could neither steam nor work her steam-pumps for expelling the water from her perforated hull. She was unable to summon help on account of damage to the dynamo and to the wireless, while

she lay within fifteen miles of a hostile coast, in waters which, when the fog lifted, would be swarming with German torpedo craft. It was not a joyful prospect; and though every man on board was fully determined to fight the ship until she went down with her colours flying, the best they could hope for was the inside of a German prison until the end of the war.

No wonder her skipper cursed his luck. It certainly was the limit!

II.

'You think you can keep her afloat—what?' Parr queried, pausing between the bites of a corned-beef sandwich, the first food he had tasted since the previous evening.

Thompson, the engineer lieutenant-commander, nodded. 'Yes, provided we have good weather,' he said, stooping down and squeezing oily water out of the legs of his overalls. 'We've managed to plug most of the bad holes—the job's been more like a bally bathing picnic than anything else—and so long as the sea doesn't get up she'll float. What d'you make of the weather, sir?' he asked anxiously. 'If any decent-sized seas come slopping in over the upper deck we're a goner.'

'The glass is pretty steady, and I don't think we'll have wind,' Parr returned, looking overhead. 'There's no chance of using the engines, I suppose?'

'Engines!' sniffed the other. 'You might just as well expect us to steam her with the inside of the wardroom clock! There's not a dog's chance of getting a kick out of 'em this side of about three months' dishing up in a dockyard. You've seen the mess-up yourself; everything's'——

'Yes, I quite understand,' the lieutenant-commander put in hastily. 'The only thing we can do is to sail the bally old ship home; but how the deuce can we do that in a flat calm, eh?' he laughed grimly.

'Sail her?' echoed Thompson, opening his eyes. 'How'——

'No, chief, I wasn't really speaking seriously. I'm afraid—though I hate to say it—that our goose is properly cooked this time. If it comes on to blow hard we shall sink. If the fog clears the "strafers" will spot us for a dead cert., and sink us after a bit of a scrap.' Parr sighed deeply and shrugged his shoulders.

'In fact,' supplemented the engineer, 'we're practically certain of being collared by the Huns unless something happens—what?'

'Quite so,' Parr nodded. 'Either killed or collared. You see, we're within fifteen miles of their coast, and what current there is is carrying us towards it. What can happen?'

'Perhaps some of our own chaps will come back to look for us?'

The skipper instantly scouted the idea. 'I'll lay you a hundred to one in half-crowns they won't,' he said with decision. 'They don't know we're here, for one thing. That wireless of ours has gone to blazes. We might, of course, abandon ship, and take to what boats we've got left. We'd have a chance of getting home, perhaps, but'—— He hesitated.

'But what?'

'I don't fancy leaving her till there's no other alternative.'

'I agree,' Thompson murmured sadly, thinking of his wife and children at home in England. 'We're done in properly, and all we can do is to make up our minds to being shoved into a Hun prison till the end of the war. Curse that rotten shell!' he concluded savagely. 'It might have hit us in fifty other places without doing all this damage!'

Parr smiled. 'Cheer up, chief! While there's life there's hope!' He knew that there was precious little hope, but he felt bound to say something consoling.

Thompson merely snorted as he walked away.

By some peculiar and most unusual hazard of the weather, the fog had continued throughout the morning and afternoon, till now, at 4 P.M., it was, if anything, thicker than ever. The swell had slightly increased, but the surfaces of the smooth-bosomed undulations were not marred by the least ruffle of wind. It seemed utterly improbable that the murk would thin itself and clear away until a breeze sprang up, and at present there were no signs of such a thing happening. The clerk of the weather seemed to have shut up shop and retired to bed.

Parr felt very irritable and depressed. He hated the suspense of waiting and of not knowing what was going to happen. It got on his nerves, but even he cherished a fervent hope that the fog would last till dark. When the night once fell the *Dragonfly* would probably remain undetected until the following dawn, even if the weather did clear after sunset. That would give, say, another twelve hours' grace, and during that time some merciful Providence might intervene on his behalf and cause something to happen to save the ship, the men, and himself. It did not seem the least likely, he was bound to admit.

The hours passed slowly—five o'clock, six o'clock, seven o'clock—and then at last a slight reddish glow overhead showed that the sun was nearing the horizon. Half-an-hour later Parr was standing on deck talking to Thompson and the sub-lieutenant, when Mr Bowles suddenly clattered up the steep ladder leading from his cabin. The worthy gunner, as there had been nothing else to do, had spent the latter part of the afternoon asleep on his bunk; but from his extreme haste it was obvious that he had been roused in a hurry. His fat, good-natured face was still rosy with sleep; his attire was distinctly *décolleté;* while he himself was panting with excitement.

'What on earth 's the matter now, Mr Bowles?' the skipper queried, smiling in spite of his anxiety.

The gunner drew a deep breath. 'I was asleep on my bunk just now, sir,' he explained hastily, 'and I distinctly heard the noise of a propeller in the water. It 's pretty close, and seems to be coming our way.'

Parr did not wait to answer, but scuttered down the ladder, entered the gunner's cabin, and pressed his ear to the still warm pillow on the bunk. Thompson and Mr Bowles followed him.

'D' you hear it, sir?' the gunner queried in a hoarse whisper.

The skipper motioned him to be quiet.

The ship, with her engines stopped and no machinery of any kind moving, was unusually still; and presently, after accustoming himself to the silence, Parr could hear a faint, rhythmic, but quite unmistakable *chug-chug—chug-chug—chug-chug*. Now water, as he well knew, is an excellent medium for the transmission of sound, and he had often noticed when lying on his bunk in his cabin, with the ship in harbour and his head on the pillow close to the vessel's side, that it was possible to hear the thudding of a propeller at quite a respectable distance. The sound he now heard was precisely similar, and was, without a doubt, caused by the propeller of a ship with reciprocating engines; a single-screw vessel, from the regularity of the thuds. If it had been a turbine-driven craft, where the screws revolve very fast for even a slow speed, the noise would almost have amounted to a *whir-r-r-r-r*. What type of ship she was he had no means of knowing for certain; but the chances were she was not a man-of-war, for very few of them have single screws. She might be a steam tramp or a trawler, he thought, something small and inoffensive; but guessing was not the least use, and he raised his head from the pillow.

'You 're right, Mr Bowles,' he remarked with a nod. 'I can hear it quite plainly, and she 's certainly getting closer.'

'I knew it, sir,' answered the gunner with a happy grin, rather pleased at his own perspicuity.

Mr Bowles's habitat was on the port side of the ship; and as the noise of the propeller-beats was inaudible from the starboard cabins, it followed that the vessel was approaching from port—that is, from the direction of the German coast. They all verified this, and then returned to the deck and listened anxiously for any sounds. They could hear nothing.

Without any definite idea as to what he intended to do, Parr ordered the last serviceable boat, a five-oared gig, to be lowered and brought alongside. This was accomplished in silence, the oars were muffled, and many men, armed with revolvers and cutlasses, under the orders of the sub-lieutenant, tumbled into her. Travers, the first lieutenant, whose job it really should have been, had been wounded during the engagement, and now lay in his cabin.

The guns, meanwhile, were loaded and manned in case the new-comer should turn out to be a man-of-war.

The night fell and rapidly grew darker. Eight o'clock came; but still they could hear nothing on deck. Down below, however, the *chug-chug* sounded louder than ever, and it was quite evident that the ship was groping her way slowly toward them through the fog.

The acoustic properties of fog are always very peculiar, probably on account of the moisture in the atmosphere. At times, for instance, the powerful compressed-air fog-siren of a lightship or lighthouse can be heard everywhere for many miles, but at others there are areas of complete silence in which it will not be heard at a thousand yards, even though there may be no wind. It was so on this occasion, for quite suddenly, at 8.10 P.M., they heard the thudding of a screw and the swish and tinkle of a ship's passage through the water. The sounds were so close as to be almost deafening after the long silence, and a second or two later they could hear men talking in German.

'We are on the spot, Hans,' somebody said in a loud, guttural voice.

'*Ja;* that is so,' another man agreed. 'I will stop the ship and blow the whistle, so that if any of them are still afloat they may call out.'

'Great Scott!' the lieutenant-commander gasped in astonishment—realising what it all meant as the raucous bellow of a steam-whistle boomed out until the very air seemed to vibrate—'that cruiser we torpedoed must have got off a wireless signal before she sank. This chap has come out to rescue her survivors.—Mr Bowles,' he added, suddenly making up his mind, 'I 'm going away in the whaler. She 's evidently something small, and I shall try to get on board and capture her.'

'But your arm!' protested the gunner and Thompson together in a whisper.

'Damn the arm!' said Parr in an excited undertone, clambering down into the boat with difficulty.—'Oars ready, men! Shove off!—Mr Bowles!'

'Sir?'

'You look out for the ship, and if you hear me sing out for help, send across all the men you can spare in the dinghy. D' you understand?'

'Yes, sir,' came a rather depressed answer from somewhere overhead in the fog. Mr Bowles, though a married man, was bitterly disappointed; he was dearly longing for another 'scrap.'

The bowman was bearing the boat off with

his boat-hook, when another figure dropped down the ladder into the stern-sheets.

'Who the devil are you?' Parr demanded angrily. 'I can't take you all!—Give way together!'

'It's all right, sir,' answered Thompson, relapsing on to the stern benches. 'It's only me. I've come to look after you.'

Parr laughed. 'Right you are, chief! Glad to have you. You might take that thing off my knee-cap, though. What is it?'

'Mauser pistol,' said the other. 'I've been longing to use him for ages.'

The skipper sniggered, for Thompson's ideas of 'looking after' people seemed rather original. It appeared, indeed, as if he intended to carry out a little 'frightfulness' on his own account. He was armed to the teeth.

III.

It was not for nothing that Parr had spent a couple of years in Germany; and, trusting to his excellent knowledge of the language, and being alive to the fact that the stranger might possibly be expecting to meet boats with the cruiser's survivors, he hoped to have no difficulty in getting on board. He realised, however, that when once he was there he was bound to be discovered, so he made his arrangements accordingly.

Thompson, with two armed engine-room ratings and a seaman, was immediately to go below to the engine-room to prevent the Germans there from wrecking the machinery or trying to sink the ship by interfering with valves; while another couple of men were detailed for the boiler-room for a similar object. The sub-lieutenant, with the coxswain and one A.B., was to make or fight his way to the bridge and take charge of the vessel; and another small party was told off to rush the wireless telegraphy office, if there was such a thing, to prevent any signal from being sent off asking for assistance. The instruments themselves, however, were not to be damaged. Parr himself, with the remainder of the men, was to account for all the Germans on deck.

No shouting was to take place, and as little noise as possible made, owing to the chance of other hostile vessels being in the vicinity; while, if possible, cutlasses were to be used instead of revolvers for the same reason. The main object, he concluded by pointing out, was to capture the ship in a serviceable condition. She was then to be taken alongside the *Dragonfly*, and, granted reasonable luck and fine weather, was to tow the damaged destroyer back to the British coast.

At first things happened exactly as Parr had imagined they would, and after leaving the destroyer astern they paddled gently in the direction whence they could hear the voices in the fog. Very soon they saw the glow of a light shining through the murk, and in another instant or two the dark bulk of a small vessel loomed up out of the black haze. It was so thick that they were practically alongside before they spotted her.

There came a gruff hail from overhead. 'Boat ahoy!' sang out a surprised voice in German. 'What boat is that?'

Parr evaded the question. 'What ship is that?' he asked in the same language, putting the helm over as they scraped alongside, and the bowman reached up with his boathook.

'This is the Government naval trawler *Nachtigal*,' came the reply. 'Are you from the *Dortmund*?'

The *Dortmund* was evidently the name of the light cruiser they had sunk; and, realising that everything depended upon a ready answer, the Englishman replied, 'Yes.' His heart was in his mouth; but as he and all his men were purposely wearing oilskins, and were without caps, there was not much danger in the darkness of the boat or her crew being recognised as British. 'Who is in command of the trawler?' he asked gruffly, preparing to leave the boat.

'Reserve Sub-Lieutenant Otto Fuchs, who is speaking,' came back the unsuspecting answer.

'I am Ober-Leutnant von Hagen,' Parr volunteered, selecting a name utterly at random. 'There are other survivors in the vicinity, so I will take charge. My men will come on board.'

The boat was now alongside, and he could see the heads of four men silhouetted against the lantern-light behind; and, realising that hesitation would give the whole affair away, he motioned his men to follow, and tried to clamber up. The sub and half-a-dozen bluejackets actually got on board; but Parr himself had forgotten his wounded arm, and his first attempt was unsuccessful.

'Give me a leg up, chief,' he whispered in Thompson's ear.

The engineer did so, and in another instant he was on deck, with the German sub-lieutenant solemnly clicking his sea-booted heels, his hand to his cap. Parr gravely returned the salute.

The *Nachtigal* was not heavily manned, for, with the exception of the officer and three men standing close to Parr, another couple on the small bridge close to the funnel, and a group of three more busy about something on the forecastle, there was nobody else visible on deck.

'What are your orders?' asked Parr in a peremptory voice, seeing out of the corner of his eye that most of his men were on board and going to their appointed places.

'I am to search'—— The German never got any further, for at that moment there came a loud shout, and the sounds of a scuffle on the

bridge. These were followed by a resounding thud as some one went down.

The British sub, a well-known Rugby footballer, had acted. He had collared one of his opponents low, hurled him to the deck, and was now calmly sitting on his chest, telling him to be quiet. The men with him were tying up the second fellow, and the whole thing had been accomplished without the least difficulty or danger.

The German sub-lieutenant, however, sized up the situation at a glance. Unarmed as he was, he sprang straight at Parr; and before the latter, encumbered by his oilskin, could draw his pistol, he was rolling on the deck, with his enemy on top of him. Parr, handicapped by his wounded arm, could not shake off his assailant, and in another moment he felt the grip of powerful fingers round his windpipe. He tried to shout, but merely gasped for breath. The stars began to dance before his eyes as the pressure increased.

'Ere!' suddenly came a loud voice in his ears; 'not so much o' it, my son!' The grip on his neck died away, and he felt the weight of his adversary whisked off his chest.

It was one of the *Dragonfly's* A.B.'s, who, seeing his commanding officer's plight, had seized the German by the scruff of the neck, swung him bodily through the air, and dashed him to the deck like a sack of potatoes.

The skipper scrambled to his feet, breathless, but safe.

On deck, meanwhile, the remainder of the enemy were being hunted like rats by isolated bluejackets, flourishing their cutlasses; but from the very first the Germans had no chance. Not one of them was armed. They were terrified at the sight of the cold steel, and fell on their knees, praying for the mercy they did not expect. They got it, but it is to be feared that some few of them were also rather badly bruised by the flat of the cutlass-blades. In the boiler-room, engine-room, wireless telegraphy cabin, the surprise had been equally complete; and within five minutes of Parr and his men stepping on board, the *Nachtigal* was in British hands, and her late crew were being lashed hand and foot.

Thompson's nose was bleeding badly from violent contact with something in the engine-room; but except for this and a few scrapes and bruises, the victory had been quite bloodless for the conquerors.

IV.

Of how the trawler was taken alongside the *Dragonfly*, of how she took the destroyer in tow, and of how they set out together across the North Sea at a gait which nearly brought the tears to Thompson's eyes, we cannot tell here. The waterlogged *Dragonfly* was a fiendish thing to tow, and progress was terribly slow; but luckily the weather remained fine. The fog cleared away, and many were the anxious glances cast astern toward the eastern horizon for the first signs of a hostile man-of-war. They fully expected to see a great gray hull looming up over the edge of the sea; but—nothing came.

On the second day out, Banks, the *Dragonfly's* petty officer telegraphist, succeeded in getting into communication with a British light cruiser by means of the trawler's wireless.

Parr and his ship had been given up for lost, and there was no small jubilation when he made his signal saying that the *Dragonfly* was safe; that he desired accommodation for eighteen fine, fat, healthy, but rather obstreperous German prisoners; and would some kind person kindly give him orders as to the disposal of a very excellent steam-trawler he had captured?

'Well!' exclaimed the cruiser's captain when the battered *Dragonfly* was safely in tow astern of his powerful little ship, the prisoners had been transferred and were in safe keeping, and the *Nachtigal* was back to an English port in charge of the destroyer's sub-lieutenant—'well! that fellow Parr has the luck of the very devil!'

I am inclined to think that he has.

. . . . . .

Parr's first care on getting back to civilisation was to visit a jeweller's, and there he purchased the most expensive silver tobacco-box he could find. He felt it was a trumpery gift; but Mr Bowles values it very highly, for outside it is simply inscribed, 'E. C. B., from P. P.,' with a date. Inside, however, where it cannot be seen, for the gunner is of a modest and retiring disposition, is another inscription. 'In memory of a very eventful day,' it runs, 'when your afternoon caulk undoubtedly saved the *Dragonfly* from loss or capture, and her officers and men from a German prison.'

A HIGHLAND LAMENT.

By Lady Skerrington.

No more will he tramp o'er the heather
Where the grouse and the curlew cry,
And never again in the gloaming
Shall I watch while he casts his fly.

The roedeer may browse in the copsewood,
And the hare in the clover grass;
They never again will be startled
By hearing his light step pass.

His rod still lies where he left it,
His gun still rests on the rack;
But never again shall I see him
Return o'er the moorland track.

The birds in the heather are calling,
The river winds down to the sea;
But never, alas! will my dear one
Come back from the past to me.

THE STRANGER-CHILD ON DARTMOOR.

By BEATRICE CHASE, Author of *The Heart of the Moor*, *Through a Dartmoor Window*.

OF the native child I have written more than once. During the past nine months it has been my privilege to watch the effect of the moor upon strange children, gentle and humble—one a boy from the sea, the other a girl from the East End of London. These psychological observations have further confirmed one of my favourite theories—that thoroughly to understand beauty we must first have experienced ugliness, and thoroughly to enjoy happiness we must previously have known sorrow.

I first met the boy one Sunday morning in April while I was meandering up between the bogs to the nearest tor. Cold though it was, and late though the spring comes to us on Dartmoor, there were signs of new life, chiefly in the sheets of golden gorse-buds and the tiny flecks of white among the bog-bean leaves in the emerald splashes of the bogs. Upward I went, rejoicing, when suddenly, almost under the shelter of the great gray tor, I saw a child in the charge of a lady. One rarely meets humanity there. If one does, it is moorland etiquette to speak. I greeted them, and fell in love with the child on the spot. He was dressed in a pretty blue-and-white striped jersey and cap, and though I was a stranger, he sprang to the salute like a man. He is not yet six years old. Finding him utterly self-possessed, I stayed 'to tell,' and then discovered that I knew his mother. I asked if he would go on to the tor with me, and he agreed joyfully. When we reached the height, the moor lay unrolled, a vast enchanted land guarded by tor castles. It was a dark, gray day, without a ripple of wind. Earth and sky were steeped in a dove-like peace. Right in the very centre of the great scene stood Bellever, the heart of the moor. Three 'swaling' fires had been lighted on the rim of moor before him—fires whose opaque pearl-white smoke ascended in three straight columns to heaven. If any artist could have painted that picture worthily, he would have made his name and his fortune.

I turned to my small new friend. He stood absorbed. Hesitatingly I asked if he liked the moor. It is not, speaking generally, popular with children, because there is practically no occupation for them; and this child, I knew, had come from the sea, with its alluring tides and sands, and bathing and paddlings. He answered warmly in the affirmative. Yes, he loved the moor—loved it with much emphasis. At first I thought he was being polite, but it soon appeared that Dartmoor had got at his very heart-strings. To my amazement, he pointed out every tor by name. There was not one he did not know, and he never once made a mistake. He had been five days on the moor then. I watched and listened. He was obviously in an ecstasy of happiness. At last I asked, 'Can you tell me why you love it so?'

He answered, almost pale with emotion, 'It is so wonderful.'

I returned home pondering. It was new and heavenly, this swift, unerring response from a child-soul. He came, he saw, he loved, and that love will influence all his life. He is to be envied. Any child who comes so young to Dartmoor and understands her is to be envied. This is a very delicate child. His delicacy is, indeed, the reason why he has been brought here from the more relaxing sea. A few days later his mother brought him to see me. She became absorbed in conversation with my mother, the Rainbow-Maker. The small boy lost no time in cultivating me.

'Please,' he began with his usual politeness, but in a firm tone, 'will you show me your chapel?'

I hesitated. Again I thought he was only being polite. It does not occur to one, off-hand, that a boy of under six can possibly be interested in a chapel. However, I found I was wrong again. I took him in. He stood murmuring, 'Oh, what a dear little chapel!' and had not finished speaking when I was suddenly called away. A little later he came to me, evidently much absorbed, and said, 'Thank you very much for letting me see your chapel.' Then, after a pause, he added, 'Who preaches there?' I tried to explain that the owner of a private chapel is in the blissful position of not hearing a sermon from one year's end to another. He considered that for some time. Clearly his main idea about church-going was that you heard sermons. 'Then what do you do in your chapel?' he asked at last.

'I pray, for one thing,' I answered promptly. 'That is, I go there when I want to speak to God.'

He nodded portentously. 'I see.'

And I believe he did.

In due course his parents had to return to

 [*All Rights Reserved.*]

their seaside home, and the child was brought to say good-bye. He was steeped in sadness. He came up, put a little hand in mine, and said, 'Good-bye! I shall never see you again.'

I was shocked, and urged on him that three months would soon pass.

'No! no! It's such a long time away.'

It was pathetic to see how sorely he felt the coming exile. He said good-bye again, and went off down the hall. Just as he reached the door he turned, ran back, opened his arms wide, and reached up for a kiss. Then he stepped outside, and stood looking in at the open door of the chapel. He did not know I could hear, but I heard him murmur, 'Good-bye, little chapel; good-bye.' He stood silent for a time, gazing in. Then slowly he kissed his left hand twice, and said again, 'Good-bye, little chapel; good-bye.'

If he had been on the stage exactly as he was, there would not have been a dry eye in the house. And to this day he does not know he was seen or heard.

The other little alien arrived from the East End of London at a time when air-raids were very frequent. She is a highly nervous child, and had been frightened almost out of her senses night after night by the noise and confusion.

She and her mother, a widow, came to reside in a tiny, old, sunny, thatched cottage all to themselves, instead of living in rooms in the same house with other people. This in itself was delightful; and besides this, the child found Paradise. She is eight years old, and knew nothing of the country. One mild winter afternoon, when not a flower was yet open, she joined me on the bridge above the clear, brown stream, and began to talk. Did I know what daisy-chains were like? Were they long chains, long enough to go round her neck? Did I think there would ever be enough daisies out to make a whole chain with? She had heard, too, of buttercups, and she longed to see them, because 'they said' they were bright yellow. Could you make buttercup-chains as well as daisy-chains, because, if so, they would be gold chains, wouldn't they? And did buttercups grow in the fields; and, if so, would she be allowed to go in to pick them if she promised to be very careful about not treading on the grass? When I had successfully conquered a sudden desire to weep, I explained what she would see and feel like in hay-time. I told her of the sheets of white and gold all up and down the land. I told her of the walls on the way to school—walls mauve with wild violets, draped with pink roses, guarded by regiments of royal red-purple foxgloves. She listened spell-bound, but obviously could not even imagine a place where you could roll on grass and pick more flowers than you could ever carry home. We sat on for a time in silence. Then, sidling nearer to me, she waved her hand to the lines of tors above us, and said, 'Isn't it like living in a great fairy-ring to live on Dartmoor? Look at the ring of the hills right round us!'

Wise, wise child! It is indeed like living in a great fairy-ring to live on Dartmoor, and you, from the East End of London, perhaps know the enchantment of this magic circle better even than we who have never lived in a city slum.

Once, upon a golden afternoon, I took this little alien for a drive to Bellever bridge. She was lifted out of herself all the way. Coming home, she said, after a long silence, 'Well, I have seen the river Dart at last.' I agreed, delighted that she had grasped the truth. 'And that is the river,' she went on thoughtfully, 'which asks every year for a heart.'

'What do you know about that?' I asked.

'I read it in one of your books,' she answered, a trifle patronisingly. 'Don't you remember it? It is poetry:

> River of Dart, River of Dart,
> Every year thou demandest a heart.'

I maintained a reverent silence for the rest of the drive, feeling, as I often do feel in the presence of children, that they are beyond me.

That evening, after her tea, she sat beside the fire, very thoughtful.

'Mother, who made the Dart?' she asked at last.

'God,' replied her mother.

'And why did God make the Dart want a heart?'

'Perhaps some day you will know. I don't.'

I wonder, child, if you will experience that universal craving for love which flows from every heart, beginning with the Heart of God, echoing through the hearts of mankind and re-echoing even in that mysterious river from which our enchanted moorland takes her very name?

THE DEFINITE OBJECT.

CHAPTER IV.—TELLING HOW HE CAME TO HELL'S KITCHEN AT PEEP OF DAY.

IT was past three o'clock and dawn was at hand as, by devious ways, Spike piloted his companion through that section of New York City which is known to the initiated as Hell's Kitchen. By dismal streets they went, past silent, squalid houses and tall tenements looming grim and ghostly in the faint light; crossing broad avenues very silent and deserted at this hour; on and on until, dark and vague and mysterious, the great river flowed before them, only to be lost again as they plunged into a gloomy court where tall buildings rose on every hand, huge and very silent, teeming with life, but life just now wrapped in that profound quietude of

sleep which is so much akin to death. Into one of these tall tenement buildings—its ugliness rendered more ugly by the network of iron fire-escape ladders that writhed up the face of it—Spike led the way, first into a dark hallway, and thence up many stairs that echoed to their light-treading feet. On and up they went, past dim-lit landings where were doors each of which shut in its own little world, a world distinct and separate, wherein youth and age, good and evil, joy and misery, lived and moved and had their being. Behind these dingy panels were smiling hope and black despair, blooming health and pallid sickness, and all those sins and virtues that go to make up the sum-total of humanity.

Something of all this was in Geoffrey Ravenslee's mind as he climbed the dingy, interminable stair behind Spike, who presently halted to get his wind and whisper, 'It ain't much farther now, Geoff; only another two flights and'—— He stopped suddenly to listen, and from the landing above a sound reached them, a sound soft but unmistakable—a woman's muffled sobbing.

Slowly, cautiously, they mounted the stair, until in the dim light of a certain landing they beheld a slim figure bowed upon its knees in an agony of abasement before a scarred and dingy door. Even as they stared, the slender, girlish figure sobbed again, and, with a sudden, yearning gesture, lifted a face, pale in the half-light, and kissed that battered door; then, weeping still, she rose to her feet and turned; but, seeing Spike, stood very still all at once and with hands clasped tight together.

'Holy Gee!' exclaimed Spike beneath his breath; then, in a hoarse whisper, 'Is that Maggie—Maggie Finlay?'

'Oh! is that you, Arthur?' she whispered back. 'Arthur—oh, Arthur!—I—I'm going away; but I couldn't go without coming to—to kiss dear mother good-bye; and now I'm here I daren't knock for fear of—father. I've been up to your door and knocked, but Hermy's away, I guess. Anyway, you—you'll say I came to thank her and kiss her for the last time, won't you, Arthur?'

'Sure I will; but where ye goin', Maggie?'

'A long way, Arthur. I don't s'pose I shall ever see this place any more—or you. So, Arthur, will you—kiss me good-bye—just once?'

Spike hesitated; but she, quick and light-treading, came down to him and caught his hand and would have kissed that; but he snatched it away, and, leaning forward, kissed her tear-stained cheek, and blushed thereafter despite the dark.

'Good-bye, Arthur,' she whispered; 'and thank you—and dear Hermy. Oh, good-bye!'

So saying, she hurried on past Ravenslee, down the dark stairway; while Spike leaned over the balustrade to whisper, 'Good-bye, Maggie; an' good luck, kid!' At this she paused to look up at him with great sad eyes, a long wistful look; then, speaking no more, hurried on down the stair—down, down into the shadows, and was gone.

'We used to go to school together, Geoff,' the boy explained a little self-consciously. 'She never kissed me before; she ain't the kissin' sort. I wonder why she did it to-night! I wonder'——

Spike turned and led the way on again until they reached the landing above, across which two doors, dark and unlovely, seemed to scowl upon each other. One of these Spike proceeded to open with a latchkey, and so led Ravenslee into the dark void beyond.

Spike struck a match and lighted the gas; and, looking about him, Ravenslee stared.

A little, cramped room, sparsely furnished, yet dainty and home-like, for the small deal table hid its bare nakedness beneath a dainty cloth; the two rickety arm-chairs veiled their faded tapestry under chintz covers cunningly contrived and delicately tinted to match the cheap but soft-toned drugget on the floor and the self-coloured paper on the walls, where hung two or three inexpensive reproductions of famous paintings; and in all things there breathed an air of refinement wholly unexpected in Hell's Kitchen. Wherefore Mr Ravenslee, observing all things with his quick glance, felt an ever-growing wonder. But now Spike, who had been clattering plates and dishes in the kitchen hard by, thrust his head round the door to say, 'Oh Geoff! I don't feel like doin' the shut-eye business; d'you? How about a cup of coffee? An' I dare say I might dig out some eats. What d'ye say?'

'Is this your sister?' inquired Mr Ravenslee, taking up a photograph from the little sideboard.

'Yep, that's Hermy all right, taken las' year. Does her hair different now. How about some coffee, Geoff?'

'Coffee!' said Mr Ravenslee, staring at the photo; 'coffee—certainly—er—thanks! She has light hair, Spike?'

'Gold,' said Spike, and vanished; whereupon Mr Ravenslee laid the photo on the table, and, sitting down, fell to viewing it intently.

A wonderful face, low-browed, deep-eyed, full-lipped. Here was none of smiling prettiness, for these eyes were grave and thoughtful; these lips, despite their soft, voluptuous curves, were firmly modelled, like the rounded chin below; and in all the face, despite its vivid youth, was a vague and wistful sadness.

'Oh Geoff!' called Spike, 'd'ye mind havin' yer coffee *à la* milko condenso?'

'Milk!' exclaimed Mr Ravenslee, starting. 'Oh—yes—anything will do!'

'Why, hallo!' exclaimed Spike, reappearing with a cup and saucer, 'still piping off Hermy's photo, Geoff?'

'I'm wondering why she looks so—sad!'

'Sad!' repeated Spike, setting down the crockery with a rattle. 'Hermy ain't sad; she always looks like that. Ye see, she ain't much on

the giggle, Geoff, but she's most always singing, 'cept when her kids is sick or Mulligan calls.'

'What do you mean?'

'Oh, Hermy mothers all the kids around here when they're sick, an' lots o' kids is always gettin' sick. An' when Mulligan comes it's rent day, an' sometimes Hermy's a bit shy on the money.'

'Is she?' said Mr Ravenslee, frowning.

'You bet she is, Geoff! An' Mulligan's an Irishman, an' mean. Say, he's the meanest mutt you ever see. A Jew's mean, so's a Chink, but a mean Harp's got 'em both skinned 'way to Frisco an' back again! Why, Mulligan's that mean he wouldn't cough up a nickel to see the Statue o' Liberty do a Salomy dance in de bay. So when the mazuma's shy Hermy worries some.'

'Don't you help her?' demanded Mr Ravenslee.

'Help her? Why, ye see Geoff, I—I ain't in a steady job yet. But I do my best, an'—— Why, there's de kettle boilin' at last;' saying which, Spike turned and vanished again, leaving Mr Ravenslee still staring down at the photo.

Presently Geoff sank back in his chair, and, lolling thus, looked sleepily at the opposite wall, but saw it not, nor heard the clatter of cups and saucers from the kitchen, accompanied by Spike's windy whistling; and, as he lounged thus, he spoke softly and to himself. 'An object!' he murmured.

'Hey, Geoff,' Spike called, 'this ain't goin' to be no *à la carte* hock an' claret feedin' match, nor yet no table-de-hoty eat-fest; but if you can do in some bacon an' eggs you're on.'

'Why, then,' said Mr Ravenslee, rising and yawning, 'count me decidedly "on."'

'D'you mind givin' me a hand wid de coffee?'

'Delighted!' and forthwith Mr Ravenslee stepped out into the kitchen; and there, in a while, upon a rickety table covered with a greasy newspaper, they ate and drank with great relish and gusto, insomuch that Mr Ravenslee marvelled at his own appetite.

'Say, Geoff,' inquired Spike, 'how long are you stoppin' at Mulligan's? A week?'

'A week—a month—six months,' replied his guest sleepily—'it's all according'——

'Accordin' to what?'

'Well—er—circumstances.'

'What circumstances?'

'Circumstances over which I have no control—yet!'

'You don't mean—me?' queried Spike anxiously.

'Lord, no!'

'And you'll never tell nobody that I'——

'Meant to be—a thief?' drawled Mr Ravenslee. 'Not a word!'

Spike flushed, took a gulp of coffee, choked, and fell to sulky silence; while Mr Ravenslee filled his pipe and yawned.

'Say,' demanded Spike at last, 'where'll you live while you're here?'

'Oh, somewhere, I suppose. I haven't bothered about where yet.'

'Well, I been thinkin' I know where I can fix you up—perhaps.'

'Very kind of you, Spike.'

'There's Mrs Trapes 'cross de landin', she lost her lodger last week—she might take you.'

'Across the landing? She'll do,' nodded Mr Ravenslee.

'But I'm wonderin' if *you'll* do; she's a holy terror when she likes, Geoff.'

'Across the landing. I'll put up with her,' murmured Mr Ravenslee.

'But say, you don't know Mrs Trapes.'

'Not yet, Spike.'

'Well, she ain't no easy mark, Geoff! Most everybody in Mulligan's is scared of her when she cuts loose; she can talk ye deaf, dumb, an' paralysed; she can so. She sure is aces up on de chin-music, Geoff.'

'But then she lives just opposite, and that circumstance, methinks, doth cover a multitude of'—— Mr Ravenslee yawned again.

'Anyway, it's a sure thing she won't take you if she don't like ye, Geoff.'

'Why, then, she must like me!' said Mr Ravenslee, and proceeded to light his pipe.

Whereupon Spike produced a box of cigarettes, but in the act of lighting one paused, and, sighing, put it away again. 'I promised de Spider I wouldn't, Geoff,' he explained. 'Ye see, I'm sort of in trainin', and Spider says smoke's bad for de wind, and de Spider knows.'

'Spider!' said Mr Ravenslee, glancing up. 'Do you mean Spider Connolly the light-weight?'

'That's de guy!' nodded Spike.

'Is he a friend of yours?'

'Sure! Him an' Bud M'Ginnis is goin' to get me some good matches soon.'

'Boxing matches?'

'That's what they call 'em, Geoff. But there ain't much boxin' to it; real boxin' don't go down wid de sports; it's de punch they wanter see—good stiff wallops as jars a guy an' makes his knees get wobbly, swings an' jolts as makes a guy blind an' deaf an' sick. Oh, I been like that, an' I know; an' it ain't all candy t' hear everybody yellin' to the other guy to go in an' finish ye!'

'Does your sister know you fight?'

'Not much, she don't! I guess she'd like me to be a mommer's pet in lace collars an' a velvet suit, an' soft an' pretty in me talk. She's made me promise t' cut out de tough-spiel, an' so I'm tryin' to.'

'Are you really, Spike?'

'Well, when she's around I do, Geoff.'

'And she doesn't like you to fight, eh?'

'Nope! But, ye see, she's only a girl, Geoff.'

'And that's the wonder of it,' nodded Mr Ravenslee.

'Wonder! What d'mean?'

'I mean that all these years she has managed

to feed you, and clothe you, and keep a comfortable home for you, and she 's—only a girl!'

'Well, an' ain't I tryin' to make good?' cried the boy eagerly.

'Are you really, Spike?'

'Sure! There 's lots o' money in de fightin' game, an' I 'm fightin' all for Hermy. If ever I get a champ I 'll have money to burn, an' then she 'll never be shy on de dollar question no more, you bet. There 'll be no more needlework or Mulligan's for Hermy; it 'll be a farm in de country, wid roses climbin' around, an' chickens, an'—an' automobiles, an' servants to come when she pushes de button—you bet!'

'Is she so fond of the country?'

'Well, I guess, yes! An' flowers—gee, she nearly eats 'em!'

'On the other hand,' said Mr Ravenslee, watching the smoke from his pipe with a dreamy eye—'on the other hand, I gather she does not like Mr M'Ginnis. I wonder why?'

'You can search me!' answered Spike; 'but it 's a sure thing she ain't got no use for Bud.'

'And yet you go around with him, Spike.'

'But don't I tell ye he 's been good t' me! He 's goin' t' match me with some top-liners; he says if I can stick it I 'll be a champion sure.'

'Yes,' nodded Mr Ravenslee, 'but when?'

'Oh, Bud 's got it all doped out. But say'——

'And in the meantime your sister will go on feeding you, and clothing you, and'——

'Cheese it, Geoff,' cried the boy, flushing; 'you make a guy feel like a two-spot in the discard! I told you I 'd try to get a steady job, an' so I will; but I ain't goin' to quit the fightin' game for nobody! 'N' say, I 'm sleepy. How about it? You can have my bed, or the couch here, or you can get in Hermy's.'

'Thanks; the couch will do, Spike.'

'Then I guess it 's me for the feathers!' said Spike, rising and stretching. 'So long, Geoff!'

And in a while, having finished his pipe and knocked out the ashes, Mr Ravenslee stretched his long limbs upon the chintz-covered sofa, and, *mirabile dictu*, immediately fell asleep.

CHAPTER V.—HOW MRS TRAPES ACQUIRED A NEW LODGER, DESPITE HER ELBOWS.

HE awoke suddenly, and sat up to find the room full of sunshine, and Spike standing beside him, a bright-faced, merry-eyed Spike, very spruce and neat as to person.

'Say, Geoff,' said he, 'I 've seen Mrs Trapes, an' she wants you to go over so 's she can pipe you off. 'N' say, you 're sure up against a catty proposition in her; if you don't hit it off on the spot as soon as she gets her lamps on to you it 'll be nix for you, Geoff, an' nothin' doin'.'

'Lucid!' said Ravenslee, yawning, 'and sounds promising.'

'Why, ye see, Geoff, she 's got a grouch on because I was out last night; so, if she gives you the gimlet eye at first, just josh her along a bit. Now, slick yourself up an' come on.'

Obediently Mr Ravenslee arose, and, having tightened his neckerchief and smoothed his curly hair, crossed the landing and followed Spike into the opposite flat, a place of startling cleanliness as to floors and walls, and everything therein; uncomfortably trim of aspect, and ornate as to rugs and carpet and sofa cushions.

Mrs Trapes herself was elderly; she was also a woman of points, being bony and sharp-featured, particularly at the elbows, which were generally bare—indeed, they might be said to be her most salient and obtrusive features; but her shrewd, sharp eyes held an elusive kindliness at times, and when she smiled, which was rarely, her elbows and her general sharpness were forgotten. She was awaiting them in her parlour, enthroned in her best easy-chair, a chair of green velvet where purple flowers bloomed riotously, her feet firm-planted upon a hearthrug cunningly enwrought with salmon-pink sunflowers. Bolt-upright and stiff of back she sat, making the very utmost of her elbows, for her sleeves being rolled high (as was their wont) and her arms being folded within her apron, they projected themselves to left and right in highly threatening fashion. Sphinx-like she sat, very silent and very still, while her sharp eyes roved over Mr Ravenslee's person from the toes of his boots to the dark hair that curled short and crisp above his brow. Thus she looked him up and down, viewing each garment in turn; lastly, she lifted her gaze to his face and stared at him eye to eye.

And eye to eye Mr Ravenslee, serene and calm as ever, met her look; while Spike, observing her granite-like expression and the fierce jut of her elbows, shuffled, and glanced toward the door. But still Mrs Trapes glared up at Mr Ravenslee, and still Mr Ravenslee glanced down at Mrs Trapes wholly unabashed; nay, he actually smiled, and, bowing his dark head, spoke in his easy, pleasant voice: 'A beautiful afternoon, Mrs Trapes.'

Mrs Trapes snorted.

'This room will suit me—er—admirably.'

Mrs Trapes started slightly, opened her grim lips, shut them again, and—wriggled her elbows.

'Yes, indeed,' continued Mr Ravenslee pleasantly, 'I like this room—so nice and bright, like the rug and wall-paper—especially the rug. Yes, I like the rug and the—er—stuffed owl in the corner!' and he nodded to a shapeless, moth-eaten something under a glass case.

Mrs Trapes wriggled her elbows again, spake harsh-voiced: 'Young feller, that owl 's a parrot!'

'A parrot—of course,' assented Mr Ravenslee gently; 'and a very fine parrot, too. Then the wax flowers and the antimacassars! What would a home be without them?' said he, dreamy-eyed and grave. 'I think I shall be very bright and cheerful here, my dear Mrs Trapes.'

(*Continued on page 68.*)

OXFORD IN THE SEVENTIES.

By C. L. G.

PART I.

THERE is no college at Oxford of such outstanding superiority in numbers as Trinity at Cambridge. The nearest approach to it is, or was, Christ Church; and when I went up to 'the House' in October 1875 there were about two hundred and thirty undergraduates in residence, as compared with one hundred and eighty or so at the next largest college. But the difference was one in kind as well as in degree. By a curious anomaly, Christ Church, the most ecclesiastical of all the Oxford foundations, attracted a larger number of rich and fashionable young men than any other college. The Cathedral is also the chapel, the Head of the House is the Dean, and so it came about that the canons and theological professors lived in close proximity to undergraduates who did not exactly diffuse an odour of sanctity. For example, the house occupied by the saintly Canon Bright was a sort of annex of Peckwater, home of the gayest of the gay.

Again, at no other Oxford college was the cleavage between reading and non-reading men so marked. It was inevitable when one considers the sources from which the House drew its undergraduates. There were on the one side the open and Westminster scholars, the exhibitioners, and a limited number of commoners who read for honours. But the great majority were young aristocrats or plutocrats, Etonians predominating, who came to Oxford to have a good time and take a pass degree. The main end of their undergraduate career was conviviality. To a limited extent cricket and the river provided a common ground where they mixed with the reading men; but the most athletic of these affluent public school men went to other colleges, while the intellectual *élite* of Eton were to be found at Balliol. At the House the young 'bloods' or 'dogs,' as we called them forty years ago, found their most congenial sphere of activity in hunting and in the various dining or social clubs. Of these the largest and the most renowned was the Bullingdon Club, chiefly recruited from Christ Church, but including a certain number of members drawn from other colleges. The Bullingdon Club had a cricket-ground of its own, as well as a barge on the river. The members were distinguished from the common herd by wearing a blue stripe on their flannel trousers. They had also a special uniform for their dinners; but this habit was common at other wine and dining clubs. All these facts, however, serve to indicate the sumptuary basis on which the social cleavage in the House was founded. The days of gentlemen commoners who wore a special tassel on their caps were long past, but the principle was there still. There were a few rare exceptions who belonged to both worlds, but such an achievement bordered on the miraculous. The most notable example in my time was a strangely gifted youth, of winning manners, with no family influence or wealth to help him, who consorted with the fastest set in Bullingdon, of which he was a member, raced and hunted, and was never seen to do a stroke of work in term-time. But he was reported to slave at his books in the vacations, and anyhow he took a Double First and gained a Fellowship. His undergraduate life reminded one of the types of Admirable Crichton familiar in the novels of Ouida or the author of *Guy Livingstone*, and his subsequent career was hardly less romantic or meteoric. But he stood alone, as the nightingale sings.

There was no hostility between the reading and the non-reading classes. We simply went our several ways. We seldom met, or very rarely in the lecture-room, though we had rooms in the same quad or on the same staircase; but those of us who had to work derived no little amusement from the detached contemplation of these gilded youths, as they sallied forth in pink, or woke the midnight echoes with hunting-horns, or broke up each other's furniture in moments of hilarious expansion. Efforts at fraternisation were not always successful. A spectacled scholar was once invited to dine at one of the most fashionable of the clubs already alluded to by a member who knew him at home. But he felt like a fish out of water during the revels, and his discomfort was not allayed when one of the company remarked in a loud voice during a pause in the conversation, 'Who is that d—d fellow in gig-lamps sitting next to Sandy?' The speaker was more renowned for his wealth than his breeding, and was probably the only member of the club capable of such discourtesy to a guest; but his resentment was not altogether unnatural. The d—d fellow in gig-lamps *was* out of his element. Personally I have met several of my gilded college contemporaries in after-life, and found them very much like other people, and not less friendly. One cannot help feeling, however, that the fusion of classes brought about by the upheaval of the last two years, and in particular by the altered conditions of military service, has broken down the social barriers which undoubtedly existed forty years ago, and probably a good deal later. A type of undergraduate a good deal in evidence of late years at Oxford was quite unknown in my time —the 'intellectual blood,' who combines ambition

for academic honours with a deliberate cultivation of dissipated habits and a contempt for weaker vessels, mental and physical. But this complex type has been probably humanised or simplified by the ordeal of the war. It was at worst a rather ugly pose, and there is no room for pose nowadays:

In dubiis hominem spectare periclis
Convenit, adversisque in rebus noscere qui sit.
Nam veræ voces tum demum pectore ab imo
Ejiciuntur et eripitur persona, manet res.

It must not be supposed, however, that the life of the reading man at a non-reading college was a drab and uneventful existence, devoted to unremitting study, and only relieved by watching the extravagances of the 'dogs.' We rowed, or ran with the beagles, or played cricket or rackets. The rinking mania was in full swing, and three hard winters in succession gave us opportunities for skating such as were rare before the age of Swiss winter sports. In one of these winters we had seven weeks' frost; the river was frozen over, and I remember skating, for several days after the thaw had set in, on the flooded meadows beyond the farthest end of Norham Gardens. The floods were shallow, nearly all the water had drained off, and the ice practically rested on the grass. An Oxford skating club was founded. Monier-Williams and Pidgeon of Christ Church, Musgrave of Balliol, and Arthur Johnson of All Souls were, as well as I remember, the outstanding experts, and our badge was a little gilt orange; but the club did not maintain an independent existence for long, and was dissolved by a cycle of mild winters. Golf had not yet arrived, though Horace Hutchinson was in residence before I went down. But in one respect Oxford in the seventies was better equipped than the Oxford of to-day. The racket-courts at Holywell were extensively patronised, and players of the second best of court games were not put to the expense of running up to London to keep their hand in. The running-path was another resource; and, though the standard of performance has been raised in several departments by Rhodes scholars and others, Brooks's 'varsity record for the high jump, made in my time, still stands. W. Bruce and M. R. Portal, both of Balliol, were a singularly handsome pair of quarter-milers. Other heroes of the running-track were Montague Shearman—now a Judge—a speedy sprinter and resolute finisher; Arnold Hills, afterwards director of the Thames Ironworks, a miler; and Stanley Weyman the novelist, who represented Oxford in the three miles. Metcalfe, the South African railway engineer, shone in the half-mile; and Rochfort Maguire, another South African magnate, combined a taste for running with his other activities, social and intellectual. Grenfell of Balliol, now Lord Desborough, was a double Blue, for he began as a long-distance runner before concentrating on the river. Other rowing celebrities were Edwards-Moss and H. P. Marriott, Bankes (another Judge), and W. Ellison.

Heads of Houses forty years ago were, in the unthinking judgment of undergraduates, more distinguished for their longevity than for any other quality. But there were notable exceptions. Liddell at Christ Church was a majestic and commanding figure, and, apart from his fame as a lexicographer, held in high repute in council. In his relations with undergraduates he never seemed at his ease, but his brusque manner was the result of a shyness which he never overcame. The first time I went to breakfast at the Deanery, with a batch of other freshmen, we were shown into the morning-room. Mrs Liddell came in, and asked us our names, and when the Dean appeared introduced us to him, a curious but characteristic inversion of the normal rôles. In Collections—the periodical college examinations—the Dean presided at the *vivâ voce*, which was held in Hall. It was rather a formidable ordeal, at least for those who were expected to do well, and I remember the gruff rebuke which I earned when, stumbling into a pitfall which had entrapped others before me, I translated μύλος ὀνικός in a divinity paper as 'a colt the foal of an ass' instead of a 'millstone.' But the Dean did not always reserve his rebukes for scholars, or junior students, as we were then called. On one occasion, when a large, florid, and overdressed commoner was before him, and had made some unusually silly answer, he greatly diverted the other examiners by observing in a stage whisper, 'Great oaf!' Another Head was famous for his wit, but I can only remember his happy description of a notorious play of Aristophanes, of which he said that it was 'as broad as it was long.' A third, who presided over a college more renowned in those days for athletics than intellect, was credited with excessive leniency in dealing with promising oarsmen and cricketers when they came up for matriculation. On one occasion, so the story goes, the captain of the Eton Boats presented himself without letting his qualifications be known to the authorities, and was ignominiously ploughed. He had already returned to Eton when the Principal heard of the tragedy, and was much upset by the news. But he at once rose to the occasion, and is reported in the legend to have despatched a telegram to the rejected candidate: 'Your case is being reconsidered. Please telegraph the perfect of τύπτω.' With the most celebrated of all the Heads of Houses in my time, Jowett, I was only acquainted by sight and through the medium of anecdotes until the close of my undergraduate days. Most of these anecdotes depended chiefly on the imitation of the Master's high, incisive utterance. His sayings were chiefly of the nature of truisms—inspired truisms, undoubtedly—and reflected his habit of thinking

aloud. Thus, when Professor Blackie had been rendering himself conspicuous in some controversy or other, and on meeting Jowett asked him, 'Well, Dr Jowett, what are they saying about me in Oxford just now?' the Master is said to have briskly chirped in reply, 'Nothing.' He could be really witty though, if the story is true of his comment on some undergraduates who stayed up during the Long Vacation, when the Master was in residence and wished to be undisturbed. So he first of all insisted on their regularly attending chapel, and, when that failed to dislodge them, had their battels cut off at the buttery. As the last of the discomfited crew was driving to the station from the college gates Jowett is reported to have observed, 'This kind goeth not out but by prayer and fasting.' But these stories give a wholly erroneous impression of the Master's generosity and kindness of heart. Of his hospitality my own experience may serve as an illustration which might be indefinitely multiplied. It was in Commemoration time, and my father, who was to receive a D.C.L., and many years before had been in official relations with Jowett, left a card on the Master at Balliol. The next morning Jowett walked out to the Iffley Road, where my father was staying with a married daughter, and invited all the members of the family to dinner, including myself. It was a large and interesting gathering, and it fell to my lot to sit between George Eliot and George Henry Lewes. Lewes was vivacious and communicative. I remember his telling me that although George Eliot had written the *Spanish Gypsy* before she travelled in Spain, she had only to make one or two trifling corrections in the poem as the result of her visit. Some story that I told him tickled his fancy, and he said, 'You must tell that to my wife;' and I was introduced to the Sibyl, and had to repeat it. Any alarm that I felt was immediately dispelled by her suave and gracious manner. I remember distinctly her telling me that she read very little fiction by her English contemporaries except the books of her friend Miss Thackeray; and when I made bold to express the difficulty I had always felt in tracing a family resemblance in the writings of father and daughter, she demurred, but admitted that landscape counted for little with Thackeray—'a hedgerow and a spire were enough for him.' Sir James Lacaita was also of the company, and after dinner told us some curious stories of Louis Napoleon, whom he had visited in exile at Chislehurst. The Emperor was dying of a mortal complaint, but during their interview talked the whole time of Cæsar's campaigns.

Of professors and dons outside my own college I saw little except of Henry Nettleship, whose lectures I attended, and whose friendship lasted throughout his lifetime. Underneath a shy manner he concealed a very warm heart, and he was not merely interested in scholars. I remember his telling me once of a Latin epitaph which seemed to him the perfection of laconic eulogy—'*Neminem tristem fecit;*' and it might well have been applied to himself. Walter Pater, who was then in residence at Brasenose, was a familiar figure. They used to tell a story of his examining for scholarships at Brasenose; as there was some doubt as to the award, the examiners looked through the papers again. When Pater was asked for his verdict, all he had to say was that there was a candidate called Sanctuary. 'I liked his name.' The lean, gaunt figure of Robinson Ellis, the editor of Catullus, is still fresh in my memory. Early in the seventies a French officer who had been in the *débâcle* at Sedan visited Oxford, and at some gathering at which they were both present Robinson Ellis showed an unexpected interest in the stranger. But it turned out that it was solely due to the fact that one of the best manuscripts of Catullus was discovered at Sedan. It used to be told of him that on one occasion, when he had gone to Paris to collate manuscripts, after leaving his baggage at the hotel he rushed off to the library, worked there all day, and then found that he had completely forgotten the name of his hotel. The authorities called in the aid of the police, who solved the problem by tracing the driver who had taken him from the station, Robinson Ellis having fortunately remembered that he was a one-eyed man. When reading for Greats I attended a couple of lectures of a series given by T. H. Green, then at the height of his fame. The lectures were crowded mostly by Balliol men, but they were far over my head, and I retired in respectful discomfiture. It brought me nearer to the philosopher to learn afterwards from a Balliol friend that Green's favourite hymn was Baxter's

> Lord, it belongs not to my care
> Whether I die or live;

especially the last verse:

> My knowledge of that life is small,
> The eye of faith is dim;
> It is enough that Christ knows all,
> And I shall be with Him.

Ruskin was in residence as Art Professor during my undergraduate days, but, with a lamentable lack of enterprise, I failed to attend his lectures; nor was I one of the band of devoted admirers who at his instigation, and to the amusement of the Philistines, showed their adhesion to the gospel of manual labour by making a road at Hinksey. Ruskin was an honorary student of Christ Church, and used to attend the services in the Cathedral. I can see him now walking along the west side of Tom Quad with Sir Henry Acland, who used periodically to stop and hitch up Ruskin's hood as it kept slipping from his sloping shoulders. Pusey was in residence as one of the canons, and I heard him preach once—a weighty discourse, but with nothing in it to explain the fierce

controversies that had made his name anathema to the extreme Evangelicals. Another of the canons was King, afterwards Bishop of Lincoln, who looked the saint that he was; and another was Liddon, on the whole the greatest preacher that I ever heard, alike for matter, incisiveness of delivery, eloquence, and perfect articulateness.

LA SIERPES.

CHAPTER IV.

AS a convalescent I had not been outside a saddle for a month, and I had ridden more than six leagues over the parched ground under a Spanish sun in August, and Bernon had ridden both ways; so the colonel, of his own accord, had told us we must drive. This we did in advance of the squadron, only halting when we knew that we were getting near the convent.

'Now, Brellinger,' said the colonel as a halt was called, 'you know the country, and I don't, so to a certain extent we are in your hands. I want to make a *coup*. I want to give these rogues a lesson; but what I don't understand is the presence of the regulars. Where in the devil's name do they come from? Because their presence makes a great difference.'

'Yes, that was what surprised General Foy, *mon colonel*,' I answered; 'but they might, after all, be only a few stragglers.'

So, leaving the others under the lieutenant at the foot of a slight incline, he and I and the major entered a wood with two or three men. Advancing cautiously, we got within sight of the building, with the open ground in front of it. Right opposite the entrance, which had a highly carved projecting window over it, was a tree-trunk; and, what's more, two or three bodies were lying near. This proved that the guerrillas had tried to ram the door in, but had been driven back.

'What fools they must be!' I said. 'There is a farm on the other side, and they might have run along under the wall with trusses of straw.'

'Bundles of faggots would have been better,' suggested the major.

At that moment several shots came from the window. Evidently some of the Spaniards had been seen too near the edge of the wood, and they answered by an irregular fire at the window from the wood.

'It's not safe for us to go any farther this way,' said the colonel; 'we might meet some of them, and that would spoil everything. I will tell you what we will do. You, Flammart and Brellinger,' he continued, 'will take eighty men and go right round well in their rear. You can leave a few to keep up communications. When you, Flammart, think you are opposite the entrance, halt with thirty. You, Brellinger, go on with the rest, and when you think you have gone far enough, fire two shots. That will be the signal for Flammart to begin to drive them out into the open. If they bolt to the north, you must issue from the wood and drive them my way. The long wall of the convent compels them to come toward me. I will have a man in a tree who will signal to us, and then we will gallop up and give them something to remember.'

Accordingly the major and I set off, making a long detour, for we knew the forest was swarming with guerrillas, and we should have to be very careful; if we came unexpectedly on any of them, of course, the alarm would be given, and the whole of the colonel's plan would be frustrated. The chances were that if we only encountered guerrillas they would soon run; but if there were regulars a rather better stand would be made.

There was one thing in our favour. On account of the heat our enemies would probably prolong their siesta. Flammart was very stout; he was not one who was used to or cared for much walking.

'There, Brellinger,' he said, wiping the perspiration from his forehead, 'I reckon I have got round far enough, and we will rest a little to give you time to get on; and then I will advance cautiously, and do nothing till you fire, and then we will push on.'

So with about thirty odd men I continued my way, and was thinking of turning to the left, when we found that the country before us to the right was rather more open and broken. We were going very carefully and silently in single file, and I was leading, when suddenly I saw a couple of fellows with guns slung on their backs coming at a fair pace toward us with a heavily laden donkey. Not far behind was another man hurrying after them.

They saw me as soon as I saw them. '*Couchez-vous! couchez-vous!*' ('Lie down!') I cried in a loud whisper to those behind me, for I saw in a second the fix I was in. If I retreated I must have excited their suspicions at once. But for the presence of the one behind I might have allowed them to come up close and shot both with my pistol; but that would probably have resulted in the third man firing at me; and the major, hearing that, would have advanced too soon and upset everything. But by pure good luck I had one advantage. I had had no chance of changing my uniform, and was still wearing the clothes of young Vegara. So I boldly made straight for them.

'Tell me, my good fellows, and I will give you some *reales*, where is the Convent del Espiritu

Santo? I want to see the Reverend Mother Superior.'

'*Hombre, señor,*' said the elder of the two, 'you cannot do that; those thieving *gavoches* are actually in the convent at this moment. We have lost our captain, but luckily have got the Father Confessor to help.'

'The Father Confessor!' I exclaimed.

'Yes,' he continued with a laugh. 'They bound him and left him in the chapel for a moment; but they did not know there was a nun in the sacristy, or that there was an underground passage from his house. She released him, and they both escaped. But we will settle those French thieves; we will bring those rats out of their holes! We ran short of powder, but now we have got some more,' pointing to several small kegs about as large as olive-barrels slung on the mule. 'We are going to have bundles of faggots, and, protected by them, we shall run across the open space and place the faggots and powder against the door. That will settle them.'

'Yes, that ought to,' I replied dryly. 'And how many men have you got?'

'Nearly two hundred and fifty, and a dozen regulars who have been wandering about for weeks, and are not in a hurry to find their regiments.'

'I think I had better stay here,' I said; and I gave them a little money and advised them to hurry on, which they did in company of the third man, who had come up. With a sigh of relief I saw them disappear, and, carefully noting the direction they took, we set off once more.

My position was far more risky than that of the major, as I had to get as close to the road as I could, and I halted after a while and listened intently, but not a sound did I hear. So thick were the trees that I might be four or one hundred hundred metres from the road for all I could tell. I had brought Bernon with me, for since I had seen the way he had fooled the guerrilla chief I had great faith in his sagacity. Suddenly he touched my sleeve, made a significant nod, and pointed to the left. The practised ears of the smuggler had heard something unperceived by us. After listening intently for a moment, he threw himself on the ground; then, getting up, he indicated in dumb show that it would be better for us to edge away to the right.

'They are not far off, and they are chopping wood,' he said to me in a low voice when we were at a safe distance.

Then I remembered what I had been told about the faggots, and realised his cleverness more than ever, for I had not said a word to him about them. But it was necessary for me to press on; so in perfect confidence I left him with ten men, and took the rest with me.

We had hardly gone any distance when I saw the gardener's cottage and the priest's house right in front of me; in fact, I could not have emerged from the wood at a better place. To the left I saw the convent. Little did Mary know how near I was! Very, very silently, and with the utmost caution, we now bore away to the left. Then we distinctly heard voices, and in a whisper I told the men to look to their carbines.

We had got within one hundred metres, when we suddenly saw a fellow dart from the wood with a bundle of faggots in front of him. A volley came from the window, but that made no difference; quickly, and one by one, others followed him. At once I ordered two men to fire at them. That was the signal for Flammart.

'Now, *mes enfants*, fire low. Cover your man and fire slowly;' but for all that, with one exception, not a single bullet seemed to find its billet. The one that did take effect must have penetrated a keg of powder, for there was a bright-red flame, a cloud of smoke, and a fearful explosion. Never in all my experience had I seen a similar case; the man and the faggots disappeared in every direction. The next moment I heard firing to the rear, and knew that the major was at work; and soon Bernon had joined in. Like rats when ferrets are put in a stack, the guerrillas rushed from the wood.

'*Allons, mes enfants, suivez-moi!*' I cried as I ran into the open to prevent them from getting into the farm buildings or away to the north. Stimulated by the explosion, which had excited them, my men needed no urging. Our enemies, seeing us, and little knowing how small our numbers were, turned away to the left; while from the convent window our comrades picked them off as fast as they could. I succeeded in hitting two, but we never got right in amongst them, as they rushed panic-stricken in the colonel's direction. As we passed the convent we heard the encouraging cheers of those within, and in a short time the great door was opened and Pierre and some others rushed out and joined us.

Quite out of breath, I was leaning up against the wall loading my pistols.

'The colonel's waiting for them. As soon as they see him they will all come back,' I shouted to Pierre; 'so keep your carbines loaded!'

I had hardly spoken when we heard the bugle sounding in the distance, and then he saw the force of my words. The bullets, however, from the major's men were now our chief danger, as the guerrillas in the wood were between him and us. In a cloud of dust, leaning low over their saddles, our men came on, headed by their colonel, sabring right and left. Some guerrillas undoubtedly may have escaped, but seldom have I known a *coup* more complete, for the bodies lay thick in all directions.

Tired and worn out, the men threw themselves on the ground, and I hurried into the convent; and in another moment Mary was in my arms,

returning my ardent kisses. The poor girl, from what she had gone through, looked tired and worn, but in her happiness she made light of it. After we had attended to our wounded, and the men had had some wine and a short rest, we were ready to return.

'Well,' said my uncle, 'all's well that ends well. We have got the pictures, and we have given the poor girl her liberty, and the sooner we get back the better.' And ere the sun had begun to sink we had left the convent behind us. Like many another, it was one of those that were burnt to the ground by the infuriated peasantry some twenty years afterwards owing to the greed and wickedness of the inmates.

To celebrate the success of the expedition, my uncle gave a dinner-party the following day. General Foy himself honoured it with his presence. Young Vegaro and his beautiful fiancée also were invited. As for Mary and me, we were happy; only our coming separation hung like a shadow upon us, so we had not quite the exuberantly high spirits of those around us.

Alas, the hour for our parting came! I went down to the ship that was sailing to Genoa, and saw them off. As I was kissing Mary for the last time, her father placed a sealed letter in my hand, telling me that I was not to open it till the next day. I paid little heed to it, for I thought it only referred to some of the money I had advanced him.

The next day I opened the packet, which contained not only a letter from Mynheer Vandermeeren, but one from Mary herself. His letter nearly took my breath away, for in it he said that, from a hatred of deception, he felt bound to tell me that, to all intents and purposes, he was a pure Englishman. His ancestors had come over with William the Third, and they, like him, had married English women; and as for himself, he did not know a word of Dutch, and had only once been in Holland for a short time on business. He reminded me that when the ship was captured and he was brought to Barcelona, owing to our two nations being at war, for Mary's sake and his own he was compelled to take refuge under his Dutch name. This and a good deal more he told me, and I had to admit that in similar circumstances I should have done the same. As for Mary, she reiterated her love, and told me she would never love any one else, even if I was so angry that I would not keep my troth because of the deception she had been obliged to practise.

Now that I knew the truth, many little incidents came to my remembrance. Still, I must own that for a time I was quite overwhelmed by these revelations. Not that I would swerve one millimetre from my devotion to her; but I saw the difficulties I was in with regard to my parents and relations. And not only that; I thought of my uncle and General Foy. I kept the news to myself for a time, but at last I told my uncle and asked his advice. Of course, his surprise was as great as mine had been.

'Whether Mary is English or not,' he said, 'she is one of the most charming and beautiful girls I ever met, so don't let her nationality make any difference; but as for the General, I think it would be best to hold your tongue. But he is so pleased with the *coup* that he made, thanks to Vandermeeren, that I think even he, though he has been deceived, would not say much.'

It was some eighteen months afterwards that Mary and I were united, and it would not in the ordinary way have been so soon as that but for my having escaped from Leipzig after the battle. Catching a smuggling-ship on the coast that sailed for Rotterdam, I was driven in a terrible storm on to the English coast; and then I found myself in exactly the same plight, in an enemy's country without a *peseta*, as she and her father had been in Spain. Then it was, when I was a fugitive and in danger of my life, that the pluck and courage, and all the sterling qualities she possessed, hidden as they might have been under her beauty and girlish high spirits in Spain, came out. True it is that in spite of all her courage, ingenuity, and money —for it turned out that her father was very wealthy—I was eventually caught; but the abdication of the Emperor in 1814 came in time for me to have but a very short acquaintance with an English jail.

Thus it came to pass that our wedding took place in London; and not in all that great city, where the beauty of the women is so extraordinary, so noticeable to every foreigner, was there one more beautiful than my own dear Mary; and not one, as I had good reason to know, with a truer or braver heart, as perhaps I shall prove some day.

THE END.

PRUSSIA'S LAND OF PROMISE.

By G. E. Thomson.

WHEN the partition of Africa was first in question Germany looked on with eager eyes and twitching fingers; but her day was not yet.

About the year 1900 Morocco was little more than a name to the rest of the world, a semi-mythical land, a far-off mirage of sandy waste and barren palm-trees. The terror of the Barbary

pirates had grown legendary, and Ismail the Terrible was but a lay figure for the historian. Then there shot across the startled sky of international politics the comet Raisuli, a practical jester in brown *jelab*, red fez, and yellow *babuches*. Swiftly followed the Anglo-French Treaty, the dramatic appearance of the Kaiser at Tangier, and the thunder of bombardment at the very doors of Europe.

Morocco had not vanished, then, with the Baghdad of Haroun-el-Rashid? Something must be done! The something was the Algeciras Conference of 1905, when Europe tied the peevish foundling to her apron-strings. Great Britain was busy elsewhere, and Germany was becomingly modest; so that to the eagerly willing hand of France fell the task of immediate correction and future guidance.

Almost touching the finger-tips of Europe across the narrow Strait of Gibraltar, Morocco was nearly the last of the world's prizes to elude her grasp; although the Frank, having fairly comfortably established himself to east and west of the prize, had proceeded some time before to snip little bits off, first at the south-eastern boundary, and later on the north-western coast. France had said nothing about it, for fear of interesting other potential competitors; but she had long had a shrewd suspicion of the value of this hilly country, fertile and full of promise, rich in grain-lands, and honeycombed with precious minerals. Her original policy was that of territorial acquisition throughout Africa, from Lake Nyasa to the Strait of Gibraltar—more than two-thirds of the whole continent—but particularly the acquisition of the Mediterranean coastline. The scheme had been evolved with great foresight, and worked out well with regard to the preparation of the way. French influence was promulgated gracefully and unostentatiously by missionaries, at great sacrifice of life and health, through the sun-scorched sands of the Sudanese Sahara and the miasmic, malaria-infested jungles of Central Africa to Nyanza, Tanganyika, and Nyasa. Egypt presented a more difficult problem; but the French missionary talked smoothly to the natives, and in his wake came the French explorer, the trader, and the soldier, and their combined efforts established French influence over the regions from beyond Lake Chad to the boundaries of the French Congo. Britain had been too much occupied to pay much attention to her neighbour up to this point; and Germany, watching eagerly in delighted anticipation of friction, said nothing.

The French operations reached the valley of the White Nile without serious friction with any European Power; but when Colonel Marchand started with an expedition from the French Congo to effect a junction with the Marquis de Bonchamp, who was advancing from Abyssinia to meet him in the Upper Nile basin, they came into direct conflict with the British scheme of an Anglo-Saxon Empire stretching from the Cape to Cairo. At Fashoda, in 1898, the two schemes crossed, and Europe, awakened to the fact that great things were toward, waited to see which side would give way.

General Kitchener, newly laurel-crowned after his victory at Omdurman, appeared suddenly at Fashoda, with the intention, as he politely informed the French commandant, of admiring the artistic effects of the Union-Jack and the Egyptian flag floating above the town. Colonel Marchand, indicating the tricolour in the post of honour, was desolated to inform General Kitchener that he was too late. General Kitchener, with a confidential air, was sure that Colonel Marchand would be glad to hear that the necessity for Britain's withdrawal from the Sudan had been only temporary. He would be delighted to assure the commandant and his men a safe passage down the Nile. The French commandant smilingly regretted that he did not see his way clear to accepting the kind offer.

Things seemed at a deadlock, when General Kitchener indicated the forces with him. 'What can one man do against these?'

'*Qu'il mourut*,' said the commandant.

But General Kitchener saw a better way out of the difficulty. 'Your Government sent you here; your Government will call you back. Have a whisky-and-soda?'

Delcassé stood at the helm of French foreign policy; the matter was settled at the respective Embassies, and Colonel Marchand withdrew. The Union-Jack floated unchallenged above Fashoda; and France reluctantly tore up her plans for an outlet in this direction, and turned with redoubled efforts to the other side. But if Egypt were necessary to Great Britain to control the Suez Canal, the strategic value to her of the coastline of Morocco commanding the Strait of Gibraltar was hardly less great. However, Egypt claimed all her attention and resources for the moment. Morocco must wait.

Meanwhile France was busy weaving her schemes in Morocco: inclining native sentiment toward her rule, extending her schools and 'protection' system, Government loans, and, incidentally, the boundary-line of Algeria, whenever opportunity offered. The revolution of the Moroccan Pretender (1902–4) left the country in such a state of lawlessness that some system of foreign protection was absolutely imperative to secure the safety of Europeans of every nation. Spain was not in a position to press her claims; and, fuming at her impotence, Germany was forced to confess that neither was she. The claimants, therefore, dwindled to Great Britain and France. Great Britain had realised more fully the magnitude of the task which she had undertaken in Egypt; so there followed the amazing Anglo-French treaty of 1904, which settled the outstanding territorial questions upon

which the two countries differed, and was to be of incalculable importance in its geographical and political significance. It shattered at one blow all Germany's hopes of aggrandisement at the expense of Great Britain or France, or possibly both, at a not very far distant date when they should be weakened by a struggle with each other. The Teuton must have been stupefied at the *entente* between the Latin and the Anglo-Saxon, whom he had regarded as separated by an unbridgable gulf of racial antipathy.

The terms of the treaty were, in fact, little less surprising to the world at large. Great Britain, in return for certain concessions in Egypt, agreed to waive all claims to political supremacy in Morocco. France was not only to be left unmolested to carry out all administrative, economic, financial, and military reforms requisite for the pacification of Morocco, provided that British treaty rights were left intact; but Article IX. went further: 'The two Governments agree to accord to one another their diplomatic support in order to obtain the execution of the clauses of the present declaration regarding Egypt and Morocco.'

Two of the secret articles added to the original treaty throw further light on the objects of the two Powers, and also admit a certain amount of justifiable annoyance on the part of Germany. The first clause provided both Great Britain and France with a loophole for departing from the other terms of the agreement by stating that either 'might be constrained by force of circumstances to modify this policy in respect to Morocco or Egypt.' The other secret article limited the Spanish sphere of influence to the Mediterranean area of Morocco, and this was confirmed in the Franco-Spanish agreement of October 1904, with which vanished Germany's last hope of getting some one else to do her work for her.

Germany's awakening had been gradual; but it must have been complete by the autumn of 1904. The question then arises: Why did she take no action until March 1905?

There were several reasons, connected with Great Britain, Russia, and internal questions; but the chief was the need to dispose of the principal driver of spokes in her wheels. Delcassé must go. He was a masterful personality, determined to push France to the forefront of world-politics; and that according to his own way, uninfluenced by the opinions of others. Feeling in France ran high against Britain after the Fashoda incident and during the South African war; but Delcassé saw a potential ally in Britain and a certain enemy in Germany. In 1900 he undermined the Triple Alliance by promising Italy a free hand in Tripoli for non-interference in Morocco. In 1901–2 he attempted to make a secret bargain with Spain by ceding to her certain districts in the north of Morocco in return for unquestioned authority in the remainder. (The Franco-Spanish agreement of 1904 was very similar in character, but clinched under different circumstances.)

Great Britain objected to this secret bargain, and Delcassé's earlier impression was confirmed. France must definitely ally herself with Germany or Great Britain. He chose the latter, and set to work to achieve his object. By April 1904 King Edward, Lord Lansdowne, and Delcassé had settled the question of the West African boundaries, Madagascar, the New Hebrides, the Newfoundland fisheries, and, above all, the Egyptian question in a series of agreements which ultimately became the Anglo-French Entente. Delcassé, then, had done what he set out to do, in spite of fierce opposition. Russia was already a friend, and he had won over Spain, Italy, and Great Britain to recognise France as paramount in Morocco. If he still had any fears of Germany's intervention, they were lulled to rest by the speech of Prince Bülow in the Reichstag on 12th April 1904, in which he stated that German interests in Morocco were 'purely economic,' and that, on the whole, he welcomed the understanding between Great Britain and France as making for the greater stability of the peace of the world.

Delcassé had underestimated his enemy, and overestimated one, at least, of his friends. Germany was silent at the end of 1904, because she knew that in the spring of 1905 she would have completed the naval programme planned in 1898, and largely augmented during the Boer war. It would be a weighty argument to oppose to an unmalleable France. Fortune favoured her.

In March 1905 Russia sustained the terrible defeat at Mukden, which sensibly diminished, for the time at least, her value as an ally to France. The moment for Germany's *coup* had arrived. On 31st March the Kaiser landed at Tangier, and, with his usual vulgar love of theatricality, made overtures to the Sultan's representative. He professed to wish to save the Sultan from undue subordination, to uphold the integrity of the country, and to insist upon the equality of European economic and commercial interests. This ignored the claim which Great Britain and Spain had acknowledged, that France should exercise a certain amount of administrative control over the country, especially in the districts bordering on Algeria. It also implied that the Sultan's Government was in no need of European assistance, and should resent the assumption. Then he continued his yachting cruise.

The incident had a far wider significance than would appear on the surface. William the Second's desire to possess Morocco would not have blinded him to the futility of trying to achieve his object by stirring up internal trouble and annoying France by the pin-pricks of tribal

insurrection. France was quite strong enough, and fully prepared to deal with such incidents. His object was to separate France and Britain, which would be the opportunity for Germany to step in and annex Morocco, and possibly Egypt as well. It was a gauntlet thrown down. The *entente* was still very recent, and uncemented. Would it stand the shock? Would Britain uphold France's action as mirrored in the eyes of Germany, whose policy had the beautiful appearance of being quite disinterested? Germany's interests in Morocco were purely commercial, and they were guaranteed. Had not her Chancellor admitted as much?

The Anglo-French understanding withstood the shock, while the statesmen of both countries looked around for Germany's ulterior motive. When they had found it, the *entente* was sensibly strengthened. Germany needed coaling-stations for that new navy of hers. From Heligoland to Togoland or the Kameruns was a very far cry. Mogador or Agadir, at the western end of the Moorish coastline, would be invaluable. If the Entente Powers could be made to quarrel, and eventually partition Morocco, Germany could with some justice demand a port as compensation for restricted trading-rights, and, possibly, as a bribe for non-interference. Her plan was subtle, but not subtle enough. Not only Britain, France, and Spain, but the United States as well, looked askance at the gigantic growth of Germany's navy and her unquenchable thirst for coaling-stations. The Powers did not fall out among themselves, but neither did they show any inclination to make France's quarrel theirs. And France, as Germany had foreseen, was not ready for war.

The results in Morocco of the Kaiser's intervention were soon apparent. Abd-el-Aziz refused the French scheme of reform, and demanded that the matter should be referred to a conference of the Powers. Delcassé refused. Prince Bülow insisted, and ended with a denunciation of the *entente*, and more particularly of Delcassé. France had allowed her Foreign Minister to lead her into this morass, he insinuated to many who had a grievance against Delcassé. France must give up this troublesome Minister, or Germany would be most regretfully compelled to take some further action.

The arguments disclosed Germany's object; but France was between the devil and the deep sea. The *entente* held, but slackly, and for the moment Germany had to be conciliated; so Delcassé must be sacrificed. He resigned in June 1905, and the immediate victory was Germany's.

France ground her teeth at the humiliation of being dictated to by her enemy, and anticipated the sweetness of revenge; Great Britain perceived the blow aimed at herself through France; and Russia felt, with renewed bitterness, the effects of her reverses in Manchuria. All three began to make preparations for the future, and Germany by her present victory had turned three watchful neighbours into forewarned and wary antagonists. The efficient reorganisation of Russia's army and the strength of Britain's navy are only now apparent, and were obviously unappreciated by Berlin; but France's precautions were obvious, and Germany countered them. At the end of 1905 France voted more than one million pounds for the construction of strategic railways, and sixty million pounds for the reorganisation of her army. Germany retorted by laying down strategic railways, with Cologne as the centre, from the Rhine to the Belgian frontier, and by paying yet more feverish attention to her fleet.

The resignation of M. Delcassé removed the chief obstacle to the Moroccan Conference, which was called at Algeciras (January–March 1906). Germany's success had gone to her head, and she overreached herself. The position of dictator which she sought to assume not only increased the ill-feeling between herself and the Entente Powers, but drove two ancient enemies, Russia and Britain, into each other's arms, and alienated all the other Powers. Italy, Russia, Spain, and even Austria and the United States, were against her, and she bowed to the inevitable in accepting the compromise proposed by France.

The Act was completed on the 7th of April, accepted by the Sultan on the 18th of June, and, having been ratified by the other Powers, was deposited at the Spanish Foreign Office on the 31st of December.

Spain wisely, but doubtless reluctantly, cooperated with France all through the crisis; and Germany, having gained less than she expected from her interference, awaited her opportunity to strike again.

The most important result of the Algeciras Conference, and the last thing desired by Germany, was the Anglo-Russian Entente. In 1907 the two Powers came to an agreement with regard to certain causes of friction in Persia, Thibet, and Afghanistan.

Germany was rapidly putting herself into the position of isolation which she accused Britain of trying to compass.

Morocco itself was in a very disturbed state, and the impish action of the Kaiser had destroyed, if it ever existed, any hope of a peaceful settlement of the country by France.

The French had already taken steps to check the nuisance by occupying Ujda with Algerian troops in March 1907; but the disaffection was widespread, and on 30th July 1907 nine European workmen — French, Spanish, and Italian—were murdered by tribesmen at Casablanca. Afterwards the rebels swept through the town, massacring the townsfolk and the Jews, and the handful of Europeans was powerless to check them. A French warship arrived and bombarded the town, and a party of

soldiers occupied the ruins. By June 1908 the Chaouyia district was subdued.

In the meantime a revolution took place in the southern capital. Abd-el-Aziz had committed the crime of being too friendly with the foreigner and too familiar with such cursed inventions as photography and bicycles; so his loving subjects declared his brother, Mulai Hafid, Sultan at Marrakesh in August 1907, and the new Sultan thought it advisable to assist the insurgents against the French in order to substantiate his claim to being a better patriot than his brother. In January 1908 Hafid was acknowledged in Fez, the northern capital, and he entered Meknas in June. Abd-el-Aziz's feeble efforts to regain his throne were foredoomed to failure, and on 23rd August Tangier, the last town to capitulate, acknowledged the new Sultan, and Europe had to acquiesce in the change.

Germany was the first to approve the new Sultan, in spite of her ruler's protestations to the old at Tangier. France and Spain were more cautious.

Germany's action in 1908 in protecting six deserters from the Foreign Legion was referred to the Hague Arbitration Court, which decided substantially in favour of France, who wisely closed the incident by pardoning the deserters. Relations between the Powers seemed to be smoother during the next few years, and the rather vague and surprising Franco-German agreement on the Moroccan question which was signed at Berlin might have had better results if the condition of Morocco itself had been more hopeful.

In 1909 Mulai Hafid guaranteed the terms of the Algeciras Act, but he was powerless to enforce order. The Riffians, in the Spanish sphere of influence, were the next natives to cause trouble, and Spain landed troops. At the same time the Sultan partially redeemed his authority by quelling the pretender, Bou Hamara, and the Concert of Europe for once found itself in harmony in its protests against the tortures inflicted upon the offenders.

In 1911 the trouble began again. Tribal outbreaks round Fez brought to that point a French military expedition on punitive measures bent. France definitely occupied the capital, reorganised the native army, and started various public works.

Germany grew restive. Here was the opportunity for which she had been waiting since her set-back at Algeciras. France had taken too much upon herself, and meanwhile Spain had occupied the points allotted to her in the secret clauses of the agreement of 1904. Germany professed to see her trading interests threatened, and despatched the gunboat *Panther* to the coveted Agadir in order to protect German subjects in that district. Incidentally, Agadir was a closed port, and there could not by any possibility be trading interests there. Had she chosen Mogador, the excuse would have been more plausible; but her obvious object was to provoke a crisis. She demanded all south-west Morocco as compensation, and for several weeks the tension between the Powers was very great. The German Secretary of State, Kiderlen-Wächter, was strongly opposed to compromise; but Britain's protest was unexpectedly firm. Germany's financial resources, at least, were not equal to a war, and the Kaiser himself seems to have been personally opposed to it at that time, possibly because his dream of the Kiel Canal as a passage for his Dreadnoughts was not yet an accomplished fact. Had he so desired it, Morocco would undoubtedly have served as the pretext for a quarrel in 1911, as Serbia did in 1914; but whatever his motive, he desired peace. As a result, Germany consented to acknowledge France's Protectorate in Morocco in return for one hundred and two thousand three hundred square miles of the French Congo adjoining the German Kameruns, with a population of seven hundred thousand to one million.

But Germany had not ceased to desire this rich and delectable country, although when at last a *casus belli* was wanted she did not seek it here.

LIFE IN THE TROPICS.

By F. Nicolls.

AT a time when the life of every British soldier was of the utmost importance to his country, after nearly two years of a war unprecedented in its violence and brutality on the part of our foes, and unparalleled in its slaughter and disregard of human life on the part of Germany, a most deplorable and preventable mortality amongst newly arrived Territorials was reported on the railway line between Karachi and the Punjab. It seems to have been thought necessary to send a detachment of over a hundred men in the height of the hot season by train, with the result that, in a three days' journey through a peaceful country, this small band was more than decimated by heat-stroke, and this although we are told the train was not overcrowded, and there were three medical officers and plenty of ice available. As this melancholy event has been the subject of discussion in Parliament, it is probable that the Indian military authorities will refrain in future from moving troops unnecessarily during the hot

weather between stations where the thermometer often exceeds one hundred and ten degrees in the shade. Emergencies may, of course, occur at any time, quite independent of the state of the thermometer, and British soldiers have shown often enough in India, and now in Mesopotamia, that, where there is real work or fighting to be done, mere heat will not deter them from taking all risks and successfully undertaking whatever there is to do. There is all the more reason, then, for not working a willing horse to death or putting young soldiers to quite unnecessary climatic risks during a time of profound peace, such as at present exists in western and northern India. Ignorance of climatic conditions in India, no doubt, is far too prevalent amongst young British soldiers. It is inexcusable when exhibited in high military officers, or in Government offices which direct the movements of troops. Fresh arrivals from England are often disinclined to guard the head from a tropical sun, especially in the early mornings and evenings. But exposure even for a few minutes is dangerous in India, and is especially so to those who indulge in beer or spirits, even in the strictest moderation. With a good head-covering, a temperate man can stand a good deal of sun with impunity. Yet how many of our young soldiers or civilians on their first arriving in the country are warned against exposing their heads unprotected to the sun? In a recent Life of a retired lieutenant-governor I read how he, on his first arriving in India, was left to find this out for himself, and he attributes his first attack of fever to his neglect of the most ordinary precautions which any old stager might have made him acquainted with. When I first arrived in India over fifty years ago I was told that beer-drinking was absolutely necessary for a European if he would keep his health. I drank a quart steadily at dinner for some years, and occasionally on Sundays and holidays had another for breakfast. I found that it caused me heaviness and drowsiness, and for forty years I have been a teetotaler, to the advantage of both health and pocket. A bottle of beer a day and two on Sundays during forty years would have cost over eight thousand rupees. What has been saved in medicine through my being a teetotaler probably far exceeds that sum. Life in the tropics is not so cheerful and pleasant as an ordinary life in temperate climates. But so far as health is concerned it is probably as healthy as life in England to many constitutions. I have just read of an instance of a member of a Roman Catholic sisterhood at Moulmein, in whose honour an entertainment was given recently on her eightieth birthday, when the Catholic bishop stated that this good lady had been teaching in her convent uninterruptedly for sixty-four years. This must surely be a 'record' teacher's life, not for the East only, but for the whole world. And this teaching, be it remembered, was all done in the tropics. One of my oldest friends, who is seventy-seven years of age, passed his young days as a soldier in the 60th Rifles, and has told me that when the King of Delhi was captured in the Mutiny of 1857, and transported to Rangoon, he remembers doing 'sentry go' over him at the Rangoon Main Guard on several occasions. This is another instance showing that 'life in the tropics' is not the deadly sort of thing people at home often suppose it to be. My friend has spent over sixty years in Burma without once going to Europe, and is still to the fore. I know of another instance, a Hampshire man, who is a year or two younger, and who has also been sixty years in the tropics without once leaving the East for change of air. Needless to say, such examples of longevity as I have come across in the tropics are all total abstainers. But they have not all in their young days been amongst those who have taken special care of themselves or led inactive lives. One must be cautious not to expose one's head without covering, even to the early morning or any sun, and the nearer one approaches to total abstinence the better for one's health. With these exceptions, life in the tropics, with moderation in all things, may be as healthy, I think, and last as long, as life in temperate climates.

When I came out to India in 1862, if I remember right, my passage to Madras cost one hundred and seven pounds, about treble the present rate. The fare, however, included unlimited liquor at meals, a provision hardly likely to encourage temperance, considering that many of the passengers were youths of eighteen or twenty, leaving their homes perhaps for the first time. I do not remember any trouble arising from this system of free drinks; but I know that some of the youngsters took their liquor not because they particularly wanted it, but because they said they had paid for it. The system was wisely altered after the Suez Canal was opened in 1870, I think, and rates of passage-money were largely reduced.

AT THE LOANIN' MOU'.

THE tears were drappin' frae baith her een
When I was sayin' good-bye yestreen;
An' we baith were wae, as we weel micht be—
The wife, at the mou' o' the loan, an' me.

Yet what could I do at a time like this
But lift her chin for a pairtin' kiss,
An' leave her to look to the bairns an' kye,
An' warsle her lane till the war was by?

Wi' the country cryin' for mair to come,
What man could bide at the lug o' the lum,
Or sleep upon feathers or cauf for shame
To think he was lyin' sae saft at hame?

What scaith may come man canna foresee,
But naething waur can a mortal dree
Than leavin' a wife at a time like noo,
Greetin' her lane at the loanin' mou'.

THE HEART OF THINGS.

By Henry Leach.

London, *Yesterday.*

IT may be that this year will be of right the happiest and most blessed of all the years since the birth of Him who came to bring peace to earth and goodwill among men. Blood must run in rivers in this new 1917; depths of anguish must be touched that were thought to be beyond the possibilities of human suffering, by such as have been sadly tortured. But yet before this young year darkens to its aged end, it is hoped with straining fervency that at last the guns will have lapsed to silence, and exhausted Europe will be at peace again. It may not be, but the omens are of fair account. There will have been filled the full span of the three years that were prophesied for the duration of the war by the great commander who has gone, and who, as we know, in his last days felt that his forecast might perhaps have erred a trifle on the side of length. Now, however, we work on facts and not on forecasts, and we see the magnitude of the task to be performed in this new year, when the greatest and hardest and most testing effort has yet to be put forth. Still, it may reach to peace. And if it does, then, despite all the suffering and the loss, notwithstanding all the sacrifice and the heart-aching that will never cease, and though we know that untold trials must still be borne, this will be the gladdest year that ever mankind has known. The volume of human happiness, the joy of millions in relief, will be infinitely greater than anything that has been known in the world before. Nations that have been in the sorest anguish will look back in wonder and amazement at the burnt-out fires in which they were nearly consumed; the joy of their relief will be an emotion that is at this stage beyond the comprehension of humanity. This peace, come when it may, will not be as others in history. It will be peace and really so much more than peace, the beginning of the new time in the life of the world. Men and women now sometimes attempt to imagine the quality of that future emotion. All that has happened since 1914 has been so overwhelming, the changes in life and thought, circumstances and outlook, have been so vast, the future has assumed such an entirely new shape, that the life that was so placidly led in the old time can hardly be invoked in the memory now, even by hard effort of remembrance. We shall not return to that placidity, but to a new state of life quite unknown to us now, with new emotions, new experiences, and new strivings. So it is wondered how we shall meet this exultation and this sudden change. Can we take it calmly, remembering the sorrows and the burden? How will sound the ringing of the bells? The streets of towns and cities will look strange in their new brilliancy; but will they be lighted up? Shall we throw our arms wide open, and shout in frantic joy? Peace! peace! peace! Surely at the least we shall fall to the knees and give thanks from the soul with a sincerity such as the most honest among us has never felt before. Most of us are of an age to remember clearly the last peacemaking in which our country was concerned. It appeared a gigantic thing, you will reflect. Mountains of oppression seemed to be lifted off our minds. Yet the measure of that peace and of the war that it ended—grave war as it was—was made by the mood of the people then, by the distractions, the light celebrations, the exuberance. It was a somewhat showy peace. This one will be very different. So each of us, thinking of the possibilities of this new year, tries to recall our emotions at the last peacemaking. How were we situated? How did we receive it? What was the feeling of peace, the emotional exultation? I remember it well, and was fortunate in a situation that made for a full effect. We had been five days at sea, away from all sight and knowledge of land and the mighty affairs that were progressing upon it, and there were no Marconis then to spread news upon the surface of the sea. On a glorious Monday morning, which broke in a dazzling blue and gold, the prow of our ship went creaming through the Pillars of Hercules, and we anchored in the shadow of the Rock that stands more than anything else abroad as an emblem of the might and the means of the British Empire. Presently from the Gibraltar shore the doctor's boat came splashing along. Questions were asked and answered, papers examined, and then the officer stood up with a foot upon the gunwale of his craft

 [*All Rights Reserved.*]

dancing on the waves below us, and shouted aloud that peace had been declared the previous day. It meant much to the ship's company. The scene and the situation were impressive. Heads were bared, and the assembly on the deck sang the anthem of their native land. And then the world went on again; the problems of life and work were much as they had been before. But this next time they will not be the same.

* * *

To-day I have witnessed a touching thing, not for the first time in this war. The early afternoon was bright with the pale yellow sunlight of the season, the air was crisp, and the streets full of that strange new war bustle to which we have become accustomed. In it the chief figures appear to be the young soldiers from our splendid colonies—the gaily feathered bonnets of the Nova Scotians conspicuous among them—and the younger girls who, in the numbers of an army, have come out from unknown recesses to do a sort of men's work in the great emergency, and now make a new mark upon the life of the town and its appearance. These chattering, lively little misses smile and scamper everywhere. And now, no less than in the time of Dr Johnson, who so remarked upon it, the full tide of human existence is at Charing Cross. There the crowds are continually denser than at any other place in London during the war; there is more bustle and movement there; life somehow seems a little stronger; in many colours the placards of the newspapers announce new tidings of battles, giving fresh hope again. But for another and greater reason, Charing Cross is at this time the heart of our London things. Always it is as the gate of the Continent; from here, chiefly, the British, and those who sojourn among them, depart for Continental places by way of the Channel. So is it the same Charing Cross that we see first when we come home from Europe. That simple circumstance, much meaning for some of us as it may have had at other times, is highly intensified now, for this Charing Cross has become the gate of the war. It seems to stand for the entrance to the battlefields, the place of effort and of sacrifice. And we see lines of troops come down the Strand—that matchless thoroughfare where Charles Lamb said he often shed tears for fullness of joy from so much of life that he felt thereat—or up from Trafalgar Square, and through the iron gates we see them filing into the troop-trains that are waiting. And the heartiness, the boldness, the jauntiness of their steps!—they hold the breath of the people who crush together at the corners by the gates and give them the last cheer from London till they return. And every afternoon there is a quite different scene. Soldiers come out into London again through those iron gates. They march no more with their swinging tread. Some of them are laid in those great covered carriages that bear the almost holy Red Cross mark upon them; others can sit up, with their bandages and their dressings, in the private motor-cars that are placed at their disposal. Ambulances, carriages, little cars and big ones, make in these wintry afternoons a regular procession, from Europe, as it seems, through into Charing Cross, of the heroes on whom the war has made its mark. The arrival of the wounded is one of the high moments in the daily life of London now. It is then we feel something more of the war than we had felt before; something in our native patriotism is touched as it is not at other times. Here is the living sacrifice; here are those who offer themselves and suffer; here is Britain at the test, and the men who bear her trial. At such moments impulses come hot from the hearts of men and women who stand by and see. They do not cheer as they would in loyalty cheer a king. Instead they often cry aloud, and they shout their love, or they look it in a compelling silence. At this corner there are some poor English women and girls who sell nosegays to the passers-by. The flowers are mostly roses, bright-yellow roses and roses red like those that stand for England. And now, when the big, open motor-car moves through the yard of the railway station, and comes to the gates that lead to Charing Cross, the heroes, pale and worn of feature, seated in it with a happy smile, the flower-sellers press close to it and tumble on to the laps and at the feet of the wounded soldiers the roses they had sought to sell. To the next car another gift, and soon there are no roses left. These humble British women have made their tribute; it could not have been better done. The soldiers felt the love of England when it was being made to them. And lately another incident occurred that may be mentioned at this time. Again the little crowd was watching and whispering at the gates of Charing Cross as the ambulances came slowly, carefully, humming through with their dear and precious burdens. They turned the corner, and passed the sellers of the newspapers to whose placards I have already referred. There is one of these venders who has been a sad cripple from his birth. This cripple is British too. Now, as one of the ambulance-cars, laden with wounded laid out on their stretchers, turned down the Strand, he ceased his call of the latest news, struggled lamely forward to the back of the ambulance, and held on to it for a moment. He dropped his bundle of newspapers, all the newest and latest, between the stretchers at the feet of the wounded, and then he lurched away again from the ambulance-car, nearly falling in so doing. It was hardly noticed; nothing was said. The newsboy had made his humble tribute. These are but little things in a world of most mighty

occurrences. Yet they bear a great and splendid meaning.

* * *

There are many things to consider keenly when the world moves on again in the time of peace. Britain in many ways has to consider her new situation. Among the things she needs to consider most are the thoughts that spring to contemplative minds upon witnessing such a tribute of roses, such a tribute of newspapers. These were British acts done by British people, and they were for Britain. They were not subscriptions of a thousand guineas, yet they were more British and more worthy than many of such subscriptions. When the war broke out I was at an hotel in which there was an Austrian of the Hebrew race, and he did not speak our language perfectly. He had been a dealer in diamonds, and was very rich. I have little doubt that he was a good and kindly man, and when the first war subscription list was opened he made his mark upon it for a most handsome sum. He was proud of his contribution. He mentioned it. At the same time, he declared that he was 'more British than the British.' That is a thing that has often been said by the people of other races when they mix with ours. But in this case some of the British who heard were inclined to look a little coldly upon the well-meaning Austrian who said he was more British than the British, and in his own way had tried to prove it. Now, when the war is over, there will be thousands and hundreds of thousands of those who will say and pretend that if not more British than the British they are as much so, and will seek for a full advantage of being British accordingly. This, as one is well aware, is an old theme now; but it can never be worn out, and the moral bearing of it must be urged with vigour by all who have the power to urge it as the great peace draws towards us. It is not desirable that there shall be so many among us who lay claim to be more British than the British. Circumstances will be changed in many respects; life will be different. The British with their friends of France and Russia and Belgium and other noble states will have fought and won this war, and they will desire that their own land shall be reserved for themselves and their own blood-friends. There are some who already say, and urge most strangely, that this cannot and should not be. They say we cannot boycott a people, however wicked it may be. The commercial and economic system of the world is said to demand the admission to our affairs again of those who have been such enemies. We must forgive them and be friends again. Think of Belgium, of northern France, of the deportations into slavery of the people from thence, of the shattering of the cathedral of Rheims, of the murder at some of our coastwise places of our own innocent women and little children sleeping peacefully in their beds; think of the *Lusitania* and Nurse Cavell; think of the thousands of other horrors—some of them far too terrible to mention in print—and then, if you can, unglove your hand in friendship to a German immediately the treaty of peace is signed in Madrid, or wherever it may be signed. Others say—they say it everywhere and all the time—that the British are soft-hearted and a little silly, and that as soon as the war is over we shall forget all the injuries we have sustained. They tell us to remember how soon we forgot our grievances against the Boers when the war with them was over. But that was a different affair. Kruger's men, with all their cleverness, were a human and a simple set, and they had much fine honesty and worth in their burly, manly frames. We knew it then, and we know it now. They were people to forgive, and to ask for their forgiveness. But the case of the Germans is different. As we are fighting this war not for selfish interests, but for the good of the world and of the human life that exists upon it, so for the same good cause must we hold the Germans far apart when the war is done. The thousands in this country now who declare that after the war we shall all be for a quick forgetfulness of the wrongs we have suffered from the Teuton brutes forget surely that hardly a home in this land of ours will be without its own special sorrow of the war. Homes like these will not be quick to forget. It will be seen that the Germans, who have calculated so very badly in regard to many affairs leading up to this cataclysm, and in their conduct of the operations since it began, have reckoned wrongly again in regard to this softness of ours. Those who urge that a full measure of trade with Germany, and no restrictions upon her whatsoever, are necessary for the commerce and well-being of the world after the war, cause difficult thoughts in the minds of others, who would see that our enemies pay to the full, and do not come back to peace with the full privileges of an honest people. These questions may be examined in two ways—a complicated way and a simple way. By the complicated system of examination we may be carried into a labyrinth of figures and tariffs, schedules, and all the wonderful machinery of chancellors and financial experts, and it will be shown how a thing is good or bad just as it was shown in the case of the quondam tariff-reform debates and worry, when nobody on simple figuring was or could ever be convinced, since the same figures could always be made to support opposite causes. By the system of simplicity, the plain question is set: What would the world do if the North Sea, which once was called the German Ocean, were to rise in wrath, and by some shock of earth's surface, such as has happened in bygone ages, its waters were to spread widely and deeply over the whole of this sad Germany so that she should perish? Could the world bear such a loss?

Would it suffer for ever afterwards because the Germans, who make cheap things and sell them cheaply, could not come among us and live with us without hindrance or restriction, and by every Teuton trick and craft be enabled to get advantage over us? Are we, then, helpless without Germany, as some would have us believe? If the North Sea laid her under deluge, should we wither and die? We do not understand the reasoning of the complicated system, but we understand the argument of simplicity.

* * *

It is necessary to be careful. The band of blue water round our islands no longer counts for all it did. Conditions and circumstances become more difficult. We have heard much in the past of what we call our birthright. Let us be jealous of our birthright now. It is something to be British, and there is no man who is or can ever be 'more British than the British.' The historic phrase that was uttered in the opening hour of the war by the German Chancellor about the 'scrap of paper' applies at least to the papers of naturalisation. They, anyhow, are scraps of paper; we have good reason to know it. Love of country, and the rights of it, are made by birth and blood, and not by pens and ink. And they are made, also, not by the residence of a generation, but by many centuries of history. The British race has been made by painful as well as glorious things. The Barons' War, Bannockburn, the Wars of the Roses, the Civil War, and other stern struggles have welded this people together, and made them truly and cohesively British. And a far greater war has fastened together again all these people who have been scattered over the earth. No scrap of paper is needed to make them British. The process of naturalisation is just a commercial convenience; it is nothing more. It does not change the blood, and heart, and conscience. It creates no love of country. Again, let us be jealous of our birthright. While some in Britain have been babbling about being friendly to the Germans very soon, our good Allies, the French —who have a great birthright, too, forged through centuries of tremendous struggle—have been busily engaged in a very different affair. They have been examining most carefully the old methods of naturalisation, and casting a new law. They have been making it infinitely more difficult than ever it was before for a person who is not of the blood of France ever to call himself a Frenchman. They have been tightening the rules and qualifications, and insisting that he who would be, in name, of the French people must pass through long processes of trial, and in heart and fine quality must prove himself worthy of the great nation to which he would attach himself. It is a great thing to be a Frenchman now; in the future it will be harder than ever it was for any one without the natural qualification to achieve that splendid honour.

* * *

As in the beginning of the year we draw nearer to the splendid peace and all the tremendous and most difficult problems that peace itself will bring, wise thinking is needed upon many subjects. France now in her journals and her assemblies is considering eagerly all the good things she will do when peace-time comes. There is uppermost always in her mind what she will do for the betterment of the world and the brightening of her already lustrous culture. The Académie Française is to be a greater influence than ever it was; French art and literature are to uplift the soul as never before. That is her ideal. It is preached everywhere. One reads hardly ever in the great French newspapers about the trade that is to be done after the war, though the French commercial people are eager about their future trade. That trade is very important. In Britain it is nearly always trade. It is even said that for the sake of trade we must be kind and friendly to the Germans as soon as the peace is signed. The French say they would rather be without such dishonoured trade, and content themselves with their spiritual pursuits. But many of our people dream only of the trade. Not long ago Mr Lloyd George said, 'When this terrible conflict is over, a wave of materialism will sweep over the land. Nothing will count but machinery and increased output.' He had been speaking of music and the joy of singing. Is it true? If so, it is a terrible thing. As we come nearer to peace we must think of such things as these, for on them the advance and happiness of Britain and of the world depend.

THE DEFINITE OBJECT.

CHAPTER V.—*continued.*

MRS TRAPES swallowed audibly, stared at Spike until he writhed, and finally bored her sharp eyes into Mr Ravenslee again.

'Young man,' said she, 'what name?'

'I think our friend Spike has informed you that I am sometimes called Geoffrey. Mrs Trapes, our friend Spike told the truth.'

'Young feller,' she demanded, ''oo are you, and—what?'

'Mrs Trapes,' he sighed, 'I am a lonely wight, a wanderer in wild places, a waif, a stray puffed hither and thither by a fate perverse'——

'Talking o' verses, you ain't a poet, are you?' inquired Mrs Trapes. 'Last poet as

lodged wi' me useter go to bed in 'is boots reg'lar. Consequently I ain't nowise drawed to poets.'

Mr Ravenslee laughed and shook his head. 'Have no fear,' he answered; 'I'm no poet, nor ever shall be. I'm quite an ordinary human being, I assure you.'

'Young feller—references?'

'Mrs Trapes, I have none—except my face. But you have very sharp eyes; look at me well. Do I strike you as a rogue or a thief?'

Here Spike, chancing to catch his eye, blushed painfully; while Mr Ravenslee continued, 'Come, Mrs Trapes, you have a motherly heart, I know, and I am a very lonely being who needs one like you to—to cook and care for his bodily needs, and to look after the good of his solitary soul. Were I to search New York I couldn't find another motherly heart so suited to my crying needs as yours; you won't turn me away, will you?' Saying which, Mr Ravenslee smiled his slow, sleepy smile, and, wonder of wonders, Mrs Trapes smiled too.

'When d'ye wanter come?'

'Now!'

'Land sakes!' she exclaimed.

'If it won't trouble you too much,' he added.

'There's sheets to be aired'—— she began, but checked suddenly to stare at him again. 'Look a here, Mr Geoffrey,' she went on, 'my terms is two-fifty a week, ten dollars *with* board, and a week in advance.'

'Good!' nodded Mr Ravenslee; 'but since I'm coming in at such short notice I'll pay three weeks ahead just to—er—bind the bargain. See, that will be thirty dollars, won't it?' And, speaking, he drew a handful of crumpled bills from his pocket and proceeded to count out thirty dollars upon the green-and-yellow table-cloth.

'Sakes alive!' murmured Mrs Trapes.

'And now,' said he, 'I'll just step round the corner with Spike to buy—er—a tooth-brush.'

'Toothbrush!' echoed Mrs Trapes faintly.

'And a few other things. I shall be in early to supper.'

'Would a nice English mutton-chop wiv tomatoes'——

'Excellent; and thank you, Mrs Trapes, for sheltering a homeless wretch.' So saying, her new boarder smiled and nodded, and, following Spike out into the hallway, was gone.

But Mrs Trapes stood awhile to stare after him, lost in speculation. 'A toothbrush!' said she. 'My! my!' Then she turned to stare down at the pile of bills. 'Now I wonder,' said she, right hand caressing left elbow-point—'I jest wonder who he's been a-choking of to get all that money? But I like his eyes! And his smile! And he looks a man, and honest! Well, well!'

CHAPTER VI.—HOW SPIKE INITIATED MR RAVENSLEE INTO THE GENTLE ART OF SHOPPING.

'GEE!' exclaimed Spike as they descended the many stairs; 'she sure give you the frosty face, Geoff; but it didn't seem to joggle you any.'

'No, it didn't joggle me, Spike, because, you see, I like her.'

'Like Mrs Trapes! You'n Hermy are about the only ones, then; most every one in Mulligan's hates her an' gets scared stiff when she cuts loose! But say, you do keep on rubbin' it in; I mean about—about thievin'.'

'Probably it's your conscience, Spike.'

'You won't ever go tellin' any one or blowin' de game on me?'

'Spike, when I make a promise I generally keep it.'

'Ye see, Geoff, it ain't as though I was a—a real crook.'

'You meant to be.'

'But I never stole nothin' in me life, Geoff.'

'Suppose I hadn't caught you?'

'Oh well, cheese it, Geoff—cheese it. Let's talk about somethin' else.'

'With pleasure. When does your sister return?'

'This evenin', I guess. But, Geoff, say now, do I look like a real crook—do I?'

'No, you don't, Spike; that's sure. And yet, only last night'——

'Ah yes, I know—I know,' groaned the lad; 'but I was crazy; I think it was the whisky, Geoff; an' they doped me too, I guess. I don't remember much, after we left, till I found myself in your swell joint. God! if I was only sure they doped me'——

'Who?'

'Who! Why, gee! you nearly had me talkin' that time. Nix on the questions, Geoff. I ain't goin' to give 'em away; it ain't playin' square. Only, if two or three guys dopes a guy till a guy's think-box is like a cheese an' his mind as clear as mud, that poor guy ain't to be blamed for it, now, is he?'

'Why, certainly,' nodded Ravenslee.

'How d'ye make that out?'

'For being such a fool of a guy as to let other guys fool him, of course. Sounds a little cryptic, but I guess you understand.'

'Oh, I get you,' sighed Spike drearily. 'But say, didn't you come out to buy a toothbrush?'

'And other things, yes.'

'Well, say, s'pose we quit chewin' th' rag an' start in an' get 'em. There's a Sheeny store on Ninth Av. where you can get dandy shirts for fifty cents a throw.'

'Sounds fairly reasonable,' nodded Mr Ravenslee as they turned up Thirty-ninth Street.

'Then you want a new lid, Geoff.'

Mr Ravenslee took off the battered hat and

looked at it. 'What's the matter with this?' he inquired.

'Nothin', Geoff; only it wants burnin',' sighed Spike. 'An' then, them boots—oh, gee!'

'Are they so bad as that?'

'Geoff, they sure are the punkest pavement-pounders in little old New York. Why, a Dago hod-carrier wouldn't be seen dead in 'em; look at th' patches. Gee-whiz! Where did His Whiskers dig 'em up from?'

'I fancy they were his own once,' answered Mr Ravenslee, surveying his bulbous, bepatched footgear a little ruefully.

'Well, I'll gamble a stack of blue chips there ain't such a phoney pair in Manhattan village.'

'They're not exactly things of beauty, I'll admit,' sighed Mr Ravenslee; 'but still'——

'They're rotten, Geoff. They're all to th' garbage-can. They are th' cheesiest proposition in side-walk slappers I ever piped off.'

'H'm! You're inclined to be a trifle discouraging, Spike.'

'Why, ye see, Geoff, I wancher t' meet th' push, an' I don't want 'em to think I'm floatin' around with a down-an'-out from Battyville. You must have some real shoes, Geoff.'

'Enough; it shall be done,' nodded Mr Ravenslee.

'Well, tan Oxfords are all to th' grapes just now, Geoff. I don't mean those giddy-lookin' pumps with flossy bows onto 'em; but somethin' sporty, good an' yellow that'll flash an' let folks know you're comin'. An' here's Eckstein's.'

With which abrupt remark Spike plunged into a shop, very dark and narrow by reason of a heterogeneous collection of garments, of ribbons and laces, of collars and ties of many shapes and hues, together with a thousand and one other things that displayed themselves from floor to ceiling; amidst which Mr Ravenslee observed a stir, a slight confusion, and from a screen of vivid-bosomed shirts a head protruded itself, round as to face and sleek as to hair.

'Greetin's, Ikey,' said Spike, nodding to the head. 'How's pork to-day?'

'Aw, vat you vant now, hey!' inquired the head; 'vat's the vord? Now shpit it out.'

'It ain't me, Moses, it's me friend wants a sporty fit-out, an' discount for spot cash, see? Show us your half-dollar shirts for a start, an' sporty ones, mind.'

Immediately out came drawers and down came boxes, and very soon the small counter was littered with piles of raiment variously gaudy, which Spike viewed and disparaged with such knowing judgment that the salesman's respect proportionately grew, and Mr Ravenslee, lounging in the background, was forgotten quite, the while they chaffered after this manner:

Salesman—'Here vos a shirt as can't be beat for de money, negligée bosom an' turn-over cuffs, warranted shrunk, an' all for vun dollar.'

Spike—'Come off, Aaron; come off! Fifty cents is th' bid.'

Salesman—'Fifty cents! Vy, on Broadvay dey'd sharge you'——

Spike—'Wake up, Ike! this ain't Broadway. An' fifty 's the limit.'

Salesman—'But shust look at dem pink shtripes, so vide as an inch. Dere's fifty cents' vorth of dye in dem shtripes, an' I'll give it you for seventy-five cents. On Broadvay'——

Spike—'We're gettin' there, Ikey; we're gettin' there; keep on, fifty 's the call.'

Salesman—'Fifty cents, oi! oi! I vould be ruined. A negligée bosom an' turn-over cuffs! Vell, vell, I'll wrap it up, so, an' I make you a present of it for—sixty. An' on Broadvay'——

Spike—'Come on, Geoff, Aaron's talkin' in his sleep. Come on, we'll go on to Mendelbaum's; see, we want shirts, an' ties, an' socks, an' collars, an'——

Salesman—'Vait, vait. Mendelbaum's a grafter—vait. I got th' best selection of socks an' ties on Ninth Av'noo, an' here's a negligée shirt with turn-over cuffs, an' only fifty cents. But at Mendelbaum's or on Broadvay'——

In this way Mr Ravenslee became possessed of sundry shirts whose bosoms blushed in striped and spotted splendour, of vivid-hued ties, and of handkerchiefs with flaming borders. From shop to shop Spike led him, and, having a free hand, bought right royally, commanding that their purchases be sent round hot-foot to Mulligan's. Thus Spike ordered and Mr Ravenslee dutifully paid, marvelling that so much might be bought for so little.

'I guess that's about all the fixin's you'll need, Geoff!' said Spike, as they elbowed their way along the busy avenue.

'Well,' answered Mr Ravenslee as he filled his pipe, 'it will certainly take me some time to wear 'em out, especially those shirts!'

'They sure are dandies, Geoff! Yes, those shirts are all to the lollipops; but say, you made a miscue gettin' them black shoes.' And here Spike turned to stare down at his companion's newly acquired foot-wear. 'Why not buy the yellow boys I rustled up for you? They sure were some shoes!'

'They were indeed, Spike.'

'Gee, but it must feel good t' be able t' buy whatever you want!' sighed Spike dreamily. 'Some day I mean to have a wad big enough t' choke a cow; but I wish I had it right now!'

'What would you do with it?'

'Do with it—well, say, first off I'd—I'd buy Hermy them roses—th' whole lot;' and he pointed where, among the push-carts drawn up against the curb was one where roses bloomed, filling the air with their sweetness. 'An' next she should'——

'Then go and buy 'em, Spike!' and, speaking, Mr Ravenslee thrust a bill into Spike's hand.

'Gee—a twenty-spot! Can I, Geoff?' he cried, his blue eyes shining. 'Th' whole lot—on de level?'

'On the level.'

Spike started joyfully away, paused, turned, and came back with head adroop. 'I guess it can't be done, Geoff,' he sighed.

'Why not?'

'Well, ye see, it ain't as if it was my own money, really.'

'But it is!'

'No, it ain't! I haven't earned it, Geoff; an' I ain't a guy as sponges on his pals—not much I ain't. Take your money, Geoff. When I buy Hermy anythin', it's goin' to be bought with money as I've earned.'

So Mr Ravenslee thrust the bill back into his pocket, and thereafter walked on, frowning and very silent, as one lost in perplexed thought.

Wherefore, after more than one furtive glance at him, Spike addressed him with a note of diffidence in his voice. 'You ain't sore with me, are you, Geoff?'

'Sore with you?'

'I mean, because I—I didn't take your money?'

Here Mr Ravenslee turned to glance down at Spike and clap a hand upon his shoulder. 'No,' he answered, 'I'm not sore with you. And I think—yes, I think your sister is going to be proud of you one day.'

And now it was Spike's turn to grow thoughtful, while his companion, noting the flushed brow and the firm set of the boyish lips, frowned no longer.

'Hello, there's Tony!' exclaimed Spike, as they turned into Forty-second Street; 'over there, behind the push-cart—th' guy with th' pea-nuts!' and he pointed where, from amid a throng of vehicles, a gaily-painted barrow emerged, a barrow whereon were pea-nuts unbaked, baked, and baking, as the shrill small whistle above its stove proclaimed to all and sundry. It was propelled by a slender, graceful, olive-skinned man, who, beholding Spike, flashed two rows of brilliant teeth and halted his barrow beside the curb.

'How goes it, Tony?' questioned Spike.

Whereat the young Italian smiled, and thereafter sighed and shook his head. 'Da beezeneez-a ver' good,' he sighed; 'da pea-nut-a sell-a all-a da time! But my lil' Pietro he sick; he no da same since his moder die-a; me no da same—have-a none of da luck—noding—nix!'

'Hard cheese, Tony!' quoth Spike. 'But say, have you seen th' Spider kickin' around?'

'No, I ain't! But you tell-a da signorina'——

'Sure I will.'

'My lil' Pietro he love-a da signorina; me, I love-a her—she so good, so generosa, ah yes!' and taking off his hat in one hand, Tony kissed the other and waved it gracefully in the air.

'Right-o, Tony!' nodded Spike. 'You can let it go at that. An' say, this is me friend Geoff.'

Tony gripped Mr Ravenslee's hand and shook it. 'You one o' da bunch—one o' da boys, hey? Good-a luck.'

So saying, Tony nodded, flashed his white teeth again, and, seizing the handles of his barrow, trundled off, his pea-nut oven whistling soft and shrill.

'Tony's only a guinney,' Spike explained as they walked on again, 'but he's white, Geoff; 'n say, he's a holy terror in a mix-up! Totes one o' them stiletto-knives. I've seen him stab down into a glass full of water an' never spill a drop, which sure wants some doin'.'

Evening was falling, and dismal Tenth Avenue was wrapping itself in shadow; a shadow made more manifest by small lights that burned dismally in small and dingy shops; a shadow, this, wherein moving shadows jostled with lounging shoulder or elbow. Now, as they passed a certain dark entry where divers of these vague shadows lounged, a long arm was stretched thence, and a large hand gripped Spike's shoulder.

'Why, hello, Spider!' said he, halting, 'what's doin'?'

'Nawthin' much, kid—only little M—— Say, who's wid you?'

'Oh, this is a friend o' mine.—Geoff, dis is de Spider!'

Visualised in the Spider, Ravenslee saw a tall, slender youth, very wide in the shoulder and prodigiously long of arm and leg, who looked at him keen-eyed from beneath a wide cap-brim, while his square jaws worked with untiring industry upon a wad of chewing-gum.

'Good-evening,' said Ravenslee, and held out his hand.

The Spider ceased chewing for a moment, nodded, and, turning to Spike, chewed fiercer than ever. 'Where you'se goin', kid?' he inquired, masticating the while.

'What was you goin' to tell me, Spider?' demanded Spike, a note of sudden anxiety in his voice.

'Nawthin', kid.'

'Aw, come off, Spider. What was it?'

The Spider glanced up at the gloomy sky, glanced down at the dingy pavement, and finally beckoned Spike aside with a quick back-jerk of the head, and, stooping close, whispered something in his ear—something that caused the boy to start away with clenched hands and face of horror—something that seemed to trouble him beyond speech, for he stood awhile dumb and staring, then found utterance in a sudden, hoarse cry: 'No, no! It ain't true. Oh, my God!'

And with the cry Spike turned sharp about, and, springing to a run, vanished into the shadows.

'What's the matter?' demanded Ravenslee, turning on the Spider.

'Matter!' repeated that youth, staring at him under his cap-brim again; 'well, say, I guess you 'd better ask de kid.'

'Where 's he gone?'

'How do I know?'

'It isn't his sister, is it?'

'Miss Hermione? Well, I guess not.' So saying, the Spider, chewing ferociously, turned and vanished down the dark entry with divers other shadows.

For a moment Mr Ravenslee stood where he was, staring uncertainly after him. Presently, however, he went on toward Mulligan's, though very slowly, and with black brows creased in frowning perplexity.

(*Continued on page 86.*)

OXFORD IN THE SEVENTIES.

PART II.

APART from the canons, we had some distinguished or interesting men on the staff of the college. Vere Bayne, the Senior Censor, was a perfect specimen of the old-fashioned don—dignified, courteous, rigorously precise, and yet with a good deal of humanity behind his starched exterior. A 'Limerick' which appeared in the seventies was generally supposed to have been aimed at him:

> There was an old don of the House
> Renowned for his wisdom and *nous*.
> When they said, 'You are wrong,'
> He replied, 'Go along,
> We never are wrong at the House.'

But it was not a complete portrait. Bayne was an academic, but when you got to know him you found that he was not a pedant at heart, that he had a pleasing vein of dry humour, as well as a nice taste in music and a good judgment in wine. Francis Paget, ultimately Bishop of Oxford, took the honour men in classical composition; and for Greats work we had Macan, now Master of University College; Stewart, now Professor of Moral Philosophy; and Richard Shute, who enlightened us on the Pre-Socratics. Shute was a brilliant and delightful man, who crowned a wayward undergraduate career by getting a brilliant First from the Tavern, as New Inn Hall, then the refuge of the irregular, was familiarly and not altogether unfairly known. That was a remarkable feat, but even more remarkable was his standing for and being elected for a studentship at Christ Church. As a matter of fact, he settled down into a most admirable don, a stimulating teacher, excellent on committees and as an administrator, and a most charming and humorous guide, philosopher, and friend to the undergraduates who came under his influence. Unfortunately he died young, much beloved and deeply regretted. But undoubtedly the don whose fame stood highest with the world at large was 'Lewis Carroll' (the Rev. Charles L. Dodgson), the author of *Alice in Wonderland* and other immortal works. 'What a delightful sort of don he must have been!' I can imagine people saying. And he certainly could be delightful and highly entertaining in the company of his equals—in Common Room, for example, whence echoes of his wit used occasionally to reach our ears. Some of us also read his clever squibs on university controversies. But the rest was practically silence so far as undergraduates were concerned. He lectured on mathematics; but I never came across any undergraduate who had ever been to his rooms or knew what manner of man he was. As a social influence he was *nil;* he seemed to lose all interest in people once they grew up. And yet all of us had read and adored his books, and would have been his devoted friends if he had let us. As it was, he stood wholly apart from the *fougue de vingt ans*, a mysterious and perplexing figure.

The æsthetic movement had already invaded Oxford, and a certain number of dons' wives, sisters, and daughters discarded fashion-plates, and went about in shapeless sage-green garments, and were addicted to the cult of Botticelli, or 'Botter,' as he was called by the irreverent, for the Harrow slang was already in vogue, and we talked of 'toggers' (torpids), 'Bletcher Junker' (Bletchley Junction), 'Shakers' (Shakespeare Readings); indeed, I remember hearing a man once allude to the crack of doom as 'cracker.' A handful of undergraduates worshipped at the same shrine, and the vagaries of Postlethwaite, satirised by Du Maurier in *Punch*, had their origin in the studied eccentricities of one of the number. But the attitude of the majority was frankly and wholesomely Philistine. Some years afterwards, when the apostle of Neo-Paganism visited his old college, he was forcibly immersed in the Cherwell. The incident was discussed in the All Souls' Common Room, and one of the friends of the victim grew vocal in his indignation against the outrage. The offenders, he declared, ought to be prosecuted. 'I suppose you mean under the Rivers Pollution Act' was the immortal comment of one of the Fellows who had up till then remained silent. Emancipated intellectuals read and imitated Swinburne. Some parodied him; but the best efforts in the domain of travesty fell a long way short of the wonderful 'Octopus' in the Cambridge *Light Green*. The *Light Green*, it may be mentioned, was in respect of its title a burlesque of a magazine called the *Dark Blue*, published in London in the early seventies, which suggested

a connection with Oxford life and thought not borne out by the contents. Undergraduate literary activity found vent in a certain amount of occasional verse, emanating chiefly from Balliol, but both in quality and quantity inferior to that of later years. The *Oxford Magazine* was not yet in existence, and A. D. Godley, though a contemporary of mine, had not gained, or at least shown, that mastery of the serio-comic vein which has long entitled him to the command of Oxford metrical light horsemen. There were some good things in the *Shotover Papers*, to which the late Mr Ivan-Müller was the chief contributor; but the wittiest Oxford rhymes in the late seventies and early eighties were the series of Balliol quatrains, miniature portraits of prominent dons and undergraduates which enjoyed a wide oral currency, and were composed by a brilliant group of undergraduates, distinguished in later years in literature, diplomacy, and the Church. I remember hearing Mackail recite his prize Newdigate poem in the Sheldonian; but the only line that stuck in my head was part of an enumeration of exotic unguents: 'Stactè, and tragacanth, and galbanum.'

The published contemporary lampoons and satires—with rare exceptions, such as those by Dodgson already mentioned—compared unfavourably with the old *Art of Pluck* and Mansel's brilliant squibs, which still commanded a ready sale in the bookshops. Caricatures of university celebrities appeared in the windows, but were crude and amateurish, and for one volume of undergraduate verse published in those days Mr Blackwell now probably publishes ten. Dress was on the whole more decorative. Battered caps and gowns abounded, but rags were not *de rigueur* with eminent undergraduates. We were not 'all Socialists' in those days; and at the Union debates the advocates of conventional, orthodox, and Conservative views were generally secure of a large majority when it came to the vote. Ruskin undoubtedly exerted an influence; but Ruskin College was yet to come, and the majority of the undergraduates who were marked out for distinction by their success at the Union were on the side of the established order of things. An exception was B. R. Wise, but his Radical views were somewhat modified in middle age. Wise was an all-round man, proving that 'he who runs may read,' as he won his Blue for the mile, besides taking a First in Laws. His subsequent career in Australia is well known; and he was Agent-General for New South Wales at the time of his death, which occurred between my writing this paper and correcting the proofs. Toward the end of my time Lord Curzon was one of the star speakers at the Union; but perhaps the highest expectations were formed of A. A. Baumann, who seemed equipped with all the qualifications for a resounding parliamentary success. In his recent book, which proves him to be in full possession of his brilliant powers of criticism and expression, he attributes his failure in politics to the possession of a judicial mind. Lord Milner, Mr Asquith, Mr Herbert Paul, and Sir Thomas Raleigh had all taken their degrees; but the memory of their intellectual prowess, especially Lord Milner's, was still fresh, and their rise to eminence regarded as secure. They were the giants of the immediate past. In my own humble view the best brain and the keenest wit is that of Sir Thomas Raleigh, but his incorrigible diffidence, his lack of ambition and of the minor arts of success, have kept him out of the limelight, though they fortunately have not prevented him from doing excellent work both in India and at home.

Of the Union I have spoken above. Other debating societies were the Canning and the Palmerston, which was started in my time at Balliol, but was open to members of other colleges, and of which I was an obscure and silent member. At Christ Church there was a small debating society, the meetings of which were invested with the utmost secrecy. Its very name was only breathed in whispers by members away from the debates. In earlier days it had been glorified by the attendance and eloquence of Lord Dufferin and other notables; but in my day we had only one orator, and he has since remained mute. He also had another claim to distinction, for he was one of the first pioneers of that adventurous band who in later days practised mountaineering on the roofs of colleges and public buildings. At that time some architectural changes were in contemplation at Christ Church, and in order to see how they looked a number of dummy pinnacles were put up on the roof of the Hall. Late one evening my friend came to my rooms and informed me that he had 'got a little pinnacle,' which, after much exertion, he had detached from its context, brought down as a trophy, and deposited in one of the canons' gardens. The kindred but more distinctive pastime of wall-pushing, which has yielded startling results, was a much later development of these irregular activities. Among the mollifying arts was music; there were two societies, the Philharmonic and the Choral, afterwards amalgamated, besides the Musical Club for the practice of chamber music. Sir Walter Parratt was organist at Magdalen, and Taylor, who conducted the Philharmonic, at New College. We had a small male voice choral society at Christ Church, where we sang glees and Mendelssohn's *Œdipus Coloneus* music. But although I heard Rubinstein give a pianoforte recital, and Hallé and Madame Norman-Neruda more than once, the musical experience that impressed me most during my stay at Oxford was the singing of the carol on May morning at daybreak on the top of Magdalen Tower.

The river was a delight as well as a discipline, or rather, one should say, the rivers, for the

Cherwell has its tranquil charms as well as the 'silver sliding Thames;' and among the memories of successful entertainments few stand out more vividly than those of water picnics in Commemoration time. Oxford is more beautiful in Eights' week; but at all seasons her sons are proud to show off her glories to their guests, especially if they happen to be good-looking sisters or cousins, or the good-looking sisters and cousins of their friends. One wonders sadly whether Oxford will ever renew the gaieties of Commemoration. To visit her now, with her handful of students, mostly weaklings, bereft of the noblest and best of her sons, is a humbling experience for elderly men who in their time were never called upon to make the great sacrifice, but have lived to see it made cheerfully and heroically by their sons. Truly this generation are entitled to use the Homeric vaunt, though they are the last to think of doing so; and when one compares our placid youth, in which the horse-play of a bump-supper, the bruises and occasional broken bones of the football field, ragging and making hay, represented the maximum of peril, with the long inferno of trench warfare, the pleasures of reminiscence are marred by the cruel violence of the contrast. And yet the old days, though they furnished little scope for heroism and endurance, were joyous and happy. One only resents the inscrutable decree of fate that has denied the innocent joys of early manhood to those who deserved them better than we did. Of the many lessons we elders have learned in the last two years none is greater than this—that we should exercise the privilege of age more sparingly in our criticism of our juniors. The old saw, *Maxima debetur pueris reverentia*, takes on a new and overwhelming truth in view of what they have done and endured—of early errors nobly redeemed, of splendid promise fulfilled in untimely death. The trumpets nowadays are always sounding on the other side.

THE END.

THE FIRST BIG STRIKE.

By E. R. PUNSHON, Author of *The Crowning Glory*, *Arrows of Chance*, &c.

IN the early summer of the year 1892 Neville Brooke Moines des Moines was sitting comfortably in the shade of a great birch-tree, reading the Court and society news in a fashionable weekly London paper.

True, the paper was a year old or more, but that did not interfere with Neville's enjoyment; for it was more than a year and more than a decade since he had heard of many of those people of whom he was now reading. He was enormously interested. There was hardly a name in the list that was not familiar to him. Lord This had been his fag at Eton, and Lord That—known in those days as Fatty—still owed him sixpence, borrowed to be spent on cream-tarts. Great Moses! The Duchess of So-and-So 'presented on her marriage' was that cheeky, green-eyed kid who had wanted to kiss him at the Christmas-party at the Abbey in—he had forgotten the year, but he remembered well how mad she had been when he had flatly refused, and how emphatically she had called him a 'rude little boy.' Neville chuckled grimly as he wondered what she would call him if she could see him now.

He threw the paper aside with a sigh. How vividly it brought the old days back! Well, all that was over now for him. He had gone the pace, and he had come a smash, of which it was possible that a few ripples were still visible on the surface of far-off London society. But what a time it had been while it lasted! He held out his hand before him. It was as firm and steady as a rock—as, indeed, it had need to be, since on his skill as a hunter and trapper his livelihood depended. He remembered that in the old days it had often shaken so much that he had sometimes found himself unable to lift his glass of champagne to his lips without spilling half the contents.

He began to fill his pipe, looking round him idly as he did so. In the distance, under a blue haze, rose the great pine-covered hills; between him and them ran a little bubbling creek fed by ice-clear glacial waters. Far away Neville thought he heard a deer call, but he was not sure. Everything was very quiet and still in the heat of the noonday sun, though this stillness was that of an overflowing life in brief repose, and not the silence of the frozen death that would come when the brief summer was over and there reigned in its stead the bitter sway of sixty below.

Neville picked up the paper again. He was aware of an odd restlessness to which he had been a stranger for many a year. The paper had been given him by a half-breed in exchange for a bottle of whisky, and reading of the old familiar life he had known so well had brought back the past too clearly. It was curious to think that years ago hardly a single column such as he had just been reading could have been written without his name occurring in one or another of the paragraphs.

He supposed it was still the same as ever over there—young fools going the pace, laughter and fun in plenty, and then the bill to pay. Well, thank goodness! he had paid his bill in full, good measure pressed down and running over, and the old life was past for ever.

But it would be rather amusing to turn up there again. He let his imagination play with the idea. The very impossibility of the phantasy amused him.

What fun it would be to stroll into the enclosure at Ascot, for instance! Men would look at him, and some would say, 'Isn't that Des Moines? Deuce of a time since I saw him.' Women, once dear, would go a little pale perhaps. And then there would be whispering in corners, and a few very likely would pretend not to see him.

He began to think of Piccadilly, of Pall Mall, of the clubs. It would be good to turn into the old club again. He supposed he was still a member, for he had paid a life-subscription, and it wasn't likely they would have taken the trouble to expel him. The theatres, too, and the opera on a gala night. His memory showed him a hundred such scenes as he lay beneath the tall, lone birch, and he moved uneasily.

'I wish I had never read the thing,' he said to himself; 'it sets a chap thinking.'

He wondered if there were any who would welcome him back for his own sake. He was not quite sure; for towards the end, when he had made the pace so hot, a good many of his old pals had dropped him. Peter Townley might remember when they two went in first together for Oxford at Lords; but Peter was well on the way to a judgeship now, and grown mighty respectable. Or little Jimmy Reeves—he wondered what had become of little Jimmy Reeves. Jimmy Reeves owed him something for stopping that scandal about the barmaid which would have brought his career to such an untimely end. He wondered if by any chance little Jimmy could be identical with the Very Reverend Dr James Reeves, who was mentioned in one of the paragraphs he had just been reading as bishop designate of Southminster. If so, the bishop designate might not be over pleased at seeing Neville des Moines again; most likely his sincere hope was that Neville des Moines was long since dead and forgotten. Or there was Billy—but Billy was in Parliament, apparently as the rising hope of the extreme Nonconformists. Billy would certainly not be at all pleased to see his old pal back again. On the whole, the outcast under the tall, lone birch did not feel he could count on a very warm welcome—perhaps felt that he did not deserve one. Unless, of course, he came with his pockets full of money, and then he would soon have the old crowd round him again.

Neville laughed to himself a little, and sat upright. There was certainly no chance of his ever having pockets full of money again; he had never had the gift either of making it or keeping it. No; he had had his fun, and paid for it as a gentleman should; and, on the whole, he supposed things might be worse. It was only that fool of a newspaper rag had set him dreaming of the old days. So long as health and strength lasted he could always knock out a living in these northern woods and hills, trading for skins, hunting, trapping, fishing. Honestly, he did not think there were many better hunters in all the West; as good there were, he knew, but none better, he thought. And, anyhow, he was doing no harm now; it was a clean, straight life. He was respected where to win respect one had to show one's self a man and no quitter, and never close-fisted. Yes, he had won respect out here; and when his time came, as it surely would—for from all who live by the wilderness there comes the day when the wilderness claims its rights—he would lie down and die without a murmur or a regret, as the dumb beasts die.

He jumped to his feet with a sudden movement. He had been dreaming so long, it was growing late, and there were traps to see to on the banks of the Klondike creek. He shook himself to shake off unwelcome thoughts, as a wet dog shakes off the rain-drops from its coat, and he made up his mind that the next London paper that came his way he would burn without giving it a glance.

As this thought passed through his mind, his foot chanced to knock against a stone half-embedded in the earth. Idly he kicked it from its place, and he noticed a yellow gleam where it had lain. Carelessly enough, he kicked the loose earth. The yellow gleam showed more plainly. The next moment he was on his knees, scratching, tearing, digging with hand and knife, like a madman. All the earth he turned up was streaked with yellow, thick and heavy with yellow grains. He gave a sudden great cry that floated away and was lost in the vast silence of the hills and the woods around.

'Gold!'

It was gold, beyond a doubt. He had struck gold—struck it rich. Never had he heard of gold so far north, but here it was. The yellow stuff that means so much was here like any other dirt, waiting to be picked up, shovelled up, carted away to reap the homage that awaited it. For here it was yellow dirt and nothing more; but there it was the glory and the splendour of the world and all the power thereof.

He worked on in a frenzy. Forgotten were the traps upon the creek-bank; forgotten supper; forgotten rest and sleep. While daylight lasted—and that was long at that time of the year in those high latitudes—he worked on, till he had scraped a great hole in the earth, and the deeper he went the richer seemed the dirt. The great pile by his side was nearly a fifth pure gold.

At last he gave up, because he could see no more, and he lit a fire and cooked himself some supper. But he had no appetite for food, for a furious excitement possessed him.

He knew very well this was a big thing. It meant millions very likely. It meant a rush

from all the corners of the earth; it meant a great city rising here in this lonely valley; it meant for him, Neville Brooke Moines des Moines, his old place in the world again, given back to him by a miracle as strange as ever was wrought upon this earth.

Weary as he was, he could not sleep, and filling his corn-cob pipe, he began to smoke. So it was all coming true. He was going back; he would see the old faces; he would lead the old life.

He found it odd to think of that. Bedrooms, for example. Stuffy they would be after this free northern sky. And white shirts with stiff starched fronts and collars. And the electric light, and the crowded streets, instead of these majestic solitudes that lay around as on the day when their Creator had looked upon them and found them good.

How the chaps would swarm round him when they knew he was rich again! How boisterous would be their greetings! How ready women would be to smile on him! It would be the old times again—wine and laughter, cards and racing, flushed faces and heavy eyes, bed at four or five in the morning, breakfast at noon or later. How well he knew that life! How strange it was to think it was all going to begin all over again!

'Up to the same old smash at the end when I've been sucked dry,' he said to himself with a laugh that had in it not much mirth. He knocked the ashes out of his pipe. 'Wonder what's the matter with me!' he thought.

He wrapped his blanket round him and lay still, and tried to imagine the great lonely valley with all the swarming crowd like flies that the news of his great find would summon hither from the four corners of the earth. He thought of the crowded saloons, the blare of the noisy pianos, the shouting gramophones, the drunken men, the women, the noise—noise unceasing and everywhere in place of this perpetual peace—the restless bustle in place of this great untroubled calm, the hard glare of flaring lamps in place of the pale glamour of the stars.

Again he thought of the old life that now it was in his power to return to at his will, and a contrast rose in his mind between that riotous round of meaningless excitement and his wild, clean, unfettered life as hunter and trapper. He looked again upon the majestic peace of the land, untroubled and calm in the warm night, and the idea came to him that it would be a foul treachery to give these calm solitudes over to the greedy horde that would come with clutching, outheld hands he could almost see, to snatch, and seize, and devour.

'I'll not do it—not I,' he said aloud, and he fell at once into a deep sleep, in which it was as though the hills and the valley and the little clear creek near by watched together over the slumbers of the man who had it in his hands to give them over to the enemy or to refrain.

When he awoke in the morning he was still of the same mind. He pushed back into the hole from which he had taken it that heap of yellow earth he had dug up the night before, and he stamped it down so heavily that little sign of any disturbance remained. Then he cooked and ate his breakfast, and took his rifle and went off to attend to the traps he had neglected the night before. And it was some years later when news came to a lonely camp in the Rockies that 'gold! gold! GOLD!' had been found in the Klondike.

'There's the biggest rush ever known on,' said the man who had heard the news to a bronzed, clear-eyed trapper his companions called 'Nev;' 'the whole place is just a swarm of 'em.'

'It would be,' said Neville des Moines briefly.

'Gosh!' said the other yearningly, 'don't you just wish it was you had had the luck to make that strike?'

But 'Nev' was a man of few words, and the other was not much surprised that he did not answer.

THE MONTH: SCIENCE AND ARTS.

THE CHANNEL TUNNEL.

PROBABLY no contemplated engineering enterprise has aroused such long-continued discussion as that of a tunnel beneath the Strait of Dover, to serve as a link between Great Britain and the Continent. If only commercial and engineering interests had been at stake, the undertaking would have been consummated many years ago, but hitherto the suggestion has always been vetoed by the defence authorities. But the present great war has caused many opinions to be revised, as is shown in Sir J. H. A. Macdonald's article on the 'Dover Tunnel and the Scottish Ship-Canal,' which was published in the November part of this Journal. The military situation has undergone a complete change, and, indeed, in many quarters it is urged that we should have been far better equipped for the movement of troops and supplies if the tunnel had been available. Still, all things considered, the postponement of the scheme has not been without its advantages. When it was first mooted, steam would have been necessary for the movement of the trains. To-day electricity constitutes the ideal propelling force, and the contiguity of the Kentish coal-field should ensure an adequate supply at a low cost. We have seen what can be accomplished by this agent in operating the heaviest descrip-

tions of main line railway traffic. Electricity has superseded its old-established rival for working some of the greatest tunnels of the world, namely, those which penetrate the Alps and the great mountain chains of the United States. More recently the electrification of the four hundred and forty miles of the Chicago, Milwaukee, and Pacific Railway traversing the difficult country of the Rockies offers comprehensive data for the solution of the intricate problems involved. The Channel Tunnel, as at present contemplated, will be about thirty-one miles in length, and the tracks will be laid in separate tunnels, somewhat after the system of the tube railways of London. Each tunnel will have a clear internal diameter of eighteen feet, and will be at a minimum depth of one hundred and fifty feet below the sea-bed. Presumably shuttle working will be practised, with cross-overs and side-switches at certain intervals, to permit express trains to pass slower trains if necessary. From the engineering point of view the project offers no pronounced difficulties. The preliminary soundings indicate that the tunnel would run through solid chalk, which would probably prove to be free from faults. Boring would be carried out by means of the Greathead shield under compressed air, and the circular bore, as excavated, would be lined with steel plates with a grouting between the plates and the chalk, while the plates themselves would be lined with cement. Better ventilation and greater security against fire will both be assured by the adoption of electric working. At an average rate of forty-six miles per hour, the passage would be accomplished in about forty minutes, but there is no reason why higher speeds should not be reached under the conditions that will obtain. At the British end the tunnel would be gained through a deep valley which would render the question of approach a simple undertaking, as only an easy gradient would be involved; while on the French side this subterranean as well as submarine passage would emerge at a point some four miles inland, so that the entrance may not be exposed to the dangers of bombardment by submarines. The engineers anticipate that the tunnel would be completed within five years, since there is no reason to suppose that the 'unexpected' would assume abnormal proportions, the formation of the chalk being comparatively regular, while it is not anticipated that water will prove exceptionally troublesome. The construction of the tunnel immediately after the war would turn to profitable use a vast quantity of plant and material already shipped across the Channel, while the finding of employment for some thousands of skilled navvies would be a contribution towards the solution of the post-war labour problem. The provision of a submarine connecting-link would be a decided stimulus to Anglo-Continental traffic, as there would be a complete avoidance of the delay incidental to transhipment at the ports. The enthusiastic advocates of the enterprise have discussed the possibility of running through-trains between the British manufacturing centres and the remote cities of Europe and Asia. But this is a romantic dream, for there are differences in track gauge to be taken into consideration, the engineer not yet having solved the problem of fitting rolling stock with a universal wheel system capable of adapting itself to all the various gauges in use upon the Continent. The alternative to a tunnel beneath the Channel is a ferry like those operating upon the great lakes of America. This scheme, it may be mentioned, has many commercial advocates, because the capital expenditure would be considerably lower for an equally effective service.

TWO STOVES IN ONE.

The urgent necessity for the housewife to be sparing in the consumption of coal has once more served to draw attention to the disadvantages of the familiar kitchen-range, especially in small houses and villas. The range is a coal-eater of the most spendthrift character, while it is additionally harassing to 'my lady' because of the labour involved in keeping it clean and efficient. Accordingly appreciation of the 'inter-oven' is more pronounced to-day than ever. This novel invention has been freely adopted in various 'Garden Cities' and in improved dwellings for the working-classes. In its latest form the apparatus is exceedingly attractive. When not in use for cooking purposes, the grate has the appearance of the most recent type of sitting-room stove, with the scientifically designed open low fire and back to throw the maximum of heat into the room with the minimum consumption of fuel. The stove is entirely self-contained, and possesses all the features associated with the ordinary kitchen-range. At the top is the oven, which is placed behind what serves as the ordinary ornamental canopy. The canopy, in fact, constitutes the door of the oven, being hinged at its lower end, opening at the top, and folding over in the manner of the desk-lid of a bureau. When opened out and lying flat, the door serves as a hot-plate. At the back of the grate, occupying the space between the top of the fire and the canopy, is an iron plate. This is likewise hinged at the lower end, and when a catch at the side of the stove is released it falls over to cover the lighted fire, forming a top precisely similar to that of the kitchener, upon which saucepans can be boiled. At the same time as this top is lowered dampers are automatically opened in side-flues of iron leading up to the oven, so that the heat from the fire, in passing to the chimney, is first brought to play upon the oven. This heat is so distributed as to cook the contents equally on all sides, thus obviating the necessity of turning the dishes

while cooking. If desired, a boiler can be fitted at the back of the fire, and the connections have been so simplified and standardised as to facilitate joining up with an existing pipe system with the minimum of expense and without carrying out any structural alterations. Owing to its introduction in the single circulation system, the boiler is heated along with the oven, the flames and the smoke passing around the one before reaching the other. This is a distinct advantage over the ordinary kitchener, in which the oven and the boiler have to be heated separately by the opening of individual dampers. But in the combination stove all the heat emitted from the fire is brought to bear in succession upon the hot-plate on which the saucepans are boiled, the boiler, and the oven. When cooking operations have been concluded, it is merely necessary to manipulate the side-catch in the reverse direction to cause the hot-plate to fold up against the back of the grate, thus concealing the boiler connections, and giving the ordinary grate of the living-room once more. Even then the hot-water supply is kept going, because the boiler is in constant contact with the fire, forming, as it does, the back of the grate. This stove has met with conspicuous success, and, owing to the facility with which it may be fitted, is being substituted for the ordinary range. Conversion may be easily effected, and a useful and attractive surround to occupy the unnecessary space may be devised to meet individual tastes.

AN INGENIOUS EGG-POACHER.

A simple device for poaching eggs in the most attractive manner—with the yolk floating centrally within a jacket of white—has been placed on the market. In general appearance it recalls somewhat the familiar frying-pan, as it comprises a shallow circular metal outer vessel to receive the water. To the rim of this is attached a flat disc with four dished recesses to receive the eggs. A little butter or other suitable fat is placed in each recess previous to the egg being put in, to prevent the latter from adhering to the metallic surface during cooking. The whole is then covered with a lid, and thus all the heat arising from the boiling of the water is retained within the vessel to perform the cooking operation. If ordinary care is taken, this simple device ensures the cooking of the eggs to perfection; and four may be as readily and quickly poached as one.

A CANDLESTICK FOR THE TRENCHES.

Life in the trenches at night, when the conditions permit, is rendered far more tolerable when it is possible to use a light, and the fighting-man, whenever possible, sees to it that a candle is in his pocket. It may furnish only a faint flicker; but even such an amount of illumination as that gives an appearance of comfort to the scene and enables the time to be usefully employed in reading or letter-writing. But an unprotected wax or tallow candle is not an ideal article for the pocket; the heat radiated from the body is apt to play sorry tricks with it. To overcome this difficulty an inventor has devised a novel candlestick intended primarily for use in the trenches. It consists of a short, nickel-plated nosed cylinder, the base of which is detachable by a screwing motion. The base forms the holder, and when the candle is to be lit it is detached from the cylinder. To put out the candle it is merely necessary to replace the tubular top, which not only acts as an extinguisher, but also preserves the candle and keeps it in position ready for use when the next favourable opportunity arises. The contrivance is small and neat, enabling it to be carried in the pocket. It is also water-tight, so that no trouble arises with the wick, no matter how wet the weather may be.

A NEW SEVENTY-TWO-INCH REFLECTING TELESCOPE.

On Little Saanich Mountain, Victoria, British Columbia, is being mounted a new seventy-two-inch reflecting telescope, which ranks as one of the finest ever built. Victoria was selected by the Canadian Government as the site for this instrument owing to the equable character of its climate, variations of temperature being exceedingly inimical to an instrument of this character, because of its extremely delicate mechanism. Several features in its construction arouse interest. Particular attention has been paid to the securing of rigidity, and the steel-castings constituting the support have been constructed upon special lines. All the delicate operating mechanism has been enclosed in dust-tight cases, and for the most part it moves in oil. The moving parts of the instrument weigh forty-five tons, but the mass is so delicately balanced, and the bearings so finely finished, as to require but a weight of five pounds to set it in motion. Seven electric motors have been installed for its operation, and with these the instrument can be easily and quickly brought to bear upon any part of the heavens. The mirror has been made from a block of glass seventy-three and a half inches in diameter and thirteen and a half inches thick, and weighing over two tons in the unpolished state. It was cast in Belgium, and fortunately was shipped from Antwerp five days before the outbreak of war. The central section of the tube, which is a steel-casting, is eight feet in diameter, six feet in length, and scales seven tons. The mirror-cell attached to the base of the tube weighs nearly three tons. The mirror floats in this cell upon twelve carefully adjusted wheels, nine of which are so counterbalanced as to distribute the weight of the glass equally over the twelve supports. The skeleton-work forming the upper part of the instrument is twenty-three feet in length by seven feet in

diameter. Another noteworthy feature is the sector-shutter, which has been designed to form a dustproof covering for the objective when the telescope is not in use, and the perfecting of this alone presented a difficult problem to ensure absolute accuracy of fitting and easy operation. The polar axis constitutes the heaviest individual piece of the movable portion of the mounting for this tube, scaling, as it does, nine and a half tons. To this is attached a worm-wheel nine feet in diameter, forming part of the driving mechanism. The whole has been so designed as to enable the driving-clock to revolve the immense weight with such accuracy and uniformity as to allow the narrow aperture in the eyepiece to be kept exactly upon the star under observation. Rapidly responsive movement of the instrument is assured by delicate electric control. The telescope is being housed in a building sixty-six feet in diameter, built of steel throughout, and sheathed with a double wall of galvanised steel. The space between the walls ensures perfect circulation of air, so that the temperature within the building is kept precisely the same as the shade-temperature outside. The dome is of the revolving type, with a double shutter having a fifteen-feet opening. When this telescope was first proposed the idea was to establish it at Ottawa; but investigation revealed the fact that the average daily variation of temperature upon Little Saanich Mountain is less than one-half the diurnal range at Ottawa, and accordingly British Columbia was given the distinction of possessing what is generally admitted to be the finest observatory in the world.

A NOVEL MUSIC-TEACHING DEVICE.

An electrical student at an American university has evolved a novel device for teaching music, which it is claimed will overcome the difficulties normally encountered in mastering this art. There is a sheet of semi-transparent material, such as celluloid, on which are printed the staff and the notes. Behind this is ranged a battery of electric incandescent-lamps operating upon the flashlight system. To complete the invention a special keyboard is provided, each key of which is fitted with a light push-button which controls a particular lamp. When a note is depressed, the completion of the circuit causes a solid red oval to appear upon the corresponding line or space of the staff on the semi-transparent sheet, and, of course, any desired combination may be obtained. The visible flashing of the note corresponding with the key touched indicates whether the correct note is being played or otherwise.

MIRACLE WHEAT.

The world's demand for wheat, and the request to farmers to put more land under its cultivation, have been responsible for the reappearance of what are described as 'wonderful' varieties of grain for seeding purposes, their supposed virtue being that they are more productive than those usually sown. To defeat the machinations of those engaged in foisting these 'wonder wheats' upon the market—at a most exorbitant price, be it observed—a note of warning has been issued by the United States Department of Agriculture, which has investigated the extravagant claims advanced in support of them. Special warning is issued against what is being widely described as 'Alaska' wheat, the purpose of the description, of course, being to take advantage of the reputation deservedly attained by the excellent crops which are being raised in that northern country. But, according to the above authority, 'Alaska' wheat was known over one hundred years ago, when it was introduced into America under the title of 'Jerusalem' wheat. Those who advocated its widespread adoption pointed to the advantage of its peculiar characteristic of throwing a multi-branched head, which it was claimed must have the effect of producing more grain per acre than the ordinary single-headed variety. Indeed, claims of yields ranging up to two hundred and twenty-two bushels per acre were made. Within recent times this self-same variety has reappeared at different intervals under other attractive names, such as 'Egyptian,' 'Miracle,' 'Mummy,' and 'Three-thousand-years-old' wheat. Some of these titles, of course, imply that it was the variety of grain raised in Egypt three or four thousand years ago, and that it has secured revival because of the fortunate recovery of a stock from an Egyptian mummy case. 'Alaska' wheat first commanded attention in 1908, and is nothing else than another form of the original 'Jerusalem' grain. It secured a vogue because of the striking story of patient experimenting on the part of an American farmer, who, as a result of nine years' effort, was said to have produced a variety in which the central ear was surrounded by nine other heads. Its sponsors claimed that a crop ranging up to ten times that obtainable from the ordinary types could be secured by the use of this seed. The American Department of Agriculture promptly exploded this fallacy, and steps were taken to prevent the exploitation of the so-called 'wonderful' seed. But the story had secured too long a start to be readily overtaken, and 'Alaska' wheat was actually shown at a recent exhibition in that country.

EXPERIMENTS WITH POTATOES.

In Bulletin No. 239 of the Ontario Department of Agriculture, Professor Zaritz presents the results of experiments and investigations with potatoes during the past twenty-six years. Some conclusions he has arrived at for Ontario may possibly have a wider interest. We learn that in 1915, an exceptionally unfavourable year for potato-growing, the average yield was only seventy-six bushels per acre. One

variety, the Snowball, gave a yield of only thirteen bushels per acre, and another variety, the Hustler, under similar conditions, three hundred and sixty-six bushels. The Extra Early Eureka, a medium early variety, gave an average of three hundred and twenty-six bushels per acre. Over a longer period the Empire State potato occupies the highest place in productiveness. The Davies Warrior and the Extra Early Eureka also gave high yields. The conclusions set down in the Bulletin are that the crop could be decidedly and economically improved by a more general use of pure well-bred seed of the best varieties, by the adoption of better methods of culture, and by a more complete control of insects and diseases. Every one knows that potatoes are essentially a starchy food; that if used alone they form an unbalanced ration, but if used in conjunction with foods rich in protein they become an important factor of diet. Germany before the war had the highest European annual production of potatoes, of which about 40 per cent. were fed to stock, 28 per cent. were used for table purposes, 12 per cent. for seed, 6 per cent. for alcohol, 4 per cent. for starch and related products, and 10 per cent. decayed. Over four hundred varieties of potatoes have been under experiment by the department. After a trial of five years the poorer varieties are dropped. The cost of production works out at from three pounds to twelve pounds per acre in Ontario and the northern states. The statement is made that from five to six families are supplied with potatoes for one year from each average acre of land which the farmer plants with this crop. It is quite apparent, therefore, as Professor Zaritz says, that the man who grows good potatoes where potatoes are needed is a public benefactor.

A TABLE ELECTRIC STOVE.

Electricity in its application to the table has become highly popular during the past few years, and another interesting development in this direction is to be recorded. This is the electric table-stove. It consists of a suitable pedestal support, similar to that employed in connection with table-lighting devices, carrying a copper bowl. At the base of this bowl is a convex disc of refractory material, upon which is mounted a grid, which glows when the current is turned on. Ordinary plug and flex connections are employed; while the stove, which is neat and compact, is obtainable in a variety of designs to meet different tastes. It emits considerable heat with a low consumption of current, and, as the bowl is mounted upon a pivoted joint which allows it to be set at any angle, the heat is thrown in any required direction by adjustment of the bowl. But the appointment is not designed merely to diffuse heat. The inside edge of the rim is so fashioned as to receive a circular support, on which toast may be prepared, water boiled, milk heated, or coffee or cocoa made ready. Even when the stove is being employed in this way considerable heat is radiated, so that it fulfils two purposes at one and the same time.

CORROSION BY SEA-WATER.

A series of experiments which should prove of incalculable value to marine engineers is being prosecuted at Brighton, with the object of securing more conclusive data concerning the corrosive action of sea-water upon condenser tubes. This is one of the most baffling problems confronting marine engineers to-day. No member of the profession can definitely tell why the condenser tubes in one vessel should withstand the ravages of sea-water for months without showing marked defects, while the tubes of a sister-ship may go all to pieces within a few weeks. These experiments were originally undertaken by the University of Liverpool; but at that institution great difficulty was experienced in connection with the supplies of the necessary sea-water, which had to be transported in large water-carts and stored. While data of considerable value were obtained, the Liverpool experiments were not deemed conclusive, as the conditions were so dissimilar from those prevailing at sea. By transferring the venue to Brighton conditions more closely corresponding to the normal are secured. The investigations should furnish valuable results, and it is hoped they will conduce to the perfection of an alloy of a practical commercial character more resistant to sea-water action than any in use at present. The Brighton Corporation is facilitating the work of the Corrosion Research Committee, which has been completely reorganised, by giving permission for the investigations to be pursued at its electric generating station, which is situated upon the seashore; while it has also permitted its staff of electrical engineers to afford any assistance that may be desired. From the determined character in which this difficult problem is being attacked it is anticipated that a definite solution will be found, more especially as the hearty co-operation of the Admiralty and of various scientific institutions has been secured.

To Correspondents who wish fuller information regarding new inventions mentioned here, addresses will be furnished, when possible, provided a stamped and addressed envelope or post-card be sent to the Editor, 339 High Street, Edinburgh.

*** TO CONTRIBUTORS.

1*st*. All communications should be addressed 'To the Editor, 339 High Street, Edinburgh.'

2*nd*. For its return in case of ineligibility, postage-stamps should accompany every manuscript.

3*rd*. To secure their safe return if ineligible, ALL MANUSCRIPTS, whether accompanied by a letter of advice or otherwise, *should have the writer's Name and Address written upon them* IN FULL.

4*th*. Poetical contributions should invariably be accompanied by a stamped and directed envelope.

SEVENTH SERIES

'MOHAMMED'S COFFIN.'

By Sir GEORGE DOUGLAS, Bart.

CHAPTER I.

THE Squire sat alone in his study, studying the Stud Book.

To whom entered his wife, a letter in her hand, excitement depicted in every line of her good-looking matronly face. 'From Edwin!' she exclaimed.

The Squire looked up. 'Nothing wrong?' he questioned nervously.

'Quite the reverse! He is coming home—coming home on four months' leave, which should give him about three months here.'

'Good, indeed! Now, Joan, you must lay your brains asteep, as they say hereaway, to think what we can do to amuse the dear lad whilst he is with us, for the neighbourhood grows duller every year.'

'I scarcely think that he is likely to find it dull after life upon a ranch,' returned his better-half, with quiet superiority.

For Edwin Fairfield, the only child of well-born but by no means wealthy parents, had of his own free-will exiled himself, in the hope of making some money, which should serve as an offset to his father's reduced agricultural rents. And already his self-denial had begun to be rewarded. Reticent as by nature he was, he had given his parents to understand that he was doing 'not badly.' And thereby hangs this tale.

Any one who had the smallest skill in reading countenances could have told you, on looking in Mrs Fairfield's face, that she had not yet disburthened herself. She had still another announcement to make, and it was, if anything, the more startling of the two.

'What do you think of this?' she said, and proceeded to read aloud from the letter in her hand.

What she read was briefly this. Edwin wrote that, being now in a position to maintain a wife, and there being no suitable girls where he was, he would be much obliged if his parents would invite some nice girl to pay them a visit at Fairfield Demesne while he was there, 'with a view to matrimony.'

'What do you think of that?' repeated the Squiress, speaking with a calmness she was far from feeling, as she folded and laid down the letter, this momentous passage read.

'Think of it?' exclaimed her helpmeet boisterously. 'Why, I think it the most ridiculous whimsey I ever heard of! Whoever heard of a young man asking his parents to choose a wife for him? The idea is preposterous—ho, ho, ho! If the young fool can't find a wife for himself—why, he isn't fit to have one, say I! What d'ye think of it yourself, wife?'

This question, which was much less emphatically enunciated than what had gone before, was drawn from Mr Fairfield by a sobering perception that he was not, as the saying is, taking his wife along with him.

'I do not agree with you at all, John,' returned Mrs Fairfield, with dignity. To the lifelong partnership upon which the worthy couple had entered over a quarter of a century ago, it was she who had brought prudence, propriety, and a nice sense of *bienséance*. The Squire was ever too impulsive, and must have his joke—often a very indifferent one, as she could not help thinking, united couple though they were. 'I confess I fail to see your point of view, John,' she continued, almost stiffly. 'I see nothing whatever outrageous, or unnatural, in Edwin consulting us as to his choice of a wife.'

'*Consulting* us? Yes, by all means,' interjected her husband, 'that is right enough! But not looking to us to take the first step.'

The interruption passed unheeded.

'On the contrary,' resumed Mrs Fairfield, 'I think it is very, very dear of him.' There were tears in her eyes and voice.

The Squire grew fidgety. 'I don't say'—— he began.

'Edwin is not like other young men,' continued the mother, knowingly pressing her advantage.

'Not like other young men? Oh, come, Joan'—— interposed the man. It was noticeable that, from cocksure, his tone had become coaxing or persuasive.

'I say that he is not like other young men,' pursued Mrs Fairfield serenely. 'From boyhood, he was always more docile than others, more willing to please, and anxious to do what was expected of him. I know him better than you do, Squire.'

 [*All Rights Reserved.*]

'Admitting (for argument's sake, mind) that you do, Joan, surely—surely, in this particular matter, we wish that he should please himself rather than us?'

'I am not quite sure of that. But, at any rate, John, I have no intention of forcing a bride upon the boy, as you, in your impulsive way, appear to think. All I propose is to ask some nice girl to stay with us whilst he is here, and then let things take their chance. That, in fact, is all he suggests. It commits us to nothing.'

Even in his own despite, John Fairfield could never help admiring his wife. He looked up to her, not in stature alone.

'Have you any one in view, Joan?' he asked with great interest.

With a slight smile, Mrs Fairfield nodded her head. 'Whom do you think?' she asked indulgently.

'Claudia?' he ventured.

'Is it likely? No; I shall invite Ruth Davenport.'

'Why not Selma Durell? She is a nice girl.'

'I have nothing to say against her; but, for several reasons, I prefer Ruth.'

'I prefer Selma.'

'Nonsense! We scarcely know Miss Durell—at least, we do not know her nearly so well as we know Ruth, and Edwin does not know her at all.'

'Selma has coin,' urged the pertinacious little Squire.

'Well, Ruth is not absolutely unprovided for. No, Squire, I have quite made up my mind that Ruth it is to be; so it is useless to say more.'

Mr Fairfield took the hint. But though he said no more, his thoughts were not idle—of which there was evidence, some two or three weeks later, when the day arrived on which both Edwin and Ruth were expected at the Demesne.

Travelling by different trains, they would reach Fairfield at different hours, Ruth coming first. The day happened to be wet, and both the Squire and his wife were at the window when the station-fly was seen approaching along the drive.

'What a lot of luggage she has!' remarked Mrs Fairfield; adding, as the cab drew nearer, 'I see she has brought a maid, too, though her letter said nothing of that. I must have a second room got ready. Dear, dear! Girls did without maids in my day.'

For answer, a sound as of a person being asphyxiated proceeded from John Fairfield. His better-half looked sharply round, but found him normal.

'I do not think there is a maid,' he murmured gravely.

'Yes, John; I am sure there are two persons in the carriage. Your sight must be growing dimmer.'

Then at last the Squire exploded. 'I don't think it is *my* sight that is at fault, wife,' he said. 'Look again! Don't you see who the second person is? Well, I suppose there is nothing for it but to own up. I wrote to Selma Durell in our joint names, asking her here on a long visit, to meet Edwin.'

For some moments an expression of mystification had been struggling with one of anger in the Squiress's countenance. Now a clear light broke on her. 'John,' she exclaimed, in tones of positive distress, 'you have ruined everything!'

The Squire was laughing as if his sides would split. A most affectionate and admiring husband, if there was one thing more than another which he enjoyed it was a joke at his wife's expense—what he called 'scoring off' her. Yet, in the very midst of his sonorous ho-ho-ho-ing, a qualm smote him. Had he gone too far? It looked rather as if he had.

At that instant a bell rang—the cab had drawn up at the door. *Bienséance* had to be considered. The Squire's mirth had subsided to the half-opened soda-water-bottle state.

'They will think you have gone mad,' said his wife, almost savagely.

Then the door opened, and a maid announced, 'Miss Durell; Miss Ruth Davenport.'

For wherever these two girls appeared in company, it was a foregone conclusion that, as if in deference to a natural right, the precedence would be Selma's. Though a year or so the elder of the two, little Ruth accorded it unquestioningly. They were both amiable girls, and had become great friends during the drive from the station.

But it was not in Mrs Fairfield to resist the impulse to show her preference. 'My dearest Ruth!' she exclaimed, and folded the winsome maiden to her bosom.

Her reception of Selma was chilly. But that queenly young beauty never noticed—never even suspected it. Life had not made her sensitive to snubs. Even if it had, the Squire's gallantry must have more than compensated for his wife's rudeness. With every bit of a little man's congenital admiration for large women, John Fairfield had determined that Edwin should have at least a chance of winning this glorious young creature as a daughter-in-law for him. So, as seemed perfectly natural and fitting, each guest found herself at once engaged in cordial conversation—Miss Durell with the host, and Miss Davenport with the hostess. And this pleasant state of matters continued until the arrival of the tea-urn. So that, in spite of the cross-purposes of Squire and Squiress, no thought or suggestion of crudeness was allowed to mar the girls' enjoyment.

Edwin was not to arrive until after dinner.

By mutual agreement, the girls had slipped out on to the lawn, so that the first meeting between son and parents might not be intruded on. And as they paced the dry-shaven turf together, side by side, in their light evening-shoes, Selma, speaking rather listlessly, as was her way, put the question to her companion, 'You know this Edwin already, I understand, Ruth—may I say "Ruth"?' she remarked.

'Oh, please do. And may I say "Selma"? It is such a lovely name!'

'Of course,' answered Miss Durell with indifference, and went on with her interrogation. 'What is he like?'

Woman-like, Miss Davenport took the inquiry to apply to his appearance, and speaking with the gravest earnestness, and in entire good faith, she answered, 'Very handsome.'

Selma was languidly astonished at her new friend's air of conviction. 'Indeed!' said she, almost superciliously; and went on: 'Dark, I suppose?'

'No; very fair—with colouring which in a girl would be considered pretty.'

'Oh, that style, is he? Humph! Well, I don't fancy we shall quarrel over him. He is a friend of yours, is he?'

'No, indeed—a mere acquaintance, or not much more. We have not met for ever so long.'

Meantime, left to themselves in the drawing-room, the Squire and his wife were conscious of a slight *gêne*. But the occasion was too joyful a one to be marred by any such feeling.

'Look here, Squire,' said the Squiress, with magnanimity, 'you have made a sad mess of things; but it is too late to regret that now. Let us come to an honourable understanding, that neither you nor I will in any way interfere with the natural course of events. Promise me that you will make no attempt to put a spoke in Ruth's wheel, and I will make you a similar promise with regard to Miss Durell.'

Pudgy Squire Fairfield nodded. 'I am quite agreeable.'

In his heart he had not the slightest doubt as to the course events would take. But Joan Fairfield, as the recipient of certain old-time confidences of her son's, felt that she knew better than the Squire—was in possession of data for forming an opinion which were denied to him. Yet those confidences, had she reasoned upon them, were of the lightest; nor had they been reverted to since they were made.

There was a bustle at the door, and the next moment Edwin was in his mother's arms. Then she released him, in order that she might admire him, whilst he shook his father warmly by the hand.

'Well!' he said pleasantly. That was all.

He was a tall, manly young fellow, and sufficiently good-looking, though a critic might possibly have objected to a certain slowness, or inertness, in the movement of his blue eyes. 'Slightly lymphatic,' a physiognomist might have said; whilst an observer of humbler station would have recalled the vulgar catchword, 'Long and lazy.'

After his laconic and truly English greeting to his parents, Edwin had turned, inconsequently enough, to look out of the window. Possibly he was finding the situation a little trying to his composure. The sight of the two glimmering figures on the lawn supplied just the diversion he needed. 'Whom have you staying here, mother?' he inquired.

The Squire was the first to get in his answer. 'A charming young lady'—— he was beginning.

But Mrs Fairfield cut him short. '*Two* charming young ladies,' said she graciously.—'You may call the girls in, John.'

Nothing loath, the Squire went at her bidding.

But Edwin turned to his mother almost reproachfully. 'Oh, mum!' said he, 'why two?'

She could not answer.

'One would have been enough,' he added. It was almost as if he was charging her with extravagance or waste.

(*Continued on page 105.*)

RECENT GREAT EARTHQUAKES.

By R. Blyth.

THE year 1906 will long be remembered by those who were resident then in the cities of San Francisco and Valparaiso. In that year two of the most terrifying earthquakes of recent times occurred, the first in April in the beautiful Californian city, and the second in August in the most important business centre of Chile, the picturesque Valparaiso (which in Spanish means 'Vale of Paradise'), in which city the writer was a resident on that never-to-be-forgotten occasion. The 16th of August was a day which stands out as having been peculiarly inappropriate to the climatic standard of Chilian weather, it having been heavily oppressive, and at sundown a thick, very fine rain, a typical Scotch mist, beginning to fall—a most unusual occurrence there, where, when it does rain, it makes no mistake about it, but descends in torrential showers, generally short-lived. So on that eventful evening, when Jupiter Pluvius behaved in such an extraordinary fashion, it was little wonder that the Scotch mist raised questions in our minds as to the why and wherefore. We had not long to wait for an answer, for just a

few minutes before eight o'clock came the first shock, like the crash of countless big guns. It was the time of the evening meal, and those of us who were fortunate enough to have finished enjoyed our last dinner for many long days. We were sitting over our coffee, discussing the day's events, when, absolutely without warning, in the twinkling of an eye, we were plunged into Stygian darkness, the remains of the meal were flung on to the floor by the swaying of the house, and we were all left groping about, covered with the plaster of the falling ceiling. I got first to the door, and tried in vain to wrench it open as a means of escape; but it had got jammed with the swaying of the house, and we were prisoners, awaiting events. Our release came with dramatic suddenness, for exactly five minutes after the first shock there came another still more violent and unnerving; and in the fearful upheaval which ensued I was able to wrench open the door and escape to the street, closely followed by the others. This was nearly my undoing, for I had just cleared the doorstep when the entire top front masonry of the house crashed down, and missed me by a few inches. The other occupants of the house had, very wisely, kept close to the walls, and so escaped also.

The spectacle which met our gaze baffles description. All around were screaming, praying women and children, mad with terror, and all of us with badly shattered nerves. During this time the shocks were continuing at intervals of a few minutes, and it was almost impossible to keep our equilibrium, owing to the ground swaying at such a rate; it was more like being on board ship in a bad storm than being on *terra firma*. The entire city was in utter darkness, only lit up here and there by the fires which had commenced in the fallen buildings, and which added to the terror; for there were no means of fighting this new enemy, as all the water-mains had burst, and the fire-engines and gear had been buried under the ruins of their stations. Great balls of fire, steel-blue in colour, were bursting overhead, and everywhere was the pervading odour of sulphur; the shrieks of the injured and the nerve-shattered filled our ears; and, to add to the confusion and terror, we could hear the crack of rifles near at hand. The explanation of this last was not far to seek; it meant that the prison guards were firing upon the escaping prisoners, for the great central prison had collapsed, and those of the inmates who were not killed evidently thought that the time of their lives had arrived, and a good many escaped in the darkness. But of this more anon.

After we had spent a seemingly interminable night in the street, well away from the tottering buildings, dawn broke at last, and the whole hideous picture of devastation was laid bare before our eyes. It was a terrible sight. The city was changed beyond belief; for not only in the hills where the bulk of the dwelling-houses were, but also in the entire business section of the city on the stretch of reclaimed land surrounding the bay, there were awful gaps, telling of entire blocks, and in many cases streets, utterly wiped out.

There were countless fires all over the devastated area, and these burned themselves out in time, but some continued smouldering for months. It was difficult to pass along many of the streets, as they had been strewn yards deep with débris, and stretcher-bearers on their errands of mercy and succour had the greatest difficulty in piloting their burdens through the almost inextricable tangle which met them at every step. For days one saw on every hand a never-ending procession of bearers with impromptu stretchers conveying their melancholy burdens. The total number of killed was estimated to be somewhere in the neighbourhood of eight thousand, but the actual figures were never known, as so many had disappeared completely in the great fires which consumed entire blocks, and left no trace behind; and the material damage was enormous.

With so many houses razed to the ground, the only thing for the homeless to do was to strike a tent in the safest bit of waste ground, and make the best of it. The writer was one amongst these thousands, and, I may add, one of the fortunate ones; for our sojourn under canvas was only a matter of about a fortnight, as an inspection of the home we were so very unceremoniously turned out of proved to be satisfactory, and we returned there, though not without fear and trembling, for we were all suffering from badly shaken nerves, and did not dare to don night attire for a considerable time afterwards.

Earth tremors continued almost uninterruptedly for three months, at comparatively short intervals, decreasing in intensity as time progressed, until the earth quietened down again, except for the usual mild tremors to which Valparaiso is continually a martyr, but which only periodically culminate in such a cataclysm as this proved to be. Trade was entirely suspended for weeks, and many were utterly ruined, losing business and house, and in some cases their own kin besides. Food was very scarce for a while, as we were cut off from the rest of the world; and, until shiploads of flour, &c., arrived from the Argentine, and other necessaries from Peru, we felt the pinch. Amongst other things, we had to take it in turn to stand in a queue each morning at the baker's shop to purchase the one small loaf, the limit allowed by the military authorities. Truly 'our daily bread.' Fresh-water was a luxury, and we had to carry our daily supply in a bucket a long way, sufficient to put an extra sharp edge on the appetite, which, in these circumstances, was quite superfluous!

From the first night of the earthquake the city was placed under martial law; and, as all the military and police were required to protect

the business section from the attentions of the horde of jail-birds who were everywhere, we, on the hill where we lived, deemed it advisable to form the male portion into a civil guard for our own protection. This was done, and on obtaining Mauser rifles and clips of ball-cartridge from the Chilian warships in the bay, we formed ourselves into night-watches of four hours each, with an authorised password, so that no one might pass through our district without authority. This was effective, and we were saved from the attentions —none too gentle—of the Chilian *roto*. Other sections were not so fortunate as we were, and we daily saw evidence of what foul deeds the prisoners who escaped from the prisons on that first night had been guilty of. Large numbers were caught red-handed robbing and maiming the dead, fire-raising, wilfully wasting fresh water, &c., and they paid the last penalty, being shot on the spot by the military, then lashed to the nearest lamp-post or tree, and left for forty-eight hours as a warning to other evil-doers, with a rough notice scrawled by the soldiers fixed up over their bodies, briefly telling the crime for which they had been sent to their account.

I witnessed some of these drumhead courts-martial, and saw the executions carried into effect. The recollection of them, with their surroundings of devastation, and overhead the clear blue vault of the Chilian sky, will never pass from my memory. One in particular stands out as clear to-day as when it occurred in that memorable August. It was early afternoon, on a bright, beautiful Sunday, when, as I was walking down one of the principal *avenidas* of the city, there suddenly wheeled into view from behind a heap of ruins a small procession headed by a bareheaded priest in flowing gown; behind him two youths, one a mere boy white as death, both with arms tied behind their backs; and bringing up the rear a file of soldiers. At the command of the officer in charge the procession stopped, and every one around stood silent and tense. Then the boy prisoner beckoned the priest to come to him, and he whispered a request in the cleric's ear. The priest immediately got out his own cigarette-case, lit a match in the shelter of his gown, and after lighting the cigarette which he had taken from his case, he transferred it to the boy's lips, who gratefully looked the thanks he had not the strength to utter, and the priest stepped back. Then another command from the officer, and the file of soldiers stepped forward, took careful aim, and these two evil-doers paid the supreme penalty, the boy with the cigarette between his lips to the last. The other was not so courageous, and he had to be propped up to keep him from collapsing before the end. When the execution was about to take place a woman's shriek pierced the air, then dead silence, which told its own tale to those who heard it. The woman turned out to be the boy's mother, who had been drawn thither by curiosity, and in the younger prisoner she had recognised her own son. The boy was incorrigible, as he had been caught the previous day robbing the dead; and, as was the practice with youthful criminals, he was soundly horse-whipped, warned, and let off, only to be caught the very next day at the same gruesome occupation, now for the last time. The curtain was rung down on the final act of this little drama after a soldier had stepped out of the file, picked up a bit of packing-case wood lying near, and laboriously scrawled on it in white chalk, '*Fusilado por ladron*' ('Shot for a robber'). He repeated the performance; and then with the assistance of the other soldiers the bodies of the miscreants were lashed to the nearest lamp-posts, the warning notices were affixed over their respective heads, and, at the word of command, the soldiers fell into line, marched off, and disappeared.

A gruesome and extraordinary thing happened in one of the ruined cemeteries perched on the top of a hill overlooking a *plaza* in the centre of the town. The niche system of burial prevailed there, the coffins being placed in niches in thick walls, and the apertures sealed at the ends. Consequently the first shock weakened the walls, and the next burst them asunder, with the inevitable result that the coffins slid from their niches, and rattled down the face of the hill to the *plaza* below, some of them being deposited in the back living-rooms of dwelling-houses, to add to the occupants' terror. In some instances live donkeys which had been grazing on the slope were carried bodily down with the ghastly avalanche, and some were discovered alive long after in the rooms of the wrecked houses, unwilling but patient prisoners. As a Chilian *burro* can live and thrive on almost anything edible that can be picked up—and the soil in and around Valparaiso is conspicuous for its lack of verdure—it is not to be wondered at that they managed to survive the ordeal.

One of the most complete wrecks to be seen amongst the public buildings was the Victoria Theatre, a large, handsome building, and the principal playhouse, which collapsed like a house of cards. Fortunately there was no performance that evening, but many pedestrians were caught in the collapsing walls. That instance was only one of the many, for what happened there was repeated at every corner, and it was a marvel how any escaped at all in such an awful seismic disturbance. The Vale of Paradise had been converted into the Valley of the Shadow as if by a magician's wand, and sorrow reigned on every hand. It was matter for comfort that a tidal wave did not engulf the ruined city after the catastrophe, as the shocks came from the sea, and it was only the great depth of water in the bay which prevented that too frequent accompaniment of earthquakes from making its presence felt; but it was observed that the water in the bay receded several inches, and left the

surrounding coast permanently drier. Valparaiso in time, no doubt, will recover from the effects of that awful visitation, as the Chilians are a hardy race, and not easily dismayed.

From personal observation which the writer was able to make some time after in San Francisco, there is no doubt that the Valparaiso earthquake was the much more severe of the two, although in San Francisco the numerous fires did enormous damage, and great blocks were entirely wiped out. So far as Chinatown is concerned, the earthquake seems to have been a blessing in disguise, for a new Chinatown has sprung into being, a little bit of China, with its domes and turrets, its almond-eyed inhabitants (with sadly docked pigtails, alas!), its restaurants with the ever-present 'chop suey' and bird-nest soup, and its fine bazaars replete with fascinating and magnificent Oriental wares. San Francisco has been entirely rebuilt, and is now her old self again, the 'Queen City of the Golden West,' set on a glorious bay, from which great ships of all nations incessantly glide out past Alcatraz Island, and the villa-dotted slopes of lovely Sausalito, through the Golden Gate—where the sunsets are great glories of crimson and gold—and so out to the blue Pacific, California's beautiful caressing ocean.

THE DEFINITE OBJECT.

By Jeffery Farnol.

CHAPTER VII.—CONCERNING ANKLES, STAIRS, AND NEIGHBOURLINESS.

IT was in no very pleasant humour that Geoffrey Ravenslee began to climb the many stairs (that much-trodden highway) that led up to his new abode. He climbed them slowly, frowning in a dark perplexity, and wholly unconscious of the folk that jostled him or paused to stare after him as he went.

But presently, and all at once, he became aware of one who climbed half a flight above him; and, glancing up, he saw a foot in a somewhat worn shoe, a shapely foot nevertheless, joined to a slender ankle, which peeped and vanished alternately beneath a neat, well-brushed skirt that swayed to the vigorous action of the shapely limbs it covered. He was yet observing the soft, rounded curves of this most feminine back when he became aware of two facts: one, that she bore a heavy suit-case in her neatly gloved hand; two, that the tress of hair peeping rebellious beneath the neat hat-brim was of a wondrous yellow gold.

Instantly he hastened his steps, and, reaching out his hand almost instinctively, sought to relieve her of her burden.

'Allow me,' said he.

She stopped, and, turning on the stair above, looked down on him with a pair of wondering blue eyes; her cheeks glowed, and she was panting a little. For a long moment they fronted each other thus silently upon that grimy, narrow stair, she above with gracious head stooped, her dark eyes questioning and wistful. And, looking up into the flushed loveliness of her face, those eyes deep and soft beneath their long black lashes, the tender droop of those vivid lips—beholding all this, he knew her to be a thousand times more beautiful than any photograph could possibly portray, wherefore he bared his head, and, striving to speak, could find no words to utter. For a moment longer she hesitated, while her clear eyes searched his face; then the red lips curved in a little wistful smile.

'Thank you,' she said, and, yielding him her burden, led the way upstairs. 'I'm afraid it's rather heavy,' she said over her shoulder after they had climbed another flight.

'It's quite too heavy for you,' he answered.

'Oh, but I've carried it often before now.'

'Then you shouldn't.'

'But I have to.'

'No,' said Ravenslee, shaking his head; 'you should let your brother bring it up for you.'

'My brother!' she exclaimed, pausing to look her amazement.

And again, as she stood thus poised above him, he took joy to note the warmth of her rich colouring, the soft, round column of her white throat, the gracious breadth of hip and shoulder.

'You know I have a brother?'

'Oh yes, Spike—er—that is, Arthur and I are quite—er—ancient cronies—pals, you know—friends, I mean.' Mr Ravenslee was actually stammering.

'Oh, really?' she said softly; but, all at once becoming aware of the fixity of his regard, the colour deepened in her cheek, the long lashes drooped, and, turning away, she went on up the stair.

'It's a long way up yet. Hadn't you better let me take it?'

'Not for worlds,' he answered.

'Isn't it getting heavier?' she inquired, as they climbed the next flight.

'Decidedly heavier.'

'Then, please,' said she, slackening her pace—'please let me take it.'

'On the contrary,' he answered, his gaze on her slender foot and ankle, 'I should like to

carry it for you all my—er—ah, that is, I mean'——

Mr Ravenslee was stammering again.

'Yes?'

He was aware that the shapely foot had faltered in its going. 'As often as I may, Miss Hermione.'

Hereupon the shapely foot halted altogether, and once again she turned to look at him in wide-eyed surprise.

'You know my name?'

'I learned it from Arthur, and I shall never forget it.'

'Why not?'

'Well, because it is rather uncommon, and very beautiful.'

'Oh!' said Hermione, and went on up the stair again, yet not before he had seen the flush was back in her cheek. 'Are you getting tired yet?' she inquired, without looking round.

'Not appreciably,' he answered; 'but if you think I need a rest'——

'No, no!' she laughed; 'we should never get off these frightful stairs.'

'Even that might have its compensations,' he murmured.

'And we've been much longer than if you'd let me carry it up myself.'

'But then we've no cause for panting haste, have we?' he suggested.

'And we have four more flights to climb,' she answered.

'So few!' he sighed.

'You see, I live at the very tip-top.'

'Good!' said he.

At this she glanced down at him over the sweep of her shoulder. 'Why "good"?' she demanded.

'Because I also live at the tip-top.'

'Do you—oh!'

'With the excellent Mrs Trapes.'

'But I thought she had lost her lodger?'

'She had the—er—extreme good fortune to find a new one to-day.'

'Meaning you?'

'Meaning me.'

By this time they had reached the topmost landing, where Mr Ravenslee set down the suit-case almost reluctantly.

'Thank you,' said Hermione, looking at him with her frank gaze.

'Heaven send I may earn your thanks again, and very soon!' he answered, lifting the battered hat.

'You didn't tell me your name,' said she, fumbling in a well-worn little hand-bag for her latchkey.

'I am called Geoffrey.'

Hermione opened the door, and, taking up the suit-case, held out her hand. 'Good-bye, Mr Geoffrey.'

'For the present,' said he; and though his tone was light, there was a very real humility in his attitude as he stood bareheaded before her. 'For the present,' he repeated.

'Well, we are very near neighbours,' said she, dark lashes adroop.

'And neighbourliness is next to godliness—er—isn't it?'

'Is it?'

'Well, I think so, anyway. So, Miss Hermione, not "good-bye."'

Now at this she glanced swiftly up at him, flushed, and turning about, was gone. But even so, before her door closed quite, she spoke soft-voiced, 'Good-evening, Mr Geoffrey.'

Thereafter, for a space, Mr Ravenslee stood precisely where he was, staring hard at the battered hat. Yet it is not to be supposed it was the sight of this that could possibly have brought the smile to his lips and into his eyes a look that surely none had ever seen there before—such a preposterously shabby, disreputable old hat! Of course not.

(*Continued on page 99.*)

THE KEA, THE KAKA, AND THE KAKAPO.

NEW ZEALAND PARROTS WHICH HAVE CHANGED THEIR CHARACTERS.

By L. B. THOBURN-CLARKE, Author of *Prawns and Prawners.*

PERHAPS in no country in the world are the weird forms of bird-life more pronounced than they are in New Zealand. Not only are many of these bird-forms of an almost prehistoric type, survivals of early life on this globe, but two of them (the kea and the kakapo) have undergone a complete change to suit their environment. In other lands birds have shown extraordinary developments, both in form and feathering, under the restraining hand of man; but these New Zealand parrots have, in a wild state and absolutely without man's interference, developed in unexpected ways.

The kea (*Nestor notabilis*) probably lived, before the British settlers arrived in New Zealand, upon the same food as its sole living relative, the kaka (*Nestor meridionalis*)—the berries and honey from the blossoms of the rata and other flowering shrubs and trees found in the New Zealand bush, varied by insects that lived under the bark. Its brush-fringed tongue would suggest such a diet; but under the civilising influence of the settler it first became a flesh-eater, then finally developed a full carnivorous habit, and preyed upon the living sheep; this being the only case where a parrot in a wild

state has adopted a flesh diet, although in captivity parrots frequently grow very fond of cooked meat, and eat it readily.

No one knows when the kea first became a 'hanger-on' to the sheep-station, or what first induced the bird to eat flesh. Perhaps, during a time of great scarcity, hunger may have compelled it to try the new diet; and, the taste once developed, the habit continued for ever afterwards. It is quite a usual custom on a sheep-station for one or more sheep to be killed daily. Only the best portions are eaten, the rest, with the head and offal, being thrown down for the dogs to eat. The head, being hard and covered with wool, is frequently refused by the dogs; consequently there may be quite a number of sheeps' heads lying about the killing-yard or paddock, rotting in the sun. No doubt the sight of the dogs feeding on offal may have suggested the first taste, and afterwards the bird continued eating the food which was always lying ready at hand.

I have had no experience of tame keas, nor have I ever heard of anybody who possessed one; but the great brown night-parrot, the kaka, its only relative, is without a rival in its uncanny intelligence, so why should not the kea have equal intelligence and sagacity? The kea, 'perching itself on the sheep's head or offal,' relates an eye-witness, 'proceeds to tear off the skin and flesh, devouring it piecemeal, after the manner of a hawk; or at other times holding the object down with one foot, and with the other grasping the portion it is eating, in the fashion of the ordinary parrot.'

Several of these great parrots eating offal were quite a common sight in the killing-yards, and created no comment. The dogs might object, but they had too wholesome a fear of the parrot's formidable beak to interfere with its feeding. As no one can tell just when the kea first commenced to eat flesh, so no one knows just when it developed a taste for the kidney fat of a sheep, and how it learnt to secure the tit-bit. This must always remain a mystery, although there are many theories to account for it. Perhaps the kea, tearing to pieces a sheep that had died on the mountains, found out the fat around the kidneys, and with diabolical intelligence attacked the living sheep, and, clinging fast with its claws to the wool, dug deeply into the skin and flesh of its living victim, and ate its fill of the fat. This appears the most probable theory. Many observers, however, consider that the practice, common on sheep-stations and large farms in New Zealand, of hanging the sheep's carcass on the flagstaff, or on a pole raised for the purpose, may have taught the kea just where to find the fat. But in this case the carcass would have been skinned and ready for cutting up before being hung up, and the kea would have had no necessity to tear its way down to the fat.

The discovery of dead and dying sheep with great yawning holes in their backs first astonished the sheep-owners, then worried them, for no one had the remotest idea that the kea was the culprit. The sheep were mysteriously attacked and mortally injured, the bird being content to eat the fat and leave the unfortunate animal to die a lingering death. When, however, the kea was found to be the culprit it was no longer allowed to have the run of the killing-yards, but was shot or trapped. But this did not stop the ravages upon the sheep. It is quite probable that the keas which attacked the sheep in the first instance were parrots that were not in the habit of coming down to the slaughter-yards to feed on the offal, but were birds that had not discovered this easy method of obtaining food. The clinging to the wool of the terrified animal, as it rushed about seeking to get rid of its tormentor, could have been no easy matter, although the kea is quite as large as a raven, with claws that fit it for hanging on to anything that it has once gripped hold of. In the face of this change of habit it seems extraordinary that our own birds of prey have not developed equally astounding tactics in securing their food. But apparently the British birds of prey still feed in the same manner as their ancestors have done for generations.

No doubt the kea, in its attacks upon its victims, uses its powerful wings to buffet and worry the sheep. Any one who has felt the force of the wings of even a small bird when it is battling with a foe must realise that the force behind the kea's wings is not to be despised. The sheep is not renowned for its resourcefulness under danger, and no doubt the attack of the winged marauder simply makes it crowd among its fellows, thus offering an easy victim to the merciless foe crouching on its back.

It is a pity that this large and interesting bird has become so injurious to the sheep, as it will probably be exterminated within a very short time, and follow in the wake of the many wonderful forms of bird-life which have already disappeared before the march of man's destroying footsteps. Its sole remaining relation, the kaka, has developed no new traits under the changed conditions of life introduced by the settler into New Zealand. Far rather does this parrot avoid the haunts of man. Its habits are nocturnal; and, although many birds may be living in the depths of the densest bush, it is rarely seen by the bushman. I have lived for months in the bush, and have never seen one in a wild state. Yet as soon as the twilight and sudden dusk of the southern hemisphere set in the night would be full of their shrill, piercing cries, as they winged their way to their favourite feeding-grounds. Sometimes at night we would hear them in the tall trees; but as a rule they are silent except when on the wing, and then they are extremely noisy. Even when living at

Takapuna, near Auckland, although there were no tall forest-trees very close at hand, I have heard them night after night passing over, their harsh screams weirdly suggestive of uncanny proceedings up among the clouds, for even on moonlight nights I could never catch a glimpse of the flying night-parrots.

My first experience of the great brown kaka was gained from a tame one belonging to a neighbour. This bird was possessed of almost fiendish intelligence and a capacity for mischief only equalled by a small monkey. When he had accomplished anything particularly wicked he would fly on to my shoulder, and, leaning forward, would stare up into my face with a look of impish mischief that was almost humanly evil in its expression. I was only a small child at the time, and the kaka constituted himself my principal torment, and I was terrified by the uncanny impishness of the bird. He would fly over to our place in the twilight and seek me through every room until he found me; then, watching for an unguarded moment, he would fly on to my shoulder and nip my ear with his powerful beak. My scream of pain would be echoed by a wild whoop of delight as he flew away to await another chance of torturing me. The very sound of his pattering feet on the veranda would send me seeking frantically for safety behind locked doors; while the kaka would patiently wait on the doormat watching for me, until some one, answering my frantic appeals, seized the bird and carried him off. He never attacked any one else in the same way, so I suppose my terror amused him. He was very knowing; and, although he pattered all over the garden and house from early twilight until ten o'clock at night, he would vanish mysteriously the instant the clock struck, so that he should not be locked up in his cage. He was quite friendly with the numerous animals, and would visit the big duck-yard and amuse himself waddling up and down, and never attempted to touch the ducklings; and he was quite to be trusted with cats and kittens. But every skin hearthrug was torn to scraps; and, if he could manage it, he would in the course of a night have the window-frames bitten through and the glass in pieces on the ground. Cups and saucers were pushed to the edge of the table and knocked over just to hear them break with a crash on the kitchen floor. He fully realised that he was doing wrong, for he would screech with delight.

Another kaka which I owned a few years later was a most amusing bird, and loved walking, following me about like a small dog; but he invariably slept during the day, only waking in the late afternoon. He loved climbing the tall blue-gum-trees in the garden, and would scream defiance to our entreaties to him to come down. He climbed straight up the trunk after the usual parrot manner, but always came down backwards. Gripping with his beak a piece of bark or a projection of wood, he would drop his feet straight down, then catch hold, and cling while he twisted his head down as low as possible, taking another grip with his beak, and repeating the process until he had reached the ground; then he waddled after me. No calling would make him come down; but the sight of me opening the gate would bring him scrambling down, as he dearly loved a walk in the twilight.

We fed him on fruit, and during the summer he would gather and eat all he required in the orchard. I never saw him attempt to find insects; nor did he trouble to suck the honey from the flowers. He was exceedingly fond of sweets and sugar, and was very mischievous. One of his favourite tricks was to come in very quietly, and remain hidden until the middle of prayers, when he would suddenly fly on to my shoulder with a screech which was most startling. If shut out of the room he would go round to the window and endeavour to get in. He loved to catch hold of anything that was being shaken, and would sit on a sack, almost asking to have it dragged over the ground. When he wanted anything he would catch hold of my dress and try to drag me in the direction he wished. At night he was shut up in a large outhouse with the dogs, and when he got dissatisfied with his own kennel he would drive out a dog and take possession of the kennel he coveted. He was very quiet, but sometimes he would call to his relatives as they flew past; and one day, when he was about eighteen months old, he flew off to join them, and I never saw him again. He was much missed, for he was always amusing, and his mischief had such a thought-out element about it that it was interesting to try to fathom the reasoning power of his brain.

The kakapo (*Strigops habroptilus*), another large parrot, has changed, not its food, but its physical habits, owing to the difference in its surroundings. A nocturnal bird, always feeding on the ground, and admirably concealed by its protective colouring of freckled green, so closely resembling the moss on which it feeds, the lack of ground vermin big enough to attack so large a bird has made this parrot lose the use of its wings. Sir Walter Buller, in speaking about this, states that the wings are apparently large and strong; but, although the muscles are developed, they are overlaid with a quantity of fat, and the bird never attempts to use them.

The kakapo appears to have been very plentiful in the days when Sir Julius Haast observed its habits while he was exploring the west coast of New Zealand in the early sixties. He speaks of the true habitat of the kakapo as being the 'mossy fagus forest near mountain streams, with occasional grassy plots; but it also lives on the

hillsides, amongst great masses of rocks in which it has its holes or burrows.' These immense rocks were mostly overgrown with roots of trees and a deep covering of moss. He saw 'one sitting on a fuchsia-tree, feeding upon the purple berries; but as soon as it saw him advancing it threw itself off the branch as if it had been shot, and disappeared amongst the huge fragments of rocks strewed along the hillside.' Apparently it never attempted to use its wings. In order to experiment with the kakapo, he took one which his dog had caught, and, selecting a wide flat which had sufficient open space for his purpose, he liberated the bird. It made no attempt to fly, or even to open its wings, but ran with extraordinary rapidity towards the nearest trees, its gait resembling that of a hen.

The aspect of the kakapo is peculiar, and has gained for it the name of 'owl-faced parrot,' but in captivity it is intelligent, social, and affectionate. Sir George Grey described its behaviour towards its owner as more like that of a dog than of a bird. It would run from the corner of the room and seize hold of his hand with bill and claw, and roll over and over like a kitten. It would then let go the hand and retreat to the corner, only to run out again and repeat the performance. The approach of a dog towards its cage was greeted with outspread wings and a pretence of anger. When the dog retreated it showed its pleasure by the most absurd antics and postures. When extremely pleased it would nestle down on its master's hand, ruffling its feathers and lowering its wings, fluttering first one and then the other, at the same time shaking its head from side to side.

At that time the kakapo was evidently very plentiful, for the old Maoris repeat legends of its having been very numerous in the North Island; but the cause of its complete disappearance from that part of New Zealand remains a mystery. After the extermination of the moas and the kindred birds, the Maoris, essentially a flesh-eating people, must have been in sore straits for animal food. Eels certainly abounded in the lakes and swamps, but other fresh-water fish were not to be had. The only animal reared by themselves and eaten was the woolly-haired yellow poa dog; consequently, when the annual shark-fishing proved a failure there was no flesh-food to be had. Probably the kakapo, which burrowed in the ground and was easy to capture, was soon exterminated in the North Island, where the greatest number of Maoris lived. These times of food scarcity were often prolonged, and I have heard old Maoris say that their ancestors, after they had killed and eaten all their slaves, and exhausted all their food, had to fall back upon the roasted roots of the bracken. I have never tasted a more unpalatable food, and wonder that the Maoris did not exterminate all the ground-feeding birds of New Zealand rather than partake of such fare.

What the Maoris' lack of flesh-food did in the North Island the settlers' dogs and cats did in the South Island. Unfortunately dogs have run wild, and these packs of animals soon destroyed the guileless kakapo, and it has become very rare; so that the report that Mr R. E. Clouston, a mining engineer, has discovered a colony of kakapo on the Gouland Downs, south of Collingwood, will be received by naturalists as being very important news. Most of Mr Clouston's work was done at night, by the aid of strong acetylene lamps, and he was thus able to observe the habits of these night parrots fully, and to discover many things which were not previously known. The fact of the kakapo having been found on the Gouland Downs is interesting, as this, being a bird sanctuary, is controlled by Government, and these curious and interesting parrots will be protected in the future. Perhaps, too, the controversy about the bones and muscles of their wings will be finally settled.

In the early days of the Commonwealth the kakapo trails were often taken by the settlers for tracks made by human beings. These are frequently fourteen inches wide. Mr Reischek, an Austrian naturalist, who observed the habits of the kakapo, stated that these tracks were usually made along the spurs of the hills. He found that when the hills were covered with snow the birds still travelled over the surface, keeping to the same route. Where, however, the dense scrub, consisting of silver-pine, ake-ake, and alpine vegetation, prevented the snow from penetrating to the ground, the birds lived in their burrows during the winter, the darkness under the snow apparently making no difference in their obtaining the food they required. When the snow began to melt in the spring the kakapos emerged and crouched in the sunshine, evidently enjoying the warmth. They were no doubt sleeping, for Mr Reischek found some, after the snow had melted, sitting on the low branches of a silver-pine. He approached quite close to them without their evincing any alarm; only when he had caught them did they attempt to free themselves by biting and scratching. This naturalist, like so many others who had observed the kakapo in the days when it was plentiful, stated that the flesh was delicious, and far better eating than any other of the native birds; so, now that the kakapo has been rediscovered, it is just as well that it is in a protected area, or perhaps it would be exterminated by the settlers who might wish to taste a dish of roast kakapo.

THE ANCESTRY OF PRIVATE SCHULTZ.

By William Freeman.

PRIVATE JOHANN SCHULTZ, whom his regimental record knew as Private Michael O'Hara, leant against the parados of what an optimistic sapper had christened a trench, and wished with great intensity that he were dead. In front of him, swept by a vicious north-east wind, was a section of Flanders—a section more desolate than the prairie itself. It was six hours since he had had more than the suggestions of a meal, and his world had, to all appearances, forgotten that he existed.

Until the summer of 1914, the Fates had dealt not unkindly with Private Schultz. One hundred years before that date, a certain bluff, fair-haired dragoon in the Prussian army had fallen in love with the Irish nursemaid in the household of the ambassador at Berlin, and after a wooing as brief as it was tempestuous, had married her. And when the name of the Little Corporal had lost its menace, the dragoon had returned to Ireland with his wife, become naturalised, and there settled. The eldest son of each succeeding generation had been named Johann; and intermarriage notwithstanding, the stiff yellow hair and blue eyes of Private Schultz's great-great-great-grandfather had been faithfully handed down.

Private Johann was the last of his line. At the beginning of the war he had been working in London for Binsteds, the big builders. Followed a chilly period of boycott, an interview with the head of the firm, and the intimation that, under the circumstances, he had better seek work elsewhere. His German name and German appearance were hopelessly against him.

'But 'tis meself that's as loyal as th' best av thim,' protested Johann.

'Quite so—quite so,' said the manager; 'but the feelings of the men must be considered.'

So Johann departed, with an excellent character and a month's wages in lieu of notice. That same Saturday afternoon he left his room at Camden Town and took the tram to Highgate. At the door of a tea-shop he halted, screwed his courage a notch higher, and went in. He passed down an aisle of marble-topped tables and entered a small parlour behind, where a dark-haired, exceedingly pretty girl was arranging a plate of cakes.

'Hallo!' she said, the colour in her cheeks deepening. 'Mother's out. Anything wrong?'

'Binsteds are afther givin' me th' sack,' said Johann. 'Finish attindin' to y'r customers, and Oi'll explain.'

He did explain. Jenny Parker listened, with growing coldness. She and Johann were not formally engaged; there had been nothing more than an 'understanding' between them. And latterly sundry girl-friends had dwelt on Johann's ancestry, and her mother had added certain caustic comments of her own. Sick at heart, Johann perceived that she was superficially sorry for his sake, but that she viewed the diminishing prospect of their marriage with more relief than regret.

'A girl nowadays couldn't be expected to feel the same,' she explained, 'towards a man whose forefathers had been German.' And Johann had passed from the shop into the chilly October air, his life broken and worthless.

A recruiting poster caught his eye, with an arrow that showed the way to the nearest depot. He walked there like a man in a dream, and, still like a man in a dream, answered the questions put to him by a keen-eyed sergeant. 'Surname, O'Hara' (Johann's mother's); 'Christian name, Michael; age, twenty-three; occupation, house-painter.' And so forth. The local battalion was badly in need of more men, the sergeant disinclined to push his inquiries too far. Michael O'Hara was duly sworn in, and after a brief leave, during which he deposited his few belongings with his landlady, found himself an inconspicuous unit in B Company, 17th (Service) Battalion, South Surrey Rifles.

But despite the name on the regimental roll, a whisper sprang up from somewhere that it was not his own, and that he was not the Irishman his brogue indicated.

'A blighter that looks like a bloomin' 'Un and talks like a Dublin car-driver ain't to be trusted,' opined Jimmy Evans, the little Cockney corporal in B Company. 'Sargint, what's that there Latin word for a chap as goes abaht wiv a name that ain't 'is own? In—in'——

'*In loco parentis*,' said Sergeant Jupes, without hesitation. And 'Loco' Private Johann became forthwith.

Extreme depression does not make for popularity; and though the officers found Johann tractable and quick enough, that alert buoyancy which is worth so much on active service was lacking. So, while draft after draft went abroad, he remained at home. Then came an action which brought the regiment much honourable mention in despatches, and left gaps which urgently needed filling. Johann was told that his turn had come at last, and was offered forty-eight hours' leave by his company officer. He hesitated for a moment, and then declined it.

'No best girls you want to say good-bye to?' asked the captain, with a curious glance at the tall, stiff figure.

Johann had a sudden transitory vision of Jenny Parker's face when they had parted at the tea-shop door.

'Not me, sorr.'

'Please yourself,' said the officer; and Johann saluted and retired to polish his equipment furiously, and to persuade himself that he was forgetting.

That was three months ago—long enough for the whispers that had been forgotten in the excitement of departure to come to life again.

'Beggin' your pardon, sir,' said Sergeant Jupes respectfully, 'but I wouldn't put Private O'Hara —him the chaps calls "Loco"—at No. 3 listening-post.'

'Why not?' said Lieutenant Mellish. 'O'Hara is efficient enough.'

'Maybe, sir. But the others don't care for his company. There's an idea that he's half-German. His hair and eyes'——

'Oh, all right!' said Mellish impatiently. 'Send him to the end of the trench. Nothing ever happens there. And if you get any further information on the point'——

'I'll let you know at once, sir.'

So Private Johann found himself at the end of the trench, a man as lonely and embittered as any in the long line that straggled across Flanders. His wandering thoughts were checked by a faint gnawing sound. It was as though some giant rodent was slowly making its way into the earth beneath his feet. The newly trained soldier in him awoke, and he flattened his ear against the damp clay and listened intently. The gnawing sound stopped long enough for him to count twenty, and was followed by a phenomenon totally beyond the analysis of Private Johann. He was conscious only of a heaving shudder that convulsed the trench, and of a blinding, stunning roar. Thereafter he dropped an interminable distance into black oblivion.

At the end of an unmeasured interval he opened his eyes again. Through a chink in the mass of rubble above him, he could distinguish a solitary star swimming in a sky of velvety blue. It convinced him that, all other evidence to the contrary, he was still alive. He wriggled one arm free, and made an effort to shift the dreadful weight which was crushing his chest. His hand encountered torn sacking, clay, and stones. He tried to turn his body, and failed; tried to shout, and found his voice little more than a cracked whisper.

'Be gob, but if Oi'm not out av this befure long, Oi'll never be out at all!' Private Johann told himself. Despite the fact that his head was aching abominably, his brain worked with astonishing clarity and detachment. It was plain that he would have to proceed with caution as well as speed. With frequent pauses to rest, he freed both arms, and then, more slowly, his body. At which stage he sat up.

The sky above him was clear, but the horizon was gray with scurrying cloud, amid which the moon, almost full, rode in a track of silver vapour. Of the landscape she illuminated Private Johann appeared to be the sole living occupant. Whether there had been a battle, and, if so, which way the fortunes of war had swayed, he had no conception. He was alone, utterly alone on a tortured plain, with only prone and motionless figures for company. The thought crossed his mind that the end of the world had come while he lay there, and that the final catastrophe had passed and left him the only man alive.

He ceased to speculate, and began scrabbling at the débris which still encumbered his legs. It was painful work, but he was free at last. He felt himself over with grimed and bleeding fingers. So far as he could discover, no bones were broken. He stood up, turned dizzy, and dropped to a sitting position. Ten minutes passed before he could walk with any degree of confidence.

The moon, rising clear of the cloud-wrack, showed him what had lately been the front-line trenches occupied by B Company. But in which direction the company had moved, or even if it still existed, he had no idea. A growing sense of physical discomfort became suddenly acute, and he realised that his uniform had been rent and slashed until it was a mere collection of fluttering rags. He was cold—colder than he had ever been in his life.

From where he stood, Private Johann could see the hunched-up figure of a man, unmistakably dead, clad in a magnificently voluminous overcoat that was not even muddied. Impelled by the primitive need of covering himself, he stumbled towards the figure. The task of annexing a dead man's garment was horrible; but war, whatever its minor aspects, is always fundamentally horrible at heart, and without hesitation Private Johann unfastened the shining buttons.

'Sorry!' he said, as one apologising for the discourtesy, and annexed also a resplendent helmet and a pair of noble gauntlets. 'But 'tis a moighty good fit, no less,' he added.

In the moonlight he could see the face clearly, and shuddered. Death itself lacked the power to give dignity to the gross features and dog-like hang of the lower jaw. But the end had been merciful—a clean-drilled hole through the forehead.

'An' now f'r the exile's return!' said Private Johann.

The moon had vanished, and he was left to stumble onward, with no sense of direction. For the first few hundred yards he went fairly sure; then an attack of vertigo overcame him, and he collapsed on a pile of rubble which had once been a well-built thirteen-inch wall. His hand came in contact with a side-pocket of the overcoat—a garment of superfine cut and quality. He unbuttoned the flap, and extracted a notebook and an aluminium box. In the latter he discovered a small phial of spirits and several flat slabs of chocolate.

'Here's luck to th' bhoys!' said Private Johann, and drank a toast to the lost company. The stuff was a cordial of a brand unknown to his limited experience, but pungent in the extreme. It sent a revivifying glow through his entire body, and made the world again a place worth living in—a place where a man of action might still carve his way to fame. He munched a slab of chocolate, and then turned his attention to the notebook.

'Graf von Zenden, Colonel on the Staff of General Stuber, 188th Division,' translated Private Johann under his breath, and whistled softly as he studied the notes that followed.

Among his few extraneous accomplishments was an ability to speak German with a fluency and distinction which many a professor might have envied. There had been no use for German at Binsteds', and the accomplishment had lain dormant, so to speak. But it had always been a theory of Johann's father that a man should speak at least one tongue beside his own, and what more natural than that of great-great-great-grandfather Schultz? Another incentive existed, in the form of the big brass-bound Bible which had belonged to the old dragoon, and which tradition demanded should be passed on from father to son as soon as the boy could read its pages. Gorgeous pages they were, filled with copperplates depicting the Creation, innumerable heavenly hosts—all with placid Teuton faces and garments as capacious and tangible as blankets—and patriarchs surrounded with flocks and herds which would be a credit to Smithfield at its best. Johann had loved the book, and learnt it before he was ten, and still kept it in the box that his Camden Town landlady was guarding.

His brain grasped the fact that the seventh regiment of the division was to make an attack following the explosion of a certain mine, which was to wreck, annihilate, and generally remove from the map the British first-line trench.

'Which same explosion,' communed Private Johann, 'is afther dumping me half-way betune the loines—but still aloive,' he added, as one gratefully appreciative of a miracle. He restored the notebook, together with the aluminium case, to the overcoat pocket, and continued his dubious progress.

Ten minutes later he was confronted by a bulky little man with a dapper moustache and gold-rimmed *pince-nez*. The dapper little man, who apparently emerged from nowhere, saluted rigidly. Mechanically Private Johann, his own face in the shadow, saluted in return.

'Colonel von Zenden, sir?'

'*Ja*,' said Private Johann huskily. He was physically incapable of running away, even if he had wanted to. Nor was there anywhere to run to.

'Let me introduce myself as Captain Sapt, commanding Companies F and G. We have been expecting you for some time. Was the explosion a success, sir?'

'One might call it so,' said Private Johann cautiously.

'We inferred,' continued the captain, polishing his glasses, 'that the enemy would probably retreat, but that we might retreat—temporarily—also. We are consequently awaiting the further instructions which the General informed us he would send by yourself.'

Private Johann nodded. 'Where is Major Weinberg?'

'He was killed an hour ago, sir.'

Private Johann paid the defunct major the tribute of a sigh. In point of fact, he was considerably relieved. It eliminated his chief risk of being recognised. The notebook had referred to Weinberg as 'my old and valued friend, at present commanding a double company possessing less intelligence than sheep.'

'You will come down, sir?' insinuated the captain, indicating a black entrance.

'I will come,' said Private Johann, and followed his guide past a rigidly saluting sentry. In the hinterlands of his brain he was assuring himself that his chances of coming to the surface again were about one in two million.

Two flights of steps brought them to a second sentry, and a doorway. They entered a brightly lighted room, furnished with wicker chairs, a carpet, and coloured pictures from *Lüstige Blatter*. A dozen officers were grouped about a central table, in various stages of *négligé*—sure sign that they were Landsturmers, and not regulars. They leapt to their feet, saluting, as the two men entered, and an officious young lieutenant dragged a chair to the head of the table for the newcomer.

'Be seated, gentlemen,' commanded Private Johann, with a wave of his hand. The cordial had given him confidence, as well as warmth and strength. He would have as gaily passed the time of day with the Imperial Butcher himself. 'Give me a plan of the trenches,' he ordered—chiefly to gain time.

They brought him a tracing that showed every detail.

'Good! Now listen to me.' He wagged an admonitory forefinger to ensure their attention. 'The English line ran *so*, and *so*.' He indicated it with his thumb-nail on the paper. 'I say "ran," because the first line no longer exists. The second is held in such force that it would be useless for us to make more than a demonstration against it. The real attack will come from Colonel zu Wedel, on your right. What are your remaining effectives, captain?'

'About four hundred and seventy-five men, sir; scarcely enough to'——

'Frighten a couple of thousand demoralised Englishmen?' completed Private Johann, with a cold glare that would have done credit to the

old dragoon. 'Parade them in twenty minutes' time.'

'Very good, sir.'

'By the way, if you have any food available'——

They hastened to assure him that every crumb, every drop of wine, was at his absolute disposal.

'Then I will forage for myself,' said Private Johann, with the austere magnificence of a Von Moltke. 'Direct me to the kitchen.'

A dozen voices made haste to direct him. The way lay through a corridor lined with their equipment, and was separated from it by a curtain. The sergeant in charge of the cooking-quarters produced, with the utmost alacrity, coffee, bread, and a sausage which he solemnly assured his excellency was the last in the possession of the regiment.

'Berlin itself could do no better,' said Private Johann, and made an excellent, if hasty, meal.

When presently he emerged into the open again, the air was shuddering under the roar of a distant bombardment, the sky meretriciously bright with star-shells. It was a state of things he had seen so often that it had lost even its element of picturesqueness, and become no more than an accepted background to the dull unhappiness of his lot. He turned, and made a critical survey of the long double line of men who waited—tall fellows with close-cropped heads, and faces from which all except the animalism engendered by weariness and hunger seemed to have been obliterated.

'Brutes they are,' said Private Johann to himself; 'just poor brutes, bein' druv to death.' He moved towards the captain, who stood in the doorway of the dug-out, buckling on his revolver. 'You will advance two-deep, Captain Sapt, in the direction I indicate. Since it is to be a surprise attack, there will be no artillery preparation, and no man will fire until he is instructed. You understand?'

The captain saluted. In silence the advance began.

It was difficult to keep line, and more than once the men had to halt and re-form. To Private Johann, his nerves strained almost to snapping-point, the few hundred yards that separated him from the obliterated line of trenches seemed as many leagues. They reached it at last, and he went back to Sapt.

'You will wait here until I return.'

'Very good, sir. But if one might venture to suggest, as a precaution'——

'Suggest what you please—when the Emperor hands over the command of his armies to a syndicate of junior officers,' said Private Johann. 'Until then, obey my instructions without comment.' And to himself he added, 'Th' natest bit av tongue-waggin' Oi 've done, so far!'

The captain reddened, and stepped humbly back, leaving Private Johann to pursue his solitary way.

Minor adventures succeeded, including a fall into a shell-crater, before he ultimately blundered into a listening-post, comprising Sergeant Jupes, Corporal Evans, and four privates. More particularly he blundered into the sergeant, who had constituted himself a temporary exploring-party of one. The encounter was not without its lighter side, for both men were on their hands and knees. Johann was the quicker, but the sergeant was the bigger man. There was a brief struggle, during which Private Johann interjected, '*Kamerad! Kamerad!*' passionately several times, without the smallest effect; and finally he was hauled, in an extremely muddied and bruised condition, into the presence of Lieutenant Mellish.

'O'Hara, by all that's marvellous!' said the lieutenant. 'And in the uniform of a Prussian field-officer! You—you damned traitor!'

'Not me, sorr!' panted Private Johann. 'Niver a bit av ut, sorr! 'Tis a scarecrow Oi am to luk at, but no thraithor at all, at all. Oi 've been blown heavens-hoigh, an' buried hell-deep; an' Oi 've been in the inimy's dug-out, and by diplomacy an'—an' swank, got away again wid a few prisoners.'

'How many?' demanded the sceptical lieutenant.

'Fower-siventy-foive, wid officers complate, sorr.'

There was a momentary pause, during which Private Johann casually unbuttoned his overcoat.

'You 've been drinking,' said the lieutenant sternly, struggling to avert his eyes from the remarkable condition of the delinquent's uniform.

'Oi have, sorr—stuff that tasted loike a red-hot poker boiled in soda-wather. But 'twas a foine tonic. An' now, if ye 'll listen'——

. . . . . .

The men under Captain Sapt were still waiting, like so many figures in cast-lead, when Johann reappeared. He beckoned the captain into the shadow of a little hummock that hid them from the others.

'I regret,' said Private Johann, 'to bear unpleasant news.' He cleared his throat. 'There has been a—blunder. The men have taken a wrong direction. It is a question of surrender or annihilation. You will order them to pile arms and raise a white flag.'

The captain gave a strangled cry, and dragged at his revolver.

'By God, but you are a traitor!' he said, and pulled the trigger.

'Be jabber, 'tis y'rself that's more than a bit av a fule,' said Private Johann, 'f'r there 's not a cartridge in wan av y'r pistols. Oi emptied 'em myself;' and with a swift and nicely calculated blow on the point of the chin, he sent Captain Sapt into an oblivion, from which he emerged in the presence of an English M.O.

Dawn found Private Johann in his dug-out, reading. He was half-blind with fatigue and exhaustion; but it would have needed total blindness to keep him from reading a letter from Jenny Parker. She had discovered his address from the Camden Town landlady, and she wrote to say that she missed him awfully, and that she hoped he would not altogether forget her. There was a good deal more in the letter, but its real value lay in the three little crosses which had been shyly scratched beneath the signature. Private Johann was holding it suspiciously near his lips when the lieutenant appeared.

'Er—O'Hara'——

Private Johann blushed vividly, and rose.

'Sorr?'

'The colonel will want to see you in the morning. He is pleased—distinctly pleased—at your work to-night, and, apart from other recognition, you will probably be offered several days' leave—which, of course, you 'll decline.'

'Not this toime, sorr.'

'Really! Well, here 's a sovereign, because I —er—called you names, and—— Good-night, O'Hara!'

'Good-night, sorr!'

The lieutenant went on his way. Down the trench advanced sundry other apologetic spirits, chanting 'For he 's a jolly good fellow' at the top of strenuous voices. But Private Johann was already succumbing to slumber—to dreams that were brighter than the moonlight that mocked the many prisoners of his taking.

CAPTAIN VILKITSKI'S VOYAGES IN THE NORTHERN ARCTIC.

By G. LINDESAY.

IN 1878–79 Nordenskjold, on board the *Vega*, sailed from Norway to Behring Strait; in 1914–15 Captain Vilkitski, in command of the Russian Hydrographic Expedition, succeeded in making the voyage in the opposite direction for the first time, his ships, which left Vladivostok on a second attempt in July 1914, arriving in Archangel on 16th September 1915. The results attained by the latter in various directions were of very considerable importance.

Last October the Russian Government, through its representatives abroad, officially notified to Allied and friendly governments the incorporation into the Russian Empire of lands and islands in the North Polar Sea discovered in 1913 and 1914 by the scientific expedition under Naval Captain Vilkitski.

The Government also notified to foreign Governments the fact that other Arctic islands lying off the Russian coasts, though discovered by foreigners, are included in the Russian Empire. The following are the lands and islands concerned, all of which are shown in a special map accompanying the communication: Off the Taimyr Peninsula—Emperor Nicholas II. Land, Tsarevitch Alexis Island, Starokadomski Island. Off the New Siberian Islands—Henriette, Bennett, Jeannette, Novopachenni, and General Vilkitski Islands, together with Herald and Solitude Islands.

A brief reference to some of these may be interesting. The two vessels which carried the expedition, the *Taimyr* and the *Vaigatch*, were built in Petrograd on the same principles as the *Fram*, Nansen's famous craft. Their displacement was fifteen hundred tons; their average speed was eight knots; they carried coal sufficient for a voyage of twelve thousand sea-miles; and the complement of each consisted of five officers, an engineer, a doctor, and forty men. Each was provided with a hydro-aeroplane and radio-telegraphic apparatus, and they were provisioned for sixteen months.

Captain Vilkitski's instructions were to explore the northern coast of Asia, of which the tract from Behring Strait to the mouth of the Lena River had previously been only partially investigated. He was then to proceed to Cape Tsjeljuskin, the most northern point of Asia (in about one hundred and three degrees east longitude), then northwards from that headland as far as the ice conditions would permit, and afterwards to Archangel.

In 1913 the ships left Vladivostok, passed through Behring Strait, and worked their way westward, the *Taimyr* keeping to the south and the *Vaigatch* to the north of the New Siberian Islands. Off Cape Tsjeljuskin impassable ice was encountered, and further progress westward was put an end to; but this brought about the discovery of Emperor Nicholas II. Land, the existence of which had for long been believed in by geographers. It was with the object of finding this presumed territory that the *Dijmphna* Expedition of 1882–83 was fitted out. Unfortunately it hit on a most unfavourable season in the Kara Sea. The vessel stuck fast in the ice, and drifted about in it the whole succeeding winter; but it was fortunate enough to rescue the people of the Dutch meteorological station, whose ship, the *Varna*, had been crushed by the ice. Bad fortune had also attended other expeditions which started with the same object in view.

When endeavouring to pass round the ice off Cape Tsjeljuskin, Captain Vilkitski got so far north that he fell in with the new land, and

sailed along its eastern coast to eighty-one degrees north latitude and ninety-six degrees east longitude. He gave it the name of his emperor, the Tsar Nicholas II., and an island between it and Cape Tsjeljuskin he called after the Crown Prince, Tsarevitch Alexis. In addition to these discoveries, he found General Vilkitski Island, to the south-east of the New Siberian Islands, and a smaller one between these and Bennett Island. As the passage to the west was closed, the expedition returned the same year to Vladivostok, and as a reward for the results obtained, the rank of Adjutant to the Emperor was conferred on its commander.

In July 1914 the ships again started for the Northern Arctic, with orders to complete the survey of the Taimyr Peninsula and Nicholas II. Land, and afterwards to proceed westwards through the Kara Sea to Archangel. Great difficulties were experienced that year with the ice. On 2nd September Cape Tsjeljuskin was passed; but both vessels were ultimately obliged to go into winter quarters immediately to the west of that headland, in the neighbourhood of King Oscar's Bay. On both voyages the wireless telegraph was found to be of inestimable value, as it enabled the ships to communicate with one another at any time, even when the distance between them was very considerable.

Of permanent Russian radio-stations in the Arctic there are at present five: two to the south of Behring Strait, at Anadyr and Nagakhan, and three at the entrances to the Kara Sea. These three have been established for the benefit of the navigation (so important for Siberia) through the strait to and from the great Russian rivers Obi and Jenesei. One of them is on the mainland on the Jugor Strait, opposite the island of Vaigatch; the second is on the north-west side of that island; and the third is at Mara Sale, in the Kara Sea, on the southern part of the west coast of the Jahnal Peninsula. From the anchorage to the west of Cape Tsjeljuskin it was found impossible to communicate with any of these stations, and fears began to be entertained in Russia as to the fate of the expedition. On 19th January 1915, however, wireless communication was successfully obtained with the ship *Eclipse*, under the command of Captain Sverdrup, which had been despatched in search of Rusinov and Brusilov's expedition. The *Eclipse* had worked its way eastwards over the Kara Sea, but had been compelled to go into winter quarters about two hundred and twenty miles to the west of the place where the *Taimyr* lay at anchor. On receipt of Captain Vilkitski's message, Captain Sverdrup forwarded it to the station at Jugor Strait (about a thousand miles), from which it was sent to Archangel (some nine hundred miles). In spite of the reassuring intelligence thus conveyed to Russia, arrangements were made for the despatch of a relief expedition, with coal and provisions, in case Captain Vilkitski should find himself obliged to remain away another winter; but in the summer of 1915 he succeeded in getting clear of the ice, and, as above stated, reached Archangel with both his ships on 16th September.

Although Captain Vilkitski was thus successful in voyaging from Behring Strait to Europe, it is hardly likely, in view of the difficulties which attach to it, that this route can ever be utilised for regular trading purposes; and in a recent issue of the *Novoje Vremja* a well-known Russian writer ridicules the idea. He advocates the construction of a waterway to Europe by means of the Siberian rivers and artificial canals, by which many of these remote provinces of the Russian Empire might be connected with Russia itself at a comparatively moderate cost. In his opinion not more than three relatively short canals would suffice; and where the making of these is too difficult, he suggests railways.

THE TWO VISIONS.

METHOUGHT I gazed upon a battlefield,
And saw unnumbered hero-soldiers yield—
With steadfast purpose—all the hopes of youth
A willing sacrifice to guard the Truth
And Liberty and Justice of the world,
Which else had from their rightful thrones been hurled.
I shuddering saw how over all the plain
Accumulated ghastly heaps of slain;
I heard the murmured prayer to Heaven addressed,
The groans of agony not all suppressed;
I saw homes mourning their illustrious dead,
Hearts nigh to breaking, faith so nearly fled.
I cried, 'Oh Father, God of love and power,
Make Thyself manifest in this dread hour!'

The vision faded from my view. I heard
A Voice which all my inmost being stirred:
'My child, thou shalt be favoured. Look again,
And see what follows after all the pain.'

The scene was changed. I stood beside the gate
Of Paradise itself, where angels wait
The arriving souls. The spirits of the dead
Thronged from the battlefield, and angels said,
'Welcome, ye brave, who in this awful strife
Have gladly yielded, of your love, your life.
"No greater love than this." Know your reward
From Him who taught you, your most loving Lord.'
I saw calm faith now repossess the heart
Of those who mourned; no longer far apart,
In One Communion of the Saints they rest,
Waiting the call to join their dead so blest.

And now I cried, 'Oh Lord of Life and Love,
I thank, I bless Thee; with the hosts above
I glorify Thy name, who out of ill
And woeful loss canst bring such trust, and fill
These blissful mansions with the ransomed souls
Whose shout triumphant round Thy Presence rolls.'

LIFE ON DARTMOOR WITHOUT SERVANTS.

By BEATRICE CHASE, Author of *The Heart of the Moor*, *Through a Dartmoor Window*.

SINCE the heartless Government took our bluejacket for coast defence we have been afflicted with female failures who have made me a hardened misogynist. They were not the single, modern young female servant, whom no consideration would induce us to admit inside this house. They were elderly, respectable, married women, who had been in gentlemen's service of what ought to have been the good old-fashioned kind; and to say that I was only just alive and sane when we got rid of the last one sums up the horrors of our year. Now we have settled down with a splendid local woman who has never been in service, and has a beautiful little home. She comes for the mornings. A native man, who is an all-round genius, comes any evening he is wanted, and always on Saturdays and Sundays; so with this help we have settled in for life. When that fails I shall rise at 4.30 A.M., and do their work also.

All my life, of course, I have done a large proportion of the higher branches of housework, such as cooking, fine laundry-work, silver and brass cleaning, and many other things. Now, however, I have boldly attacked the roughest and dirtiest departments, such as cleaning stoves, blackleading, and scrubbing; and the more I do of it the more my misogynism is confirmed. It is not until an intelligent woman does things herself that she plumbs to its depths the half-witted incompetence of even the best type of female domestic servant. I have always maintained that housecraft requires the highest form of intellect, which is why many lower-class women are unable to do it; and now I am certain of the truth of my theory. They do their work without using any mental power about it. They behave like machines, and when there comes one of those unforeseen emergencies which occur constantly in every house they are thrown off the line for the day. Apart from emergencies, through lack of brain-power, they make double the labour out of every task; and, for the same reason, as soon as anything is clean, they begin to mess it up again. The Rainbow-Maker has always remarked, 'It is the servant who makes the work and the dirt.' I find it is literally true. She also remarks, 'God sends the food, and the devil sends the cook.' That is, no doubt, truer; but as no servant in Europe can cook for us, we are spared that particular torment.

For instance, take grates, fires, and stoves. I now clean one grate every day, without missing. I do it in twelve minutes from the time I spread the grate-wrapper till the new fire is laid. This includes going over the cobbitt, fireirons, and handsome black iron kettle with the blacklead-brush. Every scrap of cinder is taken away; the bars are clear for the draught—a new experience. All the ironwork shines with polish—also a new experience—and the fire is laid in a way that can allow it to burn. When a servant cleans a grate she first leaves the bars choked, and then, hermetically to seal the necessary underdraught, she relays the fire with a mass of cinders under the paper. Then we all go mad with smoke, and the clean rooms are ruined. You explain till you are hoarse that fires require to breathe as we do; but you cannot teach her. She always has laid a fire with an impenetrable layer of cinders under it, and she will continue to do so. Then she tries to counteract this folly by using double the necessary amount of wood and paper. Flues are, of course, nearly every servant's stumbling-block. She would rather be smoked out, have to clean the kitchen, be unable to cook anything or to get any hot water, than clean her flues. The blacksmith told me this summer that in the busiest harvest season, when he was working from dawn till dark at the machinery and shoeing, he had to lose many half-days wanted for this important work 'to run the country' on all sides in response to dirges from ladies round about, saying their stoves would not burn, and they could get no food. In every case, he told me, the slut of a servant had got the flues choked solid with soot, and the fool of a mistress had not even known it. In no instance was there anything whatever wrong with the stove. Well, to me, there is a high satisfaction, not to mention pride, in cleaning out a grate, making it look beautiful, and lighting a fire which will burn. When I have done it, I am conscious of successful intellectual achievement. I wear a long blue pinafore reaching from my chin to my toes, a blue sun-bonnet, and a pair of special grate-gloves made, by a clever young friend of mine, of American cloth, which is much

 [*All Rights Reserved.*]

more satisfactory than wash-leather, as it permits no kind of leakage. I have caps, of course, for ordinary housework, such as sweeping and dusting; but for real filthy work, like grates, there is nothing to touch the old-fashioned sun-bonnet. The valance comes down beyond the nape of the neck; the ears are also completely covered; you can pull it down over the eyes in front, and the strings prevent any displacement. Added to this, it is quaintly picturesque. In addition to the dirty way in which the grate itself is only half-cleaned, there is the aggravation of the dust which a servant lets loose all over the room in taking up ashes. I never knew that it was possible to clean a grate without even having to dust the mantelpiece; but I find it is. I open the door of the room and an opposite window wide before I begin. This creates a draught which blows the ash up the chimney instead of all over the room. I must in honesty confess that I did not invent this patent. It was taught me by the local chimney-sweep, who declines to begin his operations till door and window are wide open and a draught established. If you try to teach this to a servant, she prefers to produce a fog of ash all over the room, and then either to dust everything or else leave it dirty. Again, there is a sense of intellectual delight in cleaning a grate without making any mess. Without intellect the thing cannot be done.

This intellectual effort applies not only to each task, but to the programme of the entire day. It produces a maximum of well-done work at a minimum of fatigue and time expenditure. Instead of doing a dab here and a dab there, as many servants do, I have certain hours when I am doing housework, and in an hour I do what they would take three hours over. For instance, in the evening hour of preparing dinner I start all my stoves and pans, and then clean the grate ready for the morning. The stoves and pans cannot be left entirely, yet they do not require more than intermittent attention, so that several things can be done at the same time. When the grate is finished I attend to buckets and cans, which means several journeys into the open. Thus half-an-hour of morning work is done in the evening dinner-hour, and when I descend to get breakfast ready there is a blazing fire in two minutes.

Washing-up is another trouble over which servants waste much time. To begin with, they, too often, wash up all the dirtiest and greasiest things first, and glass and silver last in a thick pea-soup of grease, coffee-grounds, tea-leaves, lumps of fat, and every other solid matter they can get together. Then they take an extra half-hour to polish silver and glasses, or else we use both in a sickeningly smeared condition. When an intellectual woman washes up, she begins with glass, continues with silver, and works on to saucepans last. I find it is a mistake to wash up after every meal. Washing-up is always the greatest problem of housework, for the very reason that it inevitably comes after a meal, when one ought not to be exerting one's self. After various experiments, I find it is better to have two washings-up a day rather than four; and the greatest mistake of all is washing-up after dinner in the evening, which is the chief meal, when one is most tired. So I leave dinner-things in soak till morning, and then do them and breakfast-things together. Exertion at that time in the morning matters much less. Lunch-things are left, and done after tea with tea-things. Tea is a lighter meal than lunch, and exertion then is again the minimum of injury. At that hour I also prepare everything for dinner, so as not to have to start all over again in half-an-hour or so. Thus I get a good spell off duty, and only have to put a match at dinner-time to the oil-stoves, on which every pan is ready. I find that the butter, milk, cream, and fat in washing-up water are extremely good for the hands, and are a preventive of chilblains. After finishing, I wash my hands in very hot water, and then rub on a lotion of lemon-and-glycerine. After peeling vegetables, especially onions, to get rid of the odour, particularly about one's nails, I use a little bottle of essence of lemon, into which I dip each finger-tip. This entirely does away with any odour, and also whitens the skin.

Another problem is the answering of the door. This I have solved to my own satisfaction, if not to my friends'. When any one calls at the hour which would throw out some domestic task, I say politely, 'I am sorry I am not at home. I have just begun washing-up, and the water is getting cold. Can you come again?' No one appears to mind. Sometimes it happens the caller only wants to know something which I can tell him at once. Before meals I plant upon the step, anchored by a boulder, a legend in large type, 'Not at home till ——. Please shut and fasten the gate.' I found, if I were to preserve my health, that this was absolutely necessary. No one can be disturbed constantly at meals without serious suffering eventually. I think people, as a whole, prefer these methods. No one wants to be a nuisance, or to cause me suffering; and then people are sure when they are asked in that I really do want to see them.

There are many little dodges by which an intelligent woman can minimise fatigue. One is to wear heelless shoes when engaged in household tasks. These are restful to both the feet and the spine, and for some reason one can get about at double the pace without heels. Very prettily cut shoes can now be had in velvet and satin in lovely colours such as cinnamon, turquoise, crimson, pink, violet, rose, gray; and, if desired, they can be changed for heels when one has finished. After a task which has meant standing for some time, I always sit in an easy-chair, and put my feet up as high as my head

on another chair padded with cushions, with a specially big cushion under the knees. Five minutes of this makes one feel perfectly fresh. It not only rests the feet and legs, but eases the heart enormously. If possible, I do it in sun and fresh air. A book for these few minutes is part of the dodge. To read even a few pages switches the mental current along a new line, so to speak—a line which has been resting for several hours and is perfectly fresh. One way to remain perennially fresh is to change the mental current frequently along rested lines. Another good dodge after fatigue or being indoors is to stand at the open door and breathe deeply for twelve breaths, especially before going to bed. Servants, of course, do none of these things. They require intellect and education.

For me there is art and beauty in housecraft which cannot be attained by any other means. What ideal can be more beautiful than to serve those we love with our own hands? What in life is more sacred than home? Home means health for the family, and families mean the nation. What work could be more sublime? I hope the day is coming when thoroughbred women, like the noble ladies of medieval times, will return again to their own, and will count it a disgrace to let their kinsfolk and their guests be served by menial hands. Let the plebeian women go out daily to what they are pleased to call man's work. It is all many of them are fit for. But, in heaven's name, let us patricians awake to our birthright, and see to it that only ourselves, the high priestesses, minister in the sacred sanctuary of Home.

THE DEFINITE OBJECT.

CHAPTER VIII.—OF CANDIES AND CONFIDENCES.

'OH!' said Mrs Trapes, 'so you've come? Good land, Mr Geoffrey, there's parcels an' packages been a-comin' for you constant ever since you went out. Whatever have you been a-buyin' of?' and, opening the door of his small bedroom, she indicated divers packages with a saucepan-lid she happened to be holding.

'Well,' said her lodger, seating himself upon the bed, 'if I remember rightly, there are shirts, and socks, and pyjamas, and a few other oddments of the sort. And here, when I can get it out of my pocket, is a box of candies. I don't know if you are fond of such things; most of the sex feminine are, I believe. Pray take them as a mark of my—er—humble respect.'

'Candy!' exclaimed Mrs Trapes, turning the gaily bedecked box over and over, and glaring at it fierce-eyed; 'fer me?'

'If you will deign acceptance.'

'Candy,' she repeated, elbows a-twitch, 'fer me? Land sakes, Mr Geoffrey, I—I'—— Here, very abruptly, she turned about and vanished into the kitchen.

Mr Ravenslee, lounging upon his white bed, was taking languid stock of his purchases when Mrs Trapes suddenly reappeared, clutching a toasting-fork. 'Mr Geoffrey,' she said, glaring still, 'them candies must ha' cost you a sight o' money?'

'True, certain moneys were expended, Mrs Trapes.'

'They must ha' cost you well-nigh a dollar-fifty, I reckon?'

'They did,' nodded Mr Ravenslee, smiling.

'My land!' exclaimed Mrs Trapes, and vanished again.

Mr Ravenslee was sighing over a hideously striped shirt when Mrs Trapes was back again, flourishing a very large tablespoon.

'Mr Geoffrey,' said she, 'it's nigh forty years since any one bought me a box o' chocolates. An' now they look so 'cute, all done up in them gold an' silver wrappin's, as I don't wanter eat 'em; seems a sin, it do. But, Mr Geoffrey, I—I'd like to thank ye;' and, lo! she was gone again.

Mr Ravenslee had just pitched the striped shirt out of the window, when, behold! Mrs Trapes was back yet once more, this time grasping a much-battered but more be-polished dish-cover.

'Mr Geoffrey,' said she, 'I ain't good at thankin' folks; no, I ain't much on gratitood, never havin' had much to gratify over; but them candies is goin' to be consoomed slow an' reverent, and in a proper sperrit o' gratitood. And now, if you're ready to eat your supper, your supper's a-waitin' to be ate.'

So saying, she led the way into the parlour, where, upon a snowy cloth, in a dish tastefully garnished with fried tomatoes, the English mutton-chop reposed, making the very most of itself; the which Mr Ravenslee forthwith proceeded to attack with surprising appetite and gusto.

'Is it tender?' inquired Mrs Trapes anxiously. 'Heaven pity that butcher if it ain't! Is it tasty, kind of?'

'It's delicious,' nodded her lodger. 'Really, Hell's Kitchen seems to suit me. I eat and sleep like a new man.'

'So you ain't lived here long, Mr Geoffrey?' queried Mrs Trapes, eagle-eyed.

'Not long enough to—er—sigh for pastures new. Don't go, Mrs Trapes; I love to hear folks talk. Sit down and tell me tales of dead kings, and—er—I mean, converse of our neighbours, will you?'

'I will so, an' thank ye kindly, Mr Geoffrey, if you don't mind me suckin' a occasional candy.'

'Pray do, Mrs Trapes,' he said heartily. Whereupon, having fetched her chocolates, Mrs Trapes ensconced herself in the easy-chair, and, opening the box, viewed its contents with glistening eyes.

'You're an Englishman, ain't you?' she inquired after a while, munching luxuriously.

'No; but my mother was born in England.'

'You don't say!' exclaimed Mrs Trapes. 'So was I—born in the Old Kent Road, Mr Geoffrey. I came over to N' York thirty long years ago as cook-general to Hermy Chesterton's ma. When she went and married again I left her an' got married myself to Trapes, a foreman, Mr Geoffrey, with a noble 'eart, as 'ad wooed me long.' Here Mrs Trapes opened the candy-box again, and, after long and careful deliberation, selected a chocolate with gentle, toil-worn fingers, and, putting it in her mouth, sighed her approbation. 'They sure are good,' she murmured. 'But talkin' o' Hermy Chesterton's ma,' she went on after a blissful interval, 'I been wonderin' where you came to meet that b'y Arthur.'

'Ah, Mrs Trapes!' sighed Ravenslee, leaning back in his chair and shaking a rueful head, 'you touch on gloomy matters. As the story-books say, "thereby hangs a tale," the dismal tale of a miserable wretch whose appetite was bad, whose sleep was worse, and whose temper was worst of all—oh, a very wretched wretch indeed!'

'My land!' exclaimed Mrs Trapes, stopping abruptly in the act of masticating a large chocolate walnut; 'so bad as that, Mr Geoffrey?'

'Worse,' he nodded gloomily. 'It is, indeed, a gloomy tale, a tale dark and dismal that I love not the telling of; for, Mrs Trapes, that more than hopeless wretch stands, or rather sits, before you.'

'Save us!' ejaculated Mrs Trapes. 'Meanin' yourself?'

'My unworthy self.'

'Lord!' she whispered, 'what you been a-doin' of?'

'Wasting a promising life, Mrs Trapes.'

'You mean,' she questioned in a harsh whisper—'you mean as you've killed some one accidental?'

'Oh no, the life was mine own, Mrs Trapes.'

'Land sakes, Mr Geoffrey, you give me quite a turn! Ye see, sometimes folks gets theirselves killed around here, an' it's always accidental, sure!' and Mrs Trapes nodded meaningly, and went on chewing. 'But say,' she demanded, suddenly sharp of eye, 'where does Arthur come in?'

'Arthur comes in right here, Mrs Trapes. In fact, Arthur broke into my—er—life just when things were at their darkest generally. Arthur found me very depressed and gloomy. Arthur taught me that life might yet have its uses. Arthur lifted me out of the Slough of Despond. Arthur brought me to you! And, behold, life is good, and perchance shall be even better, if—ah yes, if! So you see, my dear Mrs Trapes, Arthur has done much for me; consequently I have much to thank Arthur for. Indeed, I look upon Arthur'——

'Shucks!' exclaimed Mrs Trapes, 'that'll be about enough about Arthur—Arthur, indeed! You oughter know his sister.'

Now at this her lodger started and glanced at her so suddenly, and with eyes so unexpectedly keen, that once again she suspended mastication.

'Now, in the name of all that's wonderful, Mrs Trapes, why mention her?'

'Why, because she's worth knowin'. Because she's the best, the bravest, the sweetest thing that ever went in petticoats. She's beautiful inside and out, mind. I've nursed her in these arms years ago, an' I know she's—oh, well, you ought to meet Hermy.'

'Mrs Trapes, I have.'

'Eh? You have? My lan'!' Mrs Trapes bolted a caramel in her astonishment, and thereafter stared at Ravenslee with watering eyes. 'An' you to sit there an' never tell me!' quoth she; 'an' Hermy never told me! Well, well! When did ye meet her? Whereabouts? How?'

'About half-an-hour ago. Coming up the stairs. I carried her grip.'

'Well!' exclaimed Mrs Trapes, staring; 'well, well!' and she continued to munch candy and to stare and say 'Well!' at intervals until arrested by a new thought. 'That b'y!' she exclaimed. 'Was Arthur with her?'

'No,' answered Ravenslee, wrinkling his brows; 'I lost him on my way home.'

Mrs Trapes sighed and shook her head. 'The sun sure rises and sets for her in that b'y, an' him only her step-brother at that.'

'Her step-brother?'

'Yes,' nodded Mrs Trapes emphatically. 'Hermy's ma were a lady, same as Hermy is; so were her pa—I mean a gentleman, of course. But Hermy's father died; an' then her ma, poor soul, goes an' marries a good-lookin' loafer way beneath her, a man as weren't fit to black her shoes, let alone take 'em off! An' Arthur's his father's child. Oh, a good enough b'y as b'ys go, but wild now an' then, an' rough, like his dad.'

'I see,' nodded her hearer thoughtfully.

'Now, me, though married ten long year, never 'ad no children; so, ever since Hermy's mother died, I've tried to watch over her an' help her as much as I could. Ah! she's had a mighty hard struggle, one thing an' another, Mr Geoffrey; an' now I've known her an' loved her so long, it kind o' seems as if she belonged to me almost.'

'She looks very good and brave,' said Mr Ravenslee.

'Good!' cried Mrs Trapes, and snorted. 'I tell you she's jest a angel o' light, Mr Geoffrey. If you'd seen her, like I have, goin' from one poor little sick child to another, kissin' their little hot faces, tellin' 'em stories, payin' for doctor's stuff out of her bit o' savin's, mendin' their clo'es—ah, yes! an' prayin' over 'em when they died, why, I guess you'd think she was a angel too. One sure thing,' said Mrs Trapes, rising, 'there ain't a breathin' man in all this whole round earth as is fit to go down on 'is knees an' kiss 'er little foot—not a one! No, sir!'

'No, I don't think there is,' said Mr Ravenslee slowly.

'As for that Bud M'Ginnis,' cried Mrs Trapes, seizing on the coffee-pot much as if it had been that gentleman's throat, 'I'd—I'd like to bat him one as would quiet him for keeps. I would so!' and she jerked the coffee-pot fiercely, much to the detriment of her snowy tablecloth. 'There, now, see what I've done; but I do get all worked up over that loafer.'

'Pray, why?'

'Why?' snorted Mrs Trapes indignantly. 'Hasn't he made eyes at her ever since they was kids together? Hasn't he worried an' worried at her; an' because she won't look at him if she can help it, don't he try to get back at her through that b'y?'

'How does he?'

'How? By puttin' him up to fightin' an' all sorts o' devilment; by teachin' him to be tough; by gettin' him drunk.'

'Oh, does he?'

'Oh, bless ye, Bud M'Ginnis can do anything with him.'

'How so?'

'Because Arthur jest worships M'Ginnis for his strength an' toughness.'

'Ah, I see.'

'Yes, Arthur thinks there's nobody in the world could lick Bud M'Ginnis.'

'H'm! May I smoke, Mrs Trapes?'

'Sure ye may,' she nodded, and began to collect the supper-things. 'I tell you what,' she exclaimed suddenly, flourishing the fork she had just taken up; 'if somebody would only come along an' thrash M'Ginnis—thrash him good—it would be a sight better for every one round here—it would so! M'Ginnis is always makin' trouble for some one or other, an' there ain't a man big enough or got heart enough to stand up to him; not even Spider Connolly. Wish I was a man, that's all, just for an hour! Ah!' Here Mrs Trapes snorted fiercer than usual, and the jut of her elbows was deadly.

'And he gets Arthur drunk, does he?' said Ravenslee, puffing dreamily at his pipe.

'Yes,' sighed Mrs Trapes as she loaded a tray with the supper-things. 'Hermy's seen him drunk twice to my knowin', an' I thought it would break her heart, poor dear. Ye see, Mr Geoffrey, his father died o' the drink, an' she's frightened for fear Arthur should go the same road. Oh, Hermy's life ain't all ice-cream sodas an' lollipops—not much it ain't, poor, brave, beautiful thing!'

Saying which, Mrs Trapes, sighing again, took up her tray. Mr Ravenslee, having opened the door for her, closed it again, lighted his pipe, and, sinking into the easy-chair, fell into frowning thought.

The windows were open, and from the crowded court below rose the shrill babel of many children's voices, elfin shrieks and cries, accompanied by the jingle of a barrel-organ, very wiry and very much out of tune; but Ravenslee, deep-plunged in thought, heard nought of it, nor heeded the fact that the pipe, tight-clenched between his strong white teeth, was out. For Geoffrey Ravenslee had set himself a problem.

The barrel-organ ceased its jangle; the children's voices were gradually hushed as, one by one, they were called in by hoarse-voiced mothers, and led away to bed; and the gloomy court grew ever gloomier as evening deepened into night. But still Mr Ravenslee lounged in the easy-chair, and so motionless that he might have been asleep except for the grim set of his jaw and the bright, wide-open eyes of him.

At last, and suddenly, he sat erect, for he had heard a voice whose soft murmur he recognised even through the closed door.

'I don't know, Hermy dear,' came in Mrs Trapes's harsh tones. 'I'm afraid he's gone to bed. Anyway, I'll see.' Ensued a knocking of bony knuckles, and, opening the door, Ravenslee beheld Mrs Trapes, and behind her stood Hermione, and in her eyes he saw again that look of wistful, anxious fear he had wondered over at the first.

'Oh, Mr Geoffrey,' said Mrs Trapes, 'it's eleven o'clock, an' that b'y ain't in yet. Here's Hermy been out huntin' the streets for him, an' ain't found him. Consequently she's worritin' herself sick over him—drat 'im!'

'Out on the streets,' repeated Ravenslee—'alone?'

'Yes,' answered Hermione; 'I had to—try to find him.'

'But alone, and at this hour, Miss Hermione; that was surely very—er—unwise of you?'

'Yes; you see, I didn't know where to look,' she sighed. 'I've been to the saloon, but he wasn't there.'

'The saloon! Good Lord!' exclaimed Ravenslee, his placidity quite forgotten, his face set and stern; 'that is no place for you, or any girl.'

'I must go to find Arthur,' she said softly.

'No, not there, even for that. Think of the—the risks you run. No girl should take such chances.'

'Oh, you mean that!' said Hermione, meeting his eyes with her frank glance. 'But no one would try to insult me hereabouts; this isn't Broadway or Fifth Avenue, Mr Geoffrey;' and she smiled a very sad, weary little smile. 'But I came to ask if you happened to know where Arthur is, or whom he was with.'

'Wasn't wid that Bud M'Ginnis, was he?' questioned Mrs Trapes sharply.

'No, he wasn't with M'Ginnis,' answered Mr Ravenslee in frowning perplexity; 'but that's about all I can tell you.'

'Thank you,' sighed the girl. 'I must go and try again. I know I shall find him soon.' But, though she tried to speak in a tone of cheerful confidence, her shapely head drooped rather hopelessly.

'You mean you are going out on to the—to look for him again?'

'Why, of course,' she answered; 'I must find Arthur.'

'Don't, Hermy, don't—so pale an' tired as you are, don't go again,' pleaded Mrs Trapes, her usual sharpness transfigured into a deep and yearning tenderness, even her voice seeming to lose something of its harshness. 'Don't worry, my sweet; the b'y 'll find his way home right enough, like he did last time.'

'Like last time!' cried Hermione, and, shivering, she leaned against the wall as if she were faint. 'Ah, no, no!' she whispered; 'not like last time!' and, bowing her head, she hid her face in her hands.

Close, close about that quivering form came two motherly arms, and Mrs Trapes fell to passionate invective and tender soothing thus: 'There, there, my love, my pretty, don't remember that last time! Oh, drat my fool's tongue for remindin' you; drat it, my dear, my honey! Ah, don't go breakin' your angel's heart along of Arthur, my precious—and drat him too! That b'y 'll come back all right, he will—he will; I know he will. Oh, if I was only behind 'im with a toastin'-fork! There, there, Hermy dear, don't fret; Arthur 'll come home all right. My honey, you 're all tuckered out, an' here it 's gettin' on to midnight, an' you go to Englewood by the early car. Go to bed, dear, an' I 'll sit up for Arthur. Only don't cry, Hermy.'

'Oh, I 'm not crying, dear,' said Hermione, lifting her head. 'See, I haven't shed a tear. But I must find Arthur. I couldn't rest or sleep; I should lie listening for his step. So, you see, dear, I must go out and find him.'

Hereupon, with swift, dexterous fingers, Hermione straightened the very neat hat which the embrace of Mrs Trapes had rendered somewhat askew, and, turning to the door, came face to face with Mr Ravenslee, and in his hand she beheld his battered hat, but she did not notice how fiercely his powerful fingers gripped it.

'Miss Hermione,' said he, in his soft, indolent voice, and regarding her beneath languid, drooping lids, 'pray accept the hospitality of my—er—apartment. You will find the easy-chair is very easy; and while you sit here with Mrs Trapes I 'll find your brother and bring him here to you.'

'Thank you,' she answered, a little shortly because of his lazy tone, or his sleepy eyes, or his general languid air, or all of them together; 'thank you, but I 'm going myself. I must go; I—I couldn't wait.'

'Oh, but really you must, you know.'

'Must?' she repeated, looking her surprise.

'Ab-solutely must,' he answered softly, nodding so sleepily that she almost expected him to yawn. 'You really can't go out again to-night, you know,' he added.

Hermione's blue eyes flashed, her delicate brows knit themselves, and Mr Ravenslee saw that she was taller than he had thought.

'You mean you will try to stop me?' she demanded.

'No; I mean that I will stop you.'

'But you 'd never dare!'

'I would dare even your anger in so good a cause. Ah, please, don't be angry with me, Miss Hermione, because'—and here his sleepy voice grew positively slumberous—'you shall not go out into the streets again to-night.'

'Ah, an' that 's right too, Mr Geoffrey!' cried Mrs Trapes. 'Hermy needs some one strong enough to master her now an' then, she is that wilful, she is so.'

But now all at once, as he watched, Hermione's eyes filled with great, slow-gathering tears, her firm-set lips grew soft and quivered pitifully, and she sank down in the easy-chair, her golden head bowed upon the green-and-yellow table-cloth. The battered hat tumbled to the floor, and, striding forward, he had bent and caught one of her listless hands all in a moment; and thereafter, though it struggled feebly once, he held it close prisoned in his own.

'Ah, don't!' he pleaded, his words coming quick and eager; 'don't do that! Oh, do you think I can't see that you 're all overwrought? How can I let you go tramping out there in the streets again? You couldn't go—you mustn't go! Stay here with good Mrs Trapes, I beg of you, and I swear I 'll bring Arthur to you. Only you must promise me to wait here and be patient however long I am. You must promise, Hermione.'

Now at this she lifted her heavy head and looked at him through her tears. And surely, surely in the face that bent above her was none of indolence or languor? These lips were firm now, and close-set; these lazy eyes were wide and bright, and in them that which brought the

warm colour to her cheeks; but reverence was there also, wherefore she met his look, and her fingers were not withdrawn from his until she had answered, 'I promise.'

'That 's my wise dearie,' nodded Mrs Trapes.—'An' good luck to you, Mr Geoffrey; an' when you find that b'y, say as I wish—ah, how I wish!—I was back of him with a toastin'-fork, that 's all!'

Then Mr Ravenslee caught up the shabby hat, opened the door, and, going out, closed it softly behind him.

'Hermy,' said Mrs Trapes, clasping the girl's slender waist in her long arm, and leading her into the brightest of bright little kitchens, 'I like that young feller. Who he is I don't know, what he does I don't know, but what he is I do know, an' that 's a man, my dear. An' he called you Hermione. Sounds kind o' pretty the way he says it, don't you think?'

But Hermione didn't answer.

Meanwhile Mr Ravenslee, descending the monotonous stairs, paused suddenly to smile and clap hand to thigh. 'A toasting-fork!' said he; 'a toasting-fork is an instrument possessing three or more sharp points. Ha! Mrs Trapes is a woman of singularly apposite ideas.' And he smiled a little grimly as he went on down the stairs.

(*Continued on page 115.*)

THE IMPORTANCE OF SPANISH.

THE interest that is being caused by the inclusion of Spanish in the curriculum of study at the schools in England has given rise to much comment and a very favourable impression in the educational circles of South America, where the study of English is compulsory at the majority of the schools. The importance of Spanish has always been underestimated in England, and why the German language should ever have been given preference over the beautiful language of Cervantes is hard to say. When we stop to consider that Spanish is one of the most widely spoken languages, and that it is the official tongue of some twenty independent self-governed countries, inhabited by little short of eighty million people, who jointly form one of the most homogeneous races in existence, its importance cannot be overlooked. The Spanish-speaking nations of the world, particularly those of the New World, have all entered on an era of unequalled growth and prosperity. They are the countries in whose high and low lands lie the natural resources the whole world will have some day necessarily to draw upon. Their population is increasing, assisted in a great measure by the thousands of Europeans that annually make their way thither in search of an easier, better, more independent, more remunerative livelihood. Seven out of every ten of these emigrants succeed in the work they, as a rule, engage in, and, after a few years of constant toil and economy, manage to establish themselves independently in the different branches of commercial and industrial activity. Many of these men marry native women, and thus they bring up families that do honour and justice to the land in which they were nurtured. The natural result of this mixture of races will be that finally the inhabitants of these young nations will constitute a people even more perfect than heretofore. Everything seems to be in their favour—climate, resources, and territorial extension. Peru, for instance, is the size of Italy, France, Spain, and Germany put together. People do not talk about the weather in Lima, because it never rains there. Bolivia is just on sixty times the size of Belgium, and yet it has only one-third of Belgium's normal population. Buenos Aires, Argentina's beautiful capital, at the present rate of increase, will be the second city in the Western Hemisphere fifteen years hence. Ecuador produces 40,000 tons of cacao beans a year; Paraguay gives commerce something like 100,000 tons of yerba maté; Brazil, with its yearly output of about 800,000 tons of coffee, supplies four-fifths of the world's consumption; Chile produces about 2,500,000 tons of nitrate; Peru furnishes 165,000 tons of sugar and 50,000 tons of guano; Argentina produces 250,000 tons of sheep's wool, and, what is almost impossible for the mind to grasp, nearly 15,000,000 tons of wheat and other grain, besides vast quantities of frozen meat.

A fair knowledge of Spanish is as important to a British financier, business man, or traveller connected with South America as are day and night to the order of living. If British manufacturers expect to remain on the top rung of the ladder of South American trade, they must see that their representatives speak Spanish. The attention of the conservative British manufacturer should be called to the fact that his wily and business-like American cousin will beat him out of the market if he does not make haste and cast off the garb in which he is lulled asleep by the idea that the market belongs to him alone. The ignorance of the majority regarding the resources and progress of the South American countries is very disheartening. To arrive at this knowledge it is necessary to have lived in South America and seen the sort of traveller British manufacturers send out to compete with the all hustle and bustle American representative, thoroughly conversant with the Spanish language in most cases, clever, intelligent, practical, and 'a regular knocker at the right door.'

There is the German commercial traveller, too, who comes to South America thoroughly drilled and disciplined, and who is as shrewd a business man as the American. To their knowledge of Spanish is due, in a great measure, their success. South American business men are just as fond of being addressed in their own tongue as the Englishman is of being addressed in his. When the American or German traveller calls on his South American client he is welcomed with the usual, '*Para servir a usted.*' It is good to see how ably the American will catch on and talk his client into business in Spanish. From the first moment he masters the situation, and has succeeded in ingratiating himself in the other's sympathy in such a way that the rest is only a matter of good salesmanship. The British traveller, on the other hand, with the exception of the strictly limited few who have been visiting South America for years, will, when addressed by his Spanish-speaking customer, invariably let fly these dry and selfish words, 'I don't speak Spanish,' expressed in English, much to the shame of himself and his people! I happened once to be in the office of a well-known Guayaquil merchant when an English traveller called. Of course, he could not speak a word of Spanish. Being a countryman of mine, I did for him all the talking he wanted. When he had left, however, the manager remarked amusedly, 'The deuce! does the gentleman suppose that I should have studied English?'

I am not trying to point out the importance of the Spanish tongue merely for the sake of those destined to move in Spanish society, or those who may want to read *Don Quixote* in the original, or may be desirous of earning their living as correspondence clerks or members of the Diplomatic Corps. An intimate acquaintance with a language that is not one's own is unnecessary for the mere getting about in any foreign country. What I do wish to point out is that every man sent by the British manufacturer to work the South American markets, and every man on an official mission to the South American Governments, should know Spanish if he is expected to do his duty with thoroughness and in such a way as will at least equal, if not surpass, that of his American and German rivals. It is to the maintenance of British prestige and commercial and financial preponderance that we must look. The lead has been obtained after long years of patient endeavour, perseverance, and enterprise, in days when competition from the sources mentioned was less keen, when the determination and endurance of British trade pioneers were well tried, but never beaten, by the innumerable barriers that had to be surmounted on the road to ultimate success. Is the result of all those years and years of patient toil and trade victories to be snatched away from us at a single blow? To avoid it we have only to keep pace with the great rivals who openly dispute not only the markets that remain to be exploited, but also those that British manufacturers entered and held for more than a century without fear of competition. It is impossible for the measures they are adopting to escape our notice. Every movement of theirs should be countered by a similar or more efficacious movement in Great Britain.

American business men are doing their best to take full advantage of the opportunity offered by the breach caused in the commercial relations between Europe and the South American states by sending down some of their most prominent citizens to build up the trade for them. As a proof of this may be cited the recent visit of Professor Leo S. Rowe, of the University of Pennsylvania, an expert on Latin-American affairs and an enthusiastic advocate of the Spanish tongue, being himself an efficient Spanish scholar. Further proof of the interest now being taken in South America by American business men is an address which James A. Farrel, president of the United States Steel Corporation, recently delivered before the American Academy of Political and Social Science. Amongst other things, he said: 'How important a part British capital will play in the financing of Latin-America after the war remains to be seen; but the consensus of financial opinion seems to be that interest rates will materially increase, and the amount of this increase, as compared with the price of United States loans, will doubtless determine the question of who is to be the chief investor.'

Although the English language is not taught in the schools of South America as it should be, it is a recognised fact that more success is obtained in Chile, for example, with the teaching of English than in England with the teaching of German. In Chile, after the ordinary six years' study, the student leaves school with a fairly good all-round knowledge of English, which he begins to put into practice the moment he finds employment. The result is that before long he is able to speak English correctly. I do not know whether it may be safely said that the same thing happens in England with regard to the German language. In my own schooldays I could never get such a necessary grip of the German tongue as would enable me speak it with relative ease, although I studied during several years and took several prizes for efficiency. I know many others of whom I might say the same. What is the cause of this difference? It is sad to reflect how much time and money have been wasted on experiments that have been worse than useless. Up to the present, foreign languages have been taught at the English schools more as a matter of form than anything else. It would be venturesome to say so with regard to the schools in the United States, where there are a large number of competent Spanish teachers whose work has been crowned with flattering success. With regard

to the teaching of Spanish at the schools in England, there are many advantageous systems that might be adopted in order to make the undertaking a success. To the experienced teacher it should be apparent that the success of the teaching of a language depends chiefly on the method employed. The difficulty arising therefrom might be surmounted in part if the Governments would interest themselves in the matter. There are many native teachers in South America who speak English fluently, and many of them are engaged in teaching English at the public schools. Would it not be possible to engage some of these teachers for service in this country as teachers of Spanish? In return, the same number of English teachers might be sent to South America. There would be some advantage in this. The English teachers would have a splendid opportunity of acquiring a good, practical knowledge of Spanish, and a thorough idea of the South American countries and peoples, which would place them in a position that would enable them, immediately after their return to England, to devote themselves to the teaching of Spanish. This, or something similar, would be a start in the right direction. The cost would be comparatively insignificant, and the success attending the adoption of the system would doubtless amply compensate for the trouble and outlay involved.

'MOHAMMED'S COFFIN.'

CHAPTER II.

SELMA DURELL and Ruth Davenport formed a pleasant contrast, as well in antecedents as in looks. Ruth had the freshness and demure prettiness of the daisy, and, being the eldest child of a large family of modest means, had learnt how to practise self-denial winningly. Anselma, to give her name in full, was rather striking in appearance, and had been brought up as the only child of parents who could afford to indulge her. Indeed, Mrs Fairfield shrewdly suspected that, when one got to know her better, she would turn out to have been spoiled. But this did not happen. Except when ruffled, Selma was by nature amiable, and, except in being rather easily hurt, gave no indication of the slightly enervating influences attending her upbringing. Of the two, little Ruth had distinctly the more courage, and was more ready to take the initiative in difficulties. Selma quickly developed the habit of appealing to her, and indeed of leaning on her. With Edwin to amuse and to escort them, the two girls asked nothing better than to take life as it came. Edwin, for his part, fell in with their view, as he was perhaps too much inclined to do with all and sundry of his associates. So far, however, there was no fault to be found with this attitude of his.

'He is looking about him,' said his father to Mrs Fairfield, quite prepared to take the defensive. And to 'look about' is excellent, provided that the process be not too prolonged.

Meantime the Squire and his wife were interested spectators, each being fully prepared, should occasion offer, to take the other to task for infringement of their compact of non-intervention.

'Give them time to get acquainted,' Mrs Fairfield would remonstrate when her impatient lord and master prematurely demanded developments. 'Our Edwin is not one to fall in love at first sight—he has too much sense for that. He is constitutionally deliberate.'

'He takes it from you, then,' retorted her spouse. But, so far, he himself had detected no sign of a preference on his son's part, and he was beginning to wonder inwardly what the young fellow was made of. For John Fairfield was not deliberate, whether by constitution or by training.

Partly from inclination, partly from expediency, the Fairfields had fallen into the way of living very quietly. They did not 'run to' house-parties, and the consequence was that the three young people were left a good deal to themselves and their own devices.

Without appearing to do so, the Squiress kept a watch on them as they went about together, visiting some of Edwin's favourite haunts, which he had not seen for so long. A misgiving had arisen in her breast, and she made this forecast of the future: 'I know exactly how it will be! A delightful time for all three, to start with; and then jealousies and heart-burnings. And it is all your fault!' (Needless to state whom she was addressing.) 'Oh, Squire, Squire! to think that a man should live to your age and never realise the force of the proverb that "two's company"—— I foresee that one of these two girls is doomed to disappointment, and I feel for her.'

The Squire was content to reply, with quiet provocation, 'I do not fancy it will be Selma.'

In a moment Mrs Fairfield's curiosity was rampant. 'Tell me, John,' she half-entreated, half-commanded—'tell me at once—have you observed anything?'

Putting aside a temptation to tease, he reassured her. 'Nothing whatever! I was merely speaking upon grounds of general probability.'

'You are sure of that? Well, I trust you. But I do not share your view.'

'Well, well! Time will show. Are you not a little premature, wife, in taking the situation

so seriously? What is likelier than that nothing at all may come of it?'

But the Squiress had her own views on the subject. She reflected that, whoever was to be the sufferer in the love-drama which she saw ahead of her, at the worst it could scarcely be her son. What fond mother can imagine a son of hers rejected by any girl?

And Edwin had returned from abroad more debonair even than before. It could not be said, perhaps, that he shone in conversation. But what he did say was always pleasant to listen to, though in substance rather matter-of-fact.

When he had been about a week at the Demesne, a little crisis came about. It was just this. The Fairfields and their guests had been invited to a garden-party at the County Member's—a somewhat dull and formal affair, it was expected to be; for the Member was a noted temperance reformer, who loved to interpose spacious addresses on his favourite theme between tea and tennis, and to force his friends to listen to them. In a dull country neighbourhood, such events are talked over in advance; and it had been laid down by Mrs Fairfield, who in all these matters was a mirror of correctness, that though the party promised no great pleasure, it was their duty to attend it.

When the day arrived, however, Miss Durell pleaded headache, and begged to be allowed to spend the afternoon in a hammock in the garden.

It required all Mrs Fairfield's self-control to keep her face from lighting up. 'Most certainly, my dear!' she replied; 'you will have a quiet afternoon and tea by yourself, and you will be quite well, I hope, by the time we return. It is this thundery weather, I suspect.' The good lady could not restrain a slight glance of triumph in the direction of her lord. But it was premature.

You have noticed, reader, how the process of disintegration in a party is apt to spread? No sooner had Selma cried off than Edwin tried to do the same. The Squire returned his wife's glance, with much more than its original import. This put Mrs Fairfield on her mettle, and, little doubting of success, she began to use her influence with her son to persuade him to go with her.

To her surprise, Edwin remained obdurate, replying to her arguments. 'Really, mum, I'd much rather stay at home. After being so long away, I shall feel out of it. And what's the good of remaking acquaintance with the neighbours only to break it off again? Those who really care to see me will know where to find me.'

His mother had returned to the charge; but Mr Fairfield intervened. 'I suppose the boy may do as he likes, Joan? You women can never be content to let people enjoy themselves in their own way! Come, we mustn't keep the horses standing.' So there was nothing for it but for the reduced party to drive off and make the best of things.

Whoever may have enjoyed or profited by the County Member's hospitality that afternoon, Mrs Fairfield was not among them. Though the sun shone, the band played, and her friends greeted her, she was a prey to the distressing sense that her well-laid schemes were going agley. The Squire had scored off her—secured the first point in the game they were playing together. Almost she could have found it in her heart to be cross with her favourite Ruth. Why had not the little goose made the most of her opportunities, to improve the impression she had made on Edwin years before? Could it be that that impression had not proved indelible? Youth's memory is short, alas! and youth is apt to be fickle. But for the Squire to exult over her—as, of course, he would—that was insult added to injury!

Yet all this time the good lady was distressing herself quite needlessly. Edwin met the carriage at the door on its return. 'I hope you had a pleasant afternoon, mum?' said he, with polite conventionality.

'Nothing at all out of the way, I can assure you—the temperance speaker was interminable. I hope you fared better, Edwin?' As she spoke, she looked at him keenly.

His clear eyes did not avoid her glance. 'I spent most of the afternoon in the boat, mother.'

'Ha! does Miss Durell like boating?'

'I don't know. I'm afraid I didn't ask her.'

Then he had been alone! Mrs Fairfield's countenance fell, as do the countenances of those who have harboured unjust suspicions. Nor throughout dinner did she once detect the faintest sign of an understanding between the two young people. Was it, then, possible that their remaining at home had been a mere coincidence—not prearranged at all? She felt relieved, though still puzzled. And even the Squire's jubilancy (visible to her, if to none else) sustained a check when Edwin spent the evening leaning over the piano, at which Ruth was warbling ballads.

'Honours easy, I fancy,' remarked Mr Fairfield, significantly, to his wife as they were preparing to retire.

She thought the same. But she said nothing in reply, for it jarred her to hear a subject so closely connected with her Edwin's happiness spoken of in that light tone.

Selma Durell was not an early riser. She generally came down admirably arrayed, but very late for breakfast. Edwin, too, developed the habit of matutinal lateness. They had to get up very early at the *estancia*, and he seemed

bent upon profiting by his holiday to indulge morning dreams. His fond mother was far from disapproving of this. But it was a little provoking that well-disciplined Ruth Davenport was always down to the minute, to pour out the Squire's coffee. This gave her day the start of Edwin's, and threw their respective time-tables out of harmony. For by the time when Edwin was ready to smoke his first pipe in the sunny veranda, Ruth was already immersed in her practising. So it fell naturally to Selma to bear him company. To the Squiress's annoyance, this happened upon five successive days. But on the sixth day, happening to look into the drawing-room, which at that hour was given up to Ruth, she saw Edwin bending over the piano. Selma had the veranda to herself. Mrs Fairfield's spirits rose. If only Edwin had not been musical! But he was; he sang a little. So the good lady could not quite make up her mind whether it was the music or the girl that had won him from his tobacco.

During the next few days, whilst ostensibly going about her household duties, Joan Fairfield took frequent occasion to pass by the drawing-room. On the second or third morning, it was Edwin, not Ruth, who was singing—actually Edwin, who was always so difficult to persuade. At the end of a verse he broke off, and she fancied she could hear Ruth commending his performance, whilst gently suggesting one or two improvements. 'Come now, that is better!' exclaimed the fond mother. But she must not play the eavesdropper. At the end of the passage she ran into the Squire.

'Do you know where Ned is?' he asked.

'Yes, Squire, I do; he is in the drawing-room with Ruth, playing and singing.' Then she added, 'Do not disturb them just now—he would not like it;' and in a meaning under-voice, 'I think she is teaching him a new song.'

The Squire looked positively blank. 'And where is Selma?' he inquired presently.

'How should I know?'

Yet the pendulum was to swing once more. Happening, next morning, to pass the dining-room a full hour after his own breakfast, Mr Fairfield's ear caught the clatter of porcelain and silver, and he looked in. Selma, attired in a ravishing summer gown, was seated at the table, delicately detaching the stalks from a plateful of ripe strawberries, whilst Edwin watched her with a serious interest befitting the occasion.

'*Bon appétit!*' cried the little man at the door, with an atrocious accent.

Selma looked up from her task. It was one of her charms that she never made an abrupt movement, nor ever did anything in a hurry. 'I hope your remark is addressed to Edwin and not to me, Squire,' she answered graciously; 'I am about to initiate him into the delights of strawberries-and-cream made with cayenne-pepper.'

Mr Fairfield would have liked to linger and have some too; but an even stronger attraction drew him in another direction. Making an excuse to visit his wife's boudoir, he remarked, as if quite casually, 'The boy and girl seem to be hitting it off nicely.'

'Which girl do you mean—Ruth?'

'Selma! I have just found her compounding a strawberry-mash for Edwin, after a recipe of her own.' And, unable to contain himself longer, John Fairfield burst out into a 'Ho, ho, ho!' laughing his tiresome, and, as his wife at that moment thought, almost offensive, laugh; for her warmest feelings were deeply engaged.

Possibly she was unduly impatient, for a new anxiety had begun to take possession of her. It was lest the brief time at her son's disposal should slip by without his reaching a decision. And that would be almost worse than his pairing off with the wrong girl. That he should have appealed to her to find him a wife, and that she should have failed to do so, would be, she felt, such a reflection upon her character as a mother! Yet, all the while, it never occurred to her that she and her husband were doing their best to make the thing they both desired impossible. For, in the first place, it was bad enough that the young man should be confronted by contrasting types of charm and beauty, each of whom was hourly neutralising the impression made by the other. But that was by no means all; for, by insensible degrees, the Squire and his wife had alike departed from the early rigour of their compact of non-intervention. So that Edwin's native indecision was being hourly rendered more undecided, and his confusion worse confounded, by little acts of interference on the part of one of his parents.

For example, not without a certain sense of poaching, Mrs Fairfield had one afternoon carried off her son to her boudoir, in order to have him to herself for a while; for, alas! the times were past, as she felt, when she could regard him as her very own to do what she liked with. 'My dear boy,' said she, fervently, the very moment he was seated—'my dear boy, I should so like to see you settled.'

He understood instantly. There was no failure on his part to grasp—no pretence of not grasping—the precise sense in which she had used that somewhat elastic word. This, by the way, would not always have been so, and, of itself, it showed in which direction his thoughts were running. He sighed, ever so slightly. 'Well, mother,' he replied, 'we are at one there; I wish I were—settled.'

Like a greyhound pursuing a hare, sprang Mrs Fairfield in pursuit of her opportunity. 'But, my dear boy,' she exclaimed, with emphasis, 'you might so easily be "settled." It rests with yourself.'

But now it seemed as though all Edwin's momentary acumen fell away. 'How so?' he asked, heavily, almost blankly.

'How so? Why, surely you know that?' and all the difference of their respective sexes gleamed in her countenance as she spoke. Even Edwin, slow in the uptake as he was, could not fail to catch her meaning.

At that precise moment, a few notes of song, almost bird-like in their clearness, became audible, and the neat figure of Ruth passed before the window on its way along the veranda. She carried a basket in one hand and a pair of secateurs in the other, and was bent on cutting grapes or flowers for the dinner-table, a light duty this with which her hostess had charged her. She did not so much as glance into the room as she passed by.

With the lightness of a girl of seventeen, Mrs Fairfield sprang to her feet, her son following suit with less of *empressement*. 'There—there is your chance!' exclaimed the enthusiastic matron, and, opening the French window, she pushed Edwin in the direction Ruth had taken.

He went, as through life he would be likely to go, where a loved feminine hand impelled. But his step, as his mother watched him, was hardly that of one who goes to pour forth a lover's tale. This was well; for Selma, in garden-gloves, was awaiting Ruth near the vinery door; and thus the intended *tête-à-tête* developed into a party *à trois*.

(*Continued on page 120.*)

THE AUTHORISED VERSION, AND OTHERS.

SIX years ago we celebrated in this country the three hundredth anniversary of the publication of the book which, by common consent, enjoys the largest circulation in the world. It was in the year 1611 that there was published in London, by one Robert Barker, *The Holy Bible, newly Translated out of the Original Tongues, and with former Translations diligently compared and revised by his Maiestie's speciall commandment.*

There are some circumstances connected with this publication which may be reckoned in the category of things not generally known. For one thing, there is not, and never has been, any official warrant for the description 'Authorised Version' habitually attached to this translation of the Holy Scriptures. 'Appointed to be Read in Churches' means simply how the Scriptures were pointed out for public reading. The Puritans and Presbyterians required no such 'appointment;' hence in many editions it is omitted.

When this standard folio Bible was printed in 1611 there were two separate issues set in type in two different printing-houses, both of which were regarded as standard, despite occasional variations in readings. All subsequent editions, in quarto and octavo, in roman or black letter, run in pairs, and each follows the faults of its own office copy or parent. There are many of these minor faults or variations; but the distinctive one occurs in Ruth iii. 15. According to one reading, 'He measured six measures of barley, and laid it on her, and Hee went into the city.' The other version has it, 'She went into the city.' Hence the two versions are known to bibliophiles as the 'Great He Bible' and the 'Great She Bible.' In the long-run the feminine has triumphed, as she generally does, and the 'She' reading is adopted in all modern editions.

Glaring errors in printing, and quaint eccentricities in translation have constituted the special value to collectors of several early editions of our Bible. The most unfortunate case was that of an octavo Bible, published by John Barker in 1631, which, by the omission of the negative in the seventh commandment, earned for itself the title of the 'Wicked Bible.'

Lapses of this kind were serious matters for printers in Star Chamber days. Archbishop Laud caused the whole issue to be destroyed, and imposed a fine of three hundred pounds upon the printer, which money the archbishop judiciously expended in the purchase of a fount of Greek type for the University of Oxford.

The few copies of the 'Wicked Bible' which escaped the fire acquired a very inflated value. Only four copies are now known to exist, and as these are all in public libraries, they will never again offer temptation to the bibliomaniac. It is curious that ours was not the only 'Wicked Bible,' an edition having once been printed in Germany with the same extraordinary omission.

The 'Breeches Bible,' which is still to be met with in dealers' catalogues, was the outcome of the labours of some Protestant refugees in Geneva, who fled from Queen Mary's persecution. They translated, somewhat quaintly, the holy writings from the 'Ebrue and Greke,' and their statement that Adam and Eve 'sewed fig-leaves and made themselves breeches' earned for their edition its distinctive title. Although the 'Breeches Bible' was never sanctioned for public use in churches, it was, because of its racy notes, the household English Bible for nearly a century after its publication.

The 'Bug Bible' took its name from the reading, 'Thou shalt not be afraid for any bugges by night.' Let it be understood that the word, unpleasant in its associations to modern ears, is quite good Old English, bug or bugbear or 'bogey' signifying an imaginary monster held in terror over naughty children.

A Bible published by J. Baskett at Oxford in 1711 is also reckoned among the books which are valued by collectors for their faults. It is a sumptuous volume in imperial folio, a very beautiful example of typography; but its misreadings are so numerous that it was described soon after its publication as 'a Baskett full of printers' errors.' The heading of Luke, chapter xxii., 'The Parable of the Vinegar,' instead of 'the Vineyard,' gives it its title of the 'Vinegar Bible.'

Before our standard version appeared various translations of the Bible or part of it had, from time to time, seen the light. The first entire edition to be printed in English was Miles Coverdale's translation, 'out of Douche [i.e. German] and Latyn into Englishe.' This was printed somewhere on the Continent about 1535. A second edition, published two years later, is admittedly the first English Bible actually printed in England.

In the same year, however, there was published by two London citizens, Richard Grafton and Edward Whitchurch, an edition, announced as by Thomas Matthews, the real compiler being John Rogers, the first of the Protestant martyrs who suffered under Queen Mary.

Of these earlier versions, the most important was the 'Great Bible,' the first edition of which in folio was published in 1539, the latter part having been printed by Grafton and Whitchurch. This was produced under the authority of Thomas Cromwell, who had licensed Coverdale to revise a new edition on the basis of Matthews's edition. Holbein designed the title-page for this book, which was partly printed in France; but the progress of the work having been forbidden there, it was completed in England. Archbishop Cranmer contributed a preface to the second edition, and no fewer than seven impressions were called for in the space of two years. By royal proclamation its price was fixed at ten shillings unbound, and public copies were attached by chains to the pillars of the churches, with the king's injunction that the book be read with 'Discretion, Honest Intent, Charity, Reverence, and Quiet Behaviour.'

Although neither Caxton nor other of our own early printers included any part of the Holy Scriptures among their productions, it is a noteworthy fact that the Bible was the first printed book in the world, being, moreover, the masterpiece of the illustrious inventor of the art of printing. Johann Gensfleisch von Sulzebach, surnamed Zum Gutenberg, having associated himself with Johann Füst of Mentz, produced with his assistance, in 1450-55 (the book is undated), the famous folio Latin Bible commonly known as the Mazarin Bible, the first copy having been discovered in the library of Cardinal Mazarin. The expense of this production was so great that Gutenberg was unable to repay his partner the money that he had advanced, and was obliged to resign to him the whole of his printing establishment and plant, with which Füst, in partnership with Peter Schœffer, printed the equally famous Mentz Psalter in 1457. By the testimony of auction prices these are the two most valuable books in the world. At the Perkins sale in 1873 the late Mr Huth gave two thousand six hundred and ninety pounds for a copy of the Mazarin Bible. This figure held the record until the Syston Park sale, eleven years later, when another copy fetched three thousand nine hundred pounds; but this was exceeded by a copy of the Mentz Psalter, which at the same sale was acquired at the enormous price of four thousand nine hundred and fifty pounds, so far the largest sum ever paid for a single book.

PAUL.

By Dunbar Waterson.

I MET Paul first in the reserve line. He lay with nose on paws, staring into the stagnant waters of a canal long since given over to the horrors of war. No barge moved over its quiet surface; no panting motor-boat passed with drawling Yankee tourists; the locks were green with the slime of inertia, and rusty from neglect. The flimsy, hastily built wooden bridges crossed from bank to bank. Here and there a jumble of planks and barrels proclaimed the fall of earlier work, and great shell-holes in the banks the reason of their destruction. And Paul seemed to see it knowingly.

Stooping, I patted his great head and watched his stiff stump of tail wag lazily in appreciation, whilst his eyes flashed suddenly on me. I wondered if I had taken a great liberty, and thought my khaki bespoke friendship in his eyes. His keeper said, 'He canna' stand Belgiums nor Froggies. Anybody in khaki 's aal reeght, though. Niver seen a dog like 'im for fightin'. Niver mind what size! Owt on fower legs! Horses, mules, men, dogs, hens, kids, goats; he 's fear'd o' nowt. Aalways on his chain. Strong as a bull he is. He 's an Airedale, one o' Major Richardson's dogs. War-dogs. Wor company won him for good shuttin'.'

Paul was a dog to inspire immediate respect. For an Airedale he was immense. His huge bulk was solid muscle. Although a latent ferocity sat on his countenance, one never had any fear in making advances. His antipathy to foreigners was characteristic of him. Otherwise, towards men, he was genially responsive. His

eyes were large and brown and human, and 'Tommy' often swore that he listened understandingly to talk; but I doubt if this be true. The men of his battalion were from the north, and had that unforgettable accent—the strongly voiced, rugged, north-country pit accent. It was the accent he knew best. Remember, he was trained, perhaps born and bred, in the sturdy north. I have seen an Essex fail to win his immediate respect, simply because of his effeminate, sing-song speech. A pitman need but say, 'Hoo 's the' gan on, son?' and Paul was wagging his stump on the first word.

Though a general favourite, Paul's defect as a war-dog was soon known. Even as I admired him, came the long-drawn drone of a shell. Its sudden rise in pitch, from a low vibration to a vicious screaming and hissing, warned us of its near approach. It was for us. As men, we dived for cover, to emerge unruffled as soon as the nerve-racking explosion was over. As a dog, Paul failed to interpret the signs of the times, and was still lying in the sun when the burst came. Like lightning he was up, and cowering in the corner of a dug-out. His keeper expressed his disgust in a long, throaty sound, and turning to me, said, 'Paul 's a fine dog, sir; but he 's ne good. Suffers fro' shell-shock. Shell-shy, that 's what he is. If a whiz-bang gans off within a mile on 'im, he gits the wind up. What he 's t' be used for we divn't knaa. Good mascot, that 's aal he is. An' we sometimes see him scrappin'.'

This last virtue of the shell-shy dog appeared to compensate amply for his shortcoming.

Paul lives eternally at the end of a strong, heavy chain. Let him loose, and in a few seconds he has sensed the nearest animal. If that animal be a dog, Paul will fight him to a standstill; if a goat, he 'll tear it limb from limb; if a cow, he 'll torment it to a frenzy. Twice since I 've known him Paul has broken loose. He made straight as a dart for a huge, pot-bellied dog, and inside of two minutes had killed him. The Blankshires were furious, for he had destroyed their mascot. I think Paul will remember until his dying day the severe drubbing he got from his keeper. His second break followed the first by an hour. He soon found the carcass of his victim, and began to 'rive it t' bits,' as the north-countryman put it.

I could never reconcile his bitter enmity towards his own kind (and, indeed, towards most four-footed animals) with his deep affection for soldiers. Let his drubbing be ever so severe, his eye would look up pathetically at the wielder of the stick, as though to crave sympathy as well as blows. Within a few minutes Paul would be his old self. He never played, or showed marked emotion, but usually bore himself with dignity, as became a dog afraid of nothing on earth but the roar of a great explosion.

On the march I had unique chances of observing Paul, for I was invariably in the front four of platoons. Paul and the dogman walked ahead of me. Of the two, I believe the dogman was the more interesting. Perhaps I may be allowed to speak more of him at another time. Suffice it that between the two of them I was hugely entertained on the road, and enjoyed many a hearty laugh at their spasmodic differences. Paul would strain strongly at his heavy chain, jerking the dogman out of his step. Down would come the knobkerrie with a nasty thud. Paul would half-close his eyes, wink them rapidly a dozen times, crouch a little, then carry on as usual. Dogman would accompany his blow with his throaty disapproval (of which more anon), and say, 'D' ye want to pull my arm oot?' often followed by the merriest and most odd string of curses imaginable. And when I laughed at his peculiar oaths, he would turn half-sideways and smile apologetically, seeing slight humour in it, and say, 'He 's an awful beast to race ahead. Wants t' bite the captin's horse.'

Being interested in words, I tried to come to some philological conclusion on the throaty disapproval of the dogman. To convey any impression of its sound, I must perform a sort of gradual dismembering of what I take the sound to mean, and reduce it, like the schoolboy his fraction, to its lowest terms. It means, I believe, 'Get away,' and might be reduced thus: 'Get away, ge' away, ge' a'ay, ge' a'a', 'e' a'a'.' A sort of retaining of vowel-sounds. Say this steadily and continuously with a strong, deep vibration in your throat, and a powerful anger in your heart, and you may come to it.

Paul never spoke. He often gave vent to a shrill, scarcely audible whine, like a gale through thin wires, expressive, as a rule, of infinite boredom and a desire for change or movement. Passing along the sun-ridden, dusty Flemish roads, he never replied to the dogs that yelped their greetings or hate, but simply made a whirlwind rush for his enemy. Then the dogman would wield tongue and stick, and often heavily booted foot, and reduce Paul to a more pacific condition.

He hated particularly the Belgian dogcarts. To see his own kind between the shafts of a tiny vehicle, pulling some large, fleshy Belgian along, used to rouse in him an almost ungovernable fury. The dogman had his work set out, and the front four would join in the battle. The sergeant's foot would catch him in the ribs, and Paul's great clashing jaws would meet as he snapped aside momentarily at the unexpected blow. The corporal's rifle-butt would land on his brown, shapely head with a horrid thud. The keeper's knobkerrie thwacked here and there and everywhere. His nimble tongue reeled off insults, and his throaty growl punctuated what his angry voice uttered. And the weight of the platoon tramping behind, the long vista of dusty

boots implacably bearing down upon him, carried him along, still straining magnificently to achieve his end. In the meanwhile his yapping enemies had gone, and the Airedale, singularly silent during the whole affair, would resignedly trot ahead, tongue lolling and twitching, breath coming in husky jerks, with a hoarse, wheezy whistle in his throat. The dogman, after a few admonitory tugs, would glance rearwards, correct his step and pace, and jog along until the next passing dog called forth his powers of control.

The dog was a company possession, and each man had theoretically his share. In private life the dogman was a fancier, and he had the animal's true affection. If love means ownership, then Paul belonged to the dogman, as events plainly proved. When the dogman objected to being sent on working-parties, Paul was given over to an old man named Sims, and Ben went to the ranks. Paul appeared on parade, and for the first and last time I heard him speak. Sims held him back with both hands. With his forelegs in the air, Paul strained and tugged, and barked furiously, trying to reach Ben in the ranks. The marching that day was damnable. Paul was too much for the old man, who was already burdened with the weight of a hot sun and a full pack. The roads were bad and the dog unmanageable. Sims mopped his aching head with a red 'hanky' in his quieter moments, whilst Paul retarded progress, and broke the front of the platoon time and again. Cries for Ben arose. He took Paul over, and from then onwards was excused working-parties and certain parades.

He often beat Paul, and in his blunt way made me see that to conquer the dog by sheer physical strength was task enough for the heftiest of men. That he loved the dog I shall always believe. I remember the awfullest of days when men cursed and swore, and made me uncomfortable by the extent of their grousings. The day was tropical, and we were in our heaviest uniforms, tramping with packs along mud roads. The dust arose in choking clouds. We perspired copiously. Our heavy steel helmets weighed on us like the sins of the world. The men were blasphemous and mutinous. I cursed their cursing, but trudged along again in a semi-stupor.

'*Halt!* Fall out on the right of the road!' Men sank into the long, luscious grass, and continued cursing the pitiless sun. Their water-bottles were long since empty, and it was impossible to procure more. Belgians object to men draining pumps, and it is an easy matter to remove a pump-handle.

Paul, dusty and miserable, made frantic efforts to find liquid mud in the dry, grass-choked ditch. He grovelled low down, and thrust his nose into the roots in search of damp and coolness. The dogman, equally thirsty and weary, had kept his bottle full. He removed the cork and poured a little into his palm. Paul licked eagerly. Then Ben deliberately poured the remainder over the animal's head. The dog lapped noisily as it trickled amongst the hair round his mouth. In answer to my interested look, Ben said, 'Best thing for a dog on a hot day, sir—water on 'is heed.'

Paul lay quiet and content.

He always accompanies us into the trenches. The time came when Ben was amongst those left behind. He lay under a little wooden cross, beside others, in a neglected field behind the line. For many days Paul was very uneasy, and gave infinite trouble. Ben had been away before, and had returned. Paul knew this. He would gaze in all directions, listening for the step that came not, and for the voice he knew. Men said, 'He's wantin' Ben;' and my corporal, 'It 'd be a kindness to shutt that dog.'

Did he know that Ben was gone from him for ever?

A gradual change came over him. Dogs yapped at him, but beyond his quick, instinctive turn of the head, he gave no sign that he heard or cared. His fighting propensity died. He trotted along with drooping head, the picture of dejection. Boys and girls pointed him out to each other, and ran alongside to admire him; but them he never heeded. I watched the change creeping upon him, and a great pity for the lonely brute came on me. Long I tried for his esteem and love, but failed. Perhaps he was too sorely smitten, or it may be I was the wrong man. He wanted the ruddy-cheeked, rough-tongued, stick-swinging Ben. My heart often ached for him. He took all the kindly advances of the men in moody resignation.

He still trots ahead along with my platoon. The old man Sims leads him like a lamb. In his poor dumb way he tells me that his spirit is in sorrow, and in his heart is a great desolation.

THE METAL OF THE FUTURE.

WHEN first exhibited at the Paris Exhibition of 1855, aluminium was regarded as a mere chemical curiosity, 'silver made from clay,' as it was popularly termed. When, however, severe tests demonstrated its superiority over other metals wherever lightness is synonymous with economy, the methods of manufacture were continually improved, until, in 1914, the price had fallen from fifty-six pounds per pound to about three pounds per hundredweight. The characteristics of the now well-known, shining, tin-white metal are such as to render it increas-

ingly useful in all branches of the arts and sciences. It is not brittle like glass or porcelain, or poisonous like copper; it needs no enamel, does not rust, and, bulk for bulk, weighs but a fraction of other metals. These properties render it of the utmost value in aviation, in electrical engineering, in science, and in the home.

Aluminium is an essential constituent of all clays, felspars, and granites. It occurs also in cryolite and bauxite, and in many precious stones. It is thus one of the commonest and most widely distributed of elements. Practically the only source, however, is bauxite, a more or less impure oxide. The manufacture of aluminium divides itself into two stages—first, the purification of the bauxite; and, secondly, its electrolysis in a bath of fused cryolite. The purification of the raw material is a costly and laborious process, to which is very largely due the comparatively high cost of the metal. The electrical smelting in Héroult or similar tilting-furnaces is now carried on very cheaply by the utilisation of water-power. Pure aluminium is in large demand as a base for heat-resisting paints, for cooking-utensils, and for ornamental fittings. Aluminium wire is favoured for long-distance electrical transmission, since for a given conductivity it is not so heavy as copper wire. Thermite, a mixture of aluminium powder and certain metallic oxides, is used in welding, and now finds a place in the manufacture of incendiary bombs, since, by its combustion, temperatures as high as six thousand degrees Fahrenheit are easily obtained. In metallurgy aluminium is used for promoting soundness in steel ingots, and in the production of chromium and similar metals in a carbon-free state. The pure metal is now being to a large extent replaced by certain of its alloys, the addition of only a small percentage of various metals, notably magnesium, producing a disproportionate increase in the tensile strength and resistance to corrosion. Magnalium is very extensively used in aeroplane, torpedo-boat, and submarine fittings. Aluminium bronze, containing only about 5 per cent. of aluminium, ranks in strength with cast-steel, and is hard, light, and elastic. Aluminium and its alloys can only be soldered with difficulty, but may be welded by autogenous soldering.

As has been indicated, the most serious obstacle to the cheap manufacture of aluminium is the preliminary purification of the native bauxite. A new method, which promises to oust all others, has been devised by Dr Serpek. By this method, which is in use at the works of the Société Général des Nitrures in Savoy, the recovery of a most valuable by-product is made to pay very nearly the whole cost of purification. Natural bauxite is heated in the electric furnace with small coal or coke. Over the mass a slow current of nitrogen passes, resulting in the formation of aluminium nitride. The latter is then treated either with water under pressure or superheated steam, yielding pure alumina and giving off ammonia-gas, which is absorbed in sulphuric acid. The sulphate of ammonia thus made is about twenty-five tons per twenty tons of alumina, reducing the cost of purification from fifteen pounds to two pounds per ton. Incidentally, this is by far the cheapest method of 'fixing' atmospheric nitrogen, the cost for current being only one-half that of the 'nitrolime' process and a fifth that of the arc process. Serpek's method constitutes a most important advance in the manufacture of aluminium. But as yet no economical and practical process has been devised for the extraction of aluminium from clay. Boundless possibilities lie before the research metallurgist in this direction. Such a discovery once made, the manufacture of aluminium will proceed on a scale commensurate with the steel industry; and while, of course, it cannot hope to oust iron as the most useful metal, aluminium will become a serious rival to it.

TO MY MOTHER.

When you were once a little girl,
  And came downstairs at eight,
I wonder if you liked to see
  Just porridge on your plate;
I wonder if your nurse had toast,
  And marmalade as well,
And bacon—curly, crisp, and hot—
  While you got just the smell!
I wonder if you thought it fun
When she ate all and left you none?

When you were standing on the swing
  And flying through the air,
And some one called, 'Be quick! come down!
  Your grandmamma is there!'
I wonder if you ever gave
  A weeny, teeny sigh
To think you had to go inside
  Just when you'd got so high;
Or did you really never mind
To have to leave the swing behind?

When you were just about to eat
  Some bread and jam at tea,
And some one said, 'Run off at once,
  What dirty hands I see!'
I wonder if you wished that soap
  Could cost at least a pound,
Then every one would only wash
  Just once the whole year round;
Or did you quick as lightning fly
To wash your hands and wipe them dry?

When you were playing at a game
  Of robbers on the stairs,
And some one hiding by the clock
  Had caught you unawares,
I wonder if you liked to hear
  Your nurse say, 'Come to bed;
Or if you thought how nice 'twould be
  If she could go instead;
Or were you always good as gold,
And only did what you were told?

'NEW' HEROINES—AND OLD.

By GERTRUDE MOUNT, Author of *St Martin's Summer*, &c.

IN a recent contemporary there was an article dealing with the new kind of books we shall read after the war, and one eminent authority was quoted as prophesying that our future literature will be less realistic in character, more ideal and imaginatively beautiful.

On looking over some of the novels written immediately before the war, the immense difference between then and now is brought home to us with startling vividness. There was in them a constant straining after the unusual in plot, setting, and character. The *bizarre*, the fantastic, the frankly disagreeable, were seized upon by the jaded novel-reader as something new, and therefore desirable; but the pages once turned, the book joined the huge pile of its predecessors, the impression faded, and the quest for another began. Once more the strings were pulled, and the puppets danced in ever-varying combinations.

As a character in one of the most arresting ante-war novels said, 'What difference does it all make? We all dance to the same music;' and that music was the lightest.

Then what streams of talk went on inside the books and out of them; talk on all great subjects—religion, art, democratic and social ideals—vague, disturbing, yet leading to nothing!

There was a popular chorus in those distant days which young people were fond of singing as they rushed from one pleasure to another—from tea-party to tango, from 'Boston' to 'Ragtime'—'Everything, everything ends in smoke!' And what a smoke all that has ended in! The music suddenly stopped, the puppets were swept away into the box, as men and women came face to face with real primitive things—bloodshed, death, heart-break, beggary.

Then came a quick outflow of simple human documents: letters from the Front—stories of pathos and pain; verses, fresh and sad as field-flowers crushed by guns; poems like the haunting minors in martial music; all the chords of human emotion have been struck again and again, and are echoing through our land still.

We have had war-books by the score; policy, tactics, commerce—our own and our enemies'—are still being discussed with fiery zeal and earnestness, for difficult problems confront us, to be dealt with by the fit and few.

But for those larger visions of the new life after the war, those dear human histories of love and suffering, defeat and triumph—'finely touched to fine issues'—which known and unknown novelists will reveal of the fresh depths and heights and ranges of mortal experience—for these we must still wait and hope. We know they will come one day, and we know that, as a natural sequence, we shall have a new sort of heroine.

Gone into the limbo of dead and forgotten things will be the 'smart woman,' the professional beauty, the society siren, the shrieking sister—all those fleeting and tawdry types which danced and glittered and stormed through the pages of a thousand novels in the past. There was the woman who was *called* 'new' nearly a generation ago, but she was only learning new customs and doubtfully venturing into new ways. It is only now, after a long and laborious growth, and having cast off petty trammels of custom and caste, that she has emerged, a serene and capable figure, with a heart for any fate, and a hand for every load, to show us in this hour of stress 'how divine a thing a woman may be made.'

Three names in the past stand out pre-eminent amongst our female novelists. Jane Austen, Charlotte Brontë, and George Eliot, and their heroines—offspring of each author's individuality, as of her age and social environment—differ not more from each other than will the new type of heroine from all three.

We have travelled a long way from the Elizabeths and Emmas, who wore 'peaked sarsenet caps' at assemblies, cried 'Oh la!' and swooned on emergencies. Nevertheless, they had a limited good sense of their own, though philanthropy and social problems never touched them; while their wit, 'archness,' and good looks furnished them with a charm like lavender, wherein they lie enshrined to this day.

The Jane Eyres and the Shirleys, the Maggies and the Dorotheas, take themselves more seriously; they are the intense and passionate young women of a later and more complex day. Charlotte Brontë from her desolate moorland parsonage was voicing the cry for freedom—for a right to live and speak and act according to the light within her.

 [*All Rights Reserved.*]

Shirley is throughout an impassioned protest against conventionalism and ignorant prejudice, a plea for education and emancipation for the starved lives of countless unregarded women. Of the two heroines in the book, gentle Caroline Helstone stands out, to my mind, as the more natural and convincing type. She has such invaluable common-sense, which connects her, as by a living string, with the practical maidens of to-day. All through her sad little love-story —and it was very pathetic until the 'happy ending' came—she bears herself bravely and with true dignity. No one ever sees or hears her tears and longings; she does not go about making moan over her spoilt life, crying out that all is failure and vanity, like many more modern heroines who have double and treble her advantages. But she moves quietly through her village ways, doing her daily tasks and her best for everybody, only puzzling over the pathos and failure of many women's lives (not her own in particular), and wondering if somehow, or some day, there could not be a wiser and better outcome of it all. But then 'Caroline was a sincere Christian,' we are told, and, like the practical girl she was, took her faith into her daily life, and honestly tried to live by it.

Many later heroines have thought themselves too 'advanced' for such old-fashioned ideas, and have lost themselves groping in the mazes of strange 'cults' and vague unsatisfying 'new' religions. Perhaps these too will pass with the war! But I love to think of the enthusiasm with which Charlotte Brontë would have greeted the higher mental and physical training and the wonderful opportunities granted to the women of recent days, who, endowed with her dainty Caroline's loving heart and sane mind, may leave a record of honourable effort and achievement of which their strong-souled pioneer would be proud.

George Eliot has given us some interesting portraits of women; but Maggie Tulliver, dear and charming as she is, does not get beyond her emotional crisis; the discords were never resolved into harmony, and she dies, as we feel, 'with all her music in her.'

Dorothea Brooke in *Middlemarch* may be taken as a more representative specimen of her time and class; but she is touched with the introspective spirit of her day, and strikes an uncertain note. As her creator puts it, she 'sobs after an unattained goodness,' and leaves us rather sad and hardly wiser. Indeed, some irreverent male critic might well wonder what all the pother of emotion was about, and cast a backward glance of longing for the light hearts and smiling eyes of Miss Austen's generation.

Mr E. V. Lucas has said in one of his delightful books that the real emancipation of women came when she mounted the bicycle and rode away on it! Certainly she rode into the fresh air, which was so desirable a thing for herself and the world in general!

Many cobwebs have been cleared away since then, and from that memorable date a new note of gladness may be recognised in the record of woman's experience. We have less morbid self-analysis, fewer outpourings from the superfluous women. Many of them have found their work, and the blessedness that comes from doing it. Some, it may be, made a little too much fuss over this 'work,' and so drew down vials of masculine scorn; but that phase too has passed.

Evolution is a slow process; and for many a long day in quiet backwaters, far from the flood of town and city life, there lingered innumerable enforced idlers, longing to be swept into the busy human tide, but condemned, as it seemed, through circumstance and lack of opportunity, to a stagnation they abhorred. But if we think for a moment of any girl of to-day dwelling in the sleepiest village of England, and compare her lot with that of one even a quarter of a century ago, we see the pace at which we have moved. The alert, often khaki-clad figure, in short skirt and practical boots, with her day filled up by depot, canteen, or hospital work, would have caused her grandmother's pencilled eyebrows to lift in amazement. The trumpet-call of war has summoned our women, as our men, throughout the length and breadth of the land. Gladly they have offered time, service, blood—even life itself; and according to a recent confession of one of them, 'Never have the days been so full and happy—never has life been so interesting before!'

Sad that *war* was needed to set free such a tide of energy; yet sadder still if war had found our women useless mourners in empty homes instead of the toilers they are—working with men and for men, linked together by love of kindred and country—yes, by love of right, justice, and freedom *everywhere*, in a union cemented by blood and tears that time can never break.

Now, if ever, woman has

> Made herself her own,
> To give or keep, to live and learn and be.

And when the agony of this strife is over, and much of the past in ruins, it may be that we shall realise the poet's dream in those old melodious days, that man and woman, 'these twain, upon the skirts of Time,'

> Sit side by side full-summ'd in all their powers. . . .
> Then comes the statelier Eden back to men; . . .
> Then springs the crowning race of human-kind.

THE DEFINITE OBJECT.

CHAPTER IX.—WHICH RECOUNTS THE END OF AN EPISODE.

MIDWAY down he beheld two burly policemen, who mounted one behind the other, their gray helmets, blue coats, and silver buttons seeming to fill the narrow stairway.

'Anything wrong?' he inquired as they drew level.

'Not wid you dis time, bo',' answered one, blandly contemptuous, and strode on up the stair, twirling his club in practised hand, his fellow-officer at his heels.

Thus rebuked, Mr Ravenslee looked after them with quick-drawn brows, until, remembering his broken hat-brim and shabby clothes, he smiled and went upon his way. Reaching the dingy lower hall, he beheld the solitary gas-jet aflare, whose feeble light showed five lounging forms, rough fellows, who talked together in hoarse murmurs and with heads close together.

He was passing by, when, in one of these deep-throated talkers, he recognised the long limbs and wide, sloping shoulders of the Spider. Mr Ravenslee paused, and nodded. 'Good-evening,' said he, but this time kept his hands in his pockets.

The Spider eyed him somewhat askance, shifted his wad of chewing-gum from one cheek to the other, and spoke. ''Lo!' said he.

'Do you know where Spike is?'

'S'pose I do—then what?' demanded the Spider, with a truculent lurch of his wide shoulders.

'Then I shall ask you to tell me where I can find him—or, better still, you might show me.'

'Oh, might I?'

'You might.'

Now here, the feelings of the Spider waxing beyond mere words, he looked at the speaker, viewed him up and down with a glance of contemptuous hostility, whereat Ravenslee's whole expression melted into one of lamb-like meekness.

'Say,' quoth the Spider at last, 'there's only one thing as I can't stand about you, an' that's—everything!'

'Sorry for that,' murmured Ravenslee, 'because I rather like you, Spider. I think you could be quite a decent fellow if you tried very hard. Come, shake your grouch and let's be friends.'

'Say,' growled the Spider, 'what you're sufferin' from's a hard neck. You ain't no friend o' mine, not much you ain't—savvy? So crank up an' get on yer way like a good little feller.'

'But, you see, I'm anxious to find Spike, because'——

'Well, say, you keep on bein' anxious, only do it somewhere else; I don't want youse around where I am—see? So beat it while de goin''s good.'

'Why—er—no,' said Ravenslee in his laziest tones—'no, I don't think I'll beat it. I guess I'll stay right here and wait until you are so kind, so—er—very kind and obliging, as to show me where I can find Spike.' And he sighed plaintively as he lounged against the wall behind, but his eyes were surprisingly bright and quick beneath the shadow of the battered hat.

'Hully chee!' exclaimed the Spider, expectorating contemptuously; 'hark to the flossy-boy, fellers!—Aw, run away now,' said he, scowling suddenly; 'run away before ye get slapped on th' wrist.' And, while divers of his companions laughed hoarsely, he turned a contemptuous back on Mr Ravenslee; but even then he was seized in iron fingers that clutched his shoulder, and in that painful grip was jerked suddenly round again, to behold a face, vicious-eyed, thin-lipped, square-jawed, fiercely out-thrust; and, recognising the 'fighting-face,' the Spider, being a fighter of a large and varied experience, immediately 'covered up,' and fell into that famous crouch of his that had proved the undoing of so many doughty fighters ere now. Then, like a flash, his long arm shot out; but, in that same instant, Ravenslee, timing the blow to a fraction, moved slightly, and the Spider's knuckles bruised themselves against the wall at the precise moment that Ravenslee's open hand flipped lightly on the side of the Spider's square, lean jaw.

The Spider drew back, staring from Ravenslee's tall, alert figure to his broken knuckles and back again, while his companions stood by in mute and wide-eyed wonder.

'Spider,' said Ravenslee, shaking his head in grave reproof, 'you were rather slow that time; very foolish to leave your point uncovered, and offer me your jaw like that, you know.'

Five pairs of eyes stared at the speaker with a new and sudden awakened interest, and, beholding in him that lithe assurance of poise, that indefinable air, that bespeaks the trained pugilist, and which cannot be mistaken, the spectators nudged their elbows and wagged their heads knowingly.

Ravenslee's gray eyes were shining and his pale cheeks tinged with colour. 'Ah, Spider,' said he, 'life is rather worth while after all—isn't it? Spider, I like you better and better. Come, don't be a surly Spider; shake hands!'

'T' hell wid youse!' growled the Spider, covering up again, and, though his face was sulky, yet was no trace of contempt there now.

'I suppose,' mused Ravenslee, looking him over with knowledgeful eye—'yes, I judge, as you are now, you would fight about seven or eight pounds over your ring-side weight. Spider, you 'd have to give me twenty pounds! Spider, I could eat you! Come, shake hands and let 's go and fetch Spike.'

Now, speaking, Ravenslee smiled with eyes as well as lips; beholding which, the Spider grew slowly upright, his knotted fists unclenched, and, staring Ravenslee in the eyes, he reached out slowly and by degrees and grasped the proffered hand.

'Say,' said he, falling to violent mastication of his eternal chewing-gum, 'who 'd you have de mitts on with last, an' when?'

'Oh, it seems ages ago!' sighed Ravenslee. 'But where 's Spike?'

'Say, bo', who wants him, an' whaffor? Spike 's me pal, see—so I jest shore wants ter savvy who wants him, an' why.'

'His sister.'

'Hully chee! why didn't youse say so at first? When Miss Hermione wants anythin' she 's gotta have it, I guess!—Ain't that right, fellers?'

'You bet,' chimed the four.

'So, if she wants de kid, I guess I'll jest have to fetch him for her. Come on, bo'! S' long, fellers.'

Hereupon, having acknowledged the friendly salutes of the four, Ravenslee followed the Spider out into the court, empty now and silent.

'Say, bo', where 'd you meet up wid Spike anyway?' inquired the Spider, as they strode along Tenth Avenue. 'You don't belong around here, do you?'

'No. Do you know where he was last night?'

'You can search me, bo'. All I savvy is he was off on some frame-up or other.'

'Who with?'

'Well, not wid me.'

'Did you see any one with him beside M'Ginnis at O'Rourke's?'

'No; there was only them two.'

'Ah, I guessed as much,' said Ravenslee, nodding; 'he went away with M'Ginnis—good!'

'Say, bo',' questioned the Spider when they had gone some way in silence, 'I ain't seen you fight anywheres, have I?'

'No; but I've seen you, Spider. I saw you beat Larry M'Kinnon at 'Frisco.'

'Which sure was some fight,' nodded the Spider. 'Them half-arm jolts of his sure shook me some. He 'd have got me in the third if I hadn't clinched.'

'He was a terror at in-fighting.'

'He sure was, bo'.'

'It was your jabbing and foot-work won you the fight, Spider, one of the best I've ever seen—very little clinching and clean breakaways.'

'Larry sure was game all through—yes, right up to the knock-out. A good, clean fighter. N' say, bo', I was real sorry to see him counted out.'

'It meant a big purse for you, I remember.'

'Oh, sure, I had money to burn. I ain't got much left now, though,' said the Spider ruefully.

'You came pretty near being a world's champion, Spider.'

'Aw—jest near enough t' miss it, I guess. Talkin' o' champeens, the greatest of 'em, th' best fightin' man as ever swung a mitt, I reckon, was Joe Madden, as retired years ago. Nobody could ever lick Joe Madden.'

'Did you know him?'

'Not me, bo'; I wasn't in his class. But I seen him fight years ago.'

'Do you think Spike will ever make a champion?' inquired Ravenslee suddenly. 'I mean if he were given every chance?'

'Well,' answered the Spider slowly, 'he sure has th' grit; there ain't nothin' on two legs he 's afraid of except—himself, bo'. He 's too high-strung—nerves is his trouble, I reckon. Why, chee! when he 's in de ring he can't be still a minute, can't let himself rest between rounds, see? He kinder beats himself, I guess.'

'I know what you mean,' nodded Ravenslee, 'and I 'm sure you 're right. By the way, have you ever seen M'Ginnis fight?'

'I seen him scrap once or twice. He 's sure ugly in a rough-house, but in th' ring—well, I dunno.'

'Has he a punch?'

'Bo', he 's got a sleep-pill in each mitt if—if he can land his wallop right. Yes, siree, if Bud can hit a guy where it 'll do most good, that guy 's sure goin' to forget his cares an' troubles for a bit. But he 's slow an' heavy, Bud is, though I ain't never seen him mix it in th' ring, mind.'

'H'm,' said Ravenslee thoughtfully. 'Ha! M'Ginnis seems to have it all his own way around here—why?'

'Well, because Bud 's Bud, an' because Bud's old man is a Tammany boss—which gives Bud a big pull wid de police—'nuff said, I guess?'

'Quite,' nodded Ravenslee, and walked thereafter deeper in thought than ever. 'Where are you taking me?' he inquired as they turned a sudden corner.

'To de river.'

'This is Eleventh Avenue, then?'

'Yep! Watch out you don't trip on de railroad tracks.' And now the Spider seemed to have become thoughtful also, and somewhat gloomy, judging by his face as seen by an occasional feeble light as they traversed the unlovely thoroughfare.

'Bo',' said he suddenly, 'I 'm thinkin' there 's some guys in this world as would be better out of it. I 'm thinkin' of some guy as got a little girl

into trouble—an' left her to it. Her kid died, an' her folks turned her out, an' she 'd have died too, I guess, if it hadn't been for Miss Hermione an' old Mother Trapes—ye see, she was all alone, poor little kid! Now a man as would treat a girl that ways ain't got no right t' live, I reckon. I should like t' know who that guy was! I should like t' meet that guy—once.' After this the Spider became more gloomy than ever, and spoke only in surly monosyllables. Suddenly he turned off along a narrow, ill-lighted alley-way that led them between divers small, mean houses and tall, dark warehouses, and brought them suddenly out upon the misty foreshore, beyond which the dim and mighty river flowed. On they went, the Spider's depression growing perceptibly, until at last their feet trod the rough planking of a narrow causeway which ended in a dark, raft-like structure moored out in the river. Here was a small and dismal shack, from whose solitary window a feeble ray of light beamed.

What was it?

Ravenslee shivered suddenly and stopped to stare about him, while his listless hands changed to tight-clenched fists.

What was it?

What was there about this dismal, silent place that seemed to leap at him all at once from the dimness, he knew not whence? Was it the shack with its solitary light, or the broad river lapping with soft sighings and low weeping sounds among the piles below; or was it something in the altered aspect of the guiding figure that led him forward, slow and ever slower, as if with dragging feet, and yet with feet that trod so softly?

'Spider,' said he at last, speaking in a hushed and breathless manner—'Spider, where are we?' and, speaking, he shivered again even while his clenched hand wiped the sweat from his brow. The Spider made no answer, for the feeble light was blotted out by a very solid something which, approaching softly, resolved itself into a burly, blue-clad form whose silver buttons and shield showed conspicuous.

'What 's doin'?' demanded a voice. 'Who is it?' The voice was hoarse and authoritative; but the gruff tones were schooled, it seemed, to an almost unnatural softness.

''S all right, Micky,' answered the Spider in the same subdued tone; 'it 's only me come for de kid.'

'Who you got wid you there, Spider?'

'A pal o' mine an' de kid's—he 's all right, Mick.' Then to Ravenslee, 'Come on, bo'!' Slowly they approached the shack; but, reaching the door, the Spider hesitated a long moment ere, lifting the latch, he led the way in.

A fairly large room, lighted by a lamp that stood upon a rickety table, where sat a young-faced, white-haired man, very industriously writing within a small account-book; upon the table before him were a number of articles very neatly arranged, among which Ravenslee noticed a cheap wrist-watch, a hair-comb, a brooch, and a small chain purse. He was yet gazing at these, and at the white-haired man, who, having nodded once to the Spider, continued to write so busily, when he was startled to hear a long-drawn, shuddering sigh. Turning suddenly sharp about, he stared toward a certain dark corner where, among a litter of oars, misshapen bundles, boxes, and odds and ends, was a small stove, and, crouched above it, his head between his hands, he beheld Spike.

With the same instinctive feeling that he must be silent, Ravenslee approached the boy and touched him on the shoulder. Spike started and glanced up, though without lifting his head.

'Your sister is anxious about you. Why are you here?'

'Don't you know, Geoff? Ain't no one told ye?'

'What do you mean?'

'I 'll show ye!'

The boy took a hurricane lamp from the floor beside him, and, having lighted it, brought Ravenslee farther into that littered corner, where, among the boxes and bundles and other odd-ments, lay what seemed to be two or three oars covered with a worn tarpaulin.

'Look, Geoff—you remember—only this mornin'!' Very gently Spike raised a corner of the tarpaulin, and as he looked down Ravenslee's breath caught suddenly.

A woman's face, very young and very placid-seeming. The long dark hair framing the waxen features yet oozed drops of water like great, slow-falling tears; then, beholding this pale, still face, Ravenslee knew why he had shivered and hushed voice and step, and instinctively he bowed his uncovered head.

'You remember Maggie Finlay, Geoff—this mornin' on the stairs? She—she kissed me good-bye, said she was goin' away; this is what she meant—the river, Geoff! She 's drowned herself, Geoff! Oh, my God!' and letting fall the tarpaulin, Spike was shaken suddenly by fierce hysterical sobbing.

Whereat the man, looking up from his writing, spoke harsh-voiced: 'Aw, quit it, kid; quit it! Here I 've just wrote down three rings, and she 's only got one, an' that a cheap fake. Shut up, kid; you 'll make me drop blots next. Cut it out—it ain't as if she was your sister.'

Hereupon Spike started and lifted a twitching face. 'My sister!' he repeated; 'my sister!—watcher mean? My God, Chip! Hermy could never—come to—that;' and, shivering violently, Spike turned and stumbled out of the shack.

Once outside, Ravenslee set his long arm about him, and felt the lad still trembling violently.

'Why, Spike,' said he, 'buck up, old fellow.'

'Oh Geoff, Hermy could never'——

'No, no, of course not.' So, very silently, together and side by side, they crossed the narrow causeway.

'Gee, but I'm cold,' said the boy between chattering teeth as they turned along the wide avenue. 'I—I guess it's shook me some, Geoff. Ye see, I used to go to school with Maggie once —an' now, my God!'

Reaching Mulligan's at last, they beheld numerous groups of whispering folk who thronged the little court, the doorway, and the hall beyond. They whispered together upon the stairs and murmured on dim landings. But as Ravenslee and Spike, making their way through these groups, mounted upward, they found one landing very silent and deserted, a landing where was a certain battered door whose dingy panels had been wetted with the tears of a woman's agony, had felt the yearning, heart-broken passion of a woman's quivering lips, such a very few hours ago. Remembering which, Geoffrey Ravenslee, turning to look at this grimy door, beheld it vague and blurred and indistinct as he turned and climbed that much-trodden stair.

Upon the top landing they found Mrs Trapes, who leaned over the rails to greet them. 'So you found that b'y, Mr Geoffrey. Hermy 'll be glad. You 'll have heard of poor little Maggie Finlay? Poor lass! poor lonely lass! 'Twas her father drove her to it, an' now he 's had a fit—a stroke; the doctor 's with him now, an' Hermy of course. She 's always around where trouble is. I guess there won't be much rest for her to-night, long past midnight now. I 'm glad you found that b'y; I said you would. I 'll just go down and tell Hermy; she 'll be glad.'

Spike stood awhile, after Mrs Trapes had gone downstairs, very silent and with head adroop; then, slow and heavily, turned and opened his door, but paused to speak over his shoulder in a hoarse whisper. 'Geoff, if ever any man made my sister go through what Maggie Finlay went through I 'd shoot him dead, by God in heaven I would!'

(*Continued on page 132.*)

A WINTER'S RIDE: TAYSIDE.

BIRD-WATCHING is apt to be considered a pastime for the spring and summer; but this is not so, for one of the delights of nature study is that it is to be approached from a different aspect with each season. To the naturalist the circling year of nature begins on the 1st of January and ends on the 31st of December. There is no more enjoyable way of spending an autumn afternoon than to 'ride abroad' and note what birds are to be seen.

Though the month of November is the herald of winter-tide, yet it contains many a 'delicate day' of which one is wise to profit. Let the would-be bird-watcher partake of an early luncheon; and then, booted and spurred, let him sally forth on his favourite pony early in the afternoon. To study birds in comfort one should be astride a thoroughly quiet and well-mannered steed, one that is sure-footed and steady, and above all a pony that will stand quietly and not fidget. The fidgety, prancing 'blood' is not for the bird-watcher; rather let him choose a small, quiet, and sturdy hill-pony. Thus suitably mounted, his other desideratum will be a really good pair of binoculars. Here, of course, as in all matters, the personal note comes in. One will prefer this type of glass, and the other that. It is sufficient to say that they should be a prism lens of a first-class make, and with a magnification of six to eight diameters. The owner should accustom himself to use his binoculars at all times, especially when he is in the saddle. Thus equipped, the bird-watcher may sally forth; but if he cares to add a light waterproof overcoat, a small haversack, and a note-book, as well as a few slabs of chocolate, he will find these are all well worth carrying.

For our ramble let us choose a quiet, still afternoon in late autumn or early winter, and let us be in the saddle and away by 2 P.M. Our choice guides us to the high, rough grounds of the whins. So, leaving the vicinity of the riverside and garden, we turn eastward, and commence a brisk ascent of over half a mile. As we near the summit of the grassy track which has led us upward, and which opens on 'to a little winding road that leads to the hill and back again,' we are sure to see both linnets and pipits flying overhead. Had our journey been in summer instead of winter we should certainly have heard the 'clarion call' of the lark; but at this season of the year this bird has shifted its quarters. A wood-pigeon clatters out of the wood which lies to the west of the track; and occasionally a huge capercailzie-cock flaps off too, interrupted in his repast of fir-tree tops, a diet which gives a resinous and piny flavour to the flesh of this bird.

We now reach the summit of the hill and gain a wondrous view of the landscape. Beneath us lies the valley, with the river Tay winding its course with a sinuous silver curve; in the distance is the haze of the smoke of the Fair City of Perth; and yet farther is the range of the Sidlaw Hills, with the two sugar-loafed tops of the Lomonds on the far southern horizon. To the

north and east hills again shut in the Carse, and to the west the valley narrows into a hollow which is overlooked by the high, purple-shaded hills of the dim distance. A little patch of marshy ground lies close to us now, and may likely harbour a snipe or a mallard; whilst a mixed flock of lapwings and golden plover are flying overhead. The last-named birds have but recently arrived from their summer residence off the hills, and their lonely piping cry is sweet music in one's ears; whilst their wondrous swiftness and precision of flight reminds one of a well-drilled battalion of soldiers, so promptly do they wheel and turn, and yet observe an unbroken formation, following the tradition of our famous British soldiers.

Farther afield we espy our winter thrushes—namely, fieldfare and redwing—birds which regularly winter with us, and then return in spring to nest in the northern territories of Europe. In the neighbouring field our binoculars reveal to us the stormcock, or mistle-thrush, flying at a swift rate, and crossing the hedge with his dipping and rising type of flight, closely followed by a covey of partridges, whose low skimming and rapid flight is equally typical of them, as is the ponderous 'high in air' flight of 'my lord the pheasant.' As we left the path by the wood we both saw and heard some titmice, of which every species winters with us, saving the crested tit, which is *an entirely local bird* only to be found in certain districts—to wit, Speyside. The marsh titmouse is also a *rara avis*; but the cole, the great and blue, are all to be seen throughout the winter. Should there be prolonged frost they will most likely band together in company with linnets and finches, and harry the farmyard for any stray barley or oat straws, or any other accessible titbit.

The long-tailed tit is the least of all the titmice, and by rights belongs to a different group from his confrères afore-mentioned, these being of the family *Parus*, whilst our friend 'bottle Tom' holds the surname of *Acredula*. He too is restless and active, as are all the tits; and with the advent of winter these little birds band themselves together and scour the countryside in flocks, wandering through the woods and the surrounding country in little parties. This habit of *banding together*, or 'packing,' is one of the features of winter bird-life; as one rides about in winter one constantly sees quite large flocks of various birds all 'packing together' and winging their way from wood to covert, from covert to farmyard. Gilbert White was of the opinion that two great motives regulated the proceedings of the brute creation, and that these were *hunger* and *love*. Be this as it may, a sure sign of approaching autumn is to be seen in the flocking of birds.

Now we have reached the higher ground, and here in a marshy pool we flush yet another snipe, which darts off with its zigzag course of flight; and at the same time a party of wild duck (mallard) wing their way overhead, adhering, as is their wont, to a V-shaped formation of flight. At the loch, which lies a little to our west, our binoculars tell us that both mallards and teal are on the water, as well as a solitary water-hen and coots. The rabbits and hares have been disturbed by now, and again we come across the stormcock, fieldfare, and redwing. The last-named bird is the most delicate of all our thrushes, and is the first bird to suffer from a prolonged frost; hence it is no wonder that, in company with the fieldfare, the redwing annually retreats from the severity of a Scandinavian winter. The fieldfare comes in flocks with the dusk of the evening, and it is a typical sight of a gray December day with a northerly wind blowing to see a flock of the gray-blue birds passing overhead and giving voice to a throaty *chock-chaak* note. Both these birds must have but lately reached our shores, and spring-time will have reappeared ere they wing their way to their breeding-haunts in the far north.

The first sight of the redwings and fieldfares is always a seasonal landmark recalling episodes of past years, and reminding one that the summer is truly over and past, and that the grip of winter is close at hand. The fulvers, or bluefelts (for such are the local names of the fieldfares), like to haunt open country, and to travel in little parties or large flocks, being here to-day and gone to-morrow. On their arrival food is plentiful; but as the grip of winter tightens its hold on the land, 'and Boreas's rude, rough winds do blow,' these little visitors feel the pinch very acutely, and, alas! often succumb to the pangs of hunger. Very specially does this apply to the redwings. Now we listen to the *chacking* cry of the bluefelts as they wing their way to their roosting-quarters, a contrast to the whispering notes of the redwings, as a migratory flock of these latter birds also pass overhead. The redwings move in flocks over the country, being wary and shy of approach, and loving to roost and perch on the bushes. And now, to our delight, we have flushed a woodcock, most surely a foreign immigrant from Norway or Sweden. This bird, like the snipe, adopts a zigzag course of flight, and, thanks to the russet-brown hues of its plumage, is strangely hard to see or follow.

The afternoon has also already passed so quickly that we realise we must turn our face home again, first resting a little while we refresh ourselves (and Dobbin the pony) with a few pieces of chocolate, followed by a cigarette. As we stand idly gazing around we hear the swish of wings overhead, and the lordly heron flaps by, winding his way toward the distant burn that flows in the cleft of yonder gully.

Slowly we turn and begin our descent of

the hill. Little companies of cock chaffinches pass us, reminding us of the fact that Linnæus christened these birds *Fringilla cœlebs*, or bachelor finches. Again, we notice a noisy party of daws, whose evening parliament has duly assembled at such an hour. When we reach the end of the road the glorious sunset is slowly flooding the western horizon with rich hues of pink, saffron, and purple, and we realise the day is drawin close.

When the golden day is done,
Through the closing portal,
Child and garden, flowers and sun,
Banish all things mortal.

As the blinding shadows fall,
As the rays diminish,
Under evening's cloak they all
Roll away and vanish.

'MOHAMMED'S COFFIN.'

CHAPTER III.

THE Squire's turn came next. The apathetic Selma had so far bestirred herself as to mount upon the high back of a library chair, to reach down the second volume of a novel she was reading. Isolation upon this pedestal displayed the lines of her fine figure to admiration, and, though he would dearly have liked to stay and feast his eyes on them, the Squire slipped noiselessly out of the room instead to summon Edwin, who was just outside. 'That should bring him to the scratch though nothing else does!' meditated the artful old boy, his thoughts becoming legible on his countenance. 'Here, Edwin! I want you.'

The young man's pleasant voice replied from a recess in the corridor. 'All right, dad! I'll be with you in a moment, as soon as I have helped Ruth to wind this skein.'

And, sure enough, the operation did not take long. Yet, long before it was completed, Selma had stepped down from her perch; and so the Squire was put to the trouble of inventing a reason for having summoned his son.

Things were beginning to grow serious. Days became weeks, and weeks were stretching to months, and still the three young people continued to live on together, side by side, in undisturbed amity. Though by nature a lover of peace in the household, there was nothing that Mrs Fairfield now so eagerly looked out for as the symptoms of tiffs, of bickerings, feuds, and heart-burning. How inhumanly glad she would have been (the unnatural mother that she had become!) to see her Edwin distrait, downcast, absorbed in melancholy thought! For the first and last time in her life, the failure of his appetite would have been a joy to her. But he remained the picture of serenity, inclining, alas! to joyousness far more than sadness, and obviously appreciating home cookery. The girls were no greater comfort to her. What would she not have given to see Selma's eyes flash? And though habitually sleepy, one felt that they *could* flash. But, like the spark in the flint, or the glow in an opal, their fires remained latent. Of Ruth, too, she knew that, unself-assertive as that maiden was, so long as all went smoothly, she was quite able to hold her own when called upon. The tones of Ruth's voice could be f ay, more than firm; but at present they uniformly gentle. So the lover of peace i household caught herself longing for an a tion, or exchange of felinities, and immed afterwards was ashamed of her own unregen

Meantime her husband's thoughts were m in the same direction as her own. He re this by remarking to her one evening, i privacy of their sanctum, 'Look here, this is not going to answer—any fool ca that.' The tones of his voice and the expr of his features were alike preternaturally and she felt that it would be affectation o part to feign ignorance as to what he referring to.

'Whom do you blame?' was all she said.

But Mr Fairfield's mood had passed beyon point whether of teasing or recrimination. reply was sober, and for once admirably sen 'Wouldn't it be better to leave that qu unanswered for the present, dear,' he said, to join our forces in considering how the mi that has been made may be rectified?'

His unwonted seriousness was not lo appealing to his wife, who, meeting him way, made answer warmly, 'With all my h

'That is right, my dear,' returned he; pro ing, 'And now, Joan, I do not mind confe to you that this matter, lightly as we may treated it, lies a good deal nearer my heart I have allowed you to guess.'

Mrs Fairfield was by this time as serio her husband. 'Let me understand you, if please, Squire—do you refer to Edwin's ma with Selma?'

'To Edwin's marriage!' he replied, a loudly—testily. 'To Edwin's marriage—wh to Selma, Ruth, or to the Lord knows What do I care, so long as she is a good one of the right sort, and he loves her?'

Mrs Fairfield's eyes grew moist.

'What I want,' the plain, elderly man on earnestly, 'is to see our son settled. H chosen his career, and he chose like the unselfish lad he is. But if once we allow to go back to that *estancia* alone, particu after what he wrote to you, we cannot tell w

he may cast his eyes. You do not know what an obsession marriage is to a young man, Joan, when once his mind is given up to it. It is a sort of fascination, not to be resisted, and you may stake your bottom dollar now that marry he will, though there were but one single woman in the countryside and she was a mixture of wolverine and women's rightist!' Some of the Squire's prejudices were painfully antiquated.

'What is to hinder him from marrying—will you tell me that, John?' answered the good lady, just a trifle nettled by her husband's last allusion. 'What is to hinder him from marrying, if he wants to marry? Here are two nice girls in the house, for him to play with all day long; and if there is not a larger choice, it is no fault of mine; for he not only declines to go into society, but has repeatedly discouraged me from asking other girls here.'

'Has he so? Well, I can quite understand it.'

'Then, *que faire?*'

'That is what we have now to consider.' And the worthy man composed himself, very much as he might have done previous to laying some weighty statement of policy before the members of a Parish Council.

'The position of our son at this moment,' he went on, 'is exactly that of "Mohammed's Coffin," which, according to the Eastern fable, hangs for ever suspended between heaven and earth, being acted on by equal and opposite attractions.'

He paused. In despite of herself, Mrs Fairfield hung admiringly upon his words. It had been a dream of her early life that he should enter Parliament. He noticed this, was gratified by it, and proceeded—his manner, as he did so, preserving an even balance between talking down to his audience and declining to take himself too seriously.

'What we have to aim at, then, is to put an end to this unprogressive state—this undesirable condition of equilibrium, rest, or, as I may call it, virtual paralysis. But how is that to be done?'

Mistaking what was merely a rhetorical device for an actual question, his wife, in her simplicity, was about to answer him.

But he prevented her. 'It must be done, in the first place, as the classical author puts it, *suaviter in modo*'——

'You know, John, I do not understand Greek.'

'That is, without upsetting the apple-cart.'

'All-important, indeed.'

'And, secondly, it can be done in one of two ways—either by withdrawing a factor from the situation, or by adding one.'

'I follow you. You mean, either by sending one of these girls away, or by inviting another?'

Mr Fairfield nodded.

But the momentary fascination of his oratory had already palled, leaving his wife in renewed possession of her old independence of judgment.

'Then I do not agree with you,' she objected, 'for to invite another girl would merely complicate things; whilst if we are to send one away, how on earth decide which one it is to be?'

The Squire was silent; he had not reckoned upon opposition.

'Can you honestly tell me, Squire, that you have, on the whole, observed a grain of preference on our son's part for either of these young women?'

'I believe he likes them both very well,' answered Fairfield lamely.

'Granted! But do you believe that he likes one better than the other?'

'I can't say I do.'

So this council ended, as so many councils do, very much where it had begun; except that it had promoted a better understanding, if not actual unanimity, between the Squire and Squiress.

CHAPTER IV.

THUS the old course of things was resumed. The two girls continued to appeal to each other, to confide in one another, to be the best of friends; whilst, on his part, Edwin continued to divide his attentions between them as impartially as does Don Ottavio, in the opera, between the ladies Anna and Elvira. The three young people were happy, there was little doubt of that—as happy as the day is long. But the two elders were not.

The Squire, who had many different ways of being tiresome, had embarked on an entirely new rôle. He became plaintive, whilst refusing to complain. Thus, after standing in silent contemplation by the window, he would turn to his wife and say gently, 'It has been in our family close upon two hundred years, Joan, the old Demesne has; and I *should* have liked to see an heir to it—one of my own blood. Ah, well'—— There he broke off.

The words hurt Mrs Fairfield almost as much as if she had been a childless woman and they had been addressed to her by way of reproach. What could she do? She had even gone so far as to withdraw to her own room, lock the door, and ask herself this question, not without tears. What could she do? The voices of the two girls, heard from without, seemed an ironic comment on her question.

'Edwin! Edwin!' she heard one say, 'I am not nearly ready yet;' followed by the other's, 'Edwin! Edwin! you *must* wait for Selma.'

They were about to start on a picnic expedition in the pony-carriage, taking fishing-rods and sketching materials with them, and the pony did not relish standing. 'Why, oh, why could not Edwin, just for once in his life, forgetting all courtesy and chivalry, whip up and drive away, with the punctual Ruth at his side, as if bound

for Gretna Green? There would be some romance in that!'

But through the open bedroom window, she could hear her son's equable tones, as he replied, 'Take your own time! The day's still young, and I'm quite comfortable here.'

Mrs Fairfield, however, was not the sort of woman to give way to idle tears, or find a solace in them. Whilst there's life there's hope, was one of her maxims; so she must e'en be up and doing. Edwin was leaving home for a day or two, to meet Tom Coxeter, another of the partners in the *estancia*, who happened to be in England, and she determined to profit by his absence to 'pump' Selma. (Though theoretically abhorring slang, she would sometimes condescend to it, as a concession to the rising generation.) Somehow she did not think this would be difficult. And though bound to Ruth, as much by opposition to the Squire as by original preference, she chose Selma as the subject of her experiment.

Confident in her own tact and clever way of dealing with girls, she called Miss Durell into the boudoir, and put the question to her almost point-blank, 'Selma, my dear, I want you to tell me—has Edwin said anything to you?' The tones of her voice were insinuating, replete with covert meaning—surely irresistible!

But, to her astonishment, Selma was quite equal to the occasion. Her features became almost hard, and her voice toneless, as, feigning obtuseness, she made answer dully, 'Naturally, he has said a great deal to me—he and I and Ruth have been so much together.'

There was silence. Then, repulsed though she felt herself to be, Mrs Fairfield persisted, though with less confidence than before, 'Dearest Selma, you know what I mean!'

The Juno-like beauty remained obstinately silent.

Mrs Fairfield went on: 'I feel that, as his mother, I have a right to ask you this.' Surely that would bring her to book?

Not a bit of it! All that Selma said was, 'Very well, then, dear Mrs Fairfield, all that I can say is this—that I also feel I have a right not to reply unless I choose.'

The tones of her voice were now no longer colourless—there was coldness, hauteur, arrogance in them. And, for a moment, relations between the two women were dangerously strained.

But Mrs Fairfield's dignity came to her rescue. 'As you please, dear,' she answered, as if unperturbed; 'I dare say you know best.'

And the storm passed by without breaking. But it left poor Joan Fairfield terribly *intriguée*. From the attitude Selma had taken up, it seemed perfectly certain to the poor perplexed mother that there had been a passage of courtship, of some sort or other, between her son and the Junonian. She would have given worlds to know its precise nature! Could Selma possibly have refused—repulsed her own Edwin? It was unthinkable. And yet, basing her inference upon the girl's manner, that was the conclusion to which she was driven. At her wits' end, as it were, and 'carried about by every wind of doctrine,' there was a moment when she would fain have made a confidant of the Squire. But here her pride stepped in. What! was she to allow her lord and master the satisfaction of crowing over her, even though his triumph were to prove ill-founded and short-lived? No, she could not bring her mind to that!

And here let me interpolate that, as a matter of fact, she was astray in her deductions. For Edwin had not proposed to Selma, whose manner towards Mrs Fairfield had been determined solely by the resentment provoked in her by what she was pleased to consider the unwarrantable interrogatory to which she had been subjected.

As for Mrs Fairfield, that night she slept little. Next morning, while they were all at breakfast, a telegram was brought her. In country-houses of the more old-fashioned kind telegrams are public property.

'From Edwin?' queried the Squire, glancing across the table at his wife; whilst, of the two young ladies, neither made the smallest effort to conceal her interest in the answer.

'Yes, from Edwin,' replied Mrs Squire; adding, with all the pride engendered by a monopoly of interesting information, 'He is returning here to-night, and bringing Mr Coxeter with him.'

(*Continued on page 134.*)

MEDICINAL HERBS IN THE OLDEN TIMES AND NOW.

By William Layton.

ONE of the minor British poets—Blackmore—in writing a poetical description of the Creation, invites his readers to observe that,

> Sprouting plants enrich the plain and wood;
> For physic some, and some designed for food.

Now, in one or other of these categories some in both, every plant may be ranged, although in regard to many of them the world may still be ignorant of either their medicinal or their alimentary qualities. This is greatly to the world's detriment, since a large number of plants possessing one or both virtues—the stinging-nettle, for instance—grow wild on the roadside, and may be had for the trouble of gathering; and, in regard to the nettle, the Germans were

reported to have discovered that a tissue may be woven from it.

This ignorance, at least in respect to medicinal herbs, did not prevail in the good old times; necessity then, as now, was the mother of invention, and mankind went direct to nature to find a remedy for nature's ailments. In those days there were no fat physicians of whom it was said, '*Dum bene nummati Lares suos repetunt;*' which, being freely translated, meant, 'No fat physicians with well-filled fobs.' Nor were there chemists' shops debiting *aq. dist. col. sacc.* as a carry-over until a correct diagnosis could be made of the patient's malady. The countryman, and especially the countrywoman, became an expert in the use of plants containing a curative drug, the recognition of this virtue having been gained probably by mere chance. The knowledge was spread abroad by the gossip of old women; and some of these crones in time came to be regarded as witches simply because of the apparent miracles which the use of their drugs sometimes worked. But, nevertheless, the credulity of the sick was a large factor in effecting the cures, as, for instance, when Fracastoro, in the sixteenth century, cured a man, supposed to be *in extremis*, simply by administering an Armenian bole mixed with vinegar. Belief in the gipsies' power to pry into the secrets of futurity was doubtless largely due to their cures—effected by means of herbal remedies—of gripe, sores, burns, warts, and other ailments common to the countryside.

It is possible that the gipsies gained their knowledge of the medicinal value of plants when first they began their wanderings. Driven by hunger in search of foodstuffs, they made experiments as to the edible value of any likely plant they found by the wayside. That they 'pinched' what they could, even in the early part of the sixteenth century, and caused much annoyance by their depredations, is evinced by the fact that in Henry VIII.'s time an Act was passed against their itinerancy (1530). They could not in those early days, here in England, help themselves to much garden produce, as it was only about this period that the lettuce, cabbage, carrot, and turnip were introduced into this country. Of edible roots there were none; so that if the vagrant had a craving for vegetable food, he could only gratify it by delving in the hedgerows for roots or by munching berries and possibly foliage.

It is also possible that the connection between the 'herbarist' and the fortune-teller among the gipsies of earlier times was not very remote, since the supposed sidereal influence on plant-life and on man's destiny was extensively exploited by the charlatans when victimising their too willing dupes. But the use of astrological nomenclature as bombast was not confined to the Bohemian professors of the healing art. Nicholas Culpeper, a famous herbalist, who died in 1654 at Wakehurst, a fine Elizabethan manor-house in Sussex, amassed considerable wealth by the publication of his *Complete Herbal*, a work which 'displayed the Medicinal and Occult qualities of Herbs, physically applied to the Cure of all Disorders incident to Mankind.' The book ran through several editions, to an earlier one there being annexed *The English Physician enlarged, and Key to Physic, with Rules for compounding Medicine according to the true System of Nature.* This book was intended to be taken as a complete family dispensatory, and included in its pages some special recipes left by their discoverer as a legacy to his wife.

That Culpeper believed in the sidereal influence on plants, or found it profitable to pretend that he did, is manifest from the opening pages of his work. In a preface to the above-mentioned edition the author says: 'I always found the disease vary according to the various motions of the stars. Then to find out the reason of the operation of Herbs, Plants, &c., to the Stars went I.' Consequently, in writing of the common cowslip, Culpeper gravely informs his readers that this flower 'is under the sign Aries, and that Venus lays claim to this herb as her own.' It is not to be wondered at, therefore, that readers of the book were informed that water distilled or an ointment made from its petals would add considerably to a woman's beauty of countenance, or restore the same to its original state if it should have been damaged by the ravages of time. And the author naïvely adds that the fact was, as the French say, 'the secret of Polichinelle,' inasmuch as 'our city dames know it well enough.'

If we put aside the apparent charlatanism of Culpeper's method, there is much information of practical value in the work, and from it the modern herbalist even might glean some hints for the better practice of his calling. But if he would make himself acquainted with the virtues of all the herbs mentioned in the book much time will be required. The original issue of the work treats of some four or five hundred plants; and in the new edition above mentioned another hundred are introduced to the reader's attention. But when we are told that there are no less than three hundred varieties of one particular plant—namely, the liverwort (ord. *Marchanticeæ*)—it will be readily understood that a *Complete Herbal*, like the city of Rome, was not built up in a day!

We have said above that Culpeper lived in Sussex, and the reason why he chose this 'blessed county'* as a place of residence was probably because 75 per cent. of the plants known by herbalists as possessing medicinal qualities were indigenous to this particular part

*The county is still spoken of as 'Silly Sussex,' but the epithet has nothing to do with the mentality of the natives. It is a perversion of the Saxon *sælig*, which meant 'holy,' and therefore 'blessed,' an allusion to the number of religious houses established throughout the county.

of England. Without going far from his home, therefore, he was able easily to obtain herbal specimens for laboratory research.

There is a tradition extant in Sussex that Culpeper did not acquire possession of Wakehurst by inheritance or by purchase. As an apothecary in London, his services were much in request by sufferers from the Great Plague, and one of them, the owner of the Sussex estate, was temporarily staying in town. He was carried away by the terrible disease, and on his deathbed made a will and appointed his medical attendant his testamentary executor. But in spite of every effort made by Culpeper to find the rightful heirs, none came forward, and he remained in the undisturbed enjoyment of the whole property until the day of his death.

It was in this same county of Sussex that the writer of this article first had his attention called to the potentialities, from a medicinal point of view, of roadside vegetation. Wandering one warm August day down Rocky Lane—aptly named, since it cuts through the sand-rock between Hayward's Heath and Burgess Hill—he saw a carter who was having trouble with his horse. The poor brute, like the donkey of the nursery rhyme, wouldn't go. The kindly carter, with many a persuasive 'Whoa, old gal!' was gently rubbing down the flanks of the animal, but to no purpose. Suddenly the man's face was illumined with an idea; and, exclaiming, 'Darned if I don't think the old gal 's got the gripes!' he proceeded to unharness the horse and straightway to lead it to the hedgerow. Presently the poor brute began to eat greedily of the leaves of a kind of wild vine which was ramping freely amidst the hawthorn and blackberry hedge. 'Now she won't be long,' said the cheery carter; and when the animal had finished its feed it was once more harnessed into the cart.

In reply to interrogations, the man said that the vine was the bryony, or 'briney,' as he pronounced it, and added, 'Nothing like briney for gripe in horses.' In further conversation, the writer was informed that the berries are 'dead on warts and chilblains,' and that the root, when scraped and applied as a 'pultess' (poultice) to the part affected, is a sovereign remedy for lumbago.

Culpeper, in his *Herbal*, grows quite eloquent in dilating on the virtues of bryony, or ladies' seal. He tells us that 'it is a furious, martial plant;' may be used as a purgative; is good for palsies, convulsions, and stitches in the side; that a decoction of the roots, drunk in wine, is most useful in certain phases of maternity; and that an electuary, also made of the roots and honey, is good for chest complaints. He goes on to say that this same root, 'mixed with hog's grease,' is a cure for every sore, burn, sprain, or bruise known to humanity.

That our ancestors had much faith in the curative qualities of herbs, when used in the bath, is shown in the pages of *The Boke of Nurture folowyng Englondis gise*, by John Russell (edited from the Harleian manuscripts by Frederick Furnival). According to this old writer (he was Marshal to the Good Duke Humphrey, *circiter* 1408), the preparation of the 'bathe medicinable or stewe' must have been rather a formidable operation in his time. Into it was thrown a decoction of about a dozen different herbs, each one of which was supposed to possess a special curative value. The principal were the hollyhock, the marshmallow, the camomile, and the pyrethrum or feather-foil, this last since it abounds in nitrate of potash. As a preliminary to the bath, 'sheets full of herbs' had to be hung around the room in which the 'stewe' was taken; and the attendant was specially instructed to have a basin of rosemary held in readiness for the final sponge-down.

The carefully culled knowledge of the seventeenth century apothecary and of practical experience, such as that of the gipsy and the Sussex carter, finds expression to-day in the *British Pharmacopœia*, and for medicines people rush to the chemist's shop rather than to the hedgerows. But it may be asked whether it would not be in the national interest if the medicinal and other qualities of our plants and herbs were properly taught in our schools. The elements of botany already form part of the curriculum in some of them; but it is generally looked upon as a dry subject, and one of interest more to girls than to boys. Instead of writing on the blackboard certain facts about the Latin name of a plant, the order to which it belongs, the stamen, petals, and pollen, let the teacher take the class out of doors, or in towns have a live specimen of the plant at hand, and endeavour to awaken a living interest in its hidden qualities. Take the foxglove, for instance. Let the children be taught its Latin name if you like; let them be told that all parts of the plant contain poison; but also let them know and understand that from it may be extracted matter that is most useful for the service of man in the exercise of his arts and crafts. Then children would have some respect for what they now regard simply as a pretty flower to be picked, carried home, and next day consigned to the dust-heap. With such an interest awakened in plant life, a stimulus would be given to the proper development of a child's natural curiosity, and there would of itself accrue a practical, because a scientific, result of its earlier education. We should no longer be wholly dependent upon Germany or on any other country for the drugs necessary for our medicines and for our manufactures.

The Herb-Growers' Association, started in February 1916 (7 Queen Anne's Chambers, Westminster, London, S.W.), was a pioneer in the work of systematising the efforts of collectors, and the value of its work may be judged from

the fact that, with the assistance of eighteen hundred workers, it had by September marketed one hundred tons of herbs gathered from our fields and hedgerows. The next step is to sow the seeds for an increased crop next year, and with this in view fifty thousand leaflets conveying instructions have been already distributed. (The subject was introduced here—*Chambers's Journal*, July 1916—by Mary Holdsworth in her article, 'The English Herb Industry.')

'THE DOCTOR.'

By James A. Manson.

LONG years ago I came across a couplet which somehow or other I have never forgotten, though the name of its author has slipped from my memory. It expressed the sentiment:

> A wise physician skilled our wounds to heal
> Is more than armies to the commonweal,

and might have been inspired by such a man as John Abernethy (1764–1831), by whose foresight and virility medical treatment and surgical practice were immeasurably advanced. For though the whole art and science of healing has been revolutionised since his time, yet the foundations of the coming change were laid by him and his master, John Hunter, and others of his sagacious colleagues. He was a pioneer rather than a reformer, for the latter term implies that things had once been well, and only needed to be put straight again; whereas in Abernethy's day rule-of-thumb was still largely the guiding principle of his profession.

Having been surgeon to St Bartholomew's Hospital, London, for forty years, he acquired a remarkable knowledge of human nature as well as of the ailments and accidents which flesh is heir to. It is true that he was often rude to his patients—Sir Astley Cooper said his manners were worth one thousand pounds a year to him (Cooper); but this was due partly to the pressure of an enormous practice, partly to a heart trouble which rendered him irritable, partly to temperament (for he was passionate and irascible as a boy), and partly to his clients themselves. For he was a man of sturdy common-sense, who preferred to call a spade 'a spade' and not 'an agricultural implement,' and would stand no tomfoolery or the 'putting-on of airs.' But he was seldom hasty with the helpless and indigent. 'Private patients,' he avowed, 'if they do not like me, can go elsewhere; but the poor in the hospital I am bound to take care of.'

To the purse-proud he was a terror. A wealthy, lazy man consulted him, in fear and trembling, about a cure for gout, a disease caused by his visitor's fondness for the pleasures of the table. 'Live on sixpence a day,' was the doctor's advice, 'and earn it.'

Asking his counsel about her complaint of forty years' standing, a long-winded lady began to describe its progress from the very first. 'By the by,' interrupted Abernethy, 'how long will it take you to tell me? For I have a patient to see in the next street.' 'Twenty minutes.' 'Ah, well, go on,' he replied; 'and I hope you will have finished by the time I get back.' This sounds so uncouth that one must suppose the doctor had already detected that all the lady was suffering from was loquacity.

Another lady who lamented her low spirits was bidden not to come to him, but to 'go and buy a skipping-rope.'

Those patients, however, who knew his failing could manage him well enough. A woman, aware that least said was soonest mended, called one day, and, holding out her hand, remarked, 'Burn.' His answer was, 'Poultice.' Next day she called, and said, 'Better.' 'Continue poultice,' quoth Abernethy. At the end of a week she paid her last visit, and said, 'Well. Your fee?' 'Nothing,' she was told; 'you are the most sensible woman I ever saw.'

One day a man suffering from a very painful affection of the shoulder visited him. He hardly had time to open his case when Abernethy abruptly observed, 'I know nothing about it.' 'How should you?' retorted the man. 'But if you will have patience, perhaps you may.' At once came the reply, 'Sit down,' and the doctor heard him with the utmost kindness and civility.

On another occasion the wife of a distinguished musician consulted him, and, resenting his discourtesy, said, 'I had heard of your rudeness before I came, sir, but I did not expect this.' Abernethy having handed her the prescription, she asked what she was to do with it. 'Anything you like; put it in the fire if you please.' Taking him at his word, the lady threw the prescription on the fire, placed his fee on the table, and hurried from the room. Abernethy followed her into the hall, and begged her to take back the fee, or let him give her another prescription. But she would not listen to him, and left the house.

Once a mother brought her daughter, smartly gowned and tightly laced, for his opinion about her health. In recounting the interview, she, too, complained of the doctor's rudeness. But what was the head and front of his offending? Only plain speaking. 'Madam,' he had said, 'do you know there are more than thirty feet of bowels squeezed beneath your daughter's girdle? Go home and cut it; give nature a chance, and you will have no need of my advice.'

'Mr Abernethy,' explained another patient, 'there's something wrong with my arm. There, oh!'—making a particular movement with the limb—'that gives me a great pain, sir.' 'What a fool you are to do it, then!' was the doctor's soothing comment.

When the Duke of York called to consult him, Abernethy stood with his hands in his pockets, waiting to be spoken to, and calmly whistling the while. His Royal Highness, taken aback, remarked, 'I suppose you know who I am?' 'Well, what of that?' answered the doctor. Then he went on: 'If your Highness wishes to be well, you must do as the Duke of Wellington often did in his campaigns. You must cut off the supplies, and the enemy will soon quit the citadel.'

Some doctors kept cases on their hands for the sake of the fees. Abernethy detested such sharp practice. Having been called in to advise in a case of so-called tumour, which he saw was an aneurism, he pointed to a plaster. 'What is this?' he asked. 'A plaster!' 'Pooh!' he exclaimed, as he took it off and flung it aside. 'That was all very well,' said the doctor to him later; 'but your "Pooh!" took several guineas out of my pocket.'

Near Winterslow Hut, some seven miles north-east of Salisbury, a gentleman met with a serious accident to his ankle, for which the usual treatment then was amputation. Mr Davis, a surgeon of Andover, was summoned, set the parts, and then said, 'When you get well, you will probably have a stiff joint, and friends will tell you, "That comes of having a country doctor." So you had better send for a London surgeon to confirm or correct what I have done.' Abernethy, accordingly, was sent for immediately, and reached the place at two in the morning. After examining the limb very carefully, he said at last, 'I am come a long way to do nothing. I might pretend to do something; but as any avoidable movement of the limb must be harmful, I should only do mischief. You are in very good hands, and will do very well. You may have a stiff joint, but that is better than a wooden leg.' Then he took his fee of sixty guineas, and returned to town.

Not long afterwards a clergyman in the same locality was attacked with erysipelas in the head and arm. His alarmed family wrote to his brother in London, and asked him to request Abernethy to visit the patient. 'Who is attending your brother?' 'Mr Davis of Andover.' 'Well, I told him all I knew about surgery, and I *know* he has not forgotten it. You may be perfectly satisfied. It is not necessary for me to go.' With which remark he lost a fee of sixty guineas.

He strongly condemned the too common use of the knife by many of his fellow-practitioners. A workman having fallen from a scaffold near his house, several surgeons were hastily summoned, Abernethy among them. When he arrived he found the man on a mattress. He was suffering from a compound dislocation of the ankle-joint, which was completely exposed, the torn skin overlapping the edge of the bone. The parts having been adjusted and the skin drawn out of the wound, it looked really as if there were little the matter. 'Do you think I shall ever get well?' asked the man anxiously. 'But why not? Many of these cases do well.' 'But, sir,' remarked the man, 'they have sent for the instruments.' Not until then did Abernethy learn that two surgeons had already seen the patient, and had decided to amputate the foot. Though placed in a rather delicate position, he could not retire. When the surgeons returned they were surprised to see the man in some degree of comfort. Then, noticing Mr Abernethy, they inquired whether he could assure them the case would progress favourably. 'Certainly not,' said Abernethy. 'But should it not do well, you can still resort to amputation; so far, my reputation is pledged. Moreover, I assure you that no immediate mischief will ensue to endanger the man's life. You may,' he proceeded, in pre-Asquithian phrase, 'wait and see how he does. But as I am got rather into a scrape, you must allow me to manage the case in my own way.' So he put the limb in splints, varnished the plaster, and instructed the attendants to sponge constantly, in order to prevent any rise of temperature. He knew there were two holds on a patient's mind—hope and fear—and he made frequent use of both. Before leaving the man, he said to him, 'If you lie perfectly still you will do well; but if you move one jot you will do ill. That's all.' As the man made a good recovery, his limb was saved.

Dr Thomas Rees once called on Abernethy on behalf of a poor author, who greatly desired the surgeon's opinion, but, owing to the stories he had heard, was actually afraid to see him. 'Besides,' added the visitor, 'he is not able to pay you. He has been ill a long time, and earns a living as best he can.' 'Where does he live?' Dr Rees named a place two miles away. Abernethy at once ordered his carriage, visited the sick man of letters, and behaved most kindly towards him.

Abernethy became noted for the gentleness with which he examined cases of fracture and dislocation. His opinion was requested in a case of injury to a boy's elbow. The joint continued to be stiff, and, fearing lest it might remain so permanently, the doctor in attendance called in his famous colleague. Handling the arm very tenderly, Abernethy found everything in its natural place, the boy meanwhile suffering no pain. 'Now, my lad,' said the doctor, 'bend your arm a little, only just as far as to reach my finger, and not as far as that if it hurts you.' This was done duly, and the boy was next bidden bend it a little more on similar conditions,

and so on until, in about ten minutes, the arm had been completely bent. What had happened was plain. The boy was alarmed, and the muscles, growing responsive to his fear, kept the parts rigidly taut. Beyond this there was really nothing amiss.

People who harped upon Abernethy's rudeness never knew of his consideration for others. He had undertaken a serious operation in a case of Dr Barnett's, who was extremely anxious that all should pass off well. When the great surgeon arrived he went into the room where the operation was to be performed to see that everything was in order, the instruments handy, and so forth. 'I think I have all I shall need, Barnett,' said Abernethy. Then, after another look round, he added, 'But you have forgotten one thing.' Whereupon he threw a napkin over the instruments, remarking, 'It's bad enough for the patient to have to go through the operation; never let him see the terrible tools.'

Comedy and pathos alike informed a singular scene which Abernethy once witnessed in St Bartholomew's. As he was walking through the wards one day, at the head of his pupils, a poor Irishman leaped out of bed and flung himself at the surgeon's feet, pouring out all the time a flood of rude thanks, and pointing to and slapping his leg. 'That's the leg, yer honour!' he shouted. 'That's the leg, and yer honour's the bhoy to do it! May the heavens be yer bed! Long life to yer honour! Bad cess to the spalpeens who said yer honour would cut it off!' Paddy had, it seemed, entered the hospital some three months before with a diseased ankle, which the surgeons proposed to amputate. Abernethy, however, had insisted upon first trying rest and treatment, with the best results. When the patient got into bed again, Abernethy took advantage of the prevailing interest to review the case, with reference especially to the wisdom of constitutional treatment. Pat confirmed every statement emphatically. 'Bedad, an' that's thrue!' 'Divil a lie!' 'His honour's the great docthor!' were a few of his ejaculations; while at every allusion to the limb the blanket was cast aside and the leg thrust up in the air. 'That's the leg, be jabers! and a better one than the leg the gossoons wanted to cut off!' As Abernethy ended he stooped down to the patient, the laughter the incident had evoked not yet subsided, and earnestly said, 'I am glad your leg is doing well, but never kneel except to your Maker.'

He was once sent for to attend a captain in the army. The home was humble, and he thought his patient was in reduced circumstances. Really the officer was pretty well off, but lived frugally because he had honourably taken upon himself the burden of supporting some poor relations. This Abernethy was not aware of, and, under the impression of his client's poverty, he refused the proffered fee. But the captain was a gentleman, and begged the doctor not to be misled by appearances. Still trusting to his own observation, however, Abernethy withdrew towards the door. 'I insist upon your taking your fee,' cried the captain. 'Then, sir, I will not!' exclaimed the doctor as he left the room. Consequently the captain was obliged to call in another medical man, who, deceived as Abernethy had been, also declined the fee. 'Stay, sir, I must ask you to take it,' protested the patient in such a tone that the doctor felt it impossible to refuse. Then the captain told him of his experience with Abernethy.

But this was by no means the sole occasion when, like other folk, Abernethy jumped to a wrong conclusion. Called in to see a literary man whose face suggested heavy drinking, but who was really a dyspeptic, he gave great offence by his blunt speech. 'My stomach is out of order'—— the patient began. 'I see that by your nose,' gruffly broke in Abernethy, and the interview terminated in explosive wrath.

It pleased a seasoned fox-hunter to abuse Abernethy so roundly that he was asked why he was so bitter. 'Why,' explained the hunter, 'I no sooner entered the room than Mr Abernethy said, "I see you drink a good deal." Now,' added the patient in an injured tone, 'suppose I did, what on earth was that to him?'

Second thoughts often promptly undid the momentary irritation to which at first Abernethy yielded too easily. He was stepping into his carriage one day to visit a certain duke, who had sent for him in a hurry, when a stranger came forward, and said he would be very glad if Mr Abernethy would see Mr —— of Somers Town, a poor gentleman whom he had already visited and advised. 'I can't go now,' he answered with a touch of annoyance; 'I am going in haste to see the Duke of ——.' Then, closing the carriage door, he looked up at the coachman and added quietly, 'Somers Town.' His better nature had asserted itself within a few seconds.

It happened that a woman came into the hospital for an operation. Abernethy decided that she was not in a fit state, and sent her to one of the beds to nurse her strength. When her health was sufficiently improved, an early day was fixed for the operation. Then the 'dresser' informed Abernethy that she was about to leave. 'My good woman,' he remonstrated, 'what a fool you are to come here for operation, and just when we get you fit for it you want to go away!' Some one whispered to him that her father was dying, and she desired to see him. Darting an angry glance at the 'dresser,' the surgeon inquired why he had not been told so at once. Then, turning to the patient, he said very gently, 'You shall go out immediately, and shall come back when you please, and I will take every care of you.'

Frequently it was imperative to be plain-spoken. A gentleman who thought he might make up for temperance in drink by intemperance in food, and who had already suffered for his gluttony, sent for Abernethy again. The doctor saw that the merchant—for such he was—had been at his old tricks. 'What would you think, sir,' he asked, 'of a man who had made a fortune in business and then risked it all in imprudent speculation?' 'I should call him a great ass.' 'Nay, then,' answered Abernethy, 'thou art the man.'

As lecturer and teacher Abernethy shone supreme. He amazingly disliked the jargon of science. For his students' sake he could not help using it; but whenever he could, he gave a hard name its popular equivalent as well; thus he would speak of the pancreas 'or sweetbread,' cartilage 'or gristle,' and so on. He held that people were always interested in what was positive and precise, and he spoke less as if he were telling his hearers what he knew than what they did not know. And there was a total absence of any kind of display.

Many muscles in the neck have forbidding names, and when Abernethy had to describe them 'he used to chat a little; he called them the little muscles with the long names, but he would add that, after all, they were the best-named muscles in the body, because their names expressed their attachments. This gave him an excuse for referring to what he had just described, in the form of a narrative rather than a dry repetition. Then, with regard to one muscle that he wished particularly to impress, the name of which was longer than any of the others, he used to point it out as a striking feature in all statues, and then, repeating its attachments, and pointing to the sites which they occupied, say it was impossible to do so without having the image of the muscle before us.' This is the testimony of one of his students, Dr George Macilwain, who lived to become his biographer.

He had a happy knack of sympathising with a student's difficulties. 'If he were about to describe a bone or anything which he knew to be difficult, he would adopt a tone more like that in which a man would teach it to himself than describe it to others. For example, he would say, perhaps, "Ah! this is a queer-looking bone; it has a very odd shape, but I plainly perceive that one may divide it into two parts." Then, pointing with a probe to the division he proposed, he would begin, not so much to *describe* as to *find*, as if for the first time, the various parts of which he wished to teach the names and uses; the description being a kind of running accompaniment to his tracing of the bone, and in a tone as if half talking to himself and half to his audience.' But he demanded work and attention from the hearers. He once publicly rebuked a student indifferent to what was going on: 'Sir, if the lecture does not interest you, I must beg of you to walk out.'

Abernethy allowed scarcely anything to interfere with his lecture. At 2 P.M. by the clock his formula might be heard: 'Gentlemen, to-day,' &c. He was once seen in Smithfield just before two, smartly dressed and in a white waistcoat, making for the hospital. 'You are very gay to-day, sir!' 'Ah! one of my girls was married this morning.' 'I wish her every happiness. But you should have taken a day off in honour of the occasion, and not come to lecture.' 'Egad!' he exclaimed with a laugh, 'I came to lecture on the day *I* was married.'

Eager to attend his lectures, a gentleman from the country waited upon him to enter his name. In the course of conversation Abernethy discovered that his visitor doubted whether he could afford the fee, his income being an uncertain quantity. Thereupon the doctor gave him a perpetual ticket for all his lectures, and, what was singular, appeared to show him rather more attention than the rest of the students by inviting him to his house, and so forth.

In their practice he urged that doctors should explain the principle or reason for their treatment, with a view to gaining the intelligent co-operation of their patients. 'If a medical man,' he held, 'thinks he has done his duty when he has written a prescription, and a patient regards his as fulfilled when he has swallowed it, then both are deceived.'

Discussing the functions of the brain with Spurzheim, one of the founders of the so-called science of phrenology, Abernethy inquired where he placed the 'bump' of common-sense. 'There is no such bump,' was the answer; 'for common-sense depends on the equilibrium of the other organs.' This nicely adjusted balance of senses and organs explained why John Abernethy was a doctor distinguished above most as a physician of practical sagacity and common-sense.

TO NOTRE DAME AT NIGHT.

How many years since first thy Gothic form
Perfected stood upon a day of days,
Square-towered, buttressed! Neither time nor storm
Has claimed thee victim; rather Nature pays
Thee homage that so delicately strong
Arisest from the formlessness of stone
Unshaped by her. What mystery of song
Weft in thy subtle massiveness has grown
Into harmonic beauty? for it seems
That music haunts thee when the midnight moon
Plays with thy shadows while the river dreams,
Or when on clouded eves the breezes croon
A lullaby among thy tracery.
All art is thine; yet he whose brain conceived
Thy germ, whose hand designed thee lovingly,
Is gone. It matters not, for he achieved,
And thou remainest. See, thy tapered spire
Points to the arching neavens slenderly;
Mute prophecy, for thy forgotten sire
Has found in thee his immortality.

Chambers's Journal
SEVENTH SERIES

THE HEART OF THINGS.

By HENRY LEACH.

LONDON, *Yesterday.*

IT happens to be ten years this month since first the present writer was privileged, under the title of 'The Heart of Things,' to offer in this time-honoured *Journal* such thoughts and morsels of information as came to him in the city where he mostly dwells. He had written for the *Journal* many times before; but it is exactly ten years since he was permitted to revive, with some essential change of manner and method, a feature that had once been conducted by the famous novelist the late James Payn. Ten years make but a speck in time. Despite all the happiness and pain their passing causes, they are less than a moment in eternity. In the history of a *Journal* that itself is almost centenarian, they are but a short period. Yet in personal circumstance, above all for the associations they have produced, they make a period of such consequence that at this moment one cannot pass it by unobserved. Ten years ago, at the beginning, there was occasion to make a note in these pages upon our old river Thames, whose bridges then were widening once again. It is the Thames, after all, that makes of London the heart of the world, the old stream upon which the wild and ancient forerunners of our race paddled themselves about in coracles, creeping up its reedy creeks for their fowling and their rude pursuit of that commerce which so developed, in later ages, to the glory of the One Square Mile. Ten years ago, when changes were thought of, who could have imagined the river of these warring days, or pictured its bridges blotted out in darkness, its banks as still at nights as they were more than a hundred years ago? For the contemplation of great change history need no longer wait for the coming of that New Zealander of Macaulay who should stand on London Bridge and marvel as he pondered on a vast upheaval. The New Zealanders are here in their tens of thousands now; they, with their honest eyes and their loyal hearts, have seen and felt something of wonder and empire on London Bridge across the Thames. And they have felt something of the new beginning. The truth is that in this short period, because of the war, but not the war only, the world has changed far more than we are apt to realise. It occurred to me in this connection that it would be of interest and consequence to look into the files of the great daily newspapers for that very week in February ten years ago when this series of notes was first begun. The result was interesting indeed. There were some facts that leapt like fire from these already musty-smelling pages, stored away with the journals of our ancestors in the dusty cases, rarely to be disturbed. You shall see.

* * *

Naturally you would begin such a perusal gently. You might, for example, look at the theatres, for the amusements of the people are significant. The impression that such an examination made was of a period of flatness. One was happy to see that Sir George Alexander was giving one of the best of the Pinero plays, *His House in Order*, at the St James's; and the farce *When Knights were Bold* was doing well. Mr Fred Terry and Miss Julia Neilson were stirring suburbia's romantic heart with *The Scarlet Pimpernel;* and for Shakespeare there was *Antony and Cleopatra*, with all the colour and ornament that His Majesty's could give to it. A famous conjurer was mystifying the people by 'producing a living woman from his side,' the wrestler Hackenschmidt was at Olympia, and so on. Not much of it of any account. But one thing does please us in this contemplation, and it is that there was no 'revue' in London ten years ago; so sometime there may be none again. For light music at the theatre there was that sparkling *Miss Hook of Holland*, one of the best, as it was one of the last, of the sweet and reasonable musical comedies. It will be something when our producers and audiences grope their way back to such simple beauties. For the present it does not appear that there are enough theatres in London to contain all the revues that the managers would place before the people. In this matter at all events there is a good point scored to 1907. Odd little things were happening then, and in the journals they looked like mountains of occurrence. You may remember some of them. It was not the newspapers only that made them seem so big; you yourself spoke of them and discussed them much. You considered they were of consequence. For example, one of the strongest and most persistent features in the daily newspapers of that first week in February, being

 [*All Rights Reserved.*]

granted many columns by the best and the most serious, was discussion of the Music Hall Strike, as it was called. There were differences of opinion, you will recall, between the more or less minor comedians and their employers, because, it appeared, the 'stars' had such enormous salaries that the humbler mortals found their lot specially difficult in consequence. Other points were involved, but that is the lingering impression of the whole affair. The comedians insisted upon their right to live, and, furthermore, with the assistance of the trade union system, just then showing itself more indefatigable than ever, their right to strike. They struck. The halls were without their proper turns. The managers were surly and defiant, the people were petulant and despairing, and the comedians made speeches in the public places. It seemed that there was a great and portentous upheaval in the social system; but, as always happens, the excitement faded, the people grew tired of the quarrel between managers and comedians, and then the feud was settled, and the comedians went back to the stage. Honour was satisfied in every quarter. In looking through the history of this affair I am interested in the remark of one of the leaders in the strike. He exclaimed to his audience, amid cheering, that if they wanted peace they must be prepared for war—they, the comedians. Alas! we have heard it said since then. It is a fateful phrase. Some harassing doubts about the philosophy it embraces are creeping into the minds of men in these sad days of disillusion. But, as you see, at that time it was a maxim for constant and comfortable application to many circumstances, and the comedians made use of it. Another matter which was given liberal space in the papers of that week, a topic which, indeed, on one or two days was the leading feature, was the famous trial of Harry Thaw, the wealthy New York murderer. What a trial! How pathetic was the story it told of human weakness! But the majority of the people here, one fears, read the tale of that trial for its sordid details, and not as a bitter satire upon a great people. The British reader desired as much Thaw Trial as he could obtain. It is not a pleasant reflection.

* * *

At the same time, and by a coincidence, one sees that one of the greatest foreign affairs of that very week was a scare of war between the United States and Japan. There were many difficulties and unpleasantnesses about that time; the nerves of these two nations (new to the greater world of power) that faced each other across the Pacific were in a trembling state. In such cases a veritable danger of war is often created by sheer nervousness, even though the circumstances of the times may not justify the original anxiety. Anything might happen at such a time, and both Japan and America were saying irritating things. Do you recall a naval officer of the name of Hobson, the hero of the Cuban war, whom all the women of America wished to kiss because of his exploit? Hobson was listened to in many matters for years afterwards, for he had done well by his country, although there might be little connection between his act of heroism and the affairs with which he was subsequently associated. Now at this tense crisis out came Captain Hobson to say that he himself had seen a copy of an ultimatum from Japan declaring that Japanese children must be admitted to the San Francisco schools, or the United States must take the consequences! But the State Department declared positively that no such ultimatum had been received or was in existence. It was insisted that the noble Hobson was mistaken. Perhaps he had dreamt of such an ultimatum. So this tumult died away. But from the same spring of jealousy and fear that caused it there have arisen other scares since then, and more will come anon. The menace, whatever it may be, is an increasing thing, and America has cause to think in these days. Her life is not a rosy hour, as is imagined by those who do not understand. And in the same newspaper in which we read of this scare we find the speeches on Anglo-Saxon unity made by ambassadors and others at a great banquet in London of the Pilgrims' Society. They were fine speeches the sentiments were noble; it was declared with impassioned vehemence that blood is thicker than water, as always it shall be shown. And surely blood is thicker than water. In the same newspaper you will see that Goschen is just dead. Who does not remember the great Lord Goschen who, as Chancellor of the Exchequer, busied himself with reforms in our national finance, and took the old Consols most particularly under his mantle of gold and black? But until this moment I had not realised that he was descended from a German publishing family. That was a fact in biography that was passed over without reflection ten years back. However, Lord Goschen, who was the first man to speak of Britain's 'splendid isolation,' was no worse for that. He was a great Chancellor in the days when it was a great thing to be Chancellor, and statesmen held the office with pride and persistence. For the Chancellor has a task of vaster consequence and it seems, perhaps, that it is too big a task for any man. In our imagination now we see committees and cabinets and regiments of permanent officials like small black devils brewing tax poisons for an unhappy people in the regions below and behind the Chancellor's own apartments. So the Chancellor himself matters more than when Goschen lived. Again, as one ruminates among these old sheets, how tremendous seems the significance of much that was happening then, small as may have been the events themselves, and how harshly does time in this short space seem to have made its claims upon them! It is reported on this day

years back that Sir Oliver Lodge was lecturing at Whitefield's Tabernacle on the subject of the Ascent and Fall of Man, and that he spoke hopefully. He said: 'This is the most hopeful time. We are beginning to realise our responsibility. People are beginning to take control of themselves. They will make mistakes, but if they will only learn to act wisely, and do the best they can, the race will advance faster than ever before, and we don't know what we shall be. There will be no end to our power and our responsibility.' Here are words for thought.

* * *

Sometimes I have thought, and may have said, that if a real journalist—to whom the most necessary gifts are the news-sense and imagination, which includes the application of surrounding circumstance to a central fact—could take one copy of an old newspaper of any date and age, he would have there sufficient material to occupy his busy pen for the remainder of his life; and his son, if so unwise as to become a writer too, could continue effectively with the same fine story. Time and history breed such wonders in that old soil of past events! The trifling incident of to-day may be as a flaming brand of significance ten years hence. One must needs feel deeply the truth of this when looking upon such a newspaper as was in my study ten years back. The selection clearly has been made only by special occasion and circumstance, and personal choice has nothing to do with it. Yet one feels that if all the files of all newspapers had been searched from their beginnings, nothing more burdened with heavy significance, with morals, with warnings, and with writings on the wall, could ever have been discovered than the journals of that particular week. I have left to the last the item of news which, in spite of Thaw, and the comedians, and the anxieties of America, was made the big thing that week. It was given pride of place on the chief centre page. If I show you first what were the headlines you will not need to be told to look carefully upon it. Those headlines in one of the greatest London newspapers were 'Great Victory of the Kaiser. Socialist Rout. Midnight Speech by his Majesty. The Empress present. Frantic Enthusiasm of the People.' What was this, reported in the newspapers on the morning of 7th February, the telegrams being sent from Berlin on the night of the 5th? It was nothing less than the first beginning of the last phase of the new German movement which is completed by the present war. These horrors of to-day were virtually, if vaguely, determined then. For some time previously it had seemed that Socialism was undermining Imperial Germany. The number of Socialists, or 'Reds,' returned to the Reichstag at previous elections had increased most ominously for the Imperial party. They were a threat and a defiance to the Kaiser group, with all its ambitions of expansion by militarism and force of arms. These Socialists were for peace and sweet reason, and the belief that Germany could accomplish her mission by more humane methods than those of the mailed fist and the unsheathed sword. The Kaiser and his men, especially the Chancellor, Prince Bülow, saw the menace to their methods and their ideals. They risked all in a throw. They challenged the Socialists, who seemed to be so fast increasing in power. They made a political campaign. They appealed earnestly, and with all the political machinery possible, to the people, stirred up their inferior instincts, dazzled them with a vision of Germany overlording the world. And, alas for Germany! that appeal won them from reason and human good. Kaiserism conquered then. The Socialist advance was not only checked; its vote in the Parliament was cut down by half, and Germany was settled upon her militarist destiny with all its fateful consequences.

* * *

The people were maddened by the vision that had grown up in their minds, and upon the result of the elections being made known they ran first to the Chancellor's house, and then, at midnight, to the palace of the Kaiser. The Chancellor made a speech to them, saying that Germany had been placed in the saddle, and the world would see how well she could ride. It was nearly sixty years since a prince had spoken to the people from the palace window; but now, the mob insisting and shrieking the '*Deutschland über alles*,' the Kaiser, with the Empress beside him, appeared in the night and spoke to them. I must give you in full what he said then; it is of consequence. He said: 'I thank you, gentlemen, with my whole heart, for the fair homage which you have offered us. It springs from the feeling that you are proud that you have done your duty toward the Fatherland. The expression used by our Chancellor is true; Germany can ride if it will. I am of rock-firm conviction that if, as hitherto, all classes, high and low, of all denominations, stand united together, then we shall not only ride, but ride down everything that opposes itself to us. And now I will close with the phrase that our great poet Kleist has uttered in his *Prinz von Homburg*, where old Kottwitz says to the Great Elector something like this: "Why trouble about rules for beating the enemy so long as he is beaten? We have now learnt the art of conquering him, and we are full of ardour to put it to further practice." Therefore this must not be a merely momentary passing patriotic wave, but a rock-firm determination to continue farther in this path.' There was a mighty shout, and the roaring song of Germany at the end of this speech. In London the leader-writers set it down in comment that whatever else might be said, this much must be admitted by friend and foe, that from the first moment of his reign up till then

the Kaiser had scorned the cowardice that democracy never forgives; he had shown the courage that he worshipped, he had secured by confident and decisive leadership the national mandate he had won, and the result was likely to have its unmistakable influence upon the prosperity and power of that great people whose ideal was 'the strong man armed.' But in a day or two most of our people seemed to have dismissed the subject from their minds. They may think upon it now. The next time the Kaiser spoke from the balcony of his palace was on the night when war was declared. I must add to this a note upon another act of that same week, from which note a thousand thoughts may flow. While the Kaiser and his Prussians were exulting and dreaming of Germany riding o'er all the world King Edward and his queen were in Paris, and our wise king then was strengthening the links of the Entente chain. Paris was joyous in his presence, and there was the feeling on two sides of the English Channel that this kind of intimacy and understanding was very good for both of us.

* * *

This glance at the old newspapers has been worth the while. If the indulgence is permitted, one would like to close upon the personal note again, for after all, with ten years' even continuity a sense of community is established in particular pages as cannot be done in other ways. Always for such writing one's mind is directed, as now, from the heart of London, within sight of our ancient Abbey; but of necessity, in the case of one who likes to look about and wander, the preparation has been often made at far-distant places, and sometimes these notes have been set out in strange and difficult circumstances. They have been written in Paris, Rome, Madrid, New York, and other far-off cities. I have read my proofs in the great library at Washington, at a railroad depot in Canada, and in the shadow of the old cathedral at Toledo, in Spain. There is a happy complement to such vagabonding work as this, and it is a great remembrance and joy for all time. Hardly a month goes by but letters come to me from readers unknown, but friends for all that, from all parts of the world. I have had them frequently from every continent. In one week last summer there came one from Australia, one from New Zealand, another from South Africa, and a fourth from Canada. No question of modesty can hinder any writer from mentioning such a wonderful circumstance as this, for the pride of his *Journal*, and something even for himself. I had intended this month to quote from these letters; but they fill a large case, and the task would be too great. They are precious. Sometimes they are critical, often they are suggestive, and nearly always kindly. Less than a year ago I received from a gunner in the Royal Field Artillery at the front a letter having reference to something written about the famous Earl of Chesterfield, and asking questions concerning the authorship of certain books the gunner possessed. He wished to know the answers while he was there with the roaring guns. Thoughts of books—and the roar of guns! Letters upon which remembrance often returns with greatest pleasure are one or two that came, spontaneously like all the rest, some four or five years ago, from a British officer stationed with the Military Police, the Goorkhas, at a lonely frontier outpost in Upper Burma. He told me some of the wonderful activities of their life out there, and a kindly human inspiration moved him at the close of his letter to say he was a F.Z.S., and to enclose two tickets for the Zoo in London in case I knew a little child who would like to go there one day with me. I was able to tell him later that when a little girl with silvery hair had looked upon tigers that came from India, the lions, and other handsome beasts, she was made to think of the Captain Stuart away in the lonely Burmese hills who made her happy for an afternoon. I remember only one correspondent writing to me in bitter complaint, and I have often wondered at his grumbling. I could not answer him. I had been writing years ago upon some of the old beauties of Biblical language, and specially upon the Psalms of David. I had said that even one who had nothing to do with Christianity must feel the beauty and the majesty of that sweet and simple diction. The reader wrote furiously to say that it was wrong to break in with such a controversial matter. Controversial! I cannot understand. 'He maketh me to lie down in green pastures; he leadeth me beside the still waters. He restoreth my soul.' The music of language has no finer phrases.

THE DEFINITE OBJECT.

CHAPTER X.—TELLS HOW MR RAVENSLEE WENT INTO TRADE.

IT was a week later, and Mr Ravenslee leaned from the window of his room observing the view, which chiefly consisted of dingy brick walls and dingier windows, swaying vistas of clothes in various stages of dampness, clothes that fluttered from many lines stretched across the court from window to window, at different altitudes; for to-day it had been washing-day in Mulligan's, also the evening was warm. So Mr Ravenslee lounged and smoked and gazed upon the many garments, viewing them with eyes of reverie. Garments these, of every size

and hue and shape and of either sex, garments that writhed and contorted themselves in fantastic dances when the soft wind gently stirred them—a small, cool wind which, wafting across the river from the green New Jersey shore, breathed faintly of pine-woods. He was yet in absorbed contemplation of the aerial gambols of these many garments when to him came Mrs Trapes, clutching a hot iron in her hand.

'Mr Geoffrey, what'll you eat for supper?' she demanded.

'Mrs Trapes, what do you suppose I'm worthy of?'

'How about a lovely piece o' liver?'

'Liver!' he repeated, rubbing a square, smooth-shaven chin. 'H'm! liver sounds a trifle clammy, doesn't it? Clammy and cold, Mrs Trapes?'

'Cold!' said she, staring; 'cold!—of course not. It would be nice an' hot, with thick gravy an' a tater or so. An' as for clammy, whoever heard o' liver as wasn't? Calf's liver, mind! They can't put me off with sheep's; no, siree! Skudder's young man tried to once, he did so.'

'Foolish, foolhardy young man!' murmured Ravenslee.

'Mr Geoffrey,' sighed Mrs Trapes, and her elbows were particularly needle-like, 'I jest took that piece o' sheep's liver an' wrapped it round that young man's face.'

'Unhappy young man!' murmured Mr Ravenslee.

'Ye see, Mr Geoffrey, though a widder, an' therefore 'lorn, I ain't to be trod on in the matter o' livers or anythin' else.'

'I'm sure of it, Mrs Trapes.'

'But if you don't kind o' fancy liver, how about sassiges? Sassiges is tasty an' fillin', an' cheap. What d'ye say to sassiges?'

'Sausages!' answered Mr Ravenslee, shaking a grave head. 'Sausages demand such unbounded faith in the—er—sausagee, or should it be sausageor?'

'Oh, well, a chop cut thick an' with a kidney in it? What d'ye say to a chop now?'

'Yes, a chop in an hour, Mrs Trapes, or say two hours, will be most welcome. Are you very busy?'

'Washin''s all done; but there's a lot o' your shirts waitin' to be ironed, an' me here lettin' me iron get cold.'

'Oh, never mind the shirts, Mrs Trapes. Pray sit down; I need your counsel and advice.'

'But me iron?'

'Give it to me. There!' and Mr Ravenslee deposited it outside on the fire-escape.

'Now, Mrs Trapes,' said he, 'first of all I must find work. "Man is born to labour as the sparks fly upward," you know.'

'Born to trouble, you mean,' she corrected.

'Precisely,' he nodded. 'Work is trouble and trouble is work; at least I know a good many people who think so.'

'More fools them,' quoth Mrs Trapes, folding her arms.

'My own idea exactly,' he answered, lazily tapping out his pipe on the window-sill.

'I ain't noticed you sweatin' none lately,' quoth Mrs Trapes sarcastically.

'Alas, no! Mrs Trapes, there being no wherefore to call forth the aforesaid—er—moisture. Still, "man is as grass that withereth" unless he "goeth forth unto his labour."'

'An' quite right too,' nodded Mrs Trapes. 'If I had my way I'd make 'em all work.'

'That would be rather hard on our legislators and Fifth Avenue parsons, wouldn't it? Anyway, I want work, that's sure.'

'Ye mean as your money's all gone?'

'Very nearly,' sighed Mr Ravenslee with a suitable air of dejection. And he did it so well that Mrs Trapes, viewing him askance, frowned, bit her lip, wriggled her elbows, and finally spoke. 'Are ye up against it good, Mr Geoffrey?'

'I am.'

'Well,' said she, frowning down at the vivid-coloured hearthrug, 'I got twenty-five dollars put away as I've pinched and scrinched to save; but, if you want the loan of 'em, you can have 'em and welcome.'

Her lodger was silent; indeed, he was so long in answering that at last Mrs Trapes looked up, to find him regarding her with a very strange expression. 'And you will lend me your savings?' he asked softly.

'Sure I will.' And she would have risen then and there but that he stayed her.

(Continued on page 151.)

THE MANUFACTURE OF ARMOUR-PLATE.

By 'FERRUM.'

THE manufacture of armour-plate has developed considerably in recent years, and in no branch of the steel industry is there greater opportunity for engineering and mechanical skill, coupled with metallurgical knowledge, than in the operations of forging and rolling, followed by the exact heat treatment essential to produce the almost conflicting properties necessary in modern armour.

The plate must be hard, glass-hard, to resist penetration by heavy projectiles moving at tremendous velocities, yet tough and fibrous enough to take up the momentum without cracking or distortion. Mechanically, then, the

plate must have an extremely hard surface and a fibrous backing. These requirements were attained, in part, by the old 'compound armour.' Molten steel was poured on to a wrought-iron plate and cooled. The slab was then reheated, forged, and rolled to the required dimensions; if the operations were successfully carried out, the line of demarcation was scarcely visible.

Recently a modification of this process was introduced to cheapen and render less tedious the production of armour. A layer of hard steel was poured into a cooled mould, the underside quickly setting; on to the still fluid or pasty surface a thicker layer of soft steel was poured. By careful manipulation the union of the surfaces was almost complete, and it was impossible to detect the break in composition on viewing the fractured section. This method of manufacture was undoubtedly an improvement on the old compound method.

The increasing size, velocity, and hardness of modern armour-piercing projectiles have necessitated the introduction of the modern armour. The process of manufacture essentially consists in case-hardening to a depth of about two inches the surface of a homogeneous tough nickel-chrome steel. Special air, or self-hardening nickel, and more complex steels are used for lighter armour, gun-shields, and cast armoured structures.

The steel is made in Siemens furnaces, and carefully cast into ingots up to eighty tons in weight; these ingots are then slabbed under powerful hydraulic presses (eighteen thousand tons) or rolled direct to the required dimensions, depending on the power of the mills and appliances. During the rolling operation, which lasts about an hour, the slab is reversed and inverted to attain uniformity of working, and scale is removed by wood-faggots and water-jets. After rolling, the plate is usually quenched.

The next operation is that of case-hardening, and in this two plates are put face to face, separated by a layer of the carburising reagent if it be solid, or if gaseous hydrocarbons be used, the plates are slightly separated, to allow free passage for the hardening gases, by bricks, arranged in rows. The plates are maintained at redness in a car furnace for three weeks, and withdrawn after the hardening carbon has penetrated to the required depth. The plates are thus carburised and so made capable of being hardened, but they are not yet actually hard. At this stage all holes are drilled and plugged, and any bending or machining necessary is carried out.

From this point onwards the treatments differ. Some makers, especially the Continental ones, insist on heating and quenching in oil or water to remove any coarse structure that may have been formed during the long annealing whilst carburising. The next essential operation is that of 'hardening,' and this is usually carried out in one of two ways. Either the plate is uniformly heated to the hardening temperature and quenched by series of water-jets playing on the upper surface with sufficient force to prevent the formation of steam, or by a process known as 'differential quenching,' by which the carburised surface is heated to a temperature from which it will harden, and the underside kept well below, so attaining a gradual fall in temperature from the top to the bottom. The whole plate is then immersed in water, the hotter surface alone being hardened, whilst the back is toughened. Further mechanical operations can only be carried out by grinding or cutting with oxy-acetylene, as the plate has now undergone the treatments conferring maximum hardness.

In *résumé*, it will be noted that there are three distinct operations in modern methods of manufacture—the mechanical working of the plate to the required dimensions; the carburisation of the surface; quenching the carburised surface to harden it. These operations call for exact manipulation, supervision, and control; for the skill of the engineer and metallurgist may be put to the severest tests, not of the laboratory or the testing-machine, but out in the 'gray northern mists,' when failure of a unit may imperil the safety and cohesion of the whole.

'MOHAMMED'S COFFIN.'

CHAPTER V.

NOW, uncommunicative as in most matters Edwin was, he had said enough, at one time and another, to convey to the minds of the sojourners at the Demesne that Tom Coxeter was a great man. Tom it was, they knew, whose resource and energy had smoothed away difficulties in the early days of the *estancia;* Tom whose liveliness and plausibility had promoted friendly relations with the Spaniards. Then it was noticeable, also, that in discussions or arguments with the Squire, if Edwin could support his own contention by a quotation from Tom, he regarded *that* as final. In his estimation, evidently, there was no appeal from the pronouncements of Coxeter.

Of a man thus heralded, it could not be but that the Squire and the ladies should await the arrival with curiosity. Yet it is not too much to say that, when at last he appeared, the first feelings he awakened were disappointment and dislike. Of that repose which is held to mark the higher breeding, Tom was destitute. He entered the house, if not like a tornado, at least like a sudden squall. He talked too much, and laughed too loud. As for what strikes the eye—

though of commanding stature, he was large-boned rather than finely built, and he wore whiskers. Even whilst laughing at his jokes, demure Ruth Davenport, thinking her own thoughts, conceived that, stimulating as he was at first, such a man might in time become tiresome.

Meantime, within herself, Mrs Fairfield was wondering if he was quite a gentleman; whilst she evidently thought it desirable to explain to each of her girl-guests that he had been a long time abroad.

Squire Fairfield was inclined to write him down 'a bit presuming.' 'I shall not be surprised,' he confided to his wife, 'if he should want to show us how things ought to be done, or to break in on our routine.'

'If he should,' replied Mrs Fairfield anxiously, 'we must tolerate it for Edwin's sake! After all, it is not likely to be for much longer than a week at most.'

Upon the whole, the graceful languor and impassivity of Selma seemed to agree best with Tom Coxeter's great animation. More than once he had singled her out as the person to be directly appealed to; and as Selma had a readier wit than you might have given her credit for, she was always equal to the occasion. And so, more than once, she quietly turned the laugh against him, which pleased every one, but him most of all. She, at least, did not seem to realise a possibility of his becoming 'tiresome.'

Meantime Edwin came quite out of his shell, and more than once grew almost eloquent in the praise of his friend. 'He 's the most successful man I know, dad, in getting his own way,' he was heard to say emphatically. And, again, 'What we should have done without him in those first days, I shouldn't like to have to tell you!'

'He does seem a capable, go-ahead sort of fellow, Ned,' replied the Squire, by way of concession, salving his conscience with the afterthought that they would probably like him better when they came to 'get the hang of him.'

And so, indeed, it happened. Unlike most boisterous men, Tom Coxeter was not boisterous in season and out; and before many days were gone by, the Squire was fain to acknowledge that he had excellent good sense; whilst Mrs Fairfield credited him with depth and strength of purpose, and was glad to realise that Edwin had so firm a friend to lean on. If I must own the truth, Tom himself had been a little flustered on arriving at the Demesne; for, notwithstanding his assurance, and the fact that he was a great admirer of the fair, he had got rather out of the habit of associating with nice girls. Hence he had been betrayed into slightly overdoing his own mannerisms. Even Edwin had noticed that, and had taken advantage of being alone with his chum to reassure him.

'You may take my word for it, old boy, that they are the right sort—no nonsense about either of them.'

Tom's face was in the wash-basin at the moment, but that didn't prevent his hearing. None the less did he answer, 'Just say that again, Ned, will you?' When Edwin had complied, he would have liked to ask, lightly, yet significantly, 'No fear of my *poaching*—eh, old chap?'

But experience of life had taught him the value of reserve; so he remained silent, brushing his thick hair vigorously. Tom was much too busy a man, had too many irons in the fire, to have time to pay more than flying visits. On the fifth day after his arrival at the Demesne he was due in Belfast, to meet a certain shipping magnate. He was sorry to go, and the Fairfields were sorry to lose him; but such an engagement could not possibly be postponed.

'Why not come back, then, later on, to finish your visit?' urged hospitable Mrs Fairfield. She spoke in perfectly good faith, and yet scarcely expecting to be taken at her word.

'I should love to do that,' replied the parting guest, without a moment's hesitation. 'Let me see—the boat-train leaves Fleetwood'—— And he proceeded to consult a pocket time-table.

In brief, it was settled that he was to be back on Thursday. This was on Tuesday afternoon, so that a large amount of travelling would have to be accomplished against time. But Tom seemed to think nothing of that. He calculated to have three hours at the Belfast Métropole, and that would be enough.

Upon his departure from the Demesne there succeeded a flatness. Everybody missed him, and they now realised that during his brief sojourn among them he had been the life and soul of the party. More than that, though antecedent conditions were exactly reproduced, the old pleasant life of a week before seemed somehow to have lost its savour.

Ever watchful, Mrs Fairfield sustained little short of a shock when she came upon Edwin on Wednesday forenoon playing billiards by himself. The tripartite alliance appeared to have been broken up—dissolved; and what new combinations might be imminent Heaven alone knew! The day was wet, and in a cosy corner of the drawing-room were seated Ruth and Selma, working and exchanging confidences.

'Pray don't let me disturb you,' said the Squiress politely when she saw how the land lay.

'Not at all, dear Mrs Fairfield,' answered Ruth, rising to her feet. 'We were merely discussing Mr Coxeter.'

Selma yawned. 'Ah, yes, poor Mr Coxeter! I fear that, unless the weather changes, he will have a disagreeable crossing.'

But when she was in her own room once more, Mrs Fairfield's mood changed. Indignation rose in her breast, and the words came to her lips, 'Disloyal! to cut out his friend. I heartily wish I hadn't asked him back. Oh dear, oh dear! another mistake—it is just my luck!'

What would not the Squire have given to over-

hear this little soliloquy? And yet, if the good lady had been called upon to say who had cut out whom with whom, she would have been puzzled!

Slightly creased, perhaps, but with energy unabated by his two nights out of bed, Tom duly reappeared. The result of his mission had to be communicated to Edwin, who accordingly led the way to the privacy of the smoking-room. To his surprise, however, Coxeter began, not by supplying information, but by demanding it. In a man of whose life the adage *business first* had always been the Alpha and Omega, this was, to say the least of it, unexpected.

'Well, and how has everything been going on since I left?' he asked, with interest, just as if there had been no shipping magnate in question or great issues in suspense.

'Oh, very much as usual,' answered Edwin, with indifference. 'The mater had one of her headaches yesterday. But what about the concession?'

'I believe I have got that fixed up all right—the boss was nothing like so awkward as you had anticipated.'

'Ha! I guess that was your clever management.'

'Well, I don't say no—but I will give you details after dinner. Your news first. What have the girls been doing?'

For the first and perhaps only time in their acquaintance, Edwin felt, when he heard this question, that he was the knowing one of the twain. He had actually to avert his face to conceal the meaning smile which flitted over it. Many there are who, in his place, would have made this an occasion for banter. Not so he. Perhaps his slightly exaggerated respect for Tom's abilities acted as one restrainer. But there were others too.

So, giving his mind to the subject, he embarked on a conscientious reply to his friend's question. 'Well, you know, it rained pretty nearly all yesterday. The mater said the damp made it chilly; so she had a fire lighted in the hall, and the girls sat over it.'

'And you with 'em.'

'No, you're out there. I looked in on them once or twice, in passing, that was all.'

'What were they about?'

'Selma—that is, Miss Durell'——

'I know' (impatiently).

'Selma was laying the foundations of a waistcoat she was going to work. She had never made one before, and Ruth, who had made several, said she was making it too large. They insisted on trying it on me, and it was *much* too large. It would have fitted you, old chap! But Selma, who likes to have her own way—I dare say you have noticed that'——

'Indeed, I have not. I should have described her as most ready to give way to the wishes of others.'

'Well, at any rate, Selma stuck to her point, saying that it was always easier to cut a bit off than to add—— But I say, Tom, aren't we playing it rather low down? You won't thank me for this twaddle.'

Coxeter answered, inconsequently, 'This is a jolly comfortable chair, Edwin! I believe I could do forty winks here before time to dress for dinner. Wake me, will you, at the half-hour?'

Edwin agreed, and turned over the pages of a magazine, whilst his guest, as he believed, slumbered.

But presently Coxeter spoke. 'I have been thinking precious hard the last few days,' he said solemnly.

'Ah! I was afraid that concession would cost you no end of bother.'

'Confound the concession! We have always been good friends, Edwin.'

Young Fairfield nodded cordial assent. 'The very best.'

'Then I want you to tell me, as a friend, for you know her better than I—do you think I have any chance?'

All in a moment, as it were, the atmosphere of the smoking-room was grown tense. Edwin Fairfield beheld his friend in an aspect, and in a relation to himself, which he had never hitherto conceived of as possible. Tom was positively hanging on his lips. To pretend to misunderstand him would have been affectation. Yet there was one point which was not clear.

'Chance with whom—with which of 'em?' he asked, with dry lips, the situation being so unaccustomed, so impressing him.

Not for the first time in their acquaintance, Tom rebelled against his friend's dullness. 'Which of 'em?' (with the most consummate disdain). 'As if any man in his senses could have eyes for little Miss Davenport, when—Selma'—— Here, under stress of strong emotion, his voice broke off.

Simultaneously Edwin winced—winced, but a moment later felt immeasurable relief. The situation, hitherto so perplexing, had begun to clear.

And what was thus begun continued. Grass will grow whilst we are asleep; and though Selma and Coxeter had been mere acquaintances when they had parted on the Tuesday, it was not very difficult, on seeing them together now, to discern that they were lovers. In cases such as theirs, a little separation will sometimes work wonders.

It had been after separation only that they had realised how much they were to each other. That Edwin's sight was not of the sharpest will be no news to any one. But having been taken into Tom's confidence, he was now in a position to perceive a significance in many a word and look which escaped other members of the party. And as he did so, 'Mohammed's Coffin,' which had remained so long suspended, in a state of rest, determined by two equal and opposite attractions, began at last to move.

And so that evening, whilst the old Squire

dozed, whilst Mrs Fairfield palpitated and deliberately effaced herself, whilst Tom modulated his stentor-voice to a murmur, to which Selma listened looking upon the ground; whilst all this was taking place in the shaded light of the drawing-room, after dinner, Ruth's bird-like soprano pealed clearer and more flexible than ever, and Edwin simply surpassed himself in the character of sympathetic listener and turner of music-leaves.

When the dull Squire at last closed *Baily's Magazine*, and asked his wife if she intended sitting up all night, there were four at least of the company who doubted the evidence of the clock. Yet there were the hands pointing unmistakably to ten minutes to eleven!

There was the usual business with bedroom candlesticks, hot and cold drinks for the ladies, wishing of 'Good-nights;' and then Tom and Edwin rushed upstairs to change their coats, for a final pipe with the Squire in the smoking-room.

No keenness of vision was required to see that Tom was simply suffocating with suppressed information. 'My dear boy,' he burst out,' congratulate me—I 'm the happiest man in Britain!'

Possibly Edwin scarcely rose to the full height of the occasion. I believe that male confidants rarely do. Besides, he seemed to be a little preoccupied.

'Oh, she consents, does she?' was his reply. 'You have not been long about it! Well, my dear old boy, I do congratulate you. But what about the *estancia?* What about "papa's" consent?'

'I am to see Mr Durell to-morrow afternoon,' replied the happy man, reverting to the business manner which had become his second-nature. 'Selma goes home in the forenoon to prepare him.'

'I rather fear there may be difficulty,' continued Edwin thoughtfully. 'I have heard that old Durell has rather lofty views for his girl, who, you know, is an only child and a bit of an heiress. If I were you, dear boy, I would not let my feelings carry me away in the meantime. No doubt the *estancia* is all very well and very romantic; but there ain't much romance about old Durell, I 'm telling you.'

'Why, you old wet blanket! of course, Miss Durell is making a huge sacrifice; we all know that. But she and I have been into things in cold blood already, and she tells me that she has never known her father to hold out against her wishes where her happiness was really involved. Tell you what, Ned, you ought to follow suit.'

Edwin looked as if he thought the advice was by no means wanting in good sense. But he answered nothing. And with a hand upon each other's shoulder, the two young men hurried downstairs to join the Squire.

And now, reader, my story is told. For I have never been one who cared to insist upon what may easily be guessed. It is the solution of the crux that interests, not the elaboration of the same.

Selma Durell had not overestimated her influence with her parent. How she worked it I do not undertake to say; but, without pretending to be highly pleased, her father was brought to the condition of being willing to make the best of things. And that was all she cared about at present. It may be that, with feminine insight, she had already realised how much he and Tom had in common, and hence was relieved of anxiety as to the future.

Tom left the Demesne again almost immediately, to stay with the Durells; and then it was only natural that Edwin and Ruth, being left to themselves, should draw closer together. They did so, under the fostering care of the approving Squiress.

Mrs Fairfield would scarcely have been a woman if she had neglected so good an opportunity for taking some change out of her husband.

'Is Edwin engaged to Ruth, wife?' he asked her one day. 'If he isn't, it seems to me he ought to be. Why, they are never apart!'

With crushing superiority of manner, Joan replied, 'They have been engaged for some little time.' (The engagement was of that morning; the announcement of it to Mrs Fairfield was just thirty minutes old.) And, strong in her present unassailable position, she added, 'If it hadn't been for you, Squire, and your perversity, this would have happened months ago.'

'Oh, come, Joan, draw it mild—the boy has not been home six weeks yet! Well, I dare say it is all for the best. The two young wives will keep each other company abroad. And, come to think of it, it seems to me that everything has turned out very happily, and that I deserve most of the credit for it!'

Seeing that he was incorrigible, and being in her own mind perfectly satisfied with the turn things had taken, Joan Fairfield wisely let the matter drop, and carried off her husband to wish the young people joy.

In his mother's room that night, Edwin was a boy again. The reserve of years had yielded before the glow of his new-found happiness.

'It was so clever of you, mummy, to find me the right girl!' he murmured. He was seated on a footstool at her feet, with head against her lap. 'Did you remember what I once said to you about Ruth, after a ball?' he continued. 'I think you can scarcely have remembered it—it was so long ago. I had half-forgotten it myself!'

Although alone, they spoke in undertones.

'Yes, I remembered,' returned the mother tenderly.

'She is the only girl I ever cared *that* for,' pursued the enamoured, with expressive gesture.

Now, though she was the best of mothers, Mrs Fairfield was not without a spice of mischief in her composition. I hope the reader has realised that.

'You never did justice to poor Selma,' she rejoined quietly; 'yet Selma had been a good deal admired, even before your friend Mr Coxeter fell over head and ears in love with her.'

Edwin pondered for a moment; then he said, 'You are not quite right there, mother. Selma is good to look upon, and by no means a bad sort of girl. In fact, I don't mind telling you that there was a moment—— No, what I mean is, that, if there had been no Ruth, and' (recollecting himself) 'no Tom, it is not altogether impossible that Selma might have had me.'

'You have done better as things are, my boy.'

'And, of course, Ruth being there, I never really cared for any one but her.'

I fully believe that he fully believed his own words.

And so 'Mohammed's Coffin' found substantial rest at last.

THE END.

THE MONTH: SCIENCE AND ARTS.

SIMPLE KINEMA APPARATUS AND RECORDS FOR THE HOME.

THE kinematograph is now used by private persons for amusing their friends to a considerable extent, and it is only the cost of the films which prevents a much wider adoption of home apparatus. In order to overcome this difficulty, a New York inventor named Bettini has recently devised a system whereby glass plates, instead of films, can be used successfully. Moreover, these glass plates are easily produced from negative plates by similar processes to those employed in ordinary photography. Each glass plate contains nearly six hundred views, which would require between seventy and eighty feet of film. The views are, of course, very small, and the plates measure about eight inches by five inches, the images being in horizontal and vertical rows. An ingenious mechanism moves the lens backward and forward along the rows, a step down to the next below being made at each end. It might be supposed that this step down would cause a flicker, but the movement is so perfect that the changes cannot be detected. Provision is made for passing a succession of plates through the apparatus, the change over from one to the next being done automatically and without disturbing the continuity of the views. In another type of machine by the same inventor, non-inflammable discs are used, having the views arranged spirally. This apparatus is much simpler than the glass plate type, and consequently can be sold at a lower price; but the number of views is limited to the capacity of one disc. These plates and discs can be made in quantities from standard films, and sold or hired, as is done with gramophone records.

TORPEDO STEERED BY PILOT.

Although the torpedo has proved very successful when practising up to ranges of ten thousand yards, in actual warfare attacks have to be made much closer to enemy ships; hence destroyers and submarines have to approach near enough to run grave risk of being sunk by gun-fire before they can launch their torpedoes with a reasonable chance of hitting. With a view to overcoming this difficulty, according to the *Scientific American*, several different forms of torpedo have been invented in which a compartment is provided for a man who steers the torpedo nearly up to its quarry. In the early inventions the steersman was supposed to abandon his post when a hit was assured, trusting to a life-belt to keep him afloat until picked up. Later types have a false stern for the pilot to sit in, with a small conning-tower having glass port-holes, through which he can see his objective as he skims along at the surface. The front end of this false stern slides into a short tube at the tail of the torpedo, and is blown off at the last moment by compressed air, which forms the motive-power of the weapon. This false stern is in reality a small boat in which the heroic pilot can paddle himself along in the hope of reaching a friendly ship before being hit by guns on the vessel attacked. Whether the device will be actually used seems a little uncertain, in view of many apparent difficulties.

COLOSSAL BATTLESHIPS FOR THE UNITED STATES.

It is scarcely surprising that the United States should now be making a strong bid for sea-power both as regards her navy and her mercantile marine. Shipowners were doing very well before the war, owing to a wave of prosperity all over the world; and when a large number of merchant ships had been sunk by German raiders or pirates, shipping freights rose to previously unheard-of figures. This feature, together with the impossibility of obtaining ships from British builders, gave an immense impetus to shipbuilding in the United States, where it had until that time been a dying industry. At the present moment an enormous number of ships are being built across the Atlantic; in fact, the builders have orders in hand for years ahead. As regards fighting-ships, friction with Germany and the possibility of future enemies to the westward have stirred up the American nation to demand sea-power, and her naval programme for the next few years is of a very ambitious description. In this connection we must remember that the United States is

becoming enormously wealthy, and can therefore afford to maintain a powerful navy; while her coastline is of great length, and requires a large fleet to defend it. Whether battleships will become obsolete for future sea-fighting, owing to the increase in power of the submarine and her chief weapon, the torpedo, is a vexed question; but at present the American naval authorities are convinced of the need for very large vessels of this class. The first-fruits of this attitude are the three battleships *New Mexico*, *Idaho*, and *Mississippi*. These vessels mount twelve 14-inch guns in four barbettes, so that there are three guns side by side in each, against the two in similar European craft. Torpedo defence guns to the number of twenty-two are also carried, mounted high up above the water-line, where they will be most effective. As regards the armour, a belt fourteen inches thick by seventeen and a half feet wide goes right round each ship at the water-line, while for the conning-tower and the gun barbettes it is no less than eighteen inches in thickness. The vesels are 624 feet long and 97 feet wide, while thirty feet of water is needed in which to float them. Their weight is thirty-two thousand tons, and each has four large submerged torpedo-tubes. Colossal as these ships appear to be, they will look small beside the battle-cruisers projected for the United States navy next year. The principal features of the new ships will be: oil fuel without any coal at all; electric driving, which means a huge power-station on board for generating electricity to be used for turning the propellers; six or more enormous funnels; and a speed of fifty miles an hour when stripped for action, which demands two hundred thousand horse-power. It should also be added that effective protection will be provided against torpedoes of the largest size. The United States naval programme also includes submarines of five thousand tons and numerous cruisers and destroyers.

NOVEL FORM OF WATER-PUMP.

So many different forms of pump have been devised for lifting water and other liquids that the invention of any novel form of appliance for this purpose would seem almost an impossibility. Yet this has been done, and the device is of a very simple character. Most of us in our youth have stirred water round and round in a basin, and have noted how it rises at the edge while sinking in the centre. The new pump is based upon similar principles, an inverted cone-shaped pipe taking the place of the basin. If the small end of such a pipe is dipped into a stream and rapidly revolved, the water inside will rotate with it and rise to a certain extent. A plain pipe, however, slips through the water instead of getting a grip of it; and to obviate this drawback it is fitted internally with radial vanes which compel the water to rotate at the speed of the pipe, when it rises upward and overflows into a trough at the top. This effect is intensified by a screw propeller at the small end, which starts the water on its upward journey. These pumps are said to be very efficient for raising water a few feet, as is required for irrigation purposes; while their simplicity makes them eminently suitable for service abroad in upcountry districts where it would be impossible to effect repairs in more complex appliances. The pumps are fitted with telescopic legs which can be pushed into the ground at each side of a stream or dike, and adjusted to immerse the bottom ends to the correct depth.

VACUUM STREET-CLEANER.

Considering the length of time since vacuum cleaners first came into use, it is surprising that their application to street-cleaning has only lately been attempted. The first vacuum street-cleaner was recently put into service with marked success at Sandusky, Ohio, U.S.A. One could hardly expect air-suction to draw up tenacious mud without some foregoing loosening agent, and it has been found necessary to retain the revolving broom, which sweeps the dust or mud toward the long, narrow mouth of the vacuum appliance. The mechanical part of the cleaner is mounted on a four-wheeled vehicle provided with a petrol-engine which drives the revolving broom, a centrifugal fan which causes the vacuum, and the gear for propelling the cleaner along the road. At the back is a three-wheeled trailer which receives the dirt, and which can be tipped to empty it. The dirt drawn up by the cleaner is discharged into the trailer, whence it is tipped out on to the town's rubbish-heap, thus saving the squads of men and carts which have to follow up the ordinary street-sweepers to sweep the rides of dirt into heaps and remove them. Even when tried in streets just cleaned by ordinary methods, this cleaner took up nearly four tons of dirt from twenty-seven thousand square yards of street surface.

REVOLUTIONARY CHANGE IN THE COLOURS OF RAILWAY SIGNAL-LAMPS.

We have become so accustomed to the use of certain colours for signal-lamps on railways to indicate 'line clear,' 'caution,' or 'danger,' that any change seems almost revolutionary. It is generally admitted, however, that the employment of white lights to indicate 'line clear' has the grave disadvantage that they are often difficult to distinguish in places where many other lights are to be seen. With a view to overcoming this drawback the Pennsylvania Railroad in the United States is altering its system of night signals. In future a bright-yellow light on this railway will indicate caution, while 'line clear' is to be denoted by green, red lamps still being used to indicate 'danger' as heretofore.

This development has been delayed by the difficulty of producing a yellow shade capable of rendering the lights easily distinguishable from adjacent white lights. A satisfactory glass having been recently invented, the lamps over the whole system, numbering many thousands, are to be altered. Railroads in the United States are not interconnected; consequently a change of this character can be carried out much more easily there than in this country. In fact, any alteration in the colours of night signals on British railways could only be effected by joint action on the part of all the companies having running powers over each other's lines.

THE FIRST PASSENGER SERVICE BY AEROPLANES.

Some difference of opinion exists as to whether airships and aeroplanes will be commercial vehicles in future apart from the carrying of passengers who are willing to pay handsomely for the novelty of being conveyed through the air. In this connection the establishment at Newport News, in America, of the Aeronautical Transportation Company, which undertakes to carry passengers almost anywhere by aeroplanes or flying-boats, is of interest. The company's air services are widely advertised in a similar manner to those of steamships, the fares and routes being standardised; while regular lines of aircraft have been established to such towns as Baltimore, Philadelphia, and Atlantic City. Two or three passengers are carried by the larger machines, while a certain number of small, fast aeroplanes carrying one passenger each are available for those in a hurry to reach their destinations. The company's hangars are situated on the foreshore at Newport News. It will be noted that the fares are at present very high; but with improved craft perhaps capable of using paraffin instead of petrol, they will no doubt be reduced. A more important difficulty is the weather, as, although aeroplanes can fly in strong winds, these, if adverse, vastly reduce the speed, which is the main advantage of travel by air. We believe this is the first attempt at a public air-service by aeroplane, although airships were employed for carrying passengers in Germany before the war. There is little doubt, however, that public air-services will be established in this country when the present war restrictions are removed; but the fares must always be high compared with those for conveyance on the land or overseas.

VOLCANIC STEAM AS A SOURCE OF POWER.

Having no coal of her own, Italy has to import this necessary commodity from other countries, her main supply being derived from Great Britain. Owing to the shortage of shipping and the high freights obtaining, coal, even at the ports, costs over eight pounds a ton, while inland any price up to ten pounds is charged. In these circumstances it is only natural that every other possible source of power should be exploited. The volcanic region in Tuscany affords enormous supplies of natural power in the form of jets of steam at very high temperatures, which issue from numerous cracks in the ground over an area of many square miles. According to *Engineering*, these steam-jets have long been used in the manufacture of boric acid and borax, which abound in this district; while the heat from them is also employed for warming houses in the winter. Some years ago attempts were made to use this steam for generating power, and it was at first tried in a steam-engine. The acids mixed with the steam, however, had a rapidly corrosive effect upon the moving parts, and the plan was then tried of passing the steam through an ordinary boiler in place of making a coal-fire. So great is the heat of the steam as it comes from the earth that the water in the boiler was quickly turned into steam, which was used to drive a turbine of three hundred horse-power in the usual manner. By these means only clean steam came in contact with the engine, so that there was no corrosion, the natural steam being simply employed as a source of heat. This application was carried out before the war, and proved entirely successful. Recently a much more ambitious scheme, referred to in an article in our January issue entitled 'The Problem of Fuel,' has been carried out by Prince Ginori-Conti, bore-holes being sunk in the ground to a depth of three hundred to five hundred feet, where the source of the steam is tapped. These bore-holes are lined with steel pipes measuring from twelve to twenty inches in diameter, and the steam is delivered at the surface at pressures ranging up to over seventy pounds per square inch, and at very high temperatures. The boilers in which the steam is used are full of aluminium tubes surrounded by clean water, as in any other boiler having coal-furnaces. This clean water is boiled by the heat from the natural steam, and generates clean steam, which is used to drive electric dynamos through the medium of turbines, the electricity being delivered by overhead wires to Florence, Leghorn, and other cities. At present only about twelve thousand horse-power is obtained by these means; but the supply of steam is almost unlimited, so that we may expect to see a very large development of this natural source of power in the near future.

GAS *versus* PETROL FOR MOTOR-CARS.

The effect of the shortage of petrol and the restrictions on its sale has been to revive sources of power which were tried and discarded years ago. Among these is coal-gas, which, owing to the development of the internal-combustion engine, can now be used under much more favourable conditions than were the case when attempts were made

to employ it for propelling tramcars some twenty years ago. It may not be generally known that a petrol-engine can be run by coal-gas without any alteration whatever beyond connecting a gas-supply pipe. Admittedly there is a loss of power on gas when compared with petrol; but as the engines of motor-vehicles generally give much more power than is actually needed, this feature is of little consequence. A more important difficulty is the storing of enough gas on a car or a van to run it between points where fresh supplies are obtainable. At present two methods of storage are employed, the one taking the form of a gas-bag upon the roof, while the other consists of strong steel containers in which the gas is stored at high pressure. The first method is, of course, only suitable for vehicles with roofs to them, such as covered vans, single-decked buses, &c. Several motor-buses have been fitted with these gas-bags, which hold enough gas to run them for about twelve miles. This plan is, therefore, suitable for urban bus services, or even for buses between towns where gas can be obtained. The system is safe, clean, and simple, and the bags can be charged in a few minutes. Gas at high pressures is not nearly so easy to arrange for; but it has the advantage of taking up far less space, so that the storage containers can be placed under the seats or body of a vehicle, while the mileage for each charge is greatly increased. On the other hand, gas companies do not supply at high pressures; hence compressors must be carried on the cars for filling the containers under existing conditions. Moreover, the filling process is a comparatively long operation if the gas has to be compressed at the same time. It is by no means unlikely, however, that the more enterprising gas companies will shortly lay down compressing plant of their own, and store the gas at high pressure ready for use on cars. This development would make the high-pressure system a practical proposition by reducing the time of charging to a few minutes. As regards costs, three hundred feet of gas gives about the same mileage as one gallon of petrol; consequently gas at two shillings and sixpence a thousand feet is equivalent to petrol at ninepence a gallon. Therefore, not only is the shortage of petrol overcome by using coal-gas, but money is saved into the bargain.

THE BARRACOOTA.

Mr Tate C. Regan, one of the specialists on fish on the British Museum staff, has made, in a memorandum just published in the British West Indies, an interesting suggestion about certain fish which are occasionally poisonous when eaten. There is no doubt that this is the case with the far-famed barracoota, or barracuda, of the genus *Sphyræna*, of which there are three species in the West Indian waters. The flesh of the barracoota is usually excellent food; but at times it is so poisonous that not only severe illness but death itself has resulted from its consumption. Similarly with the 'jack,' *Caranx plumieri*, belonging to the horse-mackerel family, *Carangidæ*. It is fine food for the table at most times, but at certain seasons is poisonous, and, as has been noted in Barbados, specially so when caught in a particular parish. At such times two small red lumps are to be observed in its gills. Poisonous also at certain periods is the grouper, one of the sea-perch family, *Serrannidæ;* while the yellow-billed sprat, an important food-fish of the herring family, *Clupeidæ*, is extremely poisonous when taken in some localities. The idea is prevalent generally in the West Indies that such fish are poisonous when feeding on certain food, and old sailors declare with emphasis that the barracoota becomes so by eating the copper from ships' bottoms. Mr Regan suggests that in some cases —as, for example, the cavalla (a fish of the horse-mackerel family very much resembling the barracoota, and with flesh that is generally a fine human food)—the fish's flesh is subject to extraordinarily rapid decomposition, and the mischief is done by people eating it unsuspectingly after decay has actually begun. In other cases he thinks it probable that the fish secrete a poison during the breeding-season, while in still others they may be attacked by an infectious disease. The memorandum is published to invite information that may bear for or against these suggestions.

BRIQUETTES FROM ASH-BIN REFUSE.

A paragraph on 'A Cheap New Fuel' in our December issue dealt with the possibility of making briquettes from ash-bin refuse. The engineer to the Market Harborough Urban District Council, Mr H. G. Coales, gives further particulars regarding this proposal in the *Surveyor and Municipal and County Engineer* for December 11, 1916. This gentleman has taken out a patent, which has now lapsed, for what he calls coalesine fuel, which is really refuse transformed into briquettes. As he works the matter out, the product is a relatively cheap fuel. Mr Coales estimates that ten million tons of ash-bin refuse are produced annually in the United Kingdom; and in the search for other probable material for the manufacture of briquettes, coal-dust, sawdust, shavings, peat, and garden refuse are not to be overlooked. The binding substances for these briquettes are tar and pitch, which increase their heating value. Ash-bin refuse cannot be briquetted in its crude state, but after being screened must be pulverised to a fine material by a crusher. This pulverised refuse is heated and delivered to a steam-heated revolving receptacle, where it is incorporated with a hot mixture of pitch and tar. The mixture is allowed to cool, and is then briquetted. The briquettes of highest calorific value are those mixed with coal-dust as well as with tar compounds,

and they burn with a good flame and comparatively little smoke. The cost of manufacture is given at from four shillings to nine shillings per ton, and if sold at from six shillings to eleven shillings a ton, they would meet an urgent demand for a cheap fuel. In these days the scheme seems worth a thoroughly practical trial.

To Correspondents who wish fuller information regarding new inventions mentioned here, addresses will be furnished, when possible, provided a stamped and addressed envelope or post-card be sent to the Editor, 339 High Street, Edinburgh.

APOSTOLOS THE UNEXPECTED.

By Captain A. W. Bird.

APOSTOLOS the Unexpected they called him, and indeed with good cause. Was not his very nationality unexpected? For Apostolos was a Greek—he told many people so himself—and yet it was in the Sea of Marmora that he had learnt to swim, and his aged father lived at Eregli, which is certainly in Turkey, and always had lived there.

Apostolos the Elder sold sugar and salt and tobacco to the country-people. Not very much of them, because of the competition of Meia the Jew, who seemed to know by instinct when to buy, and sold at almost no profit at all. But at least Apostolos the Elder made a living.

Apostolos the Younger found sugar and salt and tobacco all equally uninteresting—to deal in, that is, for he liked sweetmeats and cigarettes as well as any other boy. Salt-water he liked too, and he became the finest swimmer on all that coast. But the unequal struggle against Meia the Jew did not interest him at all; and when his military service was ended he drifted to Smyrna, and there, through the good offices of his uncle the merchant, became clerk to M'Fie the Englishman.

M'Fie was the representative of several great English business houses, and the orders that he obtained were written in a book by Apostolos. The tale of M'Fie's adventures should be written some day, and how he obtained those orders which Apostolos wrote in that book; but this is not the place. All we are concerned with here is that he taught Apostolos to speak and to read English. Whether because Apostolos was peculiarly apt, or because M'Fie was a teacher born, it is impossible to say—perhaps because of both—but Apostolos learned his lessons remarkably well. M'Fie's unconscious example may possibly have influenced him in the way of nationality as well. Though M'Fie was always called 'M'Fie the Englishman,' he actually was, as you may have guessed, a Scotsman.

Early in the year 1915, when M'Fie somewhat abruptly closed his office and slipped down to Egypt, Apostolos moved up the coast, and found himself in due course upon the island of Lemnos, having during his journey unexpectedly (as I hinted before) become a Greek.

The island of Lemnos is rather arid in appearance. Its yellow soil produces olives and grapes in moderate quantities, and sufficient corn to nourish three villages. One geography book says that the climate is temperate; but that is flattery, for, as a matter of fact, the climate is intemperate. All this, however, was of as little interest to Apostolos as sugar and salt and tobacco in a warehouse at Eregli; and of what interest could they be to a Greek on the island of Lemnos? It was foolish to mention them here at all.

There was one thing about Lemnos, however, which interested Apostolos very much indeed, and that was the harbour of Mudros. It is small wonder that it attracted him, for it is a fine harbour, and Apostolos was in good company, for it attracted many others. I do not mean only swimmers like himself, to whom its blue waters would naturally make a special appeal. At least one Englishman and one Frenchman had been greatly attracted by it shortly before it came under the notice of Apostolos. So far as I know, neither of these gentlemen was interested in natation. They were interested in navigation, however, or so it would appear; for on the waters of the harbour lay many great ships and innumerable small ones.

On a morning in early May, Apostolos put off from the shore of the harbour in a small sailing-boat. In the stern were set out oranges and grapes, which were doubtless for sale to the troopships and warships should opportunity occur. In company with Apostolos was a young lad of Mudros. The sun was very hot, the sky very blue, the water bluer still; ships' pinnaces danced over the water, and little sailing-boats glided before the light breeze.

Apostolos stood up in his boat, and, casting his loose garments, prepared to dive into the clear water. Standing there, with one foot upon the gunwale, he looked, as they say, like a young Greek god. A foolish saying, perhaps, for Apostolos was no god. He was a fine, handsome young man, lithe of body, quick of mind, and accounted brave of heart, I think, even among a nation of brave men. But he was no god; merely a human being doing sometimes worse, and sometimes better, than he meant.

Apostolos dived into the water, and, swimming strongly, bore southward towards the great battleships anchored there; while the lad—it must be supposed through incompetence, though truly the lads of Mudros can mostly handle a boat—steered a course east by north, and quickly put a quarter of a mile between them.

I think I have said that Apostolos was a fine swimmer. But I have also said that he was called 'the Unexpected.' It was indeed unexpected that so fine a swimmer should be in difficulties in so sheltered a spot as Mudros harbour; and yet that is exactly what did occur, and Apostolos, after casting anxious glances in the direction of his now distant boat, was forced to call for help to a steam-pinnace which was hurrying across the harbour. He called for help, waving his arm and crying in Greek that he would drown. It must have been a nasty moment for Apostolos. Then those in the pinnace saw him, and altered her course. It is noteworthy that, though Apostolos could speak English very well, it does not seem to have occurred to him to use it in this emergency. The pinnace was flying a white ensign, and one would have thought—— But, then, Apostolos was ever 'the Unexpected.'

In the pinnace were two naval officers and two seamen, and Apostolos was quickly hauled aboard, shivering and gasping out his thanks and fears, though, as his rescuers were ignorant of the modern Greek language, they could not understand him.

One of the officers, casting his mind back not so very many years, remembered some words of ancient Greek, and tried them upon Apostolos. The latter, crouching in the bottom of the pinnace, smiled and shook his head. He could make neither head nor tail of them.

As a matter of fact, even in modern Greek he was not too strong. Indeed, for a Greek, he spoke it remarkably badly. But the inhabitants of many of the islands speak with strange accents; we must attribute it to that.

Whether Apostolos, crouching there, retained sufficient presence of mind after his misadventure to understand what the officers were saying, and whether, even if he understood, they spoke of anything more interesting to him than sugar and salt and tobacco, I cannot say. But I incline to the belief that nothing was said upon that voyage which could possibly be of use to the friends of a man of rather unexpected nationality. And I base my belief upon the fact that Apostolos, having been transferred in due course to the boat of another purveyor of oranges and grapes, never again fell into difficulties while swimming in the harbour of Mudros; but, after sundry minor activities upon the water and on the shore, which I need not here chronicle, was at length enlisted in a gang of labourers and moved to Gallipoli itself.

The gang of labourers in which Apostolos figured as a humble and, as he hoped, an inconspicuous unit was enlisted for the purpose of making roads. The ganger was a Greek, and all his workmen were Greeks; so the fact that Apostolos belonged at this time to that nationality was of no disadvantage to him. Quite the reverse, for the military authorities were insistent that all the workmen should be Greeks.

The work assigned to these gangs was the making of roads over which supplies might pass from the landing-stages along the shore to the firing-line ahead. The work was undoubtedly hard—for those who worked hard at it. Apostolos did work hard at it; but one who had been likened, even erroneously, to a young Greek god was not likely to feel the strain very severely.

Apostolos was not, at any rate, so exhausted as to prevent him from taking an intelligent, though unobtrusive, interest in what went on around him. Not that the labourers had much opportunity for observation. It was, indeed, expressly arranged that they should not. But certain things did come within his vision—trifling things in themselves, perhaps, and yet of great influence upon the actions of one whose actions must be guided by the exigencies of the moment.

The first incident was in connection with certain Turkish prisoners incarcerated within a wire entanglement, near which the gang passed from their encampment to their road-making.

Apostolos, taking, as I say, an intelligent interest in what went on around him, observed the prisoners in their entanglement. His glance, passing hastily over the faces of those he could see, fell upon one whose arm was heavily bandaged. For an infinitesimal part of a second a gleam of recognition seemed to light the face of Apostolos. It had passed, however, almost before it had appeared, and he strode on, his face averted. If he had recognised the prisoner, he evidently had no desire that the prisoner should recognise him. And there he was wise, for it is a little compromising for a Greek labourer to be greeted with a shout of joy by a Turkish prisoner. I admit that only a very guileless Turkish prisoner would utter a shout of joy under such circumstances. But Xanos, the cousin of Apostolos, was very guileless—that is, perhaps, why Apostolos liked him so much. And the Turkish prisoner with the bandaged arm was Xanos, and Apostolos was taking no unnecessary risks.

That day seemed a long day, and road-making an extremely arduous labour. Moreover, during the afternoon shells from the gun called 'Asiatic Annie' fell uncomfortably near the gang of Greek labourers. But Apostolos had not forgotten the prisoners in their entanglement; and when evening came at length, and the gang passed that way once more, he was relieved to see that Xanos had his back towards them.

Two private soldiers had stopped on the road, and were looking at the prisoners.

'There 's a dirty-looking devil,' said one of them, referring to Xanos. Apostolos understood the words, but no doubt took them literally, for his hand tightened upon his spade as the soldier stepped up to the barbed wire.

That the soldier had any intention other than to do Xanos some injury did not occur to Apostolos for a moment. Had he not called

him a devil? Then the soldier tossed a little packet containing a couple of cigarettes to Xanos. As the latter stooped to pick it up with his uninjured hand, the gang passed round the bend of the cliff.

Had Apostolos been an ordinary Greek labourer, it is probable that this incident would either have escaped his notice altogether, or have made but a momentary impression upon it. He was not exactly an ordinary Greek labourer, however, and Xanos was his cousin, and the fruits of the incident were of great moment for one at least, as you shall hear. But first I must tell how Apostolos came upon another acquaintance.

Upon the following day, as the gang went forth in a fresh direction to make yet other roads, Apostolos heard a voice he knew. He did not look round—he did not need to; it would have been very foolish of him if he had. It was extremely undesirable to be recognised by Xanos, his cousin; it was a thousand times more undesirable to be recognised by M'Fie. For it was the voice of M'Fie which he had heard—M'Fie, who would have been very much astonished to find him in a gang of Greek labourers, and could scarcely be relied upon to keep his astonishment to himself.

The discovery of M'Fie's proximity seems to have caused Apostolos to alter his plans, for that night he disappeared from among the Greek labourers, and was no more seen there. It is probable that this disappearance was premeditated in so far as he had had it in his mind, at his own good time, to disappear in this way. But I cannot believe that, had it not been for his strong disinclination to meet M'Fie, he would have put it into operation thus early in his stay upon Gallipoli. To so fine a swimmer as Apostolos the coast offered great attractions. Swimming in the daytime, except occasionally under strict supervision, was, of course, impossible. But at night, when the vigilance of the guard and other disadvantages had been overcome, what fine swims might he not have had, perhaps meeting friends far along the shore, who knows?

All this he sacrificed, however. I think his spirit preferred a bold stroke to the risk of being caught with no chance of putting up a fight. In any case, he disappeared from among the labourers, and crept forward to where Briton and Turk faced one another.

Fortune must have favoured Apostolos to an extraordinary degree that night, for, greatly helped by a battered service-cap and a rifle, which Heaven knows what chance had placed within his reach, he penetrated the British line, and found himself at length crawling through the scrub of No Man's Land.

And here I have to chronicle that which gives its interest, if I may claim for it any interest at all, to this story.

It was a very dark night; and as Apostolos crept forward, an occasional bullet whistling over his head, he felt rather than saw that some one was moving near him. He lay there, scarcely breathing, clutching the rifle which, though he had no ammunition, might yet prove a useful weapon; and as he lay, some one crawled across in front of him not two yards off.

At that instant a star-shell burst above them, and Apostolos saw that it was an English officer. The officer did not look round, but lay quite still, his head showing clearly against the light. Then the light subsided.

To have clubbed his enemy on the head with the butt of his rifle would have been to Apostolos the easiest thing in the world—and the most natural. It was his duty to do it. But he lay there, and let the English officer crawl on and disappear into the night. For Apostolos remembered those two cigarettes that had been thrown to his cousin, and it had come into his mind to repay them now.

This was, of course, absurdly illogical. It was his hope, I fear, to reach the Turkish trench, and there to impart such information as would result in the killing and wounding of many Englishmen. Whether such information as he had been able to obtain would prove of any value is another matter. It is highly probable that it would not. But he hoped that it would, and had no compunction about it at all. It is certain, however, that Apostolos went forward with a greatly lightened heart. To reach the Turkish trench in safety was an undertaking attended by the very greatest risks. But Apostolos went forward gaily enough, because those cigarettes were paid for.

And there we must leave him. If, as I have said, there be any interest in this story, it is in his curious behaviour in No Man's Land. Curious and illogical, but interesting, I think.

THE EVENING CLOUD.

You stood like an amber mountain,
  Your feet were in the sea;
And then the night came falling—
  Falling on you and me.
And had I sought you in the dawn
  I knew you would not be.

For all night long, these peaks on high,
I heard them falling from the sky;
Thousands of flowers with petals fair
Held out their arms and caught you there.
While the earth breathed forth an odour sweet
And gave you her bosom on which to sleep.

B. Hughes.

*** TO CONTRIBUTORS.

1*st.* All communications should be addressed 'To the Editor, 339 High Street, Edinburgh.'

2*nd.* For its return in case of ineligibility, postage-stamps should accompany every manuscript.

3*rd.* To secure their safe return if ineligible, ALL MANUSCRIPTS, whether accompanied by a letter of advice or otherwise, *should have the writer's Name and Address written upon them* IN FULL.

4*th.* Poetical contributions should invariably be accompanied by a stamped and directed envelope.

SEVENTH SERIES

'OLE CAM'RON.'

By Mrs W. F. Irvine Bell.

CHAPTER I.

'GOT any little kitties, suh?' The question, in the high, quavering falsetto of old age, was followed by the appearance of a venerable figure, curiously out of harmony with the surroundings—a negro, his shrunken frame hung about with loose shirt and trousers, and a face, black as ebony and seamed like the rind of a coco-nut, framed in beard and hair, woolly and white as that of a newly shorn sheep. As he stepped out of the thicket of manzañita and buckthorn into the more open spaces of the tall sugar-pines, one noticed a limp in his gait, and where a shaft of sunshine through the lofty green canopy struck upon his forehead, was revealed among the wrinkles an ugly scar, deep and long. 'Got any little kitties, suh?' The strange question was repeated, while a smile of childlike sweetness and a kindly beam in the soft brown eyes, still bright beneath the hoary brows, suddenly illumined the wizened face.

'*What* does he say, Margot?' asked the young man thus addressed, turning sharply in his saddle towards a handsome girl on a horse beside him.

But before she could reply, the old negro spoke again. 'Lil' *cats*, suh—any lil' *cats?* My ole doe,' he went on in a tone of indulgent explanation—'my ole doe, she done got los', suh, and I do miss her terrible—thought mebbe lil' missy dere might have some kitties she wan's to fin' a home fo'.'

A puzzled expression still hovered about the face of the young man, whose British nationality and military 'cut' not even the free-and-easy dress of the Far West, and the bronco-breeding of the horse he sat so well, could conceal.

But over the happy face of the girl beside him a bright smile broke, as she exclaimed, 'He means *kittens*, Ian dear. He is asking whether we have any kittens to spare!' and she glanced at her companion, a mischievous twinkle in her dark eyes.

'Kittens to *spare!* Good heavens! I should think we have! Better give him a baker's dozen, Margot,' he replied. Then, turning to the old darkie standing watching them with ingenuous curiosity, he said, 'Of course—you can have all the cats you want! But come and tell us who you are and where you live; you seem strangely out of your element in this part of the world!'

The negro, however, as though not quite understanding, merely came a little nearer the riders, an inquiring look upon his face; and it was then for the first time the young man noticed he carried a pan and pick such as, in gold-mining countries, prospectors use.

'You, too, on the search for gold, Sambo?' he asked pleasantly, pointing with his whip to the old man's burden.

At the word 'gold' the wrinkled black face took on the expression of a child delighted at the attention some favourite toy has attracted.

'Yes, suh,' he chortled, 'I done got a nice lil' "claim"—'nuf gol' fo' "Toby" an' me; it doan' tak' ve'y much! Would massa an' missy like to come an' see whar I lib? It 's not fa'—jus' t'ru de bush a lil' way.'

The young man glanced at the girl, and she nodded assent. 'Right-o!' he exclaimed, swinging himself out of the saddle, and managing his horse so dexterously that only a close observer would have noted the left sleeve of his coat empty and pinned to his shoulder. Then the girl having also dismounted, and the horses being left, Western fashion, with dragging lines, to graze on the sweet wood grass, the two followed the old man, using his pick as a staff, down an indistinct trail through the 'bush.'

'I never noticed this path before; did you, Margot?' asked the young man.

At the word 'path,' pronounced with soft, broad accent, the old negro turned and said inquiringly, 'Massa not bin ve'y long in dese parts?'

'No, not very,' was the reply, with characteristic national brevity.

And the negro, repressing his evident curiosity at the appearance of strangers in so sequestered a spot, led the way a few yards farther to where the timber suddenly broke on the edge of a deep, shadowy cañon. There, so steeply lodged upon a tiny terrace that, as one approached, nothing was to be seen except a stove-pipe incongruously obtruding among tall bushes of 'California holly' and the mahogany stems of shapely manzañita, stood a diminutive house—a mere cabin, whose shingled roof and log walls were stained and worn by time, and whose small eyes of poor glass winked and blinked in the bright sunshine, filling all that side of the cañon's deep bowl.

 [*All Rights Reserved.*]

Round and about it, in narrow beds dug in the rich, primeval soil, gay nasturtiums and broad-leaved Dutchman's pipe climbed valiantly by white cotton strings from ground to eaves of the tiny dwelling; on a line close by fluttered and blazed a red flannel shirt; and a spring of crystal-clear water (worth a gold-mine in that country of long droughts), falling musically into a deep tub, gave the whole atmosphere a sense of freshness.

'Small, but not squalid,' was the mental comment of the old darky's visitors.

Having leaned pick and pan against the water-butt, the old negro limped around to the door, and pushing away a stone that kept it closed, said, smiling broadly, 'Heah am de cabin, suh. Doan' need no locks heah! Woan' yo' an' missy come in an' res' yo'selves a lil' while? Den I kin show yo' my "claim" on de way back to de hosses—'t ain't much out ob de way.'

As he threw open the door for his guests to enter the tiny abode—bedroom and living-room all in one—a ball of fur, which the lady's quick eye had noticed in a box near the unlit stove, suddenly unrolled itself, and a beautiful little animal, with bright eyes and whiskered nose, hurried towards the old negro; but at sight of strangers retreated, snarling and snapping its little white teeth.

'Toby! Toby!' called the old man. Then turning towards the lady, 'Doan' be afraid of him, missy—Toby woan' hurt yo'—he's my lil' babby-coon—got him out of a trap, po' lil' t'ing.—Come along, Toby!' And the little creature, thus coaxed, gradually crept towards him, and began poking, with small, deft paws, at his owner's trousers-pocket. 'Smells de figs, de lil' rascal! Heah yo' are, den, Toby;' and the black fingers pulled out a handful of ripe purple figs, which the coon eagerly seized and ate, carefully rejecting any that were bruised or soiled.

'What a jolly little beast!' said the young man. 'But do you and he live here quite by yourselves? Tell us what your name is, and how you come to be here—so far from the "Sunny South," to which you surely must belong.'

'Dey call me "Ole Cam'ron," suh,' replied the negro.

Again the young man, starting perceptibly, turned questioningly to the girl. 'What did he say, Margot?'

But she, too, as though not quite credulous of what she heard, asked, 'Did you say you are called "Old Cameron"?'

'Yeah, missy,' he answered, a half-amused, half-pleased expression on his face. '"Ole Cam'ron," dat's wot my massa done call me. Back Eas', all de folks use' fin' my name strange-like, an' ask about it. But out heah—why,' he went on, drawing himself up with a slight gesture of scorn, 'de folks is all po' white trash—dey doan' know one name from anudder! But my ole massa'—he paused to glance at his visitors, and seeing their look of more than common interest, settled himself on an upturned box, and in the soft drawl peculiar to the negro of the Southern States, continued—'my ole massa, he come from de Ole Country—ub ve'y good fambly—*ve'y* good,' he repeated impressively. 'De big house was all full ub po'trets—all de ladies in bootiful dresses, an' all de gen'lemen in gran' uniforms. Massa use' say dat all his fambly in de Ole Country was in de ahmy—ve'y proud my massa was, an' nevah had nuthin' to do wid de po' white trash in de State. An' he was ve'y good to all de darkies—dey all lub massa and was happy. Well, one day massa bring home a lubbly young leddy as his wife—"de bootifulest leddy in Charleston," dey said. All de darkies lub her an' massa. Den bimeby dere was a lil' babby bawn in de big house—a lil' boy—an' massa call' all de darkies an' tol' 'em how dere was now a *young* massa, an' how he an' missy hoped we'd all lub him an' be faithful to him when ole massa hisself should be dead an' gawn. An' dere was a gran' feast for all de darkies, an' eberybody was feelin' ve'y happy, when all ub a sudden po' missy, she up an' died, an' lef' de lil' babby. It mos' broke ole massa's heart. He couldn't bear de sight ub dat babby; so it was sen' down to one ub de cabins on de plantation fo' my mudder to nuss along ub me—fo' I was bawn jus' few days befo' young massa. Only once in a while ole massa sen' fo' de babby; but he al'us so cry fo' my mudder, dat ole massa would sen' him back again. Well, suh, when young massa was 'bout two-t'ree yeahs ole, dere come a ve'y fine gen'le-man from de Ole Country—a brudder ub ole massa—same reg'ment to which massa hisself b'long afo' he come out to dis country. An' 'cose he wan' see lil' massa, so he an' ole massa, dey ride down to de cabin; an' when lil' massa an' me come a-runnin' out at soun' ub de hosses, ole massa's brudder, he clap his han's an' cries, "Hurrah! Heah be two fine recruits fo' de Cam'ron Highlan'ers!"'

'For the *whom*?' sharply queried the young man; while the girl, Margot, started visibly.

'Fo' de Cam'ron Highlan'ers,' replied the old negro, but so intent upon his story as to fail to notice the rapid glance exchanged between his visitors. 'Well,' he continued, 'dat seem to please ole massa powerful much. An' he laugh an' say, "Good one dat, Geordie! We'll call de lil' black un 'Cam'ron'!' an' so he *did*, suh. Doan' even 'member w'at my own mudder call me—bin jus' "Cam'ron" so long time! But after dat, lil' massa an' me, we lib in de big house, and bimeby I was ole 'nuff to be servant to lil' massa—an' we lub each udder ve'y much. Den one day dere came to de plantation a ve'y rich man to buy cotton an' slaves—he was rich an' gran', but his fambly waan't no 'count, an'

ole massa he doan' like him 'cose he was mean an' cruel. So he woan' sell him any ub us darkies. But it happen dat dey was ridin' roun' by de cabins jus' as my mudder come out o' hers. She was ve'y pretty, was my mudder—not black same as coal like *me!*'—and he made a gesture of disdain—'but mos' all white, wid bootiful eyes an' ve'y long hair—not woolly like de common trash darkies. An' dat gen'leman, what waan't no *real* gen'leman, he say right off he wan' buy my mudder; but ole massa he refuse an' refuse, till at las' de udder man he get ve'y angry, an' say dirty t'ings to ole massa 'bout him an' my mudder. Den massa grow ve'y white—fo' massa he nevah touch no niggah woman—an' dey fix up a duel, an' somehow massa slip on de grass, an' de udder man kill him!

'Well, suh, I doan' 'member how it was, but somehow or 'nudder dat man got hol' ub eberyt'ing ('cose, yo' see, young massa was on'y a lil' boy)—de plantation an' de big house, an' all de darkies. He sol' my mudder after she begin to get ole, an' he was terrible cruel to all de slaves; an' one day, when he got ve'y angry wid me 'cose I tried to preven' his beatin' young massa (he was nevah ve'y strong, was young massa), he struck me 'cross de fo'head wid his heavy whip, an' flung me down de stairs—p'r'aps you an' missy, suh, done notice I'm some lame? Oh! he was a terrible wicked man.

'When young massa was twenty-one yeahs ole, an' eberyt'ing should have bin his, dere waan't nuthin' lef'—dat rascal had spen' all de money! Po' young massa, he stay on at de plantation, an' try to mak' t'ings better. An' den came de wah wid de Nawth, an' massa's home an' de cotton-fiel's was all burn' by de soldiers, an' bimeby all de slaves was set free. Now de darkies dey lub young massa, an' would hab stayed wid him, but de cotton was burn', an' young massa had no money, so dey all wen' different ways.

'But Ole Cam'ron, suh, he stays 'long ub young massa, till one day he says to me, "Cam'ron," he say, "'t ain't no use clingin' to dis heah wreck no mo'—yo' bes' go swim fo' yo'self. Yo' is a free man now," he says, "an' I'm not altogedder sorry fo' *dat*—but I ain't got no money to pay yo' wages, so you bes' go Nawth an' get wo'k." Den I begins to blubber, an' I pleads on massa an says, "Oh, Massa Robin, fo' de lub o' Gawd, doan' sen' me away! I doan' wan' to go Nawth whar de winters is all ice an' snow. An' I doan' wan' no wages. Yo' an' ole massa done tak' car' ub me sence I bin a lil' babby," says I; "an' w'at could a niggah like me do wid money? I'm lame," I goes on, "but, Massa Robin, I'm strong an' kin wo'k fo' yo' an' fo' me." An' so at las' young massa say, "Yeah," I kin stay wid him, an' "We both drown *togedder*," he says—an' he laughs, an' de teahs stan' in his eyes same as de water in dat ole tub out dere. Den bimeby he says to me, "Cam'ron, we'll go Wes'—to whar de gol' grows like de oranges in Florida, an' whar de sun shines all de same as heah in Souf Carolina." So we starts.

'But it was a long, long journey in dose days, an' my po' young massa he got sick when we come to de bilin' hot desert'—— The old man's voice faltered; and presently, with tears running down his wrinkled cheeks, falling unheeded upon the fur of the little coon nestled in his arms, he went on: 'Well, suh, one evenin', jus' as de sun was settin', Massa Robin he lay ve'y white in de tent—we was campin' on de trail—an' he calls me an' says, "Cam'ron, I guess yo'll have to go on alone to de gol' an' de sunshine—I'se agoin' out into de night!" "Oh, Massa Robin," I says, "de night doan' las' always; bimeby comes de bootiful sunrise agin." An' he says, smilin' an' takin' my han' all de same as do' I was a white man, "Yeah, I know *dat*, Cam'ron; I'se not 'fraid ub de night." Den he pulls off de gol' ring from his fingah, de same w'at ole massa al'us wore, an' he says, "Yo' keep dis heah ring, Cam'ron—an' my watch dat was also yo' ole massa's. I ain't got no folks, an' yo've bin a faithful niggah, Cam'ron," says he. I was blubberin' so, I could scarcely heah young massa, suh. An' presently he turn his head to'ards de tent do' an' fixed his eyes on de sun settin' so glarin' red an' hot. Den jus' as it drop out o' sight, my young massa he fall asleep—an' he doan' wake no mo'.'

The old negro stopped speaking, staring dreamily through the cabin door towards the glory of the summer sky, just marshalling its sunset hues above the shadow-greedy cañon.

His visitors, deeply moved by the story, were still hesitating to rouse him from his reverie, when suddenly he resumed: 'All dat happen a long, long time ago, suh, but I kin see young massa jus' as plain as if it was yes'erday. An' I doan' know how it is, suh, but fust moment I clap my eyes on yo', I thought, sho' to Gawd it was Massa Robin come to life! Yeah, suh, I did so—but I'm an ole man, an' my eyes is failin'.'

Then the young man, who throughout the tale had exchanged with Margot looks of suppressed excitement and surprise, said eagerly, 'There's one thing you haven't told us, and that is, your master's name.'

But at this Old Cameron merely passed his hand across his forehead, and said, shaking his head, 'I doan' 'member no mo'. Ole massa, we al'us call him "massa;" an' young massa, he was "Mas' Robin."'

'Yes, to be sure,' replied his questioner, 'that was what you darkies called him. But how did other people speak to him—that fine gentleman, for instance, of whom you were telling us?'

The old man's face brightened as he said, 'Oh, to be sho', suh, de big folks call ole massa "Cunnel"—"Cunnel"—— I disremembe' what mo'.'

'Was it M'Leod, Cameron? Did people call your old master Colonel M'Leod?' now excitedly broke in Margot.

'Yeah, yeah, missy!' cried the negro, trembling with eagerness. 'How yo' know dat name?'

'Wait one moment, Cameron,' she replied; 'we have something strange to tell you. But first, will you show us your young master's ring and watch?'

For a moment the old man hesitated, looking intently into the faces of his visitors; then, as though reassured, he set down the little coon, limped across the cabin, and from a small hollow, cleverly concealed in the log wall, took a metal box, in which, wrapped in a faded silk bandana, lay a gold crest-ring and an old-fashioned hunting-case watch. With shaking hands he laid his treasures in Margot's lap, saying, 'Dese are de t'ings, missy. I nebber befo' done show 'em to nobody; but, some way or anudder, it seems like I wan' yo' an' de gen'leman to see 'em. See, dis am de ring—very bootiful, ain't it, suh?'

For reply, the young man stretched out his hand, on which a plain seal-ring with the same crest and legend appeared. Then, while Old Cameron still studied it with astonishment, they opened the watch-case and read the inscription: 'Presented by his brother-officers, Cameron Highlanders, to Colonel Ian M'Leod, January 16th, 18—.'

Thereupon Margot could restrain herself no longer. 'Cameron,' she cried, 'can you believe that Ian M'Leod is also my husband's name, and your old master must have been his great-uncle, of whom we have heard all our lives?—Show him, Ian dear,' she continued eagerly, before the amazed old negro could find words to speak—'show him your own watch that your company gave you. Oh, how strange and wonderful it all seems!'

Smiling at the girl's enthusiasm, her husband pulled out his watch, and opening it, turned the case towards the open door, so that the light fell strongly upon it.

Old Cameron, stooping down and peering at it, spelled out the words: 'Presented to Captain Ian M'Leod by the —— Company, —— Battalion, Cameron Highlanders,' and the date. Then, his face grown long and taut with astonishment, and his eyes rolled up till only the whites were visible, he raised his hands, exclaiming over and over, 'Bress de Lawd! Bress de Lawd! To t'ink dat dese ole eyes o' mine should lib to see one o' my ole massa's fambly agen! An' de cap'n heah—he am' 'nuff like Massa Robin to be his own brudder! Bress de Lawd! Bress de Lawd!'

While the old negro was thus maundering, his visitors carefully examined the ring and watch, which seemed without doubt to establish the identity of the old slave's master as the brother of Captain M'Leod's grandfather, of whose home among the cotton-fields of South Carolina many souvenirs and traditions survived. At last, rising to go, they handed the treasures to their owner, promising to return soon.

But the old man steadfastly refused to take them back. 'No, no,' he insisted; 'yo' mus' tak' dem, Massa M'Leod. W'at has an ole niggah wid one foot in de grave to do wid such t'ings? Mebbe one day de cabin burn down—den whar would be Massa Robin's t'ings? Dey sho' b'longs to yo', suh, an' I praise de Lawd dat I done foun' yo'. Only yo' an' missy come now an' agin to see me, suh; I 'm ole, an' hab no fren's.'

Seeing that he was quite determined, young M'Leod said, 'Very well, Cameron, if you really wish it, we will take these things home, for they are indeed of great value to us. But remember that we hold them for you only in trust, and if ever you want them back, or need'—he hesitated, then went on—'need anything at all that we can do for you, you can count upon Mrs M'Leod and myself as friends.—And now we must really be off, Margot,' he ended. Then he added laughingly, turning again towards Old Cameron, 'We will come soon again to see you, and bring you some "little cats" in exchange for the watch and ring!'

The old darky, as though loath to lose sight of his loved master's kindred, followed them to where the horses were grazing, and stood staring with tear-dimmed eyes long after they had vanished in the bush. Then with faltering steps he returned to his lonely cabin and the companionship of the little coon, an unwonted feeling of happiness and comfort stirring in the faithful old heart.

SOME ASPECTS OF NORTHERN SINAI.

By HERBERT T. GRANT.

Ship me somewheres east of Suez,
Where the best is like the worst,
And there ain't no ten commandments
And a man can raise a thirst.

WAS it the uninspiring view which meets the eye from the deck of a liner in its course along that fragile link which forges East and West together which led Kipling to introduce those lines into a poem of which the keynote is the glamour of the East? Doubtless Kipling's Tommy, with a well-stocked wet canteen behind him and all the temptations of the riotous East before him, would find solace in the dearth of moral restriction and facility for beer-shifting as set to rhyme in the above;

but the Tommy of 1917 has sterner work on hand. Sinai to him is a land which offers no inducement. It is no fit country for the ordinary individual without an army commissariat at his back. A bottle of water, not unlimited beer, is the greatest of all treasures here; not the cool and sparkling variety, either, which tumbles from every nook and cranny of his native mountains, but a flat, tasteless, turgid, half-boiled liquid which lubricates but not refreshes. Every day is the same. The first ray of the sun restores the blazing, pitiless condition of the tale of days which has preceded this new one. It is a land which holds out neither hope nor promise of better things to come; a land of everlasting cobalt sky and heart-breaking yellow sand; and old King Sol is lord of all. That is Sinai in the soldier's daily grind. A No Man's Land, where armed Briton and armed Turk skirmish to best advantage to shed one another's blood. A land whose nomadic inhabitants have been squeezed out by the pressure of advancing armies—driven to less molested regions; interned by us as refugees or prisoners of war; embodied in the Turkish army, or turned loose with a modern rifle and a bag of villainously loaded cartridges, with a roving commission against all stragglers, British and Colonial. A land which, as befits the playing-ground of Mars, is staged in death and desolation. Its northern limits are washed by a sea as sailless as that which surrounded Robinson Crusoe's isle of Juan Fernandez. Perhaps in pre-war days the busy steamers plied across the horizon between the ports of Egypt and the Holy Land; now there is never even a straggler to break the ceaseless monotony.

The Turkish dream of a reconquest of Egypt and the progress of our Expeditionary Force in Mesopotamia have led to many interesting articles of late in *Chambers's Journal*. Attention has been drawn to, and pictures painted of, countries which, though little known to the average Briton, teem with historical and Biblical associations; and yet he has blindly and unimaginatively read of them from his earliest Sunday-school days! In July of last year 'Nimrod' provided a most informative article dealing with the Turko-Egyptian Front. Being one of the minor items in that 'admirable scheme of defence for our most vital line to the East,' I naturally took a much deeper interest in it than would the peacefully pursuited reader. Recent happenings in which we have been privileged to play an interesting part have pretty thoroughly exploded some of Nimrod's prognostications. As the Turk, that most versatile of foes, has been responsible for these somewhat rude awakenings, and not some hitherto undiscovered feature in the nature of Sinai which he portrays so faithfully, any remarks along these lines are not intended as criticism.

It will be remembered that on Easter Sunday of last year the Turks made a raid on Dueidar, a post about twelve miles east of Kantara on the Suez Canal. Simultaneously an attack was made by an Austro-German force, in overwhelming numbers, upon a small body of yeomanry which held the Romani and Katia oases. More than a year had elapsed since the Turkish attacks on Suez were driven back in disorder; and, as the possibilities of the Turks being able to cross the peninsula later than March were considered remote, this fresh activity occasioned some surprise. Unquestionably it was an extremely smart piece of work. That a raid was all that was intended became obvious at once, as almost ere the report of the first shot had died away our military machinery burst into motion, and any delay with a view to holding on to await reinforcements would undoubtedly have ended in trouble for our enemy. As it was, he proved himself as slippery as we have learned to acknowledge him; and though for some little time thereafter the Anzacs clashed with him in minor affrays on more than one occasion, our infantry caught no sight of him whatever. 'Nimrod' has already furnished some idea of the capabilities of the camel, and it was due to the remarkable speed and endurance of this native of Sinai that the raiders were able to make their dash and be well on the return journey to their base before our slower-moving troops could get a chance to give them battle. The heroic defence at Dueidar on that occasion by a small force of the Royal Scots Fusiliers is too well known to require further comment. The sharp lesson which they taught the Turks bore fruit in a subsequent peaceful period extending over nearly four months. In the opening lines of this article I drew a picture of Sinai in the soldier's daily grind. His lot has been improved tremendously since those jottings were left to rust, and, with the exception of the proverbial flesh-pots which Port Said, Cairo, and Alexandria alone can provide, he is as well off and contented on a far-advanced front as he could be in any part of the land of the Pharaohs.

In the middle of July it became apparent that the Turks were contemplating an attack on a serious scale. Quietly and unostentatiously our preparations were made to checkmate them. 'Nimrod' particularly emphasised the two chief obstacles in the path of a Turkish advance—lack of water and absence of roads for transporting guns and heavy material. 'The movement of troops is entirely dependent on the rainfall, and no accurate forecast of events can be made until the rains eventuate or otherwise;' and 'metalled roads are essential to permit of heavy guns and transport being brought across the desert wastes, where the going is so heavy from the soft sand that for infantry to accomplish a march of even a few miles per day is a creditable performance.' This had been the generally accepted

theory. We had not seen a single drop of rain for at least five months, and Sinai was still as roadless as at the beginning of hostilities. Judge, then, of the shock to the rank and file created by the screech and bang of six-inch-howitzer shells landing in close proximity at dawn on 4th August!

The Turkish end of the surprise was a grimmer affair. Lured unsuspectingly on by the splendidly engineered retreat of the Anzacs, who had been in contact with them for some hours previously, the attack from the south, intended to cut our lines of communication, swept over the nearest of the barren ridges to our positions, there to be greeted by our waiting artillery. There this, the main, attack ended. How little the Turks knew of our actual strength may be gauged by the results. In the futile attack launched along our front proper (i.e. facing the east) they never got near enough our line to deploy from the artillery formation in which they were seen advancing. And more than one of these squares of fifty learned to their cost with what precision those sinister, unwieldy strangers lying off-shore in the Bay of Tina could launch fourteen-inch death into their midst.

It is with no intention of giving an account of the battle of Romani that I mention the above. I merely wish to emphasise the extraordinary manner in which the Turks surmounted the natural difficulties of Sinai in their advance. From Bir-el-Abd they were dependent for water solely upon the numerous wells which the Katia and neighbouring oases boast. Most of the wells are brackish, and at best are of a quality which even semi-civilised troops could not subsist on for long. The fact that our subsequent offensive drove the Turks out of this district left them with no alternative but to fall back upon their reservoirs at Bir-el-Abd. The Turk would doubtless suffer less inconvenience than the Tommy on such liquid rations; but that even he has a discriminating taste in this direction is evidenced by the joy with which our prisoners indulged in the brand supplied to our own men, once we had them safely rounded up. As for roads, we know of none. The newspaper accounts speak of the guns being dragged over planks by large gangs of labourers. Turkish prisoners, however, stated that the guns were brought across the desert on sledges. As we ourselves frequently adopt this method of transporting heavy material, it is more than probable that this latter version is the correct one. That the Turks had the guns with them we ourselves can guarantee, but how they made away with them in their hurried retreat is still a mystery. Rumour has it that the guns did not go back with them, but now lie buried in the sand somewhere out ahead—a simple matter in such a country.

The northern route of advance on the Suez Canal does not lie along the Mediterranean shore. In all probability use is made of the shore in the earlier stages, but thereafter the Turks advance to the south of the great inundation or Bardawil Lagoon, and even make use of it at points. When the western end of the lagoon was first occupied by British troops, the area still showed evidences of a recent flood. The surface was a sticky black mud, which emitted a nauseous odour, and in which one sank over one's ankles. Gradually it dried up until it presented a sound footing, as it does to-day. Now it is rough and salt-encrusted. In places one can walk on a bed of solid salt as smooth and hard as a concrete pavement, a welcome change from the heavy sand. Some of the arms and detached portions present an extraordinary spectacle. Acres and acres of salt-crystals lie glittering under the fierce desert sun. Here one would think some giant and careless sower had scattered with a lavish hand untold millions of glass pins—tiny spikes which would create woeful havoc on unshod feet. At another place a conglomeration of mud and salt, with long crystals dangling from each furrow, gives the appearance of a ploughed field in the iron grip of Jack Frost. Only that merciless sun overhead puts a check to one's imaginings along these lines.

It is an oasis belt through which runs the ancient highway from Africa to Asia which makes the feat of crossing Sinai possible. By this route the Turks could at least count on an abundant water-supply, of a kind, for a considerable part of the way; and by breaking off to north or south at Oghratina, they would be in a position to strike at either Port Said or Ismailia. South of that the country develops into a succession of terrible barren ridges, where no army could survive. The terrain throughout the watered belt is undulating; and provided aerial reconnaissance or cavalry patrols did not disclose the proximity of a hostile force, it could advance in mass under cover of the wadis, palm-clumps, and general scrub of the district very close upon our positions without attracting attention. The popular conception of an oasis is a tiny palm-fringed island with a crystal pool of purest water in its midst rising from a limitless sea of sand. As a matter of fact, it is a series of little clumps of palms scattered over a wide area, connected by stragglers here and there, singly and in twos and threes. The Katia oasis which has figured prominently throughout the present campaign is quite an imposing affair, however, consisting, as it does, of two distinct virtual woods. Huge bunches of dates hang in abundance upon the palms. September is the season for harvesting, when the date is black or golden-brown. Throughout the various stages until they are ripe they present a welcome and varied assortment of colour. All these oases are amply supplied with wells, but the water bears no resemblance either in appearance or flavour to our own home supply. Water is plentiful all over this section, and by digging a hole a few feet

in depth and the same in circumference it is possible to procure a cool bath at short notice.

Life in the army precludes a proper appreciation of any country where the soldier's duty may lead him. The thus-far-and-no-farther attitude of the whipping of exhausted bodies into further activity which war necessitates is apt to make the victim look upon the country itself as the bane of his existence. So Sinai does not appeal to the average Tommy. And yet there is poetry in every line of it. Where in all the wide world could one find greater freedom and breathing-space than here? With the passing of the warring Red Man the boundless Canadian prairie has become one gigantic farm, and the only claim to respect it can now boast of lies in the lavishness of nature viewed from a commercial standpoint. Sinai, on the other hand, as it is to-day, is the wilderness of the Book of Exodus. Somewhere among those barren ridges the sands of four thousand years cover the footsteps of Moses and his flock as, guided by the cloud by day and the pillar of fire by night, they journeyed through the wilderness to the land of their fathers. Scattered along the coast lie the remains of camps and cities famous when Cæsar and Boadicea were yet undreamt of, and that tiny island which is to-day the heart and pulse and brain of our mighty Empire was peopled by savages as crude and ruthless as the animals which clothed and fed them. What shades of mighty men of valour, bearers of the sword of strife and the word of 'glad tidings of great joy,' throng that ancient caravan route connecting West and East! It is a land for a poet with the set purpose and determination of a pioneer, and the courage of a Mungo Park. Its people know no law save that which serves to protect each small community, and a stranger is their rightful prey.

We have unearthed in the course of our wanderings here many strange implements for the reception of the unwary or the undefended. Hidden amongst the palms in the oases we come across fetters, leg-irons, extraordinary rifles of the gas-pipe type, and burlesque scimitars, which these warlike nomads could doubtless put to unpleasant practice.

[Since the above was written a British advance in Sinai has taken place, marked towards the end of December 1916 by the recapture of El Arish, a position on the coastal route held by the Turks for over two years, and by a victory at Magdhaba between the coast and the central route. This advance was rendered possible by the construction of a desert railway running eastward from El Kantara to a point whence a dash could be made to El Arish. It is expected that by a continuation of this railway into Palestine it will be possible after the war to make the journey between Cairo and Jerusalem in a few hours.]

THE DEFINITE OBJECT.

By JEFFERY FARNOL.

CHAPTER X.—*continued.*

'GOD bless you for a generous soul!' said he, and laughed rather queerly; also his gray eyes were a little brighter than usual. 'Why should you trust me so far?'

'Well, you look honest, I guess. An' then we all help each other in Mulligan's now an' then, one way or another; we jest have to. There's Mrs Bowker, third floor—the tea an' sugar as I've loaned that woman! an' last week a lovely beef-bone. Well, there; but if you want the loan of that twenty-five'——

'Mrs Trapes, I don't. Things aren't so desperate as that yet. All I need is a job of some sort.'

'What kind o' job?'

'I'm not particular.'

'Well, what have you been used to?'

'Alas! Mrs Trapes, hitherto I have lived a life of—er—riotous ease.'

'That means as you ain't worked at all, I guess. H'm!' said Mrs Trapes viewing him with her sharp hawk's eye; 'and yet you ain't got the look of a confidence man nor yet a swell crook; consequently I take it you was the only son of your father, an' lost all he left you, eh?'

'Mrs Trapes, you are a truly wonderful woman!'

'T' be born the only son of a rich father is a pretty bad disease, I reckon,' she continued. 'Yes, siree, it's bad for the child an' worse for the man; it's bound to be his ruination in the end—like drink. An' talkin' o' drink, I'm glad to see that b'y Arthur's so fond o' you.'

'Oh! Why?'

'Because you don't drink.'

'Well, I don't go to bed in my boots, do I, Mrs Trapes? But then I promised you I wouldn't, and, for another thing, I'm not a poet, you see,' said he, and yawned lazily.

'Hermy says she's glad too.'

Mr Ravenslee cut short his yawn in the middle. 'Hermione! Did she say so? When?'

'Ah, I guessed that would wake ye up a bit!' said Mrs Trapes, noting his suddenly eager look. 'It's a pity you're so poor, ain't it?'

'Why? What do you mean?'

'I mean, if you had been in a good situation an' makin' good money—twenty-five per, say—you might have asked her.'

'Asked her?' repeated Ravenslee, staring. 'Asked her what?'

'Why, t' marry you o' course,' nodded Mrs Trapes. 'You love her about as much as any man can love—which is sometimes a thimbleful an' sometimes a bit more; but you sure love her as much as a man knows how, I guess. An' don't try for ter deny it, Mr Geoffrey. I ain't blind; leastways I can see a bit out o' one eye sometimes, specially where Hermy 's concerned, I can so. O' course, you ain't worthy o' her; but then no man is.'

'No, I 'm not worthy of her, God knows!' said Ravenslee quite humbly.

'An' Hermy 's goin' to marry a man with money. Her heart 's set on it firm.'

'Money!' said Ravenslee, scowling. 'She seems anything but mercenary!'

'Mercenary!' cried Mrs Trapes. 'I should say not. I tell ye she could be a-rollin' around in a six-thousand-dollar automobile at this very hour if she was that kind. With her face an' figure, she could so.'

'What do you mean?'

'I mean as there 's men—rich men—ah, an' married too—as is mad after her.'

'Ah!' said Ravenslee, frowning again.

'You may well say "Ah!"' nodded Mrs Trapes. 'Men is all beasts more or less. Why, I could tell you things—well, there. Hermy ain't no innocent babe; but there 's some things better than innocence, and that 's a chin—will-power, Mr Geoffrey. If a woman 's sweet an' strong an' healthy like Hermy, an' got a chin, nothin' can harm her. But beauty like hers is a curse to any good woman if she 's poor, beauty being a quick-seller, ye see.'

'Yes, I see—I know!' said Ravenslee, clenching his hands and frowning blacker than ever.

'But,' continued Mrs Trapes, and here she leaned forward to touch him with an impressive, toil-worn hand, 'Hermy Chesterton 's jest an angel o' light an' purity; she always has been an' always will be; but she knows about as much as a good girl can know. She 's seen the worst o' poverty, an' she 's made up her mind, when she marries, to marry a man as is a man an' can give her all the money she wants. So ye see it ain't no good you wastin' your time danglin' around after her, an' sighin'—now is it?'

'Why, no, Mrs Trapes. I think I 'll speak to her to-night'——

'My land! ain't I jest been tryin' to show you as you ain't a fit or worthy party to speak, an' as you won't have a chance if you do speak, her heart bein' set on wealth? But you can't speak—you won't speak—I know you won't!'

'Why not?'

'First, because t'-night she 's away at Englewood makin' a dress for Mrs Crawley, as is very fond o' her. An', second, because you ain't the man to ask a girl to marry you when you ain't got nothin' t' keep her on—you know you ain't!'

'Which brings us back to the undoubted fact that I must get a job—at once.'

'H'm!' said Mrs Trapes, viewing his clean-cut features and powerful figure with approval; 'what could ye do?'

'Anything, so long as I can make good, Mrs Trapes. What would you suggest?'

'Well,' said Mrs Trapes, caressing an elbow thoughtfully, 'grocers' assistants makes good money, an' I know Mr Smith wants a butterman.'

'Good!' nodded Ravenslee; 'I should like to batter butter about'——

'Are ye used to butter?'

'Oh, I 've a decided taste for it!'

'Know much about it?'

'Certainly. It is a yellowish fatty substance concocted by human agency, supposedly from the lacteous secretion of the graminivorous quadruped familiarly known as the common (or garden) cow.'

'Landsakes!' said Mrs Trapes, drawing a deep breath, 'you sure do know something about it. 'Ever worked in it before?'

'Only with my teeth.'

'Ah, quit your jollyin', Mr Geoffrey, if you want me t' help you.'

'Solemn as an owl, Mrs Trapes.'

'Well, then, there 's Jacob Pffeffenfifer wants a young man in his delicatessen store.'

'Mrs Trapes, I can slice ham and beef with any one on earth.'

'D' ye understand picklin' an' seasonin'?'

'Ah, there you have me again. I fear I don't.'

'Then you ain't no good to Jacob Pffeffenfifer!'

'On second thoughts, I 'm not wholly sorry,' answered Ravenslee gravely. 'You see, a name like that would worry me; it would shake my nerve. I might cut beef instead of ham, or ham instead of'——

'Mr Geoffrey!' quoth Mrs Trapes, squaring her elbows.

'Sober as a judge, Mrs Trapes, and—— By Jupiter!'

'My land! What is it?'

'An idea—look!' and Ravenslee pointed down into the yard.

'Why, it 's only Tony!' said Mrs Trapes, glancing down a vista of riotous garments.

'Precisely,' answered Ravenslee, rising and stretching his long arms. 'Tony has solved my difficulty; I 'll go into the pea-nut trade.'

'What! sell pea-nuts? You!'

'Why not? "Man is born"—— you know.'

'But—my land!—only dagos an' guinneys sells pea-nuts!'

'Splendid! I shall be the exception, Mrs Trapes. Anyway, a pea-nut man I 'll be!' And, catching up his disreputable hat, Ravenslee nodded, and left his landlady staring after

him and murmuring 'Well!' at intervals. But presently she reached for her iron, stone-cold long since, and stood a while clutching it in bony fingers, and staring at nothing in particular.

'He 's sure a man, Hermy, my dear!' she said at last, nodding at the stuffed parrot in the corner. 'I 've watched him careful, an' I know. An' there 's some things better than money, my dear—ah, much better! So, if I should help to bring you into his arms—man an' wife, my dear—why, I guess it would be the best thing Ann Angelina Trapes ever done—yes, ma'am.' Saying which, she went back to her ironing.

On the stairs Ravenslee met Spike, who hailed him joyously. 'Say, Geoff, I 'm all alone to-night; come an' eat supper with me—how about it?'

'Suppose you have supper at Mrs Trapes's with me?'

'No; she gets on me nerves; so come on over, will you?'

'With pleasure.'

''N' say, I 'm a few chips shy on butter, Geoff—bring in ten cents' worth, will you?'

'Right-o, comrade, I 'll be with you anon. Make boil the kettle against my coming;' and Ravenslee hastened down the stairs. Reaching the court, he met the Italian trundling his barrow toward a certain shed, its usual nocturnal biding-place.

'How goes it, Tony?' he inquired, shaking hands.

The Italian nodded and flashed his teeth. 'Ver-a good, pal!' he answered.

'Tony, where can I get a pea-nut outfit like yours?'

'Ha! You go-a in-a da pea-nut-a beezneez, hey? You want-a push-a-de-cart, hey?'

'That 's it, Tony.'

'Ver-a good!' nodded the good-natured Italian. 'You come-a long-a me, pal. I take-a you get-a push-a-de-cart, up-a de street—yes.'

Having very soon locked away his barrow, the loquacious Tony forthwith led Ravenslee along certain streets and into a certain yard, where presently appeared a stout man with rings in his ears, who smiled and nodded and greeted them with up-flung finger and the word *altro*. Presently Ravenslee found himself examining a highly ornate barrow fitted with stove, &c., complete unto the whistle, and mounted upon a pair of the rosiest wheels he had ever seen. Thereafter were more smiles and nods, accompanied by the ever-recurrent *altro*, the transfer of certain bills into the stout man's pocket, and Geoffrey Ravenslee sallied forth into the street, bound for Mulligan's, with the chattering Tony beside him and the gaily-painted barrow before him, receiving many friendly hints as to the pitfalls and intricacies of the pea-nut trade, and hearkening with unflagging interest to the story of 'lil Pietro' and the unbounded goodness of 'da Signorina Hermione.'

CHAPTER XI.—ANTAGONISM IS BORN, AND WAR DECLARED.

'WHY, hello, Hermy!' exclaimed Spike, pausing in the doorway. 'Gee! I thought you was—were in Englewood.'

Hermione lifted her golden head, stayed her humming sewing-machine, and smiled at him. 'And I thought I 'd come home and surprise you. Aren't you glad to see me, boy dear?'

'Why, sure I am!' he answered, and, stooping, kissed a certain golden curl that wantoned at her white temple; which done, he sprawled in the easy-chair, and, taking a newspaper from his pocket, fell to studying the latest base-ball scores; while Hermione, head bent above her work again, glanced at him now and then rather wistfully.

'Gee-whizz!' he exclaimed suddenly, 'the Giants put it all over Cincinnati to-day, Hermy. Ye see, Matty was in th' box, an' he sure pitched some game!'

Hermione stopped her machine and looked at him under wrinkling brows. 'I thought you were hunting through the "wanted" columns, Arthur?'

'Why, ye see I ain't—haven't got to the ads. yet, Hermy.'

Hermione sighed softly, and, resting her round chin in her hands, viewed him silently a while; until, becoming aware of the steadfast gaze of those sweet and gentle eyes, Spike shuffled uneasily and changed colour.

'Arthur,' she said softly, 'when you promised me to try to find a situation, you meant it, didn't you?'

'Sure I did.'

'That was a week ago, dear.'

'But, Hermy, I went after that office-boy's job. You know I did.'

'Yes, dear, though you got there too late.'

'No, I wasn't late, Hermy; only another guy happened t' get there first, an' got the job. A kid I could have licked with one hand, too; one of these mommer's pets in a nobby sack-suit, all dolled up in a clean collar an' a bow-tie an' gray kid gloves. I guess his outfit helped him a whole lot, an' ye see I 'm a few chips shy on clothes, I guess.'

Hermione looked at her brother's worn garments, shiny at elbow and knee, and as she looked her eyes were suddenly suffused. 'Yes, dear, I—I 'm afraid they are—rather shabby,' she admitted humbly. 'Your clothes always did seem to wear out so very quickly. And—and it costs so much to live. And—sometimes I grow—afraid.'

The smooth, low voice faltered, and ended

upon a sob. Spike stared in wide-eyed amaze, for seldom had he seen his sister thus; but now, beholding the droop of that brave head, seeing how her strong white hands gripped each other, he tossed the paper aside, and, flinging himself on his knees, clasped her in his arms. 'Don't cry, Hermy!' he pleaded. 'Oh, don't cry! I—I can't bear it. You know I love you best in the world. Ah, don't cry, dear! I—I'll hunt up a job first thing—honest, I will.'

'But your clothes are so very shabby!' she sobbed. 'And oh, boy dear, I have only just enough to—to pay our rent this month, so I can't get you any more—yet, dear!'

'Hermy,' said he brokenly—'oh, Hermy, you make me feel so mean, I—I—— One sure thing, you're never goin' t'spend your money on clothes for me any more—the money you work so hard for!—never any more, Hermy dear. You've done enough for me, I guess; an' now it's up t'me to help you, and—and—oh gee!' Here Spike's voice broke altogether; whereupon Hermione, quite forgetting her own sorrows and worries, fell to soothing and comforting him as she had done many and many a time during his motherless childhood.

'Say, Hermy,' said he at last, his tear-stained cheek pillowed on her soft, round bosom, 'you won't think me a—an awful kid for—for cryin', will you?'

'I think I love you all the better, boy dear, and—I'm sure it has done us both good.' And, smiling down at him through her tears, she kissed him.

'I'll start in an' rustle up a job right away, Hermy,' said he, rising and nodding grimly.

'Oh boy,' said she, looking up at him fondly, 'I shall be so proud of you! It wouldn't matter what it was, or how little you got at first, so long as it was decent and honourable. And I'm sure you'll get on. Mr Geoffrey thinks so too.'

'Does he? I'm glad o' that. Say, how d'ye like Geoff?'

'Oh, well, I've only seen him two or three times,' said Hermione, folding away her work preparatory to cooking supper.

TROPICAL POTATOES.

By D. M. Ford.

SHORT crops and high prices are now being quoted against the Irish potato. Mr Runciman, as the mouthpiece of Parliament, has bidden the public knock off the 'potato habit,' and put cereals in its place; potatoes once a day, or not at all, is to be the fiat of the future. All the while barrels of tropical potatoes are rotting in Covent Garden by reason of our lamentable insularity in the matter of unaccustomed foods.

Tropical potatoes are of various kinds. The yam, for nutrition and delicacy of flavour, easily heads the list. Most people on first making its acquaintance prefer it to the potato. Speaking from first-hand experience, the writer was genuinely sorry to leave the yam behind after a winter in the West Indies, and become a 'pratie' eater again in this country.

Yams have been cultivated in warm countries for centuries, and in the West Indies enter very largely into the diet of all classes of the population. The tubers vary in size and weight, from the smaller species, no larger than an ordinary potato, to the enormous yam measuring three feet in length, and weighing thirty or forty pounds. A Jamaican lady once told the writer she had seen a monstrosity yam which, when held upright, was as tall as an average human being.

That part of the yam-plant which appears above the ground consists of slender twining stems, which the natives train round poles stuck into a mound of earth, or 'hill.' There is no prettier sight in all the West Indies than these yam 'hills' on the mountain-side, their glossy green tendrils blending in colour with the broad, cool leaves of a banana-grove, an emerald patch of sugar-cane, or a clump of feathery bamboo.

Yams vary greatly in appearance. There is the guinea yam, the hard yam, the yellow or affoo yam, the negro yam, the Lucea yam, the little Indian yam or yampee; but the white yam is the best. It is sometimes called 'flour yam' because of its powdery appearance. Though similar in taste to the ordinary potato, it is more nutritious.

Erroneous ideas are prevalent in this country that yams are difficult to cook. The writer heard of a lady in the West Indies who sent some yams to an English friend. The cook viewed the strange vegetable with profound distrust, and absolutely refused to be responsible for its preparation for the table. The yams were thereupon sent to the local bakehouse, with, however, very satisfactory results.

It may not, of course, be possible to cook yam according to West Indian methods—namely, roast it out of doors in its jacket on hot sticks or glowing coals; but, apart from this, there is no more trouble in preparing the yam for the table than the English potato. Identically the same rules may be followed, allowing rather longer time for the yam because of its tougher outer skin.

The fancy methods adopted by English cooks for transforming 'left over' potatoes may also be copied when using up cold yam. It can be

mashed with butter, eggs, and seasoning, then either baked in buttered moulds or formed into shapes for frying. A favourite dish in the West Indies is roast-pig, served with a stuffing of cooked mashed yam, mixed with tomatoes, onions, butter, herbs, and eggs to bind the mixture. Yam can also be used in various puddings and sweet dishes.

Spanish or sweet potatoes are now coming over in large quantities into this country from Spain and the Azores. Their nutritive properties are higher than yams, and much higher than Irish potatoes, owing to a large percentage of sugar as well as starch. Though the outer skin varies in colour, the inside is always of a rich yellow, with a taste similar to that of chestnuts. In Mexico these tubers are used as sweetmeats, and in Spain they are made into preserves. The usual method, however, is to split them in half, bake them for two hours or so, and eat them after the fashion of ordinary potatoes. In the United States they are often used in place of chestnuts for stuffing turkey on Thanksgiving Day.

Our ancestors were more enterprising than are we of the present day. Sweet potatoes, or skyrrets, were imported into this country immediately following the discovery of the Americas, and continued to be eaten by all classes until the Irish potato, introduced from Virginia in 1586, finally supplanted it. It is to the tropical variety that Falstaff alludes when he cries, 'Let the sky rain potatoes!' (*Merry Wives of Windsor*).

Gerard the herbalist even tried to grow sweet potatoes in England in the sixteenth century, but without success. 'I planted in my garden divers roots (which I bought at the Exchange in London), where they flourished until winter, at which time they perished and rotted,' he records in his diary; and so enamoured was he of their gastronomic properties that later he gives directions for their preparation for the table: 'They are used to be eaten roasted in the ashes; some, when they be so roasted, infuse them, and sop them with wine, and others, to give them the greater grace in eating, do boil them with prunes; others dress them (being first roasted) with oil, vinegar, and salt, every man according to his own taste and liking. Notwithstanding, howsoever they be dressed, they comfort, nourish, and strengthen the body.'

Some lesser known tropical potatoes are cocos and *tous-les-mois*, seldom exported to this country. Cocos can be boiled or roasted. They are harder than yams. The roasted coco-skin is very nice eaten with butter. Grated coco is also good, and makes good fritters; boiled coco mashed with butter is another way of serving it. *Tous-les-mois*, so called because it is supposed to bear every month, is made from a bulb which can be eaten as a vegetable, boiled like yam or coco; but it is generally made into flour.

MR PEDSON'S PALINODE.

By T. B. Simpson.

LET me introduce you to Mr Mark Pedson, Fellow and Tutor of St Serf's College, Oxford.

'There can be no doubt,' he is saying in his most magisterial tones—'there can be no doubt that Gibbon, with that unfailing insight which with him took the place of scientific research—that Gibbon, I say, was right in his assertion that the Age of the Antonines was the period in the history of the world during which the condition of the human race was most happy and prosperous.'

He gives his whiskers a defiant wave, and looks round the small circle of his auditors, challenging denial. None is forthcoming. Indeed, one of those present is asleep, but he is a rowing Blue, and therefore a privileged person; the remainder are, or have been, Pedson's pupils, and know better than to contradict him.

'In fact,' he continues, 'I have no hesitation in saying that to exchange the cares and anxieties of our modern life for any position, however humble, in the society of those truly "spacious days" would be indeed a boon;' and Mr Pedson, with a satisfied air, squirted a little more soda into the generous whisky that he had just compounded for himself.

At this point the Blue, awakening with a start, collects his faculties just enough to say 'Good-night' before openly revealing that he has lost touch with the current of the monologue with which Mr Pedson is in the habit of entertaining his evening callers. The others gladly follow his bold example, and retire. Mr Pedson himself, after a sad reflection on the fate that condemns him to rise early next morning in order to deliver two lectures before a hard-won lunch, retires to his austere bedchamber, for it is late. Soon he is asleep.

Next morning he awoke with a strange sensation of unfamiliarity, and even of discomfort. He sat up in bed with a start, and discovered, with intense surprise, that he was not in his own bed at all, but seated upon a pile of dirty sacking. His night-gown—for, like all good Oxford dons, Mr Pedson wears a night-gown—had somehow shrunk, and now, drab and coarsened, was girt up round his waist by a rude strand of cord. The discomfort he had felt was easily accounted for by the fact that a tall, powerful-looking man, whom he discovered standing by his side, dressed in a loose linen tunic, had evidently been kicking him in the ribs.

To him spoke this individual, and Mr Pedson remarked with a sort of subconscious surprise that the words were Latin: 'Up, dog, and to your work, or I'll break every bone in your vile body, devil take you!'

Mr Pedson sprang to his feet with an agility that he had not shown for years, and was assisted by his awakener's toe through the doorway of the untidy, dark, evil-smelling apartment in which he had found himself, into a large courtyard. Here was assembled a motley crew of tatterdemalions, dressed like Mr Pedson. They were fighting round a pot which stood in a corner of the yard, and abusing each other in a variety of languages, among which Mr Pedson recognised Latin and a sort of mongrel Greek. It was plain that he was expected to join in the scramble for the unsavoury mess which the pot contained; but his stomach revolted at the thought, and he stood aloofly on one side, feeling hungry and unclean. As he did so, he was disquieted to hear the overseer —for the rude fellow who had disturbed his slumbers was evidently such—engage in conversation with another person who had just entered the yard. This latter was a curled and oiled Semite, loudly dressed in a robe of Coan silk, and flashing a large array of rings proudly in the sun.

'That Marcus,' so ran the overseer's words, 'the new slave from Britain, is a do-nothing donkey. I see that Caius Pomponius is advertising for a number of slaves of good physique to appear at his pro-consular games. A hundred of them are to be matched unarmed against six Cilician panthers, and it should be a pretty enough show. Now, if we could turn an honest penny by disposing of Marcus here, it would be a good riddance; and the knave could fight hard for his life, for all his fat.'

Before Mr Pedson had fully recovered from the shock of the evident assent accorded by the gorgeous Jew to this outrageous proposition, he found himself roughly propelled into taking his place in a sort of squad with the other slaves. A shovel and a rake were thrust into his hands, and in a minute he was out of the courtyard, marching in the centre of a ragged column through the streets. For a time these were narrow and sordid, with high tenements on either side that shut out the light of day; but later they traversed broad and spacious thoroughfares, flanked by splendid mansions with marble fronts. Eventually they emerged at an open space, in which Mr Pedson recognised, towering above him, the Colosseum—the Flavian amphitheatre of ancient Rome. The gang entered the building and were set to work.

Mr Pedson found, to his ineffable horror, that the task in hand was to restore to order the arena, which bore traces only too plainly evident of the previous day's gladiatorial combats. His heart sickened in him as he heaped sand over the dark stains which spotted the surface of the ground, or helped one of his fellow-slaves to drag forth the hideously mutilated body of an unsuccessful competitor.

As he worked, he entered into conversation with one of his comrades whenever he was sure that the lynx-eyed overseer was looking in another direction; for conversation among the slaves was not encouraged, as he gathered from one or two efficient displays of the lash. He found that his master was one Apelles, who enjoyed a running contract for keeping the arena in good order, and for this purpose had a large number of slaves in his employ. His wretched bondmen were driven with merciless severity, for labour was cheap, and if a slave did die from overwork—well, *vile damnum*, his body fetched a fair price as food for the beasts. Apelles got good value for his human chattels, alive or dead.

Midday came, sweltering hot, and brought with it a short respite, and, for the others, refreshment. Mr Pedson could not yet bring himself to face the rotten salt fish and brackish water provided for him, and his afternoon's work was rendered still more nauseating to him by the pangs of hunger. At length, empty and sick, he saw the sun set on his labours, and himself once more fallen in with the squad to be marched back to the 'island' tenement in which they lived.

On the road his knees gave way beneath him from sheer exhaustion, and he was left behind, together with his friend of the arena, who had instructions to 'bring along the scurvy dog as quick as may be,' coupled with dark hints at a spell in the *ergastulum*, or penal settlement, for so idle and worthless a scoundrel, together with a taste of 'the Fork.'

Mr Pedson lay, utterly spent, in the middle of the street. Pain and weariness had rendered him almost unconscious of his surroundings, when he was brought to himself by a sharp blow between the shoulders. Hastily he dragged himself to the side, and two men swept past him armed with long rods. They were 'forerunners,' clearing a path for a litter which followed immediately behind them, borne on the shoulders of six stalwart Cappadocians. In the litter sat a bearded man of middle age, finely dressed, calm, aristocratic, who in passing glanced indifferently at the unhappy Mr Pedson as he lay sprawling in the gutter.

'Who is that?' he asked of his companion.

'Don't you know who that is?' was the reply. 'Little wonder that you are known as "Madman" in the gang. Why, that is the divine Titus Antoninus, our august Emperor.'

'Now may Jove rot his bones, and the Furies bring him dishonoured to the bottomless abyss of Tartarus!' said Mr Pedson.

Hardly were the words out of his mouth when a shutter opened at the top of the building in front of which he was lying, and without any warning a pail of slops was discharged over

his recumbent form. Till that moment he had thought that he had plumbed the lowest depths of misery; now he realised how dreadfully mistaken he had been. With a groan he staggered to his feet, and began to proceed homewards with the assistance of his companion.

It was with positive relief that he sank to rest on his pile of sacking, sordid and verminous as it was. His fellow-slaves thronged round him, reeking of the garlic which had been their supper, and jeered at the dismal plight of the 'silly Briton.' When the jest had palled they went away, leaving behind one or two of their number, kindlier souls, and with these Mr Pedson began to talk. All of them, he found, had once been free, for all had been brought to Rome to be slaves, and not born into slavery. All were uniformly wretched. Though their numbers were great there was no hope of revolt, for even a distinctive servile dress was denied them, so that the slaves of great establishments might not recognise one another as such in the street, and, realising their numerical strength, feel inclined to exert it. All thought of escape was hopeless.

The hour for sleep soon came, and silence having been effectively secured by the usual means—the lash—Mr Pedson lay on his 'bed' and gave himself furiously to think. He would gladly have bartered his soul for a whisky-and-soda, or given his right hand for a pipe; but these, of course, could not be procured, he reflected sadly, in an age when the condition of the human race was (otherwise) so happy and prosperous. It occurred to him that, even had the freak of fate which had reverted him to this age been pleased to place him in the upper ranks of society, he could not have borne his lot; for even there whisky was not, and patricians were pipeless. Nor were they, he thought, immune from slops. Another aspect of their life, too, had struck him forcibly. Wherever he had passed through the city, to and from the Amphitheatre, in fashionable or plebeian thoroughfare alike, he had been overwhelmed by the odours of ancient civilisation. Broad avenues of princely houses shared with the narrow roadways of the densely populated poorer quarters a system of great open drains, from which proceeded stenches whose strength was only equalled by their variety. The streets were littered with the refuse which the *fœx Romuli* were concerned to remove only from their actual dwellings, throwing it from the windows, and not caring for the state of the roads beneath.

Mr Pedson, of course, had spent his time in the midst of an unwashed rabble breathing coarse herbs and clad in fetid rags. But even the higher classes of society, whatever the refinements of their life might be, had these smells always with them when they took their walks abroad. On this account they had to cover their persons and fill their palaces with heavy aromatic unguents, a remedy that to a modern would seem worse almost than the disease; and Mr Pedson realised that, even had he been metamorphosed into the Emperor himself, his twentieth-century nose had reached a stage of culture which would rob his Roman life of any enjoyment that otherwise it might have possessed.

As he reflected, he fell into a fitful slumber. And in his sleep a vision came to him, in which he saw a procession pass before his eyes. In it appeared first a citizen of ancient Athens, tall and dignified, in a well-cut cloak; next was a rude barbaric chieftain, with spear and bull's-hide shield; he was followed in his turn by a hairy savage, with club and bearskin. All of these, it seemed to Mr Pedson, had this in common, that they bewailed their own lot, and spoke with longing of bygone days, each looking enviously at the older type. Last of all came a lumbering ape, shaggy and uncouth, which slowly turned straight upon the dreamer, revealing a discontented face, wrinkled hideously with simian spleen. And the face was that of Mr Pedson, whiskers and all!

This proved too much for the sleeper. With a scream he awoke, and found himself (you guessed it) in his own bed at St Serf's, to his unspeakable relief. With joy he caressed his recovered night-gown; gladly he ascertained that his cherished whiskers still adorned his own face. With ecstasy he rolled upon the bed that now seemed to him so luxurious, though he had often before informed the bursar that it was hardly fit for a dog, and should be instantly renewed. When his scout entered he was dumbfounded at Mr Pedson's unaccustomed urbanity, and at the 'please' which he subjoined to a request for breakfast in his rooms.

Breakfast over, Mr Pedson sat before his fire, and puffed at his pipe in sheer delight. There was a knock at his door, and one of the undergraduates entered who had been calling the night before.

'Excuse my coming in so early, Mr Pedson,' he began.

'Not at all,' said Mr Pedson; 'it's a pleasure.'

'But the fact is, we're having a debate this week at the Compton on the subject that "This House would welcome a return to the 'good old days,'" and we'd like awfully if you'd propose the motion. I thought you might, especially after what you said last night about the Age of the Antonines.'

'No,' said Mr Pedson, 'I couldn't really speak so directly against my convictions.'

'But I thought you said'——

'Ah yes,' said the late "Marcus," 'but that was yesterday.'

. . . . . .

Extract from the minutes of the Compton Debating Society: 'Mr Pedson, who kindly took part in the debate, appeared as opposer, and his arguments against the motion completely carried the House with him.'

SCOTTISH HISTORICAL RHYMES AND SAYINGS.

By JAMES FERGUSON, K.C.

AMONG the sidelights which give variety and picturesqueness to Scottish history, illustrating peculiarities of character and the temper of the people, and occasionally throwing vivid gleams on local and social conditions, not the least illuminating are fragments of old songs preserved by chance by some chronicler with an eye for more than mere narrative, popular judgments in easily remembered rhyme on men and events, and short proverbial sayings expressive of social and political facts. Some refer directly to historical events, some relate to the great families who left their special mark on the nation's annals, and some to the interesting figures in the national life. They are generally concise and graphic, and convey much in a few words. They reflect the patriotic spirit, the shrewd judgment, and the grim humour of the Scottish race, and in them at times we can hear 'the ringing of the Roman tread.'

The first place may well be given to the oldest fragment of Scottish poetry, the lines preserved by Wyntoun, in which, in the dark days that followed, the Scottish people lamented the accident that terminated the male line of the old Scoto-Celtic kings, under whom the realm had been consolidated and made much progress in prosperity:

Quhen Alysandyr oure king wes dede,
That Scotland led in luve and le,
Away wes sons off ale and brede,
Off wyne and wax, off gamyn and gle;
Oure gold wes changed into lede,
Cryst, borne into Virgynyté,
Succour Scotland and remede
That stad [is in] perplexyte.

The fierce hatred of the southern invader is embodied in three short verses, only preserved by chance out of many. The first was composed at the siege of Berwick in 1296:

What! wenys King Edward with longe shankys
To have wonne Berwyk, all our unthankys?
Gaas pyke him,
And when he hath it,
Gaas dyke him.

The second, says Fabian, was for long 'sungyn in daunces in carollis of ye maydens and mynstrellys of Scotlande to the reproofe and dysdane of Englyshmen':

Maidens of England, sore may ye morne,
For your lemmans ye have loste at Bannockisburne!
With heue a lowe.
What weneyth the king of Engelonde
So soone to have wonne Scotlande
With rum by lowe.

And the third was a satire on the southern neighbours made after the marriage of David II. to Joan of England, and posted on the church doors of York:

Long berdes haitles,
Painted hoodes witles,
Gay cotes graceles,
Maketh England thryftles.

The defence of Dunbar by Black Agnes, Countess of March, was celebrated in the minstrel's lines:

She kept a stir in town and trench,
That brawling, boisterous Scottish wench;
Came I early, came I late,
I found Agnes at the gate.

Home preserves a contemporary rhyme on that gallant warrior who 'loved better to hear the lark sing than the mouse squeak,' and who dared the might of England to catch him on 'the skirts of Cairntable:'

Gude Sir James Douglas
Who wise, wight, and worthy was,
Was never over glad for no winning,
Nor yet over sad for no tining,
Good fortune and evil chance,
He weighed both in one balance.

The great Earl of Mar and Lord of Duffel in Brabant, who defeated Donald of the Isles at Harlaw in 1411, is said to have been the author of the proverb, 'Hunger is the best sauce.' He was himself defeated by Donald Balloch at Inverlochy in 1431, and when fleeing through the wilds of Lochaber was thankful to get a little barley-meal from a widow woman, which he mixed with water and drank out of his shoe. He composed a Gaelic verse of which the translation is:

Hunger is a cook right good,
Woe to him who sneers at food;
Barley crowdie in my shoe,
The sweetest food I ever knew.

The horror of the Scottish people at the murder of King James I. was expressed in a current rhyme as emphatic as the Teutonic '*Gott strafe England!*'—

Robert Grahame
That slew our king—
God give him shame.

The days of 'the Douglas Wars,' when the House of Huntly received well-merited honours from the king 'for keeping the crown upon our heid,' provided the proverb, 'Half-done, as Elgin was burnt,' and are alluded to in two rhymes evidently composed by sympathisers with the falling Douglas fortunes. One records a temporary reverse, and the other probably the retribution that followed:

Where left thou thy men,
Thou Gordon so gay?
In the bog o' Dunkinty,
Mowing the hay.

The guele, the Gordon, and the hoodie craw
Are the three worst things that Moray ever saw.

The battle of Brechin, in which Huntly defeated the Earl of Crawford, originated the saying,

A Lindsay in green
Should never be seen,

the Lindsays having worn that colour on that disastrous day. The same colour is unlucky for the Sinclairs, for it is said that none of them who crossed the Ord of Caithness clad in it returned from the fatal field of Flodden. The wide spread of the Gordon name in the north-east of Scotland is recorded in the Aberdeenshire couplet:

By Bogie, Deveron, Don, and Dee,
The Gordons ha'e the guiding o't.

The battle of Glenlivet, in 1594, when Huntly and Erroll vanquished the might of Argyll, levied in the name of Church and king, not altogether to the monarch's dissatisfaction, who found some compensation in his reflection, 'Fair fa' ye, Geordie Gordon, for sending him hame some like a subject,' is associated with the Campbell saying: 'Far's the cry from Loch Awe, and help from the race o' Duine.' And the vengeance of that strong and gallant Stewart who was known as Donald of the Hammer on the Campbell Clan was commemorated in a popular Highland verse:

Donald of the Smithy, the Son of the Hammer,
Filled the banks of Loch Awe with mourning and clamour.

A south-country chronicler tells of a time when no one was safe in that region 'unless he were either a Douglas or a Douglas man;' and there was true Aberdonian caution in the advice, 'Ne'er misca' a Gordon in the Raws o' Strathbogie,' and perhaps sound judgment in the Morayshire rule, 'Speak well o' the Highlands, but dwell in the Laigh.'

The times of the caterans are responsible for 'Forth bridles the wild Highlandman,' and the rough-and-ready methods of the Borderers for characteristic expressions as 'a Lockerbie lick,' 'Jeddart justice—first hang a man and syne judge him,' and 'an Annandale end.'

Adieu, my brother Annan thieves
That helped me in my mischievis;
Adieu, Corsars, Nicksons, and Bells,
Oft have we fared through the fells,
With King correction be ye fangit,
Beleeve right sure ye will be hangit.

A couplet in similar strain proclaimed:

Comes Liddesdale's peace
When Armstrongs cease.

The strength of the great fortress of Tantallon, on the East Lothian coast, was such that achieving the impossible was symbolised in a popular catch, sung to the air of 'The Old Scots March:'

Ding doon Tantallon,
Mak' a brig to the Bass;

and the long range of Mons Meg, the great gun of Edinburgh Castle, is quaintly indicated and good advice inculcated in the lines:

Pouther me weel, an' keep me clean,
I'll carry a bullet to Peebles green.

The old tradition as to the surname of Leslie is embodied in:

Between the Less Lee and the mair
He slew the knight and left him there.

'The Robertson's stirrup-cup' keeps Atholl hospitality in memory; and the name of a famous arrow-maker and the best type of Highland bow are handed down in:

Bow from yew of Easragin,
Eagle feather from Loch Treig;
Yellow wax from Galway town,
Arrow-head by MacPhederan.

Not the fortunes of British administrations, but the last refuge of 'broken men' in olden days, is referred to in the proverbial comment: 'Ireland will be your hinder end.'

The struggles of the Reformation period afford one or two couplets of stern significance. After the fall of the Castle of St Andrews, when held by Norman Leslie and the other slayers of Cardinal Beaton, and the fate of the captives taken by the French allies of the Queen Regent had been settled, the common people made a song upon the event, of which the burden was:

Priests content ye now,
And Priests content ye now,
Since Norman and his company
Have filled the galleys fou.

The lines of Sir David Lindsay on the death of the Cardinal have been so often quoted, sometimes by those who do not recognise their historical origin, that they have almost attained to the character of a popular saying:

As for this Cardinal, I grant
He was a man we well might want,
God will forgive it soon;
But of a truth, the sooth to say,
Although the loon be well away,
The deed was foully done.

With this epitaph may be compared the French epigram upon another great ecclesiastical and patriotic statesman—Richelieu:

Chacun parle à son gré de ce grand Cardinal,
Pour moi je n'en dirai rien;
Il m'a fait trop de bien pour en dire du mal,
Il m'a fait trop de mal pour en dire du bien.

The haughty retort of the Earl Marischal, who founded Marischal College in Aberdeen, to those who shook their heads over the extent to which his family had been enriched by grants of the annexed Church lands was expressed in the inscription on buildings in Peterhead and on a tower on the lands of Deer:

Thay saye
Quhat saye thay;
Thay haif said,
Lat thaim saye.

But the subsequent misfortunes of the House of Keith verified the warning:

Meddle na with haly things;
For if ye dee,
A weird, I rede in some shape,
Shall follow thee.

The Thirty Years' War and the recruiting of Lord Reay's famous regiment for the service of 'the Lion of the North and Bulwark of the Protestant Religion' have left a reminiscence in the Gaelic Sutherland saying: 'Every man that is down in his luck will get a dollar from Mackay.'

The self-sacrifice of his foster-father and foster-brothers for the chief of the MacLeans in the battle with Cromwell's army at Inverkeithing has made proverbial the exclamation, 'Another for Hector,' as evidenced by Scott's use of it in *The Fair Maid of Perth*. The days of the Civil Wars are also recalled by the contrast depicted between the severe marches of Montrose and the predatory incursions of Lord Lewis Gordon at the head of 'Huntly's Highlandmen:'

If you with Lord Lewis go,
You'll get reif and prey eneuch;
If you with Montrose go,
You'll get grief and wae eneuch.

And the names not only of high commanders but of two gallant cavalry captains are remembered in:

Leslie for the kirk,
And Middleton for the king;
But ne'er a man can gi'e a knock
But Ross and Augustine.

The forgotten fortunes of 'fights fought long ago' are indicated in such names as 'The Bloody Butts of Lendrum,' in Aberdeenshire; and vague tradition of some prehistoric conflicts at Menmuir, in Forfarshire, lingers in the local saying:

Between the Blawart lap an' Killievair stanes
There lies mony bluidy banes.

A different order of things, and the political pre-eminence of two great Scottish families between the Revolution and the Reform Bill, are succinctly epitomised in the lines:

First came the men o' mony wimples,
Whom commonly folk ca' Dalrymples;
And after them came the Dundases,
Who rode our Lords and Lairds like asses.

This paper may be concluded with older traditions still which have some bearing on the vexed question of race in Scotland, and are not without relevance to recent parliamentary discussions on the recruiting for Scottish Highland and Lowland regiments. They are fragments saved from the lost verses of the old Gaelic bards, in which they record the traditionary descent of two Highland clans from the ancient Royal House of Celtic Scotland, that of Clan Alpin or the Macgregors from Kenneth Macalpin, the conqueror of the Picts, and that of the Clan Ferguson from Fergus, the founder of the original Scottish monarchy in Argyll, or Scottish Dalriada. The first, referring to the Macgregor, is preserved in a note to Macintosh's *Gaelic Proverbs:*

Sliochd nan righibh duthchasach
'Bha shios 'an Dun-s-a-da-innis,
Aig an robh crun na h' Alb 'o thus,
S'aig am feil duthchas flathasd ris.

Children of the native kings
Who reigned down at Dunstaffnage;
Who first the crown of Alban owned,
And still have native right to it.

Of the Clan Ferguson another bard says:

Sliochd nam fear nach robh cearbach,
Thanaig sios 'o Righ Fhearghuis,
A righich air Albain 'o thus.

Sons of the men who never were unready,
Who descended down from King Fergus,
The first king who reigned over Alban.

M'Gregor, in his *Oran nan Fineachan*, has:

Ach com an leiginn dearmad air
Clann Fhearghuis nan garbh thurn;
Sliochd a cheud Righ Albanaich
A chun air coir's na garbh-chriochan;
Mar leamhuim chalma gharga iad,
Nuair dh' fhalbadh iad le surd,
Clogaid, sleaghs, lurach-mhallach
Sud bhu ac' 'o thus.

And wherefore would I now forget
Clan Fergus of the brave deeds;
Descendants of the first King of Alban,
Who defended our rights to our mountain-land;
Like a lion strong and fierce are they,
When they march on with glee;
A helmet, spear, and coat of mail
Was what they had of old.

It is a curious and interesting historical fact that in the days when the Macgregors were harried, and their name proscribed by Act of Parliament, wherever the Clan Ferguson were numerous in the Highlands men of their name are found in the lists of those 'fyned for resetting the Clan Gregor.'

These quaint fragments of lost verse, rhymes, and epigrammatic sayings give life and colour to the dry bones of the past, occasionally flash an illuminating beam into prehistoric ages, and illustrate, in a way that formal narrative cannot, national sentiment, clan feeling, and local patriotism.

BEYOND THE VEIL.

THEY tell me your emancipated soul
Oft hovers near to comfort and inspire;
That death is but the portal—not the goal—
Of that far country of the heart's desire.
They also tell me you would speak with me
If I had ears to hear your spirit-voice;
That could my earth-dimmed eyes but clearly see,
I might again behold you and rejoice!
If this be so, why wander I in doubt,
With senses dulled and faith so nearly dry,
Mingling with those who ignorantly flout
At such a creed? Alas! I know not why.
I can but hope that when the shadows fall
My failing ear may hear your loving call.

SOME FALLACIES ABOUT EDITORS.

By One of Them.

PERHAPS the commonest is the misconception about the Editor's functions. Very many people seem to be quite unaware of the existence of a manager, a publisher, or a cashier. Any sort of communication is addressed to the Editor. Does the proprietor of the village shop at Drumtochty wish to add the *Daily Grumbler* to his stock? He writes to the Editor. Does Mrs Gummidge, who keeps a boarding-house at Slocum-on-Sea, desire to advertise her eligible apartments? She writes to the Editor. People even write to him for back-numbers. I believe it is no uncommon thing at the *Times* office to receive a letter like this addressed to Lord Northcliffe: 'I understand you had in the *Times* of last Thursday an article on the Yorkshire coal trade. Please send me a copy. Twopence in stamps enclosed.' It is needless to say that Lord Northcliffe does not sit at the receipt of custom, dropping coppers into the till and addressing newspaper wrappers. Nor, as a matter of fact, is Lord Northcliffe the Editor; but the moral of the incident is the same—that the public identifies the paper with the man on it who bulks most largely in its eye, and that in nine cases out of ten is the Editor. People have as hazy a conception of the functions of a publisher as of a stevedore; but the Editor is a familiar and friendly figure, and they calmly hold him ultimately responsible for all the varied activities of a newspaper office. Perhaps it would be unkind to disturb an illusion which has, in many cases, little correspondence to reality.

Another deep-rooted fallacy is that the Editor is in perpetual want of things 'to fill up.' I suppose the popular picture of an Editor is of a distracted man who comes to the office about seven in the evening without an idea as to how his columns are to be filled next morning, trusting that some kindly Providence will come along during the evening with a sufficient supply of battles and tragedies and law-cases to enable the paper to come out. He is growing desperate when, by the last post, arrives Mr C. Scribendi's article on the state of politics in Patagonia. With muttered thanks to a merciful Providence, he grasps the manuscript and rushes it to the printer; and the readers of the *Morning Molehill* are spared the humiliation of finding a vacant column on the back page next morning. No, Editors do not live on casual manna in the wilderness like that. They are not in want of copy, not even in what used to be called the 'silly season' till the war had reduced all the months of the year to a dead-level of wisdom. If you ever have anything to send to an Editor, do not send it from eleemosynary motives, 'to fill up an odd corner.' Well-conducted newspapers do not have odd corners.

Another erroneous conception of the Editor is largely entertained by ladies on charitable committees, to whom an Editor is a nice old gentleman who sits at a desk with a pen behind his ear, waiting to write down nice little paragraphs for every caller with an axe to grind, especially an axe she is grinding gratuitously. The sober fact that in most large newspaper offices the Editor either does not write at all or writes less than almost anybody else on the staff is one which they flatly refuse to credit. So they would the fact that as soon as their backs are turned he passes over their 'story' to the junior reporter, probably with imprecations, and certainly without any trace of the enthusiasm which would be expected of one in his position.

And this touches what is probably the most widespread of all errors concerning Editors: that he welcomes visitors. There is probably no such rooted misanthropist in the world as the Editor. Visitors are the plague of his life, especially those who think themselves important, and who really are so important that they cannot be handed over to a subordinate. They take up valuable time and pay no attention to printed placards urging brevity of discourse. Their requests are frequently absurd or impossible, and their manners vary between blandishment and intimidation. The telephone is nowhere a greater boon than in newspaper offices; and yet one of the commonest of telephone messages is from people with paragraphs, who think they can best promote their object by coming to 'see the Editor,' not because they have anything more to say to him than can be sent by letter, but simply, as they think, to secure his good graces. It is a dreadful mistake. The people an Editor likes best are, as a rule, those whom he sees least, whether proprietors, contributors, or readers.

As a matter of fact, most Editors are disappointing when you meet them. One's abstract

 [*All Rights Reserved.*]

concept of an Editor is so influenced by the tradition of dignity and omniscience that the revelation of an average human being is bound to be a disillusionment. His journal is so full of varied information, he so clearly shares all the State secrets with the Censor, he reproves (or encourages) Governments with so stern and unrelenting a vigilance, that it is incredible he should be made of the same clay as the ordinary ignoramus. The belief in his wisdom is quite touching. Morning after morning letters arrive in quest of the most curious and miscellaneous scraps of knowledge: what was *really* the cause of the *débâcle* in Roumania; whether it is true that the Crown Prince is bigamously married to Miss Higginson of Buffalo, N.Y.; how many more acres there are in Yorkshire than letters in the Bible; what is the best way of softening the plates of false teeth. Legal and domestic problems of the most intimate sort are laid before him for his arbitrament; and I have even known an entirely secular Editor consulted by one in trouble about the state of his soul.

All letters are not so flattering, and few ideas about an Editor are so baseless as that he is susceptible to letters of abuse. He is far too habituated to them; and he is much more likely to think that he has failed in his duty if his letter-bag does not contain a certain proportion of scurrility. Most of these are founded upon childish errors; but, as they are usually anonymous, it is impossible to make the necessary correction. The rest are either ill-temper or political mania, which used to be a very common form of epistolary hydrophobia. It is curious that so many of these critics are periodical in their ululations. One would think they would give up a paper which apparently caused them so much anguish of spirit; but no, they keep the pricks in order that they may have the meagre satisfaction of kicking against them.

The Editor is in his way a scapegoat. Though, as I have said, he as a rule writes little himself, he is held responsible for every word in his paper, and readers do not fail to call him to account for the misdemeanours of the sub-editor, or the reporter, or even of the printer. One well-known paper has quite lost caste with the musical world because of its proof-reader's habit of regarding 'Brahms' as the possessive case of a composer called 'Brahm,' and because it once mentioned a sonata by Beethoven in D sharp. An Editor, of course, exercises a general supervision over the paper; but it is physically impossible for him to study every line of it, and to check from his own knowledge the accuracy of every paragraph submitted by every correspondent or every item of news transmitted by a news agency. Many thousands of people all over the world are engaged, directly and indirectly, in the production of every daily paper published in this country; and the remarkable thing is that in all the circumstances the average margin of error is so small.

Editors, like Prime Ministers and Generals in the field, are supposed to require no holidays. This is especially the case with those Editors who have a personality not wholly merged in their paper. One recalls the comedy which occurred recently when, in the temporary absence of the Editor of a well-known London paper, the editorial gap was filled with an article markedly different in tone from the customary pronouncement. In response to the outcry, it had to be explained in the remaining issues of the hiatus that the article in question was supplied by a contributor in the absence of the Editor. As a rule, greater precautions are taken to preserve consistency; but most newspapers can tell tales of dilemmas and embarrassments caused by the paper's taking one line when the Editor is at home, and another, through inadvertence, when he is away.

And thereby hangs the whole problem of editorial psychology—a complicated psychology somewhere between that of a human being with a soul and that of a limited company without one. What are the contributing causes when a paper changes its opinions—say on Ireland, or Tariffs, or Woman Suffrage? The cases are few in which it is simply a matter of individual judgment. As a rule there are several people to be consulted, proprietors as well as Editor (there have been cases, strange though it may seem, where the Editor was overruled); and the probability must be considered of the contemplated change being acceptable to the readers. Not many papers were so rash (and not many so peculiarly situated in respect of the unity of proprietorial and editorial responsibility) as to start a campaign of denunciation against Lord Kitchener at a time when he was still the idol of the man in the street. So the relations of an Editor to his own policy are not always so direct and simple a matter as might appear. Not, of course, that any conscientious Editor will professionally advocate a policy of which he disapproves personally; but the policy, as announced, may be subject to reservations and qualifications which are not present to the mind of the Editor as an individual. The distinction is not peculiar to Editors. A man may say one thing of Mr Winston Churchill to his wife, but if he has to write an article on him for the *Fortnightly Review* he will choose a different, and possibly a suaver, form of words.

It is possible, too, to exaggerate the interest for Editors of a good cause, as such. So many people are apt to think that if they have invented a new sort of Garden City, or started a society for supplying hot-water bottles for the natives of Uganda, or have discovered how to live happily off boiled bracken and onion sauce, it is the immediate duty of every newspaper to place its columns at their disposal. But a newspaper is a commercial and not a philanthropic undertaking; and the Editor's business is not to bring about

more of the Millennium than is compatible with a sound balance-sheet. It may seem a hard saying, but an Editor's concern is just as much to please his readers as a grocer's is to please his customers. He is compelled, therefore, to balance the ethical with the 'interesting,' and to bear in mind (if he is the Editor of an evening paper) that a case of wife-beating may thrill his readers where the destitution of Borrioboolah-Gha may leave them cold. You have no more right to blame an Editor in the circumstances than you have to blame a bookseller who sells a Nat Gould novel to a youth who would obviously be the better for one of the works of the late Samuel Smiles.

THE DEFINITE OBJECT.

CHAPTER XI.—*continued.*

'IS that all?' said Spike, smoothing out the paper and scowling at the long columns headed 'Youths Wanted.'

'Ye-es, I think so.'

'But you an' him 's always meetin' on the stair, ain't—aren't you?'

'You should say "you and he," dear.'

'Well, but aren't you?'

'We have met—once or twice.'

'D' ye like him?'

'Well, he 's so very—different! And rather lazy! And awfully sleepy! And yet I don't think he 's sleepy really, somehow.'

'Sleepy!' exclaimed Spike. 'Well, I guess not! Lazy I dunno, but he sure is all to the wide-awake-o. When he looks sleepiest I guess he 's widest awake. And he ain't a — isn't a bad looker, is he?'

'He has nice eyes,' Hermione admitted.

'Oh, I don't mean his eyes!' quoth Spike disgustedly. 'I mean his arms an' legs an' shoulders.'

'They are nice and wide,' nodded Hermione.

'I should like t' see Geoff in th' ring. He 'd strip big.'

'Oh, really,' said Hermione, taking a very large apron from the table drawer. 'Boy dear, I do wish you weren't always thinking of fighting.'

'All right, Hermy dear. But there ain't no flies on Geoff. 'N' say, I wantcher to like him, 'cause I kinder think he 's all to the cream-puffs an''——

'Boy!' cried Hermione, lifting an admonishing finger.

'I 'm sorry; my tongue kinder slipped, Hermy. But I have been tryin' t' keep tabs on me talk—honest, I have.'

'Yes, dear. You haven't been quite so frightful lately.'

'Ye see, Hermy, you 're different. You went to a swell school, an''——

'And you never did; I know, dear. But, oh, Arthur, I did the best I could!'

'And a lot better than I deserved,' said he, reaching out to pat her hand caressingly. 'When I get a good job I 'll stay in nights an' study hard like you want me to. I sure will.'

'Yes, dear, and you 'll soon be heaps cleverer than I am,' said she, stooping to kiss his curly head as she tied the apron about her shapely hips, and thereafter, giving him a smiling nod, vanished into the kitchen, while Spike laboured through the long columns headed 'Youths Wanted.' And presently, as she moved light-footed to and fro in the kitchen, he heard her singing softly to herself an old, old song of other days that had often been his lullaby when he was a small, motherless armful of sleepiness hushed in her young protecting clasp.

'Arthur!' she called.

'Hello!' he answered.

'Are you hungry?'

'You bet I am!'

A long pause, whereafter ensued the following conversation between kitchen and parlour:

Hermione—'Boy dear!'

Spike—'Hello!'

Hermione—'Be a dear and lay the cloth for me.'

Spike—'Right-o!'

A longer pause, during which Spike rises and takes cloth from sideboard drawer.

Hermione—'Arthur!'

Spike—'Yes?'

Hermione—'Where did you meet him?'

Spike (starting)—'Who?'

Hermione—'Mr Geoffrey. How did you happen to meet each other?'

Another pause, while Spike stands frowning in perplexed thought.

Spike—'Where did you say the cloth was?'

Hermione—'In the sideboard drawer. How long have you known him?'

Spike (beginning to lay the cloth feverishly)—'Oh, a goodish time. Say, Hermy, he sure likes your name a whole lot!'

Hermione—'Oh!' (a very small pause) 'likes my name, does he?'

Spike—'He sure does. He told me so.'

Hermione—'Oh!' (another small pause) 'just what did he say, boy dear?'

Spike—'He said it was Greek an' very beautiful, an' then I said it kind o' fitted you, because you were aces up on the face an' figure question.'

A rush of petticoats, and enter Hermione, flushed and laughing. 'You dear boy!' she cried, 'for that you shall be kissed!' which he was forthwith; after which she turned to the mirror to smooth back a shining tress of hair—

that same rebellious curl that glistened above her fine black eyebrow. 'Where did you say you first met him—Mr Geoffrey?' she inquired suddenly, still busied with the rebellious curl.

Spike started, and glanced uneasily at her shapely back. 'Say, Hermy,' said he, a little huskily, 'have you got anythin' for supper?'

'Not much, dear, I'm afraid.'

'That's a pity!'

'Why?'

'Oh, because I asked him in to supper.'

'You asked Mr Geoffrey—here?' she gasped.

'Surest thing you know. Ye see, I thought you was stayin' over at Englewood.'

'Oh Arthur,' she sighed, 'and there are only two wretched little chops! And not a bit of butter! And the rent's due to-morrow—I can't spare a cent—and me in this shabby old gown! And you broke the best teapot!'

'Sounds kind of gay an' festive,' sighed Spike ruefully. 'But don't worry about the eats, dear. Geoff won't mind, an' he'll never notice your old gown.'

'He seems to notice a great deal,' said Hermione doubtfully, as she hastily untied the big apron; 'and, besides—oh, gracious goodness!' she cried as a knock sounded at the front-door, 'you must let him in, Arthur; and don't let him know I'm changing my gown.' Saying which, she vanished into her bedroom, while Spike hastened to the door.

'Why, hello, Tony!' he exclaimed, 'what's wrong now?'

'My lil Pietro,' cried the Italian excitedly, 'he no sleep; he burn-a, burn-a all-a da time—all-a da time cry! You tell you sis—she come-a like-a da las' time, den he no cry-a'—— But here Tony broke off to flourish his hat and bow gracefully as he caught sight of Hermione herself. 'Ah, signorina!' he cried, 'my lil Pietro he seeck. You please-a come see my lil Pietro? He flush-a, he cry, he all-a da fire! He burn-a, burn-a like-a da fire! You so good, so generosa—you come see my lil Pietro?'

'Why, of course I will,' said Hermione in her calm, soft voice. 'Poor little mite—is he feverish?'

'*Si, si*, signorina,' answered the anxious young father; 'he burn-a, burn-a all-a da time.'

'Reach me the aconite, boy dear. Yes, that's it.'

'But what about supper, Hermy?' queried Spike wistfully.

'Oh, well—finish laying the table. I'll be back as soon as ever I can, dear.'

'Oh gee!' sighed Spike, as their footsteps died away down the stairs, 'she sure is keen on knowin' how I met Geoff. And if she ever finds out'—— Spike cowered down into a chair, and, clasping his head between his hands, sat thus a long while, staring moodily at the floor, striving for a way out of the difficulty. He was yet wrestling with this knotty problem when he started, to hear muffled knocks at the front-door, which, being opened, disclosed the object of his thoughts. 'Why, Geoff,' he cried gladly, 'I thought you warn't comin'. Say, what you got there?' he inquired, for Ravenslee's arms were filled with sundry packages and parcels.

'Come and see,' said Ravenslee mysteriously. 'Catch this one before I drop it.'

'Why—hello!' said Spike, sniffing at the package in question as he led the way into the parlour, 'it smells good. It sniffs like—holy gee, it's a roast turkey! And—oh, say, Geoff—she's a beaut'!'

'Precisely what Mr Pffeffenfifer assured me,' said Ravenslee, depositing his other burdens on the table. 'Mr Pffeffenfifer is a man educated in eats, a food fancier, an artist of the appetite. Mr Pffeffenfifer is fat and soulful. Mr Pffeffenfifer nearly wept tears over the virtues of that bird—pledged his immortal soul for its tenderness, vowed by all the gods it had breast enough for twins. Mr Pffeffenfifer seemed so passionately attached to that bird that I feared he meant to keep it to gloat over in selfish secrecy. But no, base coin seduced him, did the trick, and—here it is. Also, we have a loaf!' and from beneath one arm Ravenslee dropped a package that resolved itself into a Vienna roll. 'Also, ham'——

'Hey, Geoff,' said Spike in awe-struck tones, 'are all these eats?'

'Certainly. I should have brought more if I could have carried 'em.'

'More?'

'Most decidedly. When I buy eats, my lad, I buy everything in sight that looks worth while—if Mr Pffeffenfifer sells. Mr Pffeffenfifer sells in such a soulfully seductive way that eats acquire virtues above and beyond their own base selves—Mr Pffeffenfifer can infuse soul into a sausage. Behold now, eats the most alluring. See, what's this? Ah yes, here we have—item: Salmi, redolent of garlic; here again a head cheese, succulent and savoury; here's ham, most ravishingly pink; and a Camembert cheese.'

'But, Jiminy Christmas, you bought such a lot of each. Who's goin' t' eat all these?'

'We, of course!'

'But we can't eat 'em all,' sighed Spike.

'Can't we?' said Ravenslee, beginning to view the quantity of the numerous viands with dubious eyes. 'They do seem rather a lot now I see 'em all together. But I'm ravenous, and if we can't manage 'em we'll find some one who can.'

'Ye see, Geoff, I sha'n't be able t' eat any o' the rest when I'm through with the turk'!' sighed Spike a little reproachfully. 'My, but I'm hungry! Strange, how hungry cold turkey makes a guy!'

'Why, then,' said Ravenslee, pitching his hat into a corner, 'sit down, comrade, and "let

mirth with unconfined wing"'—— Ravenslee yawned.

'I guess we 'd better wait a bit, Geoff.'

'What for?'

'Hermy.'

'Is she—d' you mean she 's back?' inquired Ravenslee, sitting up.

'Yes. She didn't stay at Englewood; she 's downstairs, doctoring Tony's kid.'

'But what will she think of all these confounded messes?'

'Messes!' cried Spike indignantly. 'Cheese it, Geoff—look at that turk'!'

'But—do you think she 'll mind?' inquired Ravenslee uneasily.

'Mind?' said Spike, staring. 'Not on your life. Why should she? Besides, it 's kind o' lucky you happened to blow in with this free lunch; she 's a bit shy on the dollar question this month—an' Mulligan comes t'-morrow. An', oh, say, Geoff—she 's dead set on findin' out how I met you, an'—an' where.'

'Very naturally,' murmured Ravenslee.

'An' we must tell her somethin'; but what?'

'Spike, you 've forgotten the mustard. And as for—er—lying to your sister, let our motto be "sufficient unto the day." Our present need is mustard, Spike.'

'Say, this sure is goin' t' be some supper, Geoff!' said Spike, setting on the mustard and gazing at the array of edibles with shining eyes. 'Gee, I could eat cold turkey all night!'

'Have we everything ready, Spike?'

'Except butter, Geoff.'

'Ha! the one thing I forgot, of course. Cut off and get some, like the good fellow you are;' and Ravenslee flicked a bill into Spike's hand, who, seizing his cap, promptly vanished. Being alone, Ravenslee crossed to the sideboard, and, taking thence a certain photo, seated himself in the easy-chair and fell to studying it with deep and grave attention. And sitting thus, he let fancy run riot—and fancy was singularly pleasing, to judge by the glow in his eyes and the tender smile that curved his lip.

He was lost deep within his dreams when he was aware of a loud knock upon the outer door, which Spike had left unlatched, and, setting by the photo, he rose. 'Come in!' said he.

A heavy step sounded in the little hall, the door was pushed open, and a man entered. He was a young man, big and broad-shouldered, and Ravenslee's keen eyes were quick to heed the length and ponderous carriage of the arms, the girth of chest, and firm, heavy poise of the face; lastly, he looked at the face, aggressively handsome, with its dominating nose and chin, and blue eyes shaded by thick lashes, that looked out beneath heavy brows—a comely-seeming face from the dark, close-cropped hair to the deep cleft in the strong, fleshy chin.

But now, beneath Ravenslee's persistent regard, the full-curved shapely lips grew slowly into a cruel,-down-trending line, the nostrils expanded, while the blue eyes narrowed to shining slits beneath quick-scowling, black brows. For a long moment the two men stared at each other eye to eye; then, in a hoarse, assertive tone, the new-comer spoke.

'What ye doin' here? Who are ye?'

Mr Ravenslee sat down and began to fill his pipe.

'Where 's de kid?'

Mr Ravenslee brushed stray grains of tobacco from his knee with elaborate care.

'Hey, you—where 's Spike—'n' what you doin' here anyway?'

Mr Ravenslee glanced up casually. 'And pray, who the devil may you be pleased to be?' he inquired.

'Me name 's M'Ginnis.'

'Oh, indeed!'

'Yes—indeed! Bud M'Ginnis—is that good 'nuff for ye?'

'Well, since you ask,' said Ravenslee, shaking a languid head, 'I should scarcely class you as a "bud" myself. No, I should say you were perhaps just a trifle—er—overblown. But have it your own way!' and Mr Ravenslee smiled engagingly.

'Where 's Spike?' demanded M'Ginnis, his tone a little gruffer. 'An' say—you can cut out the comedy, see? Nix on the funny business'——

'You are a pessimist, I presume, Mr Flowers?'

'Where 's de kid? Speak up now—where is he?'

'Also, your conversation grows a little monotonous, Mr Flowers.'

M'Ginnis stared, then shot out his big chin viciously. 'What you doin' in Hermy's flat, eh?'

Mr Ravenslee's brows wrinkled slightly, but his soft voice grew softer, as, pausing in the act of lighting his pipe, he answered, 'On the whole, I think you are a rather—er—unpleasant young man, so suppose you—er—go.'

'What! Go? Are ye tryin' t' tell me t' go?'

'I 'm suggesting that you—er—crank up the machine, Mr Flowers, and beat it while the going 's good!'

M'Ginnis clenched his fist and took a threatening step toward Ravenslee, then checked and stood breathing heavily.

'May I further suggest,' said Ravenslee in his pleasantest voice, 'that you look in again—say next Thursday fortnight, Mr Flowers?'

'T' hell with you—me name 's M'Ginnis.'

'Of course, you might leave a message, Mr Flowers.'

'Now, see here, you,' said M'Ginnis, his words coming thick with passion, 'I wanter know, first, where Spike is. An' then I wanter know who you are. An' then I wanter know what you 're after in Hermy Chesterton's flat—an' you 're sure goin' t' tell me!'

'Am I?'

'You sure are!'

Mr Ravenslee opened the match-box. 'Seems a pity to shake a confidence so sublime,' he sighed, 'and yet'——

'An' see here again! I've known Hermy since we was kids, an' I don't allow no man t' come stampin' around here—see? So you're goin' t' quit, an' you're goin' t' quit right now!'

'Do I look like a quitter, Mr Flowers?'

Now beholding the speaker's lazy assurance of pose, the contemptuous indifference of his general air, M'Ginnis stood speechless a moment, his clenched fists quivering, while, above the loosely tied scarf, his powerful neck seemed to swell and show knotted cords that writhed and twisted, and when at last he spoke his words came in a panting rush. 'This is Hermy's flat, an' I guess—you think you're safe here; but you ain't! I'm thinkin' out which 'll do th' least harm to her furniture—to lick ye here, or drag you out on to the landin' first!'

Mr Ravenslee lounged lower in the arm-chair, and yawned behind the box of matches. And in that moment, like a maddened animal, M'Ginnis leapt upon him, and, striking no blow, seized and shook Ravenslee in powerful, frantic hands, while from between his lips, curled back from big, white teeth, came a continuous vicious hissing sound.

'I'll wake ye up,' he panted. 'Come out—come out, I say. Oh, I'll wake ye up when I get ye outside, I guess. Come out! What you doin' in Hermy's flat? By God! I'll choke ye till ye tell me!' and his hands came upon Ravenslee's throat—came to be met there by two other hands that, closing upon his wrists, wrenched and twisted viciously in opposite directions, and, loosing his hold, M'Ginnis fell back, staring down at bruised and lacerated skin where oozed a few slow drops of blood.

'And now,' said Ravenslee, rising, 'after you, Mr Flowers; let us by all means step outside, where we will each earnestly endeavour to pitch the other downstairs. Personally, I shall do my very damnedest, for really I don't—no, I do not—like you, Mr Flowers; you need some one to tread on you a little. Step outside, and let *me* try.'

But now, while M'Ginnis stared from his swelling, bloody wrists to Ravenslee's face—a face quite as fierce and determined as his own—steps were heard, and Spike's voice called, 'Hermy come in yet, Geoff?'

'Not yet, but our friend Mr Flowers has dropped in—socially, I fancy.'

'Mr who?' inquired Spike at the door; but, beholding M'Ginnis, he paused there, staring aghast. 'Why, hello, Bud,' said he nervously, 'what's wrong?'

'Nothin' much yet, kid; only it's kinder lucky for this guy as you happened in. Who is he? What's he doin' here?'

'He's only a friend o' mine, Bud, an' he's all right; 'n' say'——

'Tell him t' beat it.'

'But ye see, Bud'——

'Tell him as we don't want his kind around here, or'——

'Spike, did you bring in the butter?' inquired Ravenslee, serenely unconscious of M'Ginnis.

'Yes, here it is, Geoff; but say'——

'It doesn't feel much,' said Ravenslee, weighing the package in his hand.

'It's half a pound. But say, here's Bud; he says you're to'——

'My Spike, I'll trouble you for the butter-dish—thanks!' and, turning away, Ravenslee busied himself at the table, whistling softly the while.

'But, Geoff, this is Bud!' cried the lad, glancing from one to the other in an agony of suspense. 'Oh, don't ye know this is Bud M'Ginnis?'

'Ah, still here, is he?' said Ravenslee without looking round.

'See here, kid,' growled M'Ginnis, 'you tell your friend t' clear out, an' t' do it real quick, see. You tell him if he ain't out in two minutes I'll run him out meself.'

'Spike, this butter is nearly oil.'

'Oh Geoff,' groaned the boy, 'you've got to go; here's Bud'——

'Why, then, Spike, tell him to—er—chase himself; I'm busy.'

Came the sound of a chair set roughly aside, and a shrill cry from Spike, 'My God, Bud, don't—look out, Geoff!'

But, as M'Ginnis came, Ravenslee turned swiftly, ducked the expected blow, and swinging his fist up beneath his assailant's extended arm, smote him hard and true upon the elbow; and Spike, staring pale and wide of eye, saw that arm fall and dangle helplessly at M'Ginnis's side, while his face was contorted with sharp agony.

'My God, Geoff! what you done to him?'

'Pins and needles, Spike, that's all. A hoary old trick, but useful now and then. Mr Flowers isn't so very wide awake as folk seem to think. You see, it wouldn't have done to knock him out here; he might have upset the table.'

'Knock out Bud!' cried Spike, aghast. 'But there ain't nobody can lick Bud M'Ginnis.'

'Oh, I don't know, Spike. Anyway, we'll see what can be done outside. After you, Mr Flowers. Pray go first, Mr Flowers. A fellow who would attack a man sitting down isn't to be trusted behind one; so, after you, Mr Flowers. Oh, we'll wait until you can use your arm, but we'll wait outside. Miss Chesterton's flat is no place for your sort; so, out with you, and quick, d'ye hear?'

M'Ginnis opened his lips to retort, but passion choked him; and, snarling unintelligibly, he turned and strode out upon the landing.

THE GERMAN MENACE TO NORTH AND SOUTH AMERICA.

By EDWARD PERRY (New Jersey).

WILL America's next great war be over the Monroe Doctrine?

The basic cause of most great wars has been the desire to control sources of the necessaries of life. Really great leaders of nations know that he who can control the food of the world can make all men his slaves.

Some parts of the Old World are already fully populated; other parts are infertile or inclement; some parts, again, are held by Powers so strong that attempt to seize them would be unprofitable. The occupation of parts of France and of Belgium, for instance, has already involved a cost frightful beyond the wildest dreams of three years ago.

South America spreads wide under equatorial skies, and narrows almost evenly as it approaches the cold Antarctic; therefore the two vast oceans temper the winds, so that the country has no such long months of ice as are common at a corresponding latitude in North America. The major part of South America will thus become the most productive area of its size in any quarter of the globe. Two of the largest river systems of the world afford easy access from the Atlantic to nearly every part of this rich field. Other large streams reach far into the continent. Together these waterways make easy and inexpensive the marketing of products of most of the countries there without the cost of constructing and maintaining great railway systems. This field has been, naturally, a great temptation to European Powers. A compact these Powers made a hundred years ago led the republics of the New World to bind themselves together to resist such encroachment. The declaration of the purpose of this compact is known as the Monroe Doctrine, which embodies the principle of non-interference with South American Governments by any European Power. Such interference would be regarded as an unfriendly act by the United States. Despite this announcement, European empire-builders and European monarchies have from time to time tried to wrest parts of their territory from South American nations.

The American attitude is: 'We should be glad to have the friendship of all other peoples, and their trade if they will give it on fair terms. What we don't want is to manage their affairs for them, or for them to interfere in ours.' That the American people really adhere to such a principle is shown by their refusal to take any part of Cuba in return for freeing the island from control by Spain; or to accept payment in any form for helping to induce European Powers to abandon claims to the territory of Honduras, Nicaragua, Colombia, of Venezuela and islands of the Antilles; or to occupy permanently any part of Mexico, great as the provocation has been to do so.

While the Americans gave such proof of aversion to conquest of other states, the people of Great Britain seem to have been approaching a like feeling, if a majority of them had not reached it, before the present war began. If they are of that mind they are far in advance of millions of their near neighbours.

When the most tremendous of all wars is at an end, the world may then be so tired of war that the millions of armed men will be restored to peaceful work. But what assurance have we that none of the warring Powers will not turn their ready forces to seizing possessions that would compensate for losses the war has already brought to them? America has such possessions, perhaps the most tempting ever known. What Power is most likely to attempt to seize them? Russia has always shown a most friendly feeling toward the United States, even when American popular sentiment appeared to be favourable to Japan, mainly because the island nation was thought to be the weaker of the two. But Russia has area and natural resources enough to give profitable employment to her people for centuries. She needs no more territory. France also has been always the steadfast friend of America. She has sufficient territory to give new homes and employment to her surplus population for generations. Moreover, racial sympathies have made the French and the Italians most welcome to Latin-America, and they have ever been welcomed to the United States. Spain and Portugal, for linguistic and traditional reasons, send emigrants freely to South and Central America, and in addition they have possessions of their own in Africa to absorb their capital, energy, and people. Belgium, with a great colony in Central Africa to develop, has no wish or inducement to go farther afield. Japan may have more urgent need than has any other Old World Power for additional room for expansion; but China, Korea, and other parts of Asia seem to offer a vast field in which the Japanese interests may expand peacefully, and with far more profit than any attempt against America would probably give.

We have been told that British statesmen inspired the Monroe Doctrine. Great Britain has respected it, even when zealous empire-builders violated the doctrine. The people of Great Britain and of the United States have long been in agreement on the basic principles of the rights of humanity, on ideals of honour, and on the essentials of government. They are also in agreement on questions of world policy. This may account in part for the hatred toward the Americans shown by so many Germans—

hatred second only to that expressed toward the British. It may be contended that they have more than once given cause for this feeling. Americans 'called the bluff' of the German squadron at Manila. Americans checkmated German intrigues for seizing Haiti and Santo Domingo. American and British influence prevented Germans from monopolising the Orinoco River. Americans kept Zelaya from delivering to Germans the railroads and the canal zone of Nicaragua. American influence deterred Costa Rica from granting to Germans a canal zone parallel and close to that of Nicaragua. Americans kept Germany from taking the Isla Margarita from Venezuela. Americans cut off the German trade in munitions for Huerta of Mexico, and arrested Germans for furnishing munitions to rebel factions in northern Mexico. Americans have been ready to supply munitions to the Allies—supplies that Germany found herself unable to carry home for her own use against those Allies because of their command of the sea. America denounced the use of submarines against unarmed non-combatants, men, women, and children, as too frightful for any but the lowest savages.

For years the Germans have complained that the Americans uphold a dog-in-the-manger policy; that they will neither take possession of Latin-American countries themselves nor let others do so. To this extent the Americans may have kept Germany from 'taking her place in the sun' of tropical America. So bitterness of feeling against the American nation was strengthened. An idea of the intensity of this hatred may be got from the fact that it caused war to be made treacherously on unarmed workers in shops well within the territory of the United States while the country was at peace with Germany, was giving shelter to millions of Germans, including the cowards who thus blew up men, women, and children, and guaranteeing to the Germans freedom to live and do any lawful business in the United States. It may be that the German Empire is not responsible for any of these acts of treachery and murder. It may not be responsible for declarations like that attributed to a professor of a public school of New York, to the effect that 'if war comes because the American Government demands that we stop using our U-boats, our most effective weapon, we Germans in New York will destroy the city! Enough of us here are ready to do it in a day!'

In relation to probable raids on the territorial and other rights of the New World, evidence volunteered by Germans of high standing in the employ of the Empire is abundant and conclusive. One of these witnesses, Baron von Stengel, an authority on international law and a professor of the University of Munich, is reported to have written lately to the Dutch Pacifist League: 'The whole course of this war up to the present has shown that we Germans have been chosen by Providence, from among all other peoples, to march at the head of all civilised nations, and lead them, under our protection, toward assured peace; for we have not only the power and force necessary for this mission, but we possess the spiritual gifts also to the highest degree; and in all creation it is we who constitute the crown of civilisation. Therefore it is superfluous to discuss pacifist plans of any nature. The nations, and especially the neutral nations, have only one means for leading a profitable existence. It is to submit to our guidance, which is superior from every point of view.' Was not that warning directed to all New World nations, and expressly and particularly to the United States?

As to designs against the peace of these nations, Professor William Romaine Newbold, of the University of Pennsylvania, has written about revelations by an Austrian army officer with whom he became well acquainted. This officer told the professor that the conquest of the United States and Canada was scheduled for the near future. 'He thought that I myself, then about forty-six years old, would live to see this conquest completed, and the English language stamped out in North America. There existed a strong organisation of Germans throughout the North American continent, the object of which was to keep alive German *Kultur* and allegiance, and to stab us in the back when the attack upon the country was made.'

Perhaps, naturally, Professor Newbold was amused by these predictions, as showing fanatical faith in Prussian mightiness. He so described them to a German 'who had long been in the diplomatic service, so I was told, who spoke English as well as I did, and was thoroughly conversant with American conditions, having been long in Washington. I told him something of Lieutenant ——'s ideas, as an illustration of the extremes to which patriotism, when not regulated by intelligence, would carry a man. To my surprise, he replied in effect, "I see nothing extravagant in all that. Nothing counts nowadays except brains. We Germans have them, and the rest of you haven't. I don't say that we shall conquer the entire earth; but I do say that we shall conquer as much of it as we please, and you can't prevent it. Try it if you dare!"'

Were we to ignore these and similar warnings, we of the Western World might be as astoundingly stupid as we think the Germans were foolish to utter them. We might think that no sane person would so betray such designs had we not seen General von Bernhardi's book, and read other utterances to the same effect by eminent Germans. Americans can no longer smilingly regard these as mere 'bluff' because they appear to be too insane to be taken seriously.

News of the day indicates that the war losses of the Teuton Powers have been prodigious, and the end is not in sight. German industries

have been deranged, her artisans scattered, crippled, or killed. Her foreign commerce, built up at the cost of years of admirable thoroughness and diligence, has been almost wholly destroyed. The road to her expansion in the East has been blocked, and it seems likely that, convinced that Germany is as a rabid wolf to the rights of humanity and civilisation, the Entente Powers will carefully maintain all useful barriers.

This New World offers the most tempting of all fields for early and easy looting, and for later and lasting exploitation. Here lies ready the greatest booty ever known; and we ourselves have loudly declared that we are unprepared to protect it. And in this New World the Prussian oligarchy might build, easily and quickly, a nation that could feed the world for a thousand years; that could become so rich and powerful that it could master all mankind. The purpose to do this was no doubt behind the German preparations that were carried on for years. It was one of the most magnificent of all human dreams. Part of these preparations was the planting and the cultivation of anti-American sentiment throughout Latin-America. There the cry 'Yankee imperialism,' like the yell 'Stop thief!' was raised on every occasion to avert attention from the real robbers, to prevent the Latin-Americans from seeing German preparations for seizing their territory. That propaganda served other purposes also. It paid its own way by turning trade from North Americans to Germans. At the same time it gratified the Teuton hatred of the Yankee. It was intended to induce the Latin-Americans to fight against the Colossus of the North when the day would come for breaking down the Monroe Doctrine and parcelling out South American territory.

Latin-America appeared to be quite ignorant of schemes for encroachment on its sovereign rights. This may have been because many a truth is known that cannot be demonstrated to the satisfaction of a court bound by rigid rules of evidence; many a truth is unpublished because the source of information must not be exposed; many a fact of living interest to a nation remains unrevealed because diplomacy requires silence. Nevertheless, soon after the beginning of the European war, warning to America was voiced by the Brazilian Minister at Paris. He declared bluntly that the greatest of dangers threatening Latin-America lay in German designs. Early in June 1915 his assertion was verified by the discovery of large deposits of arms and munitions secreted in the province of Santa Catharina, Brazil; and with them were discovered full plans for seizure of that province by the Germans settled there.

If Britain had not intervened as she did, and Germany had crushed Belgium and France, as Bernhardi prophesied, Germany would have menaced England across a narrow channel, and would have had a short and open road to North America, and through France a direct and short way to the Mediterranean, to the Caribbean, and to the South Atlantic. Had she cared to disguise her plans, German squadrons might have sailed 'on friendly visits to friendly countries,' after the precedent set by an American administration. To honour fitly the two greatest American republics, a powerful squadron might have appeared at New York, while a number of cruisers might have gone to Rio de Janeiro. A single ship of that squadron to the south might have been enough, in the German view, to do the honours at Buenos Aires, while another might have sailed farther south. At that opportune moment the Germans in southern Brazil, or in Paraguay, in Uruguay, or even in Argentina, might have uncovered their arms and their scheme. They might have declared that a new Government was established, and appealed to Germany, the mother country, for recognition. Had these quite possible things happened, what probable combination among the Latin-Americans could have driven the invader out? What could have prevented the Germans from seizing one small republic after another? What European Power would have had inducement enough to join the United States to prevent this? Would not European prejudices, and political, financial, and industrial interests, have tended strongly to lead some such Powers to join the invader in hope of sharing the spoils?

Had Germany so seized part of South America, while a powerful squadron menaced New York City, and hundreds of thousands of Germans in big American cities formed a grave internal danger, Washington would have had to sacrifice either peace or the Monroe Doctrine. The Government would have been urged by one party instantly to fly to arms to rescue a distant nation from annihilation, while another party implored them to declare neutrality and save their own cities from Prussian frightfulness by making known that the Monroe Doctrine was obsolete.

Eminent Germans long, diligently, and ably taught the dogma that the wishes and the welfare of the individual must be sacrificed to the State, whenever and however required. It is said that many Germans sought homes in the United States to avoid submitting to this doctrine. But possibly humanity might in time come to accept this dogma were there reason for believing that any ruler of any state would be fit to decide when, and how, to what extent, and by whom, such sacrifices should be made; or that any such ruler would be superman enough never to demand sacrifice for his own benefit. Often and by various witnesses the world has been informed that many a royal head has been unsound; even that a number of the crowned heads of the world have been too insane to be allowed to go about at will. The world has been told that many members of royal

families have been degenerate descendants of the drunken and the vicious, of diseased and debased rulers whose weaknesses, vices, and physical deformities have been perpetuated and increased by inbreeding. Was not the Kaiser's decision that *Der Tag* was come an evidence that he was mentally unsound? Was the sanity of the Kaiser and his councillors demonstrated by their blundering belief in easy victory over France, over Russia, and perhaps over Britain? Whether they were sane or not, they decided that the time had come for demanding such sacrifice of the individual for the State; and the Kaiser is the German State. As a natural consequence of Prussian *Kultur*, the property, the health, and the lives of millions of his people, and those of his Allies, have been destroyed because the working of wrongly developed brain-cells of a single man, or at most a small group of men of the same stamp, decided that the time was ripe for imposing their will upon all the rest of humanity. This working of mistrained minds has already cost the rest of the world enormously, and no one knows how prodigiously greater this cost may become.

Since last year's campaign drove into even German consciousness the truth that the Empire cannot hope for victory, eminent German agents have been denying that Prussian *Kultur* was to be imposed by armed conquest upon all the rest of mankind. Nevertheless, the late Professor Münsterberg, of Harvard University, declared, as lately as 26th October 1916, that 'whatever the great diplomats may settle upon after the war, the one great change will be that German *Kultur* will conquer the globe; that German *Kultur* will spread to all the countries of the world.' He added: 'The German ideal is not individual, but works in the service for the ideals of the whole State. The individual subordinates himself to the works of the whole State. That idea has taken hold on our nation, and it must grow all over the world. No nation will be able to play a rôle in the great drama after this war without it. And that is exactly what the Germans mean to-day by the term "German *Kultur*."'

This may be accepted as an assertion that armed conquest of the world was not, or is not, the design of Germany. It may with at least as good reason be taken as a reiteration of the old statements of such design: that the Prussian slogan, *Deutschland über Alles*, means all it says —Germany over all; that Prussian *Kultur*—the extreme opposite of that democracy toward which mankind has struggled through centuries —was to be forced upon all humanity. Its logical, inevitable result would be slavery for all human beings excepting one ruler by the divine right of kings.

None can fairly object to being judged by their own acts and words, and the words and deeds of the German people warrant the assertion that they accept Prussian *Kultur*. What that means may be judged from these emulators of the Hun, Goth, and Vandal; by the treatment accorded by the ruling classes of Germany to their own people; by the savage 'frightfulness' of their recent war on defenceless men, women, and children, even when these were neutral, if they were not actually friendly to the Germans. Their words and deeds show that they have long worked, and are even now working, to carry Prussian *Kultur* and slavery to America. Their record warrants the charge that Prussian *Kultur* in the New World would surpass in 'frightfulness' and savagery the worst rule by the Conquistadores in Spanish-America.

Why should not the Prussian oligarchy strive to save itself by plundering another nation or nations? By this means it might satisfy its own people by material and immediate booty, and with the belief that the mastery of the world would be given to them. Accumulated riches in the United States, and the ability of the American people to pay a prodigious, an utterly unparalleled, ransom, would make them the most tempting victims ever known. But South America could be conquered much more easily, and offers a field that is potentially greater than is North America. Conquest of South America would in time bring realisation of the dreams of the Prussians. It would make them masters of the world. Surely it is more than probable that they will attempt this conquest, unless they are convinced that such an attempt will be hopeless.

'OLE CAM'RON.'

CHAPTER II.

HOW the life-lines of Ian M'Leod, late Captain, Cameron Highlanders, came in so strange a manner to cross those of his long-dead kinsman's old slave may be briefly told. The third or fourth son of a Scotch laird, and, as the result of a small frontier campaign, minus an arm and with a more or less shattered lung, the young officer had not improved his worldly prospects by precipitately marrying his cousin, daughter of an honourable but impoverished branch of the family. Between himself and his father there passed, on the subject of what the latter chose to consider his son's unutterable folly, such high words that pride, reinforced by the doctor's verdict as to the effects the British climate might have upon his injured lung, led young M'Leod to the impulsive decision of taking his bride to the far-distant 'Golden State' of California, and there investing what small capital he possessed in a fruit-ranch lying in one

of the sun-cup valleys among the Sierra Nevada foothills.

There already, for some months before their chance meeting with Old Cameron, the young couple had been established—M'Leod himself happy and contented among his own vines and fig-trees, accomplishing wonders with his one arm; while Margot's busy hands and tireless feet soon created a 'home' out of the long, white bungalow, with its broad veranda and green shutters, which at first seemed so appalling a contrast to the ivy-grown granite walls of her own dear Highland castle. With cheerful determination to make the best of things—with her face bravely set towards the sunshine and her back to the shadows—the high-born girl discarded pretty frocks and smart hats for a short cotton dress and sun-bonnet, helped her husband to stow away in a corner of the house boxes brought out from 'home,' filled with all manner of useless silver and china, and, while her crippled soldier dexterously dug and pruned and irrigated the precious terraces of vines and the fragrant peach orchards, set herself to the manifold tasks of maid-of-all-work, where were none available to help. Ian was happy! Ian was looking stronger! What else in the wide world mattered to Margaret M'Leod?

And yet, beyond the limits of her own new home, this exiled daughter of a proud Scotch clan lived in an atmosphere of strange isolation. The valley, beautiful as Eden, with its wealth of blossom, its wooded slopes, and its river like a silver chain, twisting and breaking over time-old rocks, though once upon a time thickly dotted with prosperous ranches and busy men and teams, had, when gold was discovered in the river-bed and encircling foothills, been suddenly transformed into a great, ugly, greedy 'camp.' In an incredibly short time fair acres became pitted, as it were, by the ravages of smallpox, where one prospector after another dug frantically for the precious metal. Orchards and vineyards were first neglected, then abandoned; and when at length the gold-fever had exhausted itself, nothing remained but the bare bones of what had been one of the most famous wine-producing districts in California.

In course of time, however, the pendulum began to swing back again, and a few of the neglected ranches, including the one that young M'Leod purchased, were taken up and replanted; but the valley lay far from railroads and markets, the old methods of disposing of vine and fruit crops had passed away, and a difficult task confronted the plucky young Scotsman to win a livelihood for himself and wife from their adopted soil. Of neighbours they had scarcely any, of friends none; though the door was ever open and a kindly welcome extended to any chance visitor in the passing—some prospector trudging hillwards with pick and pan; a rancher, with sweating horses, on his slow journey into the 'big timber' country; the flotsam and jetsam of the restless race of that Far West.

All these Margaret M'Leod could and did enjoy. Their racy speech, frankly democratic but chivalrous manners; the hearty, almost pathetic appreciation of any little kindness or homely gift—all interested and appealed to one brought up in a land where sharp and unassailable distinction is drawn between gentlemen and men as mere *men*. With the few women, however, with whom she came in contact—the wives and daughters of the valley householders—poor Margot could make no headway. That which in the rough-and-ready garb of men passed as, at the worst, eccentricity of speech and the result of environment, became in their womenkind, with their would-be smart dresses of latest cut and fashion, and their easy familiarity, hopelessly underbred and common. Their efforts at 'conversation,' revealing an utter lack of comprehension of things beyond their own narrow world; the tacit criticism which Margot instinctively felt beneath their suave, self-possessed manner; their complete oblivion as to any distinction inherent to birth and breeding, irked and irritated the girl, in spite of her self-chastisement for being thus supersensitive and hypercritical.

'I can't help it—oh, I can't *help* it!' she had once exclaimed, during one of the passionate storms of homesick longing that sometimes swept over her, after a 'visitation' (as her husband called it) of one of the local dames. 'They are so *common*, Ian; and I shouldn't *mind* their being common if only they *knew* they were, and that I am *not!*' And then she had to join with him in the laugh against herself.

So when, during one of their long rides together, which always acted like a restorative to Margot's flagging courage, they had chanced upon the old negro, who not only at once recognised in her husband and herself something above the ordinary run of 'po' white trash,' but proved to have been long years in the service of their own kinsfolk, the girl had been excited and cheered to a seemingly unwarrantable degree.

Good part of the following night, while her stolid lord and master, having dismissed the subject with a laconic, 'Rum go that, Meg, about the old nigger!—better put those things where they 'll be safe,' settled solidly to sleep, Margot lay wakeful by his side, thinking over Old Cameron's story in all its detail, longing to hear more, and cogitating how she could bring a little added comfort and happiness into the life of the poor old slave, so devoted to the memory of his 'massa.'

Therefore a few days later found the young couple once more heading for the hills, a fine 'pack' of good things for Old Cameron behind their saddles, as well as a box—large and comfortable—in which two fat kittens were making themselves as crowded and noisy as possible.

When they arrived at the cabin the old darky

joyfully appeared, overwhelming his visitors with delighted thanks, and hurrying to establish snug quarters for the 'little cats,' to the evident pleasure and satisfaction of the young coon; then he took M'Leod and his wife to see his gold 'claim.' He soon taught the former the art of 'panning.' As the pine-laden air and higher altitude were a welcome change to both the young people from the valley, it became a regular thing for them to ride thither once or twice a week, with unfailing additions to Old Cameron's larder or wardrobe; and while Ian pottered about with his gun or panned the red-brown earth in the negro's 'claim,' Margot would sit and listen to the old slave's tales of long-ago days in the cotton-fields of South Carolina.

By constant questioning, Margot gradually sharpened the old man's memory, thus learning much of the lives and surroundings of those proud M'Leods, with whose names she had long been familiar, but scarcely as realities. To Margot all this was like a new breath of life, an oasis in the desert of their alien surroundings —a welcome, if unique, link between her *own* 'world' and this Far Western one of antipodal habit of life and outlook. So when, in the following year, there came a good many months in which M'Leod had to take his rides alone, the girl sorely missed her old negro friend. Her husband, however, when he could spare the time from the ranch, whose demands on his strength and purse seemed to grow daily more exacting, continued to ride up to Light Cañon.

It was after one such expedition that he said to his wife, 'Meg, I believe it's rather a good thing that we chanced to run across that poor old nigger. I "doot" he's breaking up, and I can't think what he would do without all those foods and things you send to keep him going. As for that "claim" of his, it seems to be an awfully rotten affair; I panned for several hours for the poor old soul, and got barely twenty cents' worth of "dust"—can't see how he has managed to exist all these years. One hears rumours of his having a "good thing," and he always insists he gets "'nuff," but if he were to be ill, I don't know what would become of him if he hadn't us to fall back upon.'

But although Margot's eyes were raised to his while he spoke, her thoughts this time were not of the old slave. She was thinking of her husband. Surely he had grown thinner, and more transparent-looking and worried? She wished the blight on the vines had not been so bad; and she wondered if the peach-crop were more of a failure than he admitted. It would not do for her to worry too much *now;* but after baby came she must devote herself more again to Ian —she feared she had been neglecting him. Then the busy fingers fell to stitching tiny garments which her husband called 'ridiculous!'

(*Continued on page 185.*)

SOME FACTS ABOUT ZINC.

By JOHN BOWMAN, Assoc. M. Inst. C. E.

UP to the beginning of the nineteenth century zinc was used for little else than making brass. To-day it is probably employed in more diverse ways than any other metal. So enormously has the demand for zinc grown that within the last fifteen years the world's output has been doubled, and now amounts to over one million tons per annum.

The existence of zinc as a separate metal was unknown to the ancients. The name first occurs in the writings of Paracelsus the alchemist, about 1530, to whom its discovery has, perhaps erroneously, been attributed. The fact that it was so long in being identified is doubtless due to its never being found in a free state. To extract the metal from the ore a process of reduction and distillation has to be performed. For a long time, and so far back as the sixteenth century, one of the products, white vitriol or sulphate of zinc, was prepared and used commercially before it was known to be procured from the metal. This white vitriol was made from the ore of calamine obtained in the Hartz Mountains, and its manufacture appears to have been a monopoly of Duke Julius of Brunswick. It was extensively used by leather-dressers, and also in processes where formerly alum had been employed.

Brass is an alloy of copper and zinc, to which a small quantity of tin may be added to increase the hardness, or lead if it is desirable to make the brass more suitable for filing or turning. The percentage of zinc varies. Generally the mixture consists of about two parts of copper to one of zinc. Ores are to be found which are rich in a mixture of zinc and copper, and which yield a kind of natural brass. Mines containing ores from which gold-coloured metals could be obtained were known to the ancients, and were held in the highest esteem. When such mines were exhausted it was believed that this yellow metal, which was looked upon as a purer kind of copper, would never again be found. In course of time, however, it was discovered that the addition of an ore, probably calamine, to copper while melting gave it the yellow colour so much admired. When calamine ore was discovered in sufficient quantities the ancient method of procuring brass from copper ore was abandoned, and it was found more convenient first to extract the pure copper ore, and then convert it into brass by the addition of calamine.

Zinc-smelting was practised in England from about 1730, and on the Continent, first at Liège, in 1807. The original English process for the extraction of zinc is seldom employed. Either the Belgian or the Silesian method is now used in zinc-producing countries. In the Belgian method between forty and fifty retorts charged with a mixture of ore and coal are inserted in one furnace. The distilled metal discharges from each retort into a fireclay nozzle, and the residue into a cone-shaped sheet-iron receptacle which forms an extension of the fireclay nozzle. The contents of the fireclay nozzle are raked out, and are cast into plates ready for commercial use as spelter. The residue, which may amount to as much as 10 per cent. of the total metal, is zinc dust, and is either sold as such or added to the next charge. The Silesian method employs larger fireclay retorts. These take up more room and burn more coal, but less expense is involved for retorts, as these are less exposed to the heat of the fire.

Up to 1833 zinc was principally obtained from Germany. Then Belgium began to produce the metal. These two countries manufacture considerably more than half of the world's output. Next to Belgium and Germany, the United States produces most zinc. The growth of America's production has been very remarkable. In 1897 the output was under one hundred thousand tons, and in 1906 it had increased to two hundred thousand tons. The other zinc-producing countries in their order of output are France, Britain, Austria, Spain, and Russia. The whole output of these five countries amounted to about half that of Belgium. Owing to the war and the consequent stoppage of the Belgian and German supplies there has been an enormous increase in the supplies from the other countries, and probably one result has been to place America in control of the zinc markets of neutral countries. Another effect has been enormously to increase the price. Before the war prices ranged from fifteen to twenty-one pounds per ton. In November 1914 the price was twenty-four pounds per ton. By January 1915 thirty-six pounds was the market price, and twelve months later the price was eighty-three pounds per ton. The highest price, one hundred and two pounds per ton, was reached at the end of February. On 1st March an order prohibiting speculative dealings in metals was published, and in less than a fortnight the price had declined to seventy-seven pounds per ton. At the beginning of April the price was steady at eighty-nine pounds. By the middle of the month the price had again risen to one hundred pounds, and remained at this figure until the beginning of May. At the end of May seventy-six pounds was the quoted price; the end of June saw a further decline to fifty-six pounds. Since then the price has fluctuated between fifty and sixty pounds, the average for December being fifty-five pounds. While this price represents an enormous increase on normal prices, the big reduction from the maximum price is satisfactory, because it is due to the determined action of producers in Australia. The cutting off of the German and Belgian supplies has enabled Australia to become one of the leading zinc producing countries, and she should be, at the close of the war, a formidable competitor in the Eastern and South American markets. Canada also began producing last year, and the smelter at Traill, British Columbia, yielded six million pounds, valued at two hundred thousand pounds sterling.

In its pure state zinc is extensively employed for building purposes, chiefly as a covering for roofs, where, for economical reasons, it has taken the place of sheet-lead. Its use is not to be recommended in smoky atmospheres, and even under good conditions its average life is about twenty years. Like lead, zinc is protected from further corrosion by the first coat of oxide which forms on the surface. Cast-iron exposed to air rapidly corrodes, but by coating it with zinc it is rendered weather-proof. The process of coating, or galvanising, is performed by cleaning the iron and dipping it in molten zinc. Contact with water containing calcareous matter destroys zinc. For this reason the use of galvanised iron piping is expressly forbidden by many water authorities.

As a component part of alloys, such as brass, Muntz metal, German silver, and bronze, zinc is extensively used for engineering purposes. Sulphate of zinc or white vitriol was used in the sixteenth century as an eye-wash. It is still employed as an astringent for sores and ulcers. Taken internally it is a powerful emetic in cases of poisoning.

Chloride of zinc is used as a flux in soldering. Under the name of Burnett's fluid it is a powerful disinfectant; possessing the property of dissolving silk, it is employed for removing the fibre from wool. Zinc oxide, known to painters as zinc-white, is employed as a pigment in place of white-lead for use in smoky atmospheres, where it is not discoloured by sulphuretted hydrogen.

THE SAP.

By O. C. Platoon.

SAPS are funny things. They are also not very nice things to have very much to do with, and so they are usually handed over to the care of the bombing-officer; really it is Tommy who looks after them, keeps them up to the mark, digs them out, and improves them. Saps have many purposes, the chief of which seems to be to pretend that they are the front line, so

that unsuspecting people may turn a corner and lose themselves. When they retrace their steps, they usually go in the opposite direction. When they have repeated this once or twice, they find that they have forgotten which is the front and where the Germans are. They look for the fire-bays, which are, of course, on the German side, and, finding none, realise they are in a communication-trench. They find the front line again after a while. When this has happened about forty times, somebody puts up a large notice-board at the mouth of the sap. Another use of the sap is to put the wind up the Boche, by enabling our bombers to get nearer to their lines. The Boche copes with this by putting the wind up the sap, usually with something hefty in the *Minenwerfer* line. This is a story of a sap like that.

Dead Man's Sap it was called, running out from our line at an angle of about seventy-five degrees. It bent sharply, after about ten yards, and finished up twenty yards farther on in a kind of circular pit, with fire-bays and a dug-out. The ground all around it looked as though it had been chewed. There had been more wire put up in front of Dead Man's Sap than on the whole of our company front. It had been dug out more times than any other part of our line. In fact, there was always somebody or other digging out Dead Man's Sap, or deepening it, or improving it, or making new bomb-box emplacements in it.

For some obscure reason of his own, the Boche did not like that sap. During the day his snipers fired over it and all round it. As evening came he usually dropped an aerial dart or a light trench-mortar bomb into it, or very close to it, just to show that he had not forgotten it, and that he was not going to let the matter rest. And all night long he had a battery of four fixed rifles, which fired at intervals of about ten minutes into the sandbags. Altogether, it was a very uncomfortable place—which was why we very rarely occupied it. Nobody ever lived in it; but we kept it clean and tidy, and dug it out surreptitiously with blasphemous regularity. Poor old Fritz, believing that we lived and had our being there, strafed it day in and day out, until one day he realised that it must be a dud, and let it rest. Then we occupied it.

It was very useful to us, for it was quite the best exit from the trench, and as we 'exited' every night, for one reason or another, Dead Man's Sap became quite a thoroughfare. The men who occupied it were chosen very carefully, for it had a sinister reputation. It was told that back in the early days of the war, when Fritz's tail was up, and not down, as it became later, a raiding party of Germans had arrived at the sap, hooked a sergeant out with a bayonet, dropped a large bomb among the remainder, and decamped. When the sap was inspected the next morning, however, the sergeant had been returned. He was sitting on the fire-bay, staring straight before him, quite dead and full of bayonet-holes. This was one of the mildest stories told of the sap, and it was not every one who cared to hang round the neighbourhood at night if he could help it.

The choice fell on Bullock, Minchin, and Williams. They were all types, and none of them feared anything on God's earth.

Bullock was tall, thin, dirty, and pessimistic. He was utterly without imagination. I believe he would have gone over to the German line in daylight without the slightest excitement or interest, and only have been mildly surprised when some one turned a machine-gun on him or threw a bomb at him. He rarely washed.

Minchin was youthful, and very excitable. War to him was a great and glorious game, and every morning he would walk along the trench and swear vigorously at the Germans, and propound wild plans for putting the wind up them. He it was who lay out under the Boche wire one night, shaking the posts so that the wire rattled, and the Boche, frightened out of his life at the inexplicable rattling, threw things about for quite a long time.

The third man, Williams, was grim and dour. He had a South African ribbon up, and the trenches rather bored him. He took things very calmly; yet whatever mad idea Minchin produced, he was always ready to carry it out. Bullock was usually fatigue-man on these occasions.

It was Minchin who conceived the idea of crawling out and cutting loose three of the Boche *chevaux de frise*. Bullock carried out a coil of stout wire, and the other two made it fast to the loosened portion. They then took the wire back to the line, and when daylight came, pulled the three *chevaux de frise* across No Man's Land in full view of the astounded Boche. It was quite a useful bit of work really; for the Boche, forgetting his customary caution, stared over his parapets at the moving wire, so that our snipers had a day out.

Dead Man's Sap was also extremely useful as a listening-post. At night the only way you can fathom what your opponent is doing is to listen. Verey lights give away the most obvious things, but it is not often they reveal much. There are many nights when patrols are not practicable, and on such nights listening becomes the only alternative.

'Can you hear it?' I said to Bullock, who was beside me in the sap.

'Heard it larst free nights,' said Bullock; 'diggin' an' 'ammerin'.'

'Where do you think it is?'

'Dunno, sir.'

'Fancy it's in their trenches, sir, just opposite. Can 'ear it from the front line in the daytime an' all,' said Williams.

There was the unmistakable sound of chalk

sliding off a shovel, of a pick being used, and of posts being hammered into the ground.

'Can Williams an' me go out an' find out, sir?' said Minchin.

'Yes; but mind you 're not seen, and don't interfere with them unless they interfere with you. Now, understand you 're going out for information only, and I don't want any foolhardy tricks.'

I went off to report that a patrol had gone out, and then returned to the sap to listen. Save for the continual scraping there was silence. Lights went up from time to time, and odd bullets wailed across the darkness, haphazard blind shots into the dark, which rarely, if ever, hit anything or anybody. No Man's Land seemed deserted. Suddenly Bullock pointed out in front. Two figures were crawling carefully towards the sap. We covered them, and waited until they were right up to us. We recognised them as Minchin and Williams. They rolled in, and, replacing their bombs in the box, made their report.

'We found 'em all right. They 're opposite 'ere in their front line. An' you can't see 'em from our trench, 'cos there 's a bit of a 'ill. Could see 'em from the sap 'ere in daylight. Three of 'em there is, far as we could tell.'

Now it was forbidden to observe from the sap by day, for fear of giving away the fact that it was occupied.

But a peep at Stand To in the morning could do no harm, and at dawn I went along. As I went up the sap I heard Minchin's voice. 'There they are. See 'em? Gord's truth! plain as daylight! Let 'em 'ave it, somebody.'

As I turned the corner I saw Williams lift his rifle swiftly and fire. The bullet struck the ground at the feet of the three Boches working near the parapet of their trench. There was a second's pause, then a blinding flash, a cloud of dust and smoke—a crash! Where the three men had been was a single black thing that did not move. What had happened we never knew. Williams's bullet must have struck some detonated explosive they had with them. What *would* happen I knew only too well.

I sent Bullock, Minchin, and Williams out of the sap, and told Williams just what I thought of him. For he had given away the fact that the sap was occupied, and I knew what that meant.

'Sorry, sir, but I couldn't 'elp it. To see them blighters there! Chance in a lifetime at this trench-game. Still, I 'm sorry, sir. Is it Company Office?'

Of course it was, for it meant disobeying an order, the order being that no one was to fire from the sap.

. . . . . .

During the day I was anxious. I felt certain that Williams had been spotted, and that they would take it out of the sap. But nothing happened until late afternoon.

'Rumjar, sir!' shouted the sentry.

It wobbled through the air with a 'chuffing' sound, pitched between front line and supports, and exploded with the usual terrifying clatter. It did no harm, but it was followed by four others, which hurtled over, seemingly haphazard and aimless. Then one fell short, or so it seemed, dropping about twenty yards to the right of Dead Man's Sap. The next, increasing in range, blew great gaps in the wire on the left of the sap, and filled the air with filthy dust. By this time our 'toffee apples' were sailing over in grand style, and blasting the German line to a dust-heap amid clouds of powdered chalk. No more came over, and I was left with a problem. Had it been just a 'hate,' or were those two last efforts registering on to the sap? Did the Boche mean to blot Dead Man's Sap out of existence in revenge for the events of the morning, or was it just an accident?

I went to see the trench-mortar gentlemen. I asked them if they had plenty of ammunition. 'You see, I 've an idea that the Boche has a spite against my sap, and that he may try to clean it up to-night. If he does, I want you to be quite certain that he 'll have the worst of the bargain. If he should chance to strafe my sap, I want you to make him hate himself like hell for it.'

'We 've bags of ammunition, sir. Shall we wait for orders, or just loose off when he starts?'

'You 'll traverse their support-line, and you 'll start as soon as he starts. And you 'll keep on until you 've used all you 've got, unless he chucks the game up quickly. And there 's plenty more stuff coming up to-night, so you can be as generous as you like about bombs.'

As I walked back along the trench, I felt as though I had made rather a lot of fuss about nothing. After all, nothing would probably happen. Everything was beautifully quiet.

As night came, Minchin, Bullock, and Williams occupied the sap; and when it was two o'clock the next morning and nothing had happened, I stopped being anxious about them. It was a relief to stop thinking of the matter, for this long-distance psychology is really tiring. To probe the intentions of an enemy at a distance of two hundred yards with nothing to go on but faintly heard sounds, and a few events which may be quite accidental, is an irritating pursuit.

A Verey light curved over, and as it curved I heard the horrid 'chuff-chuff' of a Rumjar. There was a fierce white flash, a tearing crash, and I knew the entrance to Dead Man's Sap was closed for repairs. Then I heard an unpleasant sound. Tat-tat! Tat-tat! Tat-tat! Every two or three seconds the double spit of a machine-gun. I hurried down to the sap. The entrance to it was almost level with the ground, and across it the machine-gun was firing. Tat-tat! Tat-tat!

Nothing could cross there. There were other shots, too, from the left, which appeared to be

hitting the sandbags of the head of the sap. There seemed no way out of it. The three men were cooped up in the bombing-pit. If they moved out towards our trench the machine-gun would get them. If they crawled out in front the odd rifle-shots would get them; and if they stayed where they were I knew only too well what would happen. Even as I thought, I heard another of the whirling shuffling horrors come curving over and drop in the angle of the sap, filling the air with humming bits of iron, stone, and wood.

But our trench-mortars were busy now, and bits of the Boche support-line went heavenwards with a loud noise. The night became a sickly, quivering glare with Verey lights, and machine-guns spat all down the line. The racket was appalling. Rifle-grenades began to burst down the trench, and ours answered in kind, their tail-pieces humming as they curved Bochewards. And through it all the sickening tat-tat! tat-tat! of the machine-gun firing across the blown-in sap.

A rattle of loose chalk, a stream of curses, a clatter of a rifle, and Minchin picked himself out of the trench beside me.

'You hurt?' I cried.

'Cushy one in the shoulder,' he answered. 'I risked it.'

'Where are the others?'

'Williams is still there. Don't know where Bullock is.'

I sent a man off with him down to the dressing-station, and watched the strafe. I pictured Williams waiting there in the sap-head, wondering how soon the Rumjar would arrive to blot out the rest of the sap, and him with it.

Suddenly the horrible tat-tat! tat-tat! ceased. One of our rifle-grenades must have laid out some of the team, for it was silent for a full three minutes. Then it began again. But in that brief pause Williams slipped calmly into the trench, unhurt. And as he was telling me how he had waited his chance, the third Rumjar dropped plumb into the sap-head. He slipped a cartridge into the breech of his rifle.

'I'm after that machine-gun,' he said, and walked away.

'But what about Bullock?'

'Don't know, sir. He disappeared just as the first Rumjar landed. 'Ope 'e 's all right.'

The strafe was dying down, but our trench-mortar people continued the good work for a full twenty minutes. Then they too stopped, and the night grew calm, save for an occasional rifle-grenade from one side or the other. I hung about the entrance to the sap, anxious about Bullock; but he did not appear. I went away at last to ask for a patrol to look for him before it grew light. Not that I had any hope of finding him. As I returned I heard the sergeant's voice.

'An' where the 'ell 'ave you bin?'

'In a shell-'ole,' said Bullock's voice.

'Talk about nine lives! Forty blinkin' lives is what you must 'ave.'

Bullock grinned.

'For Gord's sake, try and 'ave a wash before the orficer sees yer! Positive disgrace to the trenches, you are.' There was a long pause. 'Come to my dug-out, an' I'll give you a drop o' tea,' the sergeant went on, relenting a little, for Bullock was covered with chalk and dust from head to foot, and must have been badly shaken, save that nothing on earth ever did shake him.

'All right, Bullock?' I asked.

'Yessir.'

'Pretty hot, wasn't it?'

'Yessir.'

'Thought you were up against it, I suppose, eh?'

'Yessir.'

He grinned, and followed the sergeant.

'Bloomin' miracle, that's what you are,' the sergeant said, as they disappeared up the trench.

But it was a long time before we finished digging out Dead Man's Sap again.

YESTERDAYS AND TO-MORROWS.

Ah, our eyes are ever turning,
Filled with some unfathomed yearning,
Turning back along the pathway where time flings its mellow haze;
And we count the frets and sighing,
In the silence unreplying,
In the silence that has fallen over all our yesterdays.

Memory would fain be bringing
Echoes of our golden singing,
Brings us melodies that cheered us when the light was on the wane;
But our senses always falter
At some old deserted altar
Where we sacrificed to sorrow and to bitterness and pain.

Step by step we foot the highways,
Or we fare along the byways,
Where the shadows were the longest and the path was rough and steep;
And we catch the sound of sobbing
Through the mystic stillness throbbing,
And we wonder what of happiness our yesterdays may keep.

But the morrows beckon to us,
Call us from the paths that knew us,
Lure us on with smiles and sunshine down new roadways broad and fair;
And they coax us with the promise
That they never will take from us
All the goodness and the gladness that we thought we lost back there.

Then with fingers swift and certain
We draw close the velvet curtain
That swings down across the present in the sunset's golden haze;
And we turn to our to-morrows,
That still sweetness from the sorrows
Which we thought were sent to sadden all our olden yesterdays.

KILLING TIME ON DARTMOOR.

By BEATRICE CHASE, Author of *The Heart of the Moor*, *Through a Dartmoor Window*.

SOMETIMES I am patronisingly asked how I manage to kill time on Dartmoor. I usually reply that it is Time who kills me. Certainly we kill our friends, and the mystery to the Rainbow-Maker and me is why any one ever comes to see us at all. The more intimate the friend, the worse he or she is treated. We try, or I always try, to be polite to stranger pilgrims. The Rainbow-Maker, who is a poor dissembler, does not invariably even try to be polite. At times she is cataleptic with fatigue, and at other times she is severe. This is when she thinks I am being overworked. I remember, one afternoon, when she frightened three lovely ladies—actually frightened them. It happened to be rather a busy day with pilgrims. Five were already in the dining-room looking at picture-post-cards, several were in the drawing-room, three were waiting outside the window in a car, and another three arrived on the step. When I left the other two sets already inside the house, and went to attend to those waiting on the step, I discovered the Rainbow-Maker loose in the hall. What her original idea had been she did not seem to know; nor did she know where she wanted to go. When I opened the door and she realised that she was wedged between five people in the dining-room and three in the hall, she collapsed suddenly into the hall chair—the wicker one under the cuckoo clock—and gazed drearily into Africa. I admitted the three, and brought them in. As we passed the Rainbow-Maker in single file, I said politely, by way of introduction, 'That is the Rainbow-Maker.' She took no notice, but continued to stare into Africa. I repeated the remark a little louder, and the leading lady remarked nervously, 'Oh, that is the Rainbow-Maker, is it?' exactly in the way she would have said, 'Oh, that cabinet is Indian, is it?' We stood still and looked at the Rainbow-Maker for some time; but she neither turned her head, spoke, nor even blinked. The Dark Continent absorbed her. So I gave it up, and took them on, with shattered nerves, to see the rest of the house. I know they thought she was in a cataleptic trance, but they were too polite to say so. This state with her is not incivility; it is not even inhospitality. It is exhaustion.

There always in this house seems to be some unexpected uproar going on which requires errands to all points of the compass, and there is never any one to do the errands, as we all work sixteen hours a day at the ordinary routine, with no reservists for emergencies. Consequently our friends find themselves playing the unrehearsed parts of reservists. They come for rest, and they stay either in the Rainbow-Maker's cottage or in rooms in various parts of the village. When they arrive to pay a polite call, they encounter one of two treatments. Sometimes I meet them on the doorstep, remarking, 'Oh, I am awfully sorry I can't ask you in, but we have just had an urgent letter from a lady who wants rooms on Tuesday. Would you be so angelic as to go round to these places and get back here with all the answers by 2.30, and then wait while we write and take the letter to the post? Thank you very much.' Before they have time to scream a list is thrust into their hands, and the door is shut in their faces.

All our errands have two acts, so to speak. They are not the kind which you can do on your way for an expedition. They always mean cutting up a day by having to get back for consultation before post-time. The other reception is when visitors are reluctantly admitted to find me frenziedly typing against time, and the Rainbow-Maker finishing an urgent necklace for the afternoon post. She never looks up, but merely murmurs, 'Good-morning.' I pause in my clatter, and say, 'Oh, how do you do? It's so kind of you to come. Would you mind sitting down over there and looking at *Punch* till we have done? I am sorry we can't talk, because it puts her out in counting the beads.' Then I resume my clatter, and the visitor, instead of throwing a boot at my head and departing in blue flame, sits down for nearly an hour in silence, waiting till permission is granted to speak.

Two friends last summer were worse treated than any. I don't quite know why. Possibly it was that they were more meekly and touchingly determined to see something more of us than the rest. The first was a girl who was staying in the village, who used to come to us by the road visible from the window. The Rainbow-Maker, sitting therein, spotted her first, and remarked, 'If that is Miss B——, catch her at

 [*All Rights Reserved.*]

the door and ask her to take this note for me to C——, and bring the answer back before lunch.' This kind of thing went on for a fortnight.

The other friend was a man, a meek, gentle, kind, quiet creature, who came every morning for three weeks without missing once. He was told never to knock or ring, but to come in. Some of our friends are given that order; it saves so much answering of the door. At first they are naturally too polite to obey. They begin by ringing; but such a torrent of abuse in two different voices floats out at them that they abandon politeness, and learn to walk in. This man, after being shouted at several mornings running, learned to walk gently in, find a chair and the newspaper without speaking, and sit still, till he was hustled out of the way by my starting to cook lunch in a violent hurry. I used to bear down upon him, buttoning up my blue 'pinny' as I charged, remarking, 'Do you mind sitting over there now? You are in the way of the oven here.' Hastily he would move his seat, and retire to the indicated chair. Then the Rainbow-Maker would suddenly finish a necklace, look round with a glassy stare, and see him sitting by her davenport where she wanted to write letters. Quite dispassionately she and I would then discuss the best place for him to be moved to again—and he was moved. As a matter of fact, the safest spot for him would have been in the open fireplace inside the fender, but this never struck him. If he made a feeble effort to leave the house, this was negatived with yells of disapproval from us both, on the ground that he must wait and post our letters. He was never unchained till just before lunch-time, and was then hustled off lest he should be late for his own lunch. As I say, this took place every day (except Sundays) for three weeks. He seemed to prefer seeing us even on these terms, rather than not at all.

Since a heartless country took our bluejacket for coast defence, life has, of course, been extremely intricate, because his was the heaviest work, and male labour is unprocurable. We now, therefore, gaze with appraising eyes at the muscular proportions of our men friends, and calculate which job they had better be put to. Since the departure of the dismal female failures who followed the bluejacket, life has had to be mapped out afresh; and one thing we have been compelled to do away with is giving tea to wanderers. It takes more time and strength than I possess to get a meal for extra people, clear it away, and wash up afterwards. One unfortunate young man managed to get four days' leave, which he craved to spend out of doors on the moor. The first afternoon I started for a walk with him, came back without him at 4 P.M., and began to get tea.

'What have you done with Plantagenet de Courcy?' asked the Rainbow-Maker.

'Put him into the linhay to cut up faggot-wood. He loves cutting up wood,' I added, in response to a gleam in the maternal eye.

She did not reply, but listened thoughtfully all tea-time to dreary distant bumpings from the regions of our wood linhay. That afternoon Plantagenet de Courcy cut up five bundles of faggot-wood—no mean task. Next day, when I returned alone at tea-time, I volunteered the information that he was weeding the lily-bed.

'Aren't you going to give him some tea?' asked the Rainbow-Maker, shocked.

'He never has tea. Hates the meal. Besides, if he loses any time, he won't have done by dark.'

Such is the forgivingness of man that, when he got back, this ill-treated friend wrote saying his two happiest afternoons were those he spent cutting wood and weeding. I am convinced it was not satire; and how much sweeter it is to be served for love by gentlemen than for money by inferiors!

My most intimate friend had the experience of his life one autumn day. He arrived to visit the chapel at 11 A.M., accidentally encountering me outside, in a cap and large blue pinafore, shaking curtains. He asked, with much sympathy, if he could do anything; to which I sadly replied, 'I don't think so. Our domestic treasure has gone to market, and I am doing all the work to-day.'

With much spirit he thrust his services on me, came in, took off his coat, and turned to. Besides all the ordinary work of the house, I was changing the curtains for winter—a fearsome task, during which I learnt the truth of old Granny Caunter's remark, 'A house with many windows be only fit for gentry.' Many windows do cost time and money. The friend first helped me to take the summer curtains off the poles, and replace these by the winter ones. During this process he suffered a good deal of damage by getting hit over the head with the other end of the rod, or else having it poked suddenly into his eye. His worst anxiety, however, was while he was helping me to nail up the chimney-screen in the dining-room. Above us, on the high mantelshelf, was the row of ancestral copper pans. At the first blow of my hammer a loud slithering began. He exclaimed nervously, 'Look out!' I took no notice whatever, but continued to hammer. He sprang behind me, like a wicket-keeper, and caught the brass kettle-stand with his right hand. Still I hammered. Following that came the copper coffee-pot, which he stopped with his left, though the handle, which is loose, shot out into the fender. Two brass fish-slices began to descend, but were jammed by the saucepans in front of them. Then the large preserving-pan, weighing about fifty pounds, awoke from a trance. My friend reached over my head and fielded that at the risk of his life, by which time I had

finished. It was then about noon, so we washed up the breakfast-things. I washed and he wiped. His gold pince-nez and signet-ring lent quite an air to the scullery. He wiped very slowly, very vigorously. I finished washing long, long before he had done the corresponding wiping. That done, I sent him out to the linhay to carry in a basket of coke for me. He could not find the shovel, so he loaded the basket with his hands, and then had to clean under the pump. After that he carried in water, and carried out buckets of waste. The moor being such a painfully tidy place, with, of course, no dustmen and dust-carts, such things as cinders, orange-peel, tea-leaves, banana-skins, and other solid matter have to be carried to their own burial-place across the farmyard. He did all this quite nicely, and then came back, inquiring what next. To which I responded, 'Next, while I get lunch, take on the rôle of hall-porter. Sit on the oak chair by the door, nursing the coal-hammer and the billhook, and kill any inquiring stranger who wants to see me before I am ready.' He grunted with joy, and trotted off. So far as I know, no one did come. Anyhow, I never found any traces of justifiable homicide.

Just before his lunch-time, I graciously permitted him to go. He returned on tiptoe before tea, and crept quietly into chapel to pursue his belated devotions. But he had not been there two minutes before the door opened and a phantom hand beckoned him out. He followed, and the phantom hand indicated a full bucket and an empty can on the doorstep, both requiring attention. He has very expressive eyebrows, and he raised them at the sight, with an air which said more clearly than clumsy words, 'Again! Why, I did both those two hours ago. How has she done it in the time?'

If any one is yearning to kill time on the moor, he knows where to apply for the sport.

THE DEFINITE OBJECT.

CHAPTER XI.—*continued.*

NOW, as they stood fronting each other very silent and grim and menacing, running feet were heard ascending the stairs, and a slender boy appeared, who, perceiving M'Ginnis, panted out, 'Say, Bud, O'Rourke 's been pinched by de cops! He wants ye t' shin over an' fix it up.'

'O'Rourke pinched!' growled M'Ginnis. 'Say you, Larry, whatcher givin' me?'

''S right, Bud; dere 's a noo captain on de precinct, an' he 's pinched O'Rourke. 'N' say, Bud, de games 's all balled up; de push is all up in de air. 'N' say, O'Rourke 's crazy, an' can't do nothin', so he sent me t' fetch ye. You 're de only one as can fix de police, so come on right now before de whole show 's busted up.'

During this breathless speech the narrowed eyes of M'Ginnis never left Ravenslee's pale, placid face, and in the persistence of this ferocious glare was something animal-like.

'Say you, Mr Butt-in,' said he, 'I ain't through wid you; not by a whole lot, I ain't. Oh, I 'll get ye yet, an' I 'll get ye good. There won't be nothin' left for nobody else when I 'm through wid you. Savvy this, there ain't nobody ever goin' t' queer me with Hermy Chesterton. Oh, I 'll get ye good, an' I 'll get ye soon.' So saying, Bud M'Ginnis turned and went, slow and unwilling, down the stair.

'Gee, but I 'm glad he 's gone!' said Spike as he closed the door. 'Gee, but I 'm glad!' and he drew a deep breath.

'So am I,' said Ravenslee, sinking into the arm-chair; 'but there 's always to-morrow, isn't there?'

But instead of replying, Spike stood to stare on Ravenslee with eyes of admiring awe. 'I guess you know how t' handle y'self, Geoff,' said he.

'I used to think I could, once upon a time,' answered Ravenslee, stooping to recover his pipe.

'That sure was some wallop you handed him.'

''Twas fair, I thank you, comrade.'

'I shall be awful sorry to have you leave me, Geoff.'

'Leave you?'

'Well, you heard what he said?'

'Yes, I heard.'

'An' you know what he meant?'

'I can guess.'

'You 'd best shin out o' Mulligan's first thing to-morrow.'

'What for?'

'Bud says you must, an' he 'll make you, worse luck!'

'Oh, how?'

'Well,' said Spike in low, troubled tones, 'he 'll stick de gang on to you if you don't make your getaway while you can.'

'My God!' exclaimed Ravenslee, his eyes suddenly very bright, 'I never thought of that.'

'Yes; so I 'm thinkin' you 'd best shin off t'-night, Geoff,' sighed the lad gloomily.

Whereupon Ravenslee pocketed his pipe and clapped him joyously upon the shoulder. 'Banish that dejection, my comrade,' said he, 'for now, my Arthur-Spike, "now is the winter of our discontent made glorious summer in this brutal Bud," and'——

'Whatcher mean, Geoff?'

'I mean that life's erstwhile dull monotony is

like to be forgotten quite in the vigorous, exhilarating air of Hell's Kitchen. Hell's Kitchen suits me admirably; consequently in Hell's Kitchen I'll stay.'

'Stay! Geoff, are ye crazy? What about Bud M'Ginnis?'

'M'Ginnis, my Arthur? Oh, Bud M'Ginnis may be—— Hush! Straighten the cloth yonder, Spike; she's coming at last, by heaven!'

CHAPTER XII.—CONTAINING SOME DESCRIPTION OF A SUPPER-PARTY.

'OH!' said Hermione, as she caught sight of Ravenslee's tall figure, 'you've come, then, Mr Geoffrey? I've been hoping and praying you wouldn't. I mean,' she added hastily, in answer to his look—'I mean, I have only two miserable little chops for supper.'

''S all right, Hermy,' cried Spike. 'I told you not to worry about the eats; look what's here. Stand out o' the light, Geoff, so's she can see the table.'

'Why, wha—what's all this?' she exclaimed, staring at the numerous well-filled dishes with blue eyes very wide. 'Oh goodness, gracious me!' and she turned to look at Mr Ravenslee, who, meeting that wonderful glance, actually found himself stammering again.

'The fact is, Miss Hermione—er—I say the fact is we—Arthur and I—are giving a little supper to-night in honour of—of—er—my birthday.'

'You bet we are, Hermy,' added Spike. 'Will you pipe the turk'?'

'We have been waiting for you,' continued Ravenslee, placing a chair for her. 'You see—er—you are to be our guest of honour—if you will?'

'Sure you are,' nodded Spike, 'and I am head-waiter, eater-in-chief t' the turk' while she lasts, an' chief mourner when she's gone; so now I'll go an' make th' tea, only don't begin without me; a fair start an' all together—see?' and, speaking, he vanished into the kitchen.

'But a whole turkey!' said Hermione, viewing it with feminine, knowledgeful eyes; 'and then all this ham and tongue, and—Mr Geoffrey, how extravagant of you!' and she shook her shapely head at him reprovingly, but with a smile curving her red lips; and, lo! there was the shining curl above her eyebrow again more wantonly alluring than usual. 'Whatever made you buy so much?'

'Mr Pffeffenfifer,' answered Ravenslee, staring at the radiant curl; whereupon she, becoming aware of it, would have sent it into immediate retirement among its many fellows, but that he stayed her humbly. 'Please don't,' he said.

'But it—tickles.'

'Well, let it!'

'But why should I?'

'For m—Arthur's sake.'

'Arthur's!' she laughed. 'Oh Mr Geoffrey, as if he would ever notice!'

'Well, then, for the—er—turkey's sake!'

'The turkey!' she laughed. 'I'm afraid I'm dreadfully untidy to sit down at such a luxurious feast.'

'Are you?'

'Well, am I not? Look at this poor old gown.'

'I'm afraid I didn't notice your—er—gown.'

'What did I tell you, Hermy?' said Spike, entering with the teapot. 'Geoff ain't—I mean, isn't—that kind o' guy—I mean mutt—no, I mean feller. Ye see, Geoff, a girl always thinks a feller's got his lamps—I mean eyes—on their rags—clo'es, I mean. 'S funny, ain't it? Gee, but I'm hungry!'

'So am I,' said Hermione.

'So am I,' said Ravenslee.

'Why, then,' quoth Spike, 'I'll tell you what. Let's all sit down an' eat. I guess I'm full o' brilliant ideas t'-night, but this ain't no time to talk—not with that turkey starin' us in the face, it ain't—isn't, I mean. So quit chewin' de rag an' let's chew d' turk' instead—an', gee! but that's some brilliant too, I guess.'

So down they sat forthwith; and, while Hermione presided over the cups and saucers, Ravenslee carved.

'Light or dark meat, Miss Hermione?' he inquired.

'Hermy likes th' light, but a drumstick for mine; an' please don't forget th' stuffin', Geoff.'

'Tea, Mr Geoffrey?'

'Thanks!' he answered, pausing to watch the curve of her shapely neck as she bent to pour the tea, and to note how her white hand grasped the battered teapot, little finger delicately poised.

'Say, Geoff, get busy,' said Spike wistfully. 'I know the teapot's a bit off on looks, but I broke the best one, an''——

'I didn't even notice the teapot, Spike,' said Ravenslee, meeting Hermione's quick upward glance.

'Oh, cheese it, Geoff; here you've sat, with your fork in th' turk' an' your knife in th' air, starin' at that teapot a whole minute.'

'No, Spike; no. I was only thinking that tea never tastes quite right unless poured out by a woman's hand; and the fairer the hand the better the tea.'

'Which means—just what, Mr Geoffrey?' laughed Hermione.

'Why, that Spike and I are about to drink the most delicious tea in the world, of course.'

'I'd rather be eatin' that turk' when you've sawed me off a leg,' sighed Spike. 'I say, when you have.'

'Ah, to be sure,' said Ravenslee, turning his attention to his carving again, while Hermione bowed her golden head above the tea-cups.

'Gee, but she cuts tender!' quoth Spike; 'that bird sure has the Indian sign on me.'

'Sugar, Mr Geoffrey?'

'Two lumps, please.'

'Milk, Mr Geoffrey?'

'Thank you.'

'Geoff,' said Spike wearily, 'I cracked that milk-jug last night; but you don't have to sit starin' at it that way, an' me dyin' o' hunger by inches.'

'My humble apologies,' said Ravenslee, wresting his gaze from a certain curl and fixing it upon the turkey again. 'I'm a little—er—distracted to-night, it seems.'

'Oh gee!' said Spike in a hopeless tone, 'now Hermy's gone an' filled my cup with milk.'

'Why, boy dear, so I have,' she confessed with a rueful laugh, and her cheeks were very pink as she rectified her mistake.

'Are you distracted too, then?' demanded Spike.

'No, I—I don't think so. No, no, of course I'm not. I—I was just thinking, that's all.'

'Not about tea, I reckon. Say, what's gettin' you two, anyway?'

'Arthur,' said she serenely as she passed his tea, 'please fetch some more hot water.'

Spike sighed, rose, and, taking the jug, went upon his mission.

'And how do you like Mulligan's, Mr Geoffrey?' inquired Hermione, regarding him with her calm, level eyes.

'Very much,' he answered; 'I like it better and better. I think—no, I'm sure—I would rather be in Mulligan's than anywhere else in the world.'

'Oh! Why?'

Down went carving knife and fork, and leaning toward her, he answered, 'Because in Mulligan's, among many other wonders, I have found something more beautiful and far more wonderful than I ever dreamed of finding.'

'In Mulligan's?' she asked, looking her amazement.

'In Mulligan's,' he answered gravely.

Now here, all at once, her glance wavered and sank before his. 'What do you mean?' she inquired, staring into her cup.

'Shall I tell you?'

'Yes—no!' she murmured hastily and a little breathlessly, as Spike re-entered, who paused, jug in hand, to stare.

'What! haven't you served Hermy yet?' he inquired in an injured tone.

'Certainly I have,' answered Ravenslee; 'here it is, you see—all ready.'

'Only you forgot t'hand it t'her, an' she forgot t'take it. Well, say, for hungry folks you two are the limit.'

'"Man doth not live by bread alone," boy; we were talking,' said Ravenslee, handing Hermione her plate.

'You said you liked milk and sugar, didn't you, Mr Geoffrey?'

'Holy gee!' murmured Spike.

'Milk and sugar, thank you,' said Ravenslee, heedful of her deepened colour.

'Geoff,' inquired Spike gently, 'if I was to hang on to that drumstick, d'ye suppose you might be able to hack it off for me—some day?'

'My Arthur,' said Ravenslee, plying knife and fork energetically, ''tis done—behold it!'

'But surely,' said Hermione, glancing up suddenly—'surely you don't like Mulligan's, Mr Geoffrey?'

'Like it, Miss Hermione? I—abominate it.'

'Oh!'

'Say, Geoff,' mourned Spike, 'don't I get any stuffin' after all?'

'Mr Geoffrey, I've been wondering how you and Arthur met—and where, and'——

'Gee, Hermy!' Spike exclaimed, 'you sure do talk. If you go on askin' poor old Geoff s'many questions he'll forget t'serve himself this week. Look at his plate.'

'Why, Mr Geoffrey, do serve yourself, please. And—oh, my gracious! I've forgotten to give you your tea; I'm so sorry.'

Here Spike, having once again staved off the inevitable explanation, grew hilarious, and they laughed and talked the while they ate and drank with youthful, healthy appetite.

(*Continued on page 197.*)

EARLY SCOTTISH LIGHTHOUSES.

By D. Alan Stevenson, B.Sc.

THE history of lighthouses in Scotland goes back only to the beginning of the seventeenth century, and one must search among the records of the early periods when the Eastern Mediterranean was the centre of civilisation and commerce to trace the existence of the earliest lighthouse. The Pharos of Alexandria, in Egypt, built in the third century B.C., is the most celebrated lighthouse of antiquity; but it does not seem to be generally known that others were in existence in even more ancient times. The oldest Grecian records make reference to fire-beacons on headlands; but these were probably mere bonfires, not regularly exhibited. The earliest lighthouse of which there is record as having been established at a particular locality, though obviously too excellent to have been the first erected, was at Cape Sigeum, now Cape Yeni-Shehr, at the entrance to the Dardanelles on the Asiatic side, about a mile south-west of Kum

Kale. A description of it was given by Lesches, a poet of about the seventh century B.C., and there are grounds for supposing that it was in existence five centuries earlier. A tablet found in Rome, and dating from the period of the first emperors, represents various incidents of the Trojan War, one of which shows Æneas, after the burning of Troy, embarking from the shore close to the tower of Sigeum, with an inscription stating that the lighthouse is depicted according to the description given by Lesches.

There is evidence of over a dozen lighthouses having been definitely established on the shores of the Mediterranean before the Christian era, and it is certain that there were many others which have not been chronicled. The spread of civilisation throughout Europe, the quickening of trade, the increased importance of navigation, and the consequent call for lighthouses followed intimately the Phœnician and Roman conquests. The first lighthouse in the British Isles was erected by the Romans in the first century A.D. Lighthouses and beacons were also put up by the Danes and the Norsemen, and others were erected in later times; but it was not until the seventeenth century that they began to be regularly established in this country. In the year 1799 lights were established at forty-two places in England, including lightships and five coal-fires; fifteen in Scotland, one being a coal-fire; and six in Ireland. It may be mentioned that the last coal-fire in England was abolished in 1823; the last in Europe was in Sweden, and was discontinued about 1846.

In Scotland, the earliest lighthouses to be established—leaving out of account traditions, such as that of a light from St Anthony's Chapel tower above Holyrood; even if authenticated, such a light would have been quite useless as a practical aid to navigation, though it may have been of religious significance—were in 1636 on the Isle of May at the entrance to the Firth of Forth, at the entrance to the Tay some time before 1640, on the island of Little Cumbrae in the Firth of Clyde in 1757, and on Leith Pier in 1758. All of these were erected by private individuals or at the instigation of the shipping interests of the localities. No general lighting of the Scottish coast was undertaken until 1786, when an Act instituted a Board of Commissioners, who were incorporated in 1798 under the title of 'The Commissioners of Northern Lighthouses,' and authorised the erection by them of four lighthouses, at Kinnaird Head (erected in 1787), Mull of Cantire (1788), North Ronaldshay (1789), and Island Glass (1789). The Commissioners, who have ever since controlled the lighting of the coasts of Scotland and the Isle of Man, as the Trinity House have controlled the lighting of the English coast, were empowered by further Acts of 1788 and 1789 to erect lighthouses at Pladda (1790), and at any other places whenever their funds from dues on shipping should permit; but they erected only one before the end of the century, at Pentland Skerries (1794). The other lights existing in Scotland in the year 1799 were at Portpatrick (erected before 1787), Southerness (1789), Ayr (1790), Cloch (1797), and also probably at Aberdeen and Dundee. At the Tay entrance, at Ayr, and at Pentland Skerries two lighthouses were established, and at Pladda two lights were shown from one tower. The history of all these lights is of interest; but it will be sufficient to deal only with the three oldest—those on the May Island, at the Tay entrance, and on Cumbrae Island.

In considering these lights, it is important to remember that the dioptric system of lighthouse illumination by means of refracting prisms, which is the system usually employed nowadays, was not introduced till the year 1821. Most of the ancient lighthouses—such as Sigeum, for instance—were merely an extension of the primitive idea of a bonfire on a hill-top, and consisted of a high tower, usually of masonry, to carry a fire from burning billets of wood. Later the fire was often of coal, and sometimes at one place a group of three or even four of these towers carrying coal-fires was established to give a distinctive character. Exposed wood or coal fires, and very occasionally an arrangement of oil-lamps or candles without reflectors, were the sole means of illumination in lighthouses previous to the eighteenth century, when the catoptric or reflecting system was introduced. Plane metallic reflectors were used at Cordouan Lighthouse in France in 1727; and parabolic reflectors were introduced at the Mersey lights in 1763, but did not come into general use till some years afterwards. They were introduced in Scotland about 1782 at Leith Pier light by Thomas Smith, afterwards engineer for the Northern Lighthouses, who later, in 1787, designed a greatly improved form of reflector, which he used at Kinnaird Head and elsewhere.

The May Island, a mile long and half a mile in breadth, right in the entrance to the Firth of Forth and over five miles from shore, is clearly of importance for a lighthouse, and it is not surprising that the first lighthouse to be erected in Scotland was placed here. The island formerly held a priory as well as a chapel, famous for its connection with Saint Adrian, who settled on the island, and was killed by the Danes in the year 807. At one time the island supported some fourteen families. Within sight, and lying to the north, is the Inchcape Rock, on which stands the oldest existing rock-tower in the world—Robert Stevenson's celebrated Bell Rock Lighthouse—lighted in 1811. According to tradition—and Southey—a bell rung by the motion of the waves was once fixed to the Rock by an ancient Abbot of Arbroath; but there is no definite record or evidence that this was so.

Probably the first proposal for lights on the

May was made in 1630, when a petition for the erection of a lighthouse or beacon was presented to Charles I., and remitted by him to the Scottish Privy Council, who directed the 'provost and baillies of Edinburgh, Dundie, St Andrewes, Caraill, Anstruther easter and wester, Pittenweeme, Dysart, Kirkaldie, and Bruntilland' to appear before the council, 'to give their advice and opinion anent the said propositioun.' Nothing seems to have come of the matter until 1635, when Charles directed the council to appoint a commission to take evidence at the burghs interested as to what should be done on account of the 'dangers at the entrie of the firth of Forth, and the frequent losses of our subjects liffes and goods, and of strangers adventuring there speciallie in the night time.' A commission of ten was appointed, of whom four were to be a quorum. The members being evidently much taken up with the troubles and agitations of the time, great difficulty was found in arranging sittings, and their powers had to be referred back to the council and the quorum reduced to three. Ultimately they completed their investigation, which was reported on in favour of a light by a further committee of seven members, of whom three formed a quorum, including always either Lord Traquair or Lord Lorne. The evidence of the witnesses in opposition seems to have been considered of little weight, they being referred to as 'few, and these not very considerable.'

In 1636 power by letters patent was granted to James Maxwell of Innerwick, and John Cunningham of Barns, the proprietor of the May Island, to erect a light and collect dues for its maintenance, at two shillings Scots (about twopence sterling) per ton on Scottish vessels, and four shillings on foreigners, including English and Irish shipping. The light, a coal-fire, was established in the same year, the tower being forty feet high and two hundred feet above the level of high-water, with a grate or chauffer on the top for containing the coals, which was about two feet high and three feet square, tapering in at the bottom. The architect who planned and built the tower perished in a storm, which some old women, supposed to be witches, were burnt for raising. Apparently the patentees found difficulty in collecting the dues, and in 1639, by an agreement between them and the Convention of Royal Burghs, which was ratified by the Scottish Parliament in 1641, the burghs undertook to assist in making the collection, the dues were to be decreased to one and a half shillings Scots on Scottish shipping, and to three shillings on foreigners, and the light was to be extinguished during May, June, July, and half of August.

From time to time bitter complaints were made by seamen as to the inefficiency of the light, and the reason is not difficult to understand. In a severe storm, when lights were most wanted, the exposed position of the chauffers of coal-fires rendered them very useless for navigation purposes, since they kindled to windward and were generally enveloped in smoke to leeward. Sometimes the use of bellows was found an advantage, but occasionally the coals were blown out of the grate altogether. One of the keepers at the May was found to have been in the habit of putting his arm through the windward bars of the grate for his own safety while he shoved in the coals with the other; and this has been noted by R. L. Stevenson in *Some College Memories:* 'The huge shock of flames of the May beacon stream to leeward, and the watchers, as they feed the fire, lay hold unscorched of the windward bars of the furnace.'

In 1786 a committee of the Edinburgh Chamber of Commerce visited the island, and reported that when they lay at anchor at night off Gullane Ness, fourteen miles up the Firth, they could not see the light. They proposed, among other suggestions for its improvement, that the grate should be enlarged and raised to give access to the air underneath; that the fire-bars should be perpendicular and not horizontal; that the coals should be brought to the island in summer, and in shallow-draft boats, so as to land them dry; and that a new lighthouse should be built with a crane on the top for hoisting up the coals. The coal was got from Alloa, and was inferior; and they recommended that coal from Wemyss, in Fife, which was used at Heligoland and other Continental lights, should be supplied in future, as giving a steadier light. The keeper of the light, who, with his wife and six children, was the sole occupant of the island, received only seven pounds per annum, and was obliged to fish for a living. On occasions, in a storm, he had to put in to the Fife coast for shelter, and then there was no proper person on the island to look after the light. The committee also got a report from Thomas Smith, aforementioned, on altering the light to the system of oil-lamps and reflectors, to which the committee 'allowed much ingenuity, but were of opinion that a coal-fire should be continued.' He had estimated the cost of the improvement at three hundred pounds, and the annual expense of maintenance at fifty pounds. The trustees of the owner, Miss Scott of Scotstarvet, agreed to carry out the suggestions of the committee, and the light was thereby much improved; in fact, it was now the finest coal-light in Britain, the chauffer being double the capacity of any other, and burning nearly four hundred tons of coal annually. It was, however, still very inefficient in bad weather, when most required by the mariner. The Trinity House of Leith, in 1790 and afterwards, pressed on the Duke of Portland, into whose possession the light had come by marriage, the advantage of adopting the system of lamps and reflectors. In 1796 the Duke consulted the Edinburgh Chamber of Commerce, who now gave their approval to the proposal.

But nothing further was done, and the coal-fire was not interfered with.

In 1809 the Commissioners of Northern Lighthouses, on the suggestion of Robert Stevenson, their engineer, considered the advantage to the public if they were to take over the light; but it appeared that any improvement would have to be carried out by the proprietor. Consequent on the loss of two Admiralty frigates, the *Pallas* and the *Nymphen*, in 1810, by mistaking a fire on shore for the May light, the Admiralty asked the Commissioners to assume the light. Ultimately the Government gave a grant for the purpose, and the island and the rights of toll were purchased in 1814 for sixty thousand pounds, and vested in the Northern Lighthouse Commissioners, who reduced the dues to one penny per ton on all British shipping, and to twopence on foreigners. In 1816 the coal-fire was abolished, after an existence of just over one hundred and eighty years, and a fixed light from oil-lamps and reflectors was exhibited from a new lighthouse, and was described in a public notice of the time as like 'a star of the first magnitude.' The old tower was retained as a shelter for pilots and fishermen.

The revenue raised from the May light dues in 1799 amounted to nine hundred and seventy pounds, and the expense of its maintenance for the year 1790 was three hundred and seventy pounds, made up as follows: '£142 for 366 tons of coals; £84, freight; £69, three keepers; £29, discharging the coals, pilotage, carrying provisions to the island; £34, sundry accounts for hay, beans for the horse, ropes, blocks, freight and carriage of do., harness, slaters' and saddlers' accounts; also £12 for the former keeper's child.' The horse was used in carrying the coals up to the tower. The child was saved in a disaster of 1791, when the keeper, his wife, and five of his children were suffocated by the smoke, from the accumulation of cinders still glowing, thrown out from the grate after each night's burning, entering by the windows.

Lights at Buddonness, on the north side of the entrance to the Firth of Tay, were established some time previous to 1640. James VI. in a charter of 1601 granted the town of Dundee the right to levy a duty of twelve pence Scots per ton on all shipping making the Tay entrance, and to apply the proceeds for the erection and maintenance of buoys, marks, and signals on the sands at the entrance 'for showing and pointing out the dangers and depths of the waters to all navigators sailing to or from the havens of the said water of Tay for the safety of their ships, boats, and goods.' An Act of Privy Council in 1687 gave power to the Fraternity of Masters and Seamen in Dundee to erect lights and beacons in the Firth of Tay, and to collect dues. This was further confirmed by a charter of George III. in 1774. In Captain Collins's chart of 1689 two towers are indicated and are marked as 'Bottannais Lights,' and until 1726 they were generally known as the Lights of Tay. At first they seem to have been wooden structures, but later were two stone towers—a high and a low—a little distance apart to serve as leading lights. The expense of maintaining them frequently exceeded the amount they produced in dues. These lights are interesting as being not coal-fires but oil-lights. Before 1640 they did not burn during the summer months, and are recorded as consuming three barrels of oil per annum; after this date they burned candles until 1700—except in the year 1687, when four pints of oil were purchased to try two lamps, which, however, do not seem to have given satisfaction, as they were not adopted. In 1700 one of the lights, probably the lower one, was converted to oil, the higher light apparently also being converted about 1720. In 1714 forty stones of candles were used, and no oil; probably oil was too dear that year. In 1789 Thomas Smith replaced the sixteen common black lamps or 'cruisies' by six lamps and reflectors in the high lighthouse and three in the small one.

In the Firth of Clyde a lighthouse was erected on the island of Little Cumbrae in 1757, the Act constituting the Cumbrae Lighthouse Trust, now known as the Clyde Lighthouses Trust, who were empowered to erect it, being passed in 1755. Coals costing one hundred and twenty pounds annually were consumed on an open platform on the top of a stone tower, which stands on the top of the island to this day, and the cinders and unburnt coal from the old fire are still visible round the foot of it. The coal-light, like that on the May Island, was found very irregular and uncertain in its appearance, and frequent complaints were made as to its inefficiency. The keeper carried the coals up to the tower, a climb of two hundred feet, on his back, and received a yearly salary of thirty-two pounds. In 1792 the Trustees resolved to abolish the coal-fire on Cumbrae, and to substitute a light from oil-lamps and reflectors on the system that had been introduced by Thomas Smith, who was applied to for constructing the light upon the newest and best principles of the day. A new lighthouse, Robert Stevenson's first lighthouse work, was erected on the west side at a lower level than the old tower, which was considered from its height to be too liable to be obscured by fog. The lantern was constructed chiefly of timber, with small panes of crown glass and numerous astragals. Spermaceti oil was consumed in crusie-lamps with Argand burners, and thirty-six reflectors were fitted in at the cost of three guineas each, the whole improvements costing over four hundred pounds. About 1790 the Trustees had been pressed to erect a lighthouse on Cloch Point, just below Greenock, but the annual expense of the old

Cumbrae light alone was found to take up the whole income of the Trust. The new light on Cumbrae, however, was found so much less expensive to maintain than the old coal-fire that the Trustees soon found themselves with sufficient funds to allow them to undertake the erection of the Cloch Lighthouse, which was afterwards established in 1797, and it was found possible to maintain the two oil-lights on Cumbrae and Cloch for the same expense as the former coal-fire on Cumbrae.

It should be made clear that although attention has been drawn to the early condition of the illumination of these Scottish lighthouses, which according to present-day standards was imperfect indeed, yet it must not be supposed that such a state of affairs was obtaining in Scotland alone. Such an impression would be quite erroneous; for Scotland was in no way behind other countries in this, although as yet she did not occupy the remarkably pre-eminent position in lighthouse engineering which she held under the Stevenson family in the next century.

'OLE CAM'RON.'

CHAPTER III.

'IAN,' said Margot one late afternoon of a stifling hot day in August, as she came out to the veranda, looking cool and fresh in linen riding-skirt, her bridle in one hand, and a piece of mosquito-netting in the other, 'if I put this netting over baby, and leave him here to sleep in the hammock, could you keep an eye on him while I ride up to Light Cañon, and see how poor old Cameron is getting on? Kit is standing under the tree, so it will be no trouble to catch her, and I should like to ride.'

'All right, Meg,' replied her husband, 'if it won't be too hot for you and you don't mind going alone. Wait a second and I will get Kit and saddle her.'

'No, you won't!' contradicted Margot peremptorily. 'Please sit just where you are—you look awfully white, Ian *mochrae*,' she added gently in the soft Gaelic of their tenderest moments. 'Had I *better* go?' she asked abruptly, an anxious expression in the tender brown eyes.

For answer, her husband rose from the long chair (but not, alas! Margot noted, with the old glad spring), letting fall unnoticed several sheets of paper covered with figures in Ian's scraggly pencillings. 'Don't be silly, Meg; of course you'll go. Old Cameron's "kitties,"' he mimicked, 'will be out of condensed milk if you don't. So "get a move on," as our Western friends say; and I'll wake up the baby as soon as you are out of sight!' So saying, he snatched the bridle from Margot's hand, and a few moments later she was loping up the hill, constantly turning in the saddle and waving her hand to the tall figure at the bungalow gate. Well she knew that not for worlds would her undemonstrative husband wave back to her; it was enough to know that he expected *her* to wave, and that his gray eyes would follow her until she was out of sight. So she waved and smiled until a leafy turning hid him from view; then the smile died on her lips, and the brave, dark eyes filled with tears. No use trying to hide the truth from herself, her troubled thoughts ran; things were not well with her husband—very far from well. And he was trying to bear it all—to spare her the anxiety that was sapping his own strength. For anxiety it was, and not his lungs; of that she felt sure. Had not the famous specialist in San Francisco said that he was better? 'Wonderfully better in our wonderful climate,' had been his words. No; it must be *worry*, and Margot set her white teeth and drew her dark brows together in an anxious frown. All those rows and rows of figures over which poor Ian's pencil was constantly labouring—she had seen enough to realise that the vast majority were on a debit side of the paper.

Thus pondering, and casting about in her mind as to how she could more ably help her husband in his difficulties, she reached Old Cameron's cabin door. Within all was quiet—so quiet that Margot hesitated to knock. Gently lifting the latch, she looked in, and saw the old negro lying on his bed, his eyes closed, the thin, worn hands loosely clasped, and the breathing so light that for an instant the girl thought the old man's spirit had fled.

Then, as the coon, lying at his feet, suddenly uncurled, and jumped down to receive a titbit from the hand of the visitor, whom he had long since learned to recognise as a friend, Old Cameron stirred in his sleep, calling softly, 'Massa Robin—Massa Robin! Was yo' a-callin' me, suh?'

Margot's eyes filled with tears, as, setting down a basket of things for the invalid, she unfolded a fan she had brought with her, and began fanning the sleeping man. Presently, however, he roused, such a glad look spreading over the wrinkled face at sight of the fair girl beside him that Margot's heart swelled with pleasure.

'Well, my dear old friend,' she said gaily, 'you see I stole a march upon you, and even Toby here did not betray me! You've had a nice sleep, and now must take some of the jelly that I have brought you.'

The old darky smiled his gratitude, but had no appetite for even Margot's nice jelly, and of the grapes which she handed him he ate only one

or two, and then gave the bunch into the eager paws of his pet coon. 'An' how is de Cap'n, missy, an' lil' Massa Robin?' he asked, grinning broadly at mention of the latter. Then, after listening a while to his visitor's pleasant chatter, he suddenly looked at her rather sharply as she leaned across the bed to gather Toby's scattered grape-skins. 'W'at's de mattah wid yo'self, honey?' he asked anxiously. 'Yo' doan' look well, my dearie,' he went on, patting the white hand, and beaming upon the girl with eyes full of tender solicitude.

Something in the kind touch, the tender words falling unexpectedly upon the ear of the young Scotch girl, so terribly far from home and friends and with a great burden of anxiety upon her heart, burst the barriers of prolonged self-restraint and resolute pluck. For an instant she strove to evade the old man's questionings, then suddenly broke down, and sobbingly poured out all her griefs—how ill and fretted her husband was, not because of any real physical weakness, but from money difficulties; the failure of his vineyard and orchards, and the consequent disastrous columns of debts. Once the floodgates were opened, the poor girl, sure of a sympathetic listener, emptied herself of the whole sad story.

'And how we can ever pay off those debts, Cameron,' she was saying, 'I can't imagine; and Ian is too proud ever to ask his father for even a penny to tide us over. Oh, if only I had not selfishly allowed him to marry me—one who could bring him nothing but my love—he would never have come to this far-away land, never have been in such trouble!'

But at this point, suddenly her tears were checked, and her expression changed from one of distress to that of consternation, as she saw Old Cameron, half-sitting up in bed, his head, with its great shock of white woolly hair and beard, thrown back, and laughing so heartily that the coon, half-frightened, leaped down and hurried to a corner. Convinced that the display of her own distress, added to the effects of the heat on the old man's weakness, had turned his brain, Margot, bitterly reproaching herself, hastened to fetch some water, and strove to quiet him. But he only laughed the more, ejaculating, 'Trubble! Trubble! Why, *dat* ain't no trubble, honey, jus' 'cose you ain't got 'nuff money! Trubble! Why, jus' yo' dry dem purty eyes, my dearie, an' listen to Ole Cam'ron! Praise de Lawd, fo' now at las' de ole slave can repay his massa's kindness to him an' to his po' mudder, w'at he died fo' rather than sell to a cruel man! Quick! quick, Missy M'Leod!' he went on with increasing excitement. 'Yo' jus' do as Ole Cam'ron tells yo', an' dere doan' be no mo' trubble fo' yo' an' de Cap'n! Yo' see dat wooden plug on de win'ow-sill?' he continued, pointing with shaking finger. 'Tak' dat, missy, out to de spring, an' plug de pipe whar de wattah flow into de tub; den de wattah doan' run no mo', 'cept into de groun'. Den tak' de dippah, an' bail out de tub—quick as yo' kin, honey—an' den yo' *fin'* somet'ing!'

Margot, dreadfully alarmed, and still believing that the sick man was raving, thought it best to humour him; so she did as he bade her, and began emptying the tub, expecting any moment to see Old Cameron drop back exhausted on his pillow. But no! Propped forward on his elbows, he watched her through the tiny window, until, as she reached the last inch or so of water, she noticed an iron ring set into the slimy green bottom of the tub.

'Now, missy, pull de ring!' he called in cracked tones of tensest excitement.

Margot, exerting all her strength, tugged at the ring, and presently, with a loud, sucking sound, one of the boards came up, revealing a deep hollow, the circumference of the tub, carefully lined with stones. In this hollow, tightly packed, row upon row, were canvas bags of all sizes, such as prospectors use for their gold-dust! Margot, mute with astonishment, stared at the bags, till roused by a shrill call from the watcher through the window.

'Now, missy, yo' bring de gol' to Ole Cam'ron —*all his! all his!*—but w'at fo' does a po' ole niggah wan' ub so much gol'?' And he began to laugh again, clapping his hands and rocking back and forth.

Margot obediently lifted bag after bag, and, astonished at their weight and bulk, carried them to the old negro's bed. With eager, trembling fingers he plucked at the mildewed tape fastenings, and poured upon the faded quilt shining piles of nuggets of infinite size, shape, and beauty, such as the girl from the granite Highlands of Scotland had read of, but had never dreamed to see.

'Tak' 'em, honey—tak' 'em all!' cried the old prospector. 'Ole Cam'ron, he done fin' a "pocket" yeahs an' yeahs ago—an' he kep' all de gol' fo' his ole age!' Here he grinned gleefully. 'An' den, jus' w'en he begin to get *real* ole an' mebbe need a lil' money, 'long comes missy an' de Cap'n, an' tak' such good car' ub de po' ole black man dat he doan' haf to spen' any ob his gol' aftah all! Bress de Lawd fo' His goodness! So now, yo' see, Missy M'Leod, ole Cam'ron am dyin'. Dere! dere! honey; doan' yo' cry, my lil' dearie! Doan' yo' know dat I 'spec' to fin' ole massa an' young massa ober dere? An' I reckon dat eben in Hebben dey 'll sho' 'nuff need Ole Cam'ron!' His voice died away drowsily, as the shrunken figure settled gently back on the pillow, and the heavy lids began wearily to close over fast-dimming eyes. But all at once, as his old master's fair kinswoman bent anxiously over him, they opened wide again, a happy smile beamed on the wrinkled face, and, sitting up erect and alert, the old slave called out eagerly, 'All right, Massa Robin! I 'se a-comin', suh!'

THE END.

THE MILK PROBLEM.

A LESSON FROM DENMARK.

By W. J. HARVEY and C. REPPIEN, Authors of *Denmark and the Danes.*

JUST now, when the high price of milk—a food which is essential to the health and well-being of at any rate the children—is a matter of very serious concern, the method of the treatment of this problem in other countries is at least interesting, and may be very helpful. For instance, it is questionable whether the British system of the distribution of milk is the most satisfactory. With a very restricted labour market, a system which sends down one street, say, half-a-dozen different milk-carts in the early morning, and possibly twice later during the day, is, to say the least, wasteful in labour, time, and material. Why not deal with the daily supply of milk as the Post-Office deals with our letters? A method of delivery which prevents overlapping, and which is thus economical as to labour, the wear and tear of appliances, and materials, would at once reduce the cost to the consumer.

Nearly every large town in Denmark possesses a company or corporation, partly philanthropic in its aim, which exists to supply the populace with pure milk and cream at the cheapest possible rate. The most remarkable of these concerns is the celebrated Busck Milk Supply Company of Copenhagen, which has a capital of about twenty-five thousand pounds. This company limits its dividends to 5 per cent., although it could easily pay four times that amount, or more. The surplus over and above 5 per cent. is devoted to improvements in, and additions to, the machinery, equipment, and buildings. There is also a certain amount of free distribution of milk to the poor.

The company provides milk in four different grades: whole milk, half-skimmed milk, children's milk in sterilised bottles, and infants' milk specially prepared under the most stringent precautions. No cows are kept, the original supplies of milk being obtained from selected farms in the Copenhagen district.

The milk, on arriving at the company's depot, is tested and emptied into small vats, which are standing near a larger vat containing a mixture compounded of one part of salt water to two parts ice. This mixture is slowly pumped into lofty coolers, and the milk is then passed over the coolers and run into a tank, whence it is driven through a special sterilised filter made up of gravel and of cloth sheets. From the filter it passes into a large clean tank, when it is ready for distribution.

The cream, which has been separated by steam-driven Alfa separators, flows over cylinders filled with ice to an ingenious machine which has six long pipes, through which it passes into sterilised bottles. Nothing—milk, cream, butter, or cheese—is ever touched by the hand, and the extreme care with which the infants' milk is prepared has undoubtedly resulted in the saving of thousands of young lives, and contributed to the notable decrease in the figures of infant mortality for Copenhagen and the surrounding districts during the past thirty years.

A very efficient system of distribution has been devised by the company, and this attracted the special notice of Sir H. Rider Haggard during his inspection in 1910. He writes: 'All being prepared, the milk is distributed in the following fashion. Two hundred cans, each containing one hundred pounds Danish, are sent to the hospitals. Some goes to three shops the company possesses, while the rest is hawked by means of forty-four vans, which deliver it from door to door. These vans, which I saw, are extraordinarily well contrived and adapted for this purpose. The cans of whole and skimmed milk are placed on either side of the front portion of the vehicle, and locked up in such a position that the milk can be drawn through taps which are specially protected from dust. It cannot be otherwise got at even by those in charge of the van. Over the taps are written the quality and price of the milk. In the rear compartment of the van are trays which exactly fit the cases that hold the bottles of cream and of children's milk and buttermilk, the prices of which are inscribed over the door. These trays in summer are covered with a layer of ice. To draw its vans, the company keeps a stud of eighty horses, which I saw lying or standing on moss litter in beautiful stables. Not far from these stables are the ice-houses, where is stored the specially collected ice, three thousand tons of which are used every year. Much might be written about this company, but perhaps enough has been said to convey some idea of its remarkable character and the perfection of its management. It was the first society for the distribution of pure milk in the world, and I believe that even now, although some others exist in different countries, it remains the most important. If there is anything on the same scale and organised in quite the same way even in the vast city of London, the fame of it has not reached me. I suggest that here there is an opportunity for enterprising and philanthropic venders of milk in all the great towns of our country. Only could milk and cream thus collected and treated be sold at similar cheap rates in England. The charges made to the householders in London and other English cities do not seem to suggest that this would be the case. The London price [that is, in 1910] for new milk is a little under double the price for the same article in Copenhagen, whereas the difference

in the cost of cream is enormous. The Copenhagen company charges one shilling and twopence halfpenny per litre for its best cream, or, let us say, one shilling and sixpence (an outside figure) per quart, as against four shillings charged by the London dairies. Surely this is a matter that the corporations of cities might consider in the interests of the health of the population, and especially of young children. If a corporation may supply water or electricity, why should it not supply milk?'

Mr Busck's company, which started business in 1878 in hired premises, now owns eleven thousand three hundred square metres of ground, of which five thousand six hundred square metres are occupied by buildings and plant. Its daily sale of milk amounts to over twenty-five thousand quarts, and it employs a staff of one hundred and thirty men, one hundred and forty women, and two hundred and thirty boys. In cases of illness all the employés, as well as members of their families, receive gratuitous medical treatment without any deduction of salary.

All the cows used by the company are examined by veterinary surgeons twice a month, while cows supplying infants' or children's milk are tested every half-year with tuberculin. The animals are kept on pasture as long as possible. Immediately after the milking operations have been concluded the milk is cooled down to five degrees centigrade, but no pasteurisation is permitted, as this is now generally admitted to be an unnecessary proceeding, and fraught in some instances with considerable risk to the public, as, although it effectively destroys the bacilli of disease, it at the same time reduces the nutritive properties of untreated milk.

In an article published in *MacClure's Magazine* for December 1908, a contributor very succinctly stated that 'the dairyman who pasteurises good milk is a fool, and the dairyman who pasteurises bad milk a rogue. The only excuse for pasteurisation is that it is the lesser of two evils, and the Copenhagen Milk Supply Company has shown the world that it is unnecessary.'

In the well-known American review *The Outlook*, Professor J. E. Pope, commenting on his visit to Copenhagen in 1906, stated that in his judgment Copenhagen was the capital where milk is the best and cheapest. He noted particularly the importance placed upon the delivery of milk at a very low temperature, in contrast to the common practice in America and England of delivering it warm, in which case it deteriorates rapidly.

During the past thirty years the consumption of milk in Copenhagen has increased by a much greater ratio than the proportionate increase in the population would lead one to suppose. At the present moment the average consumption equals almost exactly one pint a day per person. In London and Manchester the allowance is less than one quarter of this quantity. The abundance and the cheapness of good milk has undoubtedly contributed in no small measure to the extraordinarily rapid growth of the temperance and allied movements in Denmark, as it has been clearly pointed out in the Press, the churches, and the schools that even ordinary buttermilk contains four to five times the food-value per volume of beer. Bavarian beer, for example, contains only one half-pint food-value of a quart of whole milk. A quart of Bavarian beer costs twenty-seven öre (slightly more than threepence halfpenny), while a quart of whole milk can be purchased in Copenhagen for sixteen öre (about twopence). From the point of view of cost, therefore, milk yields better value for money; while, if the relative food-values and nutritious properties are worked out, it can be demonstrated that Bavarian beer, which costs twenty-seven öre, should only be valued at four öre.

One of the most important of the appliances employed by the Copenhagen Pure Milk Supply Company is known as the hygienic milk-pail, the object of which is to collect and store the milk so efficiently cooled that it will keep long enough without pasteurising or other similar treatment. The apparatus consists of a cylindrical tinned steel pail, in the bottom of which is placed a pear-shaped copper receptacle, which is closed by means of a flat lid under the bottom of the pail. When the pail is in use the lid is unscrewed, the pail turned upside-down, and the receptacle filled with a mixture of one part common salt to three parts of crushed ice or snow. The cow is milked straight into this pail, and the milk thus loses its cow-heat. The micro-organisms are by this method immediately placed in an environment which precludes development, while the milk does not lose any of its nutritive properties.

This rapid cooling process has produced some very notable results. Dr Müller of Leipzig instituted a series of valuable experiments with Mr Busck's hygienic pail, of which we will quote one only. A certain cow, which yielded twelve quarts of milk, was milked from the two right teats into Mr Busck's pail, and from the two left into an ordinary pail, the specimens being placed side by side in bottles in a room at a temperature of fifteen degrees centigrade. The milk from the ordinary pail became sour and thick after eighty-two hours; that from the hygienic pail did not become sour until after having been kept for one hundred and forty-four hours.

In connection with the rapid cooling process invented by Mr Busck, it may be noted here that his company uses upwards of eighteen thousand pounds of ice daily, and that the whole of this enormous quantity is produced and crushed on the premises by a Danish Diesel oil-engine motor.

TWO, AND A CAVE.

By William Freeman.

SHE came upon him with startling unexpectedness, some ten feet within the cave, a point far beyond the wanderings of the average tripper. He was sprawling asleep in the autumn sunshine upon a bed of sand, still damp from the last tide, and for a space she stood motionless, looking down at him. He was wearing a shabby, gray lounge suit, his complexion had been tanned almost coffee-colour, and his chin bristled with a four-days' beard.

He stirred, yawned, and opened his eyes. The girl began to move away. He sat up, regarded her with a scowl that merged in a grin, and finally scrambled to his feet. 'Hallo! Have I been snoring?'

She shook her head. Then, seeing his eyes fixed on the string-bag she was carrying, she added timidly, 'I come back from shopping—of cakes, sixpennyworth, and bananas.'

'I suppose,' he began, and hesitated, 'you couldn't sell me some?'

'Do you mean that you are hungry?'

'Ravenous!'

She broke a couple of bananas from the bunch, and from its paper bag extracted a cake, bright with pink sugar.

'I buy some more as I return,' she exclaimed. 'I wander here because I am in no hurry, because Madame Pleckett has gone to a theatre, and I am glad to be alone.'

The man nodded, and after searching in several pockets, produced three pennies. These he offered to the girl, and when she shook her head, pitched them with gay dexterity into the open mouth of the bag.

'But I wish,' he said, as he began to peel a banana, 'that you'd share these with me.'

'I must be going back, m'sieu'.'

'Why? It isn't six o'clock yet, and I haven't had a soul to talk to for ages. It isn't as though I hadn't seen you before. Twice, yesterday, you came out of the end house on the Marine Parade, and'——

'But that does not count an introduction,' she protested.

'Then it ought to.' He flung away the banana-skin, and attacked the cake. 'Anyway, tell me something about yourself.'

'There is so little to tell,' she said simply. 'I come from Belgium, and I am given the position of maid to Madame Pleckett at the boarding-house they call The Laurels. I have to get up at six o'clock in the morning, and to dust the rooms and get the breakfast, and do many other things. I am blamed, very much, because I am slow and do not always understand. Madame speaks what you call "Cockney," and has a quick temper.'

'And how do you amuse yourself?'

She smiled. 'When I have finished my supper, I am too tired to do anything except go very gladly to bed.'

'I thought maids in England had fairly easy times nowadays.'

'Not the maids of Madame Pleckett, m'sieu'. It is only on Thursdays that I am free at all.'

He glanced at her so suddenly and keenly that she flushed. 'And so, like me, you're fed up with things?'

'Tell me of yourself,' she said hastily. 'Have you been ill?'

He shook his head. 'Why?'

'Because—well, you are young, m'sieu', and not in khaki. And I thought that all the English—all who were young and healthy, and not mad or in prison—were fighting.'

'Then we'll assume I'm mad, ma'm'selle. Because, although I'm extremely fit, I don't feel like fighting at present. That's why I'm here.'

'You mean,' she said, the delicate eyebrows arched unflatteringly, 'that you are in—in hiding?'

'That, ma'm'selle, is the position in a nut-shell. And, speaking personally, I'm fed up with the war, and all that belongs to it. The lunacy of the whole business won't bear thinking about. Here was I, in the thick of experimental work that was going to revolutionise half-a-dozen industries, and now'——

'Now the Government is wishful to make a Tommee of you, and you do not want them to. So you come to Whinsea, and bury yourself in a cave, like one escaping from prison.'

'And you,' he challenged her—'you're a prisoner, too. You're putting up with sneers, and snubs, and a slave's life generally, and the result'—he sauntered past her to the cave entrance, where the rocks that jutted out sharply on either side created a shut-in beach of their own—'the result of it all, my dear young lady, is that the pair of us are prisoners in a literal sense. We've been chatting too long. The fault, of course, was mine; but the tide in these parts is so tricky that the oldest inhabitant daren't trust it. On either side of the rocks the water is at least six feet deep.'

Her face paled. 'Then what are we to do, m'sieu'?'

'There's bound to be a solution of the difficulty. By the way, you haven't told me your name.'

'It is Dubrique—Célandine Dubrique. But at Madame Pleckett's I am called Alice, because the girl who was there before me had that name.'

'That so? My name's M'Vie. And now, as to escape. If we went to the entrance of the cave and shouted, we might attract attention.'

'But then they would find you, as well as me,

and you would be punished. It is not to be thought of, m'sieu'.'

'On the contrary, it's the first thing to be thought of.'

He went to where the water was rolling in with a steady, even swell, and shouted until breath and voice were gone. His only answer came from the wheeling gulls. He turned and regarded the cliff. From where they stood, it was utterly and hopelessly inaccessible.

'Remains,' he said to the girl, 'the cave itself. I don't know whether there 's another exit; but at the worst we ought to be able to find a ledge above high-water level, and to make our escape when the tide falls.'

'Which will happen—when?'

'It 's high-tide about nine. We ought to be able to get away at something past one in the morning. Call it two, and be on the safe side.'

'The safe side, m'sieu'?' She gave an hysterical laugh. 'But can you conceive the face of madame when I make my return?'

'Couldn't you explain'——

'Madame has little patience at the best of times; when I explain, she has none. She believes that no foreigner can tell the truth. I shall be sent out of the house with what she calls a fly in my ear—even as the first Alice, who was thought to have stolen a silver teaspoon, was sent.'

'Then,' said M'Vie, 'we 'll concentrate our energies on the immediate future. Mind the pools—there 's no sense in getting wetter than you need.'

They turned their backs on the sea, and an impudent little wave swirled round the wall of rock and followed them exultantly as they went. There was sand for about twenty yards inland, then pebbles, then scattered rocks and débris. The floor sloped to a ridge, and then went down again. M'Vie stopped to examine the walls.

'What is it?' asked the girl.

'I wanted to see where the high-water mark came. We 'll have to push on still farther.'

They were in almost total darkness when they came to where the cave divided into two narrower passages.

'It 's all right,' said M'Vie; 'I 've matches. Luckily, it 's a full box. But we 'll have to economise.' He took them from his pocket as he spoke, and lit the gloom with a tiny yellow flare.

'I don't know whether you 're what 's known as a fatalist, ma'm'selle,' he said, 'but I 've a feeling that the luck 's definitely on our side.'

'Why?' she asked.

With the match held high, he crossed to the opposite side, and returned triumphantly with a stump of candle some three inches long.

'It must have been left by a previous exploring-party,' he said. 'At the worst, it 's a couple of hours' extra illumination. Meanwhile, suppose we take the path to the left?'

She acquiesced, and for some distance they plodded steadily on.

'To me,' said the girl, breaking a long silence, 'it seems that the floor still goes downward; so that when the water comes over the higher part near the entrance'——

'Like to turn back?'

'We could at least try the other passage, m'sieu'.'

He turned back at once, glad that the darkness hid the growing anxiety in his face. They regained the main path, and M'Vie lit the candle.

'For once in my life I 'm going to be recklessly extravagant,' he announced. 'We 'll make up for it by putting on extra speed.'

'If we could only find another candle,' she sighed.

'I 'd prefer to find another exit. However, we can always go back to the ridge.'

Their second route had not the straightness of the first, and suddenly the girl slipped.

'It is because my shoes are so wet,' she explained.

M'Vie halted and looked down. A thin but active trickle of water was running along an obviously familiar channel in the middle of the path.

'On the whole,' he said, with an attempt at carelessness, 'I think it would be as well to turn back again.'

They turned back accordingly. But long before they regained their starting-place the trickle had become a vigorous little stream.

'Listen!' said the girl, clutching his arm.

A report, muffled and remote, was followed by another.

'They 're testing the big guns over at Fawsham,' said M'Vie. 'It sounds alarming, and the reverberation 's terrific; but'—— A patter of stones, followed by a deafening crash, ended the sentence.

'What—what is it?' gasped the girl.

'Wait here,' commanded M'Vie. 'Don't move. Here 's the candle, if the darkness is too much for you. I 'll be back in a jiffy.'

She waited, trembling, while he hurried in the direction of the ridge.

He returned, white with chalk, and with his knuckles bleeding. 'My remarks concerning luck,' he said, 'seem to have been premature. Those confounded guns have brought down a new mass of rock. I ought to have taken a hint from all that débris at the entrance.'

'Do you mean, m'sieu', that we cannot get out?'

'I 'm afraid that 's what I do mean—at any rate, by the main entrance. There isn't room for a decent-sized rabbit to squeeze through. We 'll have to wait until another landslip is obliging enough to set us free, or till the tide 's low enough for us to search for another exit.'

The girl's face went very white; but she made no comment.

'When I was a kiddy,' pursued M'Vie, his eyes on the water at their feet, 'I remember reciting a yarn called, "One Niche the Highest." It was about a boy who hacked his way up the face of a rock with his pocket-knife. That big chunk sticking sideways out of the roof there reminded me of it. It oughtn't to be very difficult to bring it down. If I hacked away at that soft stuff round the edges, another big-gun shot might finish the business. And if it fell without smashing, we'd have something to stand on high enough to bring our heads above the line of seaweed on the walls. Do you follow me?'

'Of course. Can I help in any way?'

'You can hold the candle. Don't let it drip.'

She stood, candle in hand, while he extracted a small but serviceable knife from his pocket. In another moment he was reaching up on tip-toes on his bunched-up coat, cutting at the rubble about the big boulder. It was risky work, and exhausting in the extreme. Presently she saw the knife slip and drop.

'Have you hurt yourself?'

'A trifle. Luckily, it's my left hand. I'll hold the light, if you'll bandage it.'

She bound the cut, which was bleeding considerably.

'By the way, what became of the string-bag?' M'Vie inquired.

'I must have left it at the entrance,' she faltered. 'Does it matter?'

'Not a great deal, though a small amount of nourishment would have come in handy.'

He gave her back the candle, and resumed the cutting.

'Stand back!' he shouted suddenly, and himself jumped.

She saw the mass of rock quiver, and then fall with a splash that drenched them with water and extinguished the candle. She became aware of M'Vie's presence against the wall near her.

'It's all right,' he said huskily. 'We've got our stepping-stone. But the corner of it caught my shoulder before I could get clear!'

He struck a match and relit the candle. The rock had turned over as it fell, leaving a jagged surface uppermost.

'All the better foothold,' said M'Vie. 'Can you scramble up?'

The girl, after one or two failures, succeeded.

'But you?' she asked.

'I'm all right for the present. How much candle have we left?'

She showed him—less than an inch.

'Better put it out for a time. We'll probably need it later. Take the matches first, though. If they get wet, we're done for.'

She took the matches from him, and blew out the light. For a time they waited in silence, that was broken only by the rushing gurgle of the water. Presently she felt a wave ripple over her feet.

'You must climb up here, m'sieu',' she insisted anxiously.

'Not yet,' said M'Vie. 'But give me your hand; I don't want to run the risk of our getting separated.'

She fumbled in the darkness, and touched his unbandaged hand. The human contact heartened them both.

'There's plenty of room here,' she begged when the stream was almost at his waist; 'I can squeeze against the wall. And it will be difficult to get up when the water is higher.'

'Hold tight, then,' said M'Vie. She heard him slipping and scuffling in the darkness, and felt the rock sway perilously. The next moment he was at her side.

'Couldn't we light the candle again?' she said. 'It will soon be difficult to keep the matches dry.'

He consented, though reluctantly. She coaxed one into a flame that lasted long enough to kindle the wick. The sight it revealed was nerve-shaking. Water, ink-black except where the walls fretted it into foam, was flowing past them in a steady, sullen stream, to fall over some distant declivity with a low roar.

'Doesn't look particularly rosy, does it?' said M'Vie grimly, as their eyes met. 'Queer how Providence brings a man up against the unexpected. I've imagined myself in all sorts of tight corners, but never one like this. There's one other scheme that occurs to me, and that's risky. Still'——

'Tell me, m'sieu'.'

'Well, the chunk of rock we're balancing on came out of the ceiling, didn't it? And though the cave slopes downward, the ground above, as I happen to know, slopes more sharply still, and our stepping-stone must have made an appreciable difference in the thickness of a roof that wasn't particularly thick to start with. If—and I admit it's a big "if"—a man were to take a sort of flying jump, and get his head and shoulders in the hole and his feet buttressed against the wall, he might be able to worry among the rubble and earth until he burst through into daylight.'

'It might be worth trying,' she admitted dubiously.

'It's a chance, anyway. But in case it should end badly'—the man's voice changed—'I'd like to tell you that I'm not quite the bad egg you labelled me. My name isn't M'Vie, but M'Vicar, of the Royal Flying Corps.'

She drew her breath sharply.

'The Major M'Vicar who destroyed the aerodrome at Lille?'

'That's so. The papers made an absurd fuss over the affair. The G.O.C. gave me a month's leave, and I went down to Fawsham to see the new guns—a regular bus-driver's holiday. But

some confounded reporter from London tracked me, and the holiday looked like being ruined. So I shed my khaki, and started to grow a beard, and hid myself here. And while I was loafing about I saw a girl come out of a big house on the front; and after that—there wasn't another girl in the universe so far as I was concerned. I didn't use to believe in love at first sight, but I know better now. I saw the girl six times in all—four times when she was dressed as a housemaid—or was it a house-parlourmaid?—and twice when she wasn't. But nothing she could have worn would have made any difference.'

He stopped. The girl's face was flooded a warm crimson in the candle-light.

'I—I, too, have to confess, m'sieu'. I came to England because our château was destroyed, and—well, one must have occupation—and I wanted to learn something of the country. So I became a maid-servant. But when my father, the Count, returns to Belgium, we shall no longer be poor. Indeed, I think that even Madame Pleckett might speak to me if we met in the street. I should not tell you these things, but you have been so good'——

There was a little pause; and then M'Vicar spoke. 'If we get out of this place alive,' he said gravely, 'do you think you could contemplate the prospect of keeping company with me? I believe that's the correct expression. It's the stage before one's properly engaged, you know.'

'The "if" is so big, m'sieu',' she answered softly, 'that I will risk disillusioning you, and say "Yes." But we must waste no more time talking now.'

'True,' he said, and gave her the candle to hold again. 'Grip the wall as tightly as you can.'

She nodded, and watched him gather himself for the leap. There was a scuffle, a deluge of small stones and earth, and then M'Vicar's head and shoulders vanished in the black gulf above. His feet groped for support against the wall, and she guided them to a projection.

'You're not hurt?' she called anxiously.

'No. Be careful with the light; I'm going to shift some of this rubble.'

The deluge of fragments began afresh. The girl, as she waited, wondered dully how long it would be before the water swept her from the rock. She had no idea of what he expected to burrow through, or how thick the roof really was; she only knew that he would have to be quick—desperately quick. The minutes that passed were filled with all the agonised confusion of a nightmare. Presently she heard a shout from M'Vicar.

'Hold on—for Heaven's sake, hold on!'

She huddled against the wall. There was a wild rush of débris, followed by an avalanche of earth that choked and half-stunned her. The candle was swept from her hand, and vanished. She gave a faint cry of terror, and peered upward. Through a ragged gap she could see the moon, pale and clear, and a multitude of stars. She heard M'Vicar's voice.

'Stretch up your arms, and I'll try to pull you through!'

A wave, more powerful than the rest, swept her from the rock as the man's hands closed over hers. She was conscious of being drawn upward, slowly and with immense effort. At the very brink there was a pause that made her heart stop beating, and it seemed as though she must inevitably drop back into the gulf again. And then, before she fainted, she felt the touch of wet turf on her face and hair, and knew that she was saved.

She opened her eyes with the sting of neat spirit on her lips. A gray-haired man was bending over her.

'Better?' she heard him say. 'Good! No, you're not much hurt. It's your friend who's come off second best. If, as I judge, he dragged you from the cave, he did it with a dislocated shoulder. He must have suffered excruciatingly. The friend who was with me has gone back to the village for some sort of vehicle. My name is Selby—Dr Wargrave Selby. We happened to be taking a moonlight stroll when we stumbled over you.'

The girl sat up, brushing the hair from her eyes. 'But—but Major M'Vicar?'

'We've every reason to hope he'll pull round, but it's bound to be a matter of a week or so. He's conscious now, if you'd like to speak to him.'

She rose dizzily, and went over to where M'Vicar was lying in the shadow of a clump of gorse. He smiled faintly as she came near.

'Well, we pulled it off, and that's something to be grateful for. I wonder if the excellent Mrs Pleckett will let me call and see you when they've patched me up again? Or doesn't she believe in followers?'

'Whether she does or does not, m'sieu',' said the girl softly, 'I shall try to tell you of my gratitude.' Then, as he made a little shamefaced movement of appeal, she bent, and, flushing hotly, touched his lips with hers.

OLD HAUNTS REVISITED.

ALL lovely things were lovely as of yore,
The beanfields had the scent of long ago.
From the blue hills to yonder distant shore
All nature basked beneath the sunlight's glow.
Flowers in the nooks we used so well to know
Stood smiling as of old, with gracious look,
As if they said, 'We bloom for thee alone;
Pluck us, and wear us;' and the tiny brook
Went on its silvery way o'er mossy stone;
And Death and Time, who stole so much away,
Seemed quite forgotten in the blessed light
Of childhood's fancies, which returned this day,
Making old places new and fresh and bright.

THE HEART OF THINGS.

By HENRY LEACH.

LONDON, *Yesterday.*

AT the beginning of the war, when the people of London thought little and realised less, they were agreeable to shout as they were told, and be blindly 'patriotic;' but suffering has changed that attitude. When the war was young the spirit of its people still contained elements of injudiciousness and stupidity. In those days, for instance—when, indeed, we suffered far less from German brutalities and inhumanities than we have done since—it was the custom to believe that nothing that ever came out of Germany was, or could ever have been, good. There was nothing lofty in that form of 'patriotism.' It has, however, long since been recognised that our cause is much too noble and splendid to warrant vulgarities of the grossest kind about our enemies. Some journalists felt for a time that it pleased our people to have jokes presented to them upon 'Big Willie' and 'Little Willie,' and pictures in keeping with the jokes; but the people never really desired this stuff, and they resent its being still offered to them in a few places, as if this appalling struggle were no more than a parliamentary by-election. Not because they think that for the Kaiser and his son, or the chiefs of the German State, there is one word more to be said than there was at the beginning; on the contrary, they are all more than ever persuaded that on these heads rests the blame for the agony of the world. All are determined that they shall suffer for their sins, if it is possible to make them suffer. And, again, there can be no doubt that with militarism ground into their spirits from their first days of consciousness, and with, as it appears to us, a certain barbaric taint in their blood which only needed opportunity and encouragement to burst out as an ugly disease, the German people are in the main rougher, coarser, far more brutal than the other peoples of Europe, and are not to be considered among the best civilised members of the human family. We are sure of that now when we think in calm and contemplative judgment. But yet we see to-day how stupid it was at the beginning to condemn utterly everything in living Germany, as was so regularly done. There are good men and women even in Germany—thousands of them, no doubt; and as their civilisation has been wrongly directed in recent times, the best humanity and the best German civilisation, as it might be considered, are regularly found in the lower places and not in the higher, which are Kultur-infected. The Germans may be fools because they do not rise as one man and annihilate their oppressors who are leading them and their country to destruction; but then it is not an easy thing to be revolutionarily wise. The humbler Germans have thought of the Fatherland, and their own homesteads, and their loved ones in the war, and they have realised the tremendous power of the militarism to which they have become chained. And then they have just determined to stick it out. There is something even to admire in that; but our people would not admire any German at the beginning, when the whole nation seemed slavishly to take the word of official and unofficial leaders for all that they were to like and dislike. It is a remarkable thing that of all the communities of the Allies, those which think best of the enemy now are our own soldiers. That is an accepted fact, and it has become the most striking feature of the psychology of the war during the last few months. This appreciation reaches its highest point in the case of the air services; but it is in existence in the others. In it there is no excusing of the leaders, or of the crimes of the early armies, more imbued as they were with foul Prussianism than are those which have taken their places. The man who walks in London now, or sits in his club, or is one of the gossips in the suburban trains—though people do not gossip so freely now as once they did—murmurs about our enemies in a temperate way, such as would have earned for him contempt, and maybe something worse, in the autumn of 1914, and he is quick to criticise our own leaders as he would not have done then. His attitude towards the enemy is not one of tolerance, nor is it one of forgiveness. It is not a disposition to be less thorough than ever in punishment—very far from that; it is discriminating reason. A poor German wife and mother who lives in a little cottage, has never been within hundreds of miles of Potsdam, loathed war even before she felt it, and, having felt it, has lost husband and several sons in this ghastly business, is not less deserving of compassion and sympathy than

 [*All Rights Reserved.*]

a British matron in like case. Possibly her future lot is a subject for even greater pity, for the truth will come upon her, if it has not done so yet, that her sacrifices were forced upon her for an unholy cause. What has she to do with Wilhelm or Hindenburg? It is in this new reason, this judicial discrimination, that our own people have now become greater than they were. They think a little as they did not think before; they judge for themselves, and so they are attaining the heights of patriotism.

* * *

One cannot fail to be struck with this changed feeling in an examination of the best of new literature, for the literature of a people generally conveys the sense of the people as do neither newspapers nor orators. Two years ago the novelists and the rest depicted for the most part an enemy devoid of any redeeming feature even in single individuals. At that time to suggest that a Dalmatian puppy was not a poisonous brute was to be counted among the pro-Germans, and for a time it was bad taste on the part of a lady did she play the 'Moonlight' sonata of Beethoven. I wonder what would have been said of Mr E. F. Benson and written to him by the indignant but then uneducated patriots if in the first six months of the war he had produced the novel *Mike* which has been so much enjoyed of late. In it one of his two heroes and a heroine are German, and play great and noble parts right through a story that is yet as finely English as it could be. Hermann and Sylvia are splendid creatures, and we see why Hermann, with the spirit of the Rhine flooding his artistic being, was glad to fight for Germany. Mr John Buchan in *Greenmantle* puts his Major Hannay into a woodcutter's cottage in southern Germany, where the poor woman, whose husband has gone to the war, gives him good shelter and comfort when he is ill and in danger. He sits with her children by the fire and reflects that this poor soul knew nothing of the causes and purposes of the war, and had no bitterness against anybody, not even the Russians if they would spare her man. 'That night,' says Hannay, 'I realised the crazy folly of war. When I saw the splintered shell of Ypres and heard hideous tales of German doings, I used to want to see the whole land of the Boche given up to fire and sword. I thought we could never end the war properly without giving the Huns some of their own medicine. But that woodcutter's cottage cured me of such nightmares. I was for punishing the guilty, but letting the innocent go free. It was our business to thank God and keep our hands clean from the ugly blunders to which Germany's madness had driven her. What good would it do Christian folk to burn poor little huts like this and leave children's bodies by the wayside? To be able to laugh and be merciful are the only things that make man better than the beasts.' One might say now that this is merely trite, and that nobody ever dreamt of burning such woodcutters' huts. But at the beginning of the war many people saw nothing good or innocent in any part of Germany, and such statements stand for the new reason. Over and over again in the books of to-day we encounter evidence of this new discrimination and reason, and as a fighting people, knowing better than ever the justice of our cause, we are strengthened by it. Here and there may be found signs that some of those who have led us are still out of touch with the new wisdom of the people. They do not understand that we do not believe that every man who by his own will or otherwise is on the other side is necessarily a devil. The whole of British history is not to be represented emblematically as a white flower. Why, then, should Serbia and Russia be counted as lands of innocents and heroes only? They contain heroes and innocents in thousands and tens of thousands, but there have been very bad men in every country in the world.

* * *

Now our new reasoners, while they believed that the Hapsburg record was an evil one, resented the line taken by the flashiest of the public educators when they utterly condemned the young man who, not by any choice of his own, was called suddenly to the high succession of the Austrian throne. He was a fool, they said, a knave, weak, and a mere German puppet. In these present days worldly ambition might well hesitate at the throne of one of the Central Empires. Carl determined he would try to do his duty, and there is evidence that in his first thoughts and acts he indicated his abhorrence of the war and his ardent desire to free his people from it. His face is frank and open; from his blue eyes there seem to beam confidence and good-nature. At the worst, monarchical knavery and ugliness are not things developed in the very young, and the new emperor is not yet thirty. I had the opportunity recently of considering a character sketch made of him by one who had personal knowledge—made since the war began, but before old Francis Joseph died, and when the present monarch was still the Archduke Charles. It is not impossible that Carl will take a step that will bring the war nearer to its end. Think, then, of a careful estimate of him by one who is on our side.

* * *

Through his boyhood and his youth he had no thought of thrones. Not till the murder that served as the prologue of this war did he become the heir-presumptive, and until that murder his chance of succession seemed very far away. So he was happy and careless in his youth, did that which pleased him most, and old Francis Joseph, liking him as all others did, was known to wish he were the heir and not Ferdinand, for Carl gave no trouble with his love and other intrigues, and was of a happy kind. Carl loved England

next to his native Austria from the beginning; an English governess taught him our language as soon as he began to learn any foreign language. He liked games such as the British play, and the outdoor life, and the Austrians of the upper and other sets murmured that this Carl was too British for their tastes. He loved dancing and many pleasures; perhaps he loved some of them more than was good for him, but he was hardly worse than frivolous. The women liked him, and because of his popularity in Vienna, his guardian, the uncle Ferdinand, the heir who was murdered, had him sent away with his regiment. Ferdinand could not speak Hungarian, Czech, French, Italian, German, and English as Carl could, and he was liked by few. Carl, impulsive, fell in love with a distinguished Viennese actress, who was nearly old enough to be his mother, and she, with wisdom, instead of taking advantage of him, played the mother and counsellor to him, became his confidante, and was the first to be told at length that the Archduke Carl had fallen really in love with an old schoolfellow. He married the Princess Zita of Parma for love only. Zita was in some ways a lovable girl. Part of her education was English, and she spent many of her early years in a convent in the Isle of Wight. She was a careful, wise-thinking girl, defended herself ably against intrigues, and tried to make herself popular. When she went into the country with her husband and walked among the rustic people, she tapped at the doors of the cottagers, and, without a murmur, bought poultry from them at the fancy prices they wrongfully asked her to pay. This was the game of being a princess. But do not imagine that these two young people, with such a destiny before them, were without character. Carl had strength. Precedent and etiquette are tremendous things in Austria; but he was afraid of neither precedent nor etiquette. From the first day of his becoming heir he showed a certain independence that shocked the old officials who knelt near to the Hapsburg throne. After the Sarajevo murders, when his uncle was killed and he became heir in his place, he attended the funeral, and angered the vastly important Master of the Ceremonies of the Vienna Court by walking behind the funeral coach. The Master of the Ceremonies, with the traditions and customs and instincts of many generations of Hapsburgs settled in his conscience and his being, had determined that no Hapsburg should demean himself by following the dead on foot. But Carl, on arriving at the railway station and having this pointed out to him, declared hotly to the astonished Master of the Ceremonies that he was now the heir to the throne, and would decide for himself what was the proper thing to do. And he alone, as first mourner, walked behind the coffin of the dead Archduke and Archduchess. In the days before the war he liked the British people, and—thanks, perhaps, to wifely influence—the Italians better than any others except his own. The Kaiser overlooked him as a young man of no importance. Possibly he may be a poor emperor; but certainly his was not a case for silly contempt when fate called him to the dread Hapsburg throne. Yet some of the paid writers, who do their work so carelessly, derided him, spoke of him as the lackey of Potsdam, and as a born enemy to Britain, France, and civilisation. In one place it was said that Carl was a young man, but that he would be very old indeed before we should trust him. Now it is quite certain that for these superficial judgments there was no basis in fact. Strange events are moving in the uncertain realms of the unhappy Hapsburgs, and stranger still are half expected. Above all things, it is clear that less than many monarchs in Europe is young Carl disposed to be the lackey of any other. So far from his being weak and light, this young emperor has a mind of his own, a sense of the overpowering seriousness of things, and a determination to exert himself for the bettering of a desperate situation. Remember this—for it is highly important to remember it—of all the belligerents Carl alone as monarch can say that he had nothing to do with the beginning of the war. His hands are clean; he neither willed it nor prepared for it, nor assented to it. His position is, therefore, unique, and to him, and perhaps to others, it is a splendid blessing. It plainly pointed a way to him when he mounted that Hapsburg throne. A personal record that was unstained by a single drop of European blood was not lightly to be abandoned. He mounted the emperor's throne wishing for peace. He saw, thanks to the folly of old Francis Joseph, this always shaky empire at the very point of disintegration and ruin. Never was its plight so pitiable, so seemingly hopeless. Austria never wins wars.

* * *

In the City and other places where financiers work they have a common expression which signifies the taking of drastic measures for wisdom's and safety's sake. They say, when things are going heavily against them, that they will stop short the business which is proving bad, that they will 'cut their losses.' Carl determined that the best thing for Austria would be to 'cut her losses,' and no man could do it with such good front as he, the innocent. He had no personal quarrel with Britain, France, Italy, or Russia. He liked them all; they had all been pleasant to him; they would be disposed to be so once more perhaps. He would like to make from those crumpled, unhappy bits of empire of which he had assumed command something like a happy country again. No young emperor ever faced a more disheartening task than Carl did on this occasion. A fair-minded enemy would admit he faced it manfully, bravely, and even wisely. It was not in his

power to stop the war himself upon the instant; but he showed that he would be a factor in arrangements from then on. He dismissed Ministers; he gave orders; he wrote to the Pope about peace; he caused it to be known far and wide that he hated war, and this war more than any other, and that he wanted peace. 'Peace!' The new emperor, the youthful king who had taken the place of the tottering Francis Joseph with the sinister look, an old dodderer who cringed to Potsdam and wrote hypocritical letters to the Kaiser about the successes of their 'glorious arms'—this new ruler spoke of peace, divine peace, and was the first of the leaders of Austria to do so since the war began. And the word sounded like a whisper from heaven to the ears of the stricken Austrian and Hungarian peoples. They were crushed, broken, beaten to the earth by the hated war. The Kaiser, with his uniforms and his eagles, came to Vienna to bestow his patronage on the new emperor at the funeral of Francis Joseph. He came to lord it, and to show the Austrians his greatness again. He expressed his intention of attending the funeral in the capacity and with the style of Supreme War Lord. Carl caused it to be known to him that he did not approve of this intention, and that Vienna and the graveside of the dead emperor was not the place for a Supreme War Lord of the Prussian or any other variety. He would, therefore, be good enough to attend as German Emperor only. It was then that the symptoms of a cold so rapidly developed in the Kaiser, and that he considered it were wise he should hurry back to Berlin without a moment's delay. He did so. Never since very many years ago, when the Reichstag gave him some hints that he should moderate his imperial ways, has the head of the Hohenzollerns received such a snub as this. It amazed him. But at the same time it drew the filmy covering from the ground in front of him, and he saw there yawning the deep black gulf that fate had prepared. Carl, it was clear, was going on his own way; he was for 'cutting the losses' of Austria, and, with such strength and tact as he could gather, was for steering for peace. Germany's game may have been settled before; but it was absolutely settled then. A few days later the Germans, desperate, made their first bid for the stoppage of the war.

* * *

Francis Joseph was a strange mixture of humankind. Many of his people loved him; almost all regarded him with sorrow and sympathy. He certainly had much sorrow in his long life, though we are not satisfied as to how deeply it hurt him. There was much selfishness in Francis Joseph, much cunning, much worldliness. He was not diabolical like the Hohenzollerns, but he was not of the kind of men who are humanly great. The Hapsburgs have been a wonderful family. They have been dukes and archdukes of Austria since 1282, kings of Hungary and Bohemia since 1526, and emperors of Austria for more than a hundred years. In their time Hapsburgs have been Roman emperors, kings of Spain, and German kings, and they were at the height of their glory and power in the reign of the Emperor Charles V., when their sway extended over some of the most important and richest states of Europe. Since those far-off days there have been many Hapsburg rulers, but few good men among them. Europe as a whole has rarely taken kindly to this breed. But in our own time there was one who seemed a better Hapsburg than any for ages past, and that was the Archduke Rudolph who was murdered. Some said at the time that it was a case of a love suicide; that was the way in which, for convenience' sake, the mysterious tragedy was explained by the Court authorities. But in Austria for some time past strange stories have been told, and they say that the truth is coming out. Rudolph, the heir to the throne, he who would have been emperor now had he lived, was enormously popular everywhere—except in Germany. He was specially popular in England; he was one of the intimates of King Edward when Prince of Wales. He was popular also with his own people, because he loved them, was an enlightened prince, with strong and original views, was of the most pronounced democratic tendencies, and had a grand scheme for the regeneration of his country when the time came for him to take command of it. All his spirit, his imagination, and his intention were adverse to moving on with Germany. In him Germany saw the greatest possible danger to her future plans. With Rudolph emperor nothing could be done for Germany; much might be done against her. And it is enough to add that not by gossips and scandal-mongers, but by responsible persons, office-holders of the past, the story is now being told, in the stress of circumstances, of how Rudolph was murdered in his bed, how with devilish conspiracy cunning details of the plot had been fashioned for years beforehand, so that the tracks of the murderers could be covered up afterwards and peoples be deceived. And it is told how the murderers were Germans working under very high command. The most absolute detail is furnished, and this story is far too circumstantial and well supported to be ignored. There has taken the place of Rudolph another Hapsburg prince, also gentler and more pacific than the rest, and he is emperor now.

THE DEFINITE OBJECT.

CHAPTER XII.—*continued.*

AND what a supper that was! What tongue could tell the gaiety and utter content that possessed them all three? What pen describe all Hermione's glowing beauty, or how her blue eyes, meeting eyes of gray, would, for no perceptible reason, grow sweetly troubled, waver in their glance, and veil themselves beneath sudden, down-drooping lashes? What mere words could ever describe all the subtle, elusive witchery of her?

And Spike ate, of course, in blissful silence for the most part, and whole-heartedly, his attention centred exclusively upon his plate; thus, how should he know or care how often, across that diminished turkey, gray eyes looked into blue? As for Ravenslee, he ate and drank he knew and cared not what, content to sit and watch her when he might—the delicious curves of white neck and full round throat, the easy grace of movement that spoke her vigorous youth; joying in the soft murmurs of her voice, the low, sweet ring of her laughter, and thrilling responsive to her warm young womanhood.

'But, Mr Geoffrey,' she inquired suddenly, 'if you hate Mulligan's as much as I do, whatever made you choose to live here?'

'A thrice blessed fate,' he answered. 'I came because—er'——

'You were a poor, lonely guy,' added Spike hastily.

'Precisely, Spike. Compared to my sordid poverty, Lazarus was rich; and as for the loneliness of my existence, the—er—abomination of desolation was a flowery garden.'

'And how did you happen to meet Ar'——

A plate crashed to pieces on the floor, and, turning, she beheld Spike very red and rueful of visage. ''Fraid I've bent a plate, Hermy,' he explained, and, winking desperately at Ravenslee, he stooped to gather up the fragments.

'Oh Arthur! and we have so few.'

'Yes, I know; but it's only the old cracked one, Hermy.'

'You've broken an awful lot of things lately, boy dear,' she sighed. 'Never mind; get on with your supper, dear.'

'Oh, I'm all right, but what about you? Gee, Hermy, you sure do talk!'

'Do I, dear?'

'Well, I guess, you keep on at poor old Geoff so, he don't get a chance for a real proper chew.'

'But then, you see,' said Ravenslee, 'I would much rather talk than eat—sometimes.'

'But say, Geoff'——

'Miss Hermione, you were asking how I met'——

'Hey, Geoff!' said Spike hoarsely.

'How I met your brother,' continued Ravenslee, silencing the boy with a look. 'Miss Hermione, I'll tell you full and free.' Here Spike took a gulp of tea and choked, also his brow grew clammy, and he stared with dilating eyes at Ravenslee, who began forthwith: 'Once upon a time, Miss Hermione—that is to say, upon a certain dark night—a man sat alone, physically and mentally alone, and very wretched because his life was empty of all achievement; because, having been blessed with many opportunities, he had never done anything worth while. And as he sat there, looking back through the wasted years, this miserable fool was considering, in his wretched folly, the cowardly sin of self-destruction because he was sick of the world and all things in it—especially of his own useless self. But I hope I don't—er—bore you, do I?'

'No,' she answered a little breathlessly, and gazing at him with eyes deep and tender; 'go on—please go on.'

'Well,' continued Ravenslee gravely, 'Destiny, or Heaven, or the Almighty, taking pity on this sorry fool, sent to him an angel in the shape of —your brother.'

'Of—Arthur?' she exclaimed, while Spike's rigid attitude relaxed and he drew a sudden deep breath.

'Of Arthur,' nodded Ravenslee. 'And Arthur lifted him out of the Slough of Despond, and taught him that life might be a useful thing after all, if he could but find some object to help him; one who might inspire him to nobler things. And so he came here, hoping to find this object.'

'An object?' she inquired softly.

'The Definite Object!' he answered, 'with capital letters. One who might make life truly worth while. One who, teaching him to forget himself, should lift him to better things. An object to live for, work for, and if necessary to —die for.'

Here Spike, finding himself utterly forgotten again, sighed in deep and audible relief, and, taking up knife and fork, fell to with renewed appetite; while Hermione, chin rested on folded hand, gazed into Ravenslee's grave face.

'Do you think he will ever—find his Object?'

'Oh yes.'

'You seem very confident.'

'I am. You see, she's found.'

'She!' exclaimed Hermione, her eyes beginning to waver.

'With a capital S,' said he, leaning nearer—'The Woman! And it's right here that his difficulties begin, because, in the first place, he is so humble and she is so proud and'——

'Proud?' said she, glancing up swiftly.

'And so very beautiful,' he continued.

'Oh!' said she, and this time she did not look at him.

'Say,' quoth Spike, 'I think I could go another drumstick, Geoff.'

'And, in the second place, he is so unworthy, and she so'——

'An' a bit more stuffin', Geoff,' sighed Spike.

'Can she help him?' inquired Hermione, stirring her tea absently.

'She is the only one who can help me.'

'Oh!' said Hermione again, very softly this time, and stirring a little faster; and, conscious of his glance, she flushed deliciously and was silent a while. As for Spike, he glanced from one rapt face to the other, and unostentatiously helped himself to more turkey.

'But,' said Hermione at last, 'how can she help?'

'By constant association,' answered Ravenslee. 'By affording me the daily example of her sweet self-forgetfulness and blameless life.'

'Are you sure she is so very good?'

'I am sure she is braver and nobler than any other woman I have ever known.'

Once more Spike glanced from the flushed beauty of his sister's half-averted face to Ravenslee's shining eyes, and boldly helped himself to more seasoning.

'Have you known her very long, Mr Geoffrey?'

'Long enough to know she is the only woman.'

'Say, Geoff,' sighed Spike, 'I guess old Pffeff. was right about this bird; she kind o' melts—'n', say, she 's meltin' fast. If you two don't stop chewin' de rag an' get busy you 'll be too late for this bird; because this bird is sure a bird o' passage; an'—— Holy gee!' he broke off as a knock sounded on the outer door, 'who 's this, I wonder?'

Before he could rise, Hermione had vanished into the passage. 'Say, Geoff,' he whispered, 'how if it 's Bud?'

Ravenslee frowned and pushed back his chair.

But at that moment they heard Hermione's glad welcome: 'Why, Ann, you dear thing, you 're just in time for the turkey. Come right in.'

'Turkey, my dear!' spoke the harsh voice of Mrs Trapes. 'Turkey—land sakes! But I only jest stepped over t' ask if you 'd happened to find that lodger o' mine anywheres. Why, lord bless me!' she broke off, halting in the doorway as she beheld Ravenslee—'lordy-lord, if he ain't a-settin' there, cool as ever was! If he ain't a-eatin' an' drinkin', an' me cookin' him at this moment the loveliest mutton-chop you ever see. A mutton-chop wiv a kidney as he ordered most express; lord, Mr Geoffrey!'

'Why, to be sure,' said Ravenslee, rising. 'I forgot all about that chop, Mrs Trapes.'

'Didn't you order it most express—cut thick, an' wiv a kidney?'

'I did,' said Ravenslee penitently.

'Well, there it is, cooked to a turn, an' nobody t' eat it. An' kidneys is rose again; kidneys is always risin', lord, Mr Geoffrey!'

'Why, you see, Mrs Trapes, we—that is, I—had a birthday not long ago, and we 're celebrating.'

'And so shall you, Ann,' said Hermione. 'Sit down, dear.'

'An' me in me oldest apron?' said Mrs Trapes, squaring her elbows. 'My dear, I couldn't an' I wouldn't. But, oh! Mr Geoffrey, what about that beautiful chop? I might warm it over for your breakfast?'

'Heaven forbid!'

'Then I must eat it myself, I suppose, though it do seem a shame to waste such a lovely chop on Ann Angelina Trapes!—But, Hermy dear, I just been down to see Mrs Bowker, an' her little Hazel 's very bad—her poor little hip again; an' she 's coughin', too, somethin' dreadful.'

'Poor little Hazel! Did she ask for me, Ann?'

'Well, my dear, she did, an' Mrs Bowker did ask if you 'd go an' look at her; but I do hate t' disturb ye, that I do.'

'Oh, it 's all right, Ann. Tell Mrs Bowker I 'll be right down.'

'I will so; but it 's a dratted shame as you should shoulder everybody's troubles, that it is.'

'Oh Ann! as though I do. And then, how about yourself, dear? What of the Baxters and the Ryders, and Mrs Tipping's baby, and'——

'My land!' cried Mrs Trapes; 'that chop 'll be a cinder!' and, speaking, she hurried away.

'Poor little Hazel,' said Hermione, crossing to a small corner cupboard. 'She 's such a dear, quaint little person. You must have seen her on the stairs, Mr Geoffrey.'

'I see so many on the stairs, Miss Hermione, and they are always small and generally quaint.'

'Hazel 's got a game leg, Geoff,' said Spike; 'an' she hops around on a little crutch. She told me yesterday she thought you was—I mean were—a fairy prince, because you always bow an' tip your lid to her when she says "Good-mornin'." So now she waits for you every mornin', Geoff; says it makes her feel like she was a real fairy princess in a story-book. Sounds kind o' batty to me, though.'

Hermione was standing on tiptoe endeavouring to reach a certain bottle upon the top shelf, where were ranged many others of various shapes and sizes, when Ravenslee's big hand did it for her; but when she would have taken it he shook his head. 'I should like to go with you, if I may,' he said, 'to be—er—formally introduced to the princess.'

'But'—— began Hermione, hesitating.

'Also I could carry the bottle for you.'

'Why, if you will do all that'—— she smiled.

'Thanks!' he answered, and, putting the bottle in his pocket, he opened the door.

'Hey, Geoff,' Spike called after him, 'you've forgot to kiss the turkey good-bye.'

'Why, then, you can do it for me, Spike!' he answered, and followed Hermione out upon the stair.

Side by side they descended the stairs, in the doing of which her soft shoulder met him once, and once he thrilled to feel her hand touch his in the shadow; but this hand was hastily withdrawn. Also, though the light was dim, he saw that she was frowning and biting her red underlip.

'These stairs are rather narrow, aren't they?' said she, drawing to the wall.

'Delightfully!' he answered, drawing to the rail; and so they went down very silently, with the width of the stairs between them.

(Continued on page 215.)

INCOME-TAX ADJUSTMENTS.

By JOHN BURNS, W.S.

WITH an income-tax which has reached a 'normal' rate of five shillings per pound, it is not only a right, but a duty, of prudent and patriotic citizens, men and women, to see, on the one hand, that they do not wrong their country in a time of peril by land and sea; but also, on the other hand, that they husband their resources, and commit no waste, whether in income-tax or in any other direction. To many readers the matters mentioned below will be at best reminders only, but useful as such; to others they may convey new lessons.

When the rate of tax was more moderate there was reason to believe that many people who were entitled to total or partial repayment injured themselves by letting it slip. That might be through either ignorance or lack of energy. It is more difficult to believe that this can be true to any considerable extent to-day, when the tax amounts to so large a proportion of the income, and that income is so greatly required to meet the increased cost of food and other necessaries. But, at the same time, one must remember that the number of people entitled to repayment is now vastly increased, it being probably not far wrong to estimate that 99 per cent. of persons who are liable to pay *some* income-tax are yet not liable for the five-shilling rate which has been deducted from them, and so are entitled to claim partial repayment. That is one reason why it seems useful to bring the subject before our readers. Another reason is that the recent changes due to the war have altered all the rules, so much so, indeed, that even some of the official forms are not yet up to date. Finally, the subject is urgent about this particular date, for if any tax is reclaimable for the financial year from 6th April 1913 to 5th April 1914, it will be lost if the claim be not sent in so as to reach the department at latest on (but better say before) 5th April of this year. Any one, therefore, who is in that position must act at once, or sustain to that extent a distinct loss. But, in truth, even as to later years, the tax is so heavy that it is rather a serious matter to lie out of the money, and the way to avoid that is to claim without further delay. A claim may be made for the four years from 6th April 1913 to 5th April 1917.

We shall confine attention mainly to incomes other than business profits. We shall purposely avoid many technicalities even at the expense of the loss of strict accuracy, for to go into all refinements would confuse instead of aiding. Our object will be accomplished if attention is concentrated, action incited, and general lines indicated.

CALCULATION OF INCOME.

This is a matter which has little interest for those whose incomes are derived from investments, from the interest or dividends on which income-tax is deducted before they are received. But private traders are assessed on an assumed income, which is arrived at by taking the average of the profits for the three previous years. Our reason for referring to this well-known rule is one application of it which is not so well known, and that is its extension in some districts to cover the case of many salaried employees, such as clerks, bookkeepers, travellers, and certain teachers. The importance of this lies in the fact of increase of salaries by war bonuses, so that by taking the average of the past three years the tax will probably be less than if it were charged on the actual income of the year.

INDIVIDUAL INCOME.

It should be clearly understood that, in applying the scales to determine rights of exemption and abatement, the test is the income of each individual by himself or herself alone. Thus, two sisters living together, and jointly entitled to a total income of £200, should get back all the tax. The one exception to this is the case of husband and wife, who are treated as one, with the result of assessing the husband on the income of both taken together, and leading to interesting income-tax questions in the first year of marriage of a lady with an income of her own and in the first year of widowhood. But there is a sub-exception when both husband and wife are engaged in separate businesses, and the whole incomes of both taken together do not

exceed £500. In that case, while the husband pays the whole tax, it is calculated as on two separate incomes, so that each may have the benefit of exemption or abatement.

Incomes Earned and Unearned.

Unless the total income soars to a figure over £2500, every one is interested to secure that such part, if any, of his or her income as is entitled to be reckoned as 'earned' shall obtain that benefit. In a sense, any investment 'earns' interest or dividend, but that is not the meaning of the word for income-tax purposes. The idea is income earned by personal exertions, not by capital; but yet it is extended to cover pensions given in respect of past services, whether the pension be paid to the worker or to his widow or children. On a total income between £130 and £500 the present rates are: earned, 2s. 3d.; unearned, 3s. This merely illustrates the divergence, which holds with variations all the way up to an income of £2500.

Exemption Claims.

In the years 1913–14 and 1914–15 any one whose income did not *exceed* £160 was entitled to repayment of all income-tax which had been charged against him in any form. For the years 1915–16 and the current year 1916–17 the free limit is reduced to £130. The £160 limit still holds for the two earlier years, so that a person whose income has been steady at £160 is still entitled to total repayment of tax for those two years, if not already obtained. But in many cases an interview with the Surveyor of Taxes will make it clear how, for the future, the necessity for claiming repayment may be obviated by the far better method of avoiding the payment altogether. This can practically always be arranged when there is any direct assessment for tax, whether on the rent of land or houses, or on the profits of a business.

Abatement Claims.

These are claims for partial relief from income-tax. Here, too, claimants may proceed either by way of avoiding the excessive payment, or obtaining the appropriate part repayment. The former is the better, and a meeting with the Surveyor is the method. The grounds or classes of abatements are numerous and various. Most of them are referred to below, but just a little care is required to avoid confusion in regard to the relation and working of the different abatements, and we shall try to make these things plain to the general reader. At the outset it may be made clear that whenever different parts of the same income are taxable at different rates (part being 'earned,' and part 'unearned'), all abatements are, as far as possible, given off the lower rate of tax. The result, and indeed the object, is to minimise the abatement.

Scale Abatements.

This is the oldest form of the principle of graduation. For the four years which may have to be dealt with in a claim for repayment the scales are:

Income.	The Concession is an Amount Equal to Tax on 1913–14 1914–15	1915–16 1916–17
£161 to £400	£160	—
£131 to £400	—	£120
£401 to £500	£150	£100
£501 to £600	£120	£100
£601 to £700	£70	£70

Over £700, for 1916–17 and future years only, see the paragraph below on marginal abatements.

It will be observed what exactly the concession is. The tax-payer's income is not deemed to be less than it actually is. On the contrary, it is taken at its actual amount. That gross amount fixes the rate or rates of tax. The tax is calculated on the whole of the gross income at the appropriate rate or rates, and then from the amount so brought out there is knocked off an amount equal to tax on the appropriate abatement. Perhaps a simpler way of expressing it is to say that the abatement is deducted from the income, but only *after* the *rate* or rates of tax have been fixed according to the gross unabated income. This may be called abatement No. 1. It is confined to people with small or medium incomes. Of course, no one can obtain it twice for the same year. Thus, if a man has a salary of £120, paid to him without deduction of tax, and if he and his wife between them derive £50 a year from investments, all taxed before receipt, he is no doubt entitled to an abatement of the tax on £120; but he has already got that in the shape of his tax-free salary, or, let us say, he gets it in the shape of not being required to pay direct to the Revenue any tax on his salary. At any rate, he can bring up no abatement No. 1 claim as against the £50, though the rate of tax on that will require to be modified as stated below. Again, if a lady living on her means has a total income of £500, all taxed before receipt except £10 bank interest, the scale abatement of £100 has already been enjoyed by her to the extent of the £10, and all she can further demand on this head is repayment of tax on the balance of £90.

Graduation Abatement.

This is abatement No. 2. It applies, not in the same degree, but in graduated degrees, to persons with small, moderate, and large incomes. The idea is to vary the rate of tax according to the assumed ability of the tax-payer to bear it. The rates are distinctly confusing, the figures varying according to the year, the amount of income, and its nature, whether earned or unearned; and the lower steps in the scale have

also varied. The following table shows the position for four years to date:

Total Income not exceeding	Nature.	Rate of Tax. 1913–14.	1914–15.	1915–16.	1916–17.
		s. d.	s. d.	s. d.	s. d.
£130	Earned	Free.	Free.	Free.	Free.
	Unearned				
£160	Earned	Free.	Free.	1 $9\frac{1}{5}$	2 3
	Unearned			2 $4\frac{1}{2}$	3 0
£300	Earned	0 9	1 0	1 $9\frac{3}{5}$	2 3
	Unearned	1 2	1 4	2 $4\frac{1}{2}$	3 0
£500	Earned	0 9	1 0	1 $9\frac{3}{5}$	2 3
	Unearned	1 2	1 $6\frac{3}{4}$	2 $9\frac{1}{5}$	3 0
£1000	Earned	0 9	1 0	1 $9\frac{3}{5}$	2 6
	Unearned	1 2	1 8	3 0	3 6
£1500	Earned	0 9	1 2	2 $1\frac{1}{2}$	3 0
	Unearned	1 2	1 8	3 0	4 0
£2000	Earned	0 9	1 4	2 $4\frac{1}{2}$	3 8
	Unearned	1 2	1 8	3 0	4 6
£2500	Earned	1 0	1 $6\frac{3}{4}$	2 $9\frac{1}{2}$	4 4
	Unearned	1 2	1 8	3 0	5 0
Over £2500	Earned	1 0*	1 8	3 0	5 0
	Unearned	1 2	1 8	3 0	5 0

Note, however, that in addition there are great concessions to soldiers, sailors, and others engaged in the war; also the concession to all, for the current and future years, of the marginal abatements treated below.

The same person may enjoy abatements No. 1 and No. 2. In fact, every one who gets No. 1 must also get No. 2; but the converse does not hold, for the income limit for No. 1 is (broadly) £700, while for No. 2 it is £2000 as to 'unearned' and £2500 as to 'earned' income. It may be expressed thus: Abatement No. 1 exempts so much income from taxation; abatement No. 2 reduces the rate on the balance of income which remains taxable.

Marginal Abatements.

This seems the best place at which to mention a recent and very sensible rule adopted in order to avoid a person being actually prejudiced by a rise in his income. Thus, £130 is now the free limit; but if one has an unearned income of £131 the former rule worked thus: deduct the abatement of £120; that leaves £11 to be taxed at 3s., which is £1, 13s. of tax, and so the person is 13s. to the bad by obtaining an increase of £1 to his income. Or, again, a lady with an unearned income of £700, and six children under sixteen, is entitled to an abatement of £70, and a further abatement of £150 for the children; so that she is taxed on £480 at 3s. 6d., which is £84. But if her income rose £5, the former rule was that she lost her abatements, and would have to pay 3s. 6d. on £705, which is £123, 7s. 6d.; so that she lost £39, 7s. 6d. by gaining £5. All these absurd results are made impossible by the new rule, which is that nothing of that kind shall result in the payment of more tax than would be payable if the rise, or gain, or excess over the scale did not exist, plus the amount of that rise, or gain, or excess. Thus, the man whose old income of £130 becomes £131 will pay £1; and the lady with the equally unfortunate addition to her income will pay her old tax of £84, plus £5 = £89. In short, they cannot lose more than they gain. All that is said above and below regarding scale and abatements must be read as qualified by this new and valuable rule. In particular, it is not now correct to say that no one with an income over £700 can have any benefit from the scale abatement or the abatement for children. These concessions to reason are limited to the current year and future years.

Abatement for Children.

The allowance is an amount equal to the tax on £25 for each child or step-child in life on 6th April of the year of assessment, and then under sixteen years of age, provided the parents' total income does not exceed £700, but with the possible benefit of the marginal abatement. These are the conditions for the current year 1916–17. In case any of the three previous years have to be dealt with, it may be noted that the income limit was then £500, and the allowance for each child was—1913–14, tax on £10; 1914–15, on £20; and 1915–16, on £25.

Apart from these statutory concessions, there may be a relief in respect of children without the above restrictions. Thus, sometimes a widow is entitled under her husband's will to the income of his estate under the express burden of maintaining the children. It may then be open to her to allocate a reasonable annual sum for each child, and so bring down her personal income, with the result of obtaining for herself and the family large repayments of tax from which she and they would otherwise be excluded. It will be observed that this is radically different from the statutory relief. It is an actual reduction of the amount of the mother's income, and may thus give her the benefits of a larger abatement and a lower rate of tax on the reduced amount.

Those who delight in subtleties may consider whether, in a proper case, it may not be possible for the same person to obtain the benefits referred to in *both* of the above paragraphs. They may also ponder how the statutory abatement will operate on, and especially in the first year of, the remarriage of a widow who has both an income and existing children or step-children, more especially if her second husband also has children or step-children.

Life Insurance Premiums.

The money applied in paying premiums of insurance on the life of one's self or wife, or towards a widow's fund, or for a postponed annuity to self or widow, is entitled to total

* In 1913–14 the rate on earned income became 1s. 2d. above £3000.

exemption from income-tax. This is subject to a limit of one-sixth of the income, and there are now certain other restrictions which will not in practice come into operation very often, and we do not trouble our readers by stating them. The one-sixth limit is most properly waived as regards extra premiums for war-risk. If the income for 1913–14 was greater than the income of the year of assessment, one-sixth of the 1913–14 income is allowed to be substituted as the limit. This insurance abatement is allowed to every one, no matter how large the income may be.

Loan Interest.

If you have had advances from a bank, you will find that you have been charged interest without deduction of tax. When that is so you are entitled to repayment from the Revenue of an amount equal to the tax on the interest in question. The bank will furnish a certificate certifying the figures. If, again, the loan is from a building society, it is usually repayable by instalments; and more probably than not you would find it very difficult to say what proportion of the fortnightly payments is for interest on the diminishing debt. But some part must be interest, and on that part you are, in one form or another, entitled to deduction of income-tax in your favour.

Maintenance of Land and Houses.

In assessments on land and houses deductions are allowed of an estimated sum for rates, and one-sixth (houses) and one-eighth (land) as a fund or estimated sum, to cover maintenance, repairs, insurance, and management. But these sums are often not sufficient, especially now in the case of houses, owing to war-risk insurances. The owner is in certain cases allowed further relief on making application and producing an account. There is no rental limit in the case of land, but houses over £12 a year are excluded. If on a five years' average the cost of maintenance, repairs, insurance, and management has exceeded the above proportions, the tax on the excess will be repaid. There is reason to believe that persons entitled do not avail themselves of this relief in many cases owing either to ignorance, forgetfulness, or fear of the trouble involved; but again, we say, when tax is so high many things are worth claiming which might at other times be allowed to slip. The mere fact that the ordinary allowances may be sufficient, or more than sufficient, in the case of one property, is no reason for not obtaining the full extra relief on another separate property. There is no income limit.

Dividends 'Free of Tax.'

These last three words are a trap to not a few. The receiver of the dividend thinks that he is paying no tax, and, therefore, that he has no claims to a return or abatement. This is a complete fallacy. The words simply mean that the company in question is distributing a larger sum than appears. The company pays the tax, but it does so for the shareholders. Therefore a lady who receives a dividend of £3 'free of tax' is just as much entitled to apply for repayment of tax on that dividend as on any other part of her income. Now 5s. per £ on £3 is 15s.; but that is not enough. The true question is, What is the dividend which, after deduction of tax, would leave £3 net? The answer is £4, the tax on which at 5s. per £ would be £1; and that is the true amount of tax which the lady has suffered on that particular dividend. In point of fact, not many companies now follow the practice of paying the dividends free of tax. Our readers will be good enough to note that this paragraph does not apply to income from the new 4 per cent. 'tax-compounded' War Loan.

Annuities 'Free of Tax.'

This case is treated by the authorities as quite distinct from that of a dividend free of tax. They will not recognise the right of the annuitant to obtain any repayment of tax. Neither will they admit that the person entitled to the balance of the income has suffered the tax corresponding to the annuity. The matter is a little involved, but probably the official view is on both points correct. The result is that it is sometimes a mistake to bequeath an annuity free of income-tax. Thus, suppose a testator leaves an estate yielding, after payment of income-tax, a clear £300 a year, and that he means to give his mother or sister £100 a year, and the balance of the income to his widow. If he leaves his mother or sister an annuity of £100 'free of tax,' his trustees will require to pay her that full sum, which will leave only £200 for the widow. But if the annuitant's total income is of such amount that she is exempt from taxation, a better way is to omit the words about tax. In that case the trustees pay her £100 a year, less tax—say £75 net; she gets back the £25 from Somerset House; and thus enjoys, as before, £100 a year. But the difference is that the widow gets a yearly income of £225 instead of £200.

Trust Beneficiaries.

A very great number of people are in the position of drawing the whole or a large part of their income from or through trustees. Of these the great majority are annuitants, life-tenants, or life-renters. Very often there are more than one beneficiary, so that the income is divided up among them in equal or unequal shares. In all these cases the investments stand in the names of the trustees, and, accordingly, the certificates of deduction of tax will run in their names also. This only means that on the occasion of the first claim for repayment it is necessary to produce a further general certificate

by one of the trustees or by their solicitor, showing the nature and extent of each beneficiary's share in the income. The detailed certificates are lodged along with the claim of one of the beneficiaries, and the one set, being thus in official custody, then serve for the claims of all the other parties. According to our experience the amount of the claim is measured by the gross, and not the net, trust income. Thus, if the gross income is £130, all taxed at 5s. per £ before it is received by the trustees, the life-tenant, if exempt, gets back the full £32, 10s., notwithstanding that there are income-costs for the year within the trust to the amount of £10, which would have reduced his income to £120 at any rate, even though there had been no such thing as income-tax.

Foreign and Colonial Income-Taxes.

Not all countries have been accustomed to such taxes for so long as we have; but the idea is spreading. If your income is subjected to foreign tax, that tax is a deduction from the income for home tax, which is then chargeable only on the income less the foreign tax. That is some relief, but not much. The case is different when it is Colonial tax which is first taken off, for that raises the grievance of double taxation within the Empire. The idea then is to deduct the Colonial tax, not merely from the taxable income, but from the British tax. But that idea is carried out in a very halting manner. Unless the receiver has a total income exceeding £1000 he does not obtain this relief at all, and even in these comparatively rare cases the relief is always curtailed so as to leave a 3s. 6d. British rate. Thus, if an Australian dividend of £20 is taxed 4s. in Australia and 4s. here (£4 in each place), there is no Australian relief, and the total British relief is 6d. per £, or 10s. in all.

Half-Yearly Settlements.

Payment of income-tax half-yearly is very familiar, it being the usual method on loans and investments, when the tax is deducted from the half-yearly interest or dividend. The same rule is now applied to certain direct assessments—namely, those technically known as schedules B, farmers, and D, mostly traders, but also applying to many employees. Further, half-yearly applications for repayment of tax have been introduced so as to mitigate the hardship of people being kept out of money which is truly theirs, which they need for daily purposes, and the want of which would not be compensated even if interest were allowed on it while withheld, which is not done.

The Application.

Consider which of the above paragraphs apply to your individual case. What is the income on which you ought fairly to pay, and have you directly or indirectly paid on more? What is the rate of tax at which you ought to be assessed, and have you paid at a higher rate? To how many of the abatements and allowances mentioned above are you entitled, and which of these have you not received? Remember you may go back to 6th April 1913. If you have not certificates of deduction of tax from all companies and persons who have paid you interest or dividends, get them at once; companies have their own forms, and forms for individuals will be supplied to you by the Surveyor of Taxes with the courtesy which characterises the officers of the department. In future keep all these certificates carefully. But meanwhile do not delay in sending in your claim because some certificates are missing. Send in the claim; the certificates can follow. Talk over the whole matter with the Surveyor, and get from him official forms to enable you to get back what is due to you at present, and to prevent, as far as possible, overcharge against you in future. With the kind and expert assistance of the Surveyor there is nothing to prevent your managing the whole thing yourself. Try; the first is the worst. Act at once.

THE TRAGEDIES OF WILD LIFE IN THE BATTLE ZONE.

By H. Thoburn-Clarke.

THE history of wild life is a succession of tragedies, and apparently the, comparatively speaking, wholesale slaughter of the innocents is one of the immutable laws of nature which it is impossible for men to ignore, beast and bird, insect and reptile, being created to prey upon each other. This being so, any increase or undue predominance of any one creature in a district will be followed immediately by a corresponding increase in the numbers of its natural enemies. Hence we see the application of this law exemplified on the Western battle-front. Mice and rats, to say nothing of other vermin, have increased at such an appalling rate that a *pro rata* number of their natural enemies, the kestrels, sparrow-hawks, and owls, with other birds of prey, have found a happy hunting-ground in No Man's Land and among the works to the rear of the British armies. Almost any hour of the day one can witness the small tragedies of natural life. The butcher-bird, because nature has denied him the claws with which to rive and rend, impales his victims on the spines and barbs of the ancient thorn that grows near our position, and tears them to fragments with his powerful beak. But as he slays for the sake of

slaying, his larder is always full of victims dangling from the thorns that surround his untidy nest. It is not a pretty sight, this natural tragedy of the wilds; and a hawk rending its tiny, feathered prey with savage greed is another unpleasant aspect of the subject.

The great barn-owl is a pretty hunter. Perhaps the soft moonlight covers up the worst of the tragedy. There is something moth-like in the great owl's soft, dodging flight, up and down, over the wire entanglements, and among the bushes and dried grass. His sudden swoop resembles a drop from out the blue. He comes down softly, with wings outspread, upon a tuft of grass, literally spread-eagled over the spot where a mouse had sought shelter. Then he feels about with his great beak for the tiny animal cowering beneath him. I have seen the manœuvre repeated a dozen times before the great bird rose with a field-mouse in its claws, and flew off to its fluffy young ones in the ruins of a barn within reach of our position.

But outside of the necessary tragedies of wild life there are many unhappy deaths due to warfare. Although the number of wild creatures actually killed appears to be comparatively small, still the close observer will always find little tragedies that come within his immediate ken. Take the great barn-owl, for instance. I have spent many an idle hour watching him dodging up and down in the moonlight. I have even approached the ancient ruin of a pigeon-cot, the sole remnant left of a large shed, and listened to the noisy snorings of his fluffy brood. The cot was supported by such precarious remains of walls that none of us would venture to climb up the ruined portal and peep into the cot which had once formed the roof of a very large stone porch. We had, however, seen the baneful gleam of the mother-bird's round eyes, and heard her angry remarks upon our intrusion.

Evidently the Germans thought that the cot concealed our gun, for one evening, just at sunset, a couple of 'whiz-bangs' came over and landed close to the cot. Another shot, more successfully aimed, ripped off a corner of the roof, and shattered the ruined wall. As we watched the falling débris, the great owl flew out with a rush and disappeared; then his mate followed more slowly. She fluttered around the ruins, then settled, and endeavoured to enter one of the openings. It was obvious that she was badly wounded, for her wings drooped heavily, and it was with difficulty that she maintained her perch on the edge of the ruined wall. Yet even in her grievously hurt condition she was anxiously seeking for her young owlets. Her mate came back, and it was pleasing to see his anxiety. He tried to steady her hold upon the crumbling wall, and evidently urged her to seek safety in flight. When finally the feeble claws relaxed their hold, and the dead owl slipped—an inert mass of creamy feathers—down on to the shattered stones beneath, he would not leave her body; he flew down, and lingered beside her for hours, even bringing her dead field-mice in the hope of rousing her from her last sleep. Just before dawn he flew off in the direction of the German lines, and I never saw him again. Later on we heard an indignant protest from a baby-owlet, and rescued him from a corner of the ruined nest. His baby-brother had been crushed to death by a falling brick, no doubt the one that had also injured and killed the mother.

A few days later I was examining an old disused French gun-pit. Evidently the Germans had managed to secure a direct hit, and it was thoroughly smashed in. As I explored the ruins I came across a hedge-sparrow's nest that had been built in a small dead bush used for concealing the position. On looking into it I saw that the centre of the nest was filled by a piece of high-explosive shell, yet the structure was absolutely in perfect condition, while underneath lay the skeleton of the bird, with some feathers still sticking to the bones. Lifting up the skeleton, I found that there had been four eggs; three had been broken, but the fourth was still perfect and unharmed. How so large a piece of shell could fall with sufficient force to kill the bird and yet not destroy the nest or damage that egg was rather puzzling. Yet there are thousands of such puzzles to be seen on the battlefields.

On the same day I was opening another disused French dug-out in which our Allies had stored their reserves of ammunition. It was in a very ruinous condition, and smelt rather highly. I thought perhaps some of the old occupants had left a limb or two behind, but I could see nothing. An empty shell-case was standing nearly upright against the wall, apparently placed there to receive the drops from a leak in the roof above it. I lifted it up for some reason or other, and inverted it. Out dropped the decomposing body of a mole. On examining the walls, I found the ends of a couple of moles' 'runs' just above the place where the empty shell-case had stood. The 'runs' were old ones, and had been constantly used, yet the shell-case must have stood there half-full of water for many months. Why, then, had the tragedy that ended that mole's life only taken place so recently? It must have passed across the edge of the shell-case hundreds of times in going from one hole to the other. There was evidence that the shell had been used for the purpose, but in the end the mole had missed its footing, and had fallen in and been drowned. The moles' 'runs' and hills are so close to the surface of the ground that the little animals frequently fall victims to gun-fire. I have often found them terribly injured, evidently thrown up out of a shell-hole, yet, in spite of their wounds, crawling feebly about seeking shelter from the fury of the shell-fire. How such a feeble creature manages to survive amid the battle-scenes is

a mystery. Practically sightless in strong daylight, with tiny, scratching feet, it apparently contrives to escape the fate that lurks on every side, and still exists in spite of its numerous disadvantages and many enemies.

Telegraph-wires and the wings of aeroplanes frequently destroy life among the birds. Once I saw a French aeroplane that had caught a hawk in one of its flights. The hawk had been pursuing a small bird, and had dashed between the wings of the aeroplane; and although its prey had escaped, the hawk had been caught by the wings in the wires. When the aeroplane came to the earth, the unfortunate bird was hanging dead, suspended between the wires. On another occasion an airman told me that he had been observing over the enemy's lines, when a great flight of wild ducks dashed against him, and he distinctly saw several fall to the ground, either stunned or dead. New telegraph-wires often claim their toll of victims before the birds learn to avoid them; and I have even seen a couple of foxes hunting each morning under an old-established telegraph-line, seeking for the stunned or dead birds lying underneath. The red animals trotted along steadily, keeping to the same line of country, and evidently finding enough to make them repeat the experiment each morning just at dawn. At least I have seen them, morning after morning, slinking softly through the undergrowth, arousing the partridges as they ran. Apparently they must have returned by another route; for, although I saw them going, I never saw them coming back again.

On another part of the line I picked up six greenfinches that had dashed during the early morning against a stretch of wire-netting. They were to all intents and purposes limp and lifeless. I thought the gunners' cat would like a feed, so I placed the six birds in a box and shut down the lid. When I returned several hours later the birds were making a furious din in the box, and on my lifting the lid they all flew off, evidently none the worse for their adventure. But all such adventures do not end so happily, and these are the only birds that have survived, although I have kept many in the hope of their ultimate recovery.

THE MONTH: SCIENCE AND ARTS.

HUGE NATIONAL WASTE OF COAL.

WE are being told by sundry learned professors and others who understand the problem that coal should never be used in the raw state for producing heat, while to burn it in an open fire is the height of folly from an economic standpoint. Various methods of using coal with a view to getting the greatest value from it are suggested by different authorities; but all combine in demanding treatment which will extract the tar, gas, sulphate of ammonia, and other valuable by-products, leaving only the gas and residual coke for generating heat. Electrical enthusiasts advocate the production of electricity from the gas and coke at the coal-pits, the electric current being distributed all over the country for supplying light, heat, and power. This system has many advantages, as, for instance, an enormous saving of traffic on our railways owing to the absence of coal-trucks, which make up a large proportion of our goods trains. Moreover, electricity, if produced on this enormous scale, could be supplied at very low prices, one farthing a unit being quite within the range of possibility. There is, however, a grave disadvantage in this system, which consists in the enormous loss of heat always incurred when fuel is turned into power. If, therefore, heat is derived from electricity this loss is entailed, as it can only be produced by first turning the fuel into power. For example, when electricity is derived from gas or coke, only 20 per cent. of the heat in the fuel can be got out of it from electric radiators and cooking appliances; whereas coke burnt in an open grate will give out 42 per cent., while in a closed stove three-quarters of its heat is utilised. So far as heating and cooking are concerned, therefore, it is far more economical to distribute coke or gas to householders than electric current. On the other hand, the supply of electricity all over the country for running railway trains, working factories, and even for domestic appliances is a perfectly sound proposition, as the power must be produced from fuel in any case, entailing the above-mentioned loss, and it is cheaper to produce it on a large scale. Whatever may be the final solution of this problem, it is clear that the burning of coal without extracting the valuable by-products contained therein must cease, and we may expect legislation to this effect so soon as the alternative coke is available. In this connection the coke referred to will be much richer than the present gasworks variety, and it will light as easily as coal, although giving off no smoke. Some of these problems were touched on here in the articles 'Coal Economy' (1916, page 536) and 'The Problem of Fuel' (1917, page 25).

RESUSCITATING SPENT REFILLS FOR ELECTRIC TORCHES.

An ingenious method of resuscitating spent electric-torch refills has been suggested by a Mr Wright. According to this gentleman's plan, two run-down refills are used to charge a third in the following manner. In order to make the

method clear it is necessary to explain the connections from the refill to the lamp and back through the case. On examining the refill or cell it will be noted that a metal strip or plate at the top connects with the lamp, while another strip of metal makes contact with the other end of the cell. Now if we have three refills so far run down that each one only makes the lamp a dull red, two may be connected in series and made to pass current back through the third, this operation really having the effect of charging it just as is done with electric accumulator-cells. To do this, connect the lamp connection of one cell to the other connection of the second cell. We now have two cells with a spare return connection on the first and a spare lamp connection on the second. These connections must be coupled to similar connections on the third cell which is to be charged, the lamp connections being coupled together, and likewise the other end connections. The connecting up may be done with pieces of copper wire after scraping the ends bright with a knife. They should then be pressed against the metal plates or strips on the cells by paper fasteners, rubber bands, or in some other way. Care must be taken, however, that the wires do not touch anything between the connections, particularly metal-work, and that they are not in contact with each other. The charging is very slow, and the cells should be left connected for two or three days.

INGENIOUS SEAT FOR USERS OF CRUTCHES.

Walking with crutches is a distinctly tiring operation, especially at first, and frequent rests are essential. In urban districts public seats are generally available at intervals, but along country lanes no such accommodation is to be found, and the wayfarer is reduced to perching upon stiles or gates. For whole persons this form of seat serves the purpose fairly well, but it is by no means adapted to the needs of the crippled warriors on crutches. This difficulty has been completely overcome by the 'Swarren' Crutch-Seat, which consists of a strip of stout canvas webbing ready to be slung between the hand-grips of the crutches. This device, which has plated steel attachments at the ends, can be clipped in place in a moment, while it will roll up into a small compass for carrying in the pocket. Large numbers of these crutch-seats are already in use, and they are proving a source of comfort to many of our disabled fighting-men.

FLOATING AN UNDERGROUND RESERVOIR INTO POSITION.

An unusual method of building a concrete reservoir has been carried out recently at Strassburg, Alsace, by German constructors. When it is necessary to build a reservoir of this nature below-ground in porous soil, grave difficulties from the presence of water are sometimes encountered. Such was the case at Strassburg, where a tank for storm water from the sewers had to be built in gravel, in which water was encountered about five feet below the surface. The tank is one hundred and sixty-four feet in length by forty-nine feet wide; consequently a steel or cast-iron structure was quite out of the question, on account of its large size and the high cost of these materials. An adjacent stream whose water-level was only a few inches below the surface of the ground gave rise to the idea of building the reservoir at a higher level than its final position, and floating it into place by the aid of water from this stream. A large shallow pit was therefore dug next to the site, in which the reservoir was built dry, the excavation for the final position being prepared in the meantime. When the work was completed, the stream was run into the shallow construction pit and floated the tank. Subsequently the wall between this pit and the site excavation was removed, with the result that both recesses were filled with water to the level of the stream. It was then a simple matter to float the reservoir into position. The stream having been dammed back into its original channel, water was pumped out of the site excavation until the reservoir rested on the bottom. Concrete, reinforced by steel beams and bars, was used for the construction of the reservoir, and the shell was strengthened by a network of cross-beams of the same materials. The structure floated in a little over three feet of water. This method of floating into position large tanks or reservoirs built of concrete is not entirely new, but it had never previously been applied on so big a scale.

DISCOVERY OF AN ESSENTIAL ELEMENT IN FOOD.

Vitamines are a recently discovered essential element in food, a small quantity of them being necessary to health in man and other mammals. Unless enough vitamines are contained in our food we become liable to certain diseases, such as scurvy, beri-beri, and other ills known as deficiency diseases. The effects upon vitamines of cooking, and preservation in tins or by other means, are of particular interest, and it has been proved that with many foods heating to two hundred and fifty degrees (Fahrenheit) destroys the effect of these vital substances. Preservation in tins or other airtight receptacles appears to have similar effects upon milk and animal foods, but is not so harmful in the case of vegetables. Certain forms of vitamines, also, are injured by drying in the sun. It would seem, therefore, that vitamines are not destroyed by boiling, although baking, grilling, or frying may have injurious effects on them. Alkalies, such as soda, have a tendency to destroy vitamines, whereas the acids which are contained in milk and fruits are beneficial to their growth. The risks run in maintaining good health for long periods upon a diet of preserved foods are well known, especially in connection with expeditions into foodless

country, and the discovery of vitamines goes a long way towards explaining this feature. Efforts are being made to produce vitamines for the treatment of deficiency diseases, and Dr Atherton Seldell is said to have already obtained this substance, in suitable form, from brewers' yeast.

NOVEL METHOD OF FISHING.

Any device which will increase our supply of fish is welcome in times such as these, and a recent invention by a Dutchman bids fair to have a marked effect in this direction. The apparatus is based upon the principle of the sand-dredger, whereby vast quantities of sand and water are sucked up through a huge pipe, the end of which is lowered on to the sea-bed. Powerful centrifugal pumps draw up the mixture, and deliver it into hoppers in the dredger, where the water runs off, leaving the sand to be taken out to sea and dumped in deep water. Fish are often drawn into these appliances, and the invention relates to certain modifications which attract the fish and ensure their entry into the suction-pipe. For fishing, the end of the pipe is lowered to the most likely depth at which the fish it is desired to catch are to be found, and a funnel-shaped net leads to the mouth. An electric-lamp is fixed in the small end of the net near the end of the pipe, and attracts the fish, which swim towards it until the indraught of water is so rapid that they cannot escape. On the deck of the fishing-dredger a special contrivance takes out the fish before they reach the pumps, where they would be in danger of being broken up by the rotating impellers.

CLOTH WATERPROOFED WITH CORK.

Cloth is being produced in France which has a thin layer of cork cemented to one side of it, or, if greater strength be desired, the cork is interposed between two thicknesses of cloth. The result in either case is a material, suitable for raincoats and leggings, which is absolutely waterproof, while being very light. Cork in its ordinary form is too brittle for this purpose, but when the resin has been extracted by a chemical process it can be doubled without injury.

PAPER FROM SEAWEED, AND COAL FROM WOOD-PULP.

The effect of the war in raising the price of all commodities both in belligerent and neutral countries has been that many startling schemes for using materials which had previously been considered worthless have been brought forward. One of these schemes relates to a certain form of seaweed, locally known as rice-grass, which is rapidly covering Poole Harbour. The idea of utilising this weed, which originated with the Bournemouth Society of Natural Science, has recently been taken up by the Poole Harbour Commissioners, at whose instance Professor Quain of University College, London, has investigated this question. According to the professor's report, there is reason to hope that rice-grass seaweed can be converted into paper, and that its exploitation would prove profitable. Another useful development is the process devised by a Swedish engineer for producing what is practically coal-powder from the waste product known as sulphate lye, which is obtained in large quantities when paper is made from wood-pulp. This waste product contains more than half the wood used, which the new process turns into coal. Careful tests of the product show a heat value approaching that of good coal, and a company has been formed to exploit the process.

LARGE RESERVOIR DAM IN SPAIN.

What is claimed to be the largest dam in Europe has recently been constructed near Barcelona. Measuring nearly three hundred and forty feet in height, with a length of over seven hundred feet, this dam is built of concrete no less than two hundred and thirty feet thick at the base, and decreasing to fourteen feet at the top. The reservoir at the back of it, which has a width of nearly four miles and extends for sixteen miles, is intended partly for irrigation purposes and partly for the production of electric-power. Canals carry the water to distances of over a hundred miles, where an area of nearly a hundred square miles, at present unproductive owing to its dryness, is to be irrigated. Turbines and dynamos of twenty thousand horse-power have been installed for producing electricity, which will be distributed at a high pressure by copper wires carried across country upon poles. This is, however, only a beginning, the doubling of the power being contemplated at a later date. Fortunately materials for making the enormous amount of cement needed for the concrete were found in the district, as were also the sand and stone for mixing with it. The scheme, which was carried out by American engineers, included the building of a road ten miles long through difficult country.

CLOTH FROM NETTLES.

Strong as have been the inducements in this country to discover processes for utilising what has hitherto been considered useless animal, vegetable, or mineral matter, it has only been a question of economy with us, whereas our enemies have worked in this direction from dire necessity. Particularly has this been the case as regards textile materials, owing to the effects of our blockade and the requirements of the German army and navy. Clothing the civilian population has therefore become a vital problem for the Central Empires, and German investigators have tried almost every conceivable substance for this purpose. Among unlikely plants from which to weave cloth, the common nettle has been experimented with, and it has been found possible to obtain from nettle-stalks a

fibrous material which can be woven into very serviceable textile goods.

VOLUNTARY WORKERS MAKE STEEL SPLINTS FOR THE WOUNDED.

An interesting development in surgical practice which has taken place during the war is the supersession of wood in favour of steel for splints. Steel splints known as the 'Thomas' are often applied in the trenches, as they allow of a man with a broken leg being removed without a stretcher. These implements are very rigid, and, of course, have to be padded with leather or felt. Others of a lighter description are made from sheet-steel, with a view to their being bent to suit wounded limbs. Large numbers of these appliances are being made at an establishment attached to the Kensington War Supply Depot, where men past military age give their services for this work. The superintendent and his voluntary workers have shown much skill in devising special implements for individual cases, and many of these have proved highly successful. The workshops are well provided with machines for working in wood and metal, while women as well as men are devoting their time to this beneficent work.

TORPEDO-BOAT CONTROLLED BY WIRELESS.

Most of us have heard of torpedoes controlled by wireless telegraphy from the shore, although little news has come to hand indicating the employment of these weapons during the present war. The principle has now been carried a stage further by the invention of a wireless controlled torpedo-boat, of which an American named John Hays Hammond, junior, is the originator. Not only can the boat be controlled, but its torpedoes can be discharged from shore stations up to ten miles distant. The boat is by no means a toy, as it measures fifty feet in length, and it is fitted with engines of four hundred and fifty horse-power, and has a speed of over twenty-five miles an hour. The inventor claims that he has been able so to control the boat from a distance of three and a half miles that it will hit a pole in the water ten times out of fifteen. The purpose of this type of boat is coastal defence from a succession of control-stations near enough together to pass a number of similar boats from one to the next. It is also claimed that the boats can be controlled from aircraft. When compared with the torpedo, this boat shows the important advantage of being able to keep up its speed, and its power of launching torpedoes, for many hours; whereas the torpedo makes one dash, and then becomes useless.

A NEW GUINEA INDUSTRY.

Nowhere else do sago-palms attain such perfection as on the moist, and often steaming, banks of the winding rivers of New Guinea. Groves of these tall, handsome trees—with their scaly trunks, each marked like the skin of a mammoth snake, and topped with great coronets of cool green fronds—line, and are reflected in, the dark, crocodile-infested waters. Travellers in New Guinea are deeply impressed by the singular beauty of these unique waterways. Here and there the grotesque houses forming a native village are built upon piles driven far down into the oozing mud, for where the sago-palm flourishes there also are the aborigines found. The white mass of pith concealed in the shell-like trunk of the sago-palm will provide food for a man for many months, once it is taken out, beaten, washed, and dried. By these means the nourishing starch is all extracted and the fibre left behind. Jellies of an exceedingly fine flavour can then be made from the sago, perfect alike in taste and in strengthening properties when eaten with coconut-cream. Sago treated in the New Guinea way is quite unlike the insipid stuff sold in civilised countries, and one can only conclude that some further ingredient, for the purpose of adulteration, is added before the article is ready for sale. The man who goes into the sago-getting business needs to possess unlimited tact, an iron constitution, and nerves of steel, for the natives at times are difficult to deal with, and the life is one of constant toil and hardship in an atmosphere of excessive heat. There are tangible dangers to be faced, which, however, pale into insignificance before the weird stillness that occasionally prevails, a stillness that frays even the strongest nerves with its mysterious menace.

To Correspondents who wish fuller information regarding new inventions mentioned here, addresses will be furnished, when possible, provided a stamped and addressed envelope or post-card be sent to the Editor, 339 High Street, Edinburgh.

SPRING.

THERE is a mist of bluebells in the lane;
Bright daffodils are dancing on the brae;
A wealth of golden gorse adorns the plain;
The balmy air is drenched with fragrant May.

A wood-dove 'midst the pine-trees cool and dark
Sends forth at morn and eve his liquid note;
In the blue heavens an ever-soaring lark
Pours forth a hymn of praise from joyous throat.

In daisied meadows lambkins skip and play;
Nature is glad in hedgerow, field, and grove;
Fair spring has come to our dear land to-day;
It is the time of faith and joy and love.

B. DUNBAR DEY.

*** TO CONTRIBUTORS.

1*st.* All communications should be addressed 'To the Editor, 339 High Street, Edinburgh.'

2*nd.* For its return in case of ineligibility, postage-stamps should accompany every manuscript.

3*rd.* To secure their safe return if ineligible, ALL MANUSCRIPTS, whether accompanied by a letter of advice or otherwise, *should have the writer's Name and Address written upon them* IN FULL.

4*th.* Poetical contributions should invariably be accompanied by a stamped and directed envelope.

By P. H. DITCHFIELD, M.A., F.S.A., Author of *The Parish Clerk*, *The Old-Time Parson*, *Faithful Jess*, *The Sorceress of Paris*, &c.

CHAPTER I.

MISFORTUNES never come singly. Fate has seen fit to decree that I should be the most unlucky man in the world. But there —why should I, Michael Fairborne, be thus moaning against fate? We Fairbornes are of yeoman stock, the backbone of England, as my father used to say; though, bless him! I wish he had had a little more of that sterling stuff about him, and then, perhaps, he would not have left me this tumble-down old farmstead and a poorly cropped farm. But it is no use whining, and moaning, and groaning, and knocking my head against the stones of this old roof-tree. I was bred and born in this Lone-Lane Farm nigh the Sinfin Moor, and my father before me, and his father before him, and I know not how many generations back; and now 'I, even I only, am left,' as old Parson Russell read out of the big Bible in church about the prophet Elijah.

Things were not so bad while mother lived. Her bright, cheery ways kept the old farm going. Her butter and cheese and eggs used to fetch the top prices in Derby market, and the sheep did well, and father put his heart into the farm, and the days were never too long for him. But when mother died he was like a watch that had lost its mainspring. He used to moon about the farm like a lost spirit, and everything fell into rack and ruin.

I was just eighteen then. I had won some distinction at Abington Grammar School. I was head of the school, had gained the school scholarship at St Catherine's College, Cambridge, and might have won an open scholarship also. It was always mother's wish that I should have a university education. But I soon found that my proper place was at home, to help my poor father in the farm, to try to cheer him in his loneliness, and to keep the old home together. Father did not long survive his dear wife, and they sleep together in our peaceful churchyard, which mother always used to call God's acre.

So here I am the owner of Lone-Lane Farm, a deserted-looking, gaunt stone house, with a lead roof that leaks when the rains pour down upon it, and haunted by the memories of past Fairbornes—not a very lively possession for a young man who is barely twenty-one years of age. Our old servant Martha 'minds me,' as we say in Derbyshire, one of the best old souls who ever lived. What I should do without her, Heaven only knows.

I may as well confess it at once; I had other troubles besides the burden of this old farm—its loneliness, its poverty, and fearful ghostliness. Close to the church stands the Manor House, where Colonel Medhurst lives with his only child Mary. Mary and I have known each other since childhood. In the old days we used to play together, when Lone-Lane Farm was not so lonely. We used to ramble in the woods together bird-nesting, or wander off to Sinfin Moor and watch the sheep, and hide in the heather, and build castles in the air, and were the best companions in the world. Then Mary went away to school; and afterwards the Colonel took her abroad for a long spell, and when she came back our old days of comradeship seemed to cease. She had grown into the loveliest girl I had ever seen. She had eyes of the purest blue, and—but there, I cannot describe her, though I see her wherever I go, when I am minding the sheep on the moor, or helping old Jan with the ploughing, or driving to Derby market.

One day I was out with my gun looking for a rabbit in Downham Wood soon after her return to the Manor, and I suddenly met her at a corner of the copse.

'You see I 'm trespassing, Michael,' she said.

'You trespassing! Just as if there is a spot in the old farm that would not welcome you! Don't you remember, Mary, how we used to wander in this wood looking for hawks' eggs? But perhaps you 've forgotten all those happy days, now that you 've been travelling in foreign parts, and have grown into such a fine lady that I hardly dare to speak to you.'

'Oh Michael, I don't so easily forget. We 're old friends, you and I; indeed, you seem to be the only real friend I have.'

'It does my heart good to hear that, Mary; but how does it happen that we never meet now? I 've called at the Manor three or four times since you returned, but I never see you;

 [*All Rights Reserved.*]

and the Colonel is quite different in his manner to me. He does not seem glad to see me, and hums and haws, and wants to know about the farm; but he never speaks of you, and seems glad to say good-bye.'

Mary blushed and stammered and looked down, and could not answer me.

'Ah! I see how it is, Mary. He is trying to separate us. He wishes to try to unfasten the ties of our old friendship. When we were boy and girl together we used to dream dreams and see visions. We said that when we were old enough we would be married, and now your father knows—and he is right—that I, with my broken fortunes, am not good enough for you, dear. You are a fitting mate for a lord or a duke, and not for a poor yeoman with a broken-down farm and a poverty-stricken home. I have no right to love you, dear; but I do so with all my heart, though I may never marry you.'

'Michael, you break my heart. You know I have always loved you. But father says it is impossible that we should wed. He wants me to marry some rich man who will care for me when father dies, as he tells me he will not have much to leave to me. It is all so hopeless, Michael.' And Mary raised her kerchief to her eyes and wept.

What can a man do when a woman weeps but try to comfort her? I told her I was young and strong, and would find a way to win wealth for her I would sell the old farm and start afresh in life, and win her in spite of a hundred fathers. And Mary's bright eyes shone through her tears, and inspired me with vain hopes and longings that might never be realised. I need not tell you that we kissed at parting, and vowed that we would be for ever true to each other, and were quite sure that all would yet be well. Such is the blind faith and hopeful confidence of youth.

CHAPTER II.

THERE was a mighty stir in our village, and indeed throughout all England, when the news came that gallant Prince Charlie was marching from Scotland with an army of seven thousand infantry and four hundred cavalry, to invade England and pluck the crown from King George's head. It seemed to us all rather a mad undertaking; but there were many Jacobites in England, and in Derby market the wiseacres shook their heads and said crowds of folk would join him, that he would reach London and dethrone the king. I had never seen 'Bonnie Prince Charlie;' but many praised him as a very gallant and brave man, who exercised so great a charm that all men loved him and were ready to die for him. I am no Jacobite, and my neighbour, the Colonel, who had fought in the Low Countries, was a staunch Tory, and loyal, as becomes a soldier, to his sovereign. But there were several squires in Derbyshire, and more in Lancashire, who used every night to pass their wine over their finger-glasses, and drink the health of 'the king over the water.' Would they join the Prince, and make his march a victorious progress and triumph?

Some of my neighbours said, 'He will never get so far as Derbyshire; we shall be safe enough.' However, news reached us that he was at Wigan; and then, when I went to Derby, they told me that Manchester had been captured by a sergeant, a drummer, and a drunken woman, who rode up to the 'Bull's Head' on horses with hempen halters, where they dined, and then proceeded to beat up recruits, and in less than an hour listed about thirty. The farmers who dined at the ordinary at the Bull Inn in Derby told me that all the rascals in Manchester, the scourings of the streets, had joined the Prince's army, and that a man they called the Duke of Perth said that if the Devil had offered a shilling more than the Prince they would have preferred the former.

The townspeople of Derby and the neighbourhood formed a company, which mustered one thousand strong, to resist the Scots if they should come our way. They called themselves the 'Blues,' and wanted me to join them. But I had my farm and my sheep to look after, and I did not think very much of this swaggering force of shopkeepers and loafers, who talked so loudly of what they would do to the brave Highland laddies when they came. It was with a heavy heart that I drove my mare Kitty homeward in the dusk of the November evening, and I wondered what the future had in store for me and for our country.

Would wild roving bands of Scots career over the hills and dales of Derbyshire, and take my sheep and plunder my farm? One thing I was sure of—they would not find 'muckle siller' at Lone-Lane Farm, as they say in their Scotch lingo. But then there was the Colonel's house, and there was my Mary. What would happen to her if the Prince's followers came to Deddington? I could not dare to think. All the world seemed full of trouble, and I had to bear such a weight of it that Kitty must have felt the load very heavy as she dragged the cart along Lone Lane. However, she pricked up her ears and dashed along like a four-year-old as we neared the farm; and Martha was waiting with a lantern at the kitchen door when we entered the yard, and she helped me to unharness the mare. Kitty never seems either 'sick or sorry,' and always knows her master's mind. I turned her into the loose box, gave her a rub down and a feed of corn, and left her quite happy and contented.

Martha was keen to know all the news of the Prince; but she restrained her curiosity and impatience until I had refreshed myself with a good wash and sat down to supper before a roaring log-fire in the kitchen.

'And now tell me all about it, Master Mike,' she said.

I told her all I knew.

'It strikes me yon must be a brave lad, that Prince Charlie, to come and invade England with a bit of an army like that. I like them Scotch laddies. My mother were a Scotchwoman, as you know, Master Mike, though them clansfolk be a thievish lot. Whatever shall we do if they come here? We ain't far from the London road, and I 'spects them Highlanders will go foraging.'

'You shall stand at the door, Martha, and tell them you 're Scotch, and it will be all right. They say the Prince has a rare eye for beauty, and perhaps he 'll make love to you, Martha, and then you can plead for your master and his few chattels.'

In spite of her years Martha blushed like a girl. 'For shame, Master Mike; but you allays will have a bit o' your fun, and like to tease your old Martha. But there—I know what we mun do. We mun hide the siller. How much did you bring back to-day?'

'I only got three pounds five shillings. The people in Derby were too excited to do much business.'

'Give it to me, Master Mike. See, I 've made a bit of a secret hiding-hole in the chimney. The siller 'll be quite safe there if yon long-legged laddies come to rob us.'

'Bless you, Martha; you always think of everything.' And Martha was as pleased as Punch as she hid away the contents of my poor purse. 'But what shall I do with the sheep? The clansfolk won't have much commissariat, I think, and, like their grandsires, they will be living on the country as they march through it.'

'Oh, that 's easy, Master Mike. You ken the old quarry on the Sinfin Moor. In my young days there used to be a bit of a cave at the bottom. Haply it be there still.'

'Fie, Martha! I believe you used to go courting there,' I said, to tease her.

'None of your nonsense, sir'—she always called me 'sir' when she was a little angry—'I was never a foolish wench, and it isn't right'——

'All right, Martha; it was only my foolish tongue wagging a bit too freely. But that 's a grand idea. Yes, the cave 's there right enough, and the entrance a little overgrown; but Jan can easily cut a way into it, and the sheep will be there as safe as houses. Really'——

I was just going to tell her what a grand housekeeper she was, when there was a loud knocking at the door.

'Whoever can that be at this time of night?' she said, as she rose to attend to the impatient summons. 'It can't be them Scotch laddies yet, I 'm thinking.'

I heard her heavy tread going down the passage; and presently, when she had unlocked and unbarred the door, the Colonel's voice was inquiring whether I was at home. And soon she ushered him into the kitchen, saying, 'Sure, it 's the Colonel come to see you, sir'

I was not overpleased to see him. There were the remains of my scanty supper on the table, and the kitchen, though the most comfortable room in the house, was not what you might call a stately chamber, and looked somewhat homely after the Manor House drawing-room. He was attired in evening-dress, while I wore my usual rough, homespun farming suit and bright-red slippers that Martha had made for me.

'Excuse my calling so late, Michael, but I could not rest until I had heard the news from Derby. You have been there to-day. How about these rascally rebels?'

'The Prince has got as far as Manchester, I hear, and he has been stopped a little, as our people have blown up two bridges to bar his road.'

'Good luck to them! Is it thought that these confounded Scotch rascals will come any farther?'

'No one seems to know, sir; but the "Blues" seem to think they are ready for them if the enemy get as far as Derby,' I replied with a smile.

'The "Blues"! A silly lot of tomfools! They would have no more chance of fighting the Scots than a herd of donkeys. Those Highlanders are some of the best fighters in the world. See what they did at Prestonpans! And the young Prince is a born leader. We have no General worth his salt, no army that could stand against a company of niggers. England has been going to the dogs since Marlborough's time.'

'You do not think much of the Duke?' I asked.

'The Duke of Cumberland is a braggart, and Johnny Cope a fool and a coward. The Prince is worth a dozen of either, though I 'm no Jacobite. I really do not know what I ought to do. It is quite possible that the rebels will march on London. They have many sympathisers in the south. Oxford is honeycombed with sedition, and there are not a few neighbours of ours who may join the Prince. If his army should pass this way, it may be rather disastrous to us. You see, I am not alone, and I am anxious about Mary.'

'Would it not be wise to take her with you and go westward, out of the line of march?' I suggested. 'If anything should happen to her'—— A strained silence pervaded the room, and for a few minutes neither of us spoke.

At last the Colonel said, placing his hand on my arm, 'Yes, Michael, I know your secret; I 'm afraid you love her dearly. You were old playmates together. But it cannot be, my boy. Think of it calmly. Are you in a position to marry?'

'Well, no, sir; I've little money, and an impoverished farm. But I am going to sell the

old place and start afresh. I have plenty of brains, I know, and a good heart, and there is no reason why I should not succeed.'

'Yes, yes, Michael; but my time may not be long, and I want to see Mary settled in life before I die. Sir James Sandleford is coming to stay with us next week, and'——

'Sir James! Why, he's old enough to be her father!' I exclaimed indignantly.

'Well, he is rather old for Mary; but he is rich, and he loves her.'

'And you propose to sell Mary to that old man! No, Colonel, I will not believe it. I will not give up hope. I believe she returns in some measure the love I have for her, and'——

'You would bring her to be mistress of Lone-Lane Farm, and of this'—— He spread his arms rather theatrically, indicating the poverty of my poor kitchen. 'No, Michael; no one can blame you for being poor. It is not your fault. I am bound to look after Mary's interests. Forgive me if I have wounded your feelings. We will not quarrel about it. There's my hand, Michael; and now I must hurry home, or Mary will think I am lost. Good-night, my boy; be brave, and face your troubles like a man.'

And so he went out into the darkness. There was a darkness in my heart, a darkness which, like the plague of Egypt, 'could be felt.'

FROM A NORTHERN SEABOARD.

By Henry Hilton Brown, F.E.S.

WHEN Laurence Sterne wrote *A Sentimental Journey through France and Italy*, he spent little time and used few words in describing the places which he had visited. He described no city or country, church or château, but exercised his inimitable humour in the delineation of human nature and the exhibition of freaks of human sentiment.

I am going to sketch a sort of sentimental journey along the coast from the mouth of the Spey to the Old Bar beyond the Findhorn. The article will be 'sentimental' in the sense that it will treat only of subjects which have human interest; but it will not exactly correspond with the term as used by Sterne, because the happenings mentioned in it were not experienced by the narrator himself, and thus did not in the first instance appeal to his sentiments. But this circumstance does not greatly matter, since the history of these events was obtained from the persons in whose experience they happened, and consequently the sentiment is only once removed. The tale of the events is connected with a particular journey, for the reason that they were associated with that strip of seashore as closely as the beads of a necklace are connected by the string. If my readers fail to recognise the necklace, they may at least be pleased to look at the separate beads.

When the railway was brought along the coast of the Moray Firth it was necessary to build a bridge across the Spey not far from its mouth. As the river when in flood carries a heavy volume of water, and is always rapid and impatient of obstacles, the foundations were strongly laid. In this work powerful pumps were used to remove the water, and steam was supplied by means of a vertical boiler. As one boiler did not yield sufficient power, a second boiler was attached to the first.

At the dinner-hour one day a boy of ten and his little sister carried their father's dinner to the works, and while he was eating it amused themselves by looking at the machinery. Nothing could have seemed more harmless and innocent than the second boiler at the pumps. The fireman had just fed it with coal, and was in the act of starting the injector to replenish its water-supply. The two children stood for a few minutes gazing at the boiler, and then the boy cried out in fear, 'Rin, Jeannie, rin; she's gaun to burst.' They ran over a heap of rubbish, and had barely gained the slight shelter thus afforded when the boiler exploded with a rending crash.

Various theories were put forward to explain why the boiler exploded, but it was agreed that the steam-pressure must have been very great. This may be estimated from a fact which was told to me at the time. A shipmaster was walking up from the mouth of the Spey to Garmouth. The left bank of the river rises in a considerable hill, cutting off his view of the bridge works. To his surprise, he saw a boiler sail silently into the air from behind the hill, and rise, as he judged, fifty feet above the ridge. A loud report which followed in a few seconds told him what had happened.

I asked the boy how he knew that the boiler was going to burst. He answered at once that he had seen the steam-gauge, and the index was pointing at a figure far higher than anything he had seen on any previous visit, so he was frightened, and thought it better to run. His quick observation and rapid deduction saved his sister and himself from a terrible death.

Leaving the mouth of the Spey, and trudging over miles of curving beach—partly shingle, partly sand—one reaches the river Lossie, and beyond that a region of shore rocks. Great reefs break up the coastline and stretch far out to sea, forming dangerous skerries. There are coves and channels among the rocks where the bottom is pure, hard sand, and where good bathing is to be got at most states of the tide.

On a summer morning about seven o'clock, a friend, whom I shall call Scott, went down to bathe. The tide was unusually far back, so that the great tangles growing on the outer reefs were uncovered, and their broad fronds gleamed in the sunlight like straps of wet leather. The sea was calm and still, except for innumerable ripples on which the light sparkled, casting on the sandy bottom reflections in the form of bright circles and semicircles. It was a fine example of the 'many-twinkling smile of ocean,' as Keble happily translated a phrase of Æschylus. And yet that calm and sparkling water concealed death sudden and terrible.

The channel which Scott chose was about thirty yards in width from rock to rock, and curved gradually seaward. He turned to float in about four feet of water; but when he tried, in a few seconds, to stand upright, his feet swung clear of the bottom, and he found that he was out of his depth. When he made to swim inward he discovered the peril concealed in the still water. A strong tidal current was running out between the reefs. He realised that he was in for a terrible struggle. He told me that it seemed as if a hand were pushing him out to sea, and that he could feel the current rippling against his shoulders as he forced inward. He was not a strong swimmer, but he did his best, striking out for the rocks somewhat farther east than the point where he had entered the water. There seemed to be little probability that he would reach his goal. His arms ached with the effort, and his head had dipped ominously under water once or twice, when his foot slightly touched the bottom. With renewed hope he struck out afresh. The touch became more decided, and finally he secured a firm foothold and gained the rocks; but he was never nearer to death than he was on that peaceful and sunny morning.

Incidentally I learned a fact which interested me. I asked Scott whether he did not feel an overpowering sense of fear when he realised his perilous situation; but he replied that he did not. He said that his mind was entirely engrossed with a fixed determination to reach the shore if possible, and he had not time to feel afraid. As he was an ordinary individual, I think we may fairly assume that in cases of extreme danger his experience is general. However terrible the thing may be, the suffering is not aggravated by terror, and this is a comforting thought when we read of men being placed in circumstances of great danger.

Within three miles of the spot where Scott fought his battle with the tide the character of the coast is changed. The sea is now bordered by sandstone cliffs, rising in places to more than a hundred feet. These curve out and in, here touching the waves, there drawing back so as to leave slopes of fresh green grass between the foot of the precipice and the beach. Such sheltered slopes are rich in wild flowers; and butterflies of many kinds and colours, white and tawny, brown and blue, flit about in great numbers on sunny days. The memory of these beautiful hordes, probably larger in retrospect than in reality, leads me into a digression from the straight line of my journey. In my youth I read a touching story of an aged naturalist who was no longer able to follow his favourite pursuit. He used to walk slowly out to a glade frequented by white admiral butterflies, and, leaning on a stile, watch their graceful movements for hours. At that time I was inclined to doubt the accuracy of the record. It seemed to me then that if one were privileged to see white admiral butterflies on the wing the sight would galvanise one's limbs though paralysed. The lapse of years has modified this opinion. I am inclined to sympathise with the old fellow, and to hold that his powers of observation might be more usefully employed in watching the flight of his favourites than in attempting to secure specimens for his cabinet.

The cliffs are pierced with caves, many of which have been occupied by human beings since prehistoric times. At present they are the occasional residence of tinkers, those degenerate representatives of the more mysterious gipsies. An old man of this class had been born in one of these caves, and was in the habit of living in it for a period every year. During a spell of cold weather the farmer of the adjoining land, pitying the old man lying at night in such a den, offered him the use of an unoccupied cottage. The aged tinker moved in, but not for long. Next morning his son arrived at the farm in great excitement. 'Ma faither 's gotten 's daith,' he said. Accustomed as he was to the pure, though chilly, air of the cave, the close and germ-laden air of the cottage had caused the old man to contract a severe cold. He returned to his cavern forthwith.

At Burghead the rocky coast ends, and here there was once a sad accident, followed by an act of great courage. The month of February had been tempestuous, and the men whose duty it was to set the stake-nets for salmon had been unable to carry out the work at the usual date. At last an afternoon came when they thought it was possible to effect their purpose. It was not a good day for such dangerous work, as there was a heavy ground-swell running in, with the weight of the North Sea behind it; but they felt that they must not put off longer. They set out in their coble, with the nets and anchors piled in the stern. The coble was brought close inshore for the purpose of laying the first anchor. While the men were engaged in this delicate operation, a big wave ran in under the coble and capsized it, end over end. The poor fellows were caught in a trap, and no help could be given them; for, although they were not far from the beach, a line of sharp rocks lay between, upon which the waves were breaking with violence. A crowd soon gathered, and the

agonised spectators could see the helpless bodies raised on great green seas and dashed upon the jagged points.

As the folk were debating what should be done, a man came down to the beach. Pushing the spectators aside, he called for a rope, which he fastened round his waist. He then plunged into the surf. At first it was thought that he must of necessity be thrown on the rocks and killed; but it was not so. He fought for two hours—fought until the rising tide and falling darkness made further effort useless. Through his gallant exertions two of the poor, battered corpses were brought to land.

Such actions are not uncommon on our coast; but there are some points in this case which are not common. The man was bred a sailor, and so was fully aware of the risk he ran. The men in the coble were not related to him. To carry out his purpose meant not only the risking of his life, but enduring hours of exposure to wet and cold. He had not even the spur given by the hope of saving life, because it was clear before he came down that the men were past that hope. On weighing these facts, it has always seemed to me that this man's act was a fine example of courage and endurance, and I am not sure that its high qualities have ever been sufficiently recognised.

Is Burghead the Winged Camp of Ptolemy? The Ordnance surveyors suggested that it is, and the question, involving as it does the relation of the Romans to the north of Scotland, has been debated with learning and ingenuity. No other northern port surpasses Burghead in evidence of long-continued use — remains of successive lines of ramparts, a subterranean 'well,' sculptured bulls, and other relics. The sentiment of these things is rather more than 'once removed,' yet it merits a passing thought. There is little doubt that those 'ancient mariners,' the seamen of Tyre and Sidon, called here in their coasting voyages. Without too much stretching of probability, we can fancy, as we stand on the rocky headland and look across the sea to the distant hills, that men speaking strange tongues had stood there gazing at the same mountains, and thinking of Taurus and Lebanon and the hills beside the Euxine. The men are gone, their cities have vanished, their language is forgotten; but the rocks, and the sea, and the far-away hills remain almost unchanged. '*Pulvis et umbra sumus.*'

The long line of sand-dunes curving round the Bay of Burghead to the mouth of the Findhorn is associated in my mind with two curious stories which were told me there. Mr Forbes was a well-read and well-educated man, and as unlikely to be deceived as he was incapable of stating as fact what he knew to be untrue. He was talking about education and our capacity of rendering our senses more keen and acute by training. He mentioned instances of what can be done in this way, and then went on to speak of our faculty of receiving spiritual impressions. It was in this connection that he told me the stories, and just as I was unable to explain them then, so I shall not attempt to explain them now. I tell them as they were told to me.

Mr Forbes and his wife had been in London. They had made the acquaintance of an English family, by whom they had been invited to visit at their country house. Neither Mr Forbes nor his wife knew anything of the family circumstances. On arrival, and before they had an opportunity of hearing of family matters, they took a short walk in the grounds. Approaching the front of the house, Mrs Forbes saw some red object at a window, and drew her husband's attention to it. As they came nearer they made out that a man dressed in a scarlet hunting-coat was standing there. Both saw the man, and remarked on the oddity of a huntsman in full dress being there at that season and hour. At tea the lady asked her hostess about the gentleman in pink, but got no direct answer. Mr Forbes afterwards learned that the room where the man appeared was closed, that no one ever entered it, but that the figure of a man in hunting-dress was occasionally seen at the window.

In this case the perception was by sight; in the second it was by hearing. Mr Forbes and his wife were on a visit to a family of whose private affairs they knew nothing. In the room assigned to them they heard distinctly the sound of steady talking. It was not possible to distinguish words, but the nature of the sound was unmistakable. On inquiry they learned that the room had been occupied for years by an old lady lately deceased, who had spent most of the day in conversation with a companion.

A well-known professor of science recently wrote in a volume of essays: 'We have no reason to suppose that there are more things in heaven and earth than are dreamed of in our philosophy.' In view of the history of philosophy and science the remark is a rash one, and disheartening besides; but it well illustrates the attitude of students of science to such tales as the two which I have just told. These impressed me strongly at the time, because they were related to me as absolute facts by the person in whose experience they occurred, and I am not going either to offer any explanation of them or to base any dogmatic theory upon them.

If it is suggested that Mr Forbes may have been mistaken in his observations, we encounter a serious difficulty. In both cases he was a stranger. He knew nothing of the gentleman in pink or the old lady. If it had not been for what he asserts he saw and heard, he would not have known about either of them. The difficulty which seems inexplicable is to account for the fact that the previous history of these persons did not suggest the manifestations, but the mani-

festations led to Mr Forbes becoming acquainted with the previous history, of which till then he was ignorant.

If it is objected that the manifestations were trivial, I must point out that this is not a logical objection. The extent of what we see does not necessarily imply that there is nothing more to be seen. No one ever saw or heard all that it was possible on some occasion to hear or see. It has often been argued that if the spirits of the dead were permitted to manifest themselves to the living, the manifestation would be of a solemn and important nature. But is this sound reasoning? Surely it is obvious that the extent to which a human being perceives such a manifestation is a measure not of the full extent of the manifestation, but of the human being's capacity to perceive. We have an analogous case in physical science. Even so recently as my boyhood the motive and lighting force of electricity was a curiosity of the laboratory. Pretty experiments were performed, but nothing important was effected. A critical person, reasoning on the lines which I have indicated, might have said that electricity was evidently a force of no practical moment, because it manifested itself in such a trivial way. We now light houses and drive machinery by means of electricity, yet there is nothing in electricity to-day that was not in it when these experiments were being made. The change is due to the circumstance that we are better able to appreciate the possibilities of the force.

I do not say that the same experience will follow the more extended study of spiritual matters, but I maintain that it is illogical to say that evidence of manifestations is to be rejected merely because they are of a trivial nature. The recorded manifestations, if they are to be referred to at all, can only be regarded as indicating the measure of an individual's capacity to apprehend such things, and not as indicating all that he might have apprehended if he had been endowed with sufficient capacity. But I give the stories as I received them, and my readers will no doubt either put them aside or take them into thoughtful consideration, just as they are swayed by preconceived ideas.

The real journey, of which this is in a Sternean sense a sentimental account, ended on the evening of the third day at a point opposite a sandbank called the Old Bar, lying to the west of the mouth of the Findhorn. The sun was setting gloriously behind the north-western mountains. In its descent it illuminated glens and straths which had been concealed in the gray distance, and revealed ranges of hills far away which had been invisible until they were lighted by the level rays. There was no appearance of life except the sea-birds wading in the shallow water. The sea murmured ceaselessly on the soft sand, the waders and the gulls piped sadly as they wandered to and fro, and a train roared faintly as it passed, going toward Forres on the distant line. The place was the perfection of solitude.

One could not avoid asking whether this place had always been so solitary. A little imagination pictured the coast in a long-past age as a busy thoroughfare. When the huge sandstone rock, pierced with caves, which lies to the east of Burghead was separated from the mainland, as we know it was, by an arm of the sea, it must have been a prehistoric Gibraltar. In its secure recesses it sheltered a large population, and there would be a constant coming and going. As the mainland was covered with forests full of wolves and wolf-like men, the seashore would afford the safest passage and the way most free from ambushes. We may reasonably believe that long before the beginning of reliable history men traversed this beach, now so lonely, in hundreds and thousands.

The Dryasdusts will scornfully reject my suggestion because it is imaginary. It may be none the worse on that account. There have been imaginings which folks can scarcely distinguish from truth, and an instance is not far to seek. Three miles inland from the Old Bar a hill is still shown as the spot where Macbeth met the witches. 'How far is't called to Forres?' The blasted heath was imaginary, yet I am sure that to a large number of my readers it will seem more real and come more closely home than any of the beads of my sentimental necklace, the truth of which is not doubted.

THE DEFINITE OBJECT.

By JEFFERY FARNOL.

CHAPTER XIII.—WHEREIN MAY BE FOUND SOME PARTICULARS OF THE BEAUTIFUL CITY OF PERHAPS.

MRS BOWKER was a small woman, worn and faded like her carpets and curtains and the dress she wore; but, like them, she was very clean and neat.

'Tis real good of you to come, Miss Hermy,' said this small, faded woman; and Ravenslee thought her very voice sounded faded, so repressed and dismally soft was it. 'I wouldn't have had the face t' send for you, Miss Hermy; only Hazel calls an' calls like she 's doin' now—listen!'

And, sure enough, from somewhere near by a small voice reached them, pitifully faint and thin: 'Hermy dear, come t' me! oh Hermy dear!'

'She allus lays an' calls like that lately when her poor hip's worse 'n usual,' sighed Mrs Bowker. 'An' your gentleman friend, would he like t' see her too?'

'Thank you, I should,' answered Ravenslee in his soft, pleasant voice.

'Oh, Mrs Bowker, this is Mr Geoffrey,' said Hermione a trifle hurriedly; 'he came with me to—to'——

'Be presented to the Princess if she will honour me,' he added.

'Ah!' said Mrs Bowker, looking up at him with a faded smile. 'Hazel told me you had a pretty voice, sir, an' I guess I know what she meant. She sets out on the stairs when she's well enough, an' has often seen ye.'

'Hermy dear, come t' me! oh Hermy dear!' called the little voice.

'Yes, go in, my dear; you know your way, I guess,' sighed Mrs Bowker, passing a small, worn hand across her faded eyes. 'There's five dozen more collar-bands I must stitch an' buttonhole t'-night, so go your ways, my dear.' So saying, Mrs Bowker went back to her labour, which was very hard labour indeed; while Hermione led the way into a tiny room, where, on a small, neat truckle-bed covered by a faded quilt, a small, pale child lay fading fast. But at sight of her visitors two big brown eyes grew bigger yet, and her pale, thin little cheeks flushed eagerly.

'Oh Hermy dear!' she cried, clasping frail hands. 'Oh Hermy, you've brought him; you've brought me our fairy Prince at last!'

Now what was there in these childish words to cause Hermione's eyes to droop so suddenly as she took the bottle from Ravenslee's hand, or her rounded cheek to flush so painfully as she stooped to meet the child's eager kiss, or, when she turned away to measure a dose of the medicine, to be such an unconscionable time over it? Observing all of which, Ravenslee forthwith saluted the small invalid with a grave bow, his battered hat gracefully flourished.

'It is truly an honour to meet you, Princess!' said he, and, lifting the child's frail little hand, he touched it with his lips. Thereafter, obeying the mute appeal of that hand, he seated himself upon the narrow bed, while Hermione, soft-voiced and tender, bent above the invalid, who having obediently swallowed her medicine, leaned back on her pillow and smiled from one to the other.

'And now,' said she, drawing Hermione on her other side and snuggling between—'now please let's all tell some more fairy tale; an' please you begin, Hermy, just where you had t' leave off last time.'

'Why, I—I'm afraid I've forgotten, dear,' said Hermione, bending to smooth the child's pillow.

'Forgotten—oh Hermy! But I 'member quite well you got where poor Princess Nobody was climbing the mountain very tired an' sad, an' carryin' her heavy pack, an' all at once along came the Prince an' took her heavy bundle, an' said he 'd love to carry it for her always if she 'd let him. An' poor Nobody knew he was the real Prince at last, the Prince she 'd dreamed of an' waited for all her life, 'cos he 'd got gray eyes so brave an' true, an' he was so big an' strong an' noble. So he helped her to the top of the mountain, an' then she thought at last she could see the beautiful City of Perhaps. That's where you got to, don't you 'member, Hermy dear?'

Now why should Hermione's shapely head have drooped and drooped until at last her face was hidden on the pillow? And why should Geoffrey Ravenslee reach to touch the child's soft dark hair with hands so light and tender?

'The beautiful City of Perhaps!' said he gently. 'Why, Princess, where did you learn about that?'

'From dear Princess Nobody, oh Prince!'

'And who is she?'

'Why, she's Hermy, Prince—and I'm Princess Somebody.—And, oh, Hermy dear, you do 'member where you left off now—don't you?'

'Yes, I remember; but I—don't feel like fairy stories now, dear.'

'Oh, are ye sick?' cried the child anxiously, touching Hermione's golden hair with loving fingers. 'Is it a headache like my mumsey gets?'

'N-no, dear; only I—I don't feel like telling any more of our story—to-night—somehow, dear.'

'Princess,' said Ravenslee, 'do you know much about the wonderful City of Perhaps?'

'Oh yes—an' I dream about it sometimes, Prince—such beautiful dreams!'

'Why, of course,' nodded Ravenslee, 'because it is the most beautiful city that ever happened, I guess!'

'Oh, it is!' cried the child. 'Shall I tell you?'

'Please do, Princess.'

'Well, it's all made of crystal an gold, an' every one's happy there, an' never sick—oh, never! An' all the children can have ices an' cream sodas whenever they want, an' lovely doll-carriages with rubber on the wheels, an'—an' everything's just lovely. Of course, every one's daddy's got lots an' heaps an' piles of money, so they never get behind with the rent, an' never have to sit up all night stitchin' an' stitchin' like mumsey an' Hermy have to sometimes. An' I 'm Princess Somebody, an' Hermy 's Princess Nobody, an' we 're on our ways through the valley of gloom, tryin' to find the beautiful City of Perhaps; but, oh, it 's awful hard to find!' she ended, with a weary little sigh.

'And yet, Princess, I 'm sure we shall find it.'

'We? Oh, are you comin' too, Prince?' cried the child joyfully.

'To be sure I am!' nodded Ravenslee.

'Oh, goody, I 'm glad—so glad, 'cause I know we shall find it now!'

'Why?'

'Well,' answered the child, looking at him with her big, wistful eyes, ''cause you look like you could find it, somehow. You see, Prince, you 've got gray eyes so brave an' true—an' you 're big an' strong, an' could carry me an' Hermy over the thorny places—when we get very. very tired—couldn't you?'

'I could,' answered Ravenslee almost grimly, 'and I—surely will!'

'When we get there, Prince, I want first—a doll-carriage an' a doll with lovely blue eyes that wink at you, an' a big box of candy, an' a new dress for my mumsey, an' no more work; an' I want lots an' lots of flowers for my daddy, 'cause he loves flowers—oh, an' I want my leg t' be made well.—What d' you want, Hermy?'

'Well, dear, I want to—say good-bye to my sewing-machine for ever and ever and ever!'

'Why, Hermy,' exclaimed the child, 'last time you said you wanted some one who could give you your heart's desire.'

'Perhaps that is my heart's desire, little Hazel,' said Hermione, rising and taking up the medicine-bottle.

'An' what do you want, oh Prince?'

'I want a great deal,' answered Ravenslee, smiling down into the big, soft eyes. 'I want some one who is my heart's desire now and for ever and ever. Good-night, dear little Princess!'

'You 'll come again, Prince?' she pleaded, holding up her face to be kissed. 'You 'll come again soon?'

'As soon as—Princess Nobody will bring me.'

'Good-night, Hermy dear—you 'll bring our Prince again soon?'

'If you wish, dear,' said Hermione, stooping to kiss her in turn.

'Why, Hermy—what makes your cheeks so hot to-night?

'Are they? said Hermione, making pretence to test them with the back of her hand.

'Why, yes,' nodded the child; 'an' they look so red an'——

'Of course you believe in fairies, don't you, Princess?' inquired Ravenslee rather hurriedly.

'Oh yes, Prince; I often see them in my dreams. They just wait till I 'm asleep, an' then they come an' show themselves. Do you ever see any?'

'Well, your highness, I fancy I have lately, and when fairies are around things are sure to happen—wishes get the habit of coming true. So, little Princess, just go on wishing and dreaming, and—watch out!'

Then Ravenslee turned and followed Hermione out upon the dingy landing; but as he climbed the stair there went with him the memory of a little face, very thin and pale, but radiant and all aglow with rapturous hope Silently as they had come they mounted, until, reaching the topmost landing, they paused as by mutual consent.

'Poor little Hazel!' said Hermione very gently; 'if only there were real fairies to spirit her away to where the air is sweet and pure, and flowers grow for little hands to gather—the doctor told me it was her only chance.'

'Why, then, of course she must have her chance!' said Ravenslee with a sleepy nod.

'But, Mr Geoffrey, how?'

'Well—er—the fairies. You said something about fairies spiriting'——

'The fairies!' said Hermione a little bitterly. 'I guess they are too busy over their own affairs to trouble about a poor little sick child. Besides, what fairy could possibly live five minutes in—Mulligan's?'

'Which leaves us,' said Ravenslee thoughtfully—'which leaves us the beautiful City of Perhaps. It is a wonderful thought that!'

'But only a thought!' she sighed.

'Is it? Are you quite sure?'

'Well, isn't it?' she questioned wistfully.

'No,' he answered gravely; 'the City of Perhaps is very, very real.'

'What do you mean?'

Now once again their hands touched in the shadow, but this time his fingers closed upon her hand, the hand that held the medicine-bottle, drawing her nearer in the dimness of that dingy landing.

'I mean,' he answered, 'that for every one of us there is a City of Perhaps waiting to open its gates to our coming; and I am sure we shall reach it sooner or later, all three of us—the Princess and you and I—yes, even I when I have done something worth while. And then, Hermione, then—nothing shall keep me from—my heart's desire—nothing, Hermione!' As he ended she felt an arm about her in the dimness; an arm fierce and strong that gripped and swept her close, then as suddenly loosed her. For a breathless moment he stood with head bowed in seeming humility; then, stooping, he crushed her hand, medicine-bottle and all, to lips that burned with anything but humility.

'Good-night, dear Princess Nobody!' he said, and watched her turn away, nor moved until the door had closed upon her.

That night he smoked many pipes, weaving him fancies of the beautiful City of Perhaps, and dreamed dreams of what might be, and his eyes glowed bright and wide, and his mouth grew alternately grim and tender. And that night, long after he lay asleep, Hermione's golden head was bowed above her work; but more than once she stayed her humming sewing-machine to look at one white hand with eyes shy and wistful—the hand that had held the medicine-bottle, of course.

PEAT.

By George Bolam.

IN the easy-going prosperity, largely inherited from our forefathers, which we have so long enjoyed in this country, we have grown accustomed to jogging along very comfortably without worrying unduly over such details as developing to the utmost all our native resources. In certain directions, as in coal-mining and the metal industries, we have maintained an easy lead, though in many cases working, perhaps, with a prodigality that future generations may have cause to regret; but in others we have allowed some nations to leave us far behind. In no country in the world has agriculture been carried to such a high state of perfection as in some of the favoured districts of Britain. But, having admitted so much, we must also acknowledge that, despite all modern scientific improvements, we have not maintained the premier position so unchallenged as our fathers did. Nor, with so much waste land in the country, can it be claimed that, as farmers, we make as much use of our land as we might do. Of course, one cause of this, and no doubt the main one, has been the facility with which we have been enabled to import food-stuffs and other articles from abroad; but it can never be sound economy to buy from others that which we can equally well produce ourselves, and this is one of the lessons which the war is every day impressing more and more urgently upon us.

One of the commodities lying ready to our hand, which has hitherto been almost entirely neglected in this country, is the subject of this article; and it is a striking comment upon that neglect that in the majority of cases the removal of the peat from its surface would discover a more fertile soil beneath, and so add to the value of the land from which it was removed, quite irrespective of the uses to which the peat itself might be put. It follows, therefore, that if the peat can be successfully worked on a commercial basis, the owner of the land upon which it is found may not only enrich himself by its manufacture, but hand on to his successor an estate enhanced in value by the operation. Surely a fortunate position for any landlord to find himself in in these days!

But, of course, all peat-beds are not equally favourably placed for exploitation. Many of them occupy high plateaux amongst the hills, where their situation, and the absence of good roads, place them for the present beyond the reach of the manufacturer. But, on the other hand, some of the most extensive bogs cover low-lying tracts, sometimes adjoining an already existing railway line, or at least within easy access by road. It is these that appeal for immediate development. On one or two of the flat moors of Yorkshire and Lancashire large quantities of peat have been dug during the past twenty years, most of it finding its way to market in the form of peat-moss litter; and that there is good money to be made out of it is proved by the dividends paid by the companies that work it, and the high premium at which their shares stand in the market. There is a great and ever-increasing demand for peat in this form, but as yet only the merest fraction of that used in this country is of home manufacture. Up to the beginning of the war the vast bulk of it was imported from abroad, largely from Germany; and, as will presently appear, there are other and perhaps more lucrative ways of dealing with peat than converting it into litter.

It is scarcely more than twenty years ago since the merits of moss litter began to be recognised in this country, and it was the enterprising Teuton who first drew our attention to it. He pointed to the great advantages it possessed over straw as an absorbent of liquid manure; and, having secured contracts for supplying some of our military stables, he went home to develop the peat industry of his Fatherland. He talked knowingly of the superior qualities of German peat over that found in this country, no doubt enlarging also upon its cheapness; and to his guile, or our simplicity, must be attributed the fact that he has during all the intervening years retained most of his contracts, and succeeded in maintaining the fiction that what he had to sell us was in some respects more fitted for its purpose than our native article.

Variously designated as bogs, peat-mosses, floes, and the like, the accumulations of peat in many places in this country are equal in quality to anything we import from abroad; but Britain has lagged behind most other civilised countries in the development of her peat industries. That her resources of the raw material are not inconsiderable may be gathered from the following figures. In the official returns of the land it has been estimated that there are in Great Britain and Ireland nearly six and a half million acres covered by peat, of which about three million acres lie in the Emerald Isle. One Irish bog on the Shannon is between two and three miles wide by about fifty miles in length, and the peat upon it varies in depth from thirteen to fifty-seven feet. For the sake of comparison, it may be added that Canada has over thirty million acres covered by peat, the United States about twenty millions, and Germany nearly five millions.

Left to nature, these wide areas of peat in this country produce little that is more valuable than heather. If the ground be fairly dry and 'sound,' its grazing value for sheep may be a shilling or two an acre; but in order to command even that rent a considerable sum has usually to be spent upon it in surface drainage and fencing. If it happens to lie in a favourable district another shilling an acre may be added as the value of the grouse-shooting; but here again this rent can only be obtained after considerable expenditure in draining. In a general way, the removal of surface moisture required by the sheep-farmer is the same as that which the grouse-shooter demands, so that one expense ought to be sufficient to secure both rents; but the drains and fences, of course, require attention to keep them in order after the initial outlay, so that the 'prairie value' of the surface of the peat-covered land is seen to be very small indeed.

It is true that some of the mosses might be planted with coniferous trees, or with birch or alder, and in that way be brought to yield some prospective return. A good deal of such land has, in fact, already been so planted in certain parts of the country; but, even where the trees are doing well, growth is slow, and the return on capital invested is so long deferred as to make the experiment anything but tempting to most private owners. As has already been pointed out, much of the peat overlies soil considerably more fertile than itself, and in exceedingly few cases is the underlying soil less suitable than the peat itself for the growth of timber or any other crop.

A sarcastic politician once said of the peat-bogs of Ireland that they were interesting as geological studies, and for the remarkable elks' heads they yielded, but chiefly important because they contributed to the poverty of the people. Perhaps he may have been ahead of his time, or have spoken more literally than he knew or than his audience appreciated. In any case, there seems no reason why the judicious removal of her peat should not now materially increase the welfare of the island, and at the same time leave her land permanently improved by the operation.

But although its conversion into moss litter may be one of the simplest methods of dealing with peat in a profitable and wholesale manner, it is not the only use to which it may be advantageously put; while, like the coking of coal, it may be made to yield several valuable by-products in the process of drying. For years past our Teutonic enemies have been paying ever-increasing attention to the extracting from peat of acetate of lime, a source of acetone, one of the essentials in the manufacture of cordite and other high explosives. They also obtain from it no inconsiderable quantity of sulphate of ammonia, a source of nitrogen, the importance of which at the present time needs no comment. Naphtha, paraffin, and other volatile oils are likewise extracted in paying quantities, and from peat charcoal carbon pencils for electric-light are manufactured. Previous to the outbreak of war our own navy and army were largely dependent upon Germany for the supply of carbons for searchlights, and how far British engineering companies were likewise dependent upon her might form an interesting subject of inquiry.

By a process invented by Sir William Ramsay, a good many gallons of alcoholic spirit may be extracted from a ton of peat; and it is said also to enter in quite considerable quantities into the composition of certain cattle and poultry foods, and even into dog-biscuits. But even these do not exhaust its sphere of usefulness. Almost from time immemorial peat has been the only fuel burnt in many remote dwellings amongst the hills, and the comforts of a peat-fire are pretty generally known. It is less effective than coal; but where pits are distant, or leading difficult, the ease with which peat can be 'won' enhances its value as an economical substitute. In distilleries a good deal of it is used in order to impart the 'peat-reek' flavour to whiskies. It was at one time much in favour as a fuel in certain kinds of engineering work, but it has latterly been found more efficient to make use of peat in that connection for the manufacture of producer-gas by which electrical generating and similar machinery may be driven. And, lastly, Professor Bottomley of King's College, London, has for some years past been carrying out extensive experiments in the treatment of crude peat with a view to realising its inherent capabilities as a fertiliser. A certain measure of success has apparently rewarded his labours, and if the results obtained in his laboratory prove to be applicable on a large scale outside, the value and importance of peat in the near future must be enormously increased.

And what, it may now be asked, is the origin of this brown or blackish substance which we call peat, and which is seen to be so different in composition and properties from ordinary soil? The answer, with certain reservations, is simple enough. It is an accumulation of decayed vegetable matter, very largely composed of the sphagnum mosses, which still continue to grow upon most damp moors where peat already exists. An abundance of moisture is essential to its formation. Mixed with it may be found the roots and remains of heather, and often also of birch, alder, oak, and other trees.

Under ordinary circumstances such substances, decaying upon the ground, are turned into common mould through the agency of bacteria which reconvert organic matter into its component gases. But it is only under favourable conditions that such micro-organisms are able to carry on their appointed functions. More than a given proportion of certain acids in the

soil puts an end to their activity, or may entirely kill them off, and it is when conditions of that kind prevail that the growth of peat probably begins, to continue with ever-increasing certainty so long as moss or other vegetation subsists upon the surface, or until the arrival of some other agent liberates the acids or counteracts their effect.

UNOFFICIAL NEWS.

By ÆSCULAPIUS.

I.

DEPUTY SURGEON-GENERAL BISCOM came into the operating-theatre of the Royal Naval Hospital, Bermuda, in the lofty way which it is the privilege of principal medical officers to assume. His staff-surgeon was at the moment finishing an operation for appendicitis.

'He ought to do well, sir,' the staff-surgeon mumbled from behind the surgical mask that covered his mouth; 'the thing had not yet perforated.'

'It 'll probably be the last case you 'll ever do here, O'Brien,' Biscom said sternly.

O'Brien tore the mask off his face. 'What 's wrong, sir?' he asked anxiously, running his eye over the tray of instruments.

The deputy surgeon-general's innuendo, however, did not refer to a stray pair of scissors left in his patient's abdomen When Biscom was satisfied that the staff-surgeon had 'risen' sufficiently, his features relaxed into an expression of rapturous triumph. 'Can't you guess the reason why?' he said, chuckling with pleasure at having 'pulled the leg' of his staff-surgeon. 'Your appointment to H.M.S. *Alcibiades* has come, and you 're to join her at Devonport.'

'Hurrah!' exclaimed O'Brien, who had recently been 'panicking' to go to sea again. 'You may carry on with the dressing, Sister Blaine, please,' he said, discarding his operating-gloves. 'At the risk of a court-martial, I decline to do any more work to-day.'

II.

A week later O'Brien's relief arrived. The staff-surgeon 'shoved off' the following day by the Quebec Steamship Company's S.S. *Bermudian*. He intended staying several days in New York before sailing for England. When the ship was a day out from Bermuda, they received wireless news of Austria's declaration of war on Serbia. A short time before arriving at New York, the operator handed O'Brien a marconigram:

'You had better sail on board *Accatania* if at all possible. BISCOM.'

The *Bermudian* docked only at 3.30 P.M., while the *Accatania* was due to sail at 4 P.M., and lay at her pier some distance away. Nevertheless, by a liberal distribution of gratuities, the staff-surgeon was able to walk up the gangway just as several warning whistles informed friends and passengers alike that the moment for parting had come. Amidst the enthusiastic cheers of an American send-off, the monster liner backed out of its slip into the stream.

O'Brien found the sights of New York Bay extremely interesting on that pleasant summer evening; and it was not till after Sandy Hook was passed that he shook off his preoccupied air, and realised he must see the purser at once concerning his accommodation.

III.

The purser's name was MacFlecknoe, and a deck-steward showed the staff-surgeon to his office. He was a stodgy little man, with a bald head and ginger-coloured beard. 'What can I do for you?' he asked pompously, concentrating his beady eyes upon O'Brien. 'I 'm very busy.'

'I 'd like you to give me a cabin, or berth of some sort,' the staff-surgeon said easily.

The hairs of MacFlecknoe's wing-like moustache bristled ominously. His tufty eyebrows became curiously agitated. A whistling sound preceded actual vocalisation of his indignant feelings. 'What on earth do you mean?' he finally sputtered.

'Exactly what I say,' O'Brien retorted. 'The fact is, I hadn't time to book.'

'Am I to infer, then,' the purser said angrily 'that you have dared to come on board the greatest liner in the world without a ticket?'

'You 're quite right in your assumption,' the staff-surgeon assured him.

'Then where in thunder is your authority for acting in this illegal manner?' screamed the purser.

'The most legitimate in the world,' O'Brien said—'the exigencies of the King's service;' and he handed MacFlecknoe the deputy surgeon-general's telegram—'which, by the way, please regard as confidential.'

The purser's manner changed instantly. He left his revolving-chair, and grasped the staff-surgeon's hand effusively 'This makes all the difference in the world, doctor,' he said. 'Really, the shock of your first announcement has left me so weak that I 'm going to have a whisky-and-soda,' MacFlecknoe declared, pressing the button. 'Will you join me, doctor?' he asked.

'Thanks very much,' O'Brien replied, laughing. 'I think that perhaps one is indicated.'

The purser ordered the drinks. 'And mind you bring none of your ordinary smoking-room

stuff,' he warned the steward.—'I hope you'll excuse my late rudeness,' MacFlecknoe said to the staff-surgeon. 'We have over seven hundred saloon passengers this trip, and they have almost driven me frantic answering all sorts of silly questions. Besides,' he said, lowering his voice, 'we've a fabulous amount of specie on board.'

Some one knocked.

'Come in,' said MacFlecknoe.

'Is this the purser?' an austere-looking lady asked, levelling her lorgnette at him.

'It is, madam,' he responded sourly.

'I've booked to Liverpool for myself and maid,' she said. 'If I decide to disembark at Fishguard instead, will it be all right?' the lady inquired.

'Certainly, madam,' MacFlecknoe replied. 'Let us know definitely a few minutes before we're due at Fishguard,' he added sarcastically.

'Thank you,' said the lady, backing out stiffly. Unhappily, she collided with the too energetic steward, and the drinks went crashing to the deck. 'I'm sorry,' she said, as she disappeared.

'So am I,' snapped the purser. 'That's the sort of thing I'm up against all the time, doctor,' MacFlecknoe said bitterly, looking sorrowfully at the mess. 'However, we'll have more drinks.'

'Oh, never mind just now,' observed the staff-surgeon, rising. 'I'd be obliged, though, if you could fix me up.'

The purser referred to his plans. 'You may have Cabin V on the boat-deck,' he said. 'We don't usually put saloon passengers up there; but at least you'll have it to yourself.'

'Right-o,' said the staff-surgeon.

'Steward,' MacFlecknoe ordered, 'show the doctor to his cabin.'

IV.

A crosswise alleyway gave access to several sections of cabins abaft the funnels. V was the port outside one, and had a square window overlooking the boat-deck. There was still that close odour about which liners develop in port, and O'Brien left his door ajar in order to let in the fresh air. He began unpacking his box, but had not proceeded very far when a black-coated gentleman appeared, holding a bottle of beer in each hand.

'Say, pard,' he said, 'have a pint of Bass with me, and tell me who is "your gentleman."'

The staff-surgeon looked at him in astonishment. 'What the deuce are you driving at?' he demanded.

'Excuse me, sir,' the man replied, somewhat taken aback, 'but I thought you were "one of us."'

'One of whom?' inquired O'Brien.

'Why, one of us valets, of course,' the man answered impatiently, 'this being the valets' flat.'

The staff-surgeon sat down on his bunk and roared with laughter. 'This is the limit,' he said. 'MacFlecknoe has a sense of humour after all.'

'I'm sorry, sir, if I've made a mistake,' the valet said humbly.

'By way of a reprisal,' said O'Brien, 'might I ask who's "your gentleman," as you say?'

'He's Albrecht von Rex,' the man replied.

'I once met a young man of that name, but he was a German naval officer,' O'Brien said reminiscently.

'It's the same, sir,' said the valet, 'although he hasn't done much orficering since I've been with him this past year. He's a queer bloke,' the man went on, with a strange mixture of cockney jargon and Yankee disdain for superiors. 'Now, what do you think he wants with a bag of sand on board?'

'I don't wish to hear anything about his private affairs,' the staff-surgeon said testily; 'but if you'll take my card to your master, and say I'll meet him in the smoking-room in half-an-hour, it'll compensate for some of your infernal impudence.'

'Very good, sir,' answered the valet, assuming his professional manner.

'It seems a long time since I met Rex,' the staff-surgeon mused, as he began dressing for dinner.

V.

Two years previously O'Brien's ship, H.M.S. *Rosemary*, was lying off the Golden Horn. One night an accident on board recalled the staff-surgeon from a dance at Admiralty House. The picket-boat steamed close to the shore. O'Brien sat in the stern-sheets bewailing the unkindness of a fate that tore him away from a charming partner whom he might never see again. There was no moon, but the stars of a brilliant sky were reflected in the silky sea like so many glorious jewels, and shed sufficient light to outline the palace of Dolmabagche, on the brink of the deep Bosporus.

Suddenly the serenity of the scene was broken by a human form being launched into the sea. A head bobbed up near the picket-boat. Please help me,' it gasped.

'Who the devil are you?' asked O'Brien, stopping the boat, and ordering the coxswain to throw him a rope's end.

'I'm an *ober-leutnant* in the German navy,' said the young man, climbing in.

'You look more like a Turk,' the staff-surgeon said suspiciously, alluding to his being dressed in native garb.

'A liaison with a fair Circassian maiden is responsible for my masquerading like this,' the officer replied, after he had got his breath. 'We arranged to meet in the palace gardens, but were discovered, and I made my escape by jumping off the parapet.'

'You were certainly taking chances,' O'Brien remarked.

'Apart from the danger to life a European

runs in an *affaire de cœur* in Turkey,' declared Rex, for such was the officer's name, 'it so happens I'm in a particularly delicate position at the present moment. My Government occasionally employs me on missions of a diplomatic nature. That's where my facility for speaking several foreign languages comes in,' said Rex, who spoke English perfectly. 'This time it is the Bagdad Railway, and the principal shareholder with whom I have to treat is a rich Turk, who is also the lord and master of my inamorata.'

'Allah be praised!' O'Brien murmured.

'Discovery would therefore have meant the lopping off of my official head,' Rex said, as the staff-surgeon dropped him at the officers' gangway of his ship, S.M.S. *Göttingen*, 'and I'm ever so much obliged to you for picking me up.'

'Oh, that's all right,' said O'Brien, giving the signal for the picket-boat to 'carry on;' 'it's all in the day's run.'

According to the valet's dark hints, the scope of Rex's diplomatic efforts had been greatly extended of late.

VI.

The smoking-room of the *Accatania* was the most famous of its kind in the *ante-bellum* liners. Its Jacobean decorations, rich frescoes, and absence of vibration gave one the impression of being in the spacious quarters of a West End club rather than travelling through the seas at twenty-five miles an hour. As soon as Rex spotted O'Brien, he dashed up to the staff-surgeon. He was singularly dark for a German, and in his dinner-jacket did not look unlike an Englishman.

'This is an unexpected pleasure,' Rex said enthusiastically. 'Have a Martini?'

'Thanks, I will, Rex,' said O'Brien.

'What's the occasion of your unservice-like trip?' Rex asked.

O'Brien told him of his new billet. 'And you?' he queried politely.

'Oh, railways again, and other things,' Rex replied. 'I've been anywhere from Peru to the Peace River district,' he said, waving his arms about him in a grandiose fashion.

'What has Germany got to do with railways on such a vast scale?' inquired O'Brien.

'Ah, now you're asking,' Rex answered enigmatically. A moment later he said, 'You're returning home at an interesting time.'

'In what way?' O'Brien asked.

'Well, this Serbian business, for one thing,' said Rex.

'I don't see how that'll affect us,' O'Brien answered. 'I fancy it'll take a good many Serbias to make our country enter the arena of a European conflict.'

'Well, here's hoping you won't,' said Rex, raising his glass.

'Cheer-o,' O'Brien responded.

'I don't know, though, O'Brien,' Rex said reflectively; 'there's a modicum of occultness about your diplomacy that's a bit bewildering to our secret service people.'

'Secret service will be the death of Germany,' declared O'Brien.

'Why?' Rex asked.

'Because you build too much on information acquired in an unnatural way.'

'Perhaps you are right,' Rex admitted.

'At any rate, let's have dinner before an Anglo-Germanic disruption takes place,' O'Brien suggested; 'the bugle went some time ago.'

VII.

They dined at a small table in the grill-room, in preference to the rather garish Louis XIV. restaurant. After he had drunk a couple of glasses of champagne, Rex said, 'You can't imagine what I've been doing during the past six months.'

'There are so many by-products connected with your activities,' O'Brien replied gibingly, 'that I haven't the remotest idea.'

'I've been clerking for the Canadian Pacific Railway,' said Rex.

'What in the world made you do that?' O'Brien asked.

'When Germany finally takes over the government of the world,' Rex boldly declared, his eyes flashing and his cheeks flushed with wine, 'we shall make great use of that stupendous repository of British Empire secrets, the Canadian Pacific Railway. Through its medium I've seen and heard things that will whet the Wilhelmstrasse appetite for world-wide dominion, and incidentally make me sight my guns all the more accurately in the navy.'

O'Brien smiled on him indulgently. 'Rex,' he said, 'you're without doubt the greatest "pipe-dreamer" I've ever come across.'

'At least you'll concede one material result of my work in Canada, of which I'm very proud,' Rex said exultingly, extracting a folded slip of paper from his wallet. It was a certificate for five shares of Canadian Pacific Railway stock. 'They gave me this for translating their annual report into German,' he said. 'It was extra work, and naturally brought me into intimate association with high officials, with what I hope will be splendid results for the Fatherland.'

'Time will tell which of us is the fool,' O'Brien said thoughtfully as they went on deck.

VIII.

Life on board the *Accatania* soon took on the usual transatlantic phase. The weather was fine, and the decks were crowded with passengers. The hours passed very quickly on such a vast liner, with its private suites, palm-court, and hundred and one pleasant diversions. Of course, the usual busybodies began organising the 'amusement' potentialities of the saloon, and certain characters loomed large in the public eye in this respect. There was one man in particular, a Mr Draw-

cansir, of Kalamanzoo, Michigan, who, early in the voyage, got up an elaborate programme of deck sports. Captain Bramble, however, decided to spring a surprise 'lifeboat drill' and 'abandon ship' exercise on the passengers about the same time. The two events conflicted, and, of course, the sports were off. Drawcansir was incensed, and made some offensive remarks to the captain on the inopportuneness of his arrangements. The captain retaliated by prohibiting deck sports as being a public nuisance.

Drawcansir, however, was able to carry off an aquatic competition in the swimming-pool of the *Accatania*. This gave him an opportunity of 'boosting' his patent self-inflating life-belt, and he booked many orders, which he filled from his stock in the luggage-room. Among other people, Rex bought one.

'Nelson would have scorned the idea of a naval officer possessing such a thing,' O'Brien sniffed.

'Wait till you see what the next war does to your Nelsonian traditions,' Rex said cynically.

THE MYSTERIES OF THE PACIFIC.

By R. W. Reid, New Zealand.

GREAT are the mysteries, seemingly impenetrable, of the Pacific. Its immense area is strewn in places with green hilly islands, fairy islets, and palm-bearing atolls, on the white, glistening shores of which the waves are ever breaking in long ridges of silvery foam. These islands, some two thousand five hundred in number, are the work of two forces widely divergent in character—the one volcanic, the other the coral insect. The Pacific Ocean is girded with volcanoes. On several of its islands are active craters, and at frequent intervals, from the far north to the far south, are experienced both earthquakes and seaquakes. So immense are the depths met with in different regions that certain scientists have suggested that the moon may have been flung from this part of the earth. Mighty chasms exist, principally at Tuscarora Deep, near Japan; at the Kuriles; at the Aldrich Deep, east of New Zealand; and between Midway Island and Guam. Hither and thither over its surface flow veritable rivers —rivers of the sea—always a most fascinating study.

Ethnologists have a rich field provided them in the Pacific. Its aboriginal inhabitants occupy a relatively humble place in the scale of present-day civilisation; but the inhabitants of these islands were not always of the uncivilised order. Evidence has been brought to light, and new discoveries continue to be made, that at one period a powerful race, possessing some degree of culture, lived and ruled in these Pacific Islands. Here is provided basic material upon which to build speculations as to whether the once civilised natives of the Pacific have retrograded, been annihilated by a more powerful race, or been absorbed by less civilised immigrants.

At Ponapé, in the Caroline Group—north from, and comparatively near to, Australia—there stands to-day a series of ancient ruins on a shelving reef. These ruins are part of what at one time was a Venice in the Pacific. The town had been built upon about fifty tiny islets, each islet surrounded with deep water, which provided numerous and intricate waterways. The storms and the salt-laden blasts—the Pacific frequently belies its name—have been loosening and crumbling the heavy masonry, and the tropical vegetation has lent its aid. Great blocks of stone have been lifted and displaced; thick walls have been rent asunder by the grasping, spreading roots. Many buildings in that eastern Venice seem to have been large and imposing. One feature of these great structures evident to-day is the extraordinary thickness of some of the walls. In several instances they are from fifteen to sixteen feet thick. But not all the buildings had walls such as these; the majority of the houses appear to have possessed walls not more than two feet thick. Two temples, at least, were within the confines of the city; but what form of worship their interiors witnessed who can tell? Away in the remote past this Ponapé city was probably the capital of an archipelagic empire. Its builders doubtless came from other lands. They must have been skilful navigators, and, as one investigator says, held mastery over their empire by their mastery of the sea. A curious ethnological fact has recently been brought to light concerning the chiefs of Ponapé, namely, that they alone among the many chiefs in Polynesia traced their lineage through the fathers. The common people of Ponapé, like all the rest of the Polynesians, traced their descent through the mothers.

The empire and city builders of Ponapé are held by certain scientists to have hailed from Japan. A water-city, similar to that of Ponapé, once stood on the west coast of Japan, and this fact is advanced as proof that the builders of the island city of the Pacific were Japanese. Moreover, the type of physiognomy found at the present time in the regions of the Carolines is often distinctly Japanese. Ancient pottery collected from several Polynesian islands is exactly similar to that found in the kitchen-middens of Japan. The present-day looms operating in the Caroline Islands, and south-

wards to and including Dutch New Guinea, are precisely the same as the primitive looms of Japan. In early days the Japanese seem to have been rovers of the sea on a much greater scale than are their descendants. Indications of their presence are said to have been discovered as far south as New Zealand; but these seem to be of a very slender nature. The Maoris many years ago, it is stated, possessed a *korotangi*, a model of a bird carved in stone. This was looked upon as an emblem of some kind—precisely of what has not been made clear—and it was carried by its possessors into battle. In time, however, it was supposed to bring bad luck, and it was buried. Generations afterwards it was found again, and the chiefs met and held a *tangi* over it. A *tangi* is the Maori ceremony of wailing and weeping over the dead. Then *waiatas*, or songs, were composed in honour of the *korotangi*, and these were handed down orally from generation to generation. In them reference is made to the bird having been brought from far-off Hawaiki. This mysterious little model is still in existence. The carving upon it is not Maori, and, according to competent authorities, could have been executed nowhere but in Japan.

But the builders of Ponapé were surrounded by powerful enemies. There are still great piles of rocks on each side of the main entrances to the city from the sea. These were evidently utilised in times of danger to block the waterways and secure, as far as possible, the safety of the city. Ponapé seems to have ultimately fallen into the hands of a barbarian enemy. To-day traditions linger in this part of the Pacific that a race of black marauders overthrew the empire whose capital was the water-city of Ponapé.

The inhabitants of Ponapé—the city is tenantless now, 'save to the crooning wind'—had reached a stage of civilisation which included the art of writing. And, strange to say, that art has in places been handed down from father to son from these far-off years. At the present time natives are found actually capable of writing that ancient script. Dr J. Macmillan Brown—who resigned his professorial chair in Canterbury College, New Zealand, to carry out ethnological and kindred researches in the Pacific—found, not long ago, on an island four hundred miles from Ponapé, a native chief who could write the ancient script. Dr Brown has obtained the complete alphabet, of fifty-one characters, and has been able to compare it with other ancient forms of writing. On Easter Island, far to the south and east of the Carolines, in the Pacific, there was a script once employed, and it remains visible to-day engraven on stone tablets. But the script discovered near Ponapé bears no resemblance to that of Easter Island. Nor does it resemble the scripts of Central America. Dr Brown, lecturing recently in New Zealand, described the Ponapé script as 'not rude, but conventional, and showing all the evidences of long usage and development. It is far ahead of Chinese hieroglyphs. . . . Here,' commented Dr Brown, 'is evidence of a cultured nation, of a degree of civilisation much higher than anything at present existing among the natives of the Pacific.'

Easter Island presents problems to the scientific inquirer seemingly more difficult of solution than those of Ponapé. Easter Island, or Rapanui, has an area of forty-six square miles, and it is set in the midst of a veritable waste of waters. Upon the island stand spacious stone dwellings and huge carved images erected upon broad platforms of massive, uncemented masonry. The monoliths clearly represent one person, the features being alike on every statue. These statues number five hundred; they range from fifty to seventy feet in height, and the majority weigh considerably over five hundred tons each. The quarry from which the great solid blocks were hewn is still visible—within the mouth of an extinct crater—some distance from where stands the long array of grim, gigantic statues. The monoliths must have been transported over the rim of the crater—a cyclopean task. Who hewed the blocks? How were they conveyed from the quarry in the crater? These are two of the questions to which scientists are now seeking to provide an answer. All the statues are half-length, their base cut level, so that they stand firmly upon the colossal platform of hewn stones. Just as Ponapé seems to have had connection in those far-off periods with Japan, so Easter Island would appear to have had some form of relations with America. In northern Peru are statues exactly similar to those on Easter Island, and in Central America are advanced examples of the same school of sculpture. The theory that a continent—of which Easter Island was part—once connected Australia, South America, and South Africa helps us on our way considerably towards the much-needed explanation of the mystery of Easter Island. But much there, and elsewhere in the Pacific, remains inexplicable as before.

THE SILENCE OF THE YEARS.

Do not be silent when I call to you,
Seeking companionship in the cold gloom
After the sunset fires, when falling dew
Weaves its pearl carpet on a muffled loom.
Let there be laughter, and light shining through
The ivied window of one magic room
In that fair palace which my glad soul knew
In royal youth. Oh, I shall call, to whom
If not to you, who hold the memories
Of all my life? On wings of gossamer
The rainbow-coloured days have swiftly flown;
But you hold stored the light and scent of these,
And lovelier yet that sacred dream of her
It is my coronal just to have known.

DARTMOOR FASHIONS.

By BEATRICE CHASE, Author of *The Heart of the Moor*, *Through a Dartmoor Window*, &c.

THE Rainbow-Maker has just told me that I look like a lop-eared rabbit. She has also severely demanded the attendance of a certain toque of mine, with its missing wing. She is the milliner, tailor, and dressmaker of the establishment, and has been greatly annoyed by the once-pair of wings in the toque. One got its largest feather broken in the wind the other day, since when she has clamoured unavailingly to mend it. She apparently suffers from the delusion that her remark about a lop-eared rabbit will reduce me to order. It has quite the contrary effect. I have seldom laughed so much in my life. I would not cease to look like a lop-eared rabbit for anything, and that toque will be mended over my dead body.

But the remark has, naturally, turned my thoughts to the fashions, and to the monotonous inquiries I receive as to how we manage to clothe ourselves prettily if we persist in living on the moor and never visit a large town. To which I reply that when you possess a resident Rainbow-Maker, the thing is simple and exciting. To begin with, my aim is to reverse the fashions on every point. I even have the heels of new boots altered and my hats specially made, rather than be remotely near the current fashions in anything. I object to looking just like every other woman—as if I had been machine-made and run in a mould. I prefer to look like a lop-eared rabbit.

Speaking of hats, I always wear a sailor or an Eton straw in summer. As it has been long extinct, I do not know the name by which it is remembered—or forgotten. At one epoch it became, I think, a 'boater.' Each spring I open the millinery season by writing to a London firm for a 'youth's white straw-boater, or Eton or sailor hat,' describing it, and saying it must be size seven and one-eighth inches in the head. As I never wear pads or frames in my hair, my head is the normal size. But such an order from a woman makes the shop-people very suspicious. They are sure among themselves that I am not a youth, and they think that I have made a mistake in the size for a woman, which according to them ought to be about nine and seven-eighths. They write an obsequious letter, acknowledging the order, and begging me to restate size, which is unusually small. I irritably restate, mentioning that, as said, it is a youth's which is required. This silences them, and the hat appears, after an interval of three weeks or so. At times I guiltily wonder if seven and one-eighth is small for a youth, and if it has been specially made for me!

Concerning dresses, my career has been uncommonly exciting for the past two years or so, because I am clothed entirely in cast-off garments of the Rainbow-Maker's. Each costume has what I call her 'hall-mark.' When you meet me in a skirt with a broad band of military braid round the hem and the sleeves with cuffs of the same braid, you will know it belongs to the Rainbow-Maker—that it has, in fact, belonged to her for so many years that no original stuff of it is left with which to lengthen it for me. In this case, military braid both lengthens the skirt or sleeves and conceals a joined hem. There is a difference of seven inches between our heights, arm-lengths in proportion.

No number of conventional costumes dully made for one every year in shops can compare with the excitement of home-dressmaking. The Rainbow-Maker not only makes everything, including tea-gowns and outdoor coats, but she does far more difficult things. As I say, she edits her costumes for me—a thing no dressmaker either could or would do. I possess now a certain brown serge costume; seeing which, people 'wonder how much a year Miss Beatrice to Venton spends on her clothes.' It began life twelve years ago as the Rainbow-Maker's winter costume in the form of a skirt and a Russian coat with long basques. After eight or nine years, during which it went through several transformations in shape, it was handed to me. There was then only enough left of it to make a skirt and a short Zouave coat. With much perseverance, we matched the colour sufficiently well, and made a waistcoat. I wore the whole thing with a set of crushed turquoise buttons and buckle. It was these, of course, which made it look expensive. Then the Zouave and the skirt and the waistcoat all turned different browns, and the Zouave, always a tight fit, shrank till I could hardly get into it; so its sleeves were extracted, and the rest was reverently buried. The sleeves were put into the waistcoat, thus making a complete dress, which was

 [*All Rights Reserved.*]

then sent to be dyed one shade darker. This brought it out all the same colour. I darned and patched the rents under the arms, the Rainbow-Maker put on a green velveteen collar, and, since Swiss belts are prehistoric, I had a green satin Swiss belt made of the same shade. I also sent a long white woollen coat which I had worn for two summers to be dyed the same green, and I now wear the complete costume once more. As the finishing touch, the Rainbow-Maker created a green velveteen toque (not velvet, mind), whose cuttings supplied the collar.

Another exciting costume of the Rainbow-Maker's was the illustrious tweed dress which matched the tweed dog. When it reached me, after being worn for several years by her, it was in the form of a short bolero coatee and a short skirt. The bolero sleeves were too short even for the 'hall-mark;' so we got little brown serge cuttings from the above brown dress, which was then young, and made a waistcoat and under-sleeves for the tweed. I wore it for eight years —till, in fact, even the Rainbow-Maker struck, and said she would burn it. With enormous diplomacy, I achieved a compromise, sent it to be dyed black, turned up the bottom yet again, put the 'hall-mark' on in black, and wore it for two years with a black-and-white shirt, crimson satin belt and stock, and gold-and-crimson braid edging the skirt and Zouave. I have it still, and always shall have it—for gardening. I am, in fact, usually wearing it, covered by a shabby blue linen gardening-coat, with a sailor hat over one eye, and galoshes large enough to fit the Giant Blunderbore below the very short skirt, when the most illustrious pilgrims arrive in sumptuous motor-cars, craving permission to snapshot me and the house.

I have got one dress of my very own that never was the Rainbow-Maker's. It was a very thick, very pretty black-and-gray-striped flannel, a remnant of eight yards, which a manufacturing firm bestowed on us for eight shillings. It began life as a morning-gown, with a cloak to throw over it lined with crimson Italian cloth. I wore it for two years. Then the Rainbow-Maker had one fell day with it all and her cutting-out scissors, and there emerged a smart whole costume of dress, with bodice, and short bolero, all to match. It did not need to have the 'hall-mark' anywhere. We lined the skirt with the cloak lining, got some crimson satin for the bolero lining, and I wore it with a crimson satin belt for five years. Last summer I had it dyed black, and put a handsome deep-cream ecru lace-collar on it. To my unutterable joy, one lady recognised it. I could have wept with delight. More than half the excitement of Dartmoor fashions is gone if your friends do not know the genealogy of each costume.

My white summer dress, however, has, I proudly hope, the most extraordinary history of all. I have worn it seven years so far. A certain kindly old bishop with a thrifty soul had presented to him an exquisite pair of real Jaeger sheets to take about with him when travelling, as a precaution against damp beds. Hearing that the Rainbow-Maker suffered from rheumatism, he packed them up, all by himself, and sent them to her. When they arrived, their softness, fineness, and lovely cream tint touched our feminine hearts almost to tears. It was unthinkable to waste them on a bed. The Rainbow-Maker set to work with paper patterns, and cut out from them a whole white dress for me and a skirt for herself. The material is like the finest, most beautiful cashmere, and, of course, washes indefinitely. We wrote to tell the bishop, and the thing was the joke of episcopal circles that summer. Another bishop wrote saying every one now knew my true character, since a bishop who knew me well had put me into a white sheet. Yet a third asked if he might send the candle, and complete the penitential outfit. Two or three years later, the joke was revived when I attended a large 'At home' in the dress, a national gathering at which many prelates were present, and went round to each one, calling their attention to the frock. The Rainbow-Maker's skirt was subsequently dyed black, and worn with a coat of black cashmere. As I say, the chief joy about our dresses is their histories, provided our friends recognise and love them in each new aspect.

THE DEFINITE OBJECT.

CHAPTER XIV.—OF A TEXT, A LETTER, AND A SONG.

RAVENSLEE opened his eyes to find his small chamber full of a glory of sun which poured a flood of radiance across his narrow bed; it brought out the apoplectic roses on the wall-paper, and lent a new lustre to the dim and faded gold frame that contained a fly-blown card, whereon was the legend:

LOVE ONE ANOTHER.

And with his gaze upon this time-honoured text Ravenslee smiled, and, leaping out of bed, proceeded to wash and shave and dress, pausing often to glance glad-eyed from his open window upon the glory of the new day. And indeed it was a morning of all-pervading beauty, insomuch that even Mulligan's, its dingy brick and mortar mellowed by the sun, seemed less unlovely than its wont, and its many windows, catching a sunbeam here and there, winked and twinkled waggishly

So Ravenslee washed and shaved and dressed, glancing now and then from this transfigured Mulligan's to the fly-blown text upon the wall, and once he laughed, though not very loudly, to be sure; and once he hummed a song, and so fell to soft whistling, all of which was very strange in Geoffrey Ravenslee.

The sun, it is true, radiates life and joy. Before his beneficence gloom and depression flee away, and youth and health grow strong to achieve the impossible; even age and sickness, bathed in his splendour, may forget awhile their burdens and dream of other days. Truly sunshine is a thrice-blessed thing. And yet—as Ravenslee tied the neckerchief about his brawny throat, was it by reason of the sun alone that his gray eyes were so bright and joyous, and that he whistled so softly and merrily?

Having brushed his hair and settled his vivid-hued neckerchief to his liking, he turned, and, stooping over his humble bed, slipped a hand beneath the tumbled pillow and drew thence a letter; a somewhat crumpled missive this, that he had borne about with him all the preceding day, and read and re-read at intervals even as he proceeded to do now, as, standing in the radiant sunbeams, he unfolded a sheet of very ordinary note-paper, and slowly scanned these lines written in a bold, flowing hand:

'DEAR MR GEOFFREY,—I find I must be away from home all this week; will you please watch over my dear boy for me? Then I shall work with a glad heart. Am I wrong in asking this of you, I wonder? Anyway, I am, your grateful HERMIONE C.

'*P.S.*—I hear you are a pea-nut man. You!'

Truly the sun is a thrice-blessed thing—and yet—— Having read this over with the greatest attention, taking preposterous heed to every dot and comma, having carefully refolded it, slipped it into the envelope, and hidden it upon his person, he raised his eyes to the spotted text upon the wall.

'You're right,' quoth he, nodding; 'an altogether wise precept, and one I have had by heart ever since she blessed my sight. I must introduce you to her at the earliest—the very earliest—opportunity.'

Having said which, he fell to whistling softly again, and, opening the door, stepped out into the bright little sitting-room. Early though it was, Mrs Trapes was already astir in her kitchen; and since sunshine is indubitably a worker of wonders, Mrs Trapes was singing, rather harshly, to be sure, yet singing nevertheless, and this was her song:

Said the young Obadiah to the old Obadiah,
Obadiah, Obadiah, I am dry.
Said the old Obadiah to the young Obadiah,
Obadiah, Obadiah, so am I.

Said the young——

The song ended abruptly as, opening the door, she beheld her lodger.

'Lordy-lord, Mr Geoffrey!' she exclaimed a little reproachfully, 'whatever are you a-doin' of, up an' dressed, an' not half-past five yet?'

'Enjoying the morning, Mrs Trapes, and yearning for my breakfast.'

'Ah, that's just like a man. They're almighty good yearners till they get what they yearns for; then they yearns for somethin' else—immediate!'

'Well, but I suppose women yearn too, sometimes, don't they?'

'Not they. Women can only hope an' sigh an' languish an' break their 'earts in silence, poor dears!'

'What for?'

'Would a couple o' fresh eggs an' a lovely ham-rasher suit ye?' inquired Mrs Trapes.

'They will suit.'

'Then I'll go an' fry 'em.'

'And I'll come and look on, if I may,' said he, and followed her into her neat kitchen.

'An' how,' said Mrs Trapes, as she prepared to make the coffee—'how's the pea-nut trade, Mr Geoffrey?'

'Flourishing, thanks.'

'The idea of you a-sellin' pea-nuts!'

'Well, I've only been guilty of it four days so far, Mrs Trapes.'

'Anyway, you've disgusted Hermy.'

'Ah! so you told her, did you?'

'O' course I did.'

'And what did she say?'

'Laughed at first.'

'She has a beautiful laugh,' said Ravenslee musingly.

'An' then she got thoughtful.'

'She's loveliest when she's thoughtful, I think,' said Ravenslee.

'An' then she got mad at you, an' frowned.'

'She's very handsome when she frowns,' said Ravenslee.

'Oh, shucks!' said his landlady, slapping the ham-rasher into the pan.

'And she was very angry, was she?'

'I should say so,' snorted Mrs Trapes; 'stamped her foot an' got red in the face.'

'I love to see her flush,' said Ravenslee musingly again.

'Said she wondered at you, she did. Said you was a man without any pride or ambition; an' that's what I say too. Pea-nuts!'

'They're very wholesome,' he murmured.

'Sellin' pea-nuts ain't a man's job no more than grindin' a organ is.'

'There's money in pea-nuts.'

'Money!' said Mrs Trapes, wriggling her elbow-joints. 'How much did you make yesterday—come?'

'Fifty cents.'

'Fifty cents!' she almost screamed. 'Is that all?'

'No—pardon me. There were three pimply youths on Forty-second Street; they brought it up to seventy-five.'

'Only seventy-five cents! But you sold out your stock. Tony told me you did.'

'Oh yes, trade was very brisk yesterday.'

'And you sold everything for—seventy-five cents?'

'Not exactly, Mrs Trapes. You see, the majority of customers on my beat are very—er—small, and their pecuniary capabilities necessarily somewhat—shall we say restricted? Consequently I have adopted the—er—deferred payment system.'

'Land sakes!' said Mrs Trapes, staring, 'd'ye mean ter say'——

'That my method of business is strictly—credit.'

'Now, look-a-here, Mr Geoffrey, I'm talkin' serious, an' don't want none o' your jokes or jollyin'.'

'Solemn as an owl, Mrs Trapes.'

'Well, then, how d'you suppose you can keep a wife, an' children maybe, by sellin' pea-nuts that way or any way?'

'Oh, when I marry I shall probably turn my—attention to—er—other things, Mrs Trapes.'

'What things?'

'Well, to my wife, in the first place.'

'Oh, Mr Geoffrey, you make me tired!'

'Alas, Mrs Trapes! I frequently grow tired of myself.'

Mrs Trapes turned away to give her attention to the ham. 'Did ye see that b'y Arthur yesterday?' she inquired presently over her shoulder.

'Yes.'

'How's he like his noo job?'

'Well, I can't say that he seems—er—fired with a passion for it.'

'Office work, ain't it?'

'I believe it is.'

'Well, you mark my words, that b'y won't keep it a week.'

'Oh, I don't know,' said Ravenslee; 'he seemed quite content.'

'You took him to the theayter las' night, didn't you? Wastin' your good money, eh?'

'Not very much, Mrs Trapes,' said her lodger humbly.

Mrs Trapes sniffed. 'Anyway, it's a good thing you had him safe out o' the way, as it happens.'

'Why?'

'Because that loafer M'Ginnis was hangin' around for him all the evenin'. Even had the dratted imperence to come in here an' ask me where he was.'

'And what did you tell him?'

'Tell him!' she repeated. 'What did I not tell him?' Her voice was gentle, but what words could convey all the quivering ferocity of her elbows? 'Mr Geoffrey, I told Bud M'Ginnis just exactly what kind o' beast Bud M'Ginnis is. I told Bud M'Ginnis where Bud M'Ginnis come from an' where Bud M'Ginnis would go to. I told Bud M'Ginnis the character o' his mother an' father very plain an' p'inted.'

'And what did he say?'

'He say! Mr Geoffrey, I didn't give him a chance to utter a single word, o' course. An' when I'd said all there was to say I picked up my heaviest flat-iron as happened to be handy, an' ordered him out; an', Mr Geoffrey, Bud M'Ginnis—went.'

'Under the circumstances,' said Ravenslee, 'I'm not surprised that he did.'

'Ah! but he'll come back again, Mr Geoffrey. He'll find Arthur alone next time, an' Arthur'll go along wi' him, an' then—good-night! The b'y'll get drunk an' lose his job like he did last time.'

'Why, then, he mustn't find Arthur alone.'

'An' who's to stop him?'

'I.'

'Mr Geoffrey, you're big an' strong, but M'Ginnis is stronger—an' yet'—— Mrs Trapes ran a speculative eye over Ravenslee's lounging form. 'H'm!' said she musingly; 'but even if you did happen to lick him, what about th' gang?'

'Echo, Mrs Trapes, promptly answers, "what"?'

'Well, Mr Geoffrey, I can tell ye there's been more 'n one poor feller killed around here to my knowin'—yes, sir!'

'But the police?'

'Perlice!' snorted Mrs Trapes. 'M'Ginnis an' his father have a big pull wi' Tammany, an' Tammany is the perlice. Anyways, Mr Geoffrey, don't you go havin' no trouble wi' Bud M'Ginnis. Leave him to some one as is as much a brute-beast as he is.'

'But, then, what of Spike?'

'Oh, drat him! If Arthur ain't got the horse-sense to know who's his worst enemy, he ain't worth a clean man riskin' his life over; for it would be your life you'd risk, Mr Geoffrey—mark my words.'

'Mrs Trapes, your anxiety on my account flatters me; also I'm glad to know you think me a clean man. But all men must take risks—some for money, some for honour, and some for the pure love of it. Personally, I rather like a little risk, just a suspicion, if it's for something worth while.'

'Mr Geoffrey, what are you gettin' at?'

'Well, I would remind you that Spike has—a sister.'

'Ah!' said Mrs Trapes, and her lined face took on a sudden anxious expression.

'Therefore I've been contemplating—er—tackling Mr M'Ginnis—at a proper and auspicious time, of course.'

'An' what o' the gang?'

'Oh, drat the gang, Mrs Trapes.'

'But you don't mean as you'd — fight M'Ginnis?'

'Well—er—the thought has occurred to me, Mrs Trapes, though I'm quite undecided on the matter, and—er—I believe my breakfast is burning.'

'My land!' ejaculated Mrs Trapes, turning to snatch the pan from the stove, 'I'm afraid the fire's ketched it a bit, Mr Geoffrey.'

'No matter.'

'An' now there's the coffee b'ilin' over.'

'Let me help you,' said Ravenslee, rising.

'Anyway, your breakfast's ready, so come an' eat it while it's good an' hot.'

'On condition that you eat with me.'

'What! eat wi' you, Mr Geoffrey—in my best parlour—an' me in me workin' clo'es?'

'Ah, to be sure—not to be thought of, Mrs Trapes. Then we'll breakfast here in the kitchen.'

'Would ye mind?'

'Should love it.'

So down they sat together, and Ravenslee vowed the ham was all ham should be, and the eggs beyond praise. And when his hunger was somewhat appeased, Mrs Trapes leaned her bony elbows on the table and questioned him.

'You ain't ever spoke to Hermy, have you, Mr Geoffrey?'

'Very often lately.'

'I mean—you ain't opened your 'eart to her—matrimonially, have you?'

'No.'

'Why, then, I'll tell you what. There's been times when I've been afraid that for the sake o' that b'y she'd sacrifice herself to Bud M'Ginnis.'

'No, she would never do that, Mrs Trapes.'

'Oh, but she would.'

'But, you see, she couldn't.'

'An' why not?'

'Oh, well, because—er—I should kill him first.'

'Land sakes, Mr Geoffrey!' and Mrs Trapes actually blenched before the glare in his eyes that was so strangely at odds with his soft, lazy tones.

'And that ends it,' he nodded. 'Mrs Trapes, I've made up my mind.'

'What about?'

'Mr M'Ginnis. I'll begin to-day.'

'Begin what?'

'To prepare myself to bestow on him the thrashing of his life.' So saying, Ravenslee stretched lazily, and finally got up. 'Good-morning, Mrs Trapes!' said he.

'But where are ye goin'?' she demanded.

'To my pea-nuts,' he answered gravely. '"Man is born to labour," you know.'

'But it's early yet.'

'But I have much to do. And she laughed at me for being a pea-nut man, did she, Mrs Trapes? She frowned and flushed, and stamped her pretty foot at me, did she?'

'She did so, Mr Geoffrey.'

'I'm glad,' he answered; 'yes, I'm very glad she frowned and stamped her foot at me. By the way, I like that text in my bedroom.'

'Text?' said Mrs Trapes, staring.

'"Love one another,"' he nodded. 'It is a very—very beautiful sentiment—sometimes. Anyway, I'm glad she frowned and stamped at me, Mrs Trapes. You can tell her I said so if you happen to think of it when she comes home.' And Ravenslee smiled, and, turning away, was gone.

'Well,' said Mrs Trapes, staring at the closed door, 'of all the—well, well!' Then she sighed, shook her head, and fell to washing up the breakfast-things.

(*Continued on page 244.*)

THE MEXICAN PEON.

By C. W. L. Barber.

PRESIDENT WILSON has declared that his sympathies are with the peon class in Mexico. It was from a sincere, if mistaken, desire to help the peon that that high-minded, learned, and peace-loving gentleman placed himself before the world in the dubious light of a supporter of the brutal robber and murderer Pancho Villa, and involved his own country in a very embarrassing situation. As I happened to pass the greater part of three years in very intimate association with the peons of northern Mexico, it has occurred to me that a short account of this little understood class might be of interest at the present juncture.

For greater clearness I may state I was encamped near Lake Guzman, a body of water twelve miles long and five wide, situated in the state of Chihuahua. This lake is visited every winter by many thousands of wild duck, besides geese and swans, and it was in order to construct a duck-decoy similar to those found in Norfolk and Suffolk that I went there. There is a good market for fowl in the United States, and the venture would have been a profitable one had it not been for the revolutions, which wrecked everything, and eventually forced me to leave the country. My camp was near the north end of the lake, and nine miles from Guzman Station, the nearest railway point.

The first peon with whom I was intimately acquainted was Alejandro (pronounced Alehandro). He was also by far the best, and could

read and write, very rare accomplishments among peons of mature age. He was honest as the day, punctilious in the performance of any work he understood, kind-hearted, faithful, and very polite; but, like all other peons I have known, he was mentally a child. My first introduction to him took place under somewhat curious circumstances.

Having gone to Guzman Station in my boat to fetch some materials for the decoy, after dining with Señor G., owner of the ranch, and my landlord, I was strolling near the south end of the lake, accompanied by B., the decoyman I had brought out from England. Suddenly we were startled to see a large fire flare up across the lake, as near as we could judge in the exact situation of our camp. We hastened back to Señor G.'s house, fearing that the tent was on fire; but he soon reassured us.

It seems that, knowing I was in want of a man to help in the construction of the decoy, he had sent one to me that afternoon; but, as he had walked out while we were sailing to Guzman, we had missed seeing him. He had no doubt lit the fire to cook his supper. Señor G. assured us our things would be perfectly safe with Alejandro, whom he had known for years. Our fears thus allayed, we accepted Señor G.'s kind offer of a room for the night, and next morning, in high spirits, set sail with a fair wind for camp.

When we neared the decoy, however, a heart-breaking spectacle greeted our eyes. I had previously purchased two large wagon-loads of corn-stalks for the screens of the decoy, and had completed several of the screens already. As this material had to be brought twenty miles, the expense was considerable.

Imagine our dismay, therefore, when we saw a herd of about twenty cattle feeding on the screens and the pile of loose stalks. The screens were wrecked, and had to be reconstructed, and the greater part of the other stalks were so bitten and trampled as to be useless.

Turning from the depressing view of the decoy, we gave our attention to Alejandro, and, had we only been in a frame of mind to appreciate it, he was indeed a picturesque object of contemplation. He stood some six feet two, was rather thin and narrow in build, and every item of his attire appeared to have been expressly designed to accentuate his height. Clad in skintight pantaloons of a light-yellow colour, with a jacket to match fashioned after the style we associate with Eton, he was confined as to the waist by innumerable turns of a scarlet sash, whose two long ends fluttered gaily in the breeze. His tall, pointed sombrero reminded one of the spire of some lofty fane; while his long gray beard, which terminated in the neighbourhood of his sash at the same acute angle, might almost have been its reflection in some distant pool.

I inquired of Alejandro what he wanted, and he explained that Señor G. had told him that I wanted a man, and thought he (Alejandro) might suit me.

'But,' I said, 'if you wish to work for me, why did you not drive away the cattle which were destroying my property?'

'I did not know they were doing any harm,' he replied, 'or I would have driven them off in an instant.'

I could not believe this at the time, but an inspection of our camp soon convinced me that it was the literal truth. On our departure for Guzman Station we had left in rather a hurry, and, after the manner of campers, had neglected to wash and put away the breakfast-things. I now observed that not only had this been done, but that the beds had been neatly made, the whole place swept out and tidied up, and a great pile of firewood had been collected and heaped up near the tent. As a matter of cold fact, Alejandro, anxious to commend himself to his prospective patron, had spent several hours in putting the place to rights and collecting fuel; and then, happy in the consciousness of a duty well performed, he had sat down and calmly watched a bunch of cattle destroy the fruits of a couple of weeks' work and considerable expenditure of cash. It sounds incredible, but such is the Mexican peon.

I was so annoyed about the cattle that, notwithstanding Señor G.'s recommendation, I was disinclined to employ Alejandro; but the work he had done round the tent decided me to give him a trial. I had reason to rejoice that I did so. He made some ludicrous mistakes at first, and it was necessary to explain and demonstrate every new job to him with a minuteness which no English labourer would have required or American tolerated. An explanation once learned, however, he never forgot it, and performed all tasks exactly as instructed, and those of a periodical nature at precisely the same time each day, whether I was present or not. In addition, he never got intoxicated even when opportunity offered. In this he differed from most peons I have known. He became extremely attached to me, and—except for a short interval referred to later—worked for me till I was forced to leave the country.

Having to do considerable excavation, I employed from time to time numerous other peons, mostly of the wandering class. As most of these stayed but a week or so, and were a thievish, unreliable crew, I shall only refer to Teodoro, who stayed with me some months, and whose character exhibited many of the virtues and failings of the better class of peons. Like Alejandro, at whose gray beard he used to laugh, Teodoro was mentally a child. He was, however, a remarkably sturdy child. Less tall than Alejandro, he had the chest of a bulldog and the neck of a bull. Nothing delighted him more than to exhibit his strength. I remember one day, when old Alejandro was toiling up the hill from the lake with a large sack of flour on his

back, Teodoro came up behind him, and, before he knew what had happened, had him, sack and all, perched on his shoulder, and was running up the hill at a brisk pace. The alarm of Alejandro —who, not daring to loose his hold on the sack, coiled his legs around the body of his captor— was ludicrous to witness, and his dismay was increased when his beloved sombrero fell off into a mezquite-bush.

Although absolutely illiterate, Teodoro was rather quicker than Alejandro to comprehend in a rough way the nature of the work he was required to do; but he was not so particular about understanding all its details, and would often start work with great vigour and an incorrect idea of what was to be achieved. Neither was he so conscientious in observing detailed instructions, even when he understood them. He was, however, a very willing worker.

Some weeks after I engaged Teodoro, Alejandro received a letter regarding a cottage he owned at Colonia Dias which required his personal attention. As I was expecting some goods to arrive at Guzman Station, Alejandro, Teodoro, and myself proceeded thither by water, leaving the Englishman B. in charge of the two or three other peons then working for me. Having settled with Alejandro, I bade him farewell, he promising to return as soon as his affairs were arranged. Teodoro and myself had embarked my goods, and were just setting sail when we were arrested by the sight of Alejandro rushing toward us at full speed. In one hand he carried his tall, pointed sombrero, while the other grasped a parting gift in the shape of a bottle of *tequila*. It was a gift I would gladly have dispensed with just then, but one impossible to refuse. *Tequila*, I may state for the benefit of those who have never sampled it, is a liquor prepared from the cactus, resembling Scotch whisky in potency, but with a flavour all its own.

As soon as we were comfortably under way, Teodoro politely offered me the bottle, and on my declining with thanks, took a drink himself. This offer he repeated several times at short intervals; but, meeting with the same response, he abandoned the preliminary ceremony as useless. However, he continued to refresh himself from time to time. I had no idea how frequently these periods were recurring, until, the wind having shifted to dead ahead, it became necessary to row. Then it at once became evident that the modest amount of skill with the oar which Teodoro had so painfully acquired in the past weeks had deserted him entirely. Therefore, at my request, he sat in the stern, while I took both oars. As the boat was heavily loaded, this was fairly good exercise; and after some time, when we were within a couple of miles of camp, it proved too much for Teodoro's sense of the fitness of things. Declaring that he was unable to sit still any longer while his patron worked, he rose unsteadily to his feet. He was approaching with a view to taking one or both oars, when some unsteadiness on the part of the boat, his legs, or his head, or possibly the three combined, caused him to turn suddenly to the right and plunge into the lake. The water at that point was little over four feet in depth, but Teodoro did not know it. Unable to swim, he rolled over and over, loudly proclaiming that he was drowning. I leaned over and caught him by the wrist, drawing him to the boat. He promptly seized the gunwale and pulled it down with such vigour that the boat was half-filled with water in an instant, and I was barely able to reach the other side in time to prevent it from capsizing. What with his intoxicated condition and his total ignorance of aquatics, the half-filled state of the boat, and my own very limited command of the Spanish language, a very ticklish quarter of an hour ensued before he was safely on board.

As we were about a mile from the nearest land, and I had no mind to lose either the boat or its contents, I conducted him to the stern seat, and, showing him my revolver, informed him that he would be wise not to move during the remainder of the trip. Fortunately he was just sufficiently sobered to heed the warning, and we arrived safely in camp in due time. Teodoro complained bitterly of the cold on the way, but a mug of hot coffee made him feel better. I turned a deaf ear, however, to his appeals for a blanket from my bed to supplement his solitary *serape* while his clothes—in which he was accustomed to sleep—were drying. His last words ere finding oblivion from his woes in sleep were, '*No mas, no mas, no mas tequila por mi*' ('No more *tequila* for me').

For the next two weeks Teodoro devoted himself to work with increased vigour, and accomplished an almost incredible amount of excavation. The most notable change in his demeanour, however, was his deferential, not to say servile, attitude to myself. He was evidently afraid I might dismiss him, although I had not referred to his lapse in any way. At the end of that time, as I had business at Guzman Station, I took Teodoro with me. Shortly after we set sail he remarked, 'I do not think I have told your honour that I have an old mother in the city of Chihuahua?' As I shook my head he continued, 'Yes, she is very old and feeble; but I love her very much. She is also very poor. Would your honour be so kind as to let me have a few *pesos*, so that I can help my poor old mother a little?' Of course, I told him he could have all that was due to him, which was found to be twenty-five *pesos*, and he was most grateful.

Next morning I took a walk around. In a back-room, seated at a rough table, was Teodoro playing monte with three Chinamen. It was evident at the first glance that he had been drinking heavily, but I simply observed that it was time to return to camp.

Teodoro, however, was in a different mood from any I had before witnessed. He banged the table with his fist, saying, 'I am not for the camp. I will not work in the dirt any more. I am rich.'

I merely replied, 'Very well;' and, having to go to Señor G.'s office for some provisions, I set sail alone.

Before I left, Señor G. inquired where Teodoro was, and I informed him how I had found the peon employed.

At two o'clock next morning the loud barking of my dog aroused the sleeping camp. Picking up my revolver, I went outside. There was Teodoro, still under the influence of *tequila*. As soon as I recognised him I said, 'It is you, then, Teodoro. Come in and lie down, but keep quiet.' He did so, not saying a word. Next morning he was given some beans and coffee. After breakfast, as I was attending to various matters, Teodoro silently followed me like a lost puppy.

At last I said, 'Well, what do you want?'

'Work, if your honour pleases,' he replied.

'But,' I said, 'you do not want to work in the dirt! You are rich.'

With a doleful wail he exclaimed, '*No tengo uno centavo*' ('I have not got a cent').

As the incidents of the previous day had made it impossible for me to employ him further, Teodoro retraced his weary path to Guzman Station.

Peons include three distinct and sharply defined classes, living under very different conditions, and exhibiting characteristics often in vivid contrast.

Taking these in an ascending order, the first is the *peon de carcel*, or prison peon. There are some estates in Mexico, mostly in the more torrid parts of the country, where, chiefly owing to the unhealthy nature of the climate, it is impossible to obtain free labour. In such locations the proprietors make an arrangement with the nearest chief of police whereby a number of prisoners work out their terms on the estates. These compacts differ in their details in various localities, but are always mutually advantageous as between the chief of police and the proprietor. The poor prisoners would have a different tale to tell. There is no doubt that they are greatly misused. They are locked up at night, often in irons, overworked, and sometimes beaten severely. Many of them have originally been convicted for desperate crimes, and they do not hesitate to attack their guards in order to gain their freedom should an opportunity offer. It is from this class that the legend arises that the peon is a treacherous, bloodthirsty villain, always ready to stab one in the back. In numbers, however, this class is insignificant, not 1 per cent. of the peon population.

The next class is composed of the *hombres sin patron*—masterless men, or wandering peons. They are recruited from escaped *peones de carcel*, deserters from the army, restless young *peones de hacienda* who have run away from their debts, and wastrels and fugitives of all kinds from the cities. They wander in gangs over the country, stealing a few chickens here, and a pig or even a calf there, and at a pinch doing a few days' work. At times, when even this last resort fails, they undoubtedly suffer great hardships. Still, they seem to prefer their free, hand-to-mouth existence to any settled employment. It is but a step from a wandering peon to a brigand. Their numbers have been increased by the present disturbed state of the country; but in normal times they constitute about 8 per cent. of the peon population. It is from them that the peon has, in other lands, the reputation of being a thievish, idle fellow.

Lastly, we come to the *peon de hacienda*, the estate or farming peon. He is the real typical peon, and under the wise rule of Porfirio Dias happy was his lot. From being confounded with the two other classes, he suffers, however, under the curious misfortune of being at once commiserated for oppressions from which he is free, and blamed for propensities from which he is remarkably exempt. A family man for the most part, and attached to his home, the irregular life of the wandering peon has for him no attractions. Gentle, polite, and honest as the day, from his grateful heart he gives thanks to God with almost every word he utters. And well he may, for Providence has appointed a special representative here on earth for the benefit of the *peon de hacienda*. That fortunate man obeys—perhaps more strictly than any other on earth—the scriptural injunction to take no thought for the morrow. Yet he never wants! When the cruel rocks, having worn through the soles of his *zapatos*, begin to lacerate his feet, when the last bean has passed from the bag to the pot, or when the cutting winds of January bring to mind the numerous holes in his *saco*, then, and not till then, he repairs to the shop or store of his patron, with a well-justified faith that his requirements will be met, however the account may stand. For the patron, like Providence, 'knoweth that he hath need of these things,' and has made provision accordingly. All the stories one hears of landowners overworking their peons may be set down as falsifications, or at best as misapprehensions founded on the case of the prison peons. Apart from a certain sense of duty—of which more later—the force that compels the peon to work is the same economic one that coerces the rest of us, the only difference being that it does not operate nearly so harshly in his case as in ours. It is seldom, indeed, that his rations of beans, flour, or dried beef are in any way curtailed. If the peon has been taking many holidays of late, and the account against him is large, it is more probable that he may

have to do without *mescal* or *tequila*, and in an extreme case have his allowance of brown sugar cut down. The *peon de hacienda* is fairly industrious by nature, however, and needs few such reminders.

No one, however, could live long on a Mexican *hacienda* without observing that these obligations form only an insignificant part of the tie that binds patron and peon; there is a sense of responsibility on the one side, and of dependence and loyalty on the other, for which they utterly fail to account. No one, for instance, could listen to one of the lengthy conferences between patron and peon on the subject, say, of the selection of a suitable wife for the peon's son without being convinced that, different as their stations are, they regard themselves as in some sort members of one family. Nor is this feeling confined to times of peace. The peon, who must not be confounded with the riff-raff of the towns, takes small interest in politics, and had no part in the instigation of any of the revolutions which have vexed Mexico in recent years. What his attitude is in regard to them a single instance will sufficiently demonstrate.

Pasquale Orrosco was one of the first to unfurl his banner in support of Madero's revolt. The neighbouring landowners, together with Orrosco's large tenants and all their peons, at once flocked to his standard. He took the military command of the revolution, and soon placed Madero in the presidential chair. Not receiving the reward he expected, he started a revolution against Madero known as the red flag rebellion; and, still supported by his neighbours and ever loyal peons, he was in practical control of the states of Chihuahua and Sonora when Huerta's *coup d'état* cut the ground from under his feet. Not seeing his way to ally himself with the Dictator on the one hand or the vulgar cut-throat Villa on the other, he withdrew to the mountains along the Chihuahua-Sonora boundary, and has since maintained the nucleus of an army in an attitude of armed neutrality. When his hour strikes—and no one is watching the clock more closely—every neighbour and tenant will hold a commission, every peon will answer the roll.

Yes, reader, you are right. Not, as at the present time elsewhere, the torn fragments of a mummy for antiquaries to discuss; not as when, already moribund, its last spark of vitality was strangled by learned laws imposed by alien hands, but as in the period of its strength, as yet unfettered by theories which had nothing to do with its growth, with the peon for its ample base, the feudal system is a living force in Mexico to-day.

IN THE 'FORTY-FIVE.

CHAPTER III.

THE wiseacres were wrong when they said that the Prince would never reach Derby. In spite of bridges being broken down to impede his progress, the gallant young leader pressed on. On 1st December his brave followers forded the Mersey at Stockport, their baggage and artillery being carried across the stream a little lower down by means of a rude temporary wooden bridge

Poor old Mrs Skyring, an old friend of my father and an enthusiastic Jacobite lady, sold every article of value she possessed, and brought the money and laid it at the Prince's feet, exclaiming, '"Lord, now lettest Thou Thy servant depart in peace!"' A friend who told me about this said there were tears in the Prince's eyes as he took the old lady's hand, raised her from her knees, and kissed her cheek.

News reached our village that Charles was at Macclesfield, while Lord George Murray marched on Congleton. We heard of him again at Ashborne, where he stayed at the hall, and there was consternation in the whole county when Farmer Beeching brought the news that on 4th December the whole Scottish army had entered Derby. I at once rushed to the Manor to inform the Colonel. At the entrance to the drive I met Mary, who looked pale and worried. I told her my news.

'Michael dear, it is all very dreadful, but it does not seem to matter much. Nothing seems to matter now. You know Sir James has come to stay with us, and he has asked me to be his wife, and father wants me to marry him. What am I to do?' There were tears in my darling's eyes as she looked up beseechingly into mine.

'Oh Mary, my dear! my dear! this must never be. My mother used to say that no one was ever happy who married without love, and you love me, I know, dear, and not that old fossil.'

'He is very kind and good to me, Michael, but I cannot love him. But I cannot stay; they are waiting for me, and I want to have a long talk with you.'

'When can we meet?' I asked eagerly.

'Father and Sir James always spend a long time over their wine after dinner. We dine at six o'clock. I will slip away as soon as I can, and meet you by the old sundial in the garden at eight. Will you be there, Michael?'

'Indeed I will, my darling; but I am coming now to tell your father about the Prince.'

'He must not see us together, dear. I will go

through the garden. You will find him in the library. Good-bye, dear—till to-night.'

So I was forced to say farewell. The butler seemed disinclined to admit me, and said that he thought his master was out. I told him rather curtly to go and see whether he was not in the library; and presently the fellow, who had evidently been acting under orders, came and told me that the Colonel would see me. As I entered the room I saw the portly, red-faced figure of my elderly rival departing by another door.

'The Prince is at Derby, Colonel,' I said bluntly, as I liked not the manner of my reception.

'Good heavens, Michael! what shall I do?'

'Remain and face it out,' I said rather angrily. 'The Prince is a courtly gentleman, I am told. He is much beloved by those who know him, or he would never have reached Derby. His followers do not ravage and pillage the country, and, beyond taking a few of our horses in exchange for their shaggy Highland ponies, I do not expect they will do us much harm.'

'But I have Mary to consider,' said the Colonel.

'Well, I am going to Derby to-morrow'——

'You—going to Derby, into that nest of rebels!'

'Of course, sir; a poor farmer cannot be too particular, and he has his living to earn. They tell me that the Prince pays well for the provisions of his army, and I shall take in a sheep or two. I cannot afford to lose a good market.'

'Well, of all the rash things I ever heard of—well—I know you, Michael, as a perverse, strong-willed young man, and it is no use trying to persuade you to give up a foolish thing!'

'No, sir, you are quite right; I do not give up easily when I have made up my mind to do a thing.'

The Colonel looked me straight in the eyes, and seemed to understand that I was talking of something else more important than taking sheep to market, though the market was Derby and the rebels were there.

'Well, good luck to you, Michael; take care of yourself. Don't let the rascals carry you off.'

I could not help thinking that the Colonel would not grieve very much if they did.

'You need not be anxious about Mary, sir. I shall find out how the land lies to-morrow; and if the Prince should come south, I'll saddle my mare Kitty, and with Mary on that fast pony of hers, we would soon gallop to a place of safety where the Scots won't find us.'

When I told Martha that I was going to Derby on the morrow, she was (as she said) 'all of a flutter.'

'Don't you go, Master Mike; don't you go. They Scots will be eating you up as well as the sheep,' she said. 'But there, it's no use your old nurse a-talking; you be that obstinate that one might as well argufy with a stone wall.'

Jan, too, was a bit anxious about me; but I quieted their fears, and told him to catch the sheep for me, and to have the cart ready for me to start at dawn.

When eight o'clock struck in the church tower I was at our trysting-place by the old dial in the Manor House garden. It was a lovely moonlight night. The hoar-frost was on the ground, and the trees shone out in the moonlight like sparkling gems. I could just make out the motto on the face of the sundial, and read the word '*Spera*,' and took the pleasing unction to my soul; and beneath that were the words, '*Non numero horas sive serenas*,' and I wondered whether any serene hours would be my lot. I had not long to wait. There was a red glow in the windows of the dining-room, where, no doubt, my rival, Sir James, was discussing his prospects with the Colonel; and soon I saw a white figure flit through the garden-door of the house. It might have been a ghost; but it was no ghost who threw herself into my outstretched arms, and whispered loving words to me as I kissed my sweetheart.

And then I had to tell her that I was going to Derby on the morrow, and she was full of anxiety, and tried to persuade me not to go.

'I shall be so anxious all day,' she said. 'God willing, you will be back by this time to-morrow night. Will you come and meet me here again, so that I may see that you are safe?'

'God willing, I will be here,' I said very solemnly.

And then she told me how urgent her father was that she should accept the elderly, ardent Sir James's proposals, how persistent the latter was, and how she hated his red face and goggling eyes, and how she would rather marry a Turk or a Hottentot than Sir James Sandleford.

And I told her that rather than let her do such a hideous thing, I would carry her off and marry her with or without her father's consent, if she could endure to be a poor man's wife and live in a cottage—which my foolish Mary seemed to think would be a paradise, and I did not contradict her. I told her that if the Prince came south, I had arranged with her father to put her on her pony, saddle old Kitty, and ride with her to a place of safety; and many other foolish plans and projects we discussed.

'A miracle may yet happen to give you to me,' I said at last when the parting-time came.

'God grant it may! And may He keep you safe to-morrow, dear, and bring you back to me.'

(*Continued on page 250.*)

AUSTRALIA: ITS ABORIGINES AND NATURAL HISTORY.

IF one looks at the map of Australia, it is apparent that the tropical portions of the continent have not attracted settlement, except superficially; it is in the south-eastern corner that the bulk of the population is to be found. Australia may roughly be divided into two equal areas of, approximately, one million and a half square miles each—the one lying within the temperate, the other the tropical, zone. The three states which include these tropical territories are Queensland, Western Australia, and the Northern Territory, which was ceded by South Australia to the Federal Government of Australia in 1907. The development of tropical Australia by the importation and use of coloured labour, as in some other British colonies, received a shock on the coming of federation in 1900. 'White Australia,' the motto of the democracy, is a *sine qua non* with the Labour Party, now politically dominant; in fact, among the first Acts of federated Australia was one to deport the Kanakas, who from the beginning of the industry had cultivated and harvested sugar-cane in Queensland. So 'White Australia' sounded the death-knell of the policy of running tropical industries in the Commonwealth by coolie labour. The fact, by the way, that Queensland can produce two hundred thousand tons of sugar in a good year shows that white men are not unequal to the strain of working in the sugar-fields! Owing to the very imperfect exploitation and development of Australia's tropical regions, these important districts, as suitable for opening up for cultivation as similar areas of Ceylon and Java, are put in the shade by the temperate areas.

In the 'wet belt' of north Queensland, sixteen degrees to eighteen degrees south latitude, there is an average rainfall approaching two hundred inches a year. All the other conditions of the tropics are found in these districts, which only require the application of suitable labour to produce the fruits, cereals, &c. which the West Indies, Ceylon, and other tropical portions of the British Empire send us. Australia by the general public of Great Britain is recognised as the land of gold and wool; but it is not so well known that coffee, rice, and the mangosteen flourish at Cairns and other parts of north Queensland.

One of the coming cultivations along the north-east coast of Australia is coco-nuts, grown for copra, a valuable raw material for soap-making. A friend of the writer's, sick of town-life, secured the freehold of the best part of a beautiful islet in eighteen degrees south latitude, called Dunk Island. On this islet he and his wife, and casual aboriginal native retainers, have lived the simple life for sixteen years. Under the influence of his Majesty the Sun, and congenial surroundings, he has changed from a pale weakling of eight stones four pounds to a tough, brown man of ten stones odd. The 'Beach-comber' (his pen-name) has a tropical plantation, with its papaws and mangoes, plenty of fishing, including the turtle and the dugong, and a coco-nut avenue leading from the coral-reef to the bungalow. The coco-nut fruits in about eight years, and wherever it is skilfully grown, represents a very important and profitable business for the tropical coasts of Northern Australia.

At the last census taken in Australia of the aboriginal inhabitants of the Commonwealth, the Statistician reported that 'the number of aboriginal natives in Australia may be said to be not more than one hundred thousand.' Some twenty thousand were in the employ of whites or were living in contiguity to settlements, leaving eighty thousand aboriginals still in a savage state. But all figures relating to this fast-disappearing race are approximate and unreliable, for no enumeration of them has ever been seriously undertaken. In Victoria and other fairly densely populated states the aboriginals are practically negligible as a factor in the population. As a race-problem, the Australian natives are full of interest. Living representatives of the Stone Age, they are remarkable for their pureness of race, not having mixed with any other peoples, and all having a common ancestry; physical type, language, weapons, habits, being much the same in the Gulf of Carpentaria and in the south and west of the continent. The 'blacks,' as the natives are dubbed, are the same as they were three hundred years ago, when the navigators of Spain, Holland, and Portugal first visited 'New Holland,' save that the process of degeneracy, following upon the advent of the white man, has adversely affected them, as is always the case when the civilised and the savage are brought into contact. Before many years have passed we shall see the extinction of the Australian native; the doom of the race is certain. The life of the aboriginals of the Australian bush is a never-ceasing quest for food; nothing passes them that can be eaten. They dig up yams and other roots, fish for crayfish and mussels, grind seeds between stones, knock down marsupials and birds with boomerang or waddy. As the 'bush' and the creeks, the sources of these delicacies, become wheatfields and the sites of towns, the native disappears.

The Governments and agriculturists of the Australian states are arresting to some degree the process of extinction. Institutions have been established and maintained by the states where the blacks are housed and encouraged to work, the children receiving elementary education. This work is usually carried on at mission stations, and Australia spends about fifteen

thousand pounds a year on it. To meet the demands of the nomadic kind of life of the natives, some of the states distribute blankets annually to them on the approach of the cold season. Another attempt, mutually useful, to help the aborigines is the offer of employment on farms and stations. The aboriginal lads are very smart in handling horses, but the wandering instinct is so firmly implanted that reliance cannot be placed on them by employers for regularity of service. The Australian state Governments have instituted a rigorous system of protecting the blacks, who, unaided, would fall an easy prey to the allurements of alcohol and drugs. The latter they used to get from the Chinese in the form of opium or opium ashes. To supply these articles now to the aborigines is a penal offence. 'Protectors' are stationed in various country districts to look after the interests of the natives, who are rarely seen in towns. So few of the natives are left that it is necessary to visit remote places to get into contact with them in any numbers.

The advent of the white man in Australia was a terrible misfortune for the natives of that continent. Their social system, that had held together for thousands of years the tribes ranging from Cape Leeuwin to the Northern Territory, gradually became broken up. The operations of the settlers on the land either destroyed or interfered with the natives' food-supply. Before the white occupation of Australia came about the aborigines led healthy lives, the increase in the race being checked by the amount of food the different districts could supply. With the white man came the white man's diseases and destructive habits, which, as in other lands under similar circumstances, decimated the natives.

The customs and habits of the blacks of Australia are curious and interesting. They are born into 'classes,' which correspond all over the continent; these divisions are regarded by them as sacred. All things in nature are relegated by them to these classes, and are considered to be male and female. These divisions govern the marriages of the aborigines, and each class is represented by a totem. Many of the beliefs of these people are curious; for instance, the superstition that a black fellow's kidney fat will cause luck in fishing. Many a murder has resulted from this. Pointing a bone is a way of inducing evil influence. Nothing is more interesting in the department of ethnology than the 'corroboree' (war-dance) of the Australian natives; and when the last Australian native has gone the way of the last Tasmanian, that part of the British Empire under the Southern Cross will be the poorer for the disappearance of a picturesque race.

The writings of Darwin, Huxley, Wallace, and other scientists suggest that there once existed two huge northern and southern continents. Huxley proposed as titles, not infelicitously, 'Arctogea' and 'Notogea' (north and south lands) respectively. Australia, by its early isolation from the continental mass, preserved alive in its pristine purity much of the faunal and floral individuality which in other regions of the globe succumbed to the hardy northern races migrating southwards from Arctogea. Australia owes the survival of the interesting marsupial and other archaic types of animal life to this isolation; and she furnished living witnesses of this pre-existence of an extensive Antarctic continent, in which were incorporated Australasia, South Africa, and South America, in the forms of isolated members of animal and vegetable types. Take the remarkable fresh-water fish indigenous to the Queensland rivers, *Ceratodus Forsteri*, the 'lung-fish.' The only two other discovered representatives inhabit rivers of Brazil and tropical Africa. The natural history of Australia abounds in interesting and quaint forms. The larger marsupials are being killed off by the insistent settler, who, axe or gun in hand, deals out destruction to the animals of the plain and bush as well as to the bush itself. Australia should take a lesson from Germany, and establish on scientific lines a national forestry. Not so long ago the states (then colonies) of Australia gave a reward for every kangaroo scalp, acting in the interests of the pastoralists. The manner of the birth of the young kangaroo is peculiar. When the little one is born, 'the mother sits on the ground with her tail in front of her, and therefore the delicate little mite rests for a moment on the soft fur of her tail. The mother quickly opens her pouch with her forepaws, and, stooping down, lifts the little one with her lips into the pouch, and pushes its mouth well on to the hard, pointed tip of the nipple. She then holds it there, and forces the milk through the nipple into the little one, which hardly has the power of drawing for itself. The nipple then swells and forms a kind of bulb in the mouth of the young, which holds it on. If force is used to remove it, the outer part of the mouth gets ruptured, and a small drop of blood appears. When once off at that early stage, it cannot be replaced, as the nipple, being now soft and flaccid, cannot be inserted into the mouth of the young kangaroo, and so it dies.' This description is from the book of Mr W. H. D. Le Souëf, of Melbourne.

Another denizen of the bush in danger of extinction is the opossum, whose skin is so popular at the periodic London sales that the auctioneer's catalogue often includes hundreds of thousands of them. The bush will be robbed of much of its charm to the animal-lover when the pretty little 'possum succumbs to the nomadic gunner intent on making a good bag of skins. A creature that could well be spared—in fact, the inhabitants of parts of Queensland are crying out for Government help in exterminating it—is the flying-fox (*Pteropus conspicillatus*).

These animals are terrible pests to gardeners and fruit-growers; they sleep during the day, and spend the night feeding on fruit, honey, &c. The flying-fox is really a bat, living in large colonies, the presence of which is indicated by the disagreeable smell of the animals, which constantly fight among themselves and make night hideous by their squealing.

The Australian ants are numerous and varied, and seem by their aggressiveness and wide diffusion to claim the country for their own. Take the termites—popularly, white ants—which inhabit trees or the interior of posts. The termite will run up the inside of the pillars on which the houses (generally constructed of wood) are built; and were it not for the tin plates with which these pillars are capped (which stop the upward march of the insects), the termite would make a meal or short work of the Australians' dwelling-places. The Australian white ant constructs habitations when away from houses — huge mounds, six to twelve feet high, in the interior of which are chambers and galleries. The mounds have wide bases, and taper gradually towards the apex. At Cape York, north-east Queensland, there is a remarkable termite city —a plain for a mile or more covered with pointed pillars, like symmetrical pyramids, six or seven feet in height; these are thickly dotted over the plain, and form the habitations of termites.

One of the most remarkable examples of Australian zoology is the 'native bear,' or koala (*Phascolarctus cinereus*), which Saville-Kent, a well-known writer on Australian natural history, calls 'the most droll and bizarre of living animals.' The koala resembles the South American sloth, in general form, in the absence of external tail, and in its slow movements, though this analogy is but superficial.

The fish-supply of the Australian seas and rivers is marvellously varied. Of the economic fish, perhaps the Murray cod takes pride of place. This fish attains a weight of sixty or seventy pounds; it belongs to the perch family. The schnapper, a sea-bream, is a splendid fish, highly esteemed for sport and the table. A peculiarity of the adult male schnapper is a large bony knob on the forepart of the head. The fresh-water lung-fish of the Queensland rivers has been alluded to; it represents the only known surviving member of a genus common enough in the Triassic and Jurassic formations. A specimen of the Ceratodus was brought to London some years ago, and presented to the Zoological Society.

From fishes to the produce of the tropical fisheries—pearl-oysters, bêche-de-mer, or trepang, and so on—is an easy transition. Thursday Island (Queensland) and Broome (Western Australia) are the centres of the pearl and pearl-oyster fisheries. This industry is somewhat under a cloud just now, because it ministers to the taste for luxury. Much, savouring of romance, could be written about the pearl-fisheries and the dusky divers. Pearl-shell is being overfished, and consequently is getting small. Pearls like the world-famous 'Southern Cross,' found at Cossack in 1874, are few and far between. This remarkable group of pearls was valued at ten thousand pounds, and consisted of nine amalgamated pearls, two of which, disposed laterally, formed the arms. The pearls resembled marrow-fat peas; so the writer of these notes thought when he handled the cross in 1886. The manner in which the series of pearls fit into one another by reciprocal convex and concave surfaces leaves no room for scepticism as to this beautiful complex gem being of Nature's arrangement. The sea-cucumber is the trepang, or bêche-de-mer, of commerce. The creature, a huge sea-slug found in the crevasses of reefs and rocks along the Great Barrier Reef, goes, in the dried state, to China, for soup-making.

UNOFFICIAL NEWS.

IX.

THE fourth night out from New York, Rex and O'Brien were walking the boat-deck, when the wireless operator, with whom O'Brien often had a yarn, popped his head out of the office window.

'Here 's a case for you, doctor,' he said, giving the staff-surgeon a slip of paper, on which was written: 'Little Willie has appendicitis.' 'It 's a message I intercepted just now,' the wireless operator laughingly explained; 'a good deal of rot goes singing through space these days.'

'I 'm afraid you 'll have to get more definite information before I can be of any service,' O'Brien said.—'What do you think of it, Rex?' he asked.

Rex looked at it, and turned very pale. 'My God!' he exclaimed, 'this is awful.'

'Why, what 's up, Rex?' the staff-surgeon asked.

'Oh, nothing,' answered Rex, recovering himself, and leaning over the ship's side, with his hand pressed against his forehead; 'I 'm not feeling very well to-night.'

Neither was Berlin. This seemingly inane sentence was the Wilhelmstrasse way of telling Germany's merchant ships all over the world to seek neutral ports, because war was certain between Britain and the Fatherland.

The operator returned to his instrument, and readjusted his headpiece. 'Hello!' he exclaimed

a moment later. 'Why, here's something for you, Mr Rex,' he said, jotting down a long communication, which he finally gave to Rex.

'Excuse me, O'Brien,' Rex said, as he made for the companion-way.

'That last message for Mr Rex appeared to be as silly as the "Little Willie" one,' the operator remarked; 'the thing seems to be contagious.'

'I suppose it's in code, and has something to do with their confounded secret service,' muttered O'Brien.

'I fancy this'll mean another one from Mr Rex,' the operator continued; 'he seems to spend a lot of money these days communicating with the ocean-going yacht *Pandora*. Incidentally, they must be very anxious about him, because he wires them our course, speed, and position every day,' he concluded.

X.

'Remember, ladies and gentlemen,' the swarthy-faced auctioneer said impressively from his rostrum, 'if the least thing happens to delay the ship, in the way of a fog or otherwise, the holder of the "minimum field" wins. How much am I offered?' he asked briskly.

The Fastnet Light was expected to be sighted about midnight, and after dinner many men and women had come into the smoking-room for the last sweepstake of the trip. All the likely probables of the day's run had been taken up, except the minimum field, which provided for a run below any of the expectations.

'What am I offered?' repeated the auctioneer impatiently. 'Remember there's a dance on.'

Several offers were made.

'Bid twelve pounds, O'Brien,' advised Rex, who, not having dined that night, was regaling himself with some sandwiches and a pint of 'Pol Roger.'

'Why don't you make a stab at it yourself?' O'Brien retorted.

'Never mind about me,' answered Rex; 'take my advice and try your luck.'

O'Brien hesitated.

'Quick,' Rex urged; 'fortune favours the bold.'

The staff-surgeon took the plunge. The runs had hitherto been very high, and the saloon passengers were optimistic regarding to-morrow's. In the absence of higher bids, O'Brien's was accepted.

The crowd quickly dispersed. They were off to the ball.

XI.

The sky was rapidly clouding up, and the sultriness of the night was relieved by occasional intensive puffs of wind from the south-west. There was little vibration, however, for the *Accatania* had slowed down soon after dancing began in the palm-court. A lusty orchestra poured out a quick succession of one-steps and hesitation-waltzes, and the give of the deck, as the gigantic liner took the long Atlantic swell, was quite agreeable to the rompish crowd. Among other celebrities, the list of saloon passengers included a party of cinema artists, and gradually the young people stopped dancing in order to watch their frolics.

O'Brien seized the occasion to go up to the boat-deck for some tropical snapshots, in which his partner, a pretty girl from the Southern States, was interested. The staff-surgeon was in his cabin, sorting them out, when the reflection of a brilliant glare through his window attracted his attention. Going out on deck, he was in time to see the last of a red rocket illuminating the darkness about a cable's length away. Then a white one appeared. Again there was blackness. This was repeated two or three times. O'Brien had scarcely time to conjecture what it meant, when he heard the awful cry of 'Man overboard!'

The ship's emergency life-buoy was dropped, and its chemical torch burst forth into a lurid flame as soon as it touched the sea. The *Accatania* came to a grinding standstill, and the boatswain piped the sea-boat's crew away.

XII.

Down in the engine-room, where Jenkinson, the fourth-engineer, was keeping the first watch, the signal from the bridge to stop came as a relief. Something was wrong with the thrust-block bearings, which perform the all-essential function of receiving the thrust, or shock, of the propellers. About ten o'clock Jenkinson had noticed a tendency of this sensitive part of the turbine to develop an abnormal degree of friction heat. The captain was notified, and ordered the fourth-engineer to slow down. Notwithstanding this precaution, shortly after 11 P.M. the pyrometer registered the dangerously high temperature of two hundred and eight degrees. The *Accatania* was a quadruple screw steamship, with a separate turbine for each propelling-shaft, and under ordinary circumstances one or more propellers could be put out of action without embarrassing the others. In this case, however, the bearings of the whole four shafts were involved, and Jenkinson was on the point of advising the captain to stop altogether in order to investigate the cause of the mischief, when he received the peremptory signal referred to.

The chief-engineer was summoned, and he ordered Jenkinson and his assistants to open up the tank from which lubricating oil was forced into the bearings. They discovered the oil to be gritty, and when some of it was examined on a glass slide, particles of sand were isolated. This was the cause of the undue frictional heat, and after the contents of the tank were evacuated, the filters cleaned, and the bearings flushed with fresh oil, the captain was informed that he could

proceed again. The skipper then signalled the lifeboat to return.

'The oil-tank has unquestionably been tampered with,' the chief-engineer declared. 'Has any one been prowling about here, Jenkinson?' he asked the fourth-engineer.

Jenkinson suddenly remembered Rex. The latter had been very chummy with him during the trip. A few minutes before eight o'clock, when he was going on watch, Rex asked permission to accompany him. Jenkinson consented. Rex was keenly interested in the bearings. At one time the fourth-engineer was called away, and Rex had been left alone in this isolated part of the engine-room. He might easily have carried sufficient sand on his person to do the harm.

Jenkinson made a dash for the steel lift to take him up to the main-deck. He would see Rex at once, and find out what he meant by it.

XIII.

Needless to say, with rockets soaring and 'man overboard,' the dancing-party 'packed up,' although the orchestra continued to play in a fitful sort of way. Thousands of people craned their necks over the ship's side to see if they could penetrate the inky-black darkness. The sea broke against the *Accatania* with a sullen crash, but no rumbling sound followed the flashes of forked-lightning which appeared off toward the west, for thunder is seldom heard at sea. The breast of many a passenger aboard that brilliantly lighted steamship became filled with vague feelings of anxiety.

Drawcansir, surrounded by a coterie of life-belt adherents, was much in evidence. 'It's at a time like this, friends,' he said, 'that, wearing my life-belt, you may view, with a complacency you would otherwise lack, the possible vicissitudes of the sea. I would advise all who haven't them already on to repair to their cabins immediately and adjust them. You'll not be at all conspicuous, and you may rest assured that if you are precipitated into the angry elements, you'll become inflated with safety, so to speak.'

Several passengers beat a hasty retreat.

'Would any other ladies and gentlemen care to give their orders?' Drawcansir asked at this psychological moment.

'Yes; I have some orders to give,' Captain Bramble roared. He was passing, and overheard Drawcansir's remarks. 'If you don't cease talking this twaddle, exciting passengers over nothing, I'll put you in irons at once.'

Drawcansir endeavoured to expostulate.

'Quartermaster,' the captain called.

'Yes, sir,' said the quartermaster, coming up.

'Send for the ship's detective, and tell him to keep this man under surveillance.'

'Very good, sir,' the quartermaster rejoined.

Drawcansir slunk off in silence.

Meantime the sea-boat was being launched.

XIV.

Staff-Surgeon O'Brien slipped into the boat just as it was leaving the davits. 'I may be useful,' he said to the third-officer in charge. 'Besides, I've some stimulants with me in case they're necessary.'

The crew pulled in the direction of the flaming life-buoy, which had drifted some distance away. They had not gone far when the storm broke overhead with a dismal moan, with a few drops of rain, and an electrical display that shook up even O'Brien, accustomed as he was to the violent disturbances of the east. There was a prolonged flash of lightning, which illumined the heavens and seas up to the very horizon. The absence of thunder seemed to render more uncanny the sight which was unfolded to their eyes. Less than fifty yards away was a glistening hull of steel, on which stood several men in naval uniform. In the foreground they saw a dripping form, which was familiar to O'Brien in spite of the extraordinary bulging of the torso. The man turned round, and O'Brien recognised Rex's face.

'Why, it's the German bloke!' the third-officer exclaimed.

'Yes; and, so far as I can make out, he's wearing Drawcansir's inflatable belt,' said the staff-surgeon.

'What do you think we'd better do, doc.?' the officer asked, in some perplexity, when darkness obliterated this strange craft from view. 'I don't like the look of things.'

'Nor do I,' answered O'Brien; 'it's one of those long-distance submarines our people were so sceptical about.'

The staff-surgeon had not time to say more. The heavens glared again, and out of the dazzling light there emerged a slowly moving luminous oval, similar in shape to a colossal shell, which in its descent described a gentle curve, and left an ill-defined trail of glow behind it. Its speed increased, until, as it approached the surface of the sea, it had assumed a velocity fearful for the human eye to contemplate. In that vast arena of ocean, this 'drop shell' from the sky found only one target. The under-water boat, with its tanks of petrol and highly explosive torpedoes, was struck, and blew up with a blinding flash and a thunderous roar. Several of the boat's crew were injured by flying splinters, and there was an appalling hiss when the hot, fused metal sank. Nothing remained to show that the submarine or its recent occupants had ever existed, save some burning oil on the surface of the sea.

'Amen!' the third-officer murmured, as he ordered the boat's crew to pick up the life-buoy, with its funereal flambeau. 'Back to the ship,'

he said, in response to several recall whistles from the *Accatania*.

XV.

Fresh surprises awaited their return on board. Jenkinson told them of the engine-room trouble. The wireless operator was cursing the blighter who had cut his aerials. They searched Rex's cabin, but beyond a lot of military maps and personal effects there was nothing which threw any light on the subject.

'Do you think they intended torpedoing us, doc.?' the third-officer asked.

'I don't know, I'm sure,' said the staff-surgeon, looking over some of Rex's photographs.

'I do,' exclaimed Rex's valet, bursting in. He had evidently been listening outside. The valet was in his shirt-sleeves, and his face had a look of suffering on it. His right hand supported his left elbow.

'What do you know?' Jenkinson asked.

'They intended taking the *Accatania* into Hamburg,' the valet declared.

'How do you make that out?' inquired O'Brien.

'Because, when I asked Mr Rex this morning if I was to label his luggage "Fishguard," he says, "Certainly not. We're going on to Hamburg." "In this ship?" says I. "Why not," says he, "if the Kaiser says so?"'

'After all,' the staff-surgeon said reflectively, 'we were a helpless, unarmed ship, with thousands of human beings on board. By intimidating us with their torpedoes and deck-guns, they could have put a prize crew on board and steamed gaily into Hamburg with enough specie to constitute a good-sized indemnity. No doubt, too, the *Pandora* wasn't far off with more men and guns,' he concluded.

'That's not all. Look at this,' said the valet, sobbing, and rolling up the shirt-sleeve of his left arm. There was a curious metal band, with four clasp-locks on it, fastened above the elbow-joint. 'Rex was a cad,' he declared, his face twinging with pain. 'Behind that smiling face of his was the soul of a swine. He tortured me, sir,' he said, turning to O'Brien, 'whenever I displeased him. It all came about in this way,' the valet went on, blubbering. 'Several months ago he detected me in a theft, and made me sign a confession, before witnesses, which he held over my head ever since. I pushed him overboard,' he said defiantly.

'You pushed Rex overboard!' they exclaimed in unison.

'Yes. I couldn't resist the temptation,' the valet declared. 'I knew he was up to some dirty work, and followed him up to the boat-deck. He stood on the rail and made signals by means of a powerful electric torch, in the shelter of one of the lifeboats. Please cut this thing off,' he pleaded.

Jenkinson sent for one of his men to bring the necessary tools.

'It's more in your line, doc.,' he said.

The forearm was white as a result of the constricting band, which had been tightened as far as the fourth clasp.

XVI.

The following day, when the *Accatania* was steaming well up the Channel, the clanging of the engine-room bells at noon reminded the staff-surgeon of the sweepstake.

'Ladies and gentlemen,' the auctioneer announced solemnly, 'the minimum field has won. The day's run was only four hundred and ninety miles.—Mr MacFlecknoe,' he said, addressing the purser, who was standing by in the smoking-room, 'please hand over the one hundred and eighty pounds to the doctor.'

The staff-surgeon's fist came down on the table with a resounding crash. 'I don't want it,' the astonished people, who were very much in the dark regarding the real significance of the previous night's events, heard him shout; 'it's blood-money, and you may give it to the Seaman's Orphanage.'

THE END.

THE CRUCIBLE.

BEYOND the shadows where I stand
In an unknown and twilight land,
  Apart from joys and fears,
Gleams the rich crucible of life,
Filled with forgotten peace and strife
  And unforgotten tears.

Memory restores in fitful gleams
Young Love empanoplied in dreams,
  A flaming sword in hand;
Singing from unfrequented hills,
And far-off hidden reedy rills
  Enriching desert sand.

Through the magnificence of day
He takes his splendid, joyous way,
  Brilliant in half-veiled truth;
With promises of joys unguessed,
And radiating smiles and jest,
  To meet gay, careless youth.

Snatching at dreams, discarding truth,
Careless and strong, ungrudging youth,
  Who only asks to give,
Seizes those phantom, vain delights
With which Love cruelly requites
  The price at which we live.

But still ineffable, divine,
Memory retains a fragrance fine,
  Saved from the burnt-out flames;
And guards unseen from curious eyes
Those hidden, sacred mysteries,
  Baptised by mystic names;

And in tranquillity unstirred
By useless speech or careless word,
  Turns water into wine;
Teaching that triumph of the soul,
The endless struggle for the goal,
  Is won through love divine.

SEVENTH SERIES

WELLS BY THE WAY.

By G. ROBERTSON-GLASGOW.

NO list of 'the hundred best books' will ever express any one's real opinion of literature; so much must be conceded to convention and the classics that one stands gazing hopelessly at the hundreds of 'best books' which would have to be omitted! Opinion is even divided about what *is* best. You cannot compare Dickens and Thackeray—a perfect bookshelf requires both; you want *Tristram Shandy*, but you cannot do without *Middlemarch;* you cling to *Queed*, but it is unthinkable to exclude Kipling. In fact, you give it up in despair, and just try to think what books you would take to a desert island with you if you were allowed three only, and had the world to choose from.

Without claiming any great literary talent, or assuming a very critical attitude, we find it interesting to look back and remember some of the books which have made the deepest impression on our minds, and which, for widely different reasons, we have remembered and responded to. Of course, various minds have various leanings, and the person who can really enjoy *Sherlock Holmes* will not, as a rule, settle down for a happy week with Mr de Morgan. Occasionally one meets people to whom reading has seemed to present no attraction at all; but I have known cases where the restriction was due not so much to natural taste as to limited means, or to a limited outlook; and when once these bonds were loosened the reader seemed to spring with a bound into the world-wide heritage of books. I intimately know one of these born readers who started life with three books, torn and tattered by admiring fingers of all sorts and all ages—the Bible first, the *Persecuted Family* (a gloomy tale of the Covenanters), and a poem called *The Ghost*—but who now revels unrestrainedly in Marie Corelli, Mrs Barclay, and the *Visits of Elizabeth;* nothing is too strong for her, and even eighty-four loaded years and precarious sight cannot daunt her.

Even now, amidst the treasures of reprints, I turn instinctively to second-hand shops and the strong and luxurious bindings of my youth. Every book I like I want to buy and keep, and one could never really wish to fill one's shelves with the best of sevenpenny editions, or the clearest of clear type. It is a joy even to handle a good binding—a thing not to be treated roughly or flung on its face, but to be opened carefully, cut with precision, and employed to line our walls with perpetual beauty.

My first distinct impression is of Mrs Sewell's ballads—*Mother's Last Words* especially, whose title, to an irreverent family, suggests a very different meaning. I loved the angel with the 'shining feet,' and the little bit about St Paul's. Later on I appreciated and enjoyed the more simply domestic *Stories in Verse*, with their highly moral tone. Some children love a moral, and for them it can never be too crudely introduced. Heaven and hell are very near to us in our infancy, and there is something tangible about a place which, as a little boy once said to me, with tears, 'you can be turned into, with gnashings of teeth.' I suppose the system of rewards and punishments suggests justice and fair-play. Mrs Greene, author of those delightful stories *Gilbert's Shadow* and *Cushions and Corners*, told me once that if she could get a whipping into a book it always sold another edition; and I am sure it is true.

How one name recalls another! And how they punctuate our childish years like milestones! *Struwwelpeter*, *The Swiss Family Robinson*, Miss Sewell's *Black Beauty*—the most perfect animal story ever written, and written, as we used to be impressively told, by an invalid lady who had never ridden a horse! We pass on down the years with more or less lagging feet, but the milestones remain to mark the way.

I hope that my children and my grandchildren enjoy the 'Susy' books as I did, and the 'Katie' series, and the 'Leilas'—those charming contributions to the joy of life, not quite so serious as *The Fairchild Family*, but not quite so exciting either, when you had skipped the prayers and hymns at the end of the chapters! There was a sort of awe about the crimes the family committed, and a terror about the punishments that amounted to tragedy: the murderer hanging in chains against the evening sky after the little boys had quarrelled; the immersion in the pig's tub after the orgy on cider; Maria burnt to death because she was vain; Emily threatened with hell because she stole one damson out of the jam, and only to be spared by 'the infinite mercy of God;' but we did think it greedy of Mr Crosbie to bring his own venison, and rude of the children to comment on it afterwards.

 [*All Rights Reserved.*]

Years afterwards I discovered another little book by Mrs Sherwood on an Indian bookstall, which was even more heavily weighted with morals, because it was a mere pamphlet, and there was not so much scope for human nature. It was called *The Ayah and the Lady*, and consisted of ten chapters, in each of which the ayah broke one commandment, and the lady pointed out to her in terse, and sometimes very objectionable, language both her sin and its punishment. This course was simplified by the ayah being 'a heathen' and one of several wives, which at once, and naturally, disposed of two commandments. *Little Henry* was never attractive—the way he hopped on one leg when he was being rude to his bearer was so objectionable!

On Sundays we read 'Sunday books'—fearful horrors, which would never have come to our ears if they had been put into a newspaper, but which were 'religious,' and dreadfully true. One was called, I remember, *The House on the Bridge*, too dreadful to think of now; and one *The Lily of Tiflis*. Most of the books of which I speak are still a joy to little children. No one has ever put Mrs Prentiss and her *Susy* out of favour, and the lucky children who are brought up on Mrs Sewell's ballads and *Struwwelpeter* thumb and wear them out just as we did, but the Sunday horrors have died a natural death.

The modern child still enjoys as much as her predecessors the good old-fashioned fairy stories, but what has become of those written in the Victorian era? Who reads *Patty and her Pitcher* in these days, or *Giant Hands*, or *The Boy who Became a Butterfly?* Only the grandmothers, I regret to say, not the grandchildren, who have to be content with stories about golliwogs and teddy bears. For myself, I always liked Hans Christian Andersen better than the Grimm brothers, and *Old Deccan Days* almost as well as either. Stories of people are, to some minds, more interesting than stories about animals, and *The Brave Tin Soldier* and *The Little Mermaid* are characters one does not forget. One thing I have learnt by experience, and can also recall of myself, and that is that little children very seldom understand humour, and more rarely enjoy it. They do not want a story to be funny, and if they are taken in they resent it. Humour is a late development, and the love of sentiment and tragedy, and even of horrors, precedes it. Perhaps it is only when we have felt the realities of life that we can appreciate its redeeming funniness, and be really grateful for a Jacobs or a Birmingham. In early life we prefer our humour in tabloid form, as anecdotes or short stories; and I remember a very beloved companion of my youth which was called *One Hundred and One London Jests*. Doesn't it suggest depths of depravity? And one wonders what the quips can have been like. I imagine them in the shape of 'teasers,' as a contemporary paper calls its lighter moments.

In the 'seventies and 'eighties girls did not, as a rule, read the novels of the day unless they were chaperoned through the pages by a faithful and industrious censor. In reading aloud whole chapters were often ruthlessly omitted in a manner that would horrify and infuriate the young people of to-day, and at which we probably grumbled a good deal amongst ourselves. I distinctly remember a good deal of skipping in Kingsley and in Ouida, which is understandable, and also in Bulwer Lytton, which seems more wonderful. We were fed on Dickens—perhaps a little 'fed up,' as boys and girls would express it now. There was always a library especially for the young. Of course, the girls read all the boys' books; but I fancy the boys did not return the compliment. Very many of the books were American; it was the day of *Little Women* and *The Gayworthys* and *Rutledge*, all very interesting and intensely domestic, with a spice of love-making thrown in; and that they still survive, and in a great measure hold their own, proves that they supplied a real need. Even now I cannot walk in the narrow streets of Vevey without remembering Amy's meeting with Laurence when she was driving her white ponies with the blue ribbon reins!

I shall never forget the joy that Miss Yonge has given me. Her books replaced, at first, the Sunday reading of an earlier date. Why we were allowed to read on Sundays novels denied to us on weekdays I cannot guess, and we certainly never drew attention to the anomaly; but for a series of years I asked nothing better of the gods than a copy of the *Daisy Chain*, and the power to mould myself into the likeness of Ethel May, a prayer which the gods did not see fit to answer. I have left off reading Miss Yonge to a younger generation, because they laugh so much, and enjoy the wrong things so tremendously—the way that the men burst into tears, or sob dryly, at a moment's notice; the fact that the reward offered to virtue is always to become a missionary; and that, as Mr Darwin found out, the feverish excitement of the book centres on whether Harry is to be confirmed or not. The sentiment surrounding death, and the greater sentiment surrounding very early (but not improvident) marriages and enormous families—all these are the obvious things, and I never thought them the least funny until I read them out to modern, unsentimental ears. But beyond and above all that is the really wonderful character drawing, the insight and sympathy which, in spite of their rather old-fashioned setting, make them still more of living companions than books.

I do not remember a first Scott. I believe we were read to sleep with him in our cradles, just as we read him to our children. At least that is the only way in which I can account for his being there without any conscious effort. Henry Kingsley was adorable, but he had a

beginning, though never an end, and Charles Ravenshoe still sits sometimes in our sympathetic company watching the area, and the blind man's dog, and the raven cunningly pecking at the undefended heel! Charles was more of a classic, and not quite such a friend; but he counted, even if there was a faint suspicion of powder in the jam. But *Austin Elliott* and *Mademoiselle Mathilde*, and the others—how we love them still, and how we keep the thumbed volumes amongst our treasures! In the leisurely manner of those days, when books were more expensive and time was cheaper, I copied out pages of quotations, and knew them by heart; and I still have the chapter about the battle of Aliwal, with the refrain, 'Still the death-ride sweeps on,' in a commonplace book of many years ago, mixed up with Trench's Crimean poems and long extracts from Mrs Barrett Browning.

But by that time I had fallen on the great writers, and a vista of entrancing delight had opened out to me—*Esmond* and *Vanity Fair*, *Pickwick* and *Middlemarch*; but *Esmond facile princeps*—books that you could read over and over again, and keep under your pillow, reading just one page more, and then another, until you were late for breakfast; and to be late for breakfast was not then, as now, a light offence, and was not lightly punished. Never mind; it was worth it, and the grown-ups understood, even whilst they blamed. There was the first Stevenson—I had acted with him in the Greek plays in Edinburgh, and it was a little awe-inspiring to recognise the genius in his writings—and Hardy, and Galt, and such a host of others. *Old Kensington* too, that treasure of our youth, that is never dull and never out of date, and that makes the Kensington of to-day so doubly dear. The church where Dolly dreamed of the inner life still stands securely and peacefully in the rush of the traffic, but Lady Sarah's house in Church Street is there no longer.

All the novels by one writer are never of the same value. Some can literally only produce one book, of which it is said we are all capable; the rest are plagiarisms from themselves; and one can pick and choose even amongst the writings of the great. Of course, there were 'serious' books as well; indeed, for every volume of fiction we were supposed to order two which we described as 'dry.' The first Carlyle that I read was an event, and was a distinct milestone in the intellectual life. I think it was *Sartor Resartus*. It was like a bugle-call, and it gave out no uncertain sound. After that came the *French Revolution*, full of new ideas, touched in with a picturesque pen. The style is not simple, and so not, perhaps, of the highest genius; or perhaps as one gets older things that are arrived at more easily are more appreciated; but it was certainly an awakening.

I never cared much for historical novels, which as a rule are neither novels nor history; but real history and real biography are entrancing reading, in whatever form they appear, either as the great classics of all time, or the little histories within history, the ever-fascinating accounts of Arctic exploration, the American War of Independence, that old mutiny of the *Bounty*. It is only difficult to know where to stop; and I recall, with so many of the names, the hot and happy Indian days, when, in the pauses of a strenuous life, we had leisure to enjoy our library. History ought to be entirely true, but never dull, and it is delightful to make a blend with fiction, and read *The Seats of the Mighty*, say, with Parkman, or Mrs Steel with the historic records of the Mutiny. There is something unique about Trollope, something unforgettable in that wonderful series which begins with the *Warden* and ends with the *Last Chronicle of Barset*. It was one of the happy accidents of life that I travelled once to America, in prehistoric days, on the *Abyssinia*, on which he wrote *Orley Farm*; but in those days I did not know my luck! The books are alive with humanity, and quick with humour. It is life itself, and not merely a love-story. Everything is of interest, and finds its place in the woven pattern—Mr Hardy and Eleanor, the Stanhopes and Mrs Proudie, Framley Parsonage and the parson.

Character drawing was, perhaps, the attraction of the books of the Victorian era, the long, peaceful, leisurely description of the joys and sorrows of a county. Some of them are more sentimental (not Trollope), or at least more outspokenly so, than modern novels; but the girl of to-day is not coquettish, which may or may not be an improvement, and would very often scorn to be considered attractive; and, with the change of outlook has come a change of method. Novels are more condensed, and are often mere dialogues, into which you plunge, dazed and breathless, trusting to Providence and time to find out who is who! To many modern writers there seems to be only one commandment, and that one, like the promises and pie-crusts of our childhood, only made to be broken, and the result is so often unutterable dullness, a boredom that approaches to tears. Men and women know that the love interest is not the only—very often not the supreme—interest in life. The great authors of an older generation realised this, and their stories represent life as a whole, and not only a limited section of it. To say, as has been said, that Victorian books were written for old ladies of both sexes, and for children, seems absurd and uncritical; even those who appreciate the modern novel to the full may perhaps be allowed a fleeting sigh to the passing of the Victorian tradition, the old-fashioned, discursive novel, with its dignified, cultivated standard, and its illusive gift of style.

The books of those days—the best books—were often written by women; the books that

one reads now are men's. Women wrote more then of the things that they understood; now they trespass on men's province, and when one compares a man's best work on his own subjects with a woman's—well, there is no comparison! No woman could have written *Vanity Fair;* but then no man could have written the *Daisy Chain.*

Whether people read more or less than they used to do is a difficult point to determine. Education has penetrated to other circles, and has widened out indefinitely; but, on the other hand, motors and games, and the outdoor life, limit the hours for reading, and encourage the snippy-snappy newspaper style, which can be swallowed whole, and need not be digested. There is very little reading aloud, and it is becoming a lost art, like the art of plain needlework which encouraged it. But, after all, each generation must have its own ideals, and we do not read books merely because they are good or bad, well written or the reverse, but only because there is something in them that attracts us personally, or appeals to our needs.

So I have come to the end of my essay, and must leave the rest in despair! There they lie blazing on every bookstall, hiding in every library, those modern novels, of which I meant to mention so many, but I have only blazed the trail! There is a glamour in their very names: *Youth, Chance, Fortitude, Queed, Somehow Good,* and a thousand others that I cannot touch; there is not time or space in a world of word-limits, and a life where one still tries to find time to read; and others have doubtless found out for themselves a hundred better books of which I have never even heard.

THE DEFINITE OBJECT.

CHAPTER XV.—WHICH INTRODUCES JOE AND THE OLD UN.

THE clocks were striking nine as, according to his custom of late, Geoffrey Ravenslee trundled his barrow blithely along Thirty-eighth Street, halting now and then at the shrill, imperious summons of some small customer, or by reason of the congestion of early traffic, to swear whole-heartedly and be sworn at by some indignant Jehu. At length he came to Eleventh Avenue, and to a certain quarter where the whistle of a pea-nut barrow was seldom heard, and pea-nuts were a luxury.

And here, in a dismal small street hard by the river, behold Ravenslee halt his gaily painted push-cart, whereat a shrill clamour arises that swells upon the air, a joyous babel; and forth from small and dismal homes, from narrow courts and the purlieus adjacent, his customers appear. They race, they gambol, they run and toddle, for these customers are very small and tender and grimy, but each small face is alight with joyous welcome, and they hail him with rapturous acclaim; even the few tired-looking mothers, peeping from windows or glancing from doorways, smile and nod, and forget awhile their weariness in the children's delight, as Ravenslee, the battered hat cocked at a knowing angle, proceeds to 'business.' Shrill voices supplicate him; little feet patter close around him; small hands, eagerly outstretched, appeal to him. Anon rise shrieks and infantile crowings of delight as each small hand is drawn back grasping a plump paper bag—shrieks and crowings that languish and die away, one by one, since no human child may shriek properly and chew pea-nuts at one and the same time. And in a while, his stock greatly diminished, Ravenslee trundles off, and leaves behind him women who smile still, and small boys and girls who munch in a rapturous silence.

On he went, his oven whistling soft and shrill, his long legs striding between the shafts, until, reaching a certain bleak corner, he halted again, though, to be sure, there were few people hereabouts, and no children; but upon the opposite corner was a saloon, with a large annexe and many outbuildings behind backing upon the river, and Ravenslee, lounging on the handles of his barrow, examined this unlovely building keen-eyed beneath his hat-brim, for above the swing-doors appeared the words:

O'ROURKE'S SALOON.

He was in the act of lighting his pipe when the doors of the saloon were swung open and three men came out, in one of whom he recognised the tall, powerful figure and broad shoulders of Bud M'Ginnis. His companions were remarkable, but in very opposite ways, the one being slender and youthful, and very smartly dressed, with a face which, despite its seeming youth, was strangely haggard and of an unhealthy pallor; while the other was plethoric, red-faced, and middle-aged, a man hoarse of voice and roughly clad, and Ravenslee noticed that this fellow lacked the upper half of one ear.

'Saturday night, mind!' said M'Ginnis, loud and authoritative.

'But say, Bud,' demanded the smartly dressed youth, 'what's comin' to us on that last deal?'

'Nix; that's what you get, Soapy!'

The youth's pale cheek grew livid. 'So you've got the deck stacked against us—eh, Bud?' said he.

'I got a close mouth, Soapy. I guess you don't want me t'open it very wide, now or any other old time. Saturday night, mind!' and, nodding, M'Ginnis turned away. The youth looked after him with venomous eyes, and his

right hand made a sinister movement towards his hip pocket.

'Aw, quit it. Are ye crazy?' grunted his companion. 'Bud 's got us cinched.'

'Got us—hell!' snarled the youth. 'Bud 's askin' for it, an' some day he 's goin' t' get it—good.'

Towards afternoon Ravenslee was trundling light-heartedly eastward, his barrow emptied to the last pea-nut. Having reached Fifth Avenue, he paused to mop his perspiring brow, when a long, low automobile, powerfully engined, that was creeping along behind, pulled up with a sudden jerk, and its driver, whose immense shoulders were clad in a very smart livery, pushed up the peak of his smart cap to run his fingers through his close-cropped hair, while his mild blue eyes grew very wide and round. 'Crikey!' said he at last. 'Is that you, sir, or ain't it?'

'How much?' demanded Ravenslee gruffly.

'Crumbs!' said the chauffeur; 'sir, if you—ain't you, all I say is—I ain't me.'

'Aw, what 's bitin' ye, bo?' growled Ravenslee.

'Well, if this ain't the rummest go, I 'm a perisher!'

'Say now, crank up de machine an' beat it while de goin 's good. How 's that, Joe?'

'Lord, Mr Ravenslee, so you are my guv'nor, an', blow me tight, shovin' a barrer! I knowed it was you, sir; leastways, I knowed your legs an' the set o' them shoulders, but—with a barrer! Excuse me, sir, but the idea o' you pushin' a perishin' pea-nut barrer so gay an' 'appy-'earted—well, all I can say is love-a-duck!'

'Well, now, cut along Joe, and get ready. I mean to put in some real hard work with you this afternoon.'

'Right-o, sir,' nodded Joe eagerly. 'Lord, but we 've missed you terrible—the Old Un an' me.'

'Glad of it, Joe! Tell Patterson to have my bath ready when we 've finished. Off with you; drive in the Fifth Avenue entrance.'

Joe nodded, and the big car turned and crept silently away; while Ravenslee, trundling onward, turned off to the left, and so into a very large, exceedingly neat place, where stood five or six automobiles of various patterns, in one of which, a luxurious limousine, an old, old man snored blissfully. At the rumble of the barrow, however, this ancient being choked upon a snore, coughed, swore plaintively, and finally sat up. Perceiving Ravenslee, he blinked, rubbed his eyes, and, stepping from the car very nimbly despite his years, faced the intruder with a ferocious scowl.

He was, indeed, a very ancient man, though very nattily dressed, from spotless collar to shiny patent-leather shoes; a small, dandified, bright-eyed man, whose broken nose and battered features bore eloquent testimony to long and hard usage.

''Ook it!' he croaked, with square bony jaw fiercely out-thrust; 'we don't want no pea-nuts 'ere, d' j' 'ear? 'Op off, 'ook it, before I break every blessed bone in yer bloomin' body.'

'What, Old Un! don't you know me either?'

'Lumme!' exclaimed the little old man, blinking beneath hoary brows. 'Ho, lor' lumme, it 's 'im! Blimy, it 's the guv'nor! 'Ow do, guv?' and shooting immaculate cuffs over bony wrists, he extended a claw-like hand.

'How are you, Old Un?'

'Well, sir, what with the rheumatix an' a stiff j'int or two, an' a touch o' lumbager, not to mention all my other ailments, I ain't quite s' spry as I was.'

'But you look very well.'

'That 's where your heyes deceives you, guv. A great sufferer I be, though patient under haffliction; ho yus, except for a swear now an' then, which do do me a power o' good—yus. If I was to tell you all the woes as my poor old carkiss is hair to, you could write a book on 'em—a big un. I got everything the matter wi' me, I 'ave, from a thick ear an' broke nose as I took in Brummagem sixty an' five years ago, to a hactive liver.'

'A what?' inquired Ravenslee.

'A hactive liver. Lord, guv, my liver gets that hactive lately as I can't set still. Joe knows; ax Joe! All as I ain't got o' human woes is toothache, not 'avin' no teeth to ache, ye see, an' them s' rotten as it 'ud make yer 'eart bleed. An' then I get took short o' breath; look at me now, dang it!'

'Why, then, sit down, Old Un,' said Ravenslee, drawing up a somewhat worn arm-chair. 'Joe and I are going at it hard and fast this afternoon, and I want you to time the rounds.' And he proceeded to remove his garments.

'Oh, j'y!' cried the Old Un, hugging himself in bony arms. 'Oh, j'yful words! Ah, but you peels like a good un, sir,' he croaked, viewing white flesh and bulging muscle with knowing old eyes; 'good an' long in the arm an' wide slope o' shoulder. You might ha' done well in the ring if you 'd been blessed wi' poverty, an' I 'd 'ad the 'andlin' o' ye; a world's unbeat champion, like Joe. A good fighter were I, an' a wonnerful trainer. Ho yus, I might ha' made a top-notcher o' ye if you 'adn't been cursed wi' money.'

'I suppose,' said Ravenslee thoughtfully—'I suppose Joe was one of the best all-round fighting men that ever climbed into a ring?'

'Ah, that 'e were. Joe were better 'n the best; only don't let 'im 'ear me say so, 'e 'd be that puffed up—lord! But nobody could beat Joe—black, yaller, or white; they all tried danged 'ard, but Joe were a world-beater. Ye see, I trained Joe, an' to-day 'e 's as good as ever 'e was. Ye see, Joe 's allus lived clean, sir; consequent Joe 's sound wind an' limb. Joe could go back an' beat all these fancy bruisers an' stringy

young champs to-day, if 'e only would; but don't let 'im 'ear me say so.'

'You 're fond of Joe, Old Un?'

'An' why for not, sir, s'long as 'e don't know it? Didn't 'e look arter pore old me when 'e 'ad money; an' when 'e lost everything didn't 'e look arter me still? An' now 'e 's your shuvver don't he keep a roof over me pore old 'ead like a son? Don't he give me the run o' your garridge, an' let me watch 'im spar wi' you an' your gentleman friends? Ain't 'e the best an' truest-'earted man as ever drawed breath? Ah, a king o' men is Joe, in the ring an' out, sir; only never let 'im 'ear me say so, 'e 'd be that proud. Lord! there 'd be no livin' wi' 'im. 'Sh! 'ere 'e be, sir.'

Joe had laid by his chauffeur's garb, and looked bigger and grimmer in flannels and sweater.

'Ho, you, Joe,' cried the old man, scowling; 'did ye bring me that 'bacca?'

'S'posin' I didn't?' demanded Joe.

'Then dang ye—twice!'

'An' s'posin' I did?'

'Then give it 'ere!'

'An' that 's his gratitood, sir,' growled Joe, shaking his head, and giving the packet into the old man's clutching fingers. 'A unnat'ral old bag-o'-bones, that 's what 'e is, sir.'

'Bones!' croaked the Old Un viciously; 'bag-o'-bones, am I? Yah, look at ye'self—pork, that 's what you are; all run to pork an' blubber an' fat, Joe, me pore lad.'

'Fat!' growled Joe. 'Ye know I ain't fat; ye know I 'm as good a man as ever I was. Look at that, you old sarpent!' and he smote himself with mighty fist a blow to fell an ox. 'Fat, am I?'

'As—lard!' nodded the old man, filling half an inch of blackened clay pipe with trembling fingers; 'as a 'og!'

'Now, by crumbs!' began Joe fiercely.

'You 're flabby an' soft, me pore lad,' grinned the old man. 'Flabby as a babby, an' soft as a woman, an' fat as a'——

But hereupon Joe reached out very suddenly, and, picking up the old man, arm-chair and all, shook him to and fro until he croaked for mercy.

'Lorgorramighty!' he panted, as Joe set him down again.

'Fat, am I?' demanded Joe, scowling.

'Fat as a 'og—fat as forty bloomin' 'ogs!' cried the old man vindictively; 'an', what 's more, your wind 's all gone. You couldn't go five rounds wi' a good un.'

'Couldn't I?'

'No!' shrieked the Old Un; 'you 'd be 'angin' on an' blowin' like a grampus!'

'Should I?'

'Ah—like a grampus!'

'Right-o!' nodded Joe, turning away; 'no jam for *your* tea to-night.'

'Eh, what—what! would ye rob a pore old man of 'is jam, Joe—a pore, afflicted old cove as is dependent on ye 'and an' fut, Joe—a pore old gaffer as you 've just shook up to that degree as 'is pore old liver is a-bobbin' about in 'is innards like a jelly? Joe, ye couldn't be so 'eartless!'

'Ah, but I can!' nodded Joe. 'An' if ye give me any more lip it 'll be no sugar in yer tea.'

'No sugar!' wailed the Old Un; then clenching a trembling old fist, he shook it in Joe's scowling face. 'Then dang ye—three times!' he cried. 'What 's the old song say?

> Dang the man with three times three
> Who in 'is 'eathen rage
> Can 'arm a 'armless man like me,
> Whose 'ead is bowed wi' age!

An' there 's for ye. Now listen again:

> Some men is this an' some is that,
> But 'ere 's a truth I know:
> A fightin' cove who 's run to fat
> Is bound t' puff an' blow!

An' there 's for ye again!' saying which, the Old Un nodded ferociously and proceeded to light his fragmentary pipe. During this colloquy Ravenslee had laid by his shabby clothes, and now appeared clad and shod for the ring.

'Sir,' said Joe, taking a set of gloves from a locker, 'if you are ready to box a round or so'——

'Why, no,' answered Ravenslee, 'I don't want to box to-day, Joe.'

'Eh!' said Joe, staring. 'Not?'

'I want to fight, Joe.'

'To—fight, sir?' repeated Joe.

'Fight?' cried the Old Un rapturously. 'Oh, music—sweet music t' me old ears! Fight? Oh, j'yful words! What 's the old song say?

> 'Appy is the fist as goes
> To black a eye or punch a nose!

Get the mufflers on, Joe; get 'em on, an' don't stand starin' like a fool.'

'But, sir,' said Joe, his mild eyes kindling, 'd' ye mean as you want—the real thing?'

'To-day,' said Ravenslee, 'instead of boxing a round or two with Joe Madden, my chauffeur and mechanic, I want to see how long I can stand up to Joe Madden, undefeated champion of the world.'

Joe's lean cheek flushed, and he looked Ravenslee over with eyes of yearning; noted the thin flanks and slender legs that showed speed, the breadth of shoulder and long arms that spoke strength, and the deep, arched chest that showed endurance. Joe looked and sighed and shook his head. 'Sir,' said he, 'I honour an' respect you to that degree as it would be a joy to fight such a man as you, and a rare privilege t' knock you down; but, sir, if I was to knock ye down'——

'You 'd earn a five-dollar bill.'

'Five dollars—for knockin' you down, sir?'

'Every time!' nodded Ravenslee.

'But, lord, sir'——

'Shut up, Joe; shut up!' snarled the Old Un, hopping out of the arm-chair. 'Don't gape like a perishin' fish! Come on upstairs an' knock the guv'nor down like 'e tells ye; an' 'arves on the money, mind. It was me as taught ye all ye know or ever will; so 'arves on the money, Joe, 'arves on the money. Come on, Joe, d'j' 'ear?'

'Crumbs!' said Joe.

'Look at 'im, guv—look at 'im!' shrieked the old man, dancing to and fro in his impatience. ''Ere 's a chance for 'im to earn a pore old cove a bit o' 'bacca money, an', what 's better still, t' show a pore old fightin' man a bit o' real sport, an' there 'e stands, starin' like a perishin' pork pig! Blimy, guv, get behind an' 'elp me to shove 'im upstairs!'

'But, crikey, sir!' said Joe, 'five dollars every time I'——

'Yus, yus, you bloomin' hadjective, two dollars fifty for each of us! 'Urry up; oh, 'urry up afore 'e changes 'is mind an' begins to 'edge.'

Thus presently Joe follows his guv'nor and the Old Un up a flight of stairs and into a large chamber fitted as a gymnasium, where are four roped and padded posts socketed into the floor; close by is a high-backed arm-chair, in which the Old Un seats himself with an air of heavy portent.

(Continued on page 259.)

OBEAH IN THE WEST INDIES.

ILLUSTRATIONS OF NEGRO WITCHCRAFT.

By Richard Thirsk.

THE West Indian witch-doctor is a delightful fellow in some respects, particularly when you do not come under his 'power.' There are few things that he cannot do, or at least pretend to be able to do, for he combines in his person the office of priest, physician, and scientist. Some daring ruffians add a still more romantic touch, and lay claim to having personal contact with the Evil One himself. Such fellows are feared because of the influence they are credited with exercising over the powers of darkness.

For instance, if you have an enemy—and who that lives under a warm sun has not?—the Obeahman will put him out of the way for you, provided you pay him his price. This varies according to your financial position and the status of the man to be killed. It is treated as a purely commercial transaction, and may be followed by unlimited blackmail levies after the charm has succeeded. Still, your enemy has disappeared. There is always that consolation when you pay the Obeahman to keep silent.

Happily this necromancer is not as a rule in a bloodthirsty mood. He has many different ways of earning his livelihood, and his appeal is as unlimited as his 'power,' embracing all classes of black society. If a tradesman is sufficiently cute to enter into a contract with an Obeahman, he will bring customers to his shop, make him prosperous, and prevent him from incurring bad debts. On the other hand—which seems unfair—he will compel unwilling shopkeepers to give long credit to patrons who have a reputation for getting into the black list. No doubt there are many people who would like to possess this astonishing charm. Well, it is to be had for a few pence! An old woman who rounded on her benefactor because he placed a spell upon her daughter, causing the girl to fall in love with an undesirable young man, testified in court that the Obeahman had given her a charm consisting of dried leaves. The possessor of this simple philtre could command unlimited credit. Better still, nobody could compel her to pay debts previously owing!

Then, again, if a nigger is arraigned before a magistrate for his misdeeds, all he need do is to leave his case in the hands of the nearest Obeahman; he will guarantee to see him safely through, bringing him out of court without a stain on his character. He will confuse the adversary's tongue so that he cannot speak properly, and he will influence the magistrate to pass judgment in favour of his client.

Not infrequently it happens that both contending parties engage Obeahmen. In a recent lawsuit that arose over the alleged stealing of goats, powder was sprinkled on the floor of the court-room with intent to influence the decision of the judge in favour of the defendant. Full of dismay, the plaintiff hastened to consult a rival practitioner, who supplied a still more 'powerful' compound, instructing his client that it was to be introduced during the luncheon interval. This was done accordingly. On his return to the court-house the judge was nearly choked. He found his bench and the jury-box saturated with some vile-smelling mixture that made the atmosphere poisonous. The cross-spell certainly was 'powerful,' and the witch-doctor made a great hit. He succeeded in his object for that day at least, compelling the court to postpone the hearing until the place was scrubbed clean and the court-room well aired.

To such a wonder-worker the discovery of hidden treasure is the simplest thing in the world, provided his dupes follow his instructions to the letter. The employés on a sugar estate

were told by a Vaudoux man or witch-doctor that wealth untold lay buried beneath their feet. All they had to do to obtain it for themselves was to kill a valuable horse belonging to their master, and to mix its blood with a charm the necromancer had for sale. This would cause them to be led to the exact spot. The thing seemed simple enough, and appealed to the native imagination. Arguing that the promised treasure would enable them to make their master a present of several horses in place of the one sacrificed, they bought the charm and bled the poor animal to death. The philtre was religiously mixed with the blood, and the search began. Alas for the sequel! No treasure was found, and the Obeahman had disappeared just when he was most wanted to counsel and guide. Enraged by the outrage, the master sought what reparation he could find, and, needless to add, the perpetrators ended by seeking fresh situations.

Goat's blood is much used for Obeah purposes, the blood of a 'goat without horns' being preferred. This is the witch-doctor's euphemistic allusion to the blood of a child, which has the reputation of being 'powerful.' At the trial of some negroes who were hanged for child-murder, it came out that an Obeahman had told the prisoners to sprinkle the doors of a bank with the blood of a 'goat without horns.' This, made effective by appropriate incantations, which secret they had to pay for, would cause the doors of the bank to fly open, giving them free access to the wealth concealed in the safes. They paid dearly for the experiment, their attempt to become rich quickly proving a short cut to the grave, for at the trial which followed they were found guilty of child-murder, and condemned to death.

Blood is also one of the component parts of love-charms. When a love-sick Julia is pining for some hard-hearted Romeo who does not respond, she hands over her earnings to a magician, who gives her in return some philtre, to which she must add a few drops of her own blood. Occasion must be found to mix this with food eaten by the desired one without his knowing it. All things being propitious, Romeo will then be compelled to wed Julia. Should he refuse to do so, he is totally unworthy of her and of her love. This strange belief is not confined entirely to the negro. Some time ago a girl was taken to a London hospital supposed to be suffering from the effects of poisoning. She had been given port-wine to drink by a man who pestered her to marry him. On discovering that he had surreptitiously put blood into it, she became hysterical and actually showed symptoms of poisoning. Blood was found in a sample of the wine sent for analysis, and the love-sick swain admitted having bled himself to command her love.

Other instances might be given of the analogy between certain Obeah beliefs and some Western superstitions. Here is an example. Just as our peasants nail a horseshoe to the door for luck, so the people of the West Indies hang on their walls a letter purporting to have been written by Jesus Christ. For long the original Hebrew document lay hidden beneath a great stone, being finally transmitted from the Holy City by a converted Jew, who also translated it. This remarkable document, possessing the virtue of guarding houses from evil and misfortune, is sold for the small sum of fivepence by 'Syrian' pedlars said to hail from Mesopotamia. An old woman, resolved to make profit out of the sale of this charm, had a number printed at her own expense. Ultimately the authorities were put on her track, and, suspecting her of practising the black art, had Lucy Cut-card arrested. In her defence she said that her home had been first pillaged, then burned down, and in order to protect her new abode she was obliged to obtain some copies of the printed charm. Misfortune had befallen her because she had omitted to provide herself with this safeguard, and she was making amends by having an abundance on hand!

General surprise is expressed when a witch-doctor is sentenced under the Obeah Act of 1904, passed with the intention of putting an end to the practices. Simple-minded spectators have been heard to mutter in the crowded court, 'Ah, you see what he do when he come out!' The fact that he has not the 'power' to work harm on the non-believing authorities might be supposed to place the impostor in a position of ridicule; but he is a cunning schemer, who knows his public, and has inculcated in them the belief that he can protect everybody save himself.

However, it is on record that a prosecuted Obeahman did succeed in getting even with his prosecutors—at least in popular imagination. He was a wily character, who combined with his witchcraft the equally hazardous occupation of smuggling. For having the misfortune to be caught landing contraband cargo he was fined fifty pounds. A few weeks after the fine was paid he obtained permission from the Governor to sail from one island to another on board the same Revenue cutter that had caught him in the act of smuggling. During the voyage a terrific storm arose, in which the vessel lost her mast and was nearly wrecked. Thus the magician's reputation was made. According to the credulous, he had placed Obeah on the cutter for interfering with him in his smuggling. 'The Governor might have known better than let him sail on her!' people declared. Still, why he should risk his own life to be revenged on the authorities is a question which never occurred to native logicians. Fortunately for the innocent passengers, a Bishop was down in the cabin praying for their safety. But for this lucky coincidence they would assuredly have gone down under such a 'powerful' Obeah!

This incident created such a stir that for a long time after it was difficult to get men to man the Revenue cutter. It was freely whispered that the vessel would be lost at sea, and, what was equally as bad, that the members of the crew would break out in sores and die. The captain was reputed to take periodical baths in lizards' blood as a timely precaution.

Obeah is really a phase of ju-ju, the primitive belief and customs of the fetichistic tribes of West Africa. It was introduced into the West Indies by the slaves pressed into the service of the plantations during the flourishing days of the sugar industry. While it has undergone changes and modifications through coming into contact with civilisation and Christianity, it still reminds us of the doings of witches in Great Britain and the New England States during the sixteenth and seventeenth centuries. Its exponents are picturesque ruffians, bearded and unkempt, enjoying the romance of practising an illegal profession under the eye of the law. They take their risks lightly. Hard work is the only thing they shirk, rum the one thing they love. Clad in the greasy rags that once did service as European clothes, they come down from their hiding-places when the coast is clear to see how the world wags and to seek fresh dupes. Most of them live in seclusion. This affords them greater safety, and at the same time lends them the added glamour of beings apart, people not only superior to their neighbours, but altogether different.

The stock-in-trade of the Obeahmen is as bizarre as their inventive minds. In their magic bags they carry about with them ground bones of the dead, needles and black thread rubbed with tallow, a looking-glass, cards, powder, quicksilver, and an evil-smelling gum reputed to be of the Devil. By ringing the changes on these mixtures they work their wonders and impose upon their victims. Curing diseases of the mind and of the body is merely a side issue with them. Protecting fruit-gardens and chicken-runs are their speciality. One thing they have in common—that is, the mercenary habit. They sell their 'power' to the highest bidder. Consequently, as the nigger's wealth, so his health and prosperity. All that the Obeahmen stipulate is that payment must be made according to the magnitude of the miracle to be wrought. They are accredited with having knowledge of secret African bush poisons. But this is an exaggeration. When they have recourse to this desperate extreme they are content to use arsenic, rat-poison, or finely powdered glass.

At the incantations the Obeahman twists and contorts himself, makes faces, and mutters unholy things in a monotonous sing-song. While he is thus communing with the Devil a 'cenci' cock is a very necessary part of his equipment. This is a weird species of the barn-door rooster, with its feathers standing out at right angles from its body. As a stimulus in the more fiery passages, liberal potations of rum must be supplied to the wonder-worker. This is to propitiate the evil spirits which bring illness and misfortune. The Obeahman is regarded as having the means to make these occult powers do his bidding. Though they are invisible to ordinary mortals, they are nevertheless capable of doing mental and bodily harm. They can assume an endless variety of forms and guises, carrying children off to the mountains out of wanton mischief, where they leave them to perish.

Occasionally these jumbies are caught and securely bottled with a safe cork, or it may be that they are bound to the seashore by a loop or knotted twigs. Pedestrians must be careful to avoid spirit-traps. They must not, under pain of dire consequences, molest the evil ones in their hopeless task of trying to bail the sea dry. Until this is accomplished they cannot be freed—which is a poetic way of saying that they are prevented from working mischief for evermore. Yet the fear of them still remains. Hence people conceal their real names, giving themselves what they call 'play names,' such as Lucy Cut-card referred to above. The real name is considered part and parcel of the individual, and the more high-sounding it is the more useful it is likely to prove. Shakespeare is honoured among the older negroes in Hamlets, Macbeths, Romeos, and Othellos. There are those who bear the unenviable prefixes Abnormal, Abdominal, and Ananias; while one boy was christened Waverley, and another Guy Mannering! Teresas, Jebuseeahs, and Dianas are as common as little nigger girls playing in tattered skirts. Even Queen Elizabeths are plentiful. Not infrequently these prefixes are changed. When a child is ailing for a lengthy period, the mother concludes that the name is not suitable. Another name is given, thereby changing the personality of the child. Should it ultimately improve in health, the mother unhesitatingly ascribes the change to this cause.

It not infrequently happens that negroes and mulattoes believe that Obeah has been 'put on' them in spite of precautions. It may have been placed secretly in their path, touching the bare foot, and thus causing swelling; or, as a woman averred, it may have been effected by placing eggs in her husband's grave immediately under the soil. Such unfortunates pine away from sheer fright; sometimes they go out of their mind. Their only safety is to have recourse to a rival practitioner for a more 'powerful' Obeah to counteract the evil. This is contained in a bag about an inch square slung round the neck of the bearer like a scapula. A bullock or its equivalent is the price paid. From time to time more Obeahs are necessary, requiring further payments until the victim is bereft of his earnings, and probably of his house and home. At this stage they usually apply for

relief to European doctors, who are credited with having obtained knowledge of their profession from the Obeahmen, since the native mind associates drugs with occult powers rather than with science. A medical man attended an old woman dwelling in a remote district. She suffered from rheumatism, for which he gave her a bottle of rum in which was dissolved powdered resin, with instructions to rub it into the affected parts. In the process of rubbing the spirit naturally evaporated, leaving the patient's hand sticky with the resin. Believing this to be the actual disease coming out of her body in this peculiar manner, the good woman spread the fame of her benefactor. Sufferers came to him from all quarters, pestering him for 'cures;' while one old man magnanimously offered him a cow for his rheumatism cure.

Much as these quaint superstitions may amuse us, they are merely survivals of customs and beliefs in vogue among our own ancestors. Obeah in some of its forms has been practised for at least ten thousand years. Therefore it is not surprising that at times of illness, misfortune, or strong emotion the old ideas and beliefs should be a source of comfort to the superstitious.

IN THE 'FORTY-FIVE.

CHAPTER IV

THE day of my adventure dawned. I dressed by candle-light, and Martha (good soul!) tried to be cheerful, though she thought I was going to my doom. The sun had not yet risen when I sallied forth, driving Kitty in the cart, with three sheep under the net behind for the Prince's army. You may imagine that my thoughts were not very pleasant as I drove along, save that Mary's spirit seemed to go with me, and I actually sang 'Drink to me only' as Kitty trotted along the well-known, oft-traversed road.

Never did Derby streets seem so strange. Some ragged Highlanders, looking very haggard, weary, and unkempt, stopped me on entering the town, and asked me my business; and I had much ado to make them understand that I had come to sell them my sheep. They wore their kilts, and their boots were worn out; and I saw some of the poor fellows stop passengers on the road, and whip off their shoes and put them on their own feet. Anxious faces peered out of the windows of the houses. Crowds of clansmen were gathered in groups in the market-place, and I heard them talking in a strange language that I could not understand. They all seemed anxious and perturbed, and shouted and gesticulated, and were evidently arguing and disputing. I drove into the yard of the Bull Inn, and old Josh, the ostler, came running to take my mare.

'These be strange times, Master Fairborne. Whatever be the world coming to?' he said.

Before I could answer him, a fine stalwart Scot, whom I took to be a chieftain, came along, and asked me if I had brought the sheep to sell; and I informed him that such was my intention. So he asked me how much I wanted, and I named a good high figure; and he said he would buy them for his Highness's army, and then and there he paid down the money in English notes, and ordered some men to take the sheep. Then, looking steadily for a few minutes at the horse and cart, he told me that I was not to leave the town before seeing him again. What did he mean by that? I wondered. Well, I was in no hurry to drive back, and thought I should like to see the sights and hear the news.

Josh had taken out the mare and was leading her into the stable, and I asked him what was going on.

In a whisper he answered, 'There 's a mighty stir going on. Some on 'em be for marching on London, and t' others want to go back to bonny Scotland. You can hear them argufying in the Court-house now, and yon brave lad they call the Prince wants to go on, and them chiefs won't let him. Leastwise, that 's what I hear.'

'And where are the brave "Blues," Josh?' I asked.

'The "Blues"! They be a lot of tarnation cowards. When they heard the Prince was coming, they marched off straight to Nottingham. Marched! Why, they ran like frightened sheep. It made me laugh to see 'em.'

'And have they done much harm to the town, these long-legged Highlanders?' I asked.

'Can't say as they have, master. They 've behaved like reasonable Christians. They proclaimed the new king in yonder market-place, and seized about three thousand pounds from the Excise folks; and people 's afraid of these kilts, and will be glad to see the backs of them.'

Just then I heard a strange sound in the market-place. It was a sort of a whirl and a squirl of a pig, and now sounded like the whistling of a wintry wind through the pine-forest, a noise I can never forget.

'Them be the bagpipes, master,' explained Josh; and a strange sort of music it was, such as I had never heard before. I rushed out of the inn-yard to see the players; and there I saw in the market-place two of them, with their weird bags and whistles, marching up and down and strutting as proud as peacocks. I went down Full Street, and there I saw the house that

belonged to the Earl of Exeter, where the Prince had taken up his quarters. There was a crowd coming out of All Saints' Church, where one Coppock, whom the Prince had made Bishop of Carlisle, had been preaching. There were very few Derby people about, for they had evidently resolved to remain in safety in their houses. Fires were blazing in the open spaces, and joints of meat were being cooked, the Scots standing by with hungry, eager faces.

I paused by the Court-house, and could hear distinctly the angry voices of the chieftains disputing and contending. I heard afterwards that the Prince had told them that he would rather be twenty feet underground than go back to Scotland and desert his English followers who were waiting to join his standard. I wandered up and down the streets. No one seemed to take much notice of me, or attempted to molest or attack me. I went back to the 'Bull,' and dined at the farmers' ordinary. There were very few farmers present; but their places were filled with Scotsmen, who did not allow conversation to interfere with the serious business of eating and drinking good ale. The chief who had so closely examined the mare was there, and had bowed to me very politely when I entered the room. When I had finished my dinner and smoked a pipe of good tobacco, I thought I would return home before the short winter day closed. So I went into the yard and told Josh to harness Kitty. He looked at me in a surly sort of way, and began to whistle.

I was just asking Josh what he meant by such extraordinary manners, when the chief strolled up, and said in his Scottish way of talking, 'I think I told you that you could not go without speaking to me first. His Highness will probably want your horse, and you can either sell it to me for the Prince or march with us.'

I was flabbergasted. Sell Kitty! If it had been any other horse I would not have minded; but to part with Kitty! No, I could not do it. So I told the old chief to his face that the mare was not for sale, that she was a favourite horse of mine, and that where she went, there would I go also.

'Vera weel; you ken the conditions,' he said; 'you gang with us.' There were half-a-dozen brawny sons of Scotland in the yard hanging about, and I knew it was no good resisting this outrageous demand. 'You will bide here the night,' said the chief; and I thought of Mary waiting for me at the sundial, and cursed my rashness in venturing to come to Derby when the rebels were there.

I wandered about the streets with anger in my heart. Should I go home, and leave Kitty to her fate? I could not think of doing that. Presently I called on Lawyer Little, who had been my father's old friend, and I told him my predicament.

'You must go home, my lad,' he said. 'I never heard of such a thing. Why, I hear the Duke, with a large army, is not very far away, and if you are caught with this gang of rebels, you 'll be hanged for a certainty. You 'll lose the mare, but that is better than losing your neck.' And that was all the comfort he could give me.

I went back to the inn, and strolled into the stable. Kitty whinnied when she heard my footstep. I patted her neck, and gave her another feed. No; I would not part with Kitty for all the Prince's gold, if he had any.

Well, there was nothing to be done but to wait events. Presently the rumour ran round the town that the Prince was going back to Scotland. Josh told me, and said it was a good job, too. I told the landlady of the 'Bull' that I should want a bed for the night, and strolled into the market-place. There I saw a great bustle. The men were rushing about as if they were mad, and there was a look of joy in their faces. A baker was standing before the door of his shop trying to keep a dozen hefty Scots back, but they pushed him aside and helped themselves to his loaves.

Shortly afterwards there was a stir at the entrance to the Court-house, and I saw some of the chieftains emerging with flushed and angry faces, and behind them walked a young man. He was the Prince himself, so handsome, so bonny; and there was a strange look of abject misery in his eyes, and a sort of dreamy expression, as if he hardly knew where he was or what he was doing. My heart was grieved for him, and as I looked at him and thought of the failure of his enterprise, his disappointment, though I am no Jacobite, I felt a tear trickling down my cheek. If his chiefs had let him, he would have marched on, to conquer or to die.

CHAPTER V.

JOSH roused me at an early hour, long before it was light, and said that the captain wanted me. I arose and dressed, and went down to the yard. There I found Kitty harnessed and already in the shafts. The captain seemed to be in a mighty hurry. He told me that I had better get 'bite and sup' before we started, as Heaven only knew when we should get another chance of a meal. So I foraged in the kitchen, and found some bits of cold bacon and a glass of milk; then said I was ready to start. The chief sat by my side, and I drove into the market-place, which was already crowded with clansmen forming into their ranks. He directed me to the house in Full Street where the Prince lodged, and behind us marched a guard of about twenty Scots. The captain knocked on the door, and presently some of the men went into the house and brought out a large hide-covered box, which they placed in the cart. I was then told to

drive on slowly, the guard marching, some in front and some in the rear. Kitty looked as surprised as I felt at these unwonted proceedings. The bagpipes were sounding in the streets of Derby as we passed along, and every one seemed delighted at the idea of returning home to Scotland. 'Whatever will become of me?' I thought, as I drove along beside the taciturn chief.

That drive was a nightmare. I will not describe it. We went on all day, just stopping now and then to rest the men and the mare, and to eat a chance meal. We seemed to be alone amongst the hills. Perhaps the clans were marching another way. The men appeared to be grumbling amongst themselves as the darkness began to fall, and presently one of them came to the chief, and talked in the strange Gaelic tongue. The men looked scared. We were passing through a dense wood, through which the road ran, and suddenly I heard the report of a gun. The captain ordered me to stop, and he clambered down from the cart and began to reconnoitre, standing on the bank by the roadside. Again another shot rang out, and this time a bullet had found its billet. The chief flung up his arms and fell back, wounded or dead. The men rushed up the bank, fired their muskets wildly into the wood, and then fled for their lives, leaving me sitting in the cart, with Kitty plunging about and rearing, startled by the firing. Presently I succeeded in calming her down, and tried to take stock of the situation.

First I examined the captain's body, and found that he was actually dead. Then I tried to discover my location. We had been travelling in a north-westerly direction from Derby along the Stockport road, and had probably covered about twenty miles. My home must be in a south-easterly course; but how distant it was I could not tell. However, the sooner I got there the better. So I turned the mare round, and resolved to strike southward as soon as I could find a road. I had not gone far before an inviting road promised to lead me in the right direction.

I was only just in time. I had scarcely travelled half a mile along it when I heard the strains of those blessed bagpipes. It was a narrow escape. If I had been found near the body of the slain chieftain, it would have been difficult to explain the situation to the clansmen, who knew no language but Gaelic, and their vengeance might have fallen on me. So I galloped the mare as hard as she would go, in order to get away as far as possible from the scene of the attack. Who fired that shot—a stray keeper, perhaps, or an outlaw—I never knew.

Kitty was getting tired, so I rested her presently beneath the shadow of a tree, and gave her a feed of corn which the dead chief had thoughtfully placed in the cart. And as I smoked my pipe I noticed again the strange trunk in the cart, that I had almost forgotten in my excitement, and wondered what it contained. However, I resolved to restrain my curiosity till I reached home, if ever I got there. The scene was wonderfully peaceful. The moon shone upon the road and woodland glade, and I saw the Great Bear shining in the northern sky, and by it traced the position of the Pole-star, so that I might steer my way by its aid. A brook by the roadside presently afforded the mare a drink, and I discovered that I was ravenously hungry. As I was examining the trunk, I found something tied up in a cloth, which proved to be the remains of a ham and a bottle of whisky. So, while Kitty munched her corn, I fed like a king, and we started off again, mutually pleased.

We had travelled scarcely four miles when the moon shone on a swinging signboard that seemed familiar. Surely it was the 'Fox and Geese'! Yes; I saw there reynard and his prey, and blessed them. This lonely inn was little more than ten miles from my home. I had often ridden to the meet of the harriers here, and could return blindfolded. In another couple of hours I should be at home. Kitty, too, pricked up her ears and trotted along merrily.

. . . . . .

I gave my accustomed whistle as I entered the gate of Lone-Lane Farm; and though it was midnight, Martha was there at the door waiting for me.

'I'd given you up, Master Mike,' she said. 'Thank God, you 've come! The Colonel 's been here twice, and I was all of a tremble, as he said them Scots fellows had taken you prisoner, and we should never see you again alive.'

'Well, here I am, Martha, alive and kicking. Help me with the mare, and I'll tell you all about it.'

'You 've brought your luggage with you, I see. What 's in this big trunk?'

'That remains to be seen,' I said; and I tried to move the thing, but it was as heavy as lead. However, I backed the cart to the kitchen door, and then, pushing and dragging, we managed to get the trunk into the room. So, when the mare was fed, I sat down to supper. After telling Martha the events of the day, I proceeded to try to open the great trunk. It had a strong padlock; but, with the help of the kitchen poker, I managed to break it open and raise the lid.

Could I believe my eyes? It was crammed full of money—guinea-pieces, sovereigns, silver, and notes. It was the treasure-chest of the Prince's army! I will not try to describe our transport of delight. Martha wept and danced around it. She fingered the gold and toyed with it like a miser. I was staggered at the sight of such wealth. What should I do with it? Could it be mine? I could scarcely return it to the Prince; and why should I give it to the Government? It was mine by right of capture. It was taken from an enemy. Why should I not keep it? I needed it sorely enough.

'Well, Martha, what shall we do with all this gear?'

'Do with it! Keep it, Master Mike. God has sent it to you. It is yours;' and I think she was right.

And so wealth came to Lone-Lane Farm, and revived the fortunes of the Fairbornes.

I need not tell you the rest of the story. Of course, Mary was taken into my confidence, and gradually the neighbours knew that I had come into riches. They said a mysterious uncle had died abroad and left me all his wealth. Some said I had struck a gold-mine on Sinfin Moor. I consulted my old lawyer friend at Derby as to what I should do with my find. He was overjoyed at my luck, and invested the money gradually for me in the Bank of England, besides buying some land and houses. I was glad to be able to re-roof the old house and re-stock the farm. And the Colonel—he was flabbergasted! There was no more talk of keeping me away from my beloved Mary. Sir James vanished from our ken, and was no more heard of; and when the marriage-bells were rung and all the villagers crowded into the church to see our wedding, and the Colonel gave the bride away, there was no one more pleased except myself.

All this took place many years ago. Mary and I and our children live at the Manor now, except when my parliamentary duties oblige me to be in London. Martha still lives at the farm with her nephew and his wife, who manage the estate for me; and Kitty leads an honoured life in her old age, and is the pet of the family, as she may well be, for to her I really owe all my luck and fortune.

THE END.

THE FOREIGN LEGION.

By the late Captain VERE SHORTT.

MOST people in this country know that France, in addition to her conscript army, maintains a force of foreign troops or mercenaries—if, indeed, men can be called mercenaries who give their military services for the sum of rather less than one penny per diem. *La Légion Étrangère*, or, as it is called in Britain, the Foreign Legion of the French army, a permanent part of the 19th French Army Corps, is a lineal descendant of the famous Irish brigade of Louis the Fourteenth.

First of all I wish to disabuse my readers' minds of the idea that there is anything romantic or, to coin a word, 'Ouidaesque' about the Foreign Legion, because nothing could be farther from the truth. The Foreign Legion is much like any other body of professional soldiers, with the difference that the men are drawn from all nations. Roughly speaking, the composition of the Legion is as follows: About 25 per cent. were Germans—mostly deserters from the frontier garrisons; about 25 per cent. are Frenchmen, some of whom have entered the corps from pure love of adventure and soldiering, some because they were out of work and starving, and some because they were in trouble of some sort; and about 50 per cent. of other nations—Spaniards, Italians, Turks, Belgians, and a few English. Of course, many of these men were of good social position, but certainly not the great majority. The Legion asks no questions, and a man can call himself what he likes. I have known men forget to answer to their names, so new were they; but if it has done nothing else, it has given an opportunity to thousands of men who were 'down and out' in their own country to recover at least their self-respect, and in hundreds of cases has opened a new and honourable career for them.

The Foreign Legion consists of two regiments of about four thousand men each. Each regiment is divided into four battalions of about one thousand men each, which are again divided into four companies. The system is the 'double company' one, as in most Continental armies. The officers consist of the colonel commanding a regiment, with a lieutenant-colonel under him, commandant (*chef de bataillon*), captain, lieutenant, and sous-lieutenant. Then there is another rank which is quite unknown in the British army—that of adjutant or company sergeant-major. The adjutant wears exactly the same uniform as a sous-lieutenant, with the exception of a thin red silk cord braided into the gold lace on his cap. Each company is divided into four sections or *pelotons*, and is commanded by a captain (always a mounted officer), three subalterns, and an adjutant. The non-commissioned officers are sergeant-major, *sergent-fourrier* or quartermaster-sergeant, sergeant, and corporal, all of whom have much the same position and duties as in the British army, with the exception that they have the *right to punish*. For instance, a sergeant can, and very often does, give a man three days' *consigne*, or confinement to precincts of barracks, without giving any reason, but simply stating in his report: 'Gave the legionary A. B. three days' *consigne*.' If the sergeant states the *motif*, or reason, for the punishment, the case goes on to the captain of the company, who will probably increase the punishment to fourteen days' *salle de police*, or guard-room, and send the case on to the commandant, who will alter it to twenty-eight days' prison, and send it on to the general commanding the division, who will refer the case to a court-martial, which may sentence the man to years of imprisonment or to service

in a penal battalion. Thus it will be seen that the right to punish is a very real and terrible power to give to a man in a subordinate position. Personally speaking, I think this system is wrong; but on this question I am quite aware that I have the majority of French officers against me.

A word as to these same punishments—I mean the ordinary regimental ones—may not be out of place. People in Britain and elsewhere have been shocked and horrified by lurid stories of punishments inflicted on soldiers in the Foreign Legion. Now, whether there is or is not a substratum of truth in these stories as applied to men in the disciplinary battalions I should not like to say. I have heard stories of men in these regiments being put *en crapaudine*—that is, tied wrist to ankle backwards, which is a form of torture, and very severe torture; or being immured in 'silos' or grain-pits; but I have never heard of these punishments being inflicted on men of the Foreign Legion except in one case. That was an Italian legionary who struck a non-commissioned officer while on active service. By all the laws of the French army there is only one punishment for an offence of this kind—death; but by some extraordinary chance—I think it was owing to the extreme provocation received—the man got off with six hours' *crapaudine*, of which he did three, and those three hours were sufficient to lay him up for six weeks.

All stories of men being kept *en crapaudine* for days may be dismissed as inventions. No man could live through the punishment. The ordinary punishments inflicted are *consigne*, or confinement to barracks, with extra fatigue duty, *salle de police*, or guard-room, and prison. In extreme cases incorrigibles are sent to the disciplinary battalions, or *biribi*, as they are called in the French army. The discipline in the Foreign Legion is strict, as it must be in such a force, but neither brutal nor unjust.

A man can join the Foreign Legion anywhere in France, and at almost any age, provided that he is physically sound. On joining he is given a ticket for Marseilles, where he proceeds without any supervision whatever. If possible, men are sent in parties; but if there are not enough recruits to form one, they are often sent singly or in pairs. Arrived at Marseilles, the men are usually kept at Fort St Jean until there are enough to form a small party, when they are forwarded by steamer to Oran under the charge of a non-commissioned officer. From Oran, if drafted to the first regiment, they are sent to Sidi-bel-Abbès; and if to the second, to Saida. It is rather funny to see a batch of recruits arrive. Most of them have sold their civilian clothes at Marseilles, and consequently turn up in a most extraordinary mixture of garments. I have seen a man arrive in a dress-coat, or, rather, half a dress-coat (he had had an argument with a friend about the ownership of a packet of cigarettes), a pair of blue dungaree trousers, no boots (he had lost them at cards in the train), and an overcoat! Poor fellow! he was an excellent soldier, and got quick promotion; he was a sergeant in two years, and got brained by an Arab mace in the fight at Ain Sefra.

On joining the Legion a man gives in his civil clothes, which are destroyed, and receives his kit, which consists of a *capote*, or long blue-gray collarless overcoat, one blue double-breasted tunic, two pairs of red trousers, three shirts, three pairs of white trousers for fatigue and summer wear, and a *képi;* also belts, rifle, bayonet, &c., and two pairs of boots. These are probably the best, as they are certainly the most expensive, boots used by any army in the world. The contract price is about twenty-three francs (19s. 2d.) a pair. This is absolutely necessary, as for the marching the Legion has to do cheap boots would be useless. No socks are worn; in place of these the men use *chaussettes Russes*, or Russian socks—so called, I believe, because they are neither Russian nor socks, but squares of greased linen folded over the feet. I have used them myself many times, and can testify that they are excellent things to march in. The uniform is precisely the same as that of the French line, with the exception that on the collar and tunic, instead of the usual regimental number, the Legion carry a grenade; that the epaulets are green with a red fringe instead of all red; and that every soldier in the Foreign Legion wears a blue woollen sash folded many times round his waist *over* his tunic, to act as a cholera-belt. According to regulations, this sash is worn on all occasions, even on fatigue duty. With the officers it is replaced by a sort of waistcoat of the same cloth as the tunic. The officers' trousers are worn very full over the hips and tight round the ankles, as is the invariable rule in the army of Africa. In fact, some of the younger officers look extremely grotesque, as they go to inordinate lengths in fullness of trousers and size of *képi*. The latter, for some obscure reason, is supposed to increase in smartness in direct proportion to its size.

The Legion exists primarily for two purposes: to fight and to march. When neither of these is to be done the men are put to road-making. Quite 80 per cent. of the roads in Algeria and almost all the barracks have been built by the Legion; but the ability to march is the Legion's great pride. The ordinary day's march is forty kilometres, or nearly thirty miles. This is done in all sorts of temperatures, from normal to one hundred degrees Fahrenheit in the shade, each man carrying a pack of over sixty pounds weight. There is none of the smartness of a British regiment's march about the Legion. The men keep their section, and that is about all that can be said. Sometimes one sees a strong man at the end of a day's march carrying two or even three rifles. The men are marching anyhow, and would, I fancy, to a British officer

seem to be utterly out of hand. This would be a mistake. The officers do not care *how* the men march, but march they must, and be fighting fit at the end of that march. There is no such thing as falling out. To do so (on the Sahara stations at least) is to invite a cruel death at the hands of the Arabs. The system of march, as laid down in the regulations, is one hour's march, five minutes' rest, and this is strictly adhered to.

Some years ago there was a case of a major who took his battalion for one of these marches. For some reason or other the men's marching was not up to his standard; so when they returned to quarters he ordered the officers to fall out, and then kept the men doubling round the parade-ground until about twenty dropped from sheer exhaustion, the others being almost in like case. I am glad to be able to state that as the upshot of this affair he was put on half-pay.

There is a sort of unwritten law in the Legion that a retreat—if such a regrettable necessity should occur—shall be carried out at the slowest walk possible. I once asked the reason of this, and was told that three-quarters of the men had run *once*, either from their creditors or their wives, and that once was quite enough for any man to run! Certainly the legionary is not an adept at retreat. Eleven times in eleven great battles have whole companies of the Legion refused to obey the order to retreat, and died to the last man where they stood. How many other troops, conscript or professional, can point to the same record?

The great difference between the Foreign Legion and the rest of the French army is the strength of the *esprit de corps* in the former. In the national army of France *esprit de corps* is repressed as much as possible, and *esprit d'armée* is sedulously fostered. When an officer in the French army is promoted he is always transferred to another regiment, generally as far away as possible from his old one. A man cannot get up much enthusiasm for a regiment in which he knows that at most he will pass only a few years, and which he looks forward to leaving, as it means superior rank and increased pay. In the Legion an officer knows that, almost always, once a *légionnaire*, always a *légionnaire*, and so he develops a very strong *esprit de corps;* and the same holds good of the rank and file. This shows itself in the superior *chic*, or smartness, of the legionary to the linesman. The French *piou-piou*, or infantry soldier, is one of the most slovenly-looking soldiers in the world, while the legionary is just the reverse. A man of the Legion will spend a couple of hours ironing a crease in his white trousers with the edge of a tin cup before going into town!

The life in the Foreign Legion, when not varied by spells of hard work, marching, or fighting, is apt to be monotonous to a terrible degree; therefore it is not surprising that many of the men drink, and drink hard. This may seem surprising when one considers their pay—a little less than one penny per day; but it must be remembered that many of the men are in receipt of money from home, and that in any case liquor in Algeria is ridiculously cheap. For a penny nearly a quart of fiery Algerian wine can be got, for sevenpence a pint of absinthe, and for fivepence a pint of *bapedi*, or fig spirit. Cigarettes can be procured at about a penny for twenty. Also, there is a very old custom in the Legion which forbids a man to '*faire Suisse*' ('do a Swiss'), which means to drink alone, under any circumstances. If a man has only a penny, and thinks he would like some wine, he has to look for some one else to share it with him; and, human nature being what it is, he generally picks on some one who has another penny to buy more wine when the first supply is finished. In this way a man will often drink more than he had any intention of doing.

One idea which people in Britain seem to have is that the *cantinière*, or lady canteen-keeper, is a trim damsel in a neat uniform, who exercises a refined and elevating influence on the brutal and licentious soldiery by whom she is surrounded. I regret to say that this idea is a delusion. All the canteen-keepers with whom I have been brought in contact have been ample ladies of mature years and forbidding presence. Some of them had moustaches, and without exception they all possessed a vocabulary calculated to paralyse an ordinary man, and even to cause the boldest legionary to turn pale, or, rather, blush. This is not an easy feat.

Now, this cheapness of drink, and especially of absinthe, leads to a disease which I believe is peculiar to the French army in Africa. This disease is known as *le cafard*. The *cafard* is a small beetle which spends its time pushing balls of dirt about, and men who suffer from *cafard* say they feel as if they had one in their head. I think myself it may be described as an aggravated case of 'blue hump' bred of dullness and disgust of life. In any case, it is fearfully common in the Legion. It may lead to anything from a mad freak without any seeming motive to an equally motiveless homicide. If a man sits on his cot, looking straight in front of him and speaking to no one, that man requires watching. He may come out of his *cafard*, or quite possibly he may seize his bayonet and stab the nearest man, run amuck, and eventually have to be shot down like a mad dog.

Another result of the hard work and monotony is desertion, or, as it is called in the Legion, going *en pompe*. Men very seldom get away. In the settled parts of Algeria there is a standing reward of twenty-five francs for each deserting legionary brought in, and on the Saharan stations capture by Arabs means torture and death. On these stations photos of the bodies of legionaries who have been captured by the Arabs are hung in the barrack-rooms to discourage intending

deserters. This does not render the Arabs popular with the Legion, and accounts for the merciless nature of the small fights which constantly take place in the south of Algeria.

The Foreign Legion, as at present constituted, was raised in 1831, and since that date has taken an honourable part in every war which France has fought. It has been commanded in turn by some of the most celebrated soldiers of France, among others Marshal M'Mahon and Generals Canrobert, Bazaine, and De Négrier. Its losses have been enormous. Two thousand men of the Legion were lent to Spain in the Carlist war for a consideration of eight hundred thousand francs (which was never paid), and of these five hundred returned to Algeria starving and in rags. It will never be known how many of the Legion have left their bones in the swamps of Indo-China and Madagascar, but they must number many thousands.

Probably every known profession and trade is represented in the Foreign Legion. The officers' mess and other buildings at Sidi-bel-Abbès were designed, built, and decorated by legionaries. At that time one company alone yielded seven men who were qualified architects. There is a legend in the Legion to the effect that in the Mexican war the authorities wished to hold a High Mass in the Cathedral in Mexico City. The local clergy refused to have anything to do with this scheme, and the French authorities were in despair. At last a man was found in the Legion who announced that he had been an archbishop, and was one still unless he had been unfrocked! Inquiries were made, the man's story was proved to be true, and he conducted Mass, going back to his duty afterwards.

The term of enlistment for the Legion is five years, and at the end of his service the legionary receives a suit of plain clothes, a ticket for any town in France he wishes, and a franc a day for subsistence. On arrival at his destination he usually finds himself penniless in an already overstocked labour market, and as often as not goes straight to the nearest recruiting office and re-enlists in the Legion.

The Foreign Legion, contrary to general belief, is *not* a regiment of criminals, but a body of men in the main good, honest soldiers, who are worked very hard for miserable pay. The shooting of the Legion is the best in the French army, and it does not stand to reason that desperate criminals would be trusted with ball cartridge for musketry or any other purpose. The motto on the Legion's colours is, '*Honneur, Valeur, Discipline*' ('Honour, Bravery, Discipline'), and it may be confidently stated, without fear of contradiction, that in its eighty-five years of existence the Legion has lived up to its motto.

In connection with the recent expansion of the Foreign Legion, the Paris newspapers stated that in the early days of the war eight thousand Italians, inspired by the example of Ricciotti Garibaldi, joined this force. The Swiss, like the Americans, numbered four thousand five hundred, and the Russians nearly four thousand, besides Poles, Alsace-Lorrainers, Czechs, Armenians, and Syrians.

Much interest was aroused by the announcement made at the beginning of last September that the King had approved of the reinstatement of John Ford Elkington in the rank of lieutenant-colonel, with his previous seniority, in consequence of his gallant conduct while serving in the ranks of the Foreign Legion of the French army. Colonel Elkington, on 14th September 1914, had been cashiered by sentence of a general court-martial after thirty years' service in the Royal Warwickshire Regiment. He at once joined the Foreign Legion under his own name. 'It was hard work,' he said to a correspondent, 'and we were nearly always in the thick of it. I had to take things as they came, and three weeks after I had enlisted I was at the front. It was not new to me, and I did not need training. Many of the men of the Legion wore medals—medals of all the wars for the last twenty years. I could not wear mine, even if I had wanted to; I was cashiered, and had no right to them any longer.' A friend sent him a copy of Rudyard Kipling's poem, *If*, which he carried in his pack on many a long march through France. He read it in bivouac and in the trenches, and he said, 'It pulled me through the bad times.' A clever American surgeon named Wheeler also became a helpful friend, and when they went into action both fell together. Colonel Elkington spent ten months in hospital at Grenoble, where a damaged leg was operated on eight times, and eventually saved. The Croix de Guerre was afterwards conferred upon him for bravery at the front.

THE INCOMMUNICABLE.

When morning broke in a silver smoke,
And the garden glitter'd and sung,
In the heart of Eve a longing awoke
She never might teach her tongue.
On a later morn, when her child was born,
It rose with a voice to speak,
Yet fell in a kiss and a tear forlorn
On the cooing baby's cheek.

Now in each heart it dreams apart,
A longing dear and dumb;
It wakes and aches, and the tears will start,
But never the words will come.
Most dim, most dear, most far-and-near,
It calls and peeps and flies,
But or ere its haunting face grows clear
The heart is old and dies.

A dew, a fire, a rich desire,
It sighs by sunset waves,
It flashes ere looks of love retire,
It melts by weedy graves.
Yet whenever its soul doth quite unroll
For a word and a touch to say,
The earth will blossom from pole to pole,
And the stars will shine by day.

COAL-TAR, DYES, AND EXPLOSIVES.

By E. FEARON.

TO most people coal-tar is a black, messy substance, to which they generally give as wide a berth as possible; but to the chemist it is one of the most wonderful substances known. From it he extracts products as far apart in their properties as the poles: benzol to drive your motor, saccharine to sweeten your coffee, phenacetin to cure your headache, dyes to colour your clothes, and numerous other things in everyday use throughout the world. The pioneer work in the discovery of coal-tar products was nearly all done by English chemists, who, by the way, can give their German rivals a good start and a beating; but, owing to our fearful and wonderful patent laws and Germany's unscrupulous method of filching ideas from all and sundry, the commercial exploitation of their discoveries was taken up in Germany, and in 1914 the dye industry there had grown into one of their most powerful organisations. There is little doubt that it is owing to Germany's vast dye manufactures, and our lack of them, that the war has dragged on all this long time; for immediately war was declared all their colour-works turned from the peaceful occupation of making dyes to the manufacture of explosives.

To the uninitiated it may seem strange, but it is nevertheless true, that the materials used in dyeing—benzol, toluol, carbolic acid, sulphuric acid, nitric acid—are also the raw materials from which high-explosives are made. Can we doubt that Germany took this into account when she laid her plans? Look at the facts as they are known. Thousands of men were employed in the dye industries (one company alone had ten thousand men so engaged), about 75 per cent. of their collieries had coke-oven plants installed—compared with some 25 per cent. in this country—and a sum of over two millions sterling had been set aside for the production of synthetic ammonia, which would be converted into nitric acid. They realised that, to a very great extent, this would be a war of high-explosives, and were prepared to supply unlimited quantities. We, on the other hand, were unable, till quite recently, to turn out anything like enough; and it is only owing to the energies of Lord Moulton and the High-Explosives Committee of the Ministry of Munitions, helped by a body of scientific men, that we are now in a position not only to supply our own needs, but to render assistance in this direction to our Allies.

It is, indeed, a striking testimony to the ability of the British nation to get out of a tight place that we are at last beating Germany at her own game. In the Boer war our experts pinned their faith to shrapnel, and for the first few months of the present conflict they still clung to their faith in it; but with the deep trenches and dug-outs employed by the enemy it was found that shrapnel was practically useless. Something that would explode with the greatest possible violence had to be used, and had to be manufactured in enormous quantities if adequate results were to ensue. Tri-nitro-toluene was the best for this purpose; but where were the supplies of toluol and the factories for converting it into T.N.T.?

Toluol is a colourless liquid that can be distilled from coal-tar or extracted, by suitable means, direct from coke-ovens and towns' gas. The Ministry of Munitions set to work, and in a comparatively short time every plant in the kingdom that dealt with the carbonisation of coal and every tar distillery was turning out toluol; works were established to manufacture the T.N.T., and since the beginning of the great advance we have seen the result of these efforts, as have the Germans!

Turning to the question of explosives generally, apart from warfare, it is not exaggerating to say that much of the progress in road-making, mining, railways, and lately in America and Canada even in agriculture, is due to command of the energy stored up in these terrible engines of death. Although gunpowder was invented by the Arabs in the thirteenth century, and introduced into Christendom about 1270, the industrial use of explosive powder was neglected for centuries. Till about 1860 ordinary gunpowder was the only source of 'compressed energy' that man had at his disposal for killing either his fellow-men or the various beasts and birds he hunted, or for mining and tunnelling. For any of these purposes a mixture of charcoal, saltpetre, and sulphur, made in different grades of fineness, had to suffice; but of late years scientific research has resulted in the discovery of infinitely more powerful agents in dynamite, gelignite, cordite, melinite, and of course T.N.T.

In all these newer explosives nitric acid is used

 [*All Rights Reserved.*]

for the purpose of nitration, as it has been found that nitrogen compounds explode more quickly, and therefore exert more pressure, than any other bodies that are available. All sorts of materials have been experimented with to produce these explosives; but there are several governing factors that have to be kept in mind in actual practice. They must be safe to handle, and not be liable to spontaneous combustion; they must not unduly corrode the rifling of the guns in which they are to be used; and for mining, &c., they must not produce poisonous fumes when fired.

One of the earliest of the high-explosives was nitro-glycerine, which was introduced in 1847 by an Italian named Sobrero; but so many accidents occurred when it was used in blasting, due to its very unstable nature, that its use for this purpose was prohibited in many countries, including Great Britain. It is a liquid made by treating glycerine with nitric acid, and so unstable as to explode with the slightest shock. It was, however, so much more powerful than gunpowder that chemists at once set themselves to solve the problem of making it safe to handle, and a Swedish scientist, Alfred Nobel, was the first to do so satisfactorily. This he did by mixing the nitro-glycerine with a kind of porous earth, and so forming a substance somewhat resembling sawdust in appearance, which he called dynamite. By this means it was rendered so safe that it revolutionised the science of blasting, as it is not at all easily exploded except by fulminate of mercury, which, on explosion, exerts a pressure of half a million pounds to the square inch. Although dynamite was a great advance on gunpowder, it was not powerful enough for modern purposes, and Nobel continued his search for a more active base for his nitro-glycerine compounds than the earth used in dynamite, and by a lucky accident hit on collodion, which is prepared by dissolving gun-cotton in ether. The new explosive was known as blasting-gelatine, and was half as powerful again as dynamite, which it has, to a great extent, superseded.

With regard to the explosives employed in warfare, these are of various kinds, depending upon the use to which they are to be put. The charge to be used as a propellant in guns is quite different from the bursting-charge of shells, mines, &c. It was found that blasting-gelatine could not be used in guns, as the charge, on being fired, simply shattered the steel body instead of driving out the shell, so rapid and violent was the explosion. Now blasting-gelatine is made by adding about 8 per cent. of gun-cotton to warm nitro-glycerine; but Nobel found, to his surprise, that if equal proportions of the two were used the mixture was suitable for firearms!

The cordite used in the British army and navy is almost identical with Nobel's mixture, but is made by combining the gun-cotton and nitro-glycerine at a low temperature by means of an acid, the resulting semi-fluid material being passed through holes in a plate, so that it forms strings or cords of varying sizes, according to the diameter of the holes; hence its name.

Various substances are employed for the bursting-charge of shells, &c., one of these being the picric acid compound known as lyddite in England, melinite in France, and *shimose* in Japan. Picric acid is, indirectly, a derivative of coal-tar, being made by adding one part of carbolic acid to eight parts of fuming nitric acid, and for some years it was largely used as a yellow dye; but an explosion in a Manchester dyework drew attention to its dangerous properties, and since then it has been reserved for explosive purposes, being melted and combined with gun-cotton dissolved in alcohol or acetone to form lyddite.

Some of the most powerful blasting substances used in mining and quarrying now contain a proportion of picric acid, the poisonous fumes being either absorbed by the addition of another ingredient, or oxidised by complete combustion. With proper precautions there is little danger with modern explosives, as they are all tested by Government inspectors.

Dynamite is not often used for mining, &c., nowadays; but a new field of usefulness has been found for it in America and other countries, where it is employed in clearing land for tillage, and even as an alternative to ploughing. Where the ground has been exhausted by repeated crops being grown without manure, it has been found that deep ploughing by dynamite brings to the surface a rich subsoil which yields splendid crops. The reason of the increased fertility is not fully known, but it is possible that some of the minute organisms inimical to the bacteria that are beneficial to the plant-life are killed by the dynamite.

How curiously intermingled, then, are life and death in this complex existence of ours; and how strange it is that a substance that not so long ago was looked upon as a 'waste product' has now become the basis of so many diverse things such as those enumerated!

THE DEFINITE OBJECT.

CHAPTER XV.—*continued.*

BUT now, when Joe would have ducked under the ropes, the Old Un stayed him with an imperious gesture, and, clambering into the ring, advanced to the centre and bowed gravely as if to a countless multitude. 'Gentlemen,' he piped in his shrill old voice, 'I take pleasure to introduce Joe Madden, undefeated 'eavy-weight champion o' the world, an' the guv, both members o' this club, an' both trained by me, Jack Bowser, once light-weight champion o' England and hall the Americas. Gentlemen, it will be a fight to a finish—Markis o' Queensberry rules. Gentlemen, I thank ye.' Having said which, the Old Un bowed again and gravely stepped from the ring, and, ensconcing himself in the arm-chair, drew out a large and highly ornate watch, while Ravenslee and Joe vaulted over the ropes.

And now behold them facing each other, the brown-skinned fighting man wise in ring-craft and champion of a hundred fights, and the white-fleshed athlete, each alike clear and bright of eye, light-poised of foot, quivering for swift action, while the Old Un looks heedfully from one to the other, watch in one bony hand, the other upraised. 'Get ready!' he croaked. 'Go!'

Comes immediately a quick, light tread of rubber-soled feet and the flash of white arms as they circle about and about, feinting, watchful and wary. Twice Ravenslee's fist shoots out and twice is blocked by Joe's open glove, and once he ducks a vicious swing and lands a half-arm jolt and makes Joe grin and stagger; whereat the Old Un, standing upon his chair, hugs himself in an ecstasy, and, forgetful of such small matters as five-dollar bills, urges, prays, beseeches, and implores the guv to 'wallop the blighter on the p'int, to stab 'im on the mark, an' to jolt 'im in the kidney-pit.' 'Go it, guv!' he shrieked; 'go it! In an' out again; that 's it. Gorramighty, I never see sich speed! Oh, keep at 'im, guv—make 'im cover up—sock it into 'im, guv! Ho, lumme, what footwork! You 're as quick as light-weights. Oh 'appy, 'appy day! Go to it, both on ye!'

And 'to it' they went, with jabs and jolts, hooks and swings, with cunning feints and lightning counters, until the place echoed and re-echoed to the swift tramp of feet and dull thudding of blows; while the Old Un, hugging himself in long, bony arms, chuckled and choked and rocked himself to and fro in an ecstasy. Moreover, when Joe, uttering a grunt, reeled back against the ropes, the Old Un must needs shriek and dance and crow with delight, until, bethinking him of his duty, he checked his excitement, seated himself in the arm-chair again, and announced, 'Time! End o' round one.'

And now it is to be noticed that as they sit to take their two minutes' rest, neither Ravenslee nor Joe, for all their exertions, seems unduly distressed in his breathing.

'Sir,' says Joe, looking his pupil over, 'you 're uncommon quick on your pins. Never knowed a quicker; did you, Old Un?'

'No, me lad, never in all me days.'

'An' you 've surely got a punch, sir.—Ain't 'e, Old Un?'

'Like a perishin' trip-hammer!' nodded the Old Un.

'Likewise, sir, you 've a wonderful judgment o' distance; but, sir, you need experience.'

'That 's what I 'm after, Joe.'

'And you take too many chances; you ain't larned caution yet.'

'That you must teach me, Joe.'

'Which I surely will, sir. In the next round, subject to no objection, I propose to knock ye down, sir.'

'Which means two dollars fifty for each on us, Joe, mind that,' added the Old Un.

'So fight more cautious, sir, do,' pleaded Joe, 'and—look out.'

'I will,' nodded Ravenslee.

'Time!' croaked the Old Un. 'Round two! And, guv, look out for yer p'int, cover yer mark, an' keep a heye on yer kidney-pit!'

Once again they faced each other, but this time it was Joe who circled quick and cat-like, massive shoulders bowed, knees bent, craggy chin grim and firm-set, but blue eyes serene and mild as ever. A moment's silent sparring, a quick tread of feet, and Joe feints Ravenslee into an opening, swings for his chin, misses by an inch, and, ducking a vicious counter, drives home a smashing body-blow, and, staggering weakly, Ravenslee goes down full-length.

'Shook ye up a bit, sir?' inquired Joe, running up with hands outstretched. 'Take a rest, now do, sir.'

'No, no,' answered Ravenslee, springing to his feet; 'the Old Un hasn't called "Time" yet.'

'Not me,' piped the old man; 'not bloomin' likely! Go to it, both on ye. Mind, that 's two-fifty for me, Joe!'

What need is there to tell the numerous feints, the lightning shifts, the different tricks of in-fighting, and all the cunning strategy and ring-craft that Joe brought to bear and carefully explained between rounds? Suffice it that at the end of a certain fierce 'mix up,' as Ravenslee sat outstretched and panting, the white flesh of arms and broad chest discovered many livid marks and patches that told their tale; also, one

elbow was grazed and bleeding, and one knee showed signs of recent contact with the floor.

'Joe,' said he when his wind was somewhat recovered, 'that makes it thirty dollars I owe you, I think?'

'Why, sir,' said Joe, who also showed some slight signs of wear, but whose breathing was soft and regular—'why, sir, you couldn't call that last one a real knock-down.'

'You 'm a liar, Joe—a liar!' cried the Old Un. —'Blimy, guv, Joe 's a-tellin' you crackers, s' help me! Your 'ands touched the floor, didn't they?'

'And my knees too,' nodded Ravenslee, 'also my elbow—no, that was last time or the time before.'

'Well, then, tell this lyin' Joe-lad o' mine as 'e surely did knock ye down.—Lord, Joe!' cried the Old Un, waxing pathetic, ''ow can ye go takin' money from a pore old cove like I be? Joe, I blushes for ye—an' Time, Time there, both on ye!'

'But we don't want any more, do us, sir?' inquired Joe.

'Why, yes, I think I can go another round or so.'

'There y' are, Joe; the guv 's surely a game cove. So get at it, me lad, an' try an' knock it up to fifty dollars. 'Arves, Joe, mind.'

'But, sir,' began Joe, eyeing the livid blotches on Ravenslee's white skin, 'don't ye think'——

'Time—oh, time, time!' shrieked the Old Un. Whereupon Ravenslee sprang to the centre of the ring, and once again the air resounded with tramp of feet and pant of breath. Twice Ravenslee staggers beneath Joe's mighty left; but watchful ever, and having learned much, Ravenslee keeps away, biding his time—ducks a swing, side-steps a drive, and, blocking a vicious hook, smacks home his long left to Joe's ribs, rocks him with a swinging upper-cut, drives in a lightning left and right, and Joe goes down with a crash.

Even while the Old Un stared in wide-eyed, gaping amaze, Joe was on his feet again, serene and calm as ever, only his great chest laboured somewhat; but Ravenslee shook his head. 'I guess that 'll be about enough, Joe,' said he.

'Guv,' cried the Old Un, seizing Ravenslee's right hand, boxing-glove and all, and shaking it to and fro, 'you 're a credit to us; you do us bloomin' proud—strike me pink ye do. 'Ere 's Joe 'ammered you an' 'ammered you—look at your bloomin' chest—lumme! 'Ere 's Joe been knockin' ye down an' knockin' ye down, an' you comin' up smilin' for more an' gettin' it—'ere 's Joe been a-poundin' o' ye all over the ring, yet you can finish strong an' speedy enough to put Joe down—blimy, guv, you 're a wonder, an' no error!'

'I don't think Joe fought his hardest, Old Un.'

'If 'e didn't,' cried the old man, 'I 'll punch 'im on the nose so 'e won't never smell nothink no more.'

'Sir,' said Joe, 'in the first round p'r'aps I did go a bit easy-like, but arter that I came at you as 'ard an' 'eavy as I could. I 'it you where an' 'ow I could, barrin' your face.'

'I hope I shall soon be good enough for you to go for my face as well, Joe.'

'But, sir—if I give you a black eye?'

'How will, say, ten dollars do?'

'Ten dollars! For blackin' your eye, sir?'

'Lumme, Joe!' cried the Old Un, 'get back into the ring and black 'em both.'

'Shut up,' said Joe, scowling down into the Old Un's eager face, 'you 'eartless old blood-sucker, you!'

'Bloodsucker!' screamed the old man. 'W'ot! me? I 'll punch you on the ear'ole, Joe, so 's you never 'ear nothin no more.'

'Are you on, Joe?' asked Ravenslee, while the Old Un, swearing softly, unlaced his gloves.

'But, crumbs, sir—axin' your pardon, things 'll come a bit expensive, won't they? Y' see'——

'So much the better, ye blighted perisher!' snarled the Old Un; 'an' don't forget as the guv owes you thirty dollars a'ready—an' 'arves, mind.'

'Stow it, you old bag o' wickedness.'

'Bag o''—— The Old Un let fall the boxing-gloves, and, turning on Joe, reached up and shook a feeble old fist under the champion's massive chin. 'Look at this, me lad—look at this!' he croaked; 'some day I shall ketch you sich a perishin' punch as 'll double ye up till kingdom come, me lad, and—lord, the guv 's countin' out our money!'

'Thirty of 'em, Joe,' said Ravenslee, holding out a wad of bills.

'Why, sir,' said Joe, backing away, 'axin' yer pardon, but I 'd rayther not—you give me such uncommon good wages, sir, an' a bonus every race we run, win or lose—so, sir, I—I 'd rayther not.'

'Not?' cried the Old Un. 'Not take money as is 'arf mine! Oh, kick 'im, somebody—kick 'im! Pound 'im for a pigeon-'earted perishin' pork pig.'

'That 'll be no sugar in your tea to-night, old viciousness.—But, sir, I 'd rayther not.'

'Don't 'eed 'im, guv—don't 'eed the flappin' flounder. If 'e won't obleege ye in a little matter like thirty dollars, I will—I 'll always obleege you.'

'That 's enough from you, old tombstones.'

'Tombstones!' hissed the Old Un, scowling darkly and squaring his fists. 'All right, me lad. 'Ere 's where I ketch ye one as 'll flatten ye out till the day o' doom.'

But hereupon Joe caught him above the elbows, and, lifting him in mighty hands that yet were gentle, seated the snarling old fellow in the arm-chair.

'Old Un,' said he, shaking his finger, 'if ye give me any more o' it—off t' bed I take ye without any tea at all.'

The Old Un, cowering beneath that portentous finger, swore plaintively and promptly subsided.

'And now,' said Ravenslee, thrusting the money into Joe's reluctant hand, 'when I make a bargain I generally keep it. I wish all my money had been spent to such good purpose.'

'What about me?' whined the old man humbly. 'Don't I get none, Joe-lad?'

'Not a cent, you old rasper!'

'Blimy, guv, you won't forget a old cove as 'u'd shed 'is best blood for ye?'

'The guv'nor don't want yer blood, old skin-an'-bones.—An' now, come on, sir.'

'Stay a minute, Joe; the Old Un generally keeps time for us when we spar rounds.'

'That I do, guv,' cried the old man, 'an' give ye advice worth its weight in solid gold. You owe me a lot, s' 'elp me!'

'About how much?'

'Well, guv, I ain't got me ledger-book 'andy, but, roughly speakin', I should say about five or six 'undred dollars. But seein' you 's you an' I 'm me—a old man true-'earted as never crossed nobody—let 's say—fifteen dollars.'

'Why, you old—thievin'—vagabone!' gasped Joe as Ravenslee gravely handed over the money.

'Vagabone yourself,' said the Old Un, counting the bills over in trembling fingers. 'The guv wants a bath—take 'im away—'ook it, d' j' 'ear?'

'Has Patterson got everything ready, Joe?' inquired Ravenslee, taking up his clothes.

'No, sir,' mumbled Joe; 'but I 'll have yer bath ready in a jiffy, sir.'

'But where 's Patterson?'

'Well, 'e—'e 's out, sir.'

'And the footmen?'

'They 're out, sir.'

'Oh! And the housekeeper—er—what 's her name—Mrs Smythe?'

'Gone to call on her relations, sir.'

'Ah! And the maids?'

'Mrs Smythe give 'em leave of habsence, sir. Ye see, sir,' said Joe apologetically, 'you 're 'ere so seldom, sir.'

'My servants are not exactly—er—worked to death, Joe?'

'No, sir.'

'Manage to look after themselves quite well?'

'Yes, sir.'

'It seems I need some one to look after them—and me.'

'Yes, sir.'

'A woman, Joe—one I can trust and honour and—er—what d' ye think?'

'I think—er—yes, sir.'

'Well, what do you suggest?'

'Marry her, sir.'

'Joe, that 's a great idea! Shake hands! I surely will marry her—at once—if she 'll have me.'

'She 'll have you, sir.'

'Do you really think she will, Joe?'

'I 'm dead certain, sir.'

'Joe, shake again. I 'll speak to her when she comes home. To-morrow 's Saturday, isn't it?'

'As ever was, sir.'

'Then, Joe, wish me luck. I 'll ask her—to-morrow.'

(*Continued on page 277.*)

HISTORIC SCRAPS OF PAPER.

THE WAR'S STORY TOLD IN STAMPS.

By Douglas B. Armstrong.

HISTORY is ofttimes recorded in unconsidered trifles—in letters, coins, pictures, relics, fashions, and household gods. The events of our own times are writ large upon the postage-stamps of nations.

As emblems of the State, stamps are particularly prone to reflect the trend of political developments. The imperishable story of the Great War is itself inscribed in no uncertain manner upon the postal issues of the belligerents. Within the pages of the stamp-collector's album are preserved souvenirs of almost every outstanding incident of the hostilities, forming a veritable cyclopædia of the war in miniature. 'Despise not small things,' says the sage, and in after-years these paper mementoes of the tented field will possess, beyond doubt, a deep historical interest all their own.

The first dishonoured act of war, the violation of Belgian neutrality, is commemorated for all time in a set of the contemporary German postage-stamps, portraying the menacing mail-clad figure of 'Germania,' bearing in heavy black Gothic characters of sinister portent the legend 'Belgien,' and beneath it a new value in Flemish currency, denoting their use under the Imperial governor-generalship. They were introduced very shortly after the occupation of Brussels, as if in malignant prophecy of the ultimate subjection of the whole of that hapless country, and many millions of specimens have been distributed in neutral and enemy countries as an earnest of frightfulness. It may be that some day they will constitute the last remaining relics of an infamous wrong.

The importation of these or other enemy issues of postage-stamps into Great Britain is prohibited under the Home Office regulations governing trading with the enemy, whilst similar restrictions have been imposed by the French and other

allied Governments. Copies contained in letters from abroad and detected by the watchful eye of the Censor are known defaced with a heavy diagonal bar of ink, in which condition they were ultimately delivered to the addressee. In retaliation for the British boycott, the German Governor of Belgium has imposed a heavy fine, accompanied by other pains and penalties, upon Belgian stamp dealers and collectors having in their possession any war-stamps of the Allies.

A plain type-set label of unprepossessing appearance, value ten centimes, and issued under the ægis of the Valenciennes Chamber of Commerce, marks the penetration of the Hun forces into northern France in their ill-starred dash for Paris, following the retreat from Mons. Acting on instructions from headquarters, the French Government officials had retired from the famous lace-making city; and when the German troops entered into possession on 29th August 1914, the postal service, in common with other State organisations, was conspicuous by its absence. As a temporary measure, the local municipal body was authorised to establish a provisional postal service along the line of tramway serving the neighbouring communes, and it was in connection with this service that this crudely printed local stamp was created. Its currency lasted for only eight weeks, when the service was taken over by the Imperial German Postal Administration, and controlled from Berlin.

Belgium's final sacrifice in the first phase of the Great War is recalled by some Red Cross postage-stamps, issued at the instigation of the courageous and charitable Queen Elizabeth during the perilous times of the siege of Antwerp. One of the designs commemorates a notable deed of heroism in the War of Independence of 1830—the death of Count Frederic de Merode in defending the flag—and is taken from the national memorial unveiled at Berchem in the same year. The other bears a familiar portrait vignette of King Albert himself, the Geneva Cross being in each instance incorporated in the design. Both series were printed lithographically in the city when the German heavy artillery was still pounding at the surrounding forts, and were sold for twice their nominal face-values, half of the proceeds going to the Belgian Red Cross.

On the withdrawal of the Belgian Government to Ostend, and subsequently to France, two days after their début the remainders of these stamps were destroyed, together with the stones from which they were printed, to prevent their falling into the enemy's hands.

Following the seizure of the former German colony of Samoa, the 'Pearl of the Pacific,' by an expedition from New Zealand on the same day that the Germans entered Valenciennes, the German colonial postage-stamps, bearing a representation of the Imperial yacht *Hohenzollern*, found in the island post-office, were temporarily withdrawn from circulation, only, however, to be reissued a few days later overprinted with the Royal cipher 'G.R.I.' and a new value in British currency.

The resources of the local printing establishment (office of the *Samoanische Zeitung*) being somewhat limited, not more than ten stamps could be overprinted at one time, and this, combined with the fact that the compositor was a Chinese-Samoan half-caste, whose knowledge of English was of the slightest, led to the creation of some curious errors and varieties so dear to the heart of the philatelist. Several stamps received double impressions of the overprint, and not a few were surcharged upside-down; whilst the first batch of shilling stamps had the value quaintly rendered as '1 Shillings.' This error, by the way, is one of the great rarities amongst the stamps of the Great War. Sets of these occupation stamps were presented to the naval officers of the Australasian squadron and to various officials, and others were eagerly bought up as souvenirs by the rank and file of the expedition. Subsequently ordinary New Zealand postage-stamps, overprinted with the single word 'Samoa,' were brought into use under the British administration.

Nemesis in the shape of the armed forces of Great Britain, France, and Japan, operating in unison, was at the same time overtaking the German colonial possessions in other parts of the world. Togoland, the oldest German colony on the West Coast of Africa, surrendered to a Franco-British expedition, after some sharp fighting, on 26th August 1914, and has since been administered under the joint control of Great Britain and France. For the first few weeks of the allied occupation no trace of ex-German colonial stamps could be found, so that those of the adjacent British colony of the Gold Coast had to be temporarily employed. Eventually, however, a regular *cache* of treasure trove, in the form not only of stamps, but of bullion to the value of thirty thousand pounds, was unearthed at Kamina, the site of the powerful wireless station linking the German colonies throughout the world with Berlin. Sealed in strong metal cases, they had been sunk in some disused wells, whence they were recovered by certain native sheikhs and handed over to the British authorities. The stamps, divided between the British and French administrations, were reissued provisionally, with the imprint 'Togo Anglo-French Occupation' in English and French respectively. The work of overprinting the British series was carried out by the monks of the Catholic Mission at Lome, the capital of Togo; but the French were forced to send their supply down to Porto Novo, Dahomey, to be surcharged, since no printing-press was available in the region under their control. For a brief period all stamps of whatever denomination were used to prepay the ordinary penny postage rate; but this soon proved impracticable, and they were afterwards

sold for their equivalent face-values in English or French money.

Another small find of German Togo stamps made by the French at Sansanne Mangu, in the northern part of the colony, in January 1915 was similarly treated; but by May of that year all of the provisional stamps had been exhausted, largely due to the enormous demand for them by stamp-collectors in all parts of the world, and those of the Gold Coast bearing a like overprint have since been in circulation.

Quite Gilbertian in character was the manner of finding the first small supply of German New Guinea postage-stamps by the officials of the Australian Expeditionary Force charged with the occupation of Kaiser Wilhelm's Land and its island dependencies in the north-west Pacific. The bulk of the stock had been destroyed by the German colonial authorities, but a number of complete sheets were at length brought to light hidden away amongst some shirts in the wardrobe of the ex-postmaster of the colony. With the aid of a small hand printing-press these were hurriedly converted into British stamps of the realm by the addition of the magic initials 'G.R.I.' and a new value in pence and shillings struck on them at the mission schoolroom at Rabual, which served as an emergency printing-office. So great was the demand for these historical stamps by the troops and officials of the Commonwealth forces that it was found necessary to restrict the sale to ten shillings' worth to each applicant. Complimentary sets in honour of the event were forwarded for the acceptance of his Majesty the King, certain high officials of the Australian Government, and the principal museums in the Commonwealth. A further supply of ex-German colonial postage-stamps brought down from Nauru, in the Marshall Islands, was overprinted and issued in a similar manner at Rabual in December 1914. The stamps in use in New Britain, as the newly acquired territory is designated, since the exhaustion of these provisional issues are those of the current Australian types surcharged 'N.W. Pacific Islands.' All of these occupation stamp issues contain errors and varieties, more or less pronounced, and are much sought after by philatelists. Prices ranging from a few shillings to twenty or thirty pounds, according to their relative scarcity, are readily obtained in the stamp-market. It is, however, for their historical and philatelic interest that they are chiefly esteemed, quite apart from any question of intrinsic value.

The advent of the Indian Army Corps upon the battlefields of France and Flanders was denoted by a special series of postage-stamps supplied to the field post-offices attached to the various divisions for use upon the correspondence of our gallant native troops. The necessity for this procedure arose from the fact that these stamps were sold not only by the Indian military post-offices in Europe, but also by those serving with the expeditions in Egypt, East Africa, and the Persian Gulf. The local currency units differing in each instance in their relation to the rupee, the absence of any distinguishing mark might have led to the stamps being purchased in wholesale quantities where the exchange rate was lowest, and re-exported to India at a considerable profit. To avoid this contingency, therefore, the contemporary postal issues of British India, with portrait of the King-Emperor, as issued to the military post-offices in the field, were imprinted on the face, with the initials 'I.E.F.,' signifying 'Indian Expeditionary Force,' and in such form they afford a lasting memorial to the valiant part played by our Indian army in the great war of the nations.

As a prelude to Turkey's entry into the war on the side of the Central Powers, the Sublime Porte, at the dictation of the Wilhelmstrasse, declared the abolition of the foreign capitulations under which various rights and privileges had been enjoyed by European residents in the Ottoman Empire under the 'most favoured nation clause' of certain treaties. Prominent amongst these treaty concessions was the right of the European Concert to maintain their own post-offices in Constantinople and elsewhere in Turkey for the benefit of their countrymen sojourning in the Near East. Seizing the long-hoped-for opportunity afforded by the European imbroglio, the Turkish Government was at long last able to carry out its cherished object of securing the suppression of the foreign postal agencies, an event which took place on 1st October 1914, and was duly celebrated by the application of a special overprint in native characters denoting 'Capitulations Abrogated 1333' upon the current stamps of the Ottoman post.

Following the actual declaration of war between Turkey and the Allies, supplies of the beautiful pictorial postage-stamp series of the previous year, the work of a London firm, who hold the plates, were cut off, so that by October 1915 the local stocks had all been used up. Recourse was had, therefore, to a large hoard of obsolete stamps of different kinds lying in the Treasury vaults, for which vain endeavours had been made to find a purchaser, and these were pressed into the service and reissued imprinted on the face with the device of the Star and Crescent of Islam above the date of the Mohammedan year.

Japan's part in the world war is perpetuated by a military franchise stamp in the form of the regular three-sen inland postage-label of the Imperial Japanese Posts, overprinted with two syllabic characters signifying 'war service,' two of which are supplied gratis every month to men of the Japanese army and navy on active service.

Philatelic souvenirs of the temporary Japanese occupation of the Marshall Islands also exist in specimens of the former German colonial postage-stamps of the group impressed in red ink with the name-seals of various Japanese officers. None of these, however, appear to have been employed postally, and their interest is that of curios pure and simple.

At a time when the German commerce raiders in the Atlantic were still at large a remarkable and unique precaution was adopted by the Government of British Honduras to safeguard a consignment of the colonial postage-stamps then on order from the printers in London. Under special instructions from the Crown Agents, this one printing was made upon special paper that had first been covered with a faint moire ground, so that the stamps included therein might be readily distinguished from any that had previously been issued, and in the event of their falling into the hands of the enemy, could at once be declared invalid in the colony. Fortunately the rounding up of the *Dresden* and *Karlsruhe* by the British navy rendered this procedure unnecessary, but the stamps remain as a mute tribute to the power and efficiency of 'Britain's sure shield.'

Two sets of stamps were issued during the course of 1915 from the tiny post-office of St Andresse, Havre, where the exiled Belgian Government has found sanctuary beneath the tricolour of La Belle France. The first, a Red Cross charity issue bearing the likeness of King Albert, was placed on sale at the New Year; whilst the second, whose designs include vignettes of historic buildings and monuments in stricken Belgium, is a striking indictment of the vandalism which masquerades under the name of *Kultur*. The Cloth Hall of Ypres, devastated Dinant, and the once noble University of Louvain, all bear testimony to the wanton spirit of sacrilege that has reduced their architectural glories to a mass of smoking ruins.

Of a more inspiriting nature, however, is the scene presented on the five-francs value—King Albert presenting colours to his gallant troops at Furnes during the present war. It was originally proposed that these handsome stamps should be withheld from issue until the Belgian Post-Office was once more established on its native soil; but they were eventually released to help to provide funds for the prosecution of the war of Belgian liberty, typified by the various designs.

German postage-stamps overprinted 'Russische Polen' in Gothic characters, as well as those of Bosnia and Herzegovina inscribed '*Feld Post*,' carry the mind back to the eventful spring of 1915, when, owing to the temporary failure of the munitions-supply, the Russian army was forced to fall back before the combined Austro-German advance, and Poland and Galicia were overrun by the enemy's forces. Both the German and Austrian issues appeared in May 1915, and are of a purely military character, not being available for use on private correspondence.

An American war correspondent relates how, in the early days of the war, the Galician conscripts serving with the Austrian army, when they were led to positions against the Russians, were encouraged by fictitious stories of the re-establishment of the Polish monarchy, in support of which they were shown some bogus stamps adorned with the effigy of King Sobieski III.

One of the minor phases of the Great War, the subjugation of the erstwhile German African possession of the Cameroons, in which both British and French troops were engaged for many weary months, is commemorated in the stamp album by two series of stamps, overprinted in the one case 'C.E.F.,' signifying 'Cameroons Expeditionary Force,' on the former German colonial types, and 'Corps Expéditionnaire Franco-Anglais Cameroun' on those of Gaboon in the other. When the British troops first occupied Duala, the capital, no trace of any postage-stamps could be found, and for a time all letters emanating from this region bore the superscription, 'No stamps available.' At length, however, a large consignment of stamps addressed to the chief postmaster of the Cameroons on the eve of war was brought to light on board the West African liner *Professor Wœrmann*, lying in the harbour of Freetown, Sierra Leone, where she had been brought as a prize by a British cruiser. They were duly converted into a provisional issue for use under the British administration of the Cameroons at the Government printing-office at Freetown, being finally issued at Duala sometime in July 1915. The French series was not issued until four or five months later, when the last of the German garrisons in the locality had been reduced.

Austro-German intrigues in southern Persia led to the temporary occupation, with the consent of the Persian Government, of the important trading port of Bushire by Indian troops on 8th August 1916. During the occupation the postal service was maintained by Indian officials, the stock of Persian stamps found in the local post-office being utilised with the addition of the words 'Bushire under British Occupation,' applied by means of an antiquated hand printing-press which was transferred from the British Residency to the post-office for the purpose. After a currency of only about six weeks these stamps ceased to be valid, when the administration of the town and district was once more restored to Persia. The British occupation stamps are in consequence of considerable scarcity, quite apart from their political interest.

The entry of Italy into the Great War on the side of the Allies was followed by the issue of some special Red Cross postage-stamps, after the French model, but of distinctive and appropriate design. A wreath of laurel encircles the banner of Italy as shown on the ten centesimi + five centesimi grayish blue, whilst the fifteen centesimi + five centesimi is emblazoned with the heraldic arms of Savoy, a Geneva Cross within a small circle being in each instance incorporated in the designs of the stamps, both of which are inscribed '*Croce Rossa.*' With the addition of the name of the issuing office in black overprint, these two charity stamps have also been circulated in the Italian colonies of Libya, Eritrea, Somaliland, the Italian islands in the Ægean Sea, and the postal agencies in Albania, and have already contributed a substantial amount to the funds of the Italian Red Cross.

As a contribution towards the additional revenue required to meet the expenses of military operations, the Italian inland postal rate was raised on 1st January 1916 from fifteen to twenty centesimi per half-ounce, when the current fifteen-centesimi postage-stamps were duly surcharged with the higher figure until such time as a permanent twenty-centesimi stamp could be prepared by the Government bank-note factory at Turin.

For some days after the German occupation of the ancient Polish capital on its evacuation by the Russian army in the autumn of 1915, the regular postal service was restricted to military requirements, and with the approval of the army authorities the local delivery of letters within the city precincts was undertaken by the Burgomasters' Committee of Warsaw. Special stamps were prepared in connection with this town post, crudely lithographed, and representing respectively an allegory of the Vistula (a dragon, with a woman's body, brandishing a sword) and the city arms of Warsaw—the Polish eagle with a crown suspended above its head. The suppression of the local service at the end of a week precluded the issue of stamps of a more ambitious nature depicting the celebrated Sobieski Monument and the Poniatowski Bridge after its destruction by the Russians.

Stamps of the German Empire, overprinted with the inscription, '*Postgebiet ob Ost*' (Postal District of the Eastern Command), are employed by the military post-offices in the districts of Vilna, Kovno, Suwalki, and Kurland in Lithuania under the German occupation.

Grim relics of the tragedy of the great Serbian retreat across the snow-clad mountains of Albania exist in the form of an abortive series of national postage-stamps, which was on the point of being issued at the time of the Austro-German invasion. Just as the streets of Nish are said to have been decked with flags to welcome the allied relief force which never came, these stamps were destined to be issued in honour of the same unfulfilled event. A set of five values had been prepared typifying the part played by Serbia in the Great War through the medium of a picture reproduced from the Parisian journal *L'Illustration*, depicting the veteran King Peter I., surrounded by his staff, directing the operations of his indomitable army. Part of the stock would appear to have been conveyed to Prizend, and there placed on sale during the temporary establishment of the seat of Government in that town; but the bulk is believed to have fallen into the hands of the invaders. A few sets were preserved by survivors of the great retreat, and constitute souvenirs of undoubted historical interest.

The single word 'Serbien' superimposed on the contemporary postage-stamps of Germany and Austria (Bosnian military post-offices) denotes their use under the Hun administration of that ill-starred country.

Although the idea has frequently been broached, H.M. Postmaster-General has not so far deemed it expedient to create separate stamps for the purpose of collecting the enhanced rates of postage necessitated by the war; nor would there appear to be any immediate prospect of such an innovation in this country. War-tax stamps of a distinctive character have, however, to be affixed to letters posted in Canada, New Zealand, Fiji, the British West Indies, &c., and Roumania, the last-named bearing the imprint, '*Timbru de Ajutor.*' Apropos of the Roumanian war-tax stamps, introduced in anticipation of the early participation of that country in the world-wide hostilities, the following picturesque story is recounted. When the use of these war-tax stamps was first bruited, a competition for an appropriate design was held amongst the leading Roumanian artists and designers, and the first prize was awarded to M. Leca, an eminent sculptor. His design represented a Roumanian soldier saluting two women who stood in a valley surrounded by high hills, over which the sun was rising. On the eve of their issue, however, a formal protest against the use of this design was entered by the Austro-Hungarian Minister at Bucharest, on the ground that it contained a palpable allusion to the Austrian provinces of Transylvania and Bukovina, as symbolised by the two women, the mountains being the Carpathians, and the rising sun intended to typify the coming of Roumania. To avoid diplomatic complications at that juncture, the stamps were accordingly suppressed, and those of the ordinary current postage type, overprinted as above described, substituted. It is rumoured, however, that specimens of the forbidden issue were printed and distributed *sub rosâ*, and that some were, in an unaccountable manner, found to be affixed to the private correspondence of the Emperor Francis Joseph himself.

To each and every one of the foregoing stamps,

as well as to countless other varieties of which space precludes detailed mention, there is attached an historical or romantic interest, imparting to them a special significance as mementoes of the world's most terrible war. The end, alas! is not yet, and ere war's red tide has ceased to flow they will doubtless be supplemented by other and no less historic 'scraps of paper.'

THE HOUSE ON THE HILL.

By B. Paul Neuman.

I.

WHEN Walter Hague married Isabel Watts, there were divergent opinions, even in their own family circles, as to the wisdom of the step. Walter's father was of the optimists.

'Wallie 's always had his head screwed on the right way,' said the old gentleman, who himself bore the reputation of being a bit of a screw. 'He isn't like the young fools who are in such a hurry to marry that they have to get the furniture on the hire system. He 's waited, and now he 's got something worth waiting for.

'I hope so,' said his wife, a good deal less confidently. 'But Isabel isn't an easy girl to know. There 's a something in her manner'——

'There 's a something in her pocket,' old Mr Hague interrupted, 'and that 's a great deal more important. Three hundred a year, if it 's a penny. Wallie knows what he 's about.'

'Belle 's old enough to look after herself,' remarked her mother, a widow, well-to-do, and enamoured of an easy life. 'If it had been me, I 'd have thought twice about it. She likes to have her own way, and, unless I am very much mistaken, Walter 's another of the same kind.'

'Oh, well,' declared Lalie, the youngest of the family, 'they 'll have to fight it out like other married people. I suppose almost every drawing-room 's been a battlefield in its time.'

'And a good many dining-rooms Temples of Peace,' said Mrs Watts, with a comfortable chuckle.

'His name 's a good omen, at any rate,' Lalie remarked.

The marriage turned out quite a success; so both sides of the family agreed. Walter was a partner in his father's thriving paper manufactory, and had already something more than the nest-egg of a substantial fortune. The happy pair found a new non-basement villa at Brondesbury, and furnished it at Maple's. Everything about it was smart and bright and shiny, and they did their best to look as smart and bright and shiny themselves. Time passed, and there was no need of a pram. Husband and wife were quite content.

'Children are such a worry and anxiety,' said Isabel.

'And a thundering expense,' added Walter.

II.

Successful to outward seeming, the marriage, like all human relationships, had its little flaws and drawbacks. As Mrs Watts had foreseen, both husband and wife, fond of their own way, were resolute in trying to get it. Hence, as time went on and they grew familiar with each other's strength and weakness, their differences tended to assume the character of campaigns rather than battles. But they always conducted hostilities with the punctilio of a high civilisation, and quarrelled in such dulcet tones that even their servants thought they were on the best of terms. This, at any rate, was the case till they fell out over the house on the hill.

By that time they had been married six years. Old Mr Hague had died, and Walter's prudence and energy had been rewarded by a steady growth of the business. The lease of their house had only one more quarter to run, and Isabel had set her heart on moving farther into the country. Walter, however, was quite satisfied with Brondesbury. He dreaded the fuss and discomfort of a move, and he felt sure that Isabel had in view a larger and more expensive establishment.

'Rouse will renew on a three years' agreement at the same rent,' he said, 'and I 'm sure we can't do better. It 's so handy for business, and the air suits us both.'

'There are plenty of other places just as handy,' she replied, 'and I 'm certain you oughtn't to be living on clay. It 's bad for both of us. You 've had quite a lot of rheumatism lately, and I 'm getting dreadfully sensitive to cold.'

He laughed. 'The poor old governor lived on gravel, but he was a martyr to rheumatism. It 's in the blood, not in the soil. And as for you, my dear, you look splendid.'

'This is summer,'she answered. 'It 's in the winter that I feel it. Dr Rogers says I should be another woman in the country.'

'But I don't want another woman,' he protested.

'Please don't be coarse, Walter,' she said severely.

'My dear girl, it was your own expression, or your doctor's. Old Rogers would say anything to please a good patient.'

Her voice grew colder and harder. 'Dr Rogers is superior to any mercenary considerations, and he understands my constitution perfectly.'

He thought he saw his chance. 'I didn't

mean anything against him. He 's quite a good sort, and if he understands you so well, it would be a thousand pities to move out of his beat.'

'I 'm not suggesting that we should. There 's a house I 've seen at Wembley '——

'But that 's clay, surely?' he interrupted.

'Yes; but the house is on a hill, and that makes all the difference; Dr Rogers says so. The moisture drains away so much better. And we should be easily within reach of him. It 's a most delightful house. There 's a full-sized billiard-room, and you know you 've always said that was one thing you *would* like; and then the garden—well, it 's the sort of garden that 's really worth working in. They say Wembley 's famous for roses, and, after seeing that garden, I can quite believe it.'

Now this was rather clever, for billiards and gardening were Walter's two outstanding hobbies.

'What 's the rent?' he asked.

'It 's only for sale,' she answered. 'They 're asking two thousand three hundred pounds, but *you 'd* get them down to two thousand easily.'

The compliment pleased him more than the price. He shook his head. 'That 's prohibitive,' he said. 'I believe I could buy this house for twelve hundred, and I 'm certainly not going to anything like two thousand.'

To his surprise, she took his refusal quite good-humouredly.

'Very well. But you must see my house on the hill. Some day, perhaps, we may be able to afford a little comfort, and then you 'll know the kind of house I like.'

'Oh yes, I 'll go over there on Saturday, if you like,' he answered, and the firing ceased.

III.

The house on the hill certainly had its good points—Walter freely acknowledged them. It was evidently well built and well planned. The rooms were large, and almost all of them had a pleasant outlook. The garden, too, was tempting, and the roses surpassed his expectations. The billiard-room, on the other hand, fell a little below them. It was really a big breakfast-room, rather low and dark, and it looked as if it would barely take a full-sized table. The house was a good step from the station, and the situation was somewhat exposed for the winter.

'Still,' he admitted, 'I don't wonder it has taken your fancy, and if it had been anywhere near my price, I don't know that I 'd have stood out. Do you know who the landlord is?'

'Yes,' answered Isabel. 'It 's a Mr Kittridge. I saw his advertisement in the *Telegraph*, and answered it. I heard from him yesterday. He says that his only child is very delicate, and they 've been ordered to live on the south coast for the present. I feel sure, from the way he writes, that he 's open to an offer.'

'You can't very well offer a man half of what he asks.'

'I believe he 'd take two thousand pounds,' she said.

'I dare say he would,' returned her husband dryly.

On their way back not another word was said about the house; nor was the subject referred to during the evening or on Sunday. But Isabel was so demonstratively amiable that Walter said to himself, 'She hasn't given it up.'

On Monday morning he bought a *Telegraph* at the station, and, as he expected, found Mr Kittridge's advertisement. The address was Abney House, Moorgate Street, and he made up his mind to call there at once and investigate for himself. But just as he reached the door with Mr Kittridge's name on it, to his astonishment it opened to let out a man whom he knew very well indeed.

'Hallo, Richards!' he exclaimed; 'what are *you* doing here?'

The light on the landing was subdued, and Richards was short-sighted.

'Who 's that?' he asked. 'Why, Hague, are you on the same errand?'

'I can't say till I know yours. Is it about an advertisement?'

'Yes. House at Wembley. Are you after it too?'

'I only wanted to ask a question or two, and you can answer them. We 'll go on together, shall we? Have you taken it?'

'No,' answered Richards, as they stepped out into Moorgate Street. 'He opens his mouth a bit too wide.'

'Over two thousand pounds, is it?'

'Well, I believe he 'd take two thousand on the nail; but that 's too much. I offered seventeen hundred and fifty, and I might have gone to eighteen hundred. The wife 's desperately keen on it. It 's a nice little place, though not quite such a palace as he seems to think it. Are you going to have a shot?'

'I should have offered less than you did. Anyway, I 'm not going to interfere while you 're negotiating.'

'Oh, you needn't bother about that. I 'm definitely out of it.'

'And it 's no good my going into it; I can see that. It 's the wife with me too. I 'd much rather stop where we are.'

Walter meant what he said. The garden had tempted him, and he knew that Isabel could be very unpleasant when she was thwarted in anything upon which she had really set her heart. If this Kittridge would have taken anything like fifteen hundred pounds, he might have considered it. As it was, he would settle at once with Rouse, and Isabel must make the best of it.

IV.

Just about the time when Walter was making up his mind, Isabel made up hers. At breakfast they had talked most amicably on half-a-dozen indifferent topics, and Wembley had not been once mentioned. Then Walter had gone to Moorgate Street, and Isabel set out for Ealing, where Mrs Watts and Lalie lived.

There she grew eloquent over the perfections of the house on the hill. 'It's absolutely ideal,' she declared. 'The moment I saw it I knew it was exactly what I'd been waiting for all these years; and Dr Rogers says Wembley would suit us both admirably.'

'Poor old Rogers!' exclaimed Lalie. 'He'd say the same of Lisson Grove if he thought it would please you.'

'Don't be so ridiculous,' said Isabel sharply. 'That's just how Walter talks. Dr Rogers is most careful. He knows that I'm different from most people—that I always wish to hear the exact truth.'

'You must be very courageous, my dear,' said Mrs Watts with a smile. 'I don't mind admitting that sometimes I like a little water with my truth.'

'What does Walter think of this house?' asked Lalie.

'Oh, you know what Walter is. Of course he likes it—no one could help doing that; but he wants to get it for next to nothing, and if he can't, he won't play. He's really just like a sulky child when he can't make a bargain on his own terms.'

'Walter's a very good man of business,' said Mrs Watts.

'He is, and he isn't,' answered Isabel. 'He makes money like a wise man, and spends—or won't spend—it like a fool. He could easily afford to buy this place, where he'd be comfortable for the rest of his life, and he talks of renewing the lease of our horrid, stuffy little house in Brondesbury. I've no patience with such nonsense.'

'Still, my dear, he pays the piper, so I suppose he thinks he ought to have a say about the tune.'

'And what about me?' demanded Isabel, with rising temper. 'It affects me ten times more than it does him. He's out all day, while I have to be cooped up in that damp, unwholesome bandbox of a house. Another three years, and we shall both of us be chronic invalids.'

'Your looks haven't begun to pity you yet,' Lalie put in.

'Oh, of course, you're always on his side, against me, both of you; but, thank goodness, I can take my own part.'

'I'm sure you can, and quite right, too,' said her mother; 'but the strongest of us has to give way sometimes.'

'Why not try to find another house nearer to his figure?' suggested Lalie.

'No!' declared Isabel explosively. 'I'm tired of always playing second fiddle. Oh yes, you may laugh, but for once I mean to have my own way—in his interest as well as my own.'

'I bet you a decent pair of gloves—twelve-button—that you don't go to Wembley,' said Lalie.

'Done!' snapped her sister.

V.

A plan, simple but daring, for getting her own way had already occurred to Isabel; and as she left her mother's house, she determined to try it at once. She would show her mother and Lalie, as well as Walter, that she was no silly patient Grisel. He wasn't the only person with a head for business. She would beat him at his own game.

As soon as she had finished lunch, she put on her bravest attire and took the train to Moorgate Street. She found Abney House and Mr Kittridge without any difficulty. He was a middle-aged man, spectacled, well groomed, and pleasant-spoken. A chemical analyst the brass plate on his outer door proclaimed him.

'I've called with reference to this advertisement,' she said, producing it.

'Oh yes,' he answered. 'Well, I'm in treaty with two or three parties, but nothing's absolutely settled.'

'Now, Mr Kittridge'—she put on her most fascinating smile—'you can see that I'm not a business woman. I'm going to be perfectly frank with you, and I hope you'll be the same with me. What's the very lowest price you'll take for the house?'

Mr Kittridge took up a letter-book. 'Here it is,' he said. 'I gave him till noon to-day. This is what I said: "I will take two thousand one hundred and fifty pounds, and let one thousand pounds remain on mortgage at 4½ per cent."'

Isabel looked down, pursed her lips, and wrinkled her forehead, as if she were trying to make up her mind on a very knotty point. She was pleasantly conscious of the fact that the analyst's eyes were fixed upon her. Suddenly she looked up, this time with a smile of the confidential and appealing kind.

'Mr Kittridge,' she began, 'I'm going to trust you with a secret. My husband has seen the house, and he likes it immensely, but he is one of the ultra-prudent, and he has persuaded himself that he ought not to go beyond one thousand five hundred pounds. If he doesn't buy your house, he will renew the lease of our present house, the position of which doesn't suit him at all, and I'm very much afraid that another three years there will ruin his health. As a matter of fact, he could afford quite well to buy your house. Now I have a little money of my own,

and sooner than see him a chronic invalid, I would only too gladly spend some of it. At the same time, I know quite well that if he were aware of my little ruse, he'd have nothing to do with it. Now, if you can accept my terms, will you help me? My idea is this. I'll write you a cheque at once for five hundred pounds. Then I'll tell my husband that I've seen you, and that I believe you'll accept one thousand five hundred pounds if he pays immediately, instead of leaving any on mortgage. I'm afraid I can't go beyond five hundred pounds, and I'm sure he won't make any advance on fifteen hundred.'

Mr Kittridge had already come to the conclusion that he had been asking a little too much, and the thought of getting the whole business settled in a day or two was very attractive. So was Mrs—— What was the woman's name? Oh yes, lucky chap, Hague. She must be a very devoted wife.

'Well, Mrs Hague,' he said, 'this is a very unusual proposition, but I can't help respecting and—and admiring your motive. The money's a good deal less than I meant to take, but if you like to make it guineas I'll say, "Done."'

'Let's see; that'll be five hundred and twenty pounds. Very well, I'll write the cheque if you'll give me a pen.'

Mr Kittridge laughed. 'Is that your arithmetic, Mrs Hague?' he asked. 'I should call it five hundred and twenty-five pounds.'

'Oh no,' declared Isabel. 'I'm sure five hundred and twenty is right. I got distinction in maths. at the Cambridge Local.'

She took a cheque-book out of her bag, and wrote and crossed a cheque for five hundred and twenty pounds.

He looked at it, and smiled. 'You were wrong in one respect,' he remarked. 'I think you're a capital business woman. Now, what sort of a receipt am I to give you?'

'Oh, give me an ordinary receipt,' she answered, 'and write me a letter saying what the money's for, and promising to return it if you and Walter—you and my husband—don't come to terms. And you'd better write me another letter saying that you've made up your mind to let the house go for a good deal less than you were asking.'

'I feel quite a conspirator,' he said, a few minutes later, as he showed her out, 'and it's a new rôle for me.'

'And for me too.' This time her smile was the smile of innocence.

VI.

That evening, at dinner, Isabel exclaimed suddenly, 'By the way, Walter, I've had another letter from that man with the house at Wembley. He says he's willing now to take a good deal less.'

'What did I tell you?' exclaimed her husband triumphantly. 'It was just a try on. The house really isn't such a treasure. It was only the garden that tempted me.'

'And the more you do in the garden the better you are. You've done wonders with this back-yard. At Wembley you'd have a perfect show. I believe he'd meet you; I do really.'

'Not he!' answered Walter. 'Eight hundred pounds is too big a drop.'

'You never know. Anyway, I should feel ever so much more satisfied if you found out what it's really going for.'

'Oh, very well,' he replied; 'but I'm getting tired of being always right.'

'Yes, it's my turn now,' she declared with a laugh that sounded unusually gay.

The next evening he came back earlier than usual, went upstairs at once to dress for dinner, and joined her in the drawing-room ten minutes before the gong was due. She had taken great pains over the menu, which was a compendium of his favourite dishes. He had definitely promised, before he went out, that he would see Kittridge, and it was all-important to have him in good-humour.

The moment he opened the door she saw that he was in high spirits, and her own rose. 'I've got those gloves!' she said to herself. All day she had been tormenting herself by imagining ingenious ways in which her daring scheme might break down. His face drove away her apprehensions in a moment.

'Well,' she asked, 'what had Mr Kittridge to say?'

'Why,' he answered, 'he said one thousand eight hundred at first. Then he came down to sixteen hundred; and then, when he saw that I really knew my own mind, he threw up the sponge and agreed to fifteen. The secret seems to be that he wants the money immediately. As soon as he found he could have it, he was ready enough to meet me.'

'And did you really settle the business?'

'Rather! He'd got a form of agreement ready, and we signed it there and then. It's the best stroke of business I've done for a long while, and you're entitled to most of the credit. It was awfully clever of you to follow him up as you did. Look here, Belle.'

He came across the room to her, took from his pocket a little morocco case, and put it into her hands. She opened it. Inside, sparkling and shimmering, lay a handsome double-hoop ring—diamonds and sapphires. She uttered a little cry of delight, sprang up, and threw her arms round his neck.

'Oh, you dear!' she cried. 'Is it really for me? How sweet of you! What perfectly lovely stones! Thank you a thousand times. Now tell me about our house on the hill, dearest. When will it be ready, do you think?'

They were standing by the fireplace, and never, he thought, had she looked so pretty, so charming, so affectionate. A shade of anxiety crossed his face. 'My darling,' he said, 'we've been very happy here, haven't we?'

'Yes, of course we have—at least I have. Who could help being happy with such a husband?'

'Well, then, my love, we'll go on being happy, in the same dear little nest.'

A sharp, hard note came suddenly into her voice. 'What do you mean, Walter?'

Not without an obvious effort, he plunged into volubility. 'I'm so glad you like that ring,' he began. 'I daren't tell you what it cost, but it was cheap if it gives you pleasure. We've both of us been clever. You know Richards—my old school crony. Well, it's the strangest thing in the world. I met him a day or two ago, and found that he was after this very house at Wembley—quite mad on it, in fact. As soon as I'd signed Kittridge's agreement I went to see him, and he offered me eighteen hundred pounds for my bargain. Three hundred pounds profit within ten minutes! That's good business, isn't it? He's a solicitor, you know, so it was soon put down in black and white, and signed. Then Rouse called about the renewal of the lease of this house, and I actually beat him down from eighty pounds to seventy-eight. Just fancy—three agreements in one day, three hundred pounds profit, and two pounds a year saved! I tell you what: you shall have a new carpet for this room—Wilton, Axminster, anything you like. Belle, Belle! What's the matter, dear? Don't look like that—don't cry—no, you really mustn't do that. Isabel, do be quiet! Remember the servants!'

The dinner-gong sounded invitingly, but high above it an angry voice rose loud and shrill, and a ring shot down, clattering and tinkling on the tiles of the hearth.

THE GREAT FAMILIES OF RUSSIA.

By A. Francis Steuart.

RUSSIA has been so long divided from Western Europe that it has never shared the same history. Indeed, until the reign of Peter the Great it scarcely did more than 'touch hands' with the West. No Russian was allowed to leave Russia unless by permission of the Tsar. Frontier and coasting trade was entirely in the hands of foreigners. Russia remained wrapped up in its traditions and customs, derived from Byzantium, and made more immutable by its isolation from the West, caused by the Tatar conquest. It was only the strong hand of Peter the Great that, after the battle of Pultava, in 1709, opened the 'window into Europe,' and allowed the light to shine through it.

The result of this isolation is that the West has up to now been absolutely ignorant of Russian history. It may know in a general way that the Tsar Ivan the Terrible sent embassies to Queen Elizabeth, and had flirtations, more or less political, with her; and it may know that after Peter the Great the autocratic Court became Germanised to a great degree; but the West has no real knowledge of the internal history of Russia. While the names Bourbon or Borgia, Douglas or Percy, convey a certain train of historical thought and possibility of traditional association, when we come to the names of historical Russian families, great though they may be, we in the West are met with abysmal ignorance about them; for we have no knowledge of their circumstances, of their origin and growth, and no *point d'appui* regarding them.

I propose, therefore, to write a few words about the greater families of Russia, showing how they began, and (sometimes) what their names—which we here regard as crackjaw and difficult—mean. It will not be a very scientific part of family history, but it may fill in a gap.

In the first place, one must point out that with the exception of princely families—and the Russian title for prince is *kniaz*—the surname is a recent introduction into Russia, as it is into Norway. It is in Russia customary to address an acquaintance only as 'John, son of John' (Ivan Ivanovitch), or 'Maria, daughter of Anthony' (Maria Antonovna), without alluding to the surname at all. A poor peasant would be perfectly respectful, polite, and within his rights if he were to address the Emperor simply as Nikolai Aleksandrovitch. This disregard of the surname has undoubtedly made it of less importance than in the West, and confined it originally to princely families.

These are very numerous in Russia. The genuineness of their titles can be vouched for by the passport of each scion, a document every Russian must have. Some are educated, some are not; some rich, many poor. Prince or princess, each must live, and so they permeate every class of society. It is interesting now to glance at their origins.

At the head of the old Russian families are without doubt those who descend from the first ancestor of the line of the old Tsars. This was Rurik, who came in 862 from 'the North'—probably from some part of Sweden, and with his brothers settled in the Slav towns of Novgorod ('new town'), Izborsk, and Belo-Ozero ('white

lake'). This Northman left a line of princely descendants. They became the old Russian princes, and grand princes, and finally Tsars of Moscow, conquering and absorbing the Tatar ordas or tribes, who had for a desolating period (1239–1480) dominated Christian Russia. The main line of the older Tsars became extinct in 1598 with the Tsar Feodor, son of Ivan the Terrible; and after a short period of wild disorder the present imperial dynasty (that of Romanov, to which we will return later) was placed on the throne by popular election in 1613, and has since been regarded by the Russians with almost a religious veneration.

But although the main line became extinct, there were, and are still, left in Russia innumerable male descendants of Rurik, all princes of ancient descent. To name but a few of these, there are the Shuiski, who gave a Tsar to Russia in Vassili V., who, elected in 1606, died a prisoner of the conquering Poles. The Princes Lobanov descend from the Princes of Rostov, and add the place-name Rostovski; the Kassatkov have a similar origin. From other lines of descent sprang the Gagarin (a great Russian name), the Kropotkin (of whom we have the author), Obolenski, Tatistchev, Repnin, Masalski, and Bariatinski princes, with many others like the Romodanovski (from Romodanov, in the government of Vladimir), Ucktomski (called from their appanage Ucktom), and Bieloselski (from *bielo*, 'white,' and *selo*, 'village'). All these descendants of Rurik still exist; but by far the most celebrated princes who sprang from him are the Dolgorouki. The name means 'long-armed,' and appears on every page of Russian history. A Dolgorouki was the first wife of the first Romanov Tsar. Another (Catharine Aleksievna) was *fiancée* of the Emperor Peter II., and with the support of her all-powerful brothers very nearly mounted the throne. Notwithstanding many eclipses, the family is still very numerous. One of its daughters, Catharine, Princess Yourievski, became second wife of the Emperor Alexander II. The descendants of Rurik, indeed, played an important rôle in Russian history. The lives of Gagarins, Dolgoroukis, and Bariatinskis alone would make a worthy book, and the deeds of the lesser known princes would fill many volumes.

Next among the families who bear the title of prince are the old houses which owe their origin—though they have been Russian for centuries—to the Lithuanian Grand Prince Gedemin (1315–40), whose descendants became either Russians or Poles, or sometimes both. Of these, the best known are the Galitzine (*galitsa*, 'a gauntlet') and the Troubetskoi (*trouba*, 'a trumpet'). The former were omnipotent under the Regent Sophia; and under Catharine II., a bastard of the Troubetskoi called Betsky (illegitmate sons of Russian princes usually halve the family name—e.g. Litzine, from Galitzine—also) was the Empress's right-hand man. The mother of Ivan the Terrible, Helena Glinska, was of a Lithuanian family as well.

Then come the Caucasian princes. There are so many of them that they are not regarded very seriously in Russia; but they have long and very exciting family histories, as they came from that debatable land which, before it became Russian, was harried alternately by Turkey and Persia. Many of their daughters were married to Moslems, and their sons made slaves. The old Tsars of Georgia are represented to some degree by the Princes Grusinki the Princes Bagration, and Prince Imeritinski; those of Mingrelia by the Princes Dadian. Of the same class are the Orbelianov, Tarakhanov, and Abachidze—all Georgians; but the Agroutinski-Dolgorouki were Princes in Armenia.

The next section of princes are more revered in Russia than one might suppose they would be from their history; for they are the descendants of the Khans of the Tatar hordes who enslaved Russia for two centuries. A Russian landowner explained the reason of this to me. 'The Khan,' he said, 'was, you see, almost a Tsar'—i.e. a sovereign prince. The origin of some of the names of their princes is curious. The Youssoupov and Ourosov descend from one 'Ouruss Khan;' the Princes Kotchoubey, from an ancestor, 'Kotchou-Bey.' The family of Kolokoltsov (*kolokol*, 'a bell') are akin to the Tsar Boris Godounov (1598–1605), who was of Tatar origin. Many more princely families began with Tatar Mourzas (Persian *mirza*, 'a noble'), who, from being Moslems, became Christians, and were adopted at once into the great Russian nation, which is very receptive.

We see this when we have now to enumerate the 'foreigners,' many of whom became Russians in very early days, mostly in the heyday of the supremacy of Novgorod the Great, which yielded to Moscow (Ivan III.) in 1478. It would be a brave man who would be definite as to the countries of which they were natives. No Russian will consent just now to his being of German origin; but it would not be historically wrong to say that most of the early immigrants came (perforce) 'through Germany.' Among these were the present imperial race of Romanov; the Cheremetiev (who boast they are akin to the Romanov), so famous in Russian history; the Pouchkin, from whom the poet sprang, whose name (from *pouchka*, 'a cannon') shows that they helped to introduce firearms into Russia. The Morosov and Saltikov were once 'foreign' also. More distinctly Germanised were the Livonian family of the Princes Lieven, who originally were feudatory to the Bishops of Riga in the thirteenth century.

Then we come to those families who have

risen through Court favour, and it is difficult to name even the most typical; for it is not easy to think that the families of Stroganoff and Demidoff, which assisted in the conquest of Siberia and the success of Peter the Great, and yet remained for long untitled, or the Tolstoi (the word means 'thick'), one of whom was made a count by that Emperor, are not just as interesting as that of his favourite, Prince Menchikov, who was originally, *on dit*, a pie-man. Among the native 'Court families' one must reckon all the kin of the Tsaritsas, who were, until the time of Peter I., chosen in the Byzantine ceremony, 'the choice of brides,' by the Tsars themselves. These included the Narichkine (Nathalia, mother of Peter I., was of this house), Saltykov, Apraxine, and Lopoukhine families. All these rose with their foundress, and at once took their place at Court. No Russian subject has, however, been made Empress since Peter I.'s second wife, Catharine I., who was born a Livonian serf. Her kinsfolk later shone at Court as the Counts Skavronski; while the Shouvalov and Razoumovski families owed their rise to the favouritism of her daughter, the Empress Elizabeth. The Princes Orlov (from *orel*, 'an eagle'), Prince Patromkine, Mamonov, and Zubov were favourites of Catharine II. The Voronzov (*vorona*, 'a crow') were great in diplomacy in her time also. The Counts Bobrinski owe their origin to her reign, the Empress herself bestowing on the first of the family the variant of her own arms—those of Auhalt-Zerbst! Nor must we forget the courtier families of foreign origin—the Counts Bruce, Scottish; Prince Ostermann, Westphalian; Bühren, Duke of Courland, originally a Courland outrider; Count Adlerberg, Swedish; the Counts Benckendorff—famous in diplomacy—from the Baltic provinces; the Princes Kantemir and Stourdza, from Moldavia; the Ribeaupierre, from France; and Prince Barclay de Tolly—the successful opponent of Napoleon—of Scottish descent.

We have now come, *via* the courtly families, to the Court itself. But, first, on its fringe, we find a host of morganatic scions of the imperial race, made so by the introduction of the German rule of 'equal birth,' which was originally quite foreign to Russia. There are many of these; but now genuine alliances have been effected between daughters of the imperial house and the old Russian princely families; so we may hope that the end of the German doctrine of *ebenbürtigkeit* is in sight in Russia.

The imperial house of Russia must be our last theme. It has a great history, which is worthy of careful study and research. As we have seen, the Tsars of the old house of Russia became extinct in 1598. A terrible period for Russia followed—elected princes, pretenders, the Polish invasion, and hideous anarchy. This 'Time of the Troubles,' as it is appropriately called in Russian history, did not cease until peace came with the election of a new Tsar from a new royal house in 1613. This Tsar was the young Michael I., of the house of Romanov. He had the good fortune to be the son of a popular hero, the Patriarch Philarete, whose sister had been the first wife of the Tsar Ivan the Terrible of the older dynasty. All this made for success. Had he not been elected, King James I. of England and VI. of Scotland dreamed for a moment of possessing the Tsarate. He thought of throwing troops into Archangel, where the British sphere of influence lay, and gaining over the friendly Russians, who feared the spread of Polish domination. He was too late. The popular young Tsar had been elected when his ambassadors arrived, and since then Russia has been under the autocratic sway of the Romanov dynasty.

The grandson of Tsar Michael was Peter the Great, the first Russian Emperor to seek close alliance with the West of Europe, and to force Western learning on Russia. With his grandson, Peter II., the male line failed. His half-sister, however, had married the Duke of Holstein-Gottorp, and had a son, the Emperor Peter III., who, by his wife, the masterful Catharine II., who deposed him, and became Empress in his stead, was ancestor to the present Emperor. The Romanov have done much for Russia in the last few generations. Perhaps the greatest act was the liberation of the serfs (made serfs, *circa* 1590, by the Regent Boris Godounov) by the Emperor Alexander II. in 1861. The next in magnitude has certainly been the almost revolutionary establishment in 1906 of the Parliament, or Duma, by the present Emperor, hitherto the Autocrat of Russia. It is this act that has changed the whole outlook of Russian history, and separated the future from what has gone before.

PEACE.

DARK lies the night, and fierce the wind
  Sweeps through the trees, with creaking boughs;
The angry seas, as though confined,
  The silence of the shores arouse.

Shall tempests always shake the woods?
  And shall the ocean endless roar?
In nature there are various moods,
  And rest returneth as before.

The tree shall hang her fluttering leaves,
  The murmuring wavelets gently play,
The night her character retrieves,
  And silence holds her ancient sway.

Old nature, steadfast through the years,
  Is not for ever rudely stirred.
And, though I live with present fears,
  Peace comes at the great Peacemaker's word.

THE HEART OF THINGS.

By Henry Leach.

London, *Yesterday.*

IT is the regret of some of the community that they will never know with complete certainty what others think of them, to what point of human value they have attained in the general estimation as the result of their effort in life. Some are indifferent; they do not care. They may be ruthless and callous; they have an object to achieve, and they force their way regardless of opinion, either for their present satisfaction or in the belief that posterity will justify them if they are engaged in any matter with which posterity may be concerned. Such are regarded as strong characters. But with others there is hopeless curiosity, or it may even be anxiety, to know the average judgment of their fellows on them. This longing can never be satisfied. To inquire, ever so discreetly, is but to provoke flattery or resentment, and in either case insincerity. The proffered praises and the spiteful condemnations are alike valueless, and one sees so much individual prejudice at work that the truth appears undiscoverable. In every individual opinion there is necessarily prejudice; absolute impartiality is a state of perfection in judgment that it is impossible to attain with human nature and society as we know them. If it were achieved, then individualism, variety of view, and many other valuable attributes of society would vanish. A few persons of consequence have had the rare advantage, through journalistic mishaps, of reading the story of their lives in the form of premature obituary notices; fortunate among mortals, it is maintained, they have enjoyed a little of that rare fruit of sincerity which ripens only when they who covet it are gone. But in this matter are the dead so fortunate? That most universal human fault of insincerity is still at exercise, and the smug maxim that of those who have just departed only what is good should be said and written makes for the glossing over of faults, the furbishing up of the slenderest virtues. Still, this is a kindly practice. So it may be better to train conscience to safe criticism and look within for the real judgments, assured that in a world in which self-interest and expediency, influence and tact, are among the principles of practical conduct, candour is rare, and often ill-balanced when produced. None the less we should like to see ourselves as others see us, as Robert Burns, with his sure perception of our nature, declared; and for more than two years past Britain in the mass has wished to know of herself as never before. Sure in her might and right, she may have affected a certain indifference to the views of other nations upon her case and conduct. It has been interesting to read the fulminations of our enemies. How they have raged! Their most terrifying threats! They have formed our lighter reading in the most unpleasant days of this last departing war winter. The comments of the neutrals, who for the most part are our friends, have been of peculiar interest to us, because here we approach not, indeed, close to absolute impartiality, and therefore perfect judgment, but as near to it as we may reach in the difficult circumstances which exist. If we say that these neutrals are our friends, it does not follow that their views upon us are necessarily over-kind. Nations, after all, are but human beings in the mass, with all the peculiarities and the weaknesses of the individual. Our friends are not always generous to our faults, and they have exceptional opportunities for discovering them. Such friends sometimes feel jealousies that others do not; there is a mine of truth in the declaration that much of mankind feels the better for the misfortunes of its friends. With this set-off against any predisposition in our favour on the part of such friends, we may come not far from the truth on reading what the neutrals say of us.

* * *

In any case, Britain is obviously more interested now than ever before in the views expressed by other states upon her through their Press. For the lighter fare, and to know of the wrath that our enemies would pour upon us, we turn to the fiery judgments of the *Kölnische Zeitung*, the *Berliner Tageblatt*, the *Vossische Zeitung*, and the others in unhappy Germany. We were more interested sometimes in seeing what Maximilian Harden, that fierce patriot, had to say in the *Zukunft*, but these quotations have ceased of late, and it is easy to guess the reason why. Harden is a German, loves Germany, yearns for her victory; but, if often misguided, he is a man of keen perceptions and judg-

 [*All Rights Reserved.*]

ments, and for long past he has been blind neither to the dangers nor to the probabilities of the German situation. Almost the last of his comments that came to us was that if Germany had to go down, she would take Europe down with her. He snapped with the greed of a man mad with peace hunger at the chance he thought he saw in the recent talk of a Peace League, when Lord Grey expounded his sympathy for this scheme. Poor Harden fancied he could see the British leaders and the German very close together in their ideals and objects. Since then little has been heard of him. In her long and arduous work of reconstruction, painful with memories of what seems now almost like a part of paradise thrown away, Germany will need the assistance of men like this who have tried to tell the truth, and loved their country all the more. We have come to know the different shades of meaning in the comments of some of these distracted German newspapers, as they reach us through Amsterdam and Copenhagen. Journals of which most of our people had never heard before have acquired for them life and an individuality. Now all know *Il Secolo* of Milan, and the *Corriere d'Italia*, which express themselves with confidence and determination, but often with more restraint, with less of the thrilling cry that is shouted up from Paris. Here are different shades of the Latin temperament. Through these Italian papers, also, you come to realise that Rome is in some senses by no means the most important place in Italy. Certainly the war is teaching geography to the world. The ignorance of the world's inhabitants regarding the earth on which they live is among the strangest phenomena of the human race. This ignorance, doubtless, was cultivated by the appalling system whereby it was sought to inject dry masses of meaningless, concentrated, semi-geographical stuff into the minds of school children. No study was more badly conducted, none carried through in such a way as to stifle curiosity, interest, and imagination in the minds of the young students as this one of geography, the facts of the world to which these young lives advance, and the shaping of which is to be given to them. During the war the people of the world have begun to learn geography better, and they find it intensely interesting. They are coming to understand now. They are daily reading bits from the foreign papers. It has been of special pleasure to read the fine phrases of ringing hope that Marcel Hutin sets down in the *Echo de Paris*, that brilliant little journal whose offices are in the heart of Paris, and whose sign is noticed by the strangers who in peace-time wander through the Place de l'Opéra. For careful expression, noble determination, superb dignity, we turn to *Le Temps*, in some ways the most soulful of the great newspapers of the world. Our people know all these papers now, though they have not seen them. And, in like manner, they know and understand, and properly appraise, the comments that come from across the Atlantic. They know the difference between the *Herald* of Mr Gordon Bennett and the *American* of Mr Hearst; the high value of the *World* and the *Tribune;* the dignity, sincerity, and truth of the *New York Times*. Never in history before has editorial comment in foreign newspapers had such a value placed upon it as now. The world needs it, for in the main it tells of the feelings of nations, of the great masses of people who may or may not be politicians, better even than the statesmen often express them. Certainly it is one of the curious results of the war that even when restrictions are placed upon the Press as not for ages past, the leading article, the expression of opinion, which before the trouble began was said to have ceased to matter and to be useless, has had its importance exalted to the uttermost. It has now not only a local but a great international value. It has obtained a unique position as spokesman for its readers. It makes people think, it guides their thoughts, it challenges them upon their views, and it brings nations to know one another. It is right and proper, then, that at this time, when nations are so much upon their trial, and when each, according to its light, is endeavouring to shape the great change of the world, there should be this curiosity about what others think of us. It may make no difference; we may continue uninfluenced by adverse criticism or praise; but there is some satisfaction in the knowledge.

* * *

Whatever their sincerity, the impartiality of few of the journals that have been named is beyond question. The individual and national point of view, the difference in temperament and understanding, the personal equation, make their inevitable prejudices despite all efforts towards honesty. We have heard much of 'material interests' in this war. It is an ugly phrase; it makes a sadly disturbing consideration at times like this, when ideals are so much the thing; but we live in the world, after all, and there is much imperfection here. And the 'material interests' of the nations whose views we consider as they are given to us are very great, and affect their judgments in spite of themselves. In recent times the opinions of another neutral have come to be much considered and commented upon in this country; a vogue for them is being established—the views of Spain. There are violent differences of opinion in the Peninsula, but there is no doubt about the complexions of those who take part in the presentation, no ambiguities, no inconsistencies. There are such great newspapers as *La Epoca*, *La Correspondencia de España*, *El Liberal*, *El Imparcial*, and others on the side of right; and, again, there are such as *El Correo*

Español (in the control of the Jaimista party, but disowned by its chief leader, Don Jaime, himself), which is perhaps the most violent pro-German newspaper in the world outside the preserves of the Central Powers. So with *La Tribuna* and some others, the influence of which, even in Spain itself, is comparatively small. *El Liberal*, a very bright and vigorous newspaper printed and published not only in Madrid, but, by a multiple system with which we in England are familar, in Barcelona, Bilbao, Murcia, and Seville also, is, on the other hand, influential, and at the same time one of the most discriminating and vigorous supporters of the Allies outside the Allies' own territory. The Spanish Press in general has a far higher moral, spiritual, and literary value than most people in our country imagine. Its value, indeed, in this respect is very high, and is scarcely lower than that of the Press of any other country except France. It is the fact that if Spain has much to learn from us in the value of advertisements and other business matters with which newspapers are concerned, there is much that we might learn from the Spanish journals in the character and value of their contents. I write as one familiar with this subject. Enormously as Spain is affected by this war, distracted as she has almost been in her efforts to preserve her neutrality, material interests, as we say, seem somehow to have counted for something less in Spain than in other countries. Perhaps it is because life is taken there a little less strenuously, more carelessly, than in some other countries; but it is certainly a reasonable suggestion for contemplation that where there are smaller and fewer material interests, there may be more impartiality and sincerity. There is much sympathy between Spain and Great Britain, many excellent reasons why we should understand each other well. There are bonds in our history, in our literature, in our aims and objects, our attitude towards civilisation, and in our forms of government. It may not generally be realised that in no other country, perhaps, is the system of government so like our own as in Spain. The monarchy there is not so limited; it is more of a personal force; but the Spanish Cortes has much that is like the Mother of Parliaments at Westminster, and if our readers of newspapers were some day, with a knowledge of Castilian, to pick up a morning newspaper of Madrid and read the reports of the previous day's proceedings in the upper and lower chambers, they might wonder what mimicry and plagiarism was this, who from the shadow of Big Ben had been playing the part of professor to the parliamentarians of the Peninsula—the more so because a frequent subject of debate in the Cortes is that vexed question of Catalonia, which is a veritable 'Ireland' of Spain, ever yearning and clamouring for its independence. For all such and other reasons we do well to look at these opinions that come from Spain, from *El Liberal*, from *La Epoca* (which is a Conservative journal), from *La Correspondencia de España*, from *El Imparcial*, from the *Diario Universal*, another Liberal journal closely attached to the Premier, and others. It is of value and importance to know what the good minds of Spain think of Britain now, and with the conviction that if there is human sympathy made from bonds with France and the interest in civilisation and true culture, there is yet no undue prejudice in our favour. There is this always for the Spaniard as not for some northern tribes, that above all he is, and has been for many hundreds of years, a splendid gentleman, a man of immaculate honour, of infinite perceptions and sympathies, of a courtesy and dignity that have never been excelled. The views of this gentleman, then, are of consequence to us.

* * *

They have lately been presented in his own country in a peculiarly interesting form. I wish that British readers had had the opportunity of reading the fine statements recently laid before the readers of Spanish newspapers concerning the effort of Britain. They would have found this reading more exhilarating, more provocative of thought, and more inspiring to determination, finer still than the opinions of any other foreign countries that I have had the chance of considering since the war began. Nearly a year ago the British Government, knowing what it was doing at the time, gave a cordial invitation to three of the most distinguished Spanish journalists to come over here and see what was being done, see everything that it was possible to show them, with practically no reservations. The invitation was accepted, and the three who came were the Marqués de Valdeiglesias, editor of *La Epoca;* Señor Don Gomez Carrillo of *El Liberal;* and Señor Don Fabian Vidal of *La Correspondencia de España.* They had had some interesting experiences on the French front, and before they crossed to England they wandered among the British lines, deeply impressed with what they saw. In England they were taken about to see the munition-works and much else; and then they went home to tell Spain of the things they had wondered at, and what their thoughts and conclusions were. I have read these impressions as they have appeared in the newspapers. Señor Don Gomez Carrillo, who by this time is editor of his paper, is a writer of much distinction and fine sympathies; perhaps there is no neutral anywhere who has written with finer fervour and more knowledge of the cause of the Allies than he has done. That is because he is a man of high intellect and training, of great ideals and experience, and of a warm and subtle temperament. He lived for long in intellectual Paris, and there his best principles were formed.

He contains within him an abounding love for France. And yet his horizon is not bounded by the Bay of Biscay or the Mediterranean Sea or any local landmarks. He knows the world. He was shipwrecked many years ago off the coast of Colombia. A famous poet was then his companion, and on the deck of the steamship, under the tropical moon, the poet recited to him his famous Nocturnes. Señor Carrillo listened then to some gloomy forebodings of his friend, and, being an optimist himself, turned in, as he says, with his illusions—to be awakened some hours later with the water up to his waist, and the sailors declaring that nobody and nothing could save them. Nevertheless twenty hours later he and the poet Silva were picked up by a Spanish sailing-vessel. When they found themselves on solid earth again, the poet, having seen his friend smile his way through the exciting drama, remarked, 'Decidedly, optimism is as incurable as pessimism!' and Carrillo answered him, 'And much less inconvenient.' To his outlook on life, and especially his outlook on the war, he brings this optimism which is a belief in the powers of good, in the inevitable victory and glory of the Allies, in the future happiness and progress of the world. So he believes very much in France and Britain, loves them; and this gentle Spaniard with his graceful pen, writer of some beautiful novels, has set down in his own Castilian in Madrid his feelings on this struggle as he has considered it from the western side.

* * *

He says that the thing that interested him most in the whole of his expedition was the English psychology. In that he is not alone among foreign gentlemen who have visited us, and who cannot completely understand, even with many explanations, the marvellous British imperturbability, and the uniformity of it. He said that when he was here officers told him that in order to understand our present life and condition, it was necessary to know the depths of our national spirit; 'and afterwards,' continues Carrillo, 'with the perpetual contradiction of everything belonging to this race, they add, "But such a thing is almost impossible."' In this he thinks they may not be mistaken, since, as he says, even Kipling himself confessed that it is not easy to fathom the secret of our mentality and sensibility. He says that the English try to hide their moral detachment, which does not exist in such a high degree in any other people, under a mask of formality and silence; that if one looks casually upon England, it will seem that every man is shaved in much the same way, that all hold the same kind of silence, that they wear the same kind of dress, and all take tea at a particular time. Even, he adds, their homes are the same, and the man who asserted that in Great Britain there is only one house reproduced in millions of copies was not far wrong. This may be called instinctive discipline or the spirit of routine; it matters little. The British monotony, he says, is a fact. He gained from some of the writings of Mr Galsworthy the best key that he could find to the mysteries of the British temperament, the enigmas that puzzle the Latin peoples, and even the Germans also, in this war. The nation seemed to him to refer with a certain pride to its own slowness; he heard our soldiers speaking with disdainful lack of interest of their own deeds; it seemed astonishing to hear them sometimes replying to German hatred with a kind of flattering gallantry; and it was sometimes hard to realise that it is not a Colonial campaign, but a duel to the death over which the free citizen of peaceful Albion is still rubbing his eyes. If one feels disconcerted sometimes at the humorous tone of some of the great writers of London, one should not lose sight of the fact, says Carrillo, that even in tragedy this nation needs something that sounds like a joke.

* * *

It really all comes to this, that stolidity and the phlegmatic manner are things that are largely unknown to the Latins with all their fire, their verve, their flashing spirits, and their excitability, and they can hardly be understood or appreciated by them. To be outwardly calm, almost indifferent—but not so inwardly—to the greatest crisis the world has ever known seems an impossible thing; to be so cool and methodical, so unflurried and quietly confident, appears amazing. The war seems, as it were, to be taken in the day's work. And so to some considerable extent it is. Notwithstanding all this vast upheaval, this new organisation of the nation, the disturbance of all the people and most of their doings, there has been singularly little change in some appearances of things, if you come to reflect upon it. If you ride down Cheapside on the top of an omnibus, past the Bow Bells whose chimes Dick Whittington heard, it seems much as it was before the war, and the war before it. There are many men in khaki about; keen observers would discover that the young girl—the 'flapper' and her senior of some few years—is more in evidence than ever before, and is mostly doing something in a sprightly way; and that a girl, indeed, comes to demand the penny fare. But, for the rest, appearances have not much changed even now as the supreme moment of the crisis comes quickly on, and Gomez Carrillo is right. We are not an ordinary people, and we must be truly an enigma to the Latins. But in the end we win.

THE DEFINITE OBJECT.

CHAPTER XVI.—OF THE FIRST AND SECOND PERSONS SINGULAR NUMBER.

IT was Saturday morning, and Hermione was making a pie and looking uncommonly handsome about it, and altogether feminine and adorable; at least, so Ravenslee thought as he watched her bending above the pastry-board, her round white arms bared to each dimpled elbow, and with the rebellious curl wantoning at her temple as usual.

'But why kidneys, my dear?' demanded Mrs Trapes, glancing up from the potatoes she was peeling. 'Kidneys is rose again; kidneys is always risin', it seems to me. If you must have pie, why not good plain beefsteak? It 's jest as fillin', an' cheaper, my dear—so why an' wherefore kidneys?'

'Arthur likes them, and he 'll be hungry when he comes in.'

'Hungry!' snorted Mrs Trapes. 'That b'y 's been hungry ever since he drawed the breath o' life. How 's he gettin' on with his new job?'

'Oh, splendidly,' cried Hermione, flushing with sisterly pride; 'they 've promised him a rise next month.'

'What! already?' exclaimed Mrs Trapes, cutting viciously into a potato. 'If he don't watch out they 'll be makin' him a partner next.'

'Oh, Ann, I wish you were not quite so—so hard on him,' sighed Hermione; 'remember, he 's only a boy.'

'You were a woman at his age, earnin' enough t' keep ye both. But there, I don't mean t' be hard, Hermy. Anyway, a man 's never much good till he 's growed up, an' then only because some woman teaches him how t' be.'

'What do you say to that, Mr Geoffrey?' inquired Hermione, pausing, flour-dredger in hand, to glance at him slyly under her brows.

'I think Mrs Trapes is a wonderful woman,' he answered.

'Ah now, Mr Geoffrey, quit yer jollyin',' said Mrs Trapes, smiling at the potato.

'Mrs Trapes has taught me much wisdom already, and, among other things, that I shall never be or do anything worth while without the aid of a woman.'

'Lord, Mr Geoffrey! I never remember sayin' no sich thing.'

'Not in so many words perhaps, but you implied it, Mrs Trapes.'

'H'm!' said Mrs Trapes dubiously.

'Consequently, I mean to ask that woman—on the very first opportunity, Miss Hermione.'

Seeing that Hermione was silent, all her attention being centred in the dough her white fists were kneading, Mrs Trapes spoke instead: 'D' ye mean as you want some one t' look 'after you—to sew an' cook an' wash an' sew buttons on for ye? I know the sort.'

'I certainly do, and'——

'Ah, it 's a slave you want, Mr Geoffrey, an' pea-nut men don't have slaves—not unless they marries 'em, an' a woman as would marry a pea-nut man has only herself t' blame—pea-nuts!'

Hermione laughed, reached for the rolling-pin, and immediately fell to work with it, her head stooped rather lower than was necessary. As for Ravenslee, he lounged in his chair, watching the play of those round, white arms.

'But why the kidneys, Hermy? You 've got to cut out luxuries now, my dear—we all have. I guess it 'll be dry bread next, I reckon.'

'Why so?' inquired Ravenslee lazily.

'Why?' cried Mrs Trapes bitterly. 'I 'll tell you why; because me an' Hermy an' every one else is bein' squeezed dry t' fill the pockets o' a thing as calls itself a man—a thievin' beast on two legs as is suckin' our blood, gnawin' our flesh, grindin' the life out o' us—a great fat man as is treadin' us down under his big boots, down an' down to slavery—death—an' worse—it 's such men as him as keeps the flames o' hell goin'—fat frizzles well, an' so will Mulligan, I hope.'

'Mulligan?' inquired Ravenslee.

'He 's raised the rents on us, Mr Geoffrey,' sighed Hermione.

'Raised the rents?' said Ravenslee, forgetting to lounge.

'Sure!' nodded Mrs Trapes grimly. 'I guess he thinks we live too easy an' luxoorious, so he 's boosted it up a dollar per. A dollar a week don't sound a whole lot p'r'aps, but it sure takes some gettin'; folks expect a deal o' scrubbin' an' sewin' an' slavin' for a dollar—yes, sir.'

'We shall just have to work a little harder, that 's all, Ann dear.'

'Harder? I guess you work hard enough for two; an' who gets the benefit? Why, Mulligan does. Oh, it 's a great comfort t' remember the flames o' hell sometimes. Lord, when I think how we have t' slave t' make enough t' live!'

'There are others worse than us, Ann.'

'Why, yes, there 's poor Mrs Finlay—she 's got to go, an' her husband paralysed! There 's little Mrs Bowker sewed herself pretty well blind t' keep her home together—she's got to go. There 's Mrs Sims with all those children, and the—— But there, who cares for the likes o' them; who cares—eh, Mr Geoffrey? An' what might you be dreamin' over this time?' she inquired, eyeing Ravenslee's long figure a little contemptuously, for he had fallen to lounging again, sleepy eyes half-closed.

'I was thinking what a lot of interest we might find in this busy world—if we would only take the trouble to look for it!' he answered. 'The fool who complains that his life is empty is blind and deaf and—damnably thick—er—pardon me, I—er—nearly got excited.'

'Excited!' snorted Mrs Trapes. 'I'd pay good money t' see you like that!'

'You see, I had an idea—a rather original idea.'

'Then take care of it, Mr Geoffrey, nurse it careful, an' we'll have ye doin' bigger things than push a pea-nut barrer—pea-nuts!'

'Mrs Trapes, I've got a strangle-hold on that idea, for it is rather brilliant.'

'There's that kettle b'ilin' at last, thank goodness!' sighed Mrs Trapes, crossing to the stove. 'Tea's a luxury, I suppose; but—oh, drat Mulligan, anyway!'

So Mrs Trapes brewed the tea, while Ravenslee gazed at Hermione again, at her shapely arms, her dimpled elbows, her preoccupied face—a face so serenely, so utterly unaware of his regard of course, until he chanced to look away, and then Hermione stole a glance at him.

'There, my dear,' said Mrs Trapes after a while, 'there's a cup o' tea as *is* a cup o' tea, brewed jest on the b'il, in a hot pot, an' drawed to perfection. Set right down an' drink it, slow an' deliberate. Tea ain't meant to be swallowed down careless like a man does his beer! An' why,' demanded Mrs Trapes, as they sipped the fragrant beverage, all three—'why ain't you out with your precious—pea-nuts, Mr Geoffrey?'

Ravenslee set down his cup and turned to Hermione. 'Mrs Trapes has told you, I think, that I am become—er—an itinerant vender of the ubiquitous pea-nut.'

'Mr Geoffrey!' gasped Mrs Trapes, gulping a mouthful of hot tea and blinking; 'I never did! Never in all my days would I allow myself such expressions. Mr Geoffrey, I'm ashamed at you! An' that reminds me—it was chicken fricassee, wasn't it? For your supper, I mean?'

'I believe it was.'

'Then,' said Mrs Trapes, rising, 'I'll go an' buy it. Was you wantin' anything fetched, Hermy?'

'If you wouldn't mind, bring a bunch of asparagus.'

'Sparrergrass!' exclaimed Mrs Trapes in horror-struck tones. 'Why, it's anywhere from thirty to sixty cents.'

'But Arthur loves it, dear; and now that he's working so hard'——

'Arthur likes!' cried Mrs Trapes indignantly. 'Mr Geoffrey, it's been Arthur ever since he was born, an' her scrinchin' an' pinchin' herself for the sake o' that b'y. O' course he likes sparrergrass—so do I; but I make shift with pertatoes or cabbidge or carrots—an' so should he. Come now, Hermy, you take a bunch o' carrots instead; carrots is healthy an' cheap! Come now, is that sparrergrass to be carrots or not?'

'Ann, that asparagus is to be—asparagus!'

'Such wicked extravagance, an' all for that b'y! Hermy, I'm surprised at ye!'

For a long moment after Mrs Trapes had departed there was silence, while Ravenslee sat gazing where Hermione stood busy at her pastry again.

'Mr Geoffrey,' said she at last, 'I want to thank you for watching over my boy. Arthur told me how good you were to him while I was away. I want you to know how grateful I am.'

'What beautiful hands you have, Hermione! And I shall dream of your arms.'

'My arms?' she repeated, staring.

'They're so—smooth and white.'

'Oh, that's flour!' said she, bending over the table again.

'And so—round.'

'Oh, Mr Geoffrey! Can't you find something else to talk about?'

'Why, of course,' he answered, 'there are your feet, so slender and shapely.'

'In these frightful old shoes!' she added.

'Worn out mostly in other people's service,' he nodded. 'God bless them!'

'They let the wet in horribly when it rains!' she sighed.

'So Heaven send us dry weather! Then there is your wonderful hair,' he continued, 'so long and soft and'——

'And all bunched up anyhow!' said she, touching the heavy, shining braids with tentative fingers. 'Please don't say any more, Mr Geoffrey, because I just know I look a sight—I feel it! And in this old gown too—it's the one I keep to scrub the floors in.'

'Scrub the floors?' he repeated.

'Why, of course, floors must be scrubbed, and I've had plenty—oh, plenty of experience. Now what are you thinking?'

'That a great many women might envy you that gown for the beauty that goes with it. You are very beautiful, you know, Hermione.'

'And beauty in a woman is—everything, isn't it?' she said a little bitterly and with head suddenly averted.

'Have I offended you?'

'No,' she answered without looking round; 'only, sometimes you are so very—personal.'

'Because the First and Second Persons Singular Number are the most interesting persons in the world; and, Hermione, in all this big world there is only one person I want. Could you ever learn to love a pea-nut man?'

'That would all depend—on the pea-nut man,' she answered softly, 'and you—you don't talk or act a little bit like a real pea-nut man.'

'Well, could you stoop to love this pea-nut man just as he is, with all his faults and failings—

love him enough to trust yourself to his keeping, to follow him into the unknown, to help him find that Beautiful City of Perhaps—could you, Hermione?' As he ended he rose to his feet, but swiftly, dexterously, she eluded him.

'Wait!' she pleaded, facing him across the table; 'I—I want to talk to you—to ask you some questions, and I want you to be serious, please.'

'Solemn as sixty judges!' he nodded.

'Well, first, Mr Geoffrey—why do you pretend to sell pea-nuts?'

'Pretend!' he repeated, trying to sound aggrieved.

'Oh, I'm not blind, Mr Geoffrey.'

'No, indeed—I think your eyes are the most beau'——

'Oh, please, please be serious!'

'As a dozen owls!'

'I—I know,' she went on quickly—'I'm sure you haven't always had to live in such—such places as Mulligan's; I know you don't belong here as I do. Is it necessity that has driven you to live here, or only—curiosity?'

'Well—er—perhaps a little of both,' he admitted.

'Then you're not obliged to sell pea-nuts for a living?'

'"Obliged" is scarcely the word, perhaps; let us call it a pea-nut penchant, a hobby, a'——

'You are not quite so—poverty-stricken as you pretend?' Her voice was very soft and gentle, but she kept her head averted; also her foot was tapping nervously in its worn shoe.

'Oh, as to money,' he answered, 'I have enough for my simple needs, but in every other sense I am a miserable pauper. You see, there are some things no money can buy, and they are generally the best things of life.'

'And so,' she said, interrupting him gently, 'you come here to Mulligan's, you deceive every one into thinking you are very poor, you make a pretence of selling pea-nuts, and push a barrow through the streets—why?'

'First, because pushing a barrow is—er—very healthy exercise.'

'Yes, Mr Geoffrey?' she said in the same soft voice.

'And, second,' he continued, wishing he could see her face—'second, because I find it—er, well—highly amusing.'

'Amusing!' she cried, turning suddenly, her eyes very bright and her cheeks hot and anger-flushed. 'Amusing!' she repeated. 'Ah, yes—that's just it—it's all only a joke to you, to be done with when it grows tiresome; but my life here—our life—is very real—ah, terribly real, and has been sordid sometimes. What is only sport to you for a little while is deadly earnest to me. You are only playing at poverty, but I must live it.'

'And, thirdly,' he continued gently, 'because I love you, Hermione!'

'Love me!' she repeated, shaking her head. 'Ah, no, no—your world is not my world, nor ever could be.'

'Why, then, your world shall be mine.'

'Yes, but for how long?' she demanded feverishly. 'I wonder how long you could endure this world of mine? I have had to work and slave all my life; but you—look at your hands, so white and well-cared-for—yours are not the hands of a worker!'

'No, I'm afraid they're not!' he admitted, a little ruefully.

'Now look at mine—see, my fingers all roughened by my needle.'

'Such busy, capable hands!' said he, drawing a pace nearer—'hands always working for others, so strong to help the distressed. I love and honour them the more just because of those work-roughened fingers.' As he spoke he reached out very suddenly, and, clasping these slender hands, stooped and kissed them reverently. Now glancing up, he beheld her red lips all a-quiver, while her eyes were suffused all at once, as, drooping her head, she strove to loose his hold.

'Let me go! she whispered. 'I—I—ah, let me go!'

'Hermione,' he breathed, 'oh, Hermione, how beautiful you are!'

But at this she cried out almost as if he had struck her, and, wrenching her hands free, covered her face. 'Oh God! are all men the same?'

'Hermione,' he stammered—'Hermione—what do you mean?'

'I mean,' she answered, proud head upflung, 'there were always plenty of men to tell me that—when I was an office scrub-woman. Well,' she demanded fiercely, stung by something in his look, 'what did you think I'd been? When a girl is left alone with a baby brother to care for, she can't wait and pick and choose work that is nice and lady-like; she must take what comes along, or starve—so I worked. I used to scrub floors and stairs in an office building—I was very young then, and Arthur hardly more than a baby, and it was either that or starvation, or'—— She flushed painfully, but her blue eyes met his regard unflinchingly. 'Anyway, I preferred to be a scrub-woman. So now you know what I mean by your world not being my world, and I—I guess you see how impossible it all is?'

For a long moment was a silence, wherein she stood turned from him, her trembling fingers busily folding and refolding a pleat in her apron, while he stared down blindly at the floor.

'So you preferred the slavery of scrubbing floors, did you, Hermione?' he said at last.

'Of course!' she answered, without turning or lifting her heavy head.

'And that,' said he, his voice as placid, as

serenely unhurried, as usual—'and that is just why all things are going to be possible to us; yes, even turning my wasted years to profit. Oh, my Hermione, help me to be worthy of you—teach me what a glorious thing life may be'——

'I?' she said wonderingly, her drooping head still averted. 'But I am'——

'Just the one woman I want to be my own for ever and always, more—far more than I have ever wanted anything in my life.'

'But,' she whispered, 'I am only'——

'The best, the noblest I have ever known.'

'But a—scrub-woman!'

'With dimples in her elbows, Hermione!' In one stride he was beside her; and she, because of his light tone, must turn at last to glance up at him half-fearfully; but those gray eyes were grave and reverent, the hands stretched out to her were strangely unsteady, and when he spoke again his voice was placid no longer.

'Dear,' he said, leaning toward her, 'from the very first I've been dying to have you in my arms; but now I—I dare not touch you unless you will it so. Ah, don't—don't turn from me; let me have my answer; look up, Hermione!'

Slowly she obeyed, and now, beholding the shy languor of her eyes, the sweet hurry of her breathing, and all the sighing, trembling loveliness of her, he set his arms about her, drawing her close, and she, yielding to those compelling arms, gave herself to the passion of his embrace. And so he kissed her, her warm, soft, quivering mouth, her eyes, her silken hair, until she sighed and struggled in his clasp.

'My hair,' she whispered—'see, it's all coming down!'

'Well, let it. I'd love to see it so, Hermione.'

'Should you? Why, then, let me go,' she pleaded.

Reluctantly he loosed her; and she, standing well beyond his reach, shook her shapely head, and down, down fell the heavy coils, past shoulder and waist and hip, rippling in shining splendour to her knees. Then, while he gazed, spell-bound by her loveliness, she laughed a little unsteadily, and, flushing beneath his look, turned and fled from him to the door.

When he would have followed, she stayed him. 'Please,' she said, tender-voiced, 'I want to be alone; it is all so wonderful, I want to be alone, and—think.'

'I may see you again to-night, Hermione? Dear, I must.'

'Why, if you must,' she said, 'how can I—prevent you?'

Then, all at once, her cool, soft arms were about his neck, had drawn him down to meet her kiss, and—he was alone with the pastry-board, the rolling-pin, and the flour-dredger; but he saw them all through a golden glory, and when he somehow found himself out upon the dingy landing the glory was all about him still.

(*Continued on page 294.*)

THE SURFING-GROUND OF HAWAII.

By F. CARTWRIGHT.

BENEATH the volcanic cliffs of Diamond Head stands the Bay of Waikiki, where the famous surfing-ground of the Hawaiian Islands is situated. Curving gently inward from the giant headland, the bay is two miles across, and, fringed with palms and other tropical growth, provides an ideal refuge from the stress and strain of the busy city. Honolulu, the capital, is only five miles distant in a north-westerly direction. A splendid motor-road connects the two places, while the car-line service is both rapid and efficient. Many fine homes dot the shore and its vicinity, while the hotel accommodation is all that can be desired. Since the late Robert Louis Stevenson honoured Waikiki with his residence there a great expansion has taken place. Marsh-lands have been drained for building purposes, and Uncle Sam has also taken over large tracts for military uses. Fortunately the planting of fourteen-inch guns has not spoilt the beauties of Waikiki, for the necessary emplacements are well hidden, and, indeed, the uninitiated might pass within a dozen yards of these heavy batteries and yet not see them.

One looks across the Pacific and notes the great coral-reef three-quarters of a mile or more away, smothered in foam. Giant rollers hurl themselves over it in mountains of spray, and, untamed, dash forward at express speed toward the shore. The depth of the lagoon is trifling considering its extent, and this it is which makes surfing there so safe and enjoyable. It is almost impossible to be drowned in it. 'Why not go beyond the reef and make a bigger run of it?' say the unsophisticated. The reply is—'Sharks!' And so one stays within the reef, where there is room for thousands, young and old; where there is no undertow; and where the beach slopes very gradually, to rise again as the coral line is approached.

There are two kinds of surf-riding—on boards and in canoes. The former method is incomparably the more exciting and skilful, and we will deal with that first. Surf-boards vary in length and width, but a good average size is eight feet by eighteen inches. They are made from the wood of the native koa-tree, which will take a very high polish. Tapering to a blunt point in front, these boards are comparatively light and are easily handled. Some have a history.

To an enthusiastic surfer, his board is what the bat is to the keen cricketer, a thing of joy and loving care.

Having watched the accomplished hand careering on the crest of a mighty roller, one judges the performance to be comparatively easy. Not so. There are difficulties ahead for the green hand, and it takes time and patience to attain passable skill. A great deal depends on the board, which must balance well. However, having obtained a satisfactory piece of timber, the tyro can go ahead.

Starting from the beach, the surfer has to push his board in front of him as soon as he reaches the deeper stretches fringing the coral. This process disgusts many learners, but no sport is worth while where all is plain sailing. Arrived in the region of broken water, the swimmer has to watch his chances keenly, and correct timing is all the battle at this stage. Should he miscalculate, back he is thrown, and possibly he and his *koa* part company for a while. However, he succeeds at last in mounting his board and turning it toward the shore. The next move is perhaps the most difficult—manœuvring for position in order to ride the roller, which has to be attacked in a slanting direction. And here a certain amount of knack is requisite to tilt the board. Many disappointments have to be faced, and the least one can say of the experience is that it is tantalising. Strength and skill, an eye for the psychological moment, with a perfect confidence in his tool—these are the surfer's assets. But those ignominious plunges into the deep, locally termed 'taking the diploma,' are common to all learners.

The conventional way of occupying the board consists in lying flat on it, with head raised and hands acting as guides. Once learnt, this position is really all that is necessary. Some, however, go beyond this, and kneel or stand upright; while the freak performer is always to be encountered.

We left the surfer awaiting his chance. Noting a giant wave careering toward him, he prepares to catch it, and meanwhile down he goes into the green abyss. Gradually he is caught upward as the object of his attention roars toward him, and in a trice his board is slanted. Will he do it? Yes; breathless and excited, he is on the crest, the nose of his *koa* is skilfully pointed shoreward, and wave and man are speedily borne for hundreds of yards in a wonderful ecstatic progress. Finally the mass breaks on the beach, and the surfer presently emerges, dazed yet exhilarated, and—goes forth again.

That nowhere else can surfing be so safely practised as in Hawaii is well known to real travellers. There is absolutely no danger to the person who can swim. Though this sport was originally confined to the natives, the white man now revels in it; and many of the gentler sex are really clever surf-riders who lose nothing by comparison.

Of surf-canoeing not so much can be said, for there is not so great an element of risk attaching to it, nor is the personal factor so paramount. Yet its pursuit is marked by a measure of excitement, and there certainly is a subtle charm. Probably we might define canoeing as a sport more suited to those who have lost some of their youthful activity. Those long, graceful outrigger canoes are a picturesque sight anywhere, but especially so when topping the breakers. In canoeing one dons a bathing-suit, and the craft is paddled toward the edge of the reef. Awaiting their opportunity, the natives neatly turn before the oncoming roller. Caught up like a feather, away she goes, skilfully placed by the crew with prow and stern rising clear, and in a minute a crash on the beach announces that the end is reached. Sometimes the craft is overturned, but it is easily righted and return made to the beginning of things. It is a rare occurrence when misfortune comes along.

It may here be said that the strong and high waves are termed 'queen surf,' while the more moderate rollers come under the title 'canoe surf.'

Near the beach are the headquarters of the Outrigger Club, built in native fashion, with grass roof, the leading organisation of the surfing fraternity. Much hospitality is dispensed here, and visitors are cordially welcomed. Across the way are the famous Aquarium and the lovely Kapiolani Park, both of which will well repay a visit.

A VOICE IN THE WILDERNESS.

By Mrs Comyns Carr.

THE lawns at the hospital were bright with the daffodil and the whitening blossom.

The nurse who was pacing up and down with Lieutenant Eric Fortescue told him so. But she was sorry when she had done it, for this was a patient whom one must be careful not to depress by reminding him of his blindness—he took his misfortune so very hard.

'Blossom!' echoed he. 'Yes, I suppose it's spring—season of hope, don't they call it? Not much hope for me—eh, nurse?'

The nurse silently turned a pair of kind, brown eyes upon him; they were not liquid brown eyes—not, indeed, beautiful eyes at all; they were small, and flatly set in a large, strong, and—yes—plain face.

But Eric Fortescue could not see this. He only knew that her arm was strong; that her touch was firm, yet very gentle; that her large hand was soft; and that her voice—and this was more to him than anything—her voice was wondrous deep and sweet, full of the most varied and delicate inflections, always soothing to his sore spirit, always pleasant to his fastidious, musician's ear.

'There are different kinds of hope,' said she, 'and different things to hope for.'

He laughed harshly. 'Oh, you mean resignation and a contented spirit and all that!' he cried. 'Now, don't *you* come any preachifying over me! *You've* never tried that game, at least.'

'I shouldn't *think* of being so impertinent,' answered the young woman quietly, loosening her hold on him a little.

He clutched the arm, gripping it to his side.

'Oh, come now! Don't be offended,' said he, half-petulantly. 'Of course you're right; a contented spirit would be a jolly, cosy thing—and they say blind folk get it at last. Though how the—they do it, when they've so much more time to think than other folk, passes me.'

'Why, you have got glorious things to think about!' she cried. 'How about that day up at the bridge-head that you talk of sometimes?'

'Yes! That was good!' He smiled—a smile that lit his handsome, boyish face as with a wondrous inner light.

She was gazing at him, though he did not know it, and smiled in sympathy.

'Yes, that was very good—till'——

'Till you went down! I know. But even then it was good. When Private Jones carried you out under fire, wasn't it good? Perhaps men don't do that for officers they don't admire—and love.'

'They do it because they're fine fellows—that's why,' he answered quickly. 'But, yes, I'll admit that was good, too—very good. I shall never forget it.'

There was a pause.

'And when you went up—when we went up—the other day to get your Military Cross? Wasn't that good? Weren't you proud? I know I was!'

'Well, the thought of those things comes in and helps one a bit sometimes; and if they could have patched me up enough to go back, the war would have been a blessing to me—shown me things straight. But a useless log.' He threw up his one usable hand—the left was maimed—to emphasise his words.

But she drew him towards an empty seat by the side of the water.

'Come and sit in the sun and listen to the birds,' said she. 'They'll tell you things. I admit you never can go back—your arm would have prevented that, anyhow—but haven't you got your old profession left? Why need you be a useless log?'

'Do you mean my music?' he laughed bitterly.

'Yes; a composer can work in the dark. Why, Milton wrote *Paradise Lost* when he was blind.'

'Oh, he had a daughter devoted enough—and clever and sympathetic enough—to write it down for him. I'm not likely to find some one who could, and would, write down my symphony.'

'You never can tell,' said the nurse.

He sat down wearily. 'I can't even listen to the birds to-day,' he grumbled. 'They mock one with that light, gay song. No more gaiety in life for me, nurse.'

'You think too much,' she said.

'Think!' echoed he. 'How's one to prevent it when one has only a woman's heartlessness to think of?'

She moved; her lips parted, as though on a word; but she did not speak it; only her eyes spoke, and he could not see them.

But the kindness in her must have passed to him, for he put his hand into the breast of his tunic, and drew out an ear-marked letter, fingering it.

'Read that,' he said. 'It had to be read to me—by her brother who brought it—and I little thought I should ever want any one else to see my shame! But you—you understand things. You see, it was written after *this* happened.'

And she read. It was the letter of a selfish, cruel woman—written without even sufficient sympathy to sheathe her sword in velvet. 'You would be the last man to want to be hampered with a wife in your present circumstances,' she wrote. 'No one is more sorry for you than I am, but I feel you would rather be free.'

The flush of a righteous wrath rose in the nurse's face; but she said quietly, as she put the letter back in his hand, 'You were engaged to her?' It was a question; but when she added, 'You loved her,' it was not in the tone of a question.

'Yes! I was engaged to her,' he answered, tearing up the paper, and letting the pieces flutter to the ground, 'for two years. I hadn't enough to marry on when I asked her, and we were waiting, and then the war broke out.'

He paused. Then, 'As for loving her—well—she was very beautiful.'

'Beautiful!' echoed the woman beside him beneath her breath.

'Yes—with that kind of beauty that makes people turn round in the street, you know. Tall, slender, fine features, fine eyes, gorgeous colouring, gorgeous red hair.'

The nurse drew in her breath.

'Of course, that sort of thing sweeps a man away if he's fool enough to throw himself in its path, and I'm dreadfully susceptible to physical beauty.'

The woman made no sign, except that her

hands were clenched. Yet presently she said, 'Perhaps she's sorry now.'

'Sorry? She? Never! She's the wife of a big gun—queening it! Well, she has got what she needed; and I have lost what would have been a burthen and nothing else now. Oh yes! I may well cry, "Thank God!" nurse.' And turning to the woman whom he could not see, he added, '*She* wouldn't have brought me here to listen to the song of that thrush.'

'Perhaps she didn't care for music,' said the nurse.

'No. She heard none of the music that rings through life—as you do!'

There was no reply; but the thrush sang.

'You can hear the world-music—and give it out again, too,' he added softly. 'You're a musician.'

He did not say it as one who asks, but as one who states a fact.

'Well, yes, I was a singer before the war,' she admitted. 'I wonder how you guessed!'

He laughed. Then, 'And you gave it up to help poor, embittered wretches like me!' he added gravely. 'Well, you won't have lost by it, my dear!'

She quivered, and moved imperceptibly a little farther on the bench.

'No, indeed,' she declared. 'I wouldn't have missed a fraction of it for worlds! It has given me a happiness which I should never have known. I couldn't live the old life again.'

'None of us could do that,' he said gravely. 'But *you* could never have lived without helping some one, somehow.'

'Ah! You've put me on a pedestal, you see. But I've got to come off it!' She laughed softly—a tender, rippling, happy laugh.

'*I* won't help you off it. I want to keep you there for the rest of your life—and mine. I want'——

His arm was stealing about her; but she put it firmly back, and jumped to her feet.

'Good gracious!' cried she, glancing at the watch on her wrist; 'it's close on the hour for the doctors. I shall be in a scrape.'

He rose, sighing. 'I'm sick of doctors, nurse! What has been the use of them, eh? There's nothing more to be done.'

'One never can tell,' she replied. 'Wait until to-morrow before you make up your mind about *them*—or anything else.'

She spoke in the old, firm, optimistic, professional voice; but she was not really hopeful—not about the doctors' opinion. Whether there was any other hope in her breast, dependent on the very adverseness of that opinion, was known only to herself.

. . . . . .

But Nurse Beaumont and her patient were both wrong; there *was* something more to be done.

It was a new specialist who had examined the injured eyes that spring day on which the thrush had sung a new song; he had advised an operation—he had unfurled the flag of hope, and the operation had been a success.

Six weeks ago Eric Fortescue had been a blind man; to-day he saw. The oculist had just given him the glasses that were to finish the cure, and had told him that he might read his letters.

The nurse—a pretty little slip of a thing—handed them to him, including one that bore no postmark.

'Nurse Beaumont asked me to give you that,' said a voice that was strange to him. 'She left the hospital two days ago.'

His fingers closed tightly over the thin paper; but he asked no question.

'I believe she means to give up nursing. She's done her bit—perhaps she's marrying. They often do,' said the voice that sounded so harsh to him.

He opened the letter, slowly—as a hint that the nurse should leave him. Yet when she did, he stopped—his fingers trembled too much to do it. But he could read his name in a firm hand on the cover; the glasses were all right, and this was the first use that he was to make of them.

'I know,' he read, when he could muster courage at last—'I felt sure last week that it was going to be all right, and I'm glad—oh, I'm glad for you, my friend! But you won't *want* me now. And I haven't the courage to wait and see the look on your face when your eyes open for the first time on your nurse. Because, not only do I not possess real beauty, to which you admit you are susceptible, but I have not even the sort which your imagination conjured up as suited to my voice. I am one of Nature's cruellest freaks—I am a very plain woman. And I couldn't be the one to inflict the sight of my face upon you for a lifetime; I understand the artist's temperament too well! Oh, I know you would have been true to me! And perhaps you might even have fancied that you could get over it. But I know better. So good-bye, my friend. I thank you for the good days you gave me—though they were dark days to you in one way; I thank you for having let me lighten them a little. I shall watch your career; I think it will be worthy of the mercy that has befallen you.—Your friend, ELSPETH.'

. . . . . .

The summer was nearly spent; the grimy dust of a hot day in late August lay upon the City. The oppression of it weighed upon the spirit of Eric Fortescue as he walked down the street, crowded with workers escaping from close rooms for an evening breath of air.

He had laboured hard the last three months, but not with any result satisfactory to himself. That morning, however, he had chanced to see in an advertisement that a song of his was to be performed at a charity concert, and he had

suddenly determined that he would go and hear it. And he went.

There were one or two indifferent items and one excellent number; then that for which he had come—set down to a Miss Fletcher, a singer unknown to him.

A tall, gaunt, plain, young woman came quietly on to the platform. Scarce a hand welcomed her; but she stood, in a simple dignity, gazing, with parted lips, straight into the audience.

Eric Fortescue wondered what it was in her that compelled attention, though she was so very badly endowed with the usual armour of attraction. Then, to the soft accompaniment of a lute, she began to sing, and a hush fell upon the audience, and an awful—a holy and awful—hush upon his own heart; for the voice was the voice that was always ringing in his ears, the voice of the woman who had brought him back from a spiritual death to hope, and—to love. He had never before heard her sing; but he *knew*—love could not deceive.

And this was the song that she sang:

'Ah, why dost sigh and moan?
Ah, why? Ah, why?
Queen of the laughing May,
Who wears thy crown to-day?
Good-bye! Good-bye!
Yea, for all mirth hath flown;
The strings have all one tone—
Ah, why? Ah, why?

'It is the lute that sings,
Not I! Not I!
Methinks some sleeping heart
That once had felt love's smart
Doth wake and cry!
Nay, hark! 'tis love's own wings
That fan the trembling strings—
Not I! Not I!'*

He had sat with his head bent—listening only; unconsciously his critical powers were alive, in spite of his beating heart—and they were satisfied. The girl had rendered his music as an artist; but she added thereto something which he gloried to think he alone could explain, though it appealed to the whole room.

And with the last words of the song he raised his eyes to her face. It was no longer ugly to him; it shone with a beautiful light—the light of the same spirit that spoke in the tender tones of the last whispered notes; it was, as he had told her in his days of blindness, the face proper to the voice—to the mind that spoke in the voice. Thank God! The eyes of his soul had not been more blind now than the eyes of his body were then.

A burst of applause followed the first pause of satisfaction. Eric Fortescue jumped up, and, while Miss Fletcher was still bowing her acknowledgments, he hastened out and found his way to the artistes' room.

She came in, and was at once the centre of a little group of friends. There was a smile on her large, sensitive mouth as she received the praises of her fellow-performers; but it was a dreamy smile, as though her thoughts were elsewhere.

And then he saw that he had drawn her eyes to his, where he stood in the doorway. Her sallow cheek went a shade paler, and then a faint flush crept up to it. The crush gave her time to recover, and to receive him with perfect self-possession as the mere composer complimenting her on the adequate rendering of his music.

It was the natural thing that he should see her downstairs; but when they were out in the street and he took the hand which she held out in farewell, he looked her straight in the eyes. 'What a pity you have taken another name for the profession!' said he. 'Beaumont was so much prettier.' He felt her fingers close in a convulsive grip before she withdrew her hand.

'What makes you think that is my name?' said she faintly.

'Have you forgotten that a musician's ear is acute, and that it grows even more acute when he is blind? You should know that, having nursed the blind.'

Then, as she was silent, 'Do you suppose that I could ever forget your voice? I should have known it in a thousand.'

Still she was silent. But his courage was not dashed; rather was it strengthened by that silence.

'You have tried very hard to run away from me, but you will have to give me a better reason than you gave me in your letter before you shall run away from me again,' he ended on a note of triumph.

Yet even then she did not speak. She stood still, with bent head; but he took his permission from the very pose, and drew her arm quietly within his own.

'It was my arm in yours before,' he said. 'But things have changed, Elspeth. It has got to be yours in mine for the rest of our lives. There's no denying me now—your voice has spoken, you see!'

She was trembling, as he remembered she had trembled in the hospital garden on the day when the thrush had warbled to them its spring love-song; then he had been diffident, but now he spoke with the ringing triumph of certainty.

He pressed the firm, round arm to his side in his strength, as he had pressed it before in his weakness, and then he saw her smile. It was a smile akin to that tender, rippling laughter which had cheered his spirit in the old, bitter days; a smile that shone from within, lighting the honest, brown eyes with a deep and holy light, touching the heavy features to brightness, telling of a selfless and passionate love flowing richly from a good heart. Truly, the voice in the wilderness had led the feet of the blind man into green pastures.

* Words of the song by J. Comyns Carr.

THE MONTH: SCIENCE AND ARTS.

CONCRETE SHIPS.

THE importance to this country of shipbuilding, in view of the number of British vessels being destroyed by enemy submarines, can hardly be over-estimated, and any new development which will cheapen the construction of ships, while shortening the time taken in building them, is of vital interest at the present time. From time to time during the last decade barges and lighters have been built of concrete reinforced with steel bars and netting. The scarcity of steel plates has given a strong impetus to this method, and a number of barges have recently been built on this system in Norway, while ships of two thousand tons and a floating dock are said to be in course of construction in that country. No British shipbuilder has yet adopted this plan, but some interesting lighters are being built in this country for use with a dredger. The largest of these vessels is over seventy feet in length, and has a width of twelve feet, and a depth of between five and six feet. When such a structure is built, a framework of steel bars, forming the longitudinal ribs, the cross-beams, and the uprights, is constructed, and the parts in between them are covered with stout steel netting known as 'expanded metal.' The concrete is then run in between wooden moulds in the usual way. So far as barges and lighters are concerned, the cost is stated to be little more than one-third that of steel vessels, while the boats are practically everlasting. Another advantage is that no painting is necessary for the preservation of such craft; consequently the cost of upkeep is nil, except for an occasional scrub to clean off weeds and other marine growths. Even if this method cannot be applied to large ships, its adoption for lighters and barges will save money, labour, and steel for the construction of bigger craft.

NEW SYSTEM OF FORECASTING THE WEATHER.

Many people note the rise or fall of the barometer from day to day, and a few enthusiasts possess instruments which record these movements continuously on a strip of paper. To the layman these records appear as a hopelessly irregular line. Those who study meteorology, however, have long since discovered that there are series of regular rises and falls, but so complicated in character that the possibility of forecasting the weather therefrom appears to be extremely remote. Recently an Italian meteorologist, Professor Vecelli, who has been studying this problem for several years, has evolved some approach to order out of apparent chaos, and his predicted movements of the barometer for about a month ahead, as illustrated by the curves given in *Popular Science Siftings*, show a remarkably close resemblance to the actual records. This new method is still far from perfect, but Professor Vecelli hopes in time to predict the weather at certain places for several weeks in advance after a careful study of past barometric records.

DIVING-ARMOUR FOR GREAT DEPTHS.

The greatest depth of water at which divers can work in the ordinary rubber dress is a little over two hundred feet, and at this depth the pressure causes so much discomfort that they can remain below for only short intervals of time. The diving apparatus involves a supply of air to the helmet, pumped through a rubber pipe, the pipe forming an additional danger from the risk of entanglement with wreckage. A new diving-dress has recently been invented by an American in which depths up to three hundred and sixty feet can be safely reached, while it is possible for the diver to remain below for several hours at a time. Instead of being flexible, like the ordinary costume, this dress is in the nature of armour, the body of the diver being relieved entirely of pressure from the water; yet it is so constructed that movements of the arms and legs are practicable. Another advantage is the elimination of the air-pipe in favour of chemical breathing apparatus contained in the dress, which remains effective for several hours. Thus only one line, that for lowering and raising him, is attached to the diver, as, although a telephone is included in the outfit, the cables are embodied in this line.

ELECTRIC TORCH WHICH REQUIRES NO REFILLS.

As most of us are aware, great reductions in the amount of electricity needed for lamps, including those used for electric torches, have been made during the last few years, and this development has made possible the lighting of torch-lamps by miniature dynamos worked by the hand. A Hungarian is credited with the invention of a torch based on this principle in which a tiny dynamo is worked by a spring for two or three seconds to light the lamp. When a lever is pressed down by the thumb this spring is wound up, and as the dynamo runs, the lever comes back again into its original position, ready for another wind, with the resultant flash of the lamp. Pocket-torches made upon the above principle have the advantage of being a permanent source of light instead of requiring refills from time to time. In larger lamps the squeezing-power of the two hands is utilised to wind up the springs.

POCKET WIRELESS RECEIVER.

According to *Popular Mechanics*, in which a drawing of a section of the instrument is given,

a wireless receiver very little larger than a fountain pen has been devised by a well-known American pioneer in wireless telegraphy. This tiny apparatus contains the electric batteries and magnetic coils needed for receiving messages, and is supplemented by an aerial wire passing down the coat-sleeve to the end of a walking-cane, the ground connection being carried down the leg to a metal plate on the heel of the boot. When the instrument is held to the ear with the cane at arm's length, messages can be picked up from transmitting stations in the vicinity.

ANGLO-FRENCH RAILWAY FROM THE MEDITERRANEAN TO BAGDAD.

What is known as the Bagdad Railway has been so much in the public eye of late years that an important British and French scheme for connecting Bagdad by rail with the Mediterranean on the one side and the Persian Gulf on the other is liable to be overlooked. Although no actual constructional work has been done on this line, its course has been mapped out and subjected to a preliminary survey, and there is little doubt that it will be proceeded with in the near future. The proposed terminal port on the Persian Gulf is Koweit, whence the line will run to Bagdad, about four hundred miles distant, and thence through Hit, Ana, and Deir to Homs, a further distance of about six hundred miles. A line already connects the last-named place with the port of Tripoli in the north of Palestine. From Bagdad the line will run due west to the Euphrates, which will be crossed by a large bridge, the river valley being then followed to Deir. Apart from the opening up of new fertile country, this line will shorten the time taken to reach India by several days, while a heavy traffic from pilgrims may be expected. No great difficulties are likely to be met with in building the railway, and a rough estimate places the cost at about twelve thousand pounds per mile. Nor are financial obstacles likely to stand in the way of its construction, as the scheme has the support of both the British and the French Governments, while the certainty of profitable traffic in the long-run will attract private capital. The undertaking is being promoted by the Persian Gulf and Mesopotamia Development Company, Limited, the originator of the scheme being Mr Bernard Maimon, and the engineers Messrs Sir John Wolfe Barry and Partners.

ELECTRIC CURRENT PREVENTS RUST AND CORROSION.

Those in charge of steam-boilers know how difficult it is to prevent the insides from being eaten away by rust or corrosion, while with hard water a scale forms which has to be chipped off with hammers at frequent intervals. It has been known for many years that the natural tendency to rust of the inside surfaces of boilers is accentuated by galvanic action, the complete boiler forming a huge electric battery in which feeble currents of electricity flow from one part to another. Now in an electric battery one part, which in a cell for an electric bell is a zinc plate or bar, wastes away, and for many years zinc plates have been inserted in steam-boilers for the purpose of forming electrodes which shall be subject to this galvanic corrosion instead of parts of the boiler itself. This plan was successful so long as the zinc remained clean, but when it became partially corroded there was a risk of the electric current reversing, so that the boiler wasted instead of the zinc. A new system of preventing corrosion, known as the 'Cumberland' Electrolytic Method, is based on a similar principle to that of the zinc plates; but with this system the action is intensified by an electric current from a dynamo, while reversal is rendered impossible. Another beneficial effect is that scale from hard waters is not formed on the plates and tubes; consequently the labour of chipping and the inconvenience of having the boiler idle for a day or two every couple of months are eliminated. Not only is the formation of scale prevented, but old scale is softened, so that it can be brushed off. A large number of boilers have already been fitted with the apparatus, the result being a saving in cleaning, repairs, and coal, which repays many times over the cost of the necessary equipment and electric current. In addition to the boilers, the condensers, in which the steam from the engines is condensed into water, suffer severely from corrosion. These appliances consist of large numbers of brass tubes, which are very costly to renew, and which often waste away quickly from galvanic action when salt-water is passed through them, as is the case in steamships. The Cumberland system has also been found effective in preserving these tubes from corrosion, whereby the heavy cost of periodical renewal is saved. In one instance the apparatus reduced the loss of condenser-tubes from one hundred a month to a trifle over one a year. It is interesting to note, also, that the growth of barnacles and shell-fish inside the condensers, which is by no means uncommon, and which impairs their efficiency, is entirely prevented by the Cumberland apparatus. As regards cost, one penny a day for current in a large electric-power station saves something like one thousand pounds a year in condenser-tubes.

PROTECTIVE SMOKE-HELMETS AND LAMPS FOR FIREMEN.

Two interesting appliances for the use of firemen in fire-brigades have recently been invented which should be of value in certain circumstances. One of these is a smoke-helmet of a novel type, to which fresh air is supplied for breathing from a container carried across the shoulders, in which it is compressed to a

pressure of two hundred pounds to the square inch. One of the most important features of the apparatus is a crown capable of withstanding violent shocks from falling bodies, in conjunction with a rigid framework which transfers such shocks to the shoulders, where a cushion of cotton-wool padding softens the blows. It is easy to understand that a falling beam which would break a man's neck in an ordinary helmet might hit the appliances described without causing serious injury to the wearer. The new helmet has windows in front similar to those of a diving-helmet, telephones opposite the ears, and a whistle which can be blown when the fireman needs assistance. Moreover, the wearer can take off the helmet himself without external aid. The second invention is a powerful gas-lamp, fitted with a reflector, and supplied with gas under pressure from a reservoir carried on the back of a fireman. The reservoir has a wide base, so that it can be taken off and placed on the ground if desired. The lamp-head swivels, and can be made to project a powerful beam of light in any direction. According to *Popular Mechanics*, this invention has been adopted by the Cincinnati fire department.

SUCCESSFUL TREATMENT FOR SEVERED NERVES.

The injury or complete severance of important nerves by bullets or pieces of shell is no uncommon occurrence at the Front. When a piece of the nerve has been actually carried away, something to take its place is essential if the wounded man is to recover the use of the muscles affected. A German professor is said to have originated a method whereby injured nerves can easily be mended, although portions may be missing. Part of a small artery from some animal is filled with nerve fluid, and used to join up the two ends of the nerve, which soon grow together again under this treatment. In one case several inches of the nerve going to an arm were destroyed, but the above method proved successful, and the patient was able to use the limb within a few weeks.

NEW SOURCES OF WEALTH TO RELIEVE TAXATION.

Wealth which is equally free to all nations can only be drawn from the sea or the air, and these sources appear to be practically inexhaustible. The small number of many kinds of fish taken out of the sea does not appear appreciably to affect the quantity therein; while agricultural produce, which is partly derived from the air, can be grown continuously on the largest scale without apparently altering the quantity or constituents of the atmosphere. By fishing and agriculture, therefore, we collect materials which would otherwise remain useless. This view seems to be taken by the Empire Resources Development Committee, of which the object, according to Lord Milner, who presided at the first meeting, is to open up new sources of revenue for the Government which will relieve the heavy taxation we are likely to suffer from after the war. A scheme suggested by Mr Bigland, M.P., consists in an Empire monopoly of home and colonial fisheries, in which the Colonies will join the home Government in supplying fish for almost the whole world, the estimated profits at a penny a pound being thirty-six million pounds in ten years. Palm-oil and coco-nut products have also been mentioned as a hopeful source of wealth if properly developed. The chairman of the above committee is Sir Starr Jameson, while Mr H. Wilson-Fox is the honorary secretary.

POSSIBLE EXISTENCE OF LARGE SUPPLIES OF PETROLEUM IN ENGLAND.

The possibility of petroleum being found on a commercial scale in England will come as a surprise to many. Yet such is the opinion of Mr William Forbes Leslie as set forth in a paper read before the Institution of Petroleum Technologists. Oil from shale has been obtained in Scotland for many years past, but the yield meets only a very small proportion of the demand in this country. According to Mr Leslie, certain indications point towards the existence of vast quantities of oil-shales in a zone bounded on the north by a line between Whitehaven and the mouth of the Tees, and extending to the western end of the English Channel. Intermittent flows of petroleum mixed with water have been noted from time to time at several collieries within this area, the yield in one case being as much as one thousand gallons a week. A borehole at Kelham, in Nottinghamshire, is said to afford proof of a true oil-bearing stratum below the surface rocks. No doubt this matter, of which the importance can hardly be over-estimated, will be exhaustively investigated after the war, as the discovery of large quantities of petroleum in this country would have an important bearing upon the payment of interest on war loans, and even upon the repayment of the principal.

LIFE-SAVING APPLIANCES FOR SUBMARINES.

Inventors have long been busy trying to devise means of escape for the crews of submarines which have been so damaged that they cannot rise to the surface. A favourite idea is a compartment embodied in the upper surface of the hull, and so attached that it can be quickly released for carrying the crew up to safety. One such device recently invented is a detachable conning-tower, normally held down by several large bolts, which can be quickly undone. At each end is a windlass, upon which is wound enough wire cable to reach to the surface from any depth that the submarine can sink to without collapsing. When an accident happens the crew enter the conning-tower

through a water-tight door in the bottom, which is then closed, while the bolts holding the structure to the hull of the vessel are unscrewed. The windlasses are now operated to pay out cable as the tower floats upwards, the speed being adjusted at each end so as to keep it level. Should the submarine be slowly sinking in water too deep for the length of the cables, these can be cast off entirely when their full length has been paid out. A somewhat similar device by another inventor consists of a compartment fitting into the top of the submarine, and also fixed by quickly releasable bolts, but without the windlasses for controlling the journey to the surface. In each case the life-saving compartment contains a supply of oxygen and stores of food and water, as well as means for attracting the attention of passing vessels.

BREAD FROM WHEAT WITHOUT GRINDING.

The Italians are credited with having invented a method of making bread direct from wheat without grinding it. After being well washed, the wheat is soaked in warm water for three days, by which time it has become quite soft. The grain can then be kneaded in the ordinary way, made into loaves, and baked after being allowed to 'rise.' Bread made in this way has a much higher food value than the ordinary article, as even the husk has useful dietetic qualities. The wheat should be of good quality for this process, and, of course, should be free from dirt, seeds, or other species of grain. Hence, although no grinding is needed, the processes which precede this operation must be carried out. In view of the shortage of labour and fuel, this process of making bread should be particularly worthy of adoption at the present time.

A NEW BICYCLE GEAR.

In view of the fact that before the war is over there will be thousands of soldiers suffering from the loss of a foot, or maimed in one or other of their legs, it may be of interest to know that a bicycle has been designed which, on account of being fitted with foot-levers, may be ridden by men who could not operate an ordinary crank machine. The driving-power is applied by means of two levers working independently, the length of each stroke varying according to requirements. Thus a man minus one foot, or with one leg shorter than the other, could operate the bicycle with ease. A further advantage consists in varying leverages, or speed-gears, ranging from forty to eighty, fifty to one hundred, &c. A machine of this description may also be ridden by any one over ten years of age, as any length of stroke may be taken, according to length of reach. On mounting, the levers are always in one definite position, ready to take a stroke with either foot. Chain-wheel troubles are eliminated, owing to the absence of chains and gear-wheels. The lever principle of propulsion as applied to bicycles is, of course, no new idea, but as embodied in the above machine offers particular advantages never before combined. The appliance is not yet on the market; but in view of the particular uses above suggested, its manufacture should be made possible even in war-time. Some such device must be looked on as a necessity if men disabled in the ways referred to above are to be able to get about and find employment.

AN APOLOGY.

The Editor regrets to find that the article by Mr Reginald B. Span, entitled 'Some Royal Apparitions,' which appeared in the December number of *Chambers's Journal*, was in some instances an almost verbatim copy of an article by Mr Eliot O'Donnell, entitled 'Haunted Royalties,' which appeared in *The Occult Review* for November 1915. It is hardly necessary to say that the Editor had not previously seen the article in *The Occult Review*, and he desires to offer his sincere apologies to Mr O'Donnell for the unintentional infringement of his rights.

To Correspondents who wish fuller information regarding new inventions mentioned here, addresses will be furnished, when possible, provided a stamped and addressed envelope or post-card be sent to the Editor, 339 High Street, Edinburgh.

A LOST EDEN.

If I could hear the nightingales,
And 'mid the roses stand,
As on one night, in one far June,
In Love's enchanted land,

With spirits hushed and still we stood,
While, through the dusk, your eyes
Shone like the altar-light that falls
Upon the sacrifice.

The birds' song passionate and sweet,
The roses drenched in dew,
The magic and the mystery,
Our souls together drew.

And then you drifted from my reach—
Not ours Love's paradise.
Oh, angel of the flaming sword,
Is wisdom always wise?

MARIE HEDDERWICK BROWNE.

*** TO CONTRIBUTORS.

1*st*. All communications should be addressed 'To the Editor, 339 High Street, Edinburgh.'

2*nd*. For its return in case of ineligibility, postage-stamps should accompany every manuscript.

3*rd*. To secure their safe return if ineligible, ALL MANUSCRIPTS, whether accompanied by a letter of advice or otherwise, *should have the writer's Name and Address written upon them* IN FULL.

4*th*. Poetical contributions should invariably be accompanied by a stamped and directed envelope.

THE PASTEL.

By Douglas G. Browne.

CHAPTER I.

IN the small studio that housed Mr Humphrey Rippingill, the marine painter, the clock had just struck nine on a November evening. The gas was not lighted, for there was no gas to light. The curtains, as a precautionary measure, were closely drawn across the big north window. An oil lamp, standing amid the raffle of supper on the gate-legged table, gave forth an indifferent illumination and a powerful smell. The tortoise stove, however, was glowing comfortably through all its cracks, filling the room with coke-fumes; and before it Mr Rippingill himself slumbered uneasily in a basket chair, and dreamed of the water-rates.

It was at this juncture that Mr Porson, the well-known solicitor, fell into the studio through the skylight. His entry was unrehearsed and lacking in composure; but very happily the drop was short and a large ottoman lay immediately below. The painter, aroused by the crash of breaking glass and woodwork, and the sudden impact of an icy blast, sat up and blinked, to discover his skylight hanging inward in tatters, and a small, stout, infuriate gentleman, stuck all over with glass as a pudding is with almonds, bouncing on his ottoman.

'Well, I'm blessed!' said the marine painter; but this was nothing to the language that proceeded to flow from Mr Porson as he got himself into an upright posture, and, sitting gingerly on the edge of the couch, began to pluck the fragments of glass out of his person. Mr Rippingill made no attempt to go to his help, but sat staring with an air of mingled astonishment and disgust. 'It's your own fault, you know,' he said at length; 'but you really shouldn't swear like that at your age. Of course, it's creditable in a way; one admires it in sailors—and parrots.'

'Curse your impudence!' Mr Porson cried. 'Why don't you'——

'Why don't I rush to your help?' Mr Rippingill continued for him. 'Well, now, why should I? You and your friends have led me a nice dance these last few days. Besides, I take it you've got me now; although your methods *are* a little drastic, you know. What about my window? Who are you, by the way?'

'My name is Porson,' said the solicitor. While continuing to feel himself all over with plump white hands, he was staring at the other with some astonishment.

'Porson!' the painter repeated. 'Porson! Ah, of course, the grocer!'

'Grocer!' cried the solicitor. '*Grocer!* What the devil do you mean, sir? Grocer, indeed! I tell you my name is Porson, of Porson, Williams, & Whichcord, solicitors, of Lincoln's Inn!'

Mr Rippingill regarded him critically, his head on one side.

'Certainly,' said he; 'you are not quite my idea of a grocer; though in these days one never knows. But I had no notion that full-blown solicitors—nothing personal intended—demeaned themselves by this sort of work. And was it really necessary to precipitate yourself like a bomb through the window?'

'I banged your cursed door till I blistered my hands,' Mr Porson said savagely. 'Do you suppose'——

'Oh, that was you, was it?' the painter interrupted. 'I should have taken you for a man of sense. Did you seriously think I should let you in? No, no! Little Willie is not quite such an ass! His friends have their own signals. While this strained situation continues, other knocks receive no attention.'

Mr Porson glared at him, speechless. He was still seated on the ottoman, a somewhat ludicrous figure—his hat gone, his tie under his ear, his thick gray hair in disorder, and one trouser-leg hitched up to the knee.

'And you were in!' he stuttered at length; 'you were in! And you let me climb that infernal ladder and risk my neck on your predestined skylight!'

'I didn't ask you to,' said Mr Rippingill simply. 'I thought you had gone away. I would really much rather you hadn't chosen this mode of entry, though it is distinctly sporting in a man of your age. As for the skylight, it isn't my fault. The whole studio is as rotten as touchwood. You could run a butter-

 [*All Rights Reserved.*]

knife into the timber anywhere. It belongs to the Ecclesiastical Commissioners, you know —*Q.E.D.*'

The solicitor had now risen cautiously to his feet, and was indulging in gentle oscillatory movements calculated both to adjust his disordered dress and to reveal the presence of any stray fragments of glass he might have overlooked. As a matter of fact, although rudely shaken, he was not hurt at all. His plump face, inflamed to an alarming degree with rage and agitation, did not show a scratch.

Mr Rippingill, who had not moved from his chair, suddenly lay back and laughed until he was weak.

'Oh, very funny!' said Mr Porson furiously; 'very funny, I have no doubt! But let me tell you, sir, I consider your conduct outrageous! I have always maintained that painters as a class are impudent, unwashed, empirical coxcombs; and this exhibition fully confirms that belief!'

'Oh, come, come!' the painter gasped, struggling for breath. 'It is deuced comic, you know! You'll see it yourself when you're calmer. You're just talking through your hat now. Funny? Why, damme, it's as good as a play! Oh Lord! how weak I am!' He fell back again, laughing helplessly, the tears running down his cheeks. And then, 'Gad! there is your hat!' he cried, pointing upward.

Indeed, Mr Porson's immaculate top-hat, a masterpiece by Heath, could be seen far above their heads, hanging precariously from a splinter of the window-frame. Its owner felt himself incapable of doing justice to his feelings; and, while he hesitated and fumed, the painter recovered himself and spoke again. 'Well, hand it over,' he said in a small, weak voice.

'Hand over what?' asked Mr Porson, staring.

'The summons, or writ, or whatever you call the beastly thing.'

It was plain that Mr Porson was completely at a loss.

'You seem to be labouring under some delusion,' he said shortly. 'I know nothing of any writ or summons. I am in the habit of leaving such things to my clerks. Why, good God, sir!' he cried, with a fresh access of wrath, 'do you suppose I should serve a writ with my own hands?'

It was the turn of Mr Rippingill to be surprised. 'Then what *are* you here for?' he asked, sitting up.

'To ask you a few simple questions,' the lawyer replied. 'By the way, you are Mr Humphrey Rippingill, I suppose?'

'I am.'

'And you were on friendly terms with the late Mr Sholto Abernethy?'

'Of course I was!' the painter said, jumping to his feet. 'Is *that* what you want to see me about? My sainted aunt! why didn't you say so before? And why smash my skylight to ask a few simple questions?'

Mr Porson stamped with irritation, trod on some glass, swore, and retreated to clearer manœuvring-ground.

'Because you would not answer my knock, sir!' he retorted. 'I must have hammered on your door for ten minutes without eliciting any reply. It was imperative that I should see you at once. I went to No. 3, but there was no one there. I knew Mr Abernethy's studio was empty. I was turning away, when I saw a glimmer of light in your top window. I had excellent reasons for suspecting that some unauthorised person might, in your absence, have forced an entry here. I came and knocked again without result, and my suspicions were increased. How could I suppose you were here all the while? It was no time for scruples. I fetched the ladder, which I had previously noticed by your neighbour's studio, set it against the window, and climbed up. I trust you are visited by some compunction when you picture this! The ladder is short, and as I was leaning rather heavily on the window, attempting to see in, the cursed thing gave way! I might have broken my neck!'

'You might have broken mine,' the artist put in. 'I often go to sleep on that ottoman.'

'As if that were not enough,' Mr Porson continued firmly, disregarding the interruption—'as if that were not enough, I am received with ridicule and confounded with a dun! A dun, indeed! Only my sense of professional duty restrains me from walking out of this place at once!'

'Oh, I don't wonder you feel a little ruffled,' Mr Rippingill said; 'any one would. And perhaps I owe you some apologies. You see, Mr Porson, I am in a state of siege. The defalcations of a picture-dealer, who is, I believe, now in Rio de Janeiro, have landed me in penury. Duns lie in wait for me in the street, so that I have not put my nose out of this yard for a week past. If I opened my door to any but the preconcerted signals, writs would descend on me like snowflakes. It began by being amusing, but now it is merely tiresome. In addition to the gas and the water people, who are always with us, there are a tailor, two artists' colourmen, a grocer (I remember now, his name is Pawkins), and I dare say several more. Ah! and, of course, there is the inevitable Shylock himself, one Ian Heriot of that ilk, *né* Isaacsohn. I wonder why Jew moneylenders always take Scotch names! My friend Ian is hardly a spiritually minded person, but he gets there with both feet every time.'

'I have heard of him,' said Mr Porson. During this speech he had been softening, and he was now regarding the painter with a keen but not unfriendly eye. He was, in fact, a man of kindly nature, but irritable and prejudiced; and

certainly the manner of his descent into the studio would have upset the nervous system of an amœba. Moreover, artists as a class were anathema to Mr Porson, although his oldest friend had been Mr Abernethy the painter. But then, in the opinion of many, Mr Abernethy was not an artist.

'Well, well!' said he, 'there seems to have been a mutual misunderstanding. Perhaps there were faults on both sides. I beg to withdraw any strictures I may have passed, in the heat of the moment, on your profession, Mr Rippingill. A little natural vexation'——

'The fault was entirely mine!' the painter replied, not to be outdone. 'I was grossly uncivil. And now, is there anything I can do for you? A drink? Some vaseline or sticking-plaster?'

But Mr Porson's attention had wandered. He was peering anxiously about the studio, where canvases, easels, clothes, books, and other things filled every corner and covered every piece of furniture. He seemed to be looking for something. And suddenly, crying, 'Ah, excuse me!' he stepped over the débris of the window, pushed hurriedly past its owner, and from the top of an untidy bookcase behind him took up a small picture. It was a bright, clever little sketch of a field of poppies done in pastel. With a chuckle of triumph the lawyer turned again to Mr Rippingill. 'Will you favour me,' he said, 'with a brief statement of the circumstances under which this came into your possession?'

'Do you suppose I stole it?' the painter cried.

'No, no!' said the solicitor impatiently; 'I suppose nothing of the kind! Pray answer my question. We may be interrupted at any moment.'

'Why should we be?' the other murmured; but, without further argument, he embarked upon the required explanation, which may be both summarised and amplified as follows.

The Chichele Studios are only three in number, and they stand in a pleasant enclosure behind a high brick wall. In No. 3 dwelt intermittently a dipsomaniac, who is no concern of ours. No. 2 was Mr Rippingill's messuage or tenement. No. 1, the largest of the three, had, until two days before, belonged to Mr Sholto Abernethy, R.A. Everybody is familiar with Mr Abernethy's work; and this fact, together with the national characteristic of looking three times before he leaped, and then declining to leap after all, explains how he contrived to amass his considerable fortune. In private life (and his whole life was private) he was a kindly, modest man, who refused annually to figure in the columns of *Who's Who*. A widower, he lived with one servant—an Irishman named O'Shea—in No. 1 Chichele Studios; and, except on the occasions of his lightning descents upon the Finchley Road in search of tobacco, the enlightened public who bought the signed artist's proofs of his sentimental pot-boilers never saw him at all. Between him and his neighbour, the young marine painter, a considerable intimacy had arisen in the two years since the latter took the cheapest of the studios. Notwithstanding a great disparity between their ages, they discovered many common interests, from the theories of M. Comte (in which the Academician was a firm believer) to the vastly overrated art of Izaak Walton. They were in daily communication for months together; for Mr Abernethy seldom showed any desire to get away from London, and Mr Rippingill seldom could afford to. Some three months, however, before the present crisis in the young man's affairs, Mr Abernethy fell ill, and presently departed, albeit with extreme reluctance, to recuperate upon the Folkestone Leas. It was not then supposed that he would be away longer than a week or two; but before he left he begged the other to do him a service. This was no more than to take charge, during his absence, of a certain picture (or, rather, sketch), his own handiwork, to which he seemed to attach some mysterious significance. It was, in fact, the small pastel now in Mr Porson's hand.

'You see, Humphrey,' Mr Abernethy had said, 'I'm very fond of that little sketch. Not, God knows, as a work of art—it's not worth a bawbee—but for what we may call its associations. Yes, I think we might very well call them associations. It means a lot to me, that wee sketch, and maybe to others forby. Yet it seems daft-like to send it to the bank, and lawyer-men I never could abide. Of course, my dear Humphrey, I don't want you to mount guard over it, or lock it up, or fash yourself in any way whatever; just hang it on your wall and think no more about it. Maybe it will bring you luck. Truth is, I'm none so easy about this studio of mine. You can't say who might get in.'

Although there were undoubtedly many articles of value in Mr Abernethy's studio, this did not explain why any one should want to steal or damage a pastel sketch of no intrinsic value at all. The old gentleman, however, plainly had set his heart on leaving it in safe keeping; and Mr Rippingill gladly accepted the very slight responsibility. The object of this solicitude might seem unworthy; but that was no business of his. What is the use of being a Royal Academician if you cannot support a few whims?

As it happened, the friends never met again. Mr Abernethy wrote several times from Folkestone, and never omitted to ask after the pastel. Meanwhile his fortnight grew to a month, the month to two, and then to three; and then one morning it was found he had passed quietly into that other life where, presumably, the tenets of M. Comte will undergo the most practical test of all. Unhappily, his death occurred during

Mr Rippingill's humiliating imprisonment in his studio—only two days, in fact, before the surprising arrival there of Mr Porson. The young painter was sincerely distressed, but amid his own thronging troubles the event and its possible consequences filled less of his thoughts than they would ordinarily have done. And, until the solicitor leaped upon it with such ardour, the pastel had slipped altogether out of his mind.

Such, however, was the history of its coming into his possession, which did not take long in the telling.

When it was done, 'Thank you, Mr Rippingill,' the lawyer said cordially; 'I am greatly indebted to you. Indeed, notwithstanding my own misadventure, the fact that you have sported your oak so thoroughly may prove to have saved us an infinity of bother. Have you had many callers to-day?'

'Four or five,' said the painter.

'And you opened to none?'

'Not one.'

'Excellent!' Mr Porson cried. 'I suppose you have no idea who they were?'

'None whatever.'

'Now tell me, did Mr Abernethy ever speak to you of his family?'

'Not in so many words,' the other replied; 'but from what he let fall I gathered he was not on the best of terms with any of them.'

'That is putting it mildly,' the lawyer said. 'Did he never mention his son?'

'Never. I did not know he had one.'

'What is your opinion of O'Shea?' was the next question.

'Well,' said the painter, 'if you really want to know, I think he's a humbug.'

The solicitor had another question on the tip of his tongue, when both were startled by a loud rat-tat upon the studio door.

'There's another!' said Mr Rippingill. 'They might leave a man alone at this time of night! Well, let them knock! I sha'n't open.'

But Mr Porson motioned him to keep quiet. 'Speak low,' he whispered. 'Wait a minute and see what happens. I shall be surprised if this is anybody you expect. Can you hide me anywhere?'

'Hide you?' the astonished painter echoed. 'Well, there's my bedroom, or we could pull that screen out a bit.'

'The screen will do,' the lawyer said in the same low tone; and in a minute he was hidden behind it, taking the pastel with him. Then he put his head out again.

'My hat!' he whispered; 'can you get it down and shove it out of sight?'

By standing on the ottoman, Mr Rippingill was able to hook down Heath's masterpiece with a walking-stick. As he stowed it behind some canvases, feeling rather like a criminal in a nightmare, there came a second heavy battering upon the door. But he was well used to this sort of thing. He was lighting a pipe when the woodwork was assaulted for the third time; after which, he glanced at the screen for instructions, and saw Mr Porson thrust his head out once more, shake it, wink, and point up at the skylight.

(*Continued on page 311.*)

OIL-BEARING SEEDS AND NUTS IN THE BRITISH EMPIRE.

By L. L. Blacknell.

IN various ways the importance of oil-yielding seeds and nuts in international trade has been brought to our notice during the last year or two. Germany was a large importer of oil-seeds from British colonies, and after several months of war it was realised that vegetable oils are a valuable source of glycerine, which is required in making explosives, and that in permitting Germany to import oil-seeds we were allowing her to have this essential war material as well as valuable food products. A serious shortage of animal fats and vegetable oils undoubtedly now exists in Germany, and it is sought to replace this shortage by emergency cultivation of such oil-seeds as poppy-seed, rape-seed, and sunflower-seed. Fats are an essential part of our diet, and in temperate climates animal fats such as butter, lard, suet, &c. have been mainly consumed until quite recent years. On the other hand, in tropical countries—as, for instance, in West Africa—the natives consume large quantities of vegetable oils with their food. Butter is now being replaced to a remarkable extent by margarine made largely of vegetable oils such as coco-nut oil and palm-kernel oil. Great advances have been made in the treatment of oils, so that they can be used in the manufacture of margarine. Liquid oils are converted into solid fats, their distinctive flavours removed, and wholesome and palatable butter substitutes produced. Older uses of vegetable oils in this country are those of linseed-oil in making paints, varnishes, and linoleum, and of rape-seed for the production of colza-oil for burning. But the margarine-making industry bids fair to become the largest consumer of vegetable oils in the future, and there is no reason why all the margarine consumed in this country should not be made by British industry with British materials, instead of being largely imported from foreign countries, as is the case at the present moment.

A matter of moment to the British Empire lies in the fact that the Empire includes some of the most important oil-seed-producing countries of the world. India exports oil-seeds and vegetable oils to the value of over seventeen million pounds a year; Ceylon and the British islands in the Pacific are large producers of copra; whilst British West Africa exports enormous quantities of palm-oil, palm-kernels, and ground-nuts.

Castor-seed.—Besides its well-known medicinal use, the chief uses of castor-oil are in dressing leather, and as a lubricating oil for aircraft engines. The normal export of castor-seed from India amounts in value to nearly a million pounds annually. More than half the exports come to this country, and are crushed chiefly at Hull. Mills for crushing castor and other oil seeds are working successfully in Bombay and other parts of India, and the tendency to export oil instead of seed is increasing.

Copra.—It is thought that the long-prophesied 'boom' in coco-nut planting will take place as soon as normal conditions are restored after the war. About 35 per cent. of the world's output of copra, the dried kernel of the coco-nut, is produced in the British Empire—Ceylon, India, and the British possessions in the Pacific being the chief exporters. The Philippines, Java, and Celebes are the largest foreign producers. Copra from the west coast of India, known as Cochin copra, commands the highest price in the world's markets. The production of coco-nut oil for shipment instead of copra is rapidly expanding in southern India.

Ceylon is the largest exporter of products of the coco-nut palm in the Empire. The shipments in 1915 were fifty-five thousand tons of copra, twenty-five thousand tons of oil, and seventeen thousand tons of desiccated coco-nut. Amongst British African colonies, British East Africa, Zanzibar, and the Gold Coast produce copra. In the West Indies the coco-nuts are more often shipped as fruit than in the form of copra.

Cotton-seed oil is used in soap-making, by pastry-cooks and confectioners, for frying, and also in making vegetable lard and butter substitutes. This seed is imported into the United Kingdom, for crushing, to the value of over four million pounds a year, mainly from Egypt and India; whilst refined cotton-seed oil is also imported from the United States to the value of over a million sterling.

The *ground-nut* (or pea-nut) oil industry in France is very important, and deals with half-a-million tons of nuts a year, derived chiefly from French and British colonies. The oil is used as a salad-oil, for cooking purposes, in canning sardines, and in the manufacture of margarine. The best qualities of ground-nut oil compare favourably with olive-oil, and can be produced at a much lower cost. The cake is one of the best feeding-cakes for stock. The present high prices of cotton-seed have caused seed-crushers in the United States to turn their attention to ground-nuts, which are grown there on a large scale, and are eaten in the form of roasted pea-nuts and as 'pea-nut butter.' Seeing that ground-nuts are very largely produced in the British Empire, it is surprising that they have been hitherto almost entirely neglected by British oil-seed crushers. The unshelled nuts are sold by fruiterers in this country, and the roasted kernels are used by manufacturing confectioners as a substitute for more expensive edible nuts; but there is room for a much larger consumption for the production of oil and cake, especially in view of the need of finding a market for the nuts from India and Gambia, which formerly went to Germany.

Linseed is in a different category from that of the oil-seeds so far mentioned, inasmuch as the oil is not an edible oil, but a 'drying' oil used in the manufacture of paints, varnishes, and linoleum. The Argentine and India are our chief sources of supply of linseed, the value of our imports being between five and six million pounds a year. Four or five years ago we were importing large quantities of linseed-oil from the Netherlands and Belgium, but practically all our requirements of linseed-oil are now produced from seed crushed in this country.

Mowra-seed is an Indian oil-seed which was formerly shipped to Germany, and for which no new purchaser has yet been found. The result is that the export from India has seriously declined. Mowra fat is used in soap and candle making and as a chocolate fat.

Niger-seed oil is used as a substitute for linseed-oil when the latter is scarce, though it has not such good drying properties. It is suitable for soap-making, and for use as an edible oil. Niger-seed is produced largely in India.

Much has been heard recently of *palm-kernel oil*, a product of the West African oil-palm, which also yields palm-oil. Palm-oil is obtained from the pericarp or outer pulpy layer of the palm fruit. The kernels are obtained by shelling the palm-nuts which are left when the pericarp is removed from the fruit. Palm-kernel 'oil' is a soft fat with a pleasant nutty taste, and resembling coco-nut oil both in appearance and character. It is used in soap and candle manufacture, and in the preparation of margarine and cooking fats. The cake or meal which is left after expression or extraction of the oil from palm-kernels is a useful cattle food, which was much used in Germany, and is speedily finding favour amongst dairymen and stock-feeders in the United Kingdom. Up to the time of the war West African palm-kernels were mainly shipped to Germany, where the oil was expressed and sent to this country either unrefined or manufactured into butter substitute. The crushing of palm-kernels has now been taken up by British oil-seed

crushers, and this valuable trade has been captured from Germany. To ensure that the industry shall be retained in the Empire after the war, an export duty has been placed on shipments of palm-kernels from British West African colonies to destinations other than British.

Sesamum-seed, also known as sesame, sim-sim, til, gingelly, and benni seed, is the product of an annual plant cultivated in India, China, Turkey, and throughout the warmer regions of the world. The oil from the seed is used as an article of food in the countries where it is produced, and for soap-making and margarine manufacture in European countries, particularly France. Exports of sesamum-seed from India have fallen from nearly a hundred thousand tons in the year 1913–14 to less than fourteen thousand tons in the year 1915–16. Here again is a valuable Empire product which is almost unknown to British importers and manufacturers. Small quantities of sesamum-seed are occasionally imported into this country, and used as an ingredient in compound feeding-cakes, but the crushing of sesamum-seed on a large scale has not yet been undertaken here. The presence of very small quantities of sesamum-oil can be readily demonstrated by means of a chemical test producing a characteristic crimson colour, and in some Continental countries manufacturers of margarine are required by law to include a small quantity of this oil in their products, so that the difference between margarine and butter can be easily detected.

Shea butter is the fat obtained from the kernels of the shea-tree of West Africa. It is used by the natives for food, and the nuts are exported to the extent of about ten thousand tons a year. In Europe the fat obtained from the kernels is used in candle-making and, mixed with other oils, for soap-making. The shea-butter tree flourishes over large areas in Northern Nigeria. In northern Ashanti large tracts of country containing these trees are waiting to be exploited when cheap transport is available.

Poppy-seed has been for many years crushed for its oil in France, supplies of seed being obtained from India, whence the shipments have been as much as forty thousand tons in a year, and from Turkey. The poppy is also cultivated for its seed in France and Russia. Poppy-seed oil is a colourless or very pale golden yellow oil, with little or no odour and a pleasant taste; it is used as a salad oil, and is often added to olive-oil. Its 'drying' properties enable it to be used as a fixing agent in the preparation of artists' colours. Exposure to light renders it perfectly colourless, and it is therefore particularly suitable for use in making white paints.

The chief use of *rape-seed* is for the expression of its oil (colza-oil), which is used for burning. The crushing of rape-seed is an important industry in this country, our supplies being obtained largely from India and, in normal times, from Russia. Havre is another important centre for the crushing of rape-seed, whilst Japan also grows the seed and exports the oil.

The *soya-bean* of Manchuria has long been an important article of food in the East. In Europe the oil pressed from the bean is used by manufacturers of margarine, soap, and candles, and in the manufacture of varnish and printing-ink. Experiments in growing soya-beans have been made in many parts of the British Empire; but it seems unlikely that the crop can be profitably grown for export in competition with the Manchurian beans, which are raised under ideal climatic conditions and by the cheapest possible labour. Imports of soya-beans into the United Kingdom fluctuate rather strangely, but they have averaged over a hundred thousand tons a year for the last five years.

Sunflower-seed is extensively produced, and crushed for its oil, in Russia; but not much attention has been given elsewhere to the cultivation of the sunflower for its seed. The oil is suitable for edible purposes, and when refined is a good substitute for olive-oil. The cake is a good feeding-stuff for stock.

It will be seen that the world's trade in oil-seeds is now of the greatest importance, and that the British Empire is concerned in a very large share of it. The world's demand for oil-seeds has increased enormously during the last few years, partly owing to the requirements of soap, glycerine, and lubricant makers, but more especially to the growth of the margarine-manufacturing industry, which, it is to be hoped, will ere long become firmly established on the largest scale in the United Kingdom.

THE DEFINITE OBJECT.

By JEFFERY FARNOL.

CHAPTER XVII.—HOW GEOFFREY RAVENSLEE MADE A DEAL IN REAL ESTATE.

THE morning sun blazed down, and Tenth Avenue was full of noise and dust and heat; children screamed and played and fought together, carts rumbled past, distant street-cars clanged their bells, the side-walks were full of the stir and bustle of Saturday; but Ravenslee went his way heedless of all this, even of the heat, for before his eyes was the vision of a maid's shy loveliness, and he thrilled anew at the memory of two warm lips. Thus he strode

unheeding through the jostling throng at a speed very different from his ordinary lounging gait. Very soon he came to a small drug-store, weather-beaten and grimy of exterior, but very bright within, where everything seemed in a perpetual state of glitter, from the multitudinous array of bottles and glassware upon the shelves to the taps and knobs of the soda-fountain. Yet nowhere was there anything quite so bright as the shrewd, twinkling eyes of the little, gray-haired man who greeted Ravenslee with a cheery nod.

'Hot enough?' he inquired.

'Quite!' answered Ravenslee.

'Goin' to be hotter.'

'Afraid so.'

'Rough on th' kiddies, an' ice goin' up. Which reminds me I sent on the mixture you ordered for little Hazel Bowker.'

'Good,' nodded Ravenslee.

'And the pills to Mrs Sims.'

'Good again.'

'An' the sleepin'-draught for old Martin Finlay.'

'Good once more.'

'Won't last long, old Martin, I guess. Never been the same since little Maggie drowned herself, poor child! What d' ye want this mornin'?'

'First, to pay for the medicine,' said Ravenslee, laying a five-dollar bill on the counter, 'and then the use of your 'phone.'

'Right there,' said the chemist, nodding toward a certain shady corner, where, remote from all intruding bustle, was a telephone-booth, into which Ravenslee stepped forthwith, and where ensued the following one-sided conversation.

Ravenslee—'Hallo!'

Telephone—'Buzz!'

Ravenslee—'Hallo, Central! give me thirty-three Wall, please.'

Telephone—'Ting-a-ling—buzz-z!'

Ravenslee—'Damn this 'phone—what? No, I said double-three Wall.'

Telephone—'Buzz! Ting! Zut!'

Ravenslee—'Sounded different, did it? Well, I want'——

Telephone—'Buzz! Zut! Ting!'

Ravenslee—'Thanks. Hallo! that thirty-three Wall? Dana & Anderson's office? Good! I want to speak with Mr Anderson—say Mr Ravenslee.'

Telephone—'Zing!'

Ravenslee—'Thanks. That you, Anderson?'

Telephone—'Pang!'

Ravenslee—'Thanks—very well! What the devil's wrong with this instrument of torment? Can you hear me?'

Telephone—'Crack!'

Ravenslee—'Good! Yes—that's better! Now listen; I want you to do some business for me. No, I'm buying, not selling. I'm going into real estate. What! a bad speculation? Well, anyway, I'm buying tenement property in Tenth Avenue, known as Mulligan's, I believe. Oh, you've heard of it, eh? Not in the market? Not for sale? Well, I'll buy it. Oh yes, you can—what d' you suppose is his figure? So much? Phew! Oh, well, double it. No, I'm not mad, Anderson. No, nor drunk. I just happen to want Mulligan's—and I'll have it. When can you put the deal through? Oh, nonsense; make him sell at once—get him on the 'phone. Oh yes, he will if you offer enough—Mulligan would sell his mother—at his own price. You quite understand—at once, mind! All right. Good-bye. No, I'm not mad—or drunk, man; I haven't tasted a cocktail for a month. Eh—go and get one? I will!'

So saying, Ravenslee hung up the receiver and hasted out of the stifling heat of the suffocating booth, mopping perspiring brow.

'You look kinder warm!' nodded the chemist.

'I feel it.'

'An' it's goin' to be warmer. Try an ice-cream soda—healthy an' invigoratin'.'

'And better than any cocktail on such a day!'

'I guess! Take one?'

'Thank you, yes.'

So the bright-eyed chemist mixed the beverage and handed it over the counter. 'Chin-chin!' he nodded.

'Twice,' said Ravenslee, lifting the long glass. 'To the beautiful City of Perhaps!' and he drank deep.

'Say,' said the chemist, staring, 'that sounds t' me like a touch of the sun. Try a bottle of my summer mixture; good for sunstroke, heat-bumps, colic, spasms, and Hell's Kitchen generally. Try a bottle?'

'Thanks,' said Ravenslee, 'I will.' And grimly pocketing the bottled panacea, he stepped out into the hot and noisy avenue.

CHAPTER XVIII.—HOW SPIKE HEARKENED TO POISONOUS SUGGESTION, AND SOAPY BEGAN TO WONDER.

SPIKE was on his way from the office, very conscious of his new straw hat and immaculate collar; his erstwhile shabby suit had been cleaned and pressed by Hermione's skilled and loving fingers; hence Spike turned now and then as he passed some shop window to observe the general effect with furtive eye; and, stimulated by his unwontedly smart appearance, he whistled joyously as he betook himself homeward. Moreover, in his breast-pocket was his pay-envelope—not very bulky, to be sure—wherein lay his first week's wages, and as often as he turned to glance at the tilt of his straw hat or heed the set of his tie, his hand must needs steal to this envelope to make sure of its safety.

His fingers were so employed when he chanced to espy a certain article exposed for sale in an adjacent shop window; whereupon, envelope in hand, he incontinently entered and addressed the plump Semitic merchant in his usual easy manner.

'Greetin's, Abe! I'll take one o' them hair-combs.'

'Hair-gombs?' nodded the merchant. 'Vot kind?'

'What kind? Why, the best you got.'

'Ve got 'em up to veefty dollars.'

'Come off it, Cain—come off. I ain't purchasin' a diamond aigrette to-day; it's a lady's hair-comb I want, good, but not too flossy-lookin'—savvy that? This'll do, I guess—how much? Right there!' said Spike, flicking a bill upon the counter. 'That's it, stick it in a box—oh, never mind th' wrappin's. S' long, Daniel!'

With his purchase in his pocket, Spike strode out of the shop whistling cheerily, but the merry notes ended very suddenly as he dodged back again, yet not quite quick enough, for a rough voice hailed him, hoarse and jovial.

'Why, hallo, kid, how goes it?' M'Ginnis's heavy hand descended on his shrinking shoulder, and next moment he was out on the side-walk, where Soapy lounged, a smouldering cigarette pendent from his thin, pallid lips, as usual. And Soapy's eyes, so bright between their narrowed, puffy lids, so old-seeming in the youthful oval of his pale face, were like his cigarette, in that they smouldered also.

'Holy smoke!' exclaimed M'Ginnis, surveying Spike up and down in mock amazement, 'this ain't you, kid—no, this sure ain't you.—Looks all t' th' company-promoter, don't he, Soapy?'

''S right, kid; 's right!' nodded the pallid youth, his smouldering eyes always turning toward M'Ginnis.

'Say now, Bud, quit yer kiddin'!' said Spike petulantly.

'But, gee-whiz!' exclaimed M'Ginnis, tightening his grasp, 'you sure are some class, kid, in that stiff collar an' sporty tie. How's the stock-market? Are ye a bull or a bear?'

'Ah, cut it out, Bud!' cried the lad, writhing.

'Right-o, kid; right-o!' said M'Ginnis, loosing his hold. 'You're comin' over t' O'Rourke's to-night, of course?'

'Why, no, Bud, I can't.'

'Oh, t' hell wid that! I got you all fixed up to go ten rounds wid Young Alf, th' East Side Wonder.'

'What!' exclaimed Spike, his eyes bright and eager; 'you got me a match wi' Young Alf? Say, Bud, you ain't stringin' me, are ye?'

'Not much. I told you I'd get ye a real chance.'

'Why,' cried Spike, 'if I was t' lick Young Alf I'd be in line t' meet th' top-notchers!'

'Sure—if you lick him!' nodded M'Ginnis grimly.

'Say,' said Spike, his face radiant, 'I've just been waitin' an' waitin' for a chance like this—a chance t' show you an' th' bunch I can handle meself—an' now'—— He stopped all at once, and, shaking his head gloomily, turned away. 'I forgot, I—I can't, Bud.'

'Aw, what's bitin' ye?'

'I can't come t'-night.'

'Won't come, ye mean!'

'Can't, Bud.'

'Why not?'

'I promised Hermy t' quit fightin'.'

'Is that all? Hermy don't have t' know nothin' about it. This is a swell chance for ye, kid—the best you'll ever get; so just shin over t'-night, an' don't say nothin' t' nobody.'

'I—can't, Bud—that's sure.'

'Goin' t' give me de throw-down, are ye?'

'I don't mean it that ways, Bud, but I can't break my promise t' Hermy.'

'She'd never know.'

'She'd find out some ways—she always does, and I can't lie t' her.'

'So you won't come, hey? We ain't classy enough for ye these days, hey? I guess goin' to an office every day is one thing, an' crackin' a millionaire's crib's another.'

'Cheese it, Bud—cheese it!' gasped Spike, pale and trembling.

'Right-o, kid!' nodded M'Ginnis; 'but I've been wantin t' know how ye made your get-away that night.'

'Oh, quit—quit talkin' of it!' Spike panted. 'I—I want t' forget all about it. I been tryin' t' think it never happened.'

'Ah, but you know it did,' said M'Ginnis, 'an' I know it, an' Soapy knows it did.—Don'tcher, Soapy?'

''S right,' nodded Soapy, his voice soft, his eyes hard and malevolent.

'So we kinder want t' know,' continued M'Ginnis, heedless always of those baleful watching eyes—'we just want t' get on t' how you'——

'Oh, say—give it a rest!' cried Spike desperately; 'give it a rest, can't ye?'

'Why, then, kid, what about comin' over t' O'Rourke's t'-night?'

Spike wrung his hands. 'If Hermy finds out she'll—cry, I guess.'

'Hermy!' growled M'Ginnis, black brows fierce and scowling. 'A hell o' a lot you care for Hermy, I—don't think!'

'Say now, you Bud, whatcher mean?' demanded Spike, quivering with sudden anger.

'Just this, kid—what kind o' a brother are ye t' go lettin' that noo pal o' yours—that guy you call Geoff—go sneakin' round her mornin', noon, an' night?'

'You cut that out, Bud M'Ginnis. Geoff don't! Geoff ain't that kind.'

'He don't, eh? Well, what about all this

talk that 's goin' on—about him an' her, an' her an' him—eh?'

'What talk?' demanded Spike, suddenly troubled.

'Why, every one 's beginnin' t' notice as they 're always meetin' on th' stairs—an' him goin' into her flat, an' them talkin' an' laughin' together when you 're out o' th' way—ah,' growled M'Ginnis between grinding white teeth, 'an' likely as not kissin' an' squeezin' in corners.'

'That 's enough—that 's enough!' cried the boy, fronting M'Ginnis fierce-eyed; 'nobody ain't goin' t' speak about Hermy that way.'

'Ye can't help it, kid. Here 's this guy Geoff, this pal o' yours—been with her—in her flat with her, all th' mornin'.—Ain't he, Soapy?'

''S right, kid!' nodded that pallid individual, the smouldering cigarette a-swing between pale lips; and, though he addressed Spike, his furtive eyes, watching aslant between narrowed lids, glittered to behold M'Ginnis's scowling brow; also the wolverine mouth curled faintly, so that the pendulous cigarette stirred and quivered.

'Oh, I 'm handin' ye the straight goods, kid,' M'Ginnis went on; 'I 'm puttin' ye wise because you 're my pal, an' because I 've known Hermy an' been kind o' soft about her since we was kids.'

'Well, then, you know she—she ain't that sort,' said Spike, his voice quavering oddly, 'so—don't you—say no more—see?'

'All right, kid; all right—only I don't like t' see this pal o' yours gettin' in his dirty work behind your back. If anythin' happens—don't blame me.'

'What—what you tryin' t' tell me—you, Bud?' questioned Spike between quivering lips.

'I 'm tellin' ye things are gettin' too warm. Oh, Hermy ain't the icicle she tries t' make out she is.'

'An' I 'm tellin' you—you 're a liar, Bud M'Ginnis—a dirty liar!' cried the boy.

M'Ginnis's bull-neck swelled; between his thick, black brows was a vein that swelled and pulsed; and, viewing this, Soapy's glittering eyes blinked and the pendulous cigarette quivered faintly again.

'Now, by'—— began M'Ginnis, lifting menacing fist; then his arm sank and he shook his big handsome head. 'Oh, pshaw!' he exclaimed, 'I guess you 're all worked up, kid, so I ain't takin' no notice. But savvy this, kid; if Hermy ain't goin' t' marry me on th' level, she ain't goin' t' let this guy have her—the other way—not much! I guess you ain't forgotten little Maggie Finlay? Well, watch out your pal Geoff don't make Hermy go th' same.'

Uttering a wild, inarticulate cry, the lad sprang—to be caught in M'Ginnis's powerful grasp; but, even so, his fist grazed M'Ginnis's full-lipped mouth. For a moment Spike strove desperately to reach Bud's grim, smiling face, until, finding all his efforts vain, he ceased all at once, bowed his head upon his arms, and burst into a passion of bitter sobbing; then, with an agile twist, he wrenched himself free, and, turning, sped away, heedless of his jaunty straw hat that had fallen and lay upon the dusty side-walk. Languidly Soapy stooped and picked it up.

'His noo lid!' said he; 'only bought t'-day, I reckon!'

'Gee!' exclaimed M'Ginnis, staring after Spike's fleeing figure, already far away; 'he sure was some peevish!'

'Some!' nodded Soapy. 'If he 'd happened t' have a gun handy, here 's where you 'd have cashed in for good, I reckon. Yes, Bud, you 'd be deader 'n mutton!' sighed Soapy, turning Spike's hat upon his finger; 'you 'd be as dead as—little Maggie Finlay you was mentionin'!'

M'Ginnis wheeled so suddenly upon the speaker that he took a long step backwards, but he still spun Spike's hat upon his finger, and the pendulous cigarette quivered quite noticeably. 'Aw, quit it, Bud; quit it!' he sighed. 'You know I ain't th' kind o' guy it 's healthy to punch around promiscuous.'

'You mean, if he 'd missed, there was you, eh?'

'Well, I dunno, Bud; if it had been my sister—maybe'——

'Oh, I know the sort o' dirty tyke you are, Soapy; but I 'm awake—an' I 've got you, see? If anythin' was t' happen t' me, I 've left papers—proofs—'n' it 'ud be the chair for yours—savvy?'

'Anyway, Bud, I—I haven't got a sister,' said Soapy, juggling deftly with the hat. 'But there 's one thing, Bud; th' guy who gets actin' Mr Freshy with Hermy is sure goin' to ante-up in kingdom come if th' kid 's around.'

'You 're a dirty dog, Soapy, but you 've got brains in your ugly dome. I guess you 're right about th' kid, an' that gives me an almighty good idea!' And M'Ginnis walked on awhile deep in thought; and ever as he went, so between those pale and puffy lids two malevolent eyes watched and watched him.

'No,' sighed Soapy at last, sliding a long, pale hand into the pocket of his smartly tailored coat—'no, I ain't got a sister, Bud; but there was little Maggie Finlay—I kind o' used t' think she was all t' th' harps an' halos—I used t' kind o' hope—but, pshaw! she 's dead—ain't she, Bud?'

'I guess so!' nodded M'Ginnis, yet deep in thought.

'An' buried—ain't she, Bud?'

'What th' hell!' exclaimed Bud, turning to stare—'what 's bitin' ye?'

'I 'm wonderin' "why," an' I 'm likewise wonderin' "who," Bud. Maybe I 'll find out for sure some day. I 'm—waitin', Bud—waitin'. Goin' around t' O'Rourke's, are ye? Oh, well, I guess I 'll hike along wid ye, Bud.'

JOHN NAPIER, THE INVENTOR OF LOGARITHMS.

By GEORGE PHILIP, M.A., D.Sc.

THIS year is the tercentenary of the death of John Napier, Laird of Merchiston, the inventor of logarithms. He was born in 1550, and died 4th April 1617. One hears a great deal just now of the neglect of science in this country, and nowhere is this neglect more evident than in the scanty interest shown in the lives of our great men of science. The subject of the present article is a glaring example of this. Some books on the history of Scotland pass him over in silence; others dispose of him and his works in a very few lines; while others simply refer to him as a recluse who won a reputation as a devotee of the black art. Writers on general history are not entirely to blame in this respect, as scientific men themselves have paid little attention to the ways trodden by their great forerunners. Curiously enough, the only historian of Scotland who does anything like credit to Napier's memory is David Hume, who showed in general very little appreciation for any talent other than literary. Hume said that 'John Napier was the person to whom the title of a great man was more justly due than to any other whom his country ever produced.' Most people will probably dissent from this opinion; nevertheless, it is a fact that, whether we judge a man by the brilliance of his genius or by the influence of his discovery on succeeding generations, John Napier will rank among the very greatest of our countrymen. It is regrettable that more information is not circulated about the great scientific achievements of the men of these islands; it would effectually dispose of a very prevalent idea that in the matter of invention or discovery we are the inferiors of the Teuton. Many notable results of far-reaching importance have been attained by men of our race, but one is safe in saying that not one of these results has had a greater influence on the progress of science than the invention of logarithms. To bear this out, it is sufficient to remark that the process invented by Napier is employed in the everyday routine work of the engineer, the surveyor, the navigator, the actuary, and the accountant; and when these are mentioned it will be seen that the whole fabric of our commercial life is intimately associated with that invention.

Every one knows that the most tedious operations we have to perform in arithmetical calculations are those that involve multiplication and division; addition and subtraction are, comparatively speaking, simple. Now, if a person is in possession of a table of logarithms, and knows how to use it, any calculation involving multiplication or division can be converted into one involving respectively addition or subtraction. Similarly, finding the power or the root of a number is merely a question of multiplication or division. A single example will suffice to show how much time is saved by utilising the remarkable process invented by Napier. Suppose we wish to find what answer we should get by multiplying 675 by 873. All we have to do is to turn up our table of logarithms, which tells us right away that the logarithm of 675 is 2·8293038 and that of 873 is 2·9410142. These numbers found in the tables have to be added, since our original numbers had to be multiplied. Our tables again tell us that the number which has for its logarithm 5·770318—the answer to our addition—is 589275, which is the answer desired.

Some readers to whom this process of calculation is new will be curious to see how it may be applied to assist a business man, say, in calculating what £3520 would amount to in 20 years at 4 per cent. per annum compound interest. If this had to be worked out by finding the interest year by year, it would take probably a couple of hours. But by our new method all that has to be done is as follows. (We are not here explaining the why and the wherefore of this method; we are merely showing how it is applied, and how effective it is in saving time.) We proceed thus: Take the logarithm of 1·04; multiply that by 20; add to the answer the logarithm of 3520; find from the tables the number which has this number for its logarithm, and you have your answer. It takes merely a few minutes.

If any evidence is required to show how universal the use of logarithms is, and how many different types of businesses are assisted by it, we have only to glance over the list of societies and associations that took a prominent part in the Napier Tercentenary Celebrations held in Edinburgh in July 1914, just before the outbreak of war. That year was the tercentenary of the publication of Napier's great book on logarithms. In addition to delegates from the learned scientific societies (strictly so called) of all the civilised countries of the globe, representatives were sent from the Society of Shipbuilders, the Faculty of Actuaries, the Association of Chartered Accountants, the Institute of Bankers, and a host of other bodies that concern themselves entirely with practical business of one kind or another. They are not primarily interested in questions of abstract mathematics, and the very fact that representatives of all the great industries of the world met together to do honour to the memory of John Napier is surely ample proof of the greatness of his invention and of its far-reaching importance.

This article is not meant to usurp the place of a text-book of mathematics. It is merely intended to give the general public some idea of the achievements of this wonderful man of whom so little notice has hitherto been taken. We therefore make no attempt to explain to the reader who is unacquainted with logarithms the principle on which they are based. Suffice it to say that even after conceiving the idea and formulating his plan of working, Napier had a colossal amount of calculation to perform; yet his working was so accurate that in his final results, after calculating the logarithms of the first thousand numbers, he made only one arithmetical mistake, and an insignificant one at that, as it involved only a figure in the ninth decimal place. Napier called his tables *The Wonderful Canon or Rule*, knowing full well the value of the process he had elaborated, and the surprise it would cause when given to the world.

A brief summary of the state of physical science at the end of the sixteenth century will show that such an invention was greatly needed, the striking fact being that it came from such a totally unexpected quarter as the little kingdom of Scotland, which hitherto had not produced one single man of eminence in this department of learning.

Up till the beginning of the seventeenth century, and indeed for some time after, the only subject of study that can be dignified by the name of science was astronomy, which exerted a fascination over men's minds from the very earliest times. The motion of the heavenly bodies was closely watched in order to explain the theory of the universe, and rules were sought for calculating their position at any given time. To facilitate the use of these rules tables were constructed, these, in fact, being to the astronomer something like a ready-reckoner in the hands of a business man. By the time we speak of, these tables were tolerably complete, but the labour involved in using them was very heavy. The sixteenth century contained the working periods of the lives of the astronomers Copernicus and Tycho Brahe, and these two—especially the latter—left an immense mass of observational data which was greatly increased by Kepler, and was destined in his hands to be of invaluable service in establishing the laws of planetary motion, now known as Kepler's Laws. These in turn formed the facts from which Sir Isaac Newton deduced his law of gravitation. The invention of the Galilean telescope in the early years of the seventeenth century provided a means of making astronomical data more numerous and more accurate, but no simultaneous advance had yet been made in simplifying the calculations involved in the working up of these results. It is said that Kepler performed each calculation ten times, and that one hundred folio pages were taken up with each opposition of Mars. Any real progress was therefore impossible so long as astronomers were trammelled with ponderous arithmetical calculations, and it is not surprising that men of an inventive turn of mind directed their attention to constructing mechanical devices to facilitate computation. Napier himself devised his 'Bones' for such a purpose. It must also be borne in mind, too, that by this time the science of algebra, which was brought by the Arabs from the East, was percolating slowly through western Europe, and people in general were beginning to employ calculation more freely in their everyday life. The first English book on arithmetic was published about sixty years before Napier published his great *Canon*, but only a very few could perform even the simplest arithmetical operations. It will surprise most people to learn that even so late as the beginning of the seventeenth century there was no notation for the simple processes of algebra such as are now known to every schoolboy who has had his second lesson in that subject. These processes were expressed in words, and even the common signs of plus and minus were not in general use.

Such was the state of science in Europe when Napier in 1614 published his *Description of the Wonderful Table of Logarithmes*. It was not until 1619, five years after its publication, and two years after the death of its author, that Kepler saw the book. Yet he immediately wrote a letter to Napier, the news of whose death had not reached him, and in this letter he referred in the most glowing terms to the processes explained in the book. To make the whole world know of his indebtedness to Napier, he caused the letter to be published in his *Ephemeris* for 1620, an astronomical almanac published annually under his guidance.

The outstanding facts of Napier's life are now well established. He was born at Merchiston Castle—at that time *near* Edinburgh, now *in* the city—in 1550, his father, Sir Archibald Napier, like all the Napiers of Merchiston, being a man of high standing in the councils of the State. On his mother's side he was related to the Bellenden family, and indeed either by blood relationship or by marriage ties he was connected with the most powerful members of the Scottish nobility. For generations the Napier family were prominent in all matters affecting the welfare of the Scottish people, and in a turbulent age, when fortune proved a fickle mistress to many a Scottish noble, the Napiers of Merchiston preserved the goodwill and esteem of both sovereign and people.

At the age of fifteen John Napier went to St Salvator's College, St Andrews, and although he must have remained there for a few years, he left without taking a degree. After this, he is lost sight of for several years. There is little doubt that he went abroad to continue his education, and perhaps also to escape as far as possible from the turmoil that was threatening to overwhelm

Scotland at that time. In all probability he studied at the University of Paris, an institution that attracted many Scotsmen, who acquired there the education which their own country could not provide. This residence abroad had very far-reaching effects on Napier. In his day the only subjects taught at St Andrews were divinity and philosophy; if mathematics were taught at all, it was as a very subsidiary branch of philosophy. But in the Continental universities it was beginning to hold an important place in a general education, and at Paris we know that the celebrated mathematician Peter Ramus taught with great distinction. If we are right in our surmise that Napier studied at Paris, he would there come under the influence of Ramus, and that will account for the fact that soon after his return to Scotland he started to write his *De Arte Logistica*, which is essentially a work on algebra and arithmetic. A study of this book shows that Napier was at least abreast of his time in this department of mathematics. Indeed, it is no exaggeration to say that it affords evidence that he was aware of certain processes that were not in general use for fully a century later. These facts are worth recording, as they show that Napier was, without doubt, one of the foremost scholars of his day.

It must be a matter of intense satisfaction to all his countrymen to know that the honour of the first invention of logarithms belongs indubitably to John Napier. Students of the history of science know well the difficulty that often surrounds a claim to priority of discovery, but it is now a well-accepted dictum that priority of publication carries with it presumable priority of discovery. The facts that establish Napier's claim are of national interest to us, and consequently there is no necessity to crave forgiveness for introducing them here. His most formidable rival for the honour was Jacob Bürgi, a native of Prague, who did certainly construct a scheme of logarithms; but his process was not made public until 1620. We have, moreover, other grounds for establishing Napier's claim.

In a letter to Cugerus the mathematician, Kepler remarked that 'a certain Scotsman even in the year 1594 held out some promise of that wonderful canon [of Napier's] in a letter to Tycho Brahe.' Who this Scotsman was, and how the promise came to be made, is indicated by a discovery made in the Edinburgh University Library by Mark Napier, the biographer of John Napier. Here a copy of a book by Tycho Brahe was found which bears on one of its blank leaves in manuscript a Latin inscription to the following effect: 'To Doctor John Craig of Edinburgh, in Scotland, a most illustrious man and highly gifted with varied and excellent learning, Tycho Brahe hath sent this gift, and with his own hand hath written that at Uraniborg, 2 November 1588.' The only Dr John Craig this can refer to is the son of Sir Thomas Craig, the celebrated jurist of James VI.'s reign, and the intimate friend of Sir Archibald Napier of Merchiston.

There is very little known of John Craig except that he was physician-in-chief to James VI., and that he had some reputation as a mathematician. He and Sir Alexander Napier's eldest son were friends, and we know that he was on intimate terms with the family at Merchiston. That Craig was also a friend of Tycho Brahe is shown by the fact that in a collection of letters published in Brunswick in 1737 the first three letters are from Dr Craig to the Danish astronomer, and in one of these he says that 'about the beginning of last winter that excellent man Sir Wm. Stewart delivered to me your letter and the book you sent.' The book mentioned here is almost certainly that in the Edinburgh University Library, and the date of the letter is fixed, therefore, as 1589. As further confirmation of this we have the fact that this Sir William Stewart was in Denmark in 1588, making arrangements for the marriage of King James to the daughter of the Danish king. Two years afterwards the king himself visited Denmark, and in his capacity as patron of learning paid his respects to Tycho Brahe, who was then living in great splendour in his observatory at Uraniborg. Dr John Craig was with the king in his capacity as physician. These well-attested facts show that by the year 1590 John Napier of Merchiston and Tycho Brahe had a mutual friend, well versed in mathematics, and nothing is more probable than that the arithmetical labours that troubled practical astronomers formed the subject of conversation between Craig and his friends on both sides of the North Sea. There is accordingly good ground for believing that Kepler's information was correct, and that by the year 1590 Napier was engaged in the work of constructing his tables, twenty years before the earliest date claimed for the existence of Bürgi's table, and thirty years before its publication. It is very probable that both men independently invented a system of logarithms, but Kepler's enthusiastic welcome of Napier's tables, when he first became acquainted with them in 1620, appears to indicate that he had seen nothing like them before, which would hardly have been the case had Bürgi's work been then published.

A word or two must now be said about Napier's other activities. His prominence in public affairs disposes effectually of the widespread idea that he lived the life of a recluse either at Merchiston Castle or in his Stirlingshire residence. No man of his religious zeal could possibly remain a mere spectator when the newly formed Church had to fight so strenuously against a powerful faction that had many supporters both at home and abroad. No doubt the retired life of a scholar would have pleased him better than extorting pledges from an unwilling

monarch whose personal tastes were in entire antagonism to the wishes of the majority of his people. But this aspect of Napier's life must not be overlooked, as it had a powerful influence on his intellectual state at the time. His entire mental energies were taken up with religious matters, and the enemies of Protestantism assumed in his mind the form of fiends or monsters. The events through which Scotland had just passed, the reported alliance with the Spanish, and the fact that a Napier of Merchiston found himself ranged against his sovereign were quite sufficient to justify his looking on these happenings as the precursors of the end of all things. It was during these years that he was engaged in writing his book, *A Plaine Discovery of the Revelation of St John*, a treatise, published in 1593, which is perfectly ludicrous to this generation, but which gave Napier a reputation on the Continent which not even his invention of logarithms could give. To us it looks like an intelligence run riot. But when we reflect that the greatest thinkers of even a century later indulged in such grotesque speculations, we need not be surprised at Napier's prolonged studies in this subject. It seems to have been a subject specially attractive to a mind of a mathematical turn, as we find that Sir Isaac Newton, who was born practically a century after Napier, devoted a great deal of attention to interpretations of a similar kind.

Any sketch of John Napier's life would be incomplete without a reference to another sphere of activity in which he gained fame or notoriety. Popular opinion in the neighbourhood of his residences in Edinburgh and in Stirlingshire would have it that he was in league with the powers of darkness, and there is on record one instance at least in which he took advantage of the credulity and ignorance that pervaded all classes of his countrymen at that time. One almost forgives Napier's action in this case, for the dupe was a noted rascal named Logan of Restalrig, against whom Napier probably had a score to wipe out. Logan—so the story goes—had heard that there was a large quantity of hidden treasure somewhere in the neighbourhood of Fast Castle, a stronghold on the coast of Haddington, and after having failed to locate it himself, he called in the assistance of the wizard laird of Merchiston. Knowing his man, Napier expressed his willingness to go, on condition that he was given a safe conduct both to and from the castle. Whether the quest was successful or not we do not know, but on the road home Napier was waylaid and robbed by persons who, he supposed, were the retainers of Logan. No room for doubt remains as to his opinion of Logan of Restalrig and of all others of that name, for he gave instructions that in all leases issued subsequent to this a clause was to be inserted that no farm on his estates was to be let to any one of the name of Logan. Another story is related showing how he was popularly supposed to have superhuman powers. He had as a pet a jet-black cock, which was thought to give its master access to the most secret thoughts of his domestics. On one occasion Napier suspected a member of his household of theft, and to find out the culprit he put the cock, after having covered it with soot, into a darkened room, and then made his servants pass into the chamber one by one. He had previously informed them that the cock would crow when the guilty person touched it. The cock remained silent throughout, but the guilty person was soon discovered, as he alone emerged with clean hands.

Napier died, as we have said, in April 1617. We are not certain as to his burying-place, but in all probability it was the churchyard of St Cuthbert's, Edinburgh. Dr Robert Pont, the minister of St Cuthbert's for many years, was an intimate friend of Napier's. Some readers perhaps know his son better—Timothy Pont, one of the most famous of our early geographers and map-makers.

It is impossible in an article like this to do full justice to the claims of John Napier, but even from what has been said it is evident that Hume's estimate was in no way exaggerated, and that he was not only one of the greatest Scotsmen, but also one of the greatest men in the history of science.

A BOAT-CRUISING EXPERIENCE.

By Commander P. J. STOPFORD, R.N.

TO the north of the island of Zanzibar lies the island of Pemba, which used to be the hunting-ground of H.M. ships engaged in the suppression of the slave-trade.

The procedure was as follows. A ship would leave from one to four boats, provisioned for three weeks, to patrol a portion of the coast of the island, and then return to her ordinary duties. At the end of this period the ship would return, reprovision the boats, and relieve the crews, either partially or wholly, and again leave them. This was generally carried out at night, the ship showing no lights and sounding no bugle-calls. The slaves used to be brought over from the mainland, after marches often exceeding a hundred miles, during which they suffered indescribable hardships and ill-treatment, in gangs of ten to a hundred in small dhows, in which they were packed in the most appalling state of filth and misery.

It happened that the present writer (when sixteen years of age) was away on this service in a twenty-eight-foot cutter upon a memorable occasion. My crew consisted of six seamen, besides the coxswain, one marine, a native interpreter, and one seedie-boy (native sailor). Armament—seven Martini-Henry rifles, three revolvers, and three cutlasses. We had been away for a fortnight, during which time we had captured two empty dhows bearing obvious signs of having recently landed slaves. Both were subsequently condemned in the Prize Court.

It was a Sunday evening, and we were lying at anchor, with an awning spread, in a bay at the south-eastern extremity of the island, which was well known as a likely place for slaves to be landed. Suddenly a dhow was observed to round the point forming the eastern side of the bay, hauling her wind to come in. Instantly the awning under which we had been resting was furled, the anchor was weighed, and sail made. Upon observing this action, the dhow immediately bore up and disappeared in the direction from which she had come. This was fairly good evidence of her nefarious intention, and it did not take us long to follow in her tracks. We soon sighted her again, but she had considerable start of us; there was a very heavy sea outside, and it was evident that no mean chase was before us. Moreover, from her size we assumed that she would have a large cargo on board, and there was every prospect of her making a stout resistance.

The rules of this business required us to fire blank-cartridge from a rifle as a signal for her to heave to, and if that was disregarded, to fire a shot across her bows; but as she was dead to windward of us, and it was obvious that a blank could not be heard, we proceeded at once to fire ball to windward of her. But the motion of the boat made firing very erratic. Some shots were seen to strike the water less than half-way; some were never seen at all. After a few rounds without effect, we started firing at her sail. In the meantime everything was prepared for the anticipated 'scrap.' A stern chase is proverbially a long chase, and how long this one might have lasted cannot be known; for after about half-an-hour of it, we saw the dhow suddenly come up into the wind and take a quantity of water over her bow, and before the ejaculation 'That's a good one!' was finished, she gave a tremendous lurch the other way, and capsized before our astonished eyes. In a moment the surrounding sea was covered with struggling and yelling black figures.

Our excitement was now naturally intense, but there was nothing to be done but to sit tight and sail on. In a short time we saw one or two figures separate themselves from the remainder, and do their utmost to reach us. One of these, a strong swimmer, soon got near enough for us to see that he was almost exhausted. One of the crew immediately plunged into the sea, and soon reached the black, whom he supported. The boat was hove-to, and, with a life-buoy secured to a line, both were hauled into the boat. (The bronze medal of the Royal Humane Society was awarded for this deed.) This man, a slave, told us that there were a hundred slaves on board the dhow, and nine Arabs, who had guns.

We then sailed on towards the capsized dhow, on whose high stern, mast, and yard we could distinguish a crowd of poor wretches, whose terrible shrieks were becoming audible. It was a ghastly sight. Most of the slaves were unable to swim. Some, frightened by the Arabs' misrepresentations that the white man's object was to catch them and eat them, abandoned themselves to the sea, while others did their utmost to avoid us. We were sailing through a mass of inert and helpless bodies. Whenever we saw men alive—and in many cases these had others clinging to them—we threw our life-buoy towards them, and so saved a few. When we got abreast of the dhow, but to leeward of her, we tacked and went close past her, then went about again and sailed right over her, getting a good 'haul' off her yard. But it was maddening to see the way in which they quitted even that support to elude us. For the rest, we had to content ourselves with plane sailing through the crowd.

The same man who had made the previous rescue now made a second attempt, this time to save two little boys not very far off. One sank before he could reach him, and the other promptly grappled his would-be rescuer so dangerously that it was only by getting our oars out and pulling all we knew that we got to him in time to save him. He was nearly done up when we did so.

By this time the sun had set, and darkness was coming on with the rapidity of the tropics. Our number in the boat was more than doubled, and we had shipped a great deal of water. We went about once more and got one last lot; for to have stayed longer would have been to endanger our own boat and the lives we had saved.

We therefore reluctantly bore up for our own depot, about seven miles distant, and proceeded to take stock of the result. Of twenty bodies that we had secured, two were found to be dead, and two belonged to the dhow's crew, so that the slaves rescued numbered only sixteen—a sad minority out of one hundred, if what we had been told was true, as seemed likely. We did our best to make the poor wretches as comfortable as possible, and gave them as big a blow-out of rice, oatmeal, and tea as we could provide. There was a lot of bailing to be done to free the boat of water, and with a fair wind we made good progress. But we managed to run aground, and remained stuck for half-an-hour.

We reached our destination at half-past one

in the morning, and, having transferred our freight to an empty dhow that was there, we proceeded to restore the boat to a condition resembling good order, and then sought such rest as wet thwarts afforded.

Later inquiries in the neighbourhood showed that the bodies of fifty-six slaves, three Arabs, and the captain of the dhow had been recovered and buried by fishermen, and that six Arabs and one slave had escaped alive.

So ended an experience of which no one who took part therein is likely to wish for a repetition.

LIQUID-FIRE AND POISON-GAS.

By Arnold Freeman.

THOUGH it is now a long time since our German enemies introduced liquid-fire into this world-war, it is quite surprising how little is known in England, and what erroneous ideas are held, of this weapon of *Kultur*. It is not very long ago since I saw in a newspaper an account of an interview a correspondent had had with a *poilu* on the Somme front, in which the French Tommy described how from a vantage-point he had watched the Germans during an attack pour liquid-fire into a trench and shrivel up the defenders. Had that correspondent known the least thing about *Flammenwerferen*, he would have realised at once that the *poilu* was 'pulling his leg,' and I and a good many others would have missed a laugh. As a matter of fact, a trench is the safest place (excepting a dug-out) a man can be in if there is any so-called liquid-fire about.

I have played liquid-fire over a trench full of Tommies, and, the demonstration over, they have emerged smiling, unsinged, without even the smell of burning about them. I have been in a trench when the flame of the *Werfer* has been roaring overhead, and have felt a pleasant warmth; that is all.

For this reason. The flame about which so much (and so little) has been heard is from twenty to thirty feet long—the earlier *Werfer* throws the shorter distance—and *it cannot be directed downwards;* the extremity of the flame is never so near the ground as its beginning; for, the surrounding air being heated by the flame, it rises, as hot air is bound to do, and the cooler air below, moving upward to take its place, causes the flame to rise. Thus when the flame of a *Werfer* is directed upon a trench it passes harmlessly over the top, provided that the trench is not so badly constructed as to have the parados higher than the parapet; and provided, also, that the men have kept their heads and are lying down in the bottom of the trench. Once only have I known a man in a trench to be singed by the flame. He was a staff-officer, and perhaps considered it beneath his dignity to lie flat. He merely bent down. His dignity cost him a new tunic.

The only real value of this instrument of German *Kultur* is its moral effect. Certainly its appearance is fearsome enough. Just imagine the orange-coloured flame, thirty feet long and five or six feet in diameter, darting out towards one; the dense masses of black smoke given off by it; the great roar of its burning, and one can realise what its effect upon green troops might be. Consequently demonstrations are constantly being given at our training-centres in France, and also in the field, by means of captured flame-throwers. Whole companies of various battalions are placed in trenches, and the flames played over them, in order that the soldiers may realise how empty a blusterer the *Flammenwerfer* is, and that they may have confidence in the protection the trench gives them, and so deprive this instrument of its sole asset—its moral effect.

The liquid-fire apparatus is quite a simple affair. Outwardly, all one sees is a metal cylinder, which is fastened by means of straps to the back of the soldier whose duty it is to operate it, and a piece of metal hose-pipe attached to the cylinder. This pipe ends in a nozzle, which has attached to it a piece of wick, lighted before the attack begins.

The cylinder, or container, is divided into two parts. The upper half is filled with compressed hydrogen, the lower half with a mixture of burning and lubricating oils. The turning of a tap releases the hydrogen, which forces the oil in a fine spray through the pipe, the spray being ignited as it passes out of the nozzle by the piece of burning wick.

The *Flammenwerfer* operators have no enviable job, for the moment they are seen advancing they are the target for every rifle within reach. I remember once (it was before we knew how innocuous this weapon was), when the Germans were coming over to pay us a call, a big Irishman saw across an open space, where part of the gray-clad phalanx had been mown down, a man rushing forward with a cylinder arrangement on his back. He yelled out, 'Boys, that baste wid the hurdy-gurdy on 's back!' He was pumping out rapid fire as he spoke. 'Glory be to God!' he added as the man went down. 'Sure, it 's the flames of hell he was afther bringing to you!' A patrol went out afterwards to secure the apparatus, and they found that the man had been riddled with bullets from head to heel, and that the container he carried resembled a sieve.

Poison-gas when first introduced was certainly a more effective weapon than the *Flammenwerfer*,

whether one considers its moral effect or the number of men put out of action by its use. British troops were not prepared for it; so that when the first death-cloud was released by the Boche, to float slowly over and into our trenches, our men had no weapon with which to fight it. They had to choose between sticking to their posts and being poisoned, or running away and letting in the enemy. To their eternal honour, they chose to stay. Gasping, choking, retching, they kept on firing until, in some cases, they could hold the rifle no longer; in others, until relief came.

Steps were soon taken by the powers that be to meet the gas menace; for at the outset a very real menace it was. First, a respirator or pad to cover mouth and nostrils was introduced. It did not prove very effective. Many of my own regiment—the Duke's—wore them on a terrible day in May 1915, and were gassed in spite of them. Next a helmet with mica windows or eyepieces was introduced; but it was found that the mica was often broken in the folding of the helmet, and so the present helmet (of which every man possesses two), fitted with strong, flanged, glass eyepieces, was provided.

The present helmet is a perfect defence against gas. Wearing it, a man may walk about in the thickest gas-cloud unharmed (I have done so), though the formaldehyde generated inside the helmet does cause rather an unpleasant feeling in the throat. This is quite harmless, but it has caused many a man to imagine he was gassed when really he ailed nothing. I could tell a few laughable stories to illustrate this.

The men being in possession of helmets which protect them from the physical effects of a gas-cloud, it is necessary to instil in them confidence in their helmets, in order to rob the gas-cloud of its moral effect. For this purpose anti-gas schools were started—divisional ones, to which relays of men were and are sent from the various battalions in the division; and army-schools for the training of non-commissioned officers. In these schools lectures dealing with anti-gas methods are given each day, in the morning session. In the afternoon the men (wearing their gas-helmets) are placed in a specially built room, in which are fixed a number of gas-cylinders. The gas is turned on; the room is filled with a thick fog. So the men learn that a helmet gives them adequate protection; and after that, for them, a gas-cloud has no terrors. The men have confidence in their masks, and consequently there is no fear of their *moral* being shaken by such an attack.

At the gas-schools the men are also taught the use of the Vermorel Sprayer—an instrument not unlike a *Flammenwerfer* in appearance—which after an attack sprays trenches and dug-outs with a solution that kills the gas which (being heavier than air) is left in all hollows.

Poison-gas is conveyed to the trenches in cylinders about forty inches in length by seven in diameter. They are fixed—dug in in the front wall of the trench—in batteries of five, with a space of about twenty yards between them. The five cylinders are connected with one pipe, which runs through the sandbags and projects slightly over the slope of the parapet. As each cylinder is emptied the next is turned on, the battery being exhausted in about fifteen minutes. The gas issuing from the cylinders forms a fan-shaped cloud, which joins up with the clouds sent out by the batteries on either side, so that one long, unbroken cloud is formed. It is often mixed with smoke, in order to form a more effective cover from view, and thus facilitate an attack. For instance, a gas-cloud may be discharged over a mile front, and it may only be intended to attack at one point. The enemy being screened by a gas-and-smoke cloud, the defenders cannot tell at which point the attack is going to be launched, until it is too late to concentrate at that point.

To sum up, gas when first used was effective both for its effect upon *moral* and for the losses it caused. To-day, in consequence of the admirable training of the troops in anti-gas methods, it is in effect negligible. If any man is gas-poisoned, it is pretty safe to conclude that it is caused by carelessness or some other fault of the man himself.

AN ORKNEY MAID.

She dwells beneath a northern sky,
Where sometimes night
Seems strangely bright,
As if the day had not gone by,
And there beside Pomona's bay
Has from a child
Admired the wild,
Romantic scene of Orcady.

Its legends, too, of time long fled,
When on the wave
With daring brave
A roving life the Norsemen led,
Enkindled in her early years
An ardour keen
As theirs had been
That yielded not to craven fears.

Hence now a maiden fully grown,
Of aspect fair
And courage rare,
She often launches forth alone
Upon the heaving dark-blue sea
To sail her craft
The winds abaft,
In spite of dangers which may be.

Her seamanship so skilful aye,
That of the maid
'Tis aptly said,
When o'er the surf she glides away,
There goes a scion of the race
Who knew of old
As sailors bold
How perils of the deep to face.

SEVENTH SERIES

THE RIVER.

By E. K. VENNER.

IT flows calmly along, under the bridge, and onward between its deep banks, faithfully recording all their varied reflections on its way, a thing of beauty and a picture of peace in the light of evening, with an evil reputation sufficient for a German. For, despite its innocent appearance, it is one of the most dangerous streams that flow. Underneath the calm, flowing surface are holes of surprising depth, and mingling with it unexpected currents full of deadly purpose. The toll of victims in the neighbourhood of the bridge alone, stretching far back into bygone days, must be of appalling length, and still the river asks for more. And, alas! it is likely to get them, for warnings and cautions are thrown away on the large class that contribute to the boating and bathing fatalities every year.

Splash! a salmon has jumped close to the bridge—a most effective check to melancholy reflections if you are a fisherman. There he is, dimly seen in the deep water, lying a little to the left of those weeds, his mouth showing a gleam of white as it opens and shuts—twenty pounds, if an ounce. There is a theory that the salmon here are quite aware of the presence of observers on the bridge, and jump up to have a good look at them. If this is so, they gratify their curiosity pretty often, as it is seldom that a pause on the bridge is not followed by a splash below. But whatever salmon are feeding on, they have at present little use for home-made flies, and takes are few and far between.

Not far from the farthermost pier lies a dead member of the community. Is he the victim of an otter, or what? More probably a case of disease. People who know say the drought and need of fresh water affect salmon very unfavourably. Perhaps this is a case in point. A local fishmonger told me that fish taken from the river at this time are quite off colour, the flesh of a recently caught one being white instead of the beautiful pink that has given its name to a much-used colour. But a forty-two-pounder set up in a neighbouring building in the pink of condition shows what the river can produce, an inscription beneath recording that it had been two years in the sea.

But here is a very different kind of fish swimming out from the bridge, a 'great logger-headed' chub in fact, of which the river is full. It seems strange to find a chub almost within the august circle made by one of the kings of the river, for he is one of the coarsest of fish. Into his capacious leathery mouth goes a large and varied selection of food. Bumble-bees, flies, frogs, minnows, and much else are all alike to him; cheese he is especially partial to—the stronger the better.

I tried the other day by that overhanging bush to indulge his appetite in this last particular, while Mollie read to me Izaak Walton's advice on the subject from the bank above. But, in the language of the day, there was 'nothing doing' on this occasion. Still, it was a pleasant experience to fish and have old Izaak behind one, as it were, and to hear of the chub which he caught.

'Look you, sir, there is a trial of my skill; there he is; that very chub which I showed you with the white spot on his tail, and I'll be as certain to make him a good dish of meat as I was to catch him. I'll now lead you to an honest ale-house where we shall find a cleanly room, lavender in the windows, and twenty ballads stuck about the wall. There my hostess, which I may tell you is both cleanly and handsome and civil, hath dressed many a one for me, and shall now dress it after my fashion, and I warrant it a good meat.' The secret of making a chub 'a good dish of meat' appears to be to cook him the day of his capture. But I must say, however, that, much as I should have liked to see this one caught, I should have been quite content to leave the eating of him to Izaak and his scholar, for, when all is said and done, the chub remains *un villain*, as the French call him.

There is one great drawback to fishing in our river, and that is the presence of a ravenous host of small gudgeon, which, when you are bottom-fishing, bite voraciously at the worm, which is not intended for the consumption of the nursery. Any number of these may be caught in a short time, and as they number almost six to the ounce, there is nothing for it but to throw them back again, unless, indeed, you want them for bait, in which event they would be sure to be affected by an unaccountable fit of shyness. But the persistent way in which at other times they can get a good-sized hook into their tiny

 [*All Rights Reserved.*]

mouths is quite remarkable. On one occasion, tired of having my bait spoilt and of returning the marauders to the water, I *did* use one of them as a bait, with the result of hooking a few minutes later a small jack, which I found exceedingly difficult, with such tackle, to pull out of a bed of weeds. These jack run up to a large size in our river, and vie with the salmon themselves in the weight to which they attain.

About a mile below the bridge are the falls, where the river suddenly breaks away from its slow and stately progress and speeds onward in a smother of froth and bubbles. Here in the gravel reaches is a grayling-ground par excellence, and many a fish has come to hand on the ideal landing-place, which looks as if it were made for fishermen. The water also looks as if it should be full of trout, but, strange to relate, that fish is very rarely taken in the river; why, I cannot say.

As you fish from here there is a pool at your feet swarming with what appear to be tiny grayling. So densely packed is this nursery that the nurslings may be scooped up in a landing-net before they have time to pass through the meshes. They are beautiful little silvery creatures, and would be the delight of a boy with a pickle-bottle.

While you are fishing you will also probably see a pair of kingfishers, whose special haunt this is, flashing up towards the falls, and giving warning of their approach by a sound which makes one imagine tiny wheels which require greasing.

Much more difficult to see are the otters and badgers which are about the high sand-banks. One can imagine the large toll of fish taken by the former in the river below, and what a mark for destruction they must present to the river-keepers.

But if otters are the enemies of the keepers, the badgers are equally the enemies of the farmers. A neighbour of mine told me they simply played havoc with his lambs, killing some out of pure mischief apparently, and dragging others to their holes in the river-banks. This hardly accords with the description of the badger which sets him forth as 'one of the most quiet and inoffensive of our indigenous animals.' Here he almost rivals the fox as a depredator.

But there is no doubt as to which of the two is the more destructive, and the river people would instantly award the palm to the little red rover. He has multiplied exceedingly of late years, and his raids on the fowl-houses of cottager and farmer are numerous and slaughtering. In fact, what between the damage done by him and that done by the rabbits, whose name is legion, and who have undermined the river-banks in many places in such a way as to make them positively dangerous, the people of the neighbourhood have a very bad time; and if you try to keep down the one, you have to deal with the other; for, a farmer told me, it was no good setting traps for rabbits, as the foxes always heard them and carried them off.

Just level with the falls an island divides the river into two branches, the water that is not drawn into the rapids finding its way round the other side of the island in a broad, rapid stream. In this branch a heron may sometimes be seen standing in a contemplative attitude; at other times he will rise from under the nearer bank, affording one a close view of the splendid spread of his wings and of his beautiful ash-gray plumage. He must have a sumptuous time amongst the small fry which swarm here as in other parts of the river, especially salmon par, which are as great a nuisance as are the gudgeon in the upper reaches, should you be fly-fishing for grayling. They are hauled out time after time, only to be returned to the water. This was not their fate in former years before they were protected by law, and many a choice dish of them has appeared on the breakfast-tables of the past. The readiness with which they are caught is all the more exasperating in view of the difficulty in this water of landing grayling. These are generally hooked some distance down-stream, with the result that after a few seconds' play the hook is pulled out of mouths tender enough even when hooked in more favourable circumstances, and hardly one in six comes to the landing-net.

The island is reputed to be a great otter stronghold, and it certainly seems an ideal place for such a shy community.

A fisherman once witnessed a curious encounter on it between a rabbit and a stoat. The rabbit suddenly appeared on the edge in an abject state of terror, and vanished a second after, a stoat occupying the place where it had stood; then the stoat vanished on the track of the rabbit. After some minutes the rabbit reappeared, having apparently made the circuit of the island, and once more gave place to the stoat. On the third appearance the rabbit had evidently come to the conclusion that the island was not big enough for the two of them, and that anything would be better than remaining on it with such a terrible little pursuer. It stood for a second looking at the river, and then suddenly plunged in and struck out for the shore. A minute later the stoat came into view on the taking-off place, and was plainly quite taken aback by the sight of the swimming rabbit. It had evidently never entered into his blood-thirsty calculations that a rabbit could swim. He gazed after it, absolutely baffled, and perhaps hoping in his ferocious little mind that the rabbit would be drowned. But the valiant swimmer was equal to the occasion, and the would-be assassin had the mortification of seeing it land and scramble up the opposite bank.

In the upper reaches of the river the water is of great and unexpected depth, shelving down within a foot or so from the bottom of the steep

banks to a depth of ten or twelve feet, and getting proportionately deeper farther out. One of these places is known to us as the Perch Hole, from its being a favourite haunt of these game fish. It is also one of the few favourable spots afforded for bank-fishing, the banks having been eaten out in a large semicircle, the sides of which lead easily down to the water. Here, where the water is fringed with water plantain, just outside a bed of weeds, the fisherman may have an exciting time watching his float, which may be taken down any moment by a good fish. The water plantain very much resembles gypsophila, but the angler will probably have more reason to notice the aggravating way in which his hook fits round its knots, to every one of which it is a perfect fit. It is bad enough in August, but it is worse in the autumn, when the plant lies submerged in the flood-water, for then a fixture means a breakage.

In this still-fishing it is extraordinary how much you can see of the life of the river, and how accustomed the river-folk become to your presence. As I was standing here recently, a dabchick suddenly appeared within a few feet of my float, and remained a few seconds near it, looking at me with her wild dark eyes, before paddling very leisurely over to the other side. The animal world is so full of starts and sudden movements that a perfectly still figure always seems to exert a soothing influence on it.

The bridge from here, perhaps, never looks to better advantage than when the river is all aglow with the golden light of sunset, when the water-fowl show black against its magic surface, and when the waters, as they flow onward, seem almost to have come down from the western sky —a river of liquid gold. Then the bridge hangs across, a fairy-like structure, a dream-bridge, such as you would imagine to lead to some cloud-capped castle set in the hills beyond.

But there is no such fair illusion when you stand in the same place and see the river raging along in full autumn flood, level with its fifteen-feet banks; you then only wonder at the strength of the bridge and the solidity of the piers which are withstanding the wild rush of waters.

This part of the river is subject to wind-storms of extraordinary violence, which often arise with startling suddenness, and rush up a magnificent avenue of Scotch firs which runs parallel with its course with the roar of an express train. On a recent memorable occasion a more than usually violent storm left behind it a scene of destruction amongst the trees which almost baffles description.

The people of the river country are surprisingly intelligent when one considers the remoteness of their situation. From our bridge it is two miles and more to the next bridge, and the cottages between the two are very much scattered. In these the people will talk to you in a low, attractive tone of voice, and show sometimes a quite unexpected knowledge of the questions of the day. Some of them speak with great aversion and horror of the river. They will tell you they never walk along its banks if they can help it, and, if you are a stranger, will earnestly warn you of its dangers. In one of the cottages lives an acute old fisherman, who by no means shares this aversion, for he spends all his spare time by the river-side, where his knowledge of the finny folk has been gained by much experience, and from which he generally goes homeward with something in his bag. It had a couple of eels in it when I last met him, and as the eels of the river have a great reputation for savouriness, his supper that night must have been well worth eating. But, like most rustic fishermen, he keeps his knowledge to himself. The story goes that a party of unsuccessful fishermen once came across him, and immediately divining that he knew the ropes, or, rather, the banks, proceeded to make much of him in the hope of extracting some useful information. They gave him an excellent lunch, and supplied him with unlimited tobacco, to both of which he took very kindly; but the net amount of information they got from him in return would have been sufficient 'to put on the point of a knife and choke a daw withal,' as Beatrice has it in *Much Ado About Nothing*.

I remember one of the same sort on another river, who assured me he knew of a certain bend some distance off where great sport was to be expected, and an arrangement was speedily made with him by myself and a friend to act as a guide to the place, his hand having been liberally crossed with silver. There was one bite during the day of a tentative description, that was all, and a weary trudge home at the end of it with anything but pleasant thoughts of the old rascal who had promised us such unusual sport. Of course, fish are uncertain things; but I think it quite possible that, knowing the ways of such gentry, he had taken our money to lead us to a place where we could not possibly spoil sport for him and his companions.

I saw another of the breed the other day fly-fishing a promising piece of water on the other side of the river. He could throw a fly, I could see, and seemed to know where to throw it; but as it meant a walk of two miles to get into communication with him by way of the bridge, I had to watch him in silence, and wonder what fly he was using. But would he have shown it to me had I been able to reach him? It is very doubtful.

When all is said and done, being able to fish at all is better than being by a river teeming with fish, where you may only look and long, and when the trout are rising in all directions under your eyes as if they knew you must not fish for them. On such a river it was calculated that the price paid for a season's fishing worked out at something like a guinea a trout of those caught.

Within sound of the falls of our river, where there ought to be trout and are not, there rises the tower of an ancient church under whose shadow Owen Glendower is said to be buried. The supposed place of burial is marked by a much-worn and broken stone slab, which, from its appearance, might well date back to his times. But whether this is his place of burial or not, there is no doubt that the ancient princes of Wales were much in its neighbourhood, often perhaps using the river for purposes of defence. All traces of fords have long since disappeared, but ours is not a river which looks as if it ever took kindly to the idea, and no doubt its appetite for victims was quite as voracious then as now.

There is one curious feature connected with the old church of the river which appears in the register of burials. These date back to 1678, and, for some years from the beginning, to every burial entry is attached an affidavit setting forth 'it was buried in woollen,' with the addition, in some cases, of the information, 'neither was the coffin lined with anything at all.' This was in compliance with the Act of 1666 under which woollen shrouds only were permitted to be used in England. To this obligation the lines written on a famous actress buried in Westminster Abbey would seem to refer:

'Odious in woollen, 'twould a saint provoke,'
Were the last words that poor Narcissa spoke.
'One would not, sure, be ugly when one's dead,
And Betty, give this cheek a touch of red.'

How many woollen shrouds the river has been responsible for the extracts do not tell us.

THE DEFINITE OBJECT.

CHAPTER XIX.—IN WHICH THE POISON BEGINS TO WORK.

SPIKE sat glowering at the newspaper, yet very conscious none the less that Hermione often turned to glance at him wistfully as she bustled to and fro. At last she spoke. 'Arthur dear, why so gloomy?'

'I ain't—I mean, I'm not.'

'You're not sulking about anything?'

'No.'

'Then you're sick.'

'I'm all right.'

'But you didn't enjoy your dinner a little bit.'

'I—I wasn't hungry, I guess,' said Spike, frowning down at the paper.

But Hermione was beside him, her cool fingers caressing his curls. 'Boy dear, what is it?'

'Say, Hermy, where'd you get them roses?' and he nodded to the flowers she had set among her shining hair.

'Oh, Mr Geoffrey brought them.'

'Been here, has he?'

'Yes; he came in with Ann this morning. Why?'

'Did he—did he stay long?'

'N-o, I don't think so. Why?'

'Comes round here pretty often, don't he?'

'Why, you see, he's your friend, dear, and we are very near neighbours.'

'Oh, I know all that; but—folks are beginning to—talk.'

Hermione's smooth brows were wrinkled faintly and her caressing hand had fallen away. 'To talk!' she repeated. 'You mean about—me?'

'Yes!' nodded Spike, avoiding her eyes; 'about you and—him!'

'Well, let them!' she answered gently. 'You and Ann are all I care about, so let them talk.'

'But I—I don't like folk t' talk about my sister, an' it's got to stop. You got t' tell him so, or else I will. What's he got t' go buyin' ye flowers for, anyway?'

Hermione's black brows knit in a sudden frown. 'Arthur, don't be silly!'

'Oh, I know you think I'm only a kid; but I ain't—I'm not. If you can't take care of—of yourself, I must, and'——

'Arthur, stop!'

'Well, but what's he always crawlin' around here for?'

'He doesn't crawl—he couldn't,' she cried in sudden anger; then in gentler tones, 'I don't think you'd better say any more, or maybe I shall grow angry. If you have grown to think so—so badly of him, remember I'm your sister.'

'But you're a girl, an' he's a man, an''——

'Stop it!' Hermione stamped her foot, and, meeting her flashing glance, Spike wilted and—stopped it. So, while he glowered at the paper again, Hermione put away the dinner-things, making more clatter about it than was usual, and turning now and then to glance at him under her long lashes.

'Where did you meet M'Ginnis as you came home, Arthur?'

'At the corner of—say, who told you I met him?'

'You did.'

'I never said a word about meetin' him.'

'No; but you've been telling me what he told you. Only M'Ginnis could be vile enough to dare say such things about me. Oh Arthur, for shame! How can you listen to that brute beast? For shame!'

Now, meeting the virginal purity of those eyes, Spike felt his cheeks burn, and he wriggled in his chair. 'Bud only told me Geoff had been—been here,' he stammered, 'and I guess it was the truth—I—I mean'——

'Oh, boy, for shame!' and, turning about, she swept from the room, her head carried very high, leaving him crouched in his chair, his nervous fingers twisting and turning a small box

in his pocket—the box that held the forgotten hair-comb. He was still sitting miserably thus, when he started to hear a knock on the outer door, and a moment later a woman's voice, querulous and high-pitched.

'Oh, Miss Hermy, my Martin 's very bad t'-night, an' I got t' go out, an' I can't leave him alone. Would ye mind comin' down an' sittin' with him for a bit?'

'Why, of course I will.'

'Ye see, since he had th' stroke he 's sorrered for our little Maggie—he was hard on her, ye see, an' since she—she died he 's been grievin' for her. Had himself laid in her little room—seemed to comfort him, somehow. But to-day, when he heard we had to leave because th' rent was rose, it nigh broke his poor heart. An' I got to go out, an' I can't leave him alone; so—if ye wouldn't mind, Miss Hermy'——

'Just a moment—I 'll come right now.'

As she spoke Hermione re-entered the kitchen, untying her apron as she came. Spike sat watching, waiting, yearning for a word, but without even a glance Hermione turned and left him. When he was alone he started to his feet, and, tearing the box from his pocket, dashed it fiercely to the floor; then as suddenly picked it up, and, approaching the open window, drew back his hand to hurl it out, and so stood, staring into the face that had risen to view beyond the window-ledge, a round face with two very round eyes, a round button of a nose, and a wide mouth just now up-curving in a grin.

'Hey, you, Larry, what you hangin' around here for?' demanded Spike, slipping the box into his pocket again. 'What you doin' on our fire-escape, hey?'

'Brought back yer roof!' replied the lad.

'Well, where is it?'

'Here it is,' and, climbing astride the window-sill, Larry handed in the jaunty straw.

'Where 'd you find it?'

'Bud give it me. 'N' say'——

'All right,' nodded Spike, dusting the straw tenderly with a handkerchief. 'Now git; I wanter be alone.'

'But, say, kid, Bud says I was ter say as he 's sorry for what he said 's mornin'; 'n' say, he says you 'd better be gettin' over t' O'Rourke's. 'N' say'——

'I ain't comin'!'

'But, say, you 're t' fight Young Alf. 'N' say'——

'I ain't comin'!'

'But, say, dere 's a lot o' our money on ye—I got two plunks meself; 'n' say, you just gotter fight, anyway—Bud says so.'

'I can't help what Bud says; I ain't comin'.'

'Not comin'!' exclaimed Larry, his eyes rounder than ever.

'No!'

Larry's wide mouth curved in a slow grin, and he nodded his close-cropped head. Said he, 'Say, kiddo, you know Young Alf 's a punishin' fighter, I guess; you know as nobody 's never stopped him yet, don'tcher; you know as you 're givin' him six pounds—say, you ain't—scared, are ye?'

'Scared?' repeated Spike, frowning. 'Do I look like I was scared? You know there ain't any guy I 'm scared of; but I promised Hermy'——

'Pip-pip!' grinned Larry. 'Say, if you don't turn up t'-night, d' ye know what de bunch 'll say? Dey 'll say you 're a—quitter!'

'Well, don't you say it, that 's all!' said Spike, laying aside his hat and clenching his fists.

'Not me!' grinned Larry. 'There 'll be plenty to do that, I guess. Dey 'll call it after ye in de streets. Dey 'll give ye th' ha! ha! Dey 'll say Hermy Chesterton's brother 's a quitter—a quitter!'

For a long moment Spike stood with bent head and hands tight-clenched; then crossing to the sideboard, he took thence his shabby cap.

'Who 's in my corner?'

'Now you 're talkin', kiddo. I know as you'——

'Who 's in my corner?'

'Bud an' Lefty. 'N' say, I guess they can handle you all right, eh? 'N' say, come on, let 's cop a sneak before any one butts in—de fire-escape for ours, eh?'

'Sure!' said Spike, climbing through the window. 'Oh, there ain't nobody goin' t' call Hermy Chesterton's brother a quitter!'

'You bet there ain't!' grinned Larry. 'Come on, kid!'

(*Continued on page 327.*)

SLEEP, TWIN BROTHER OF DEATH.

By F. G. Aflalo.

SIR THOMAS BROWNE reminds us that but for the fall of Adam there need have been no parsons, lawyers, or doctors. Even less important events, however, have had consequences little less appalling than the flourishing condition of the three professions, for if it had not been for the safe return of Emin Pasha and his troops from the Congo, there need have been no sleeping sickness in Uganda. It was by the infected remnant of soldiers who had served under Emin and Stanley that the disease was introduced into the Protectorate of Uganda,

bringing to the shores of Victoria Nyanza, as well as to its islands, a devastating horror that is appreciated only by those who have seen for themselves the visible results. Figures are too abstract. The bare statement that a quarter of a million natives succumbed to the new and hitherto unsuspected disease in the course of fifteen years, 'dying in the wilderness the same as the Israelites,' conveys little more realisation of the existing misery than any statistics of mortality from endemic outbreaks of more familiar description. One must look on the dreadful desolation of the silent islands from which the native population has perforce been removed by the Government, or journey through districts of the protectorate populated by human beings emaciated to the point of death, to understand what sleeping sickness actually signifies. Nor is it necessary to travel far before making acquaintance with the evil agent of destruction, the particular tsetse fly (*Glossina palpalis*), associated with the spread of the infection. As a matter of more recent discovery, an allied fly (*G. morsitans*), hitherto regarded as infecting only domestic cattle, is also suspected of transmitting sleeping sickness to human victims. It is, however, the first-named that is beyond all doubt an active vehicle of the disease. I have two before me as I write, not capable of doing any further mischief, but safely pinned on cork, and much more harmless than others that I remember attacking me in the country. Each is rather larger than our common house-fly, with a peculiar and, for the expert eye, unmistakable venation of the wings, the tips of which, when the fly is at rest, are crossed scissors fashion. The flight is so rapid as almost to baffle the eye. I have known them dash at a passing motor-van going fifteen miles an hour, and alight on a passenger. On one occasion, as we were travelling along the Masindi road, one of these insects suddenly appeared from nowhere on my sleeve; but, finding that I wore gauntlets, it shifted to the bare hand of a fellow-passenger, and promptly bit him. As he had been making game of my precautions, which comprised, in addition to the said gauntlets, a beekeeper's veil and mosquito-boots, his surprise was rather ludicrous; and the chances of his being infected with sleeping sickness were slight, for so effectually has the Government dealt with the problem, as will presently be shown, that it is officially computed that not more than four flies in every thousand are infected. The estimate may savour of optimism, but it is beyond denial that the insect's power for evil must have been enormously curtailed by the clearance of bush and the removal of infected natives out of reach of further flies. It is, therefore, once more possible over considerable areas of Uganda to be bitten by the tsetse with no worse consequences than used to result in the happy days before Stanley's troops brought this curse on the country. The alternative is too terrible to dwell on, and Europeans are by no means immune, as some folk appear to imagine. The wretched victim takes years in dying, and goes through successive stages of wasting, lassitude, and, in the majority of cases, mental decay.

The tsetse fly comes suddenly into view, darting from some low bush; inflicts its bite, generally after alighting unnoticed on the victim's wrist, neck, or ankle; and then, having taken its fill and done its evil work, departs. The most awkward position in which I remember having been attacked by one was when I was fishing at the Ripon Falls, where the Nile issues grandly from Lake Victoria. The fisherman has to stand on a narrow spit of rock close to the falls, with the roaring waters hurrying past his feet; and his freedom of movement on that precarious foothold is yet further restricted by the possibility of falling among crocodiles, which, at the headwaters of the Nile anyway, by no means confine their operations, as they are said to do elsewhere, to stagnant water, but have been known to show themselves aggressive in the mighty torrent racing north to Egypt. It was while standing on the rock that I suddenly became aware of a tsetse fly on my khaki sleeve. When disturbed, it flew across to the other sleeve, and it then became necessary to reel in line and lay down the rod to do battle in earnest. The fly got away with its life, but it stayed away, which was something. For the rest of the afternoon there was no trouble from anything worse than the little *umba* flies that swarm at that spot, and inflict a painful bite without further consequences.

Mention has been made of the swiftness of the tsetse on the wing, and its power of rapid flight has the effect of reducing its dangerous natural enemies to two, a bee-eater and a dragon-fly, the only known creatures regularly able to capture it in the air. The dragon-fly is probably the more efficient destroyer of the two, for the bee-eaters pass most of the day high up in the trees, and rarely come down to hunt round the low bush in which the tsetse has its haunts. It is, in fact, the need of such covert, combined with a humid atmosphere, that keeps the tsetse in the vicinity of overgrown lake-shores, and gives us some power over it, since by clearing the bush we can drive the hated insect elsewhere. I remember fishing one day with a party of natives and a seine-net on a newly cleared strip of foreshore about a mile from Entebbe, and there was no vestige of the fly on a spot that only a few weeks before had been forbidden ground. The policy of regarding infected natives as reservoirs of the disease, and removing them under surveillance to new quarters, where other flies will not have the chance of getting at them to lay in a fresh supply of *trypanosomes*, attacks the problem from another side, and, though admittedly less effective than clearing operations, may also contribute to improved conditions.

The mention of reservoirs brings us to the

possibility of a like purpose being served by buffalo and other big game, a hypothesis which rests on disputed evidence, but which has inspired those who accept it to urge the wholesale destruction of all wild animals in fly country. The causal connection between big game and sleeping sickness is not unanimously admitted, but there is certainly grave significance in the above-mentioned discovery that the germ of the disease can also be conveyed to human beings by a second species of tsetse fly heretofore regarded as hostile only to cattle. Whether any good purpose would be served by waging a war of extermination against the wild buffalo, without also attacking crocodiles and the monitor lizards which—a familiar sight as they lie basking on rocks and stumps along the shores of Lake Victoria—are even more favourite victims of the tsetse than the larger reptiles, is a matter for discussion; and it looks as if the game-rangers, jealous for their protégés, have at least as good a case as those who clamour for destruction.

Acquaintance with the tsetse fly and its haunts is necessarily restricted, so far as the unofficial traveller in Uganda is concerned, by the wise action of the medical officer in putting all infected areas out of bounds. This it was that recently prevented my visiting the Murchison Falls, which are said to combine entrancing scenery with wonderful fishing; but I came across the insect more than once during a brief visit to Lake Albert. One alighted on the table as I was at lunch on the deck of the *Samuel Baker* with Captain Dugdale. On the following morning the gig in which I was fishing was driven by a violent squall into a little bay on the farther shore, and my crew suddenly set about belabouring a couple of natives whom we discovered loading bananas into their canoe. Inquiry as to the reason for this seemingly unprovoked attack elicited the fact that the men had no right to be ashore at that spot, a perfect hive of tsetse flies, and this unwelcome information inspired a hurried mobilisation of all hands to shove the gig off and out of risk of infection.

The horror of sleeping sickness lies in our helplessness to fight it. It is almost the only disease of importance which still absolutely defies both medicine and surgery. It remains, in short, *opprobrium medicorum*, and there is no immediate prospect of removing this terrible reproach. Every specific, including at least one of which much was hoped, has failed in turn. Antimony and atoxyl have been discarded as futile; and the one remedy that promised relief proved, unless administered in insufficient doses, worse than the disease.

If we can do nothing to cure the disease, we are almost as powerless to prevent it. True, the clearing operations afore-mentioned are efficient so far as they go, but lack of funds precludes extending them beyond the immediate vicinity of ports and landings on the lake-shores. The tsetse fly is not vulnerable in the succeeding stages of its development in the same way as the mosquito responsible for carrying malaria or yellow fever is vulnerable. The nurseries of the latter insects, which pass their early days in stagnant water, are amenable to drainage or to treatment with paraffin. Even the adult mosquito, most dreaded after sunset and during the evening, when people in the tropics are often indoors, can, to a great extent, be kept at bay by screens and curtains. The tsetse fly lives all its life on land, and is hatched in situations by no means easy to discover. Its flight, as we have said, is exceedingly rapid. The period of its greatest activity is not after sunset, but in the afternoon; and the place is not indoors, but in the open. From these few facts, the difficulty of coping with so elusive an enemy can be appreciated.

The medical department is more hampered by lack of funds for this work than it ought to be. Fifteen years ago the Busoga and Bunyoro natives knew nothing of the scourge in store for them, and they owe it entirely to Europeans. It is true that the suppression of sleeping sickness is a less paying proposition than the endowment of further facilities for the extended export of cotton. No economic comparison is, in fact, possible. There is, however, just the chance that the industrial salvation of Uganda may indirectly depend on the effectual eradication of this fell disease. What is on humane grounds even more certain is that this is incomparably the most urgent problem before the Colonial Office in its administration of the protectorate, in taking over which we not only acquired possible profits in the cultivation of cotton, coffee, and cocoa, but also incurred imperial obligations that we cannot possibly repudiate unless we wish to bring ridicule and derision on the spirit and letter of all that is implied in that much-abused phrase, 'the white man's burden.'

THE PASTEL.

CHAPTER II.

THE painter looked. Through the great ragged hole nothing was to be seen but the blackness of the night. The cold wind blew fitfully in, carrying the murmur of the outside world. But almost immediately other, nearer noises became audible—soft, scraping sounds as of some one climbing the ladder Mr Porson had placed there; and then, suddenly, a white face appeared against the black void.

'Hello, there!' said Mr Rippingill.

'Hello!' replied the owner of the face. 'So you *are* in! I thought something must be wrong. I couldn't get an answer at the door, and then I saw the ladder and the state of this window. So up I came. What's the matter?'

'A meteorite,' said the painter. 'What do you want?'

'I want to speak to you? May I come in?'

'You can speak quite well from where you are.'

'I should prefer to come in,' the stranger said, peering about the studio. He was a youngish man, with a thin, vicious face that somehow seemed familiar to Mr Rippingill. 'I should prefer to come in,' he repeated. 'It's confidential, you know. By the by, I suppose you are Mr Rippingill.'

That harassed individual admitted that he was.

'I am very glad to meet you, Mr Rippingill!' the other said, with as much effusion as could be expected in his situation. 'I have often heard of you from my poor father—the late Mr Abernethy, you know.'

'Oh, indeed!' Mr Rippingill murmured. 'Well?'

'Well, mayn't I come in?'

'I hate to seem inhospitable,' said the painter; 'but, really, my dear sir, I don't see why you should. You are quite private up there. It isn't likely there is any one else on the roof.'

'But I can't discuss confidential matters while I'm stuck up here like a steeple-jack!' Mr Abernethy cried petulantly. 'Why shouldn't I come in? Aren't you alone? I must see you alone—quite alone! I hope I'm not indiscreet; but if there's any—er—er—reason why I shouldn't come in, pray remove the reason for a short time. This is urgent, Mr Rippingill! It will be worth your while—well worth it, I assure you!'

'I'm afraid you're a low-minded person!' the painter replied. 'I really couldn't let you in. You'd pollute the studio!'

Mr Abernethy muttered something under his breath. His tormentor was wishing he could communicate with the solicitor; but, overlooked as he was from the skylight, he dared not turn his head. However, while completely at a loss for the meaning of these nocturnal adventures, he enjoyed irritating Mr Abernethy, to whom he had taken a violent dislike.

Mr Abernethy was beginning patiently again, 'Come, come, Mr Rippingill, be reasonable,' when there occurred an interruption without. The gate of the enclosure in which the studios stood slammed with a report like a cannon-shot; it possessed a very powerful recoil, which had often disconcerted nervous strangers. It greatly disconcerted Mr Abernethy, who nearly fell off the ladder. And this was not all; for a large lamp hung above the gate, and it was at once clear that by this illumination he had recognised the new-comer. His unpleasant face was convulsed with rage when he thrust it through the window again.

'Don't let her in!' he hissed. 'Whatever you do, don't let her in!' He appeared to contemplate dropping through upon the ottoman, thought better of it, and ducked down to get his head below the line of light from the window. There, it seemed, he remained, crouching on the ladder-top in the shadow. And immediately after came a peremptory tattoo on the door.

Mr Rippingill, momentarily freed from observation, hazarded a glance at the screen. 'What shall I do?' he whispered.

Mr Porson thrust out his head, looked at the skylight, and smiled broadly. He had, of course, heard everything. 'Oh, let her in!' he whispered back, and disappeared again.

The door led straight into the studio, and no sooner did Mr Rippingill open it than a lady marched resolutely past him, without a word, to the middle of the floor, where she stood looking about her through a pair of long-handled glasses. 'What a mess!' she exclaimed.

She was a very large woman, perhaps six feet high, and of mature age. She wore black alpaca and quantities of crape, and blew her nose defiantly with a handkerchief whose black border was fully an inch wide. Her face was pink and uncompromising, and her small eyes glittered in it like beads. 'You are Mr Rippingill?' she asked. It was, however, less a question than an assertion, and implied that if he was not Mr Rippingill he should be made sorry for it. And, barely waiting for his assent, she went on, in the same style of *oratio directa*, 'You have had an accident. Some one has been trying to get in!'

'Some one!' the painter cried. 'A regiment rather! A butcher, a baker, a candlestick-maker, a moneylender, a solicitor, a low-minded person of unspecified profession, and now, madam, yourself. Perhaps you will tell me your name and what it is I can do for you?'

It was plain that the lady was not satisfied. She peered suspiciously at him through her long-handled glasses, examined the shattered skylight, and then surveyed the whole studio again. As soon as her gaze was lowered Mr Rippingill cast a furtive glance upward, and saw the pallid face of Mr Abernethy, distorted with anger and mouthing obscene but happily inaudible remarks, flash into view for a moment. The painter winked back cheerfully. He wondered how Mr Porson felt behind the screen, and what the meaning of all this might be.

The lady in black, with a depreciatory sniff, was addressing him again. 'I am Mrs MacFie,' she announced. 'I am the sister of the late Mr Sholto Abernethy, with whom you were acquainted. I was with him during his last days, when he expressed certain wishes to me which I regard as sacred commands, uttered

from the grave, to be carried out regardless of any inconvenience to myself. I came to town from Norwood expressly to see you. I have called here twice before to-day.'

Mr Rippingill pulled his moustache and looked pleasant, convinced that if Mrs MacFie had been anywhere near her brother during his last days (which he was inclined to doubt), she had not come as a ministering angel; for, as he afterwards remarked to Mr Porson, he had never seen a more arrogant and generally poisonous specimen of her sex. Meanwhile, out of the corner of his eye, he had another glimpse of Mr Abernethy gesticulating in the skylight.

'I was charged by my brother,' continued Mrs MacFie, in her sonorous, uncompromising voice, 'to take over from you a certain picture—a small drawing in chalks representing a field of poppies—which he had left in your charge.'

'A drawing in *chalks?*' questioned Mr Rippingill dubiously.

'I am not conversant with your technical terms,' said Mrs MacFie.

'Perhaps he meant a drawing in tempera?' the painter suggested.

'Yes,' said the lady, falling into the trap; 'that was the word he used.'

Mr Rippingill could not restrain a smile. But before he could reply there broke in a shrill, frantic voice from the skylight.

'I'll give you fifty pounds for that picture, Mr Rippingill!'

Mrs MacFie looked up with a scream. 'Ronald!' she cried.

'Oh, you be quiet, Aunt Julie!' said Mr Abernethy. 'You thought you'd steal a march on me, didn't you? Well, it hasn't come off! —Fifty pounds, Mr Rippingill!'

Mr Rippingill appeared to ponder. 'Have you got the money on you?' he asked.

Ronald Abernethy was fumbling in his breast-pocket, when Mrs MacFie recovered herself. 'Nonsense!' she cried; 'this is disgraceful! Mr Rippingill, the picture is mine! Kindly hand it over at once!'

'I'm afraid that is impossible,' said the painter, 'for the picture is gone.'

'Gone!' cried Mrs MacFie.

'*Gone!*' shrieked Ronald Abernethy.

And here another voice joined in. 'Not lost, but gone before!' said Mr Porson, emerging from behind the screen with the pastel under his arm.

'Perdition!' cried Mr Abernethy, and vanished from their sight. They could hear the ladder scraping and groaning as he scrambled down.

But Mrs MacFie was made of different stuff. She turned swiftly at the lawyer's voice, glanced at the gold frame under his arm, and then looked him straight in the eye. 'I might have known it!' she said, breathing heavily.

'Good-evening, madam,' Mr Porson replied. 'A very pleasant little family reunion, is it not? What a pity you did not bring the gifted O'Shea to make it complete!'

Mrs MacFie said no more; but she looked much. She understood as well as her nephew the symptoms of defeat. In silence and with a certain dignity she walked past the two men and out of the studio; and only when she slammed the door after her did she betray the emotion she must have felt.

'She's a corker,' said Mr Porson, laughing, 'and as unscrupulous as they make them. We have had some battles before this. By the by,' he added, 'you handled them admirably, Mr Rippingill. It was a pleasure to listen!'

'You are very good,' the painter replied. 'And now perhaps you will tell me what it is all about?'

The lawyer looked at him curiously, and smiled. 'Certainly,' he replied, 'if you will first find me a duster and a pair of pincers.'

The young man, with an air of patient resignation, sought for and presently discovered these articles.

Mr Porson, sitting on the arm of the basket chair, began to pull out the nails from the back of the little picture-frame. 'Mr Abernethy,' he began, 'was my oldest friend. He was a man, as I dare say you know, of many eccentricities; but a kinder-hearted fellow never lived, which is more than can be said of the rest of the family. They were the worst type of the "unco guid"—unscrupulous humbugs, always swindling some one in the Lord's name. In the end, Sholto cut himself adrift from them altogether. There is no need to go into details, but they behaved abominably to his wife, and he never forgave them. He could be very obstinate, for all his good heart. Well, Mrs Abernethy died many years ago, and there was only the one child, Ronald, who turned out very badly indeed. I confess I do not know any young man I dislike more. To cut it short, after innumerable misdemeanours and sham penitences, he played a trick that even his father could not forgive. Sholto made him an allowance, and told him to get out of his sight. This was about two years ago—just before you came here. At that time Sholto had a house as well as his studio, but after the split he gave it up and lived here entirely. At the same time he engaged that rascal O'Shea.'

The solicitor paused while he removed the backing-board from the frame and then lifted out the sketch. 'Do you call this a good piece of work?' he asked.

'Most certainly,' said the painter. 'Mr Abernethy did excellent work in pastel, for his own amusement; as good as any I have seen in France.'

'H'm!' Mr Porson murmured thoughtfully. His eyes twinkled. 'What would you say it was worth?' he asked.

'It is almost impossible to say,' the other

replied; 'the price of a picture depends on anything you like except artistic merit. If that sketch was by Velasquez, it would be worth some hundreds of pounds. As it is by Sholto Abernethy, and as he is just dead, which is interesting and makes people talk about him, it might fetch ten or fifteen. In a year's time you will be lucky to get sixpence for it, except from conscientious relatives like your late visitors. I doubt, though, if you'll ever get much out of Mrs MacFie. She looked a hard nut. In any case, fifty pounds is ridiculous! What is the meaning of it, Mr Porson? Is the Koh-i-noor concealed in the frame?'

The lawyer chuckled. 'They seemed quite set on it, did they not?' said he. 'Well, the mystery shall be cleared up. I wonder you haven't solved it already. Though it's true you're never likely to meet such another example of pig-headed balderdash outside a novel! Did Abernethy ever give you his opinion of lawyers?'

'Often,' said the painter, smiling.

'It was a standing joke between us,' the solicitor continued, 'that while I was always running down artists (in the abstract, you understand), he was always running down lawyers. For years he wouldn't make a will, simply because it involved a legal operation. But two years ago, when he finally cast off Master Ronald, he had to make one, as he was determined to leave the young rascal no more than the allowance he was then in receipt of. I thought that was too much; but I left well alone. Now you know, of course, how Sholto prided himself on making patent toys? You have seen his performing clocks and secret drawers and double-bottomed boxes, and all the other tricks? I always thought this a great waste of time and intellect, but otherwise harmless enough. But when it came to drawing up the will, I found he had set his wits to work on *my* business! He pulled out a sheet of cardboard, and wanted to know if a will drawn up on that would be valid. I told him (with some heat) that a will drawn up on his shirt-cuff would be valid, provided it was properly witnessed. Then he explained what he wanted to do. I suppose you see it now, Mr Rippingill?'

The painter nodded. 'It's not such a bad idea, you know,' he said, looking with increased respect at the little sketch.

'It's a ridiculous, bedlamite idea!' the lawyer snorted. 'Such unbusiness-like, unprofessional, penny-novelette rubbish I never heard of before in my life! We came nearer a quarrel over it than we ever did before or since. In the end I gave in. Because he was my oldest friend, I sacrificed my professional pride, and drew up the will on his wretched piece of card. If I had not done so, either he would have made an abysmal muddle of it himself, or he would have gone to some rascally local pettifogger who would have swindled him. He was like a child in these things, although he was shrewd enough in ordinary business. The will was witnessed by a friend of his, who is now unfortunately dead, and by that wheedling humbug O'Shea. I would never have let O'Shea know that the will existed if I had realised what Abernethy meant to do with it. When it was too late, he calmly told me that as soon as he had perpetrated his piece of vandalism he was going to hang the thing up on the wall, like any other picture! He said nobody would ever think of looking for it there! Nothing would move him; he was quite *proud* of his own cleverness! Cleverness, indeed! It makes me hot to think of it!

'However, it's all over, and I'm thankful to have the wretched thing safe. I had given it up for lost. I have no doubt that Master Ronald, as well as Aunt Julie, has been here more than once to-day. You see, this is what happened. O'Shea knew all about the will. When the other witness died, he became the only interested person who did. Of course, he was interested only indirectly; he could not benefit himself, but he might turn his knowledge to account. He soon learnt enough about the family to serve his purpose, and then he waited. If he could impose on Abernethy he might get a legacy himself. But there was not time for that; and, besides, I think poor Sholto saw through him to a certain extent. Well, then this illness began. No one thought it was serious. Abernethy and O'Shea went off to Folkestone, and you went off with the precious picture. Nobody else knew where it was; even I didn't know. Sholto died, as you know, the day before yesterday, quite late. Next morning O'Shea telegraphed to Master Ronald, brought him down in a hurry in the afternoon, and for a consideration, cash down, told him where the will was. Early this morning Ronald came up to town again to see you. O'Shea, unknown to him, came up in the same train, ran off to Aunt Julie (who, of course, has not been near Folkestone), and tried the same trick on with her. She couldn't benefit directly, whatever happened to the will, but she saw fast enough that once she got hold of it she could sell it to Ronald. Oh, they're a fine, clever lot, the Abernethys! All this time I had no idea where the will was, you understand. I was going down to Folkestone this evening, intending to call at the studio first, when who should turn up at my house but O'Shea, as bold as brass! This was little more than an hour ago. One can't help admiring the rascal! Of course, he tried the same game on, but he didn't get anything out of me. It was the other way about. I frightened him so thoroughly that he let out the whole story. I jumped into a cab, feeling sure I was too late, and here I am!'

'Well,' said Mr Rippingill, after a pause,

'it's a rum story. I'm glad to have been of use. It really gave me great pleasure to assist at the discomfiture of Aunt Julie and her nephew. It has quite cheered me up.'

'Wouldn't you like to see the will?' Mr Porson asked, with a twitch of his lips. 'Of course, it is highly irregular; but the whole case is so out of the common that I think we may allow ourselves some latitude. Only, pray don't talk about it.'

'As you please,' said the painter carelessly. 'It seems a pity to destroy that sketch,' he added.

'Bosh!' cried Mr Porson, and applied the cloth with vigour. A little cloud of iridescent dust shone in the lamplight, thinned, and vanished. Another rub or two, and the paper was almost clean, showing only faint smears on its surface. In colour it was light gray, and across it perhaps a dozen lines of writing had been executed in some dull black ink with a broad pen. Mr Rippingill, bending over the lawyer's shoulder, glanced without much interest down the list of bequests: 'To the Strathpeffer Hospital,' so much; 'To the President and Trustees of the Positivist Society,' so much; 'To the Artists' Benevolent Fund,' so much; and so on. It was not a long will. But there was a codicil; and as the young painter read it his indifference vanished and his heart missed a beat. For it ran as follows: 'I desire to bequeath to my friend Humphrey Rippingill, in memory of a very enjoyable and helpful companionship, the sum of five thousand pounds (£5000).'

'It was worth reading, after all!' said Mr Porson.

THE END.

GUN-FIRING HEARD IN ENGLAND.

By CHARLES DAVISON, Sc.D., F.G.S.

SINCE the war began, and especially since the advance of last July, the sound of heavy gun-firing has often been heard in the south-eastern counties of England. Many letters on the subject have been published in the newspapers. Of course, not all the records are equally trustworthy. Some, no doubt, refer to local firing, which has often been mistaken for that of distant battles; but, when once the latter sound has been recognised, there is no difficulty in distinguishing it from the sharper, more definite reports of firing within a score or so of miles. On this account, the observations which Mr Miller Christy has described and collected in a paper lately read before the Royal Meteorological Society are of considerable value and of much interest both to physicists and others.

Mr Christy's observations were made at Chignal St James, a village about two or three miles to the north-west of Chelmsford. His house is at some height (about one hundred and fifty-five feet) above sea-level; and, as there can be little doubt that many of the sounds which he has heard come from the firing near Ypres, it is important to notice that there is no higher ground intervening between that town and Chignal St James. The distance separating the two places is about one hundred and twenty-five miles, the line joining them running roughly north-west and south-east.

Mr Christy is well known as a careful observer of natural phenomena. He notices that the nature of the sound varies considerably on different occasions. Sometimes the firing is slow and deliberate; about three to twelve shots are heard every minute, and each report is loud and distinct. Mr Christy is probably correct in attributing these sounds to British monitors bombarding the German positions on the Belgian coast, about Nieuport, Ostend, and Zeebrugge. It is difficult, however, as he realises, to be sure of this, for there is no doubt that much firing takes place off the south-east coast of England, of which no account ever reaches the newspaper press.

Of far greater interest is the sound of the firing which takes place inland. This is the sound that is heard most frequently in the south-eastern counties. It is much more rapid than the other. At times there may be only four or five shots to the minute, but occasionally the frequency rises to more than one hundred per minute. The sound is much less distinct than that of the North Sea firing, and appears to be more distant. As a rule it is quite faint; though, as Mr Christy remarks, it is easily perceptible and quite unmistakable. There is not the sharp report as of a gun fired close at hand. It resembles more closely a dull and distant thud, which one seems to feel rather than to hear. It is this appeal to the sense of feeling rather than to that of hearing that is the distinctive mark of very distant gun-firing. It is unfortunate, from a scientific point of view, that the exact source of the sound cannot be located. On some occasions the firing may be more or less concentrated within a limited region, though it often takes place simultaneously over a wide extent of the front. But, in referring most of the sounds which he has heard to the neighbourhood of Ypres, Dixmude, or Arras, it would seem that Mr Christy is adopting a view from which very few would dissent.

Last summer, however, there was a change both in the nature and in the intensity of the

reports. The sound of the fighting at Vimy on 21st May was heard with remarkable ease, but this was as nothing compared with the loud sounds heard, especially in the evenings, from 24th June to 2nd July. It was no longer the usual succession of dull thuds, but an incessant fluttering rumble, becoming at times exceedingly intense and rapid. At Pembury, near Tunbridge Wells, a lady was so upset by the noise that she had all her windows closed. Partly, perhaps, this excessive intensity may have been due to more favourable atmospheric conditions. But, considering the time at which it occurred, it must have been caused chiefly by the great bombardment of the German lines in the valley of the Somme.

Besides making his own careful observations, Mr Christy has collected and analysed those of many other observers. The area in the south-east of England over which the sounds were heard at various times is a considerable one. It includes practically the whole of the counties of Kent, Essex, Surrey, and Sussex. The sounds have been heard to the north-west of London, in Cricklewood and Hampstead, and in parts of other counties. The sounds which Mr Christy attributes to the firing near Ypres have been heard at Elmdon, in the north-west corner of Essex, about one hundred and fifty-one miles from Ypres. The sounds of last June and July were audible at a still greater distance—at Avon Castle (near Ringwood, in Hampshire) and at Stockbridge (near Winchester), both places being about two hundred miles from Albert. On 11th and 21st July, sounds, probably due to Somme firing, were heard at Wendling, in central Norfolk, about two hundred and twenty miles from Albert.

The conditions under which the sounds are heard throw much light on the power of the atmosphere to transmit sounds to great distances. One point of some importance is the height of the place of observation. The greater the height, the more readily are the sounds heard. Chignal St James, as already mentioned, is about one hundred and fifty-five feet above sea-level. Elmdon, in the north-west corner of Essex, is at a height of about four hundred feet. Again, in valleys and on low ground the sounds were rarely or never heard; nor were they often noticed in large towns or their suburbs.

The audibility of the sounds varies also throughout the year. During the spring and summer of 1915, hardly a day passed but the sounds were clearly heard; from the latter part of August to the beginning of October the observations of the sounds were infrequent; and from that time until the end of February 1916 they were hardly ever heard. The same variability was observed during the past year. From 1st May to 6th August the sounds were heard at Chignal St James nearly every day, whereas from 7th August to 11th September (the date of writing) they were almost, if not quite, inaudible.

Some of the weather conditions prevailing on the days when the sounds were heard have been studied by Mr W. Marriott, whose recent death is a great loss to the science of meteorology. One interesting point discovered by Mr Marriott is that a cloudy or overcast sky is more favourable than a clear sky to the transmission of sound. Another is that, though the direction of Ypres from Chignal St James is roughly south-east, the wind on the days in question was nearly always from between north and east, the breezes being usually light or moderate. There is, however, nothing unusual in this. At Ditcham, according to the well-known meteorologist, Captain Cave, the sounds of guns fired in the Channel are often heard far more plainly with a northerly than with a southerly wind. In such cases there is probably a southerly wind at some height above the ground, a condition of the weather that not only causes firing to be heard plainly at great distances, but also brings heavy rains of a thunderstorm type. This, as Captain Cave suggests, may perhaps account for the popular belief that the firing of guns is the cause of a heavy fall of rain.

CELANDINE, AND A SUITOR OR TWO.

By William Freeman.

EXISTENCE in Little Thurso Street is primitive, and the war has not made it less so. The street itself is so crooked that its littleness is more apparent than real, and its nearness to the Arsenal makes lodgings there almost as scarce as sunshine.

Celandine Evique came thither from a Belgian hamlet consisting of a big gray house, eleven cottages, a poplar-lined road, and a duck-pond. The gray house had been her home, and she and her mother had had the good fortune to escape unscathed the same day that an advance-patrol of the enemy had bayoneted her father on his own doorstep before burning down the building. Madame Evique had died a week or so later; but kindly hands had shepherded Celandine to England, and found her both a lodging and a situation with Sam Widgery and his wife, who kept the eating-house at the corner of Little Thurso Street and Faggs's Alley.

It was Bill Juper, making five pounds a week at the Arsenal, who first came to the conclusion that Celandine, with her delicate complexion, soft brown eyes, and wavy hair, was worthy of

more than a passing nod. Bill was a big, heavy-jawed fellow of thirty-five, successfully badged, and a living contradiction to the theory that all Cockneys are undersized and puny.

He spoke to Celandine one keen January day when she was bringing him his usual cup of what was humorously alluded to by the customers as washing-up water, and by Sam Widgery as 'cawfy.'

'Whatjer do when the shop's shut?' he demanded.

'Rest myselfs; read a little; make good the wear of my clothes. Also, go on Sundays to chapel with Madame Widgery,' said Celandine seriously.

'Too much un'ealthy dissipation,' opined the sarcastic Mr Juper. 'Ever bin to a cinema?'

'Once,' said Celandine. 'It was when I visited Brussels with my aunt Jeanne Marie.'

'What price a couple o' tip-up seats at the Gloriana 'All to-night—eight-thirty sharp?' he suggested.

Celandine, quivering with excitement, sought her patroness.

'Aw right,' said Mrs Widgery carelessly. 'But you ain't to be out later 'n ten.'

Celandine conveyed the fact to Bill with the delight of a child who has been given an unexpected holiday. And when that evening she met him at the corner, Mr Juper was conscious of a mild thrill at the trim hat, the costume that was so simple and yet indefinably lady-like, and the shy, radiant smile that greeted his 'What ho, Lady Ermyntrude!'

It was a promising beginning, marred only by Celandine's ignorance of Little Thurso Street etiquette. She insisted on paying for herself, and while she enjoyed the performance enormously, Bill's running fire of badinage fell entirely flat. She willingly accepted his arm back to the eating-house, but lightly evaded his clumsy attempt to wind up the evening's entertainment with a chaste salute. Celandine, in short, demonstrated with the utmost frankness that she did not understand even the first stages of walking-out; and Mr Juper, sitting on his bed an hour later, after a supper of bread-and-cheese and cocoa, couldn't for the life of him decide whether it was worth while teaching her or not.

He had come to the conclusion that it was, what time Mr Alfred Fysh, popularly known as the Giddy Kipper, working at a neighbouring lathe, and also a patron of Widgery's, was moved to note the exceeding whiteness and slimness of Celandine's hands. There was a touch of the genuine connoisseur about Alfred. The military authorities, to whom he had reluctantly surrendered himself at the latest possible moment, had marked his classification card B2, which meant he might, if he chose, abandon foreign service for munition-making. Alfred did choose. He disliked military discipline almost as much as he disliked the police, who are prone to be suspicious of a man who buys valuable bric-à-brac without asking questions, and then pawns it discreetly in the remoter suburbs. Alfred had spent more than one unpleasant morning in the witness-box, and those who knew him best opined that his ultimate abiding-place would be the dock.

Alfred was a tall, lean youth, with eyes that were never entirely steady, and a smile that contained the suggestion of a leer. No one had ever seen Alfred in a bad temper, or intoxicated, or badly dressed. His attitude towards life was that of a detached, rather amused philosopher. Unaware of Mr Juper's previous efforts, he began the cultivation of Celandine's friendship in his own gay and casual fashion one dinner-hour.

'Miss!' he called.

Celandine crossed to the table at which Mr Fysh was gazing with agonised intensity into a plate of tripe.

'Sair?' (Many and torturous were Celandine's attempts to grapple with a syllable eternally baffling to the foreigner.)

'Next time your esteemed boss cuts up his old bicycle-tires and labels them piggy-wiggy, you might ask him to include the valve.'

'I will, sair,' said Celandine obediently.

'Another thing,' continued Mr Fysh. 'When I go into a restrong, even if it 's only Sam Widgery's, I like to be served by some one with a proper amount of fizz and dash. You look as though you want a bottle of Mother Jemima's Blood Reviver, two-and-ninepenny size, or a beano without the option.'

'I do not under'—— began Celandine.

'I 'll put it another way. When did you last go on the giddy razzle-dazzle?'

The vertical wrinkles in Celandine's forehead deepened. 'The geedy raz'——

'When,' pursued the allegorical Mr Fysh sternly, 'did you last cast aside the dish-cloth of dull care for the frills and feathers of high-jinks?'

'I do not know,' said Celandine helplessly. She fell back on a safe and stereotyped phrase. 'But if there is anything more you want'——

'Yes,' said Alfred, 'there is. I want to bring a dash of carmine into those lily cheeks by escorting you to a little dance we 're getting up at the Grotto Club, at the corner of Campyle Street, next Tuesday. What about it?'

Still slightly dazed, Celandine, under the compelling gaze of the Giddy Kipper, once more sought Mrs Widgery.

'Seems to me,' said Mrs Widgery, 'that you 're 'avin' a pretty gay time of it lately. But the Club 's all right, and s' long as you 're back by ten sharp'——

It was a wet and windy night when Mr Fysh 'and lady' sought admittance at the rather shabby entrance of the Grotto Club. It was a tribute to Mr Fysh's astuteness that he had made himself a conspicuous member of a club

whose record to date had been absolutely blameless. The dancing was decorous in the extreme, the refreshments included nothing stronger than a decoction of ginger, while the manners of Mr Fysh himself would have done credit to a duke lately suffering from a family bereavement.

Celandine was introduced to a variety of gentlemanly youths, and up to a certain point enjoyed herself. Followed a queer and quite inexplicable reaction. She saw her surroundings, as it were, with new eyes. Intuitively she perceived that the other girls were looking at her with an amusement in which there was no real friendliness, and that the men who talked together in little groups were planning things which had no connection with gaiety or recreation. Sudden loneliness engulfed her. She went across to where Alf was standing. 'It is almost ten o'clock,' she said. 'And, thank you very much, but I would be very glad to go home now, because I am so tired.'

'Oh, all right,' said Alf. 'There were several other chaps that I wanted to introduce you to as my'—— He checked himself, as the colour rose in the girl's cheeks, and turned towards the cloakroom.

That night he dreamed that he caught and kissed Celandine so swiftly that she wasn't able to evade him. For his parting attempt in that direction, albeit better managed than Mr Juper's, had met with precisely similar success.

Several weeks passed, and then one afternoon there limped into the eating-house a short, stockily built figure in very muddied and worn khaki. Among many other impedimenta he carried a German helmet, and himself wore a flat metal one. It was a slack time, and Celandine was absorbed in the polishing of the copper urn which formed the chief ornament of Mr Widgery's counter. There was a strip of looking-glass set in the wall behind, and in this she caught a sudden reflection of the figure. She dropped the polishing-leather with a little cry, and, after a second's hesitation, shyly held out her hand. The figure in khaki gripped it.

'So—so you are home again,' said Celandine when speech of some sort became imperative.

'Home again—for keeps,' admitted the other joyously. 'I collected so many shrapnel-chips that they discharged me as a public nuisance. I came by the old *Princess Aurelia* this morning. I inquired at the Refugee Hostel, and they told me you 'd been billeted here.'

Celandine nodded. Her thoughts had leapt back to the night when she and her mother had slipped away from the still smouldering ruins of their home, and stumbled and struggled, undetected, through the cordon of drunken ruffians who surrounded the village. She recalled, as one recalls a nightmare, the interminable tramp along roads thronged with panic-stricken crowds; the détours they made to escape capture and insult; the thirst; the weariness; and, finally, their arrival at a British outpost. And the man in charge of the outpost had been one Richard Cairn, corporal, whose kindliness lit unforgettably the black horror of that time, though he could speak so little French that he could scarcely understand their thanks.

The swing-door opened, and Bill Juper came in. 'Plate o' rice, old girl,' he demanded; 'and look slippy about it.'

The corporal glanced at Bill, and then back at the girl. 'Close at eight?' he inquired gruffly.

'Half-past,' said Celandine.

'I shall be waiting outside,' said Cairn, and limped out of the shop.

''Oo 's that travellin' tinker?' demanded Mr Juper sourly, as the door closed again.

'A—a most good friend of mine,' said Celandine. 'Rice, you wish for, sair?'

'I did,' said her customer; 'but I 've altered my mind. I 'll 'ave a chat with that tin-'atted scarecrow what 's just gone, instead.'

He rose and departed. Through the window, Celandine beheld him overtake the corporal in a dozen rapid strides.

''Arf a mo', my lad'——

The corporal turned. 'Want a light?' he inquired amicably.

'No; a explanation,' said Mr Juper. 'If you 're under the impression that you 're goin' to swank round with that dressy bit o' goods in Widgery's, you can guess again. Savvy? You 're a back-number. No need to say more, is there?'

'Not that I know of,' said the corporal, unmoved. 'And as I 've a train to catch'——

He resumed his progress, leaving Mr Juper slightly dashed. The victory seemed too easy to be complete. But since he was hungry, and dinner-hours at the Arsenal were inelastic, he returned to the eating-house to have it out with Celandine. But Celandine was having her own belated dinner in the parlour behind, and Mrs Widgery was in charge.

Fate, in the person of an iron-souled foreman, kept Mr Juper working late that night, and it was nearly ten before he escaped. His steps led him naturally in the direction of the shop, long shut. A subdued light glimmered at a first-floor window, and he tried to believe that it was Celandine's. But Mrs Widgery's high-pitched voice corrected him. She was favouring her spouse with a synopsis of the evening's events.

'Comes back from a stroll with the gel,' she was saying, 'an' tells me straight out that 'e 'd asked 'er to marry 'im. Talked to me as confidential and friendly as if I was 'is future mother-in-law. An' there stood me lady, blushin' an' smilin', an' lookin' pretty enough to'——

'Eat,' said Mr Widgery inevitably.

''E seemed quite the gentleman; an' when 'e 'd give me a few more facks, I told 'im 'e could please 'isself. Which 'e 'd 'a' done anyway,' concluded Mrs Widgery with conviction. 'When

I sees a man with a square chin an' gray eyes, I don't waste time argyfyin'.'

Mr Widgery, whose chin was of the retreating type, and whose eyes were a watery blue, sighed faintly, and dropped upon his hands and knees to grovel for a missing collar-stud. And in the street below, Mr Juper, with a last malignant upward glance, went on his way.

On the following evening he met with better fortune. He also met, by accident, Mr Alfred Fysh.

'Ullo!' said Mr Juper, with an entire absence of enthusiasm. 'On the way to that there club o' yours?'

'Not this child!' said Mr Fysh frankly. 'Because, between ourselves, there's 'ealthier rondyvoos just now. Some blighter's been letting 'is tongue wag, and the cops are sniffing round.'

He might have added that the most immaculately conducted club becomes an object of suspicion when it leaks out that 50 per cent. of the members are receivers of stolen property.

'Fact is,' resumed Mr Fysh, in a second burst of candour, 'I'm thinking of taking a stroll with that little bit o' fluff that ladles out the soup at Widgery's.'

'Then you can think different,' snapped Mr Juper.

Alfred stole a sidelong glance at him and edged a little away.

'Any partic'lar impediment?'

'Yes—me,' said Mr Juper. 'It's yours truly as forbids the banns. Even if it wasn't,' he concluded viciously, 'there's another chap in the runnin'—a sandy-'aired bounder just back from the front.'

'What size?' inquired Mr Fysh. He was a man swift in collating the essential facts of a problem.

'Smallish,' said Mr Juper, 'and with a limp. There 'e is!'

They rounded the corner as a clock chimed the half-hour, and perceived ahead of them the corporal. With an elaborate air of having been wafted into the neighbourhood by the purest accident, he was strolling up and down within sight of the side-door of the eating-house. For, in spite of the many things a fluent young man can contrive to say to his beloved within a couple of hours, there was a good deal left over.

Ten minutes later he became aware of two forms converging upon him from opposite sides of the road. For the time being, and in the face of this alien danger, the rivals had agreed to sink all private differences.

'You 'anging about for that girl at Widgery's?' inquired Mr Fysh.

'I am,' said the corporal, with equal directness.

'Well, 'ook it,' advised Mr Fysh, 'before me and my mate 'urts you. I'm putting it plain because I don't want no misunderstandings. You just fade away like the flowers that bloom in the spring, tra-la! and all will be forgotten and forgiven. If you *don't*'——

'And if I don't?' echoed the corporal.

'There won't be enough of you left to bait a fish-'ook with,' interposed Mr Juper, with the simple savagery of his class.

'And when's this massacre going to begin?' asked the corporal, with admirable *savoir-faire*.

The two glanced up and down the street. It was ill-lit and misty, and, what was of greater importance, deserted. And for the moment they were beyond the radius of the eating-house windows.

'Now,' announced the Giddy Kipper, and became, on the word, actively pugilistic.

His mental record of what followed was curiously hazy. Summarised, it appeared that a thunderbolt smote him on the point of the chin, and that he instantly fell down a well of utter blackness for many, many miles. This was a pity, for he missed a good deal—Mr Juper's entrance into the arena, for instance. The faithful Bill had some knowledge of boxing; furthermore, he was half as heavy again as the corporal. That the latter should manœuvre so that the prone body of Alf was always between them struck Mr Juper as grossly unsportsman-like. They circled warily for a good many times before he saw his chance, and struck. It was a well-timed blow, and if the corporal had dodged it a tenth of a second later, it would have ended the fight there and then. As it was, Mr Juper decided to try again. He tried again with a punch that was a secret favourite, and that was meant to catch the corporal cleverly below the belt. Its only flaw was that it involved a certain amount of stooping. Swiftly the corporal side-stepped, and before Mr Juper could recover, gripped him in a highly scientific and original fashion, and sent him whirling over his shoulder across the muddy pavement into the opposite railings.

At the end of an indefinite interval Bill and Alf opened their eyes. They found themselves propped affectionately back-to-back in a cool and dark angle of the wall. A short distance away they could hear old Widgery drawing down the blinds of his premises.

'Yes, 'e's gone,' said Mr Juper, interpreting his comrade's glance down the road. 'Let's 'ave a drop o' something warm, an' talk things over.'

They rose dizzily, and made their way into the eating-house, where Mrs Widgery, under protest—for it was past closing-time—served them with two mugs of cocoa.

'Been fightin'?' she remarked severely.

'Not us,' said Mr Fysh. 'Jest been 'aving a frolic with a new-born kitten.'

'It seems to 'ave scratched pretty 'ard,' said Mrs Widgery, on whom a jest was wasted.

'It did,' said Mr Juper. 'But we're goin' to

get our own back nex' time—if we're 'ung for it.'

The plotting that followed would have done credit to a couple of Adelphi villains. Their talk, indeed, was of little else but the annihilation of the luridly adjectival interloper. Celandine—a changed-beyond-expression, thrice-adorable Celandine—may have overheard fragments of their plotting, and realised that danger threatened, for she went so far as to broach the topic one day over two plates of what Mr Fysh termed horse-tail soup.

'The corporal—my Richard,' she began, blushing so vividly at the word that Mr Juper ground his teeth—'will on Tuesday be visiting the Arsenal, where you work. He will be seeing the foreman of your workshops, and will be pleased to shake hands with you there.'

'What's that?' said Mr Fysh, with unexpected cordiality. 'Right-o! When's 'e coming?'

'He will be at the main gate at about five o'clock,' said Celandine with another blush.

'We'll be waitin',' agreed Mr Juper, inwardly marvelling at his own good fortune.

The day came, and the hour. It was one at which Alf and Bill, with many others, knocked off for fifteen minutes to partake of hot tea. This time, as prearranged, they made their way to a conveniently dark angle of the main path down which the visitor must inevitably pass. To them came a dozen or so choice spirits, well primed. Mr Cairn was to be given no second chance of escape.

At a quarter-past five they were still waiting. Beyond a car in which the chief and another officer were seated, no one passed. Finally, a prowling foreman hounded them back to work with sundry pungent comments, and the information that the chief was coming on a round of inspection.

Presently he came; with him the second officer. Bill, bending sullenly over his lathe, heard him say, 'These are the men we can best spare.'

'We shall be glad of them all, sir,' said the officer.

At the sound of his voice Mr Juper stiffened himself convulsively. His eye fell on Mr Fysh, who was giving an excellent imitation of living statuary.

The chief spoke again, in a slightly louder voice. 'This,' he said, 'is Lieutenant Cairn, who, you remember, lately gained the V.C. Unfortunately he is no longer fit for active service, but he is undertaking the training of recruits at home, and the War Office has commissioned him to go through the Arsenal with me to weed out unskilled men who are fit for garrison-duty, and so forth.'

The lieutenant, flushing at the outburst of cheering that followed, glanced casually at Mr Fysh. 'He looks a fairly fit specimen, if you could spare him,' he said.

'Easily, sir,' said the foreman heartily.

'Also'—— He turned swiftly upon the cringing Bill. 'What's your name, my man?'

Bill stuttered a reply.

'Another man we could do without,' said the foreman.

The chief and the lieutenant proceeded on their way.

'Of all the'—— began Mr Fysh, in a weak voice, as the door closed behind them.

'Meanin' you ain't 'eard,' said the foreman, with a touch of compassion. ''Ere, read this. The boss showed it me this mornin'.' He handed Bill a cutting from a paper rarely patronised by even the *élite* of Little Thurso Street.

'A romance of the war,' read Mr Juper laboriously, 'has been disclosed by the announcement of the marriage of Corporal (now Lieutenant) Cairn, V.C., with Mademoiselle Celandine Evique, only daughter of the late Count and Countess Evique, whose château was destroyed by the enemy some two years ago. Mademoiselle Evique has been living in humble circumstances in England, but steps have now been taken by the Belgian Government to secure her very considerable fortune. The lieutenant will in future be connected with recruiting-work in England.'

The cutting fluttered from Bill's nerveless fingers, and he turned helplessly to Mr Fysh. But for once that fluent gentleman was smitten absolutely dumb.

SEA-GULLS AT BLACKFRIARS.

FLASHING of outspread wings all silver-white
About the bastions and the river-wall;
Beat of strong pinions in suspended flight,
And call on hungry call.

Gray mists of winter deepen into gloom
Across a stream swift-ebbing to the sea;
And fierce gulls whirling where the dark wharves loom
Demand that food shall be.

Beside the parapet a sailor-lad,
Released for some short hours to town and kin,
Lingers to watch the sea-birds, hunger-mad,
Whom townsfolk feed a-grin.

He sees and understands. He knows the call
To all the warmth and joy towns hold in fee;
The fierce, keen hunger driving landward all
The children of the sea.

Yet, too, he knows that here is not their rest;
Below him, see, a boat forlorn and gray
Rides and subsides upon the waters' breast,
And the gulls perch and sway.

Quaint, ugly gulls, so strong and swift in flight,
The warm town calls them, but the sea is home;
Wild wastes of water and the tempest's might,
The spindrift and the foam.

JIM OF JACKADDER.

By LAWRENCE B. JUPP.

CHAPTER I.

AT Gillingup, on the evening of the 29th December 1896, the position of affairs, briefly stated, was as follows. Vi'let May, aged three years and three months, had been lost in the bush since early dawn. All the able-bodied menfolk of the township were out searching for her. Molly Fitzpatrick, her mother, was running like a wild thing from shanty to tin shanty, a dishevelled, tearful Rachel, bereft of her offspring, and refusing to be comforted, what time her dissipated lord and master, 'Dan the Drunk,' sprawled full length in the shadow of a mighty red-gum, and voiced his woes garrulously to the circumambient air. Presently he grew calmer, sat erect, and blew his nose noisily without the extraneous aid of a pocket-handkerchief. An empty bottle lay within reach; he tilted it against the crimson light that filled the silent forest with fire, then flung it from him with an oath and a grunt.

'Wot's the use o' chil'ren, any'ow?' he inquired, gruffly addressing a meditative magpie that was perched upon a branch of an adjacent tree. He paused a moment, seeking inspiration; then continued, following up an unaccustomed train of thought: 'Stands to reason—though why, blessed if I know—we was all sent into this blanky old world to work: by the sweat o' 'is brow shall a man moisten his bread; and wot 's the good o' bread without a drop o' summut short to wash it down? I'd like to ask. Very well, then, stands to reason that a child oughter be a comfort to its pore, 'ard-workin', perspirin' parents; 'stead o' which, wot 'appens? Runs away in the flower o' 'er young, giddy youth, and 'ides 'erself, I say, and brings my gray 'airs —sorrowin'—grave '——

He tailed off into utter incoherence, his shock head fell back, and next minute he was snoring blissfully, quite unconscious of his surroundings. The magpie took to flight, screaming harshly, as a big, bearded man rode at a hand's-pace through the tangled undergrowth, peering this way and that down the leafy woodland vistas, swart now with swift-gathering shadows. His keen blue eyes fell upon the slack, recumbent form lying all asprawl at the foot of the tall red-gum. He reined in his horse with a savage curse, and sat there like a statue, looking down from beneath bushy brows at the father of the child the whole township was seeking high and low.

'Drunken, loafing brute!' He involuntarily raised the heavy stock-whip he carried, then lowered it again regretfully. 'Bah! Let him lie; if he never wakes to the light of another day so much the better for everybody,' he muttered in his beard, and gave his gaunt steed a touch of the spur.

Three miles from Gillingup, on a rocky rise, topped by a granite outcrop, a ragged hessian hut hugged a great gray boulder. Near by, over a handful of yellow fire, a middle-aged man in torn canvas shirt and patched moleskins squatted on his heels, pipe in mouth, watching the pale glimmer of lightning that played incessantly behind a mountainous mass of billowy white cloud piled just above the barren Woongyne Ranges. The black billy, which hung suspended by a twisted piece of wire from a primitive tripod arrangement, seemed obstinately impervious to the heat of the flickering flames. For the third time the man raised the lid with the aid of a broken twig, and for the third time he was doomed to disappointment—the water merely simpered, as it were, in irritating mockery, instead of bursting into little, dancing bubbles of mirth.

'The devil 's in the blamed thing!' said Jim of Jackadder, and went off in quest of more fuel.

There were a few forlorn-looking, ring-barked trees on the far side of the slope, and a dense mat of scrub, barbed with thorn and starred with scentless purple flowerets. Poodle, the disreputable old kangaroo-dog, who, in return for board and lodging, generously kept his master in fleas—big, powerful insects of aggressively active habits—slunk on ahead, cautiously pushing his way through the thick bush; there was occasionally an unwary wallaby feeding there about this time, when the shadows cast broad patches of shade; and a myriad restless midges spun mazily in the golden track of the descending sun. Suddenly the dog stood stock-still, limbs stiffening and every hair abristle; then broke into a furious and prolonged barking.

 [*All Rights Reserved.*]

'Shet up, yer ugly swine! Reckon the devil's in the old dog,' quoth Jim, by way of formula. 'Snake—or gohanna,' he added, and limped over to investigate matters.

Curled up under a flowering shrub, peacefully slumbering, lay a child, a frail mite of a girl. Her head was pillowed upon one brown arm; her thin, bare legs were criss-crossed with raw, bleeding scratches; her diminutive skirt had been torn into ugly rags by the thorny scrub; her black hair escaped in little rats' tails from beneath a battered sailor-hat; recent tears had left grimy channels on her small, freckled face. She clutched a hideous rag doll firmly by one leg; in her other hand she held a few withered bush-blossoms.

'Well, I'm jiggered!' gasped Jim of Jackadder. He pulled off his weather-beaten wideawake, gazed into it distractedly, found no consolation therein, so rolled his protruding eyes skyward. A heavy drop of warm rain plashed upon his brow. He started violently. 'Well, I'm jiggered!' he repeated with emphasis. 'If it ain't that young Vi'let May—pore Molly's kid!'

He raised the child gingerly in his strong arms, and smoothed the short skirt with a touch that was gentle, despite its surpassing awkwardness. Poodle sat back on his haunches, and regarded the strangely assorted pair with intelligent interest, until a combined attack of the swarming enemy recalled him to the stern realities of canine existence.

'There's goin' to be a storm,' said Jim aloud. 'I'll 'ump the kid as far as my shanty, and in the mornin''—— He left the sentence unfinished.

The sun had set now, and the white cloud-bank above the sombre ranges had taken an angry coppery hue. The wind died out completely, and ever and anon a menacing growl of thunder roused an echo in gully or hollow. The rain ceased as suddenly as it had begun, and the silence brooded like a live thing; only far away from the remote recesses of the forest came the dull vibration of the storm's wings—it sounded like the rush of hurrying footsteps.

Jim carried the sleeping child into the hut, and laid her gently on the canvas stretcher, littered with dingy blankets, which served him for a bed. A bob-tailed iguana, a much-pampered pet, wriggled across the earthen floor, and shot out a long black tongue derisively.

'Git to blazes, yer old rip!' said Jim, and aimed a kick at his erstwhile favourite.

The thought was uppermost in his mind that the child would be hungry when she awoke. He considered painfully a moment; then his face brightened, and he chuckled joyously.

'I'm jist as glad now I didn't sell them old goats,' he muttered. 'Stop where you are, Poodle; yer on guard. See an' be'ave yerself like a rale gen'elman fer onst.'

He took a tin pannikin from a shelf, and limped out of the hut. It was quite dark by the time he returned. A bare half-pint of milk was all he had been able to secure after a conflict which, but for an unexpected display of tenacity of purpose on the part of the human, must infallibly have ended in the signal triumph of a self-willed and opinionated goat. Jim put a match to a few chips in the empty fireplace, set the pannikin down among the flames, and, taking half a loaf of bread from an ancient kerosene-tin, applied himself to the unwonted task of making bread-and-milk.

'Yer chops off th' crust, Poodle,' he informed his familiar, who was watching the operation with slavering jaws. ''Cos why? Chil'ren o' tender years ain't got no teeth, on'y gums, Poodle; or if teeth at all, sech as they 'ave is on'y fit fer ornament, not fer gen'ral chewin' purposes, same as understood by me an' you. 'Ere, catch!'

Poodle's jaws snapped together convulsively.

The tempest had broken in full fury. Every now and then the little, tumble-down shanty was lit up by a dazzling blue glare. The cracked oil-lamp burnt feebly, as if conscious of its own limitations. The clumsy crash of the thunder and the hoarse roar of the rain soon awakened the sleeping child.

She sat up erect, her knuckles in her eyes. 'Boo, hoo! I'se f'ightened. I want my mammie. Oo—oo—ow!'

Jim of Jackadder would rather have faced a score of bellicose natives single-handed than this small atom of humanity, who, open-mouthed and lusty-lunged, contended with the tempest. He whisked the bread-and-milk off the fire, tested its temperature with a stubby forefinger, found it too hot, and said as much explosively.

'Git out o' the light, Poodle, blame yer!—alwiz in the way,' he growled vindictively. 'There, there; I'm a-comin', me darlint. See wot I got fer yer.'

He plunged an iron spoon into the smoking mess, and proffered it recklessly. A pair of eager little lips snapped at the contents like a trout at a fly, and promptly rejected the mouthful with a startling wail of anguish.

'Too infernal, eternal, cussed 'ot!' gasped the flabbergasted Jim.

For a moment panic possessed him. He ran out into the storm, and returned with a pannikin full of rain-water—returned to find Poodle greedily guzzling boiling bread-and-milk.

'Yer dirty, ugly, thievin' brute!'

For the first time in the course of an acquaintanceship of over two years' standing, he raised his heavy blucher boot and lifted his favourite clean across the room. It was a well-timed kick, not lacking in force. Poodle uplifted his voice and fled into outer darkness, yelping with surprise and pain.

'We must jest make the best o' wot the old

varmint 'as left us, me dear,' quoth Jim philosophically, and, pouring a measure of cold water into the little basin, he proceeded once again to minister to the appetite of his small guest.

Vi'let May, in no wise particular, ate with relish, greatly to her host's satisfaction. She polished the bent spoon with a slip of tongue as red as a beetroot, and ran a grubby finger round the rim of the bowl that nothing might be lost.

'Now, say grace,' she commanded, with her finger in her rosebud mouth.

Jim scratched his head, grinned uneasily, blushed like a schoolgirl, and, 'Oh Lord, may we never 'ave no call to go empty away, amen,' he said with intense seriousness. 'Can't remember nothin' else,' he added apologetically.

Vi'let May laughed adorably. 'Gimme my dolly.'

The demand was imperious. Jim groped about on all-fours on the floor, and at last produced the missing link of Vi'let May's happiness. She held it in her arms upside-down, crooned over it with little dove-like notes, and hugged the egregious counterfeit of infancy in a perfect transport of affection.

'Mummy gived me my dolly Klismas; least mummy says Daddy Klismas gived it her to give to me 'cos I'd bin' a goo' gurl.' A sudden light dawned upon her. 'Are 'oo Daddy Klismas? 'Cos if 'oo is, I ain't 'flaid to stay wiv 'oo till mummy comes to fetch me.'

'Well, yes,' admitted Jim mendaciously, 'I reck'n I'm old Daddy Christmas, me little un. You've no call to be afraid o' yer old daddy, 'ave yer, me darlint?' He took her in his arms and held her there safe and snug, while outside the angry storm still raved and shrieked strident-voiced.

'Me—not—'flaid'—there was a long pause between each of the words—'not—wiv—Daddy—Klis'—— The little dark head fell back on Jim's broad shoulder, the little eyes closed, and the little red lips drooped apart. Vi'let May had gone to sleep with her dolly tightly clasped to her small, motherly bosom.

Jim laid the child on the bed with exceeding gentleness, glanced guiltily over his shoulder, grinned sheepishly, and stooped down.

'Hallo, within there! Spare a minute, Jim Flood? It's me—Tom Drayton.'

Jim straightened up, and started as if he had been shot. His first impulse was to throw a blanket over the sleeping child; then he shrugged his shoulders, and strode to the open door, peering out into the darkness.

'That Tom Drayton? Anythin' I can do fer yer, Tom?'

The new-comer steadied his impatient horse with a firm hand. 'Molly Fitzpatrick's nipper strayed into the bush this mornin',' he said curtly. 'The township 's bin out all day lookin' fer her.' He broke off short, and shook a clenched hand at the raging heavens. 'This blasted storm! The pore kid 'll never live through the night. We've searched high and low—there isn't a one of us ain't dead-beat. You might take a look through the gullies and round about here first thing in the mornin', Jim. Not that I've much hope—I fossicked 'em pretty thoroughly myself this forenoon.'

'I will—you can trust me, Tom,' answered Jim Flood, listening intently and nervously the while for any sound of the child's awakening; 'but I allows with you there ain't much chance—specially now, arter this darned old storm.' He paused; then resumed in a thick, hesitating voice, 'Molly—meanin' Mrs Fitzpatrick—I reck'n she 'll be plaguy badly broke up over this 'ere—terrible fond she were o' that young Vi'let May; she thought the world o' the little un; and her tied to—to Dan.'

'D—n him!' The man in the saddle flamed out in sudden passion. 'I struck the scab not a couple o' hours back, away yonder, lyin' dead-drunk under a red-gum. Little he cares fer wife or child, kith or kin; so long as he has a bottle o' square-face to keep him comp'ny, the rest can go to blazes. I hope to God the lightnin' burns the blasted tree, and Dan too, the—the'—— He laughed grimly. 'Well, I guess it's no use squawkin', Jim; I must get a move on. We 'll be out ag'in first thing in the mornin'. The pore little lass can't be fer off. You 'll take the gullies as fer as Simpson's, mate?'

'Ay,' said Jim, 'I 'll take the gullies, Tom. Good-night.'

He waited until the clatter of horse's hoofs had died away down the rough, uneven track, then swung round on his heel and re-entered the single room of the shanty, where Vi'let May slept the deep sleep of childhood, her rag doll folded in a close embrace.

. . . . . .

Two months passed by, and the tragical mystery of Vi'let May's complete disappearance off the face of the earth had ceased to be the sole topic of conversation among the dwellers in the little bush township of Gillingup. It was popularly supposed that the child had been drowned in a pool of the river, but all attempts to locate the spot had signally failed.

One sultry afternoon an untimely shower of rain drove Mrs Cockshott, the minister's wife, into the local store, her advent being hailed with delight not only by Mrs Mudge, renowned as the greatest gossip within a radius of many miles, but also by Mr Meek, the storekeeper, an inoffensive, mild-mannered little man, whose name showed remarkable prescience on the part of Providence. Now Mr Meek was Mrs Mudge's most long-suffering victim.

''Afternoon, Mrs Cockshott,' began the excellent old lady briskly. 'How's your goodman's

lumbago? Has he tried messagin' it with olive-oil? The knuckles, mind you—the palms o' the hand ain't no use at all; it must be the knuckles. Like this—see.'

She laid aside her umbrella, and gave such a spirited illustration in support of her therapeutic theory that the smalls of the onlookers' backs ached in sympathy. Mr Meek, behind the counter, sniggered feebly, and tried to cover up his traces with the special brand of apologetic cough he kept in stock for use in cases of emergency, such, for instance, as the challenging by an irate customer of a twice-told account, or any other small exigency incidental to a successful business career.

'Quite well, thank you, ma'am,' said Mrs Cockshott brusquely. Mrs Mudge was her pet aversion.—'A pound of York ham, please, Mr Meek; a dozen new-laid eggs—by the by, one of the last lot was addled, so you can make it a baker's dozen this time—and a tin of the best pickled salmon.'

'Me an' Mr Meek was just talkin' when you come in,' resumed Mrs Mudge, undaunted by her rebuff.

'Really!' put in Mrs Cockshott, ironically incredulous.

Mrs Mudge was a member of an opposition sect, which Mrs Cockshott, as the minister's wife, could not possibly dream of recognising; therefore no weekly threepenny-bit was jeopardised by plain speaking.

'Yes,' continued Mrs Mudge firmly; 'we was talkin' about Jim Flood. If ever anybody had white-ants, I reck'n Jim Flood's got 'em bad. Wot d'ye say to a man his time o' life eatin' lollies—lollies by the bagful?'

'I don't see much in that to make a fuss about,' replied Mrs Cockshott curtly. 'At all events, it's better than spending his hard-earned money swilling beer, like some I could mention.'

Now, Mrs Mudge's husband had the reputation of being able and willing to consume more ale at a sitting than any two adult males in Gillingup. Also, scandalous rumour had it that Mrs Mudge herself was not entirely averse to malted liquors of sorts. The old lady regarded the minister's wife sternly. Mrs Cockshott occasionally took a little brandy for 'the spasms;' it was a clear case of the pot and the kettle.

'Lollies ain't all,' continued Mrs Mudge with a pronounced sniff.—'Wot else did you say, Mr Meek?'

'Six tins o' Nestlé's milk,' said that gentleman glibly; 'one Noah's ark, redooced in price owin' to loss o' Noah's 'ead an' fracture o' elephant's trunk; one child's sun-bonnet; one bottle o' castor-ile; an' two tins Mellin's food fer infants; 'sides which, I've seen parcels lyin' addressed to him at Mulga Station from Baxter Brothers, the big drapers in the city.'

Mrs Mudge smiled triumphantly. 'Clear as daylight—second child'ood,' she observed judicially. 'Melon's food! Noah's ark, indeed! Jim's never bin the same man since Molly Evans—Mrs Fitzpatrick as is—threw him over for that beauty of a husband o' hers. Terrible fond o' one another they was one time, to be sure. I declare I've no patience at all with the woman; but as she made her bed, so she must lay in it.'

'Eggsackly,' said Mr Meek, with decision. 'Second child'ood, no doubt, ma'am.—Good-afternoon to you, Mrs Blogg.'

Mrs Blogg, a stout, middle-aged lady with a red, determined face, entered the store breathlessly, and seated herself upon a bag of sugar.

''Ave you 'eard the news?' she asked abruptly, wasting no time on trivial greetings. Then, without pausing for reply: 'I'm struck all of a 'eap. When I 'eard it just now from Mrs Dooling you could 'a' knocked me down with a feather. I 'adn't a word to say edgeways. I just stood there in the middle o' the road and gasped—fairly gasped. If I didn't know it fer a fact I wouldn't believe it; no, not if you was to go down on your bended knees to me in the middle o' the road and vow to me on your Bible oath, believe you I—would—not!' Her voice rose to a shrill falsetto squeak.

Meanwhile Mrs Mudge exhibited aggravated symptoms of the direst wrath. You might snatch a bone from a hungry dog, and peradventure escape unharmed; but tantalise Mrs Mudge by withholding, for however brief a space, a choice morsel of gossip, and the fat was in the fire—and no mistake about it.

'Mary Blogg!' she hissed, and her mien was so threatening that Mr Meek positively quailed, 'I declare to goodness I'll shake the false teeth out o' your head if you sit there makin' mysteries out o' molehills. What was it Mrs Dooling told you?'

Mr Meek stood to attention. Mrs Cockshott feigned a genteel impassivity, but natheless pricked up her ears.

Mrs Blogg waited a moment for greater effect, then said slowly and emphatically, 'Dan Fitzpatrick ran away this very morning with Wun Li the Chinaman's wife. Wun Li caught 'em at the cross-tracks, shot Dan stone-dead, and morshally wounded 'is wife; then committed wot in 'is 'eathenish country they calls "'Arry-carrie," blowing out his own brains. None o' 'em is expected to survive. The pore wife o' the white corpse is completely prostrated.'

Mrs Mudge said not a word. Her eyes shone with enthusiasm. She snatched up her three brown-paper parcels, and literally ran out of the store, quite forgetting her umbrella.

'Gone to gossip, I make no doubt,' commented Mrs Blogg bitterly. 'Speaking for meself, I'd scorn to trade on the misfortunes of me neighbours. A pound o' butter, a tin o' French coffee, and two pounds o' Ceylon tea, if you please,

Mr Meek—they'll go into this pillar-slip; and at the same time you might let me 'ave my little account up to date, if you'll be so good, and I'll settle with you now.'

Mr Meek mopped his pale, fat face with his apron. 'Very, very sad, but business is business,' he murmured softly.

(*Continued on page 346.*)

THE IMPERIAL PUBLIC LIBRARY OF RUSSIA.

By S. J. Rapoport.

I.

MANY things which are introduced at first as ornaments and *objets de luxe* become later matters of everyday necessity and of common use. Even such common things as knives and forks and umbrellas were, no farther back than two or three centuries ago, things which were rarely met with, and only amongst the very rich classes of society.

The same may be said of public libraries. In the present age of compulsory elementary education and Carnegie endowments, libraries are a necessity. It is difficult to imagine the existence of a city or European state, even the smallest, without its municipal or national library. It was quite different a century or two ago. A library was then looked upon as a rare thing, suitable only as an ornament for a great monarch or a rich Mæcenas. In Russia, up till the end of the eighteenth century, no public library whatever was in existence. There have been several big collections of books and manuscripts owned by private persons, but they were accessible only to a very few of the owners' friends.

The Empress Catharine II. started to buy whole libraries, but only for her own use and that of the Imperial household. In 1764 she bought a big collection of 30,000 volumes belonging to Baron Johann Albrecht Korf, who, in the reign of Anna Ivanovna, became the President of the Russian Academy of Science. This collection was given by the Empress to her son, then heir-apparent, Paul (afterwards Emperor). Then she acquired the rich libraries of Voltaire, Diderot, and Prince Shcherbatoff, besides many other books, chiefly in magnificent bindings. All these purchases she kept in the Hermitage, which is now one of the largest museums in Europe, though when it was built in 1765 it was only intended as a private annex to the Winter Palace, where the Empress used to have her social gatherings and amateur theatrical performances.

And, indeed, the idea of having a big national public library in St Petersburg (as the capital of the Russian Empire was then called) in the eighteenth century could hardly have been seriously entertained, considering that there were practically no readers who could make use of such an institution. Even at present 75 per cent. of the people do not know how to read or write. In the middle of the eighteenth century the proportion of illiterate persons must have been no less than 99 per cent. of the total population; and, although St Petersburg was then the most enlightened place in Russia, and its inhabitants the best-educated, there could hardly have been enough readers to make use of a big public library. After all, in the eighteenth century the new Russian capital was still, comparatively speaking, a small city. Only towards the end of the century did its population reach the number of two hundred thousand. Of these the number who could read was certainly small, and the majority of them would be officials in the various Government departments, who had no time during the day to make use of a library. Those of the leisured aristocratic class who cared for reading and study would have private collections of their own, and would deem it beneath their social position to sit in a public room for the purpose of study. The university and school students, who now form such a great proportion of the visitors to the reading-room of the Imperial Library, could not have been numerous at that time, as there were scarcely any establishments for higher education in the Russian capital. The university, the great technical schools, and similar institutions were not founded till the nineteenth century. Hence, if the need for a great national public library were felt at all, it could only have been by a very few. It was more from ambition and by chance than on account of necessity that the Empress Catharine II. conceived the idea of establishing a public library, to be supported by the State, in St Petersburg. But although the foundation of the library was resolved on in the year 1795, it was only opened to the public nineteen years later, in 1814, and thus in 1914 it celebrated the centenary of its existence.

II.

Catharine II. conceived the idea of establishing a public library in the same spirit and under the same circumstances as did many of the ancient rulers of Rome, Greece, or Egypt. When among the spoils of their victories were found collections of books or separate manuscripts, they eagerly transported these to their own capitals, and made them the corner-stone of new 'national' libraries. Thus Sylla, after the siege of Athens, discovered an entire library in the temple of Apollo, which he carried to Rome, and so appears to have been the founder of the

first Roman public library. Catharine followed the example of Sylla; and when, in 1794, Warsaw fell after being stormed by Suvorov, the national library of the Polish kingdom (founded by the brothers Zalusky) was declared to be Russian property, and in a few months was carried away to St Petersburg.

The story of the Polish library has been told many times, but it is worth retelling, especially at present, when the resurrection of Poland is so near at hand, and when the question of its national collection of books may so soon become a subject of acute discussion.

There lived, in the middle of the eighteenth century, two brothers, the Counts Zalusky, both occupying high positions in the State. The elder, Andrei (born in 1695), was the Great Chancellor of Poland and Archbishop of Cracow; the younger, called Joseph (born in 1702), was Assistant State Secretary of Poland and Bishop of Kiev. Their family was related to King Jan Sobessky, and the two brothers were also related to King Stanislav Leshchincky, and owned much property. Being highly educated and great lovers of learning and books, they both collected, especially the younger one, a large number of books, and founded a library in Warsaw, which was opened on the 8th of August 1748. This library, which the Zaluskys kept at their own expense, was declared to be the 'crown of the capital and the universe' (*corona urbis et orbis*), the 'gem of Poland' (*gemma regni Poloniæ*). The collection consisted of more than 400,000 volumes, and many manuscripts, woodcuts, engravings, maps, &c. The copies were of great rarity. The chief part dealt with Poland, her history, geography, ethnography, language, &c.; and the rest was devoted to theology and law. The books were collected not only from convents and private libraries in Poland, but also from places abroad where Joseph Zalusky spent much time and money in search of books about Poland. He was not only an ardent collector, but a learned man, and thousands of the copies he acquired bear trace of his study and investigations. He discovered the names of anonymous authors, stated the year in which certain of the books were printed, marked the degree of rarity in a book by varying numbers of asterisks, and so on.

After the establishment of the library, they both, but more particularly Joseph, set about enriching it by the purchase of new and old books and manuscripts. But the death of Andrei in 1758, and the interest which Joseph began to take in politics after the death of his brother, adversely affected the library. Joseph Zalusky was one of the most bitter opponents of Russia in the Polish Diet, and on the night of 2nd October 1767 was, by order of the Russian ambassador in Warsaw, Prince Repnin, expelled from that city, together with some other prominent members of the Polish legislative body. They were deported to Smolensk. Afterwards Zalusky was taken to Kaluga, where he remained in exile till 1773. During his six years of forced absence from Poland the library declined very much. Many books were stolen, no new acquisitions were made, the building became dilapidated, and the collection in general fell into a state of gross neglect and disorder. The management had been left in the hands of the Order of Jesuits, which, however, had been abolished. When Joseph Zalusky returned from exile he again devoted himself to his life-work; but his days were already numbered, and he died 9th January 1774. The library then became the property of the Polish nation, and remained under the management of the Polish Ministry of Education till the fall of Warsaw.

It is curious to note that this library of Zalusky's, which was the foundation of the present Imperial Russian Library, and still forms its most important part, contained only eight books in the Russian language. One can truly say that Poland not only founded the Imperial Public Library in St Petersburg, though against its own will, but also richly endowed it—in later years as well. After the Polish insurrection of 1830, the Russian Government confiscated many more libraries belonging to Polish municipal bodies, Polish societies, and private persons. Among these were the library of the Jesuits in Polotsk, which contained a most valuable edition of *Acta Sanctorum* and 106 manuscripts of great value; the public library of Warsaw, which consisted of more than 133,000 volumes and many precious manuscripts and engravings; the library of Prince Sapega; and many others. Altogether the spoils after the insurrection in Poland in 1830 amounted to more than half-a-million volumes.

The Polish insurrection of 1862 brought in some more spoils taken from Polish churches, convents, and private houses. The Russo-Turkish war of 1828–29, and the Russo-Persian war of 1826–28, gave Russia many spoils for the Imperial Library, among them the rich collection of oriental books and manuscripts from the Ardebil Library, the birthplace of the Persian dynasty of the Sufis. According to the wish expressed by the Emperor Nicholas I., the Ardebil Library was incorporated with the Russian Imperial Library as a 'memorial to the glory of the Russian arms.' The wars with the Caucasian tribes, the expeditions to Khiva and Bokhara, again yielded rich booty in the shape of rare and exceedingly valuable manuscripts and volumes in oriental languages taken from the mosques, palaces, and private houses.

III.

At the same time the task of collecting in a more peaceful way by purchase and statutory acquisition was being undertaken. After 1810 two copies of each book printed in Russian were presented to the library. Later this was changed

to one copy only. Now large sums are spent annually in buying books printed abroad, or rare manuscripts; though, in comparison with other great national libraries, the Russian purchases seem rather small. The British Museum spends about twenty thousand pounds per annum, whereas the Imperial Public Library spends only about five thousand pounds. Many of the most valuable additions have been supplied by private donors, who have frequently given very big collections of rare and precious volumes.

In December 1913—that is, at the end of the centenary of its foundation—the library contained 2,615,374 books and pamphlets, 207,816 manuscripts, and 193,445 pieces of music, maps, engravings, photographs, &c. Altogether there were 3,016,635 copies, not counting catalogues, duplicates, placards, and other such publications, which amounted to more than 200,000.

Perhaps the most interesting and unique department in the Imperial Library is the one called Rossica, which contains books printed in foreign languages on Russia. It contains 230,000 volumes, and is almost the only example of such a department; as very few other national libraries have a separate department for foreign books on their own country.

The growth of the Imperial Russian Library is really a matter of only half-a-century, as up to 1850, when Baron (afterwards Count) Modest Korf was appointed director, it existed as a stock of badly kept books almost uncatalogued, and rarely made use of by the public. The whole sum spent on new books from 1814 to 1850 did not exceed on an average one hundred and fifty pounds a year. Baron Korf, who was at the head of the library from 1849 till the end of 1861, infused new life into it, and made it really a public library. It was he who established the Rossica department, as well as the departments for incunabula (books published before 1500), the Aldines and Elzevirs. He introduced order into the chaos which had reigned up till then in the matter of cataloguing, succeeded in obtaining larger grants for buying and binding books, increased the staff, and enlarged the building. At the same time he was very active in advertising the uses of the library among the population, so that when he left the office to his successor he had the satisfaction of knowing that whereas in 1849 the number of tickets issued to readers was eight hundred and ninety-six, and the number of books required by them about one thousand four hundred, in 1861 the numbers were respectively three thousand six hundred and fourteen and one hundred and thirty-one thousand three hundred and thirty-one.

By order of the Emperor Alexander II., the Rossica Room was called the Room of Baron Korf, and a portrait of the latter is placed over the entrance.

In 1912 the number of readers' tickets amounted to twenty-seven thousand eight hundred and ninety-nine, and the number of books issued to five hundred and twenty-two thousand nine hundred and fifty-eight.

It may be of interest, also, to mention that the first woman reader did not appear till 1831. Since then the numbers have increased, but statistics of women readers are not available before 1854. In that year, out of one thousand nine hundred and eighty-eight readers, twenty-three were women, and up till 1862 their number never exceeded one hundred. Since then there has been a steady increase, owing to the greater number of women students in the educational establishments of the Russian capital. In 1912, out of twenty-seven thousand eight hundred and ninety-nine readers, seven thousand three hundred and nineteen were women.

THE DEFINITE OBJECT.

CHAPTER XX.—OF AN EXPEDITION BY NIGHT.

'WHY, Mr Geoffrey, what you settin' here in the dark for?'

'Is it dark, Mrs Trapes?'

'My land! can't you see as it's too dark t' see?—an'—oh, shucks, Mr Geoffrey!'

'Certainly, Mrs Trapes! But can't you see that the whole world—my world, anyway—is full of a refulgent glory, a magic light where nothing mean or sordid can possibly be, a light that my eyes never saw till now or hoped to see, a radiance that may never fail, I hope—a—er'——

'Oh, go on, Mr Geoffrey, go on! Only, I guess I'll light the gas jest the same, if you don't mind!' Which Mrs Trapes did forthwith. 'But what was you a-doin' of all alone in the dark?'

'Glorying in life, Mrs Trapes, and praising the good God for health and strength to enjoy it and the fullness thereof.'

'"Fullness thereof," meanin' jest what, Mr Geoffrey?'

'The most beautiful thing in a beautiful world, Mrs Trapes.'

'An' that's Hermy, I s'pose. An' all that talk o' glory an' radiance an' magic light means as you've been an' spoke, I guess?'

'It does.'

'An' what did she say?'

'Nothing.'

'Nothin'?'

'Not with her lips, but'——

'Oh, her eyes, was it? Mr Geoffrey, I'll tell you what—a girl may look "yes" with her

eyes a whole week an' say "no" with her mouth jest once, an' mean "no"—when it's to a pea-nut man. Lordy-lord! what's that?' And Mrs Trapes jumped as a hand rapped softly on the door, and stared horrified to see a human head protrude itself into the room, while a voice said, 'Da signorina she out, so me come tell-a you piece-a-da-noos.'

'Why, if it ain't that blessed guinney! Go away—what d'ye want?'

Hereupon Tony flashed his white teeth, and, opening the door, bowed with his inimitable grace, grew solemn, tapped his nose, winked knowingly, and laid finger to lip mysteriously.

'My land!' said Mrs Trapes, staring. 'What's the matter with the Eyetalian ij'it now?'

'Spike—he go make-a-da-fight!' whispered Tony hoarsely.

'Eh—Arthur fightin'—where?'

'He go make-a-da-box—he drink-a-da-booze, den he walk-a—so! Den da signorina she-a cry.'

'Oh!' exclaimed Mrs Trapes, 'you mean as that b'y's off boxin' again?'

'*Si, si*, he go make-a-da-box-fight.'

'Is he over at O'Rourke's, Tony?' inquired Ravenslee, sitting upright.

'I bet-a-my-life, yes.'

'Oh, Mr Geoffrey!' exclaimed Mrs Trapes, clasping bony hands, 'if they bring him home drunk like they did last time!'

'They sha'n't do that, Mrs Trapes. Don't worry; I'll go and fetch him,' said Ravenslee, getting to his feet.

'Fetch him? From O'Rourke's? Are ye crazy? You'd get half-killed, like as not. Oh, they're a bad, ugly lot down there!'

'I feel rather ugly myself,' said Ravenslee, looking around for the shabby hat; 'anyway, I'm going to see.'

'Why, then, if you're goin' t' venture among that lot, you take this with ye, Mr Geoffrey,' and she thrust the poker into his hand; 'you'll sure need it—ah, do now!' But Ravenslee laughed and set it aside. 'You'd better take it, Mr Geoffrey; fists is fists, but gimme a poker—every time! A poker ain't t' be sneezed at! What! goin'—an' empty-'anded? Mr Geoffrey, I'm surprised at you—think of Hermy!'

'That's just what I am doing.'

'Well, s'posin' they hurt you, what'll Hermy do?'

'You think she'd mind, then, though I'm—only a pea-nut man?'

'Even a pea-nut man's a feller-creatur', ain't he?—an' Hermy's 'eart is very tender, an'—oh, shucks, Mr Geoffrey, I guess you know she'd just be crazy if you was hurt bad!'

'Why, then,' said Ravenslee, smiling, and taking up the battered hat, 'I'll take great care of myself—trust me!'

'Then good-bye, Mr Geoffrey, good-bye, an'—the good Lord go with you.'

'Thank you, Mrs Trapes,' said Ravenslee, and followed Tony out upon the stair.

Upon one of the many landings the young Italian paused. 'Me put-a-you wise, Geoff; you savvy where-a to find Spike; now me go back t' my lil Pietro, yes. S'long, pal, 'n' good-a luck!'

Ravenslee hastened on downstairs, returning neighbourly nods and greetings as he went, but staying for none, and so, crossing the court, turned into the avenue.

On the corner he beheld the Spider, hard at work on his eternal chewing-gum, peak-cap drawn low, and hands in pockets. Seeing Ravenslee, he nodded and lurched forward. 'What's doin', Geoff?' he inquired.

'I'm off to O'Rourke's—coming?'

'Not much! An' say, 't ain't worth your trouble—I ain't fightin'. Nawthin' but a lot o' fifth-raters.'

'I'm going over to fetch Spike.'

'How much?' exclaimed the Spider, his square jaws immobile from sheer astonishment. 'Say, you ain't crazy, are ye—I mean, you ain't dippy or cracked in the dome, are ye? Because de kid's goin' ten rounds with Young Alf de East-side Wonder t'-night, see?'

'Not if I can help it, Spider.'

'Aw—come off, bo'! D'ye think Bud'll let him go?'

'I sha'n't ask Bud, or any one else.'

'Meanin' as you'll walk right in on Bud's tough bunch an' cop out de kid on yer lonesome—eh?'

'I shall try.'

'Then you sure are crazy; if yer dome ain't cracked yet, it's sure goin' t' be. Why, Bud 'n' his crowd'll soak you good 'n' plenty, 'n' chuck ye out again quicker 'n ye went in—they will sure, bo'—if you go.'

'I'm wondering if you'll come along and help?' said Ravenslee lazily.

'Me? Not so's you could notice it. I ain't huntin' that sort o' trouble.'

'Oh, well, if you think you'd—er—better not, I'll go alone.'

'What! yer goin', are ye?'

'Of course! You see, Spike is my friend; consequently his trouble is my trouble. Good-night, Spider; and whatever else you do, be sure to—er—take good care of yourself!' And Ravenslee smiled and turned away; but he had not gone six paces before the Spider was at his elbow.

'Say, bo',' said he, 'I don't like the way you smile, but you talk so soft an' pretty, I guess I'll jest have t' come along t' gather up what they leave o' ye.'

'Spider,' said Ravenslee, 'shake!' The Spider obeyed, somewhat shamefacedly, to be sure.

'It looks like two domes bein' cracked 'stead o' one, an' all along o' that fool kid!' Having said which, he lurched on beside Ravenslee, chewing voraciously. 'How you goin' t' work it?' he inquired suddenly.

'I don't know yet.'

'Hully chee! You've sure gotcher nerve along. There's some o' the toughest guys in little Manhattan Village at O'Rourke's dump t'-night, keepin' th' ring an' fair achin' for trouble.'

'We must dodge 'em, Spider.'

'S'pose we can't?'

'Then we must trust our luck, and I've got a hunch we shall get Spike away somehow before Mr Flowers dopes him or makes him drunk. Anyway, we'll try. The dressing-rooms are behind the annex, aren't they?'

'Know the place, do ye?'

'I've looked it over. We can get in behind the annex, can't we?'

'In?' repeated the Spider, smiling grimly. 'Oh, we'll get in all right—what gets my goat is how we're goin' t' get out again. You sure are a bird for takin' chances, Geoff.'

'Life is made up of chances, Spider, and there are two kinds of men, those who take them joyfully and those who don't.'

'Well, say, you can scratch me on the joyful business. I'm the guy as only takes chances he's paid t' take.'

'How much are you getting on this job, Spider?'

'Oh—well—I mean—say, what's th' time, bo'?'

'Five minutes after eight—why?'

'I guess de kid's in th' ring, then. There's a full card t'-night, an' he's scheduled for eight sharp, so I reckon he's fightin' now—an' good luck t' him!'

By this time they had reached that dark and quiet neighbourhood where stood O'Rourke's saloon. But to-night the big annex glared with light, and the air about it was full of a dull, hoarse, insistent clamour that swelled all at once to a chorus of discordant shrieks and frenzied cries.

'Ah!' quoth the Spider sagely, 'hark to 'em howl! That means some guy's gettin' his all right—listen to 'em; they love t' get blood for their entrance money, an' they're sure gettin' it. Some one's bein' knocked out—come on!'

It was a dark night, for there was no moon, and the stars were hidden; thus, as Ravenslee followed the Spider, he found himself stumbling over the uneven ground of a vacant lot, a lonely place beyond which lay the distant river. So they came at last to various outbuildings looming up ugly and ungainly in the dimness.

'Say, bo',' said the Spider, stopping suddenly at a small and narrow door, 'you'd best wait here an' lemme go first.'

'No; we'll go together.'

'Right-o; only, be ready to make a quick get-away!' So saying, the Spider opened the door, and, closely followed by Ravenslee, stepped into a dim-lit passage thick with the blue vapour of cigars and cigarettes. It was a long, narrow corridor, bare and uncarpeted, seeming to run the length of the building; on one hand was a row of dingy windows, and on the other were several doors, from behind which came the sound of many voices that talked and sang and swore together and at the same time—a very babel.

Now at the end of this passage was yet another door which gave upon a small room that contained a rickety sofa, a chair, and a battered desk; a kerosene-lamp suspended against the wall burned dimly; and it was into this chamber that the Spider ushered Ravenslee somewhat hastily. The Spider's eyes were very bright, and he chewed rather more fiercely than usual.

'Bo',' said he, 'this place ain't exactly a bed o' roses for a strange guy like you; ye see, this is Bud's own stampin'-ground, an' the whole bunch is here t'-night, and most of 'em are heeled. Soapy an' Bud always tote guns, I know. So I guess you'd better mark time here a bit while I chase around an' locate th' kid. If any one asks what you're doin' around here, say as you came in with me. But, bo''—and here the Spider laid an impressive hand on Ravenslee's arm—'if you should happen t' see Bud, well, don't stop to look twice, but beat it—let it be th' door or winder for yours—only, beat it!'

'Oh, why?'

'Well, I know Bud's got it in fer you; I heard him say—— Oh, well, if his gun should go off—accidental-like, this place ain't exactly Broadway or Fifth Av'noo, bo'—see?'

'I see!' nodded Ravenslee.

'Hold on!' said Spider, and crossing to the window, he unlatched it stealthily and lifted it high. 'If I ain't back inside ten minutes, bo', nip out through here an' hike—wait for me at the lamp-post across the lot over there—it'll be safer. D'ye get me?'

'I do!' nodded Ravenslee.

'I guess you'd be less of a fool if you was to get out now an' wait—outside!' Spider suggested.

Ravenslee shook his head. 'I'll wait here,' said he; 'there are times when I can be as big a fool as the next, Spider, and this is one of them.'

'That's so!' nodded the Spider, and, chewing viciously, he turned and was gone, to be hailed a few minutes later in uproarious greeting by many discordant voices which died slowly to a droning hum, above which came sounds more distant, shouts and cheers from the auditorium.

Left alone, Ravenslee looked about him, and then espied a newspaper that lay upon the desk,

and idly taking it up, his gaze was attracted by these words, printed in large block letters:

'NOTORIOUS CRIMINAL RUN TO EARTH. JACOB HEINE THE GUN-MAN ARRESTED IN JERSEY CITY.'

Below in small type he read this:

Jacob Heine, believed to be the perpetrator of several mysterious shooting affrays, and member of a dangerous West-side gang, was arrested to-day.'

Now, the light being dim, Ravenslee drew closer to the lamp, and, standing thus against the light, his face was in shadow; also his long figure was silhouetted upon the opposite wall, plain to be seen by any one opening the door. Suddenly, as he stood thus, head bent above the paper, this door opened and M'Ginnis entered; he also held a paper, and now he spoke without troubling to lift his scowling gaze from the printed column he was scanning: 'That you, Lefty? Here 's a hell of a mix-up—that dog-gone fool Heine 's got himself pinched—and in Jersey City, too! I told him t' stay around here till things was quiet! It 's goin' t' be a hell of a job t' fix things for him over there—'t ain't like N' York. But we got t' fix things for him or chance him squealin' on th' rest of us; but what beats me is '——

M'Ginnis's teeth clicked together and the paper tore suddenly between his hands as, glancing up at last, he beheld two keen, gray eyes that watched him, and a mouth, grim and close-lipped, that curled in the smile Spider didn't like.

For a long, tense moment they stood motionless, eye to eye; then, reaching behind him, M'Ginnis locked the door, and, drawing out the key, thrust it into his pocket.

'So—I got ye at last—have I?' said he slowly.

'And I 've got you,' said Ravenslee pleasantly; 'we seem to have got each other, don't we?'

'See here, you,' said M'Ginnis, his massive shoulders squared, his big chin viciously outthrust, 'you 're goin' t' leave Mulligan's, see?'

'Am I?' said Ravenslee, lounging upon a corner of the battered desk.

'You sure are,' nodded M'Ginnis; 'Hell's Kitchen ain't big enough for you an' me, I guess—you 're goin' because I say so, an' you 're goin' t'-night!'

'You surprise me!' said Ravenslee sleepily.

'You 're goin' t' quit Hell's Kitchen for good, and—you ain't comin' back!'

'You amaze me!' and Ravenslee yawned behind his hand.

'An' now you 're goin' t' listen why an' wherefore—if you can keep awake a minute!'

'I 'll try, Mr Flowers; I 'll try.'

M'Ginnis thrust clenched hands into his pockets and surveyed Ravenslee with scornful eyes—his lounging figure and stooping shoulders, his long white hands, and general listless air.

'God!' he exclaimed, 'that she should trouble t' look twice at such a nancy-boy!' and he spat loud and contemptuously.

'Almost think you 're trying to be rude, Mr Flowers.'

'Aw—I couldn't be to a—thing like you! An' see here—me name 's M'Ginnis!'

'But, then,' sighed Ravenslee, 'I prefer to call you Flowers—a fair name for a foul thing.'

M'Ginnis made a swift step forward, and halted, hard-breathing and menacing. 'How much?' he demanded.

'A fair name for a foul thing, Mr Flowers,' repeated Ravenslee, glancing up at him under slumberous, drooping lids; 'anyway, Flowers you will remain!' As they stared again eye to eye, M'Ginnis edged nearer and nearer, head thrust forward, until Ravenslee could see the cords that writhed and swelled in his big throat, and he hitched forward a languid shoulder. 'Don't come any nearer, Flowers,' said he, 'and don't stick out your jaw like that; don't do it; I might be tempted to try to—er—hit it!'

'What—you?' said M'Ginnis, and laughed hoarsely, while Ravenslee yawned again.

'An' now, Mr Butt-in, if you 're still awake, listen here. I guess it 's about time you stopped foolin' around Hermy Chesterton, an' you 're goin' t' quit—see!' Ravenslee's eyes flashed suddenly, then drooped as M'Ginnis continued, 'So you 're goin' t' sit down right here, an' you 're goin' t' write a nice little note of farewell, an' you 're goin' t' tell her as you love her, an' leave her because I say so—see? Ah!' he cried, suddenly hoarse and anger-choked, 'd' ye think I 'll let Hermy look at a thing like you—do ye—do ye?' And he waited.

Ravenslee sat utterly still, and when at last he spoke his voice sounded even more gentle than before: 'My good Flowers, there is just one thing you shall not do, and that is, speak her name in my hearing—you 're not fit to, and, Mr Flowers, I 'll not permit it.'

'Is that so?' snarled M'Ginnis. 'Well, then, listen some more. I know as you 're always hangin' around her flat, an' if Hermy don't care about losin' her good name '——

Even as Ravenslee's long arm shot out M'Ginnis side-stepped the blow, and Ravenslee found himself staring into the muzzle of a revolver.

'Ah, I thought so!' he breathed, and shrank away.

'Kind of alters things, don't it?' inquired M'Ginnis, hoarse and jeering. 'Well, if you don't want it to go off, sit down an' write Hermy as pretty a little note as you can. No; shut that window first.'

Silent and speechless, Ravenslee crossed to the window and drew down the sash, in doing

which he noticed a dark something that crouched beneath the sill.

'An' now,' said M'Ginnis, leaning against a corner of the desk, 'sit down here, nice an' close, an' write that letter—there's pen an' ink an' paper—an' quick about it, or, by'—— M'Ginnis sprang up and turned as the glass of the window splintered to fragments—and, almost with the crash, Ravenslee leapt—a fierce twist, a vicious wrench, and the deadly weapon had changed hands.

'Lucky it didn't go off,' said Ravenslee, smiling grimly at the revolver he held; 'others might have heard, and, Mr Flowers, I want to be alone with you just a little longer. Of course, I might shoot you for the murderous beast you are, or I might walk you over to the nearest police depot for the crook I think you are; but—oh, well, of late I've been yearning to get my hands on you, and so'—— Ravenslee turned and pitched the revolver through the broken window. But, almost as the weapon left his hand, M'Ginnis was upon him, and, reeling from the blow, Ravenslee staggered blindly across the room till stayed by the wall, and sank there, crouched and groaning, his face hidden in his hands.

With a cry hoarse and fierce, M'Ginnis followed and stooped, eager to make an end—stooped to be met by two fierce hands, sure hands and strong that grasped his silken neckerchief as this crouching figure rose suddenly erect. So for a wild, panting moment they grappled, swaying grimly to and fro, while ever the silken neckerchief was twisted tighter and tighter. Choking now, M'Ginnis felt fingers on his naked throat, iron fingers that clutched cruelly, and in this painful grip was whirled, choking, against the wall, and thence borne down and down. And now M'Ginnis, lying helpless across his opponent's knee, stared up into a face pale but grimly joyous, lips that curled back from gnashing white teeth—eyes that glared merciless. So Ravenslee bent M'Ginnis back across his knee and choked him there awhile, then suddenly relaxed his hold and let M'Ginnis sink, choking, to the floor.

'A little—rough, Mr Flowers,' he panted, 'a trifle—rough with you—I fear—but I want you—to know that you—shall not utter—her name—in my presence. Now the key—I prefer door to window. The key, Mr Flowers—ah, here it is!' So saying, Ravenslee stood upright, and, wiping blood and sweat from him with his sleeve, turned to the door. 'One other thing, Mr Flowers; have the goodness to take off your neckerchief next time, or I—may strangle you outright.'

Half-way down the passage Ravenslee turned to see Murder close on his heels; once he smote, and twice, but nothing might stay that bull-like rush, and, locked in a desperate clinch, he was borne back and back, their trampling lost in the universal din about them, as reeling, staggering, they crashed out through wrecked and splintered door, and, still locked together, were swallowed in the night beyond.

(*Continued on page 340.*)

WAR SAVINGS CERTIFICATES.

By JOHN BURNS, W.S.

A FEW months ago we emphasised the attractiveness of these Government securities as investments or savings funds for people of all classes. Within the short interval which has elapsed since that article appeared great changes have taken place. The 6 Per Cent. Exchequer Bonds have been withdrawn. So have the 5½ Per Cent. Treasury Bills; but indeed the latter, being for not less than £1000, did not appeal to people of moderate means. Most important of all, the new War Loan has been issued and successfully floated. We have purposely refrained from saying anything more on the subject of War Savings Certificates till after the closing of the lists of applications for the new loan. That stage being successfully passed, it is fitting to refer again briefly to the distinctive position and value of the War Savings Certificates and their relation to the loan.

The first thing to be made clear is that the War Savings Certificates are still on sale on exactly the old terms. There has been some misunderstanding on this head owing to the withdrawal of War Expenditure Certificates, a confusingly similar name applicable to a totally different thing. The War Savings Certificates still provide a five years' savings fund from the date of purchase, rolling up at £5, 3s. per cent. compound interest, compounded half-yearly, and free of income-tax in the strictest sense of these words. Pay 15s. 6d., and five years later you draw £1. The 15s. 6d. may be paid up by instalments if the purchasing investor is unable to provide it in one sum. That is a valuable concession to many people, but the great majority of our readers will no doubt multiply, rather than divide, that modest sum. The maximum allowable is 500 times 15s. 6d., which is £387, 10s.

The next thing is that there is really no competition between the War Savings Certificates and the new War Loan. Let us look at it briefly from the points of view both of a wealthy man or woman and of a man or woman of limited resources.

To the wealthy investor the immunity from

income-tax and super-tax is a great attraction, with a normal rate of 5s. per £1 on all income, and super-tax, reaching to 3s. 6d. per £1, on incomes over £2500, but charged only on people who have more than £3000 a year, and with little prospect of relief in view of the gigantic war liabilities, which will not cease with hostilities. The certificates and the 4 per cent. issue of the loan both give to the wealthy man this valued immunity from income-tax. The certificates apply this tax relief to both ordinary income-tax and super-tax, but to only £387, 10s. of capital, and for only five years, but coupled with a net yield of over 5 per cent. compound interest. The 4 Per Cent. War Loan applies the relief to ordinary income-tax only and not to super-tax, but without any capital limit, and for twelve years, but with a net yield of only 4 per cent., even if the investor is not liable for super-tax. No doubt the wealthy investor would prefer that the War Savings Certificates were for twelve instead of five years, just as he would prefer that the limit were £3875 rather than £387, 10s. For that matter, so he would prefer that the free yield of the War Loan were 4½ per cent. rather than 4 per cent., and free from, instead of subject to, super-tax. But he must take things as they are offered, and not many offers are so attractive as that of these certificates. The limit of amount is, so far, under the investor's own control by investing up to the £387, 10s., not only for himself, but also for his wife, and for each of his children. The point, however, is as to any suggested collision with the War Loan. To this the answer is that, however much he may have subscribed to that issue, whether from patriotic motives, or because he wished not to miss a good thing, or for both reasons combined, that has no bearing at all on the wisdom of his taking as much as he is allowed to have of the certificates, which have virtues of their own, and to him as a wealthy man more than to others. These virtues are not tarnished by the soundness and worth of the larger issue.

Next as to the investor of more restricted financial power. And for the sake of brevity we pass at once to the case of the man or woman who pays no income-tax. That may be either because the total income does not exceed £130, or because it is equalled or exceeded by the various abatements for scale, children, life insurance, &c. So long as the 6 Per Cent. Exchequer Bonds, especially those of the Post-Office issue, were on sale, it was perhaps a little difficult to maintain the pecuniary advantage of the War Savings Certificates over these bonds for investors of the class whose case is now being considered. When a person is not in any event liable for income-tax, it follows that any advocacy of the value of an investment on the ground that the income from it enjoys immunity from income-tax is apt to bring a rejoinder, the essence of which, politely enveloped, is, 'Thank you for nothing.' The Exchequer Bonds paid a rate of interest higher by fully three-quarters per cent. than the certificates, and though they were for only three years as against the five years of the War Savings Certificates, the investor received his interest half-yearly instead of having to wait till final maturity. But then this last fact, so far from telling against the certificates, goes all the other way. Their essential nature is expressed by the word 'savings' in their title. The objects are the encouragement of thrift and its utilisation for the purposes of the war. This quality is essential to the winning of the war. It is intended to be exhibited, not only in the first putting away of the 15s. 6d. or larger sums, but also in the weekly and yearly self-restraint which allows the investor to let his money lie fructifying day and night for the five years continuously. No other investment does this. Nor can it in any other way be done on anything like the same terms. So far as any possible competition from the 6 Per Cent. Exchequer Bonds is concerned, the above is wasteful and ridiculous excess of argument, for these bonds have ceased to be issued. But it is useful to restate the above considerations, for they inculcate the head and front of the case for these certificates.

If the small investor is so circumstanced that the actual paying of his or her way requires a yearly return in cash from all the family resources, then no doubt War Savings Certificates must be regretfully renounced. The War Loan is then, as between the two, a necessity of the situation. That, however, comes not from a competition of their financial values, but from the personal position of the investor. Such cases do exist; but thrift tells for much, and under its influence there will not be so many cases as one might imagine where the peculiar benefits of the War Savings Certificates cannot be enjoyed to some extent.

Both issues—the loan and the certificates—are great. It is their crowning recommendation that, so far from its being a case of how happy the investor could be with either were t'other cheap and charming investment away, he will, on the contrary, be happy with either, but happier still with both. He can divide his available resources and score on both flanks. The War Loan gives him a high rate of interest and a steady income. The War Savings Certificates give him a glorified savings-bank, exemplifying the value of thrift, the prudence of eliminating the remotest possibility of shrinkage of capital at any date, a rate of interest nearly double that of the ordinary savings-bank, and the principle of accumulation by compound interest after the manner of the savings-bank book, but going two better by the higher rate and by accumulating not once but twice a year. To all this is

added a strong inducement not to upset the scheme by any idea of withdrawal during the five years, while yet the way of escape is provided for emergencies of necessity. So that it really comes to this, that it is wisdom to have subscribed for or to buy War Loan, but positive folly to neglect the War Savings Certificates.

A FAMOUS SEA-FIGHT IN THE LAST GREAT WAR.

By Commander LORD TEIGNMOUTH, R.N.

THE following very graphic description of a naval action which took place over a hundred years ago off the Gulf of Salonica—where the warships of the Allies are now very much in evidence—will serve to show the different conditions under which naval warfare was conducted in the last great naval war, as compared with those confronting our seamen at the present time.

By way of preface, it may be well to explain that, in consequence of an entangling treaty with Russia, Great Britain, finding herself, in 1806, at war with the Porte, Lord Collingwood, who commanded in the Mediterranean, despatched the thirty-eight-gun frigate *Seahorse* to protect British interests in the Ægean. This vessel was commanded by Captain John Stewart, a member of that gallant band of young and enterprising frigate-captains of whom Collingwood wrote: 'It is really astonishing: these youths think that nothing is beyond their enterprise, and they seldom fail of success;' adding significantly: 'This activity and zeal in these gallant young men keep up my spirits, and make me equal to bear the disagreeables that happen from the contentions of some other ships.' And in right loyal spirit did Captain Stewart justify the trust of his chief on the present occasion. For more than a year he cruised amongst the islands of the Archipelago, driving off the Ionian privateers, whose crews had been living at free quarters and committing the most shameful depredations—like the modern Huns—on the unfortunate inhabitants, and exercising a sort of protectorate over the entire Archipelago. 'Every one of the islands,' he wrote to a friend, 'groaned under their lash, and until they (the privateers) were driven away it was impossible to re-establish or protect private property.'

Another, and especially important, object of Captain Stewart's mission was to protect the islanders from the ravages of their Turkish Agas—who fled at his approach; and, further, to encourage the extensive trade carried on with Malta, which island, in fact, derived its chief supplies from the Archipelago.

Captain Stewart was but thirty-four years of age when entrusted by Lord Collingwood with this highly important mission. The able manner in which he fulfilled it drew from Sir Robert Adair, the British Plenipotentiary sent out to arrange terms of peace with the Porte, the following eulogium: 'The conduct of Captain Stewart has been most judicious. Steadily adhering to the conciliatory system with which he had set out, his disinterestedness was never shaken, even by the temptation of advantages fairly within his reach; but he regarded his instructions to capture and distress the Ottoman trade rather as a means of bringing a mistaken enemy to his senses than as a source of emolument to himself. He strictly enforced two conditions on the Turks as the price of his forbearance—the one, that they should collect no revenue in the Greek islands; the other, that no Turkish ship of war should appear in those seas. It is not, therefore, to be wondered at that the Greeks regarded him rather as their protector than their enemy, and that, as such, they should venerate him to this hour.'

It must be understood that the jurisdiction of the Porte then extended not only over the whole of Greece, but throughout the islands of the Archipelago and the Ægean Sea, with the exception of the Cyclades, which, though paying tribute to the Porte, had never been subjected to a Turkish occupation. The civil administration throughout the islands was entrusted by the Porte to the Primates, or chief magistrates—elected by the Greek inhabitants from amongst themselves—who collected the revenue and carried on the government.

The circumstances which led up to actual hostilities between Great Britain and the Porte at this juncture are thus stated by Sir Robert Adair: 'With every disposition to give a marked character of mildness to the hostilities which the two nations, so long friendly, were now compelled to exercise against each other, he (Captain Stewart) found it impossible on one occasion to avoid inflicting upon the Turkish marine one of those severe lessons which every naval state in hostility with us has been doomed to experience in its turn. It happened that, under a pretence of destroying pirates, the captain-pasha thought fit to send a squadron of frigates into the Ægean Sea, in contravention of the compact already mentioned. Information of this having reached Captain Stewart, he remonstrated with the Turkish commodore upon his proceedings; and on being made acquainted by that officer with the purpose for which he had been sent out, Captain Stewart readily offered to take that service upon himself, provided the Turkish squadron would return to port; but

he told him, at the same time, that if he remained there, he must attack him. The Turk, scarcely thinking his adversary in earnest, and relying upon his immense superiority—his own ship mounting fifty-two guns and his consort thirty-four guns, while the *Seahorse* had but thirty-eight in all—preferred the risk of an engagement.'

Captain Stewart, in challenging so vastly superior an enemy to battle, incurred a very grave responsibility; and in a letter written subsequently to a friend, he thus explained his position: 'I felt my situation critical. I was alone, and could not get assistance for some time. If I were driven out of the Archipelago, the whole of the islands would be instantly overrun by the Turks, and our influence and character suffer in consequence. As I knew that whatever the Turkish force was, it would certainly be much superior to my own, I devised in my head most of the cases likely to arise, and determined, if the disparity of force was not excessive, to attack them, and, if they were under sail, to do so at night.'

Captain Stewart's conception of an enemy's force which 'was not excessive' may be gathered from what he confided to his friend: 'I was walking the deck with much anxiety, when, at half-past six (P.M.), a large frigate, with fifteen ports on a side, was observed coming through the passage between Schohilo (Skopelos) and Kilidroni. Then followed a smaller ship, with thirteen ports a side, and then a galley. This seemed within my compass. I knew my crew to be brave, active men, well practised at manœuvring. They made sail with indescribable alacrity; we stood towards the Turks, and purposely kept from engaging them until dark, when I judged we should have a greater advantage in manœuvring.'*

In the sequel, Captain Stewart's decision to fight justified the high opinion of his judgment entertained by Lord Collingwood, who had thus written of him: 'No officer is higher in my estimation than Captain Stewart, because I have experienced his ability and judgment wherever he was employed, and know that he is suited to the most important services.'

Captain Stewart's official report of the encounter is brief and to the point, after the manner of those days. A detailed and very graphic narrative of the affair, compiled by an officer of the *Seahorse*, is, however, fortunately extant, in the form of a stained and faded 'cutting' from a north of England newspaper, preserved by a member of Captain Stewart's family, residing at that time in Abbey Yard, Carlisle. It is reproduced here verbatim.

THE 'OLD HORSES' IN THEIR ELEMENT.

On the 1st of July 1808, H.M.S. *Seahorse*, thirty-eight guns, Captain John Stewart, was lying in the beautiful harbour of St George, in the island of Syra, whither we had gone to complete the frigate's water, when a small Lemnian 'mistique,' of two guns and thirty-five as savage-looking rascals as ever formed part of a pirate's crew, ran under our stern, and asked permission to communicate some important intelligence; a boat from the frigate soon brought the two chiefs of this small but fierce and lawless band. After a long conference in the cabin, our excellent captain ordered the hands to be turned up, and in his own brief and energetic manner informed the officers and crew that 'the pirate had seen a Turkish squadron of two fifty-gun frigates, one of thirty, and a galley the day before, off the north end of Lemnos; that the disparity of force, compared with that of our single ship, was great, but that, well trained as the "old horses" were, he had no doubt of our success, even should we encounter them altogether,' and he concluded by asking 'whether we should try such fearful odds.' The reply was three rattling cheers, and up anchor; the commander and three of the pirates remaining, at their own request, on board.

The following days were passed in seeking for the 'circumcised dogs,' preparing the ship for the anticipated struggle, and exercising the crew in the various duties a long action would call on them to perform. In the evening of the third day we spoke a fine Hydriot polacre of twenty guns, who had been chased the previous day by a portion of the Turkish squadron (one of the large ships had been sent to Lemnos); she offered to stay by and take part with us, and her offer was accepted.

On the 5th, at 5.30 P.M., we saw, to our great joy, the commodore's ship coming round the east end of Scopulo, followed by the thirty-gun ship and a galley; they were directly to windward. On perceiving us they shortened to easy sail, and bore down in open order. When within about three miles, the wind shifted in a heavy squall, giving us the 'weather-gage,' which was taken immediate advantage of by Captain Stewart, who steered for the large frigate. At 9.10 P.M. we ranged up under his lee quarter and gave him our double-shotted broadside, at the distance of about ten fathoms. Its weight (for every shot told) evidently bothered our opponent, and he returned a hasty, ill-directed fire, the greater part of his shot passing harmlessly ahead. The row had now fairly begun, and we lay at the good Nelsonian distance of about half pistol-shot, unrigging him from the quarter-deck and forecastle, and giving ample occupation to Azrael in transporting the souls of

*The enemy's force was as follows: *Badere Zaffer*, Captain Scanderli Kichuc Alli, a very fine frigate of the largest dimensions; she carried fifty-two long brass guns, twenty-four-pounders, on the main-deck, except two, which were forty-two-pounders, and twelve-pounders on the quarter-deck and forecastle. The other ship was the *Aho Fezan*, Captain Daragardi Alli, carrying twenty-four guns, thirteen-pounders, and two mortars.

many of the followers of Mahomet to the foot of Al Sirat's Arch,* liberated from their fleshly prisons by the hulling activity of our main-deckers.

Prosperously, however, as we thought ourselves to be proceeding (or, as Brother Jonathan would say, 'progressing'), our allies thought otherwise; the boasting Hydriot started off under all the canvas he could muster, and the pirates, who had chosen their station in the launch on the booms, and had at first been tolerably active with their long 'tophaikes,' became very fidgety, and prepared for bolting. By this time (10.25) we had relieved our opponent from all further occasion to call his sail-trimmers, the larboard yard-arm of his foresail being the only rag left to interest him, and he very properly bore up to keep steerage-way. The small frigate having for some time galled us considerably with her raking shot, we took this opportunity of throwing all aback, closed with her, and three broadsides sufficed to silence her guns; the explosion of some powder under the forecastle set her on fire forward, and we made sail to get out of her way and rejoin our first opponent. Before we had succeeded in the latter object, the captain of the mizzen-top hailed the quarter-deck, and exclaimed, 'The little frigate has given three rolls and gone to h—l, sir!' A marine on the larboard quarter also reported having seen her go down, and this was the last time mortal eyes beheld the *Apo Fezan* or her crew of about three hundred men.

The dismantled state of the enemy enabled us now to work round him like a 'cooper round a cask,' until 11.20 P.M., when, as we were in stays ahead (having just raked him with one broadside, and ready to give him the other), he shot away our mizzen-mast; the ship missed stays, and the Turk, collecting between three and four hundred men in his fore-rigging, bowsprit, and forecastle, boldly attempted to board. Our two divisions of boarders were placed in the main-chains, about the gangway, and in front of the marines on the quarter-deck; behind the marines' bayonets were the sail-trimmers, forming thus a phalanx seven deep of pikes, tomahawks, bayonets, and cutlasses; our foremost quarter-deck thirty-two-pounders had each eight hundred musket-balls, and the whole broadside was ready (and reserved) with round and grape. The infidels came on shouting and uttering dreadful yells, to which perhaps the midnight hour added a few horrors; at all events, the combination proved quite too much for our Lemnian friends, who crawled into the deepest recess of the cable-tiers, and remained there; indeed, some few of the best of the 'old horses' were struck with a momentary panic, which, but for the coolness of the officers, would probably have spread—for the mutual cessation of fire and a profound silence, broken only by the occasional yell of the barbarians, had in it something very appalling. But the men were reminded that they had pledged themselves either to conquer or go down with the bunting flying, that the Turks gave no quarter, and that the issue of the battle depended on their repulsing this attack, when we might in turn become assailants, and speedily terminate the fight. At length, just before his bowsprit-end reached the after-main swifter, he got all that we could give him—grape, canister, musket-balls, rockets, and all, with three good British cheers at the tail of them. At such a distance, and a flanking fire directed against, literally, a bee-like cluster of men, the carnage is more easily conceived than described; suffice it to say that no son of Mahomet polluted our quarter-deck with his footstep, though a few did attempt it, and were piked and thrown overboard. Some turns of a hawser were got over her bowsprit-end and round her capstan; but they parted. Our mizzen-mast being gone, we had nothing aft to lash him to; and amidst the groans and shrieks of the wounded and dying, she dropped astern.

From this time to the end of the action, I cannot do better than make an extract from the ship's log: '11.45 P.M. recommenced action; enemy making off before the wind. Midnight, moderate and fine, alongside the Turk. At 1.15 A.M. the enemy's fire having totally ceased, though we could get no answer from him, and she being a complete wreck, hauled off; cleared the decks, spliced the mainbrace, and went to quarters again, keeping the Turk awake by a shot now and then. At daylight, the enemy hoisted her colours; we bore up, and passing under the stern, gave her a raking broadside, which she returned with her stern guns, and struck her colours at 5.30 A.M. Sent the first-lieutenant, who took possession of the *Badere Zaffer*, mounting fifty-two long brass guns, forty-two-pounders, twenty-four-pounders, and twelve-pounders, commanded by Scanderli Kichuc Alli; had on board at the commencement of the action nearly seven hundred men, of whom two hundred and four were killed and one hundred and seventy-six wounded. *Seahorse* went into action with two hundred and eighty-six men, of whom five were killed and ten wounded.'

The scene of slaughter on board was dreadful; her only surgeon (a French renegade) was in a state of helpless intoxication, and the only attempts he had made in his profession were stopping up some of the holes made in the wretched Turks by plugs of lint. More than seventy were lying dead on her gun-decks, and the cable-tiers and storerooms were full of the desperately wounded and dying; her first *chiaous* (lieutenant) had seven musket and grape shots in him. Four days after, we landed these *mal-*

heureux on the island of Miconi or Mykoni, the greater part of their wounds undressed, and the thermometer at eighty degrees.

The little Arab who commanded, on being brought on board and asked for his sword, had no idea of the necessity of surrendering it; indeed he had, immediately after his colours were struck, dressed himself entirely in white (meant, perhaps, as a kind of flag of truce), and said he had lost his sword. Having obtained permission to return to his ship for his effects, and being, in the confusion of the moment, unguarded, he got one of the fighting-lanterns (which was still alight), and, accompanied by two of his lieutenants, had reached the magazine passage, then not secured, and over ankle-deep in gunpowder, when, just as he was in the act of taking the candle from the lantern, the schoolmaster, who had come on board the prize from curiosity, and happened, providentially, to be on the lower-deck, immediately, on seeing the danger, knocked down the Arab, doused his glim, and saved us from the otherwise inevitable destruction of one, if not of both, frigates. He was, of course, removed forthwith to the British frigate. As he spoke Italian fluently, Captain Stewart rebuked him severely in that language for his breach of the laws of honour and of war, to which he listened with unmoved patience. When the speaker ceased, the little tiger bent forward his head, and pointing to his neck, said, 'Take it; it is yours. Don't hesitate; for had the fortune of war been mine, I would have had your head off two hours ago. I only did my duty in attempting to blow my ship up, and I curse my own stupidity for not succeeding.' His officers declared that during the action he had put seventeen of his own men to death with his own hand in attempting to keep them at their quarters. His activity and contempt of danger were conspicuous to us even in a night-action; and many a deliberate aim was taken at him. But notwithstanding the carnage all round, he was unharmed, and seemed to bear a charmed life. They were as brave as the noble animal their figure-head represented, which was carefully covered over with canvas before they struck, that, as they said, 'the king of beasts and birds' (the eagle which supported their poop-lantern) 'should not witness the triumph of infidels over true-believers.'

The prize, with great difficulty, was brought into Myconi, or Mykoni, and after a refit, to Malta, eventually reaching England, where she was sold, as unsuitable for the British service. Not even her figure-head was retained as a memorial of as gallant a fight as adorns Britain's annals.

The sole remaining link with the memorable events above described are, first, a gold medal, presented to Captain Stewart 'as a mark of his Majesty's gracious approbation of the skill and gallantry that had been displayed on the 5th of July 1808;' second, the jade handle of the sword, so grudgingly surrendered by the 'little tiger' who commanded the prize, and whose life—which the Turks would have deprived him of for having lost his ship to an inferior enemy—was saved through Captain Stewart's intercession. Besides these, there is a very handsome gold medal, presented to Captain Stewart by the captain-pasha in acknowledgment, it is understood, of his humane treatment of the prisoners,* all of whom, as soon as possible after the action, were given their liberty, and sent to Smyrna or Constantinople, in ships provisioned from the *Seahorse*. Of a subsequent visit to Constantinople, Captain Stewart wrote to a friend: 'I was honoured with marked civility by the Turks, which, as I had almost the whole conduct of the war against them, I attribute to my having personally well treated all their countrymen whom I had taken.'

These three mementoes are now amongst the most treasured possessions of the present writer. They serve as a reminder of the high sense of duty and readiness to accept responsibility which distinguished our young captains during the last great naval war, as well as of the spirit of daring by which they built up the maritime supremacy of Great Britain one hundred years ago. And it was the same lofty sense of duty and the same spirit of daring that recently induced Sir Christopher Craddock to accept battle off Coronel, and Sir David Beatty to hold the German fleet off Jutland bank.

MAY.

'Little, little breezes
Dancing through the air,
Have you seen my mistress
Straying anywhere?'

'Who may be your mistress?
Many a maid we've met
Since we came a-dancing
When the bright sun set.'

'Who may be my mistress?
She has eyes of blue,
And her feet so tender
Gleam with fairy dew.

'She has hair like sunshine,
Fingers like a rose
Scatt'ring showers of sweetness
Everywhere she goes.'

'Ah, then we have met her
Not so far away;
Look! Why, there she's coming!
Lovely scented May!'

EDITH L. ELIAS.

* Family records are silent on the subject. As Captain Stewart rendered great services to Sir Robert Adair during the subsequent peace negotiations with the Porte, and was invited to a war council of the Turkish Ministers, to advise with reference to a proposed attack on Sebastopolis, the medal may have been awarded for his services to the Porte.

THE HEART OF THINGS.

By Henry Leach.

London, *Yesterday.*

AN arresting thought is expressed in the introductory chapter that Mr James M. Beck, once Assistant Attorney-General of the United States, has written for the new international edition of his book, *War and Humanity*. Mr Beck is one of the thousands of strong, honest Americans who distinguish good from bad and speak their minds with full force, as, without any fetters of high and responsible office about them, they may do with impunity. 'For nearly two years past,' says this eminent American jurist, 'the German Government has refused to disavow the *Lusitania* crime. By its note of 31st January 1917, it has, indeed, avowed it anew. The United States should, at the council of nations, demand that the Kaiser, who caused the *Lusitania* to be sunk, shall for that crime forfeit his crown.' Here is the sound of a friendly voice, the message of a mind that believes that right shall utterly prevail, and that the wicked shall be punished according to their deserts. That is indeed a fine idealism. To balance well the punishment with the fault is a tremendous object; rarely is it achieved. It is difficult to appraise the evil, and justice sees not when the scales are held. It is also the erratic disposition of man to bear down with vengeance upon the offender in a trifling thing, and to shrink from the responsibility of inflicting any super-punishment upon the perpetrator of the most revolting crimes, the promoter of the most appalling disasters to humanity. A poor man, honest in his way, hungry, starving, tortured by circumstances in the old days of peace and plenty, falls from grace and yields to the temptation of stealing a loaf of plain bread, which he eagerly devours. Upon him the majesty of the law presses down with consciousness of right and duty and the exercise of wisdom, and, with a homily addressed to him, the miserable wretch who in his poor fashion applied unwillingly the warrior's maxim that necessity knows no law, goes to prison for a month with hard labour. Yet, despite the hopefulness of the American lawyer, I doubt if the Kaiser will be given a month with hard labour or any such punishment as we should inflict upon a man who stole bread when he was starving. A part of the explanation is, of course, that there are crimes too great for punishment. Simple man stands back appalled at the insensibility of a creature in human form who can pile horror and destruction upon the whole of mankind, remorselessly, enthusiastically, appealing to his God and praising Him; and this simple man concludes that he himself is unfitted to judge and attempt to punish such an abnormality, that no earthly punishment can be adequate, and that the sinner who has surely exceeded all the monstrosities of history must be left to the last tribunal, while as to the present world he may go. There is the feeling also that, with it all, this creature, with his strange cunning, his amazing mendacity, his cant, his callousness, and his utter oblivion to the value of human life and the hurt of human suffering, is not merely abnormal, but is literally, most positively, mad; in which event, according to human way, his case at most is one for detention, the chief wonder being that he should be at large, that men should be such fools as to let him lead.

* * *

If he has the slightest sensibility, the Kaiser has already one punishment in his lifetime that must hurt terribly and incessantly. There has always been a certain strength about the uttermost villains of history, something indefinable which, in spite of the student, commanded a special respect. For all the slaughter that he ordained, Napoleon was a man who had still in him some love for his own kind, some respect for God's creation. We cannot imagine Napoleon ordering the sinking of the *Lusitania*. Even if he arranged the assassination of the Duc d'Enghien, we cannot conceive such a man giving instructions for the shooting of Nurse Cavell. He was too great for that; his spirit was too fine. He had magnificent dreams, which he realised if only for a while; and he came to success through genius and not through mere massacre. But the mummer of Berlin, this very cheap showman who had his white horse ready that he might ride into Nancy like a great conqueror of old, will be little thought of in days to come, while Bonaparte will always be remembered and discussed. Mark how small is the figure he makes even to-day. Hindenburg has overshadowed the degenerate Hohenzollern; his fancy speeches and proclamations no longer create any effect. They

 [*All Rights Reserved.*]

are put in out-of-the-way corners of even German newspapers. People care little now for the Kaiser one way or the other. They know him. He is little more than a melancholy failure, a poor, mad creature who had the delusion that he could make guns and soldiers enough to murder the world and take possession of it, and that then for all time he would be looked upon as the mighty conqueror, the lord of war, and would oust the famous Corsican from the chief place in the history of modern times. Beyond all things that was the Kaiser's ambition, that he should have the thrilling pages in history for himself, and it mattered little if he were condemned and hated, provided his figure were there in full size.

* * *

It will not be. We see now, from his dwindling presence, how he will go out. He is of no account. It is true that he has done appalling evil, but just in the way of a mad dog, and he should not have been allowed. The assassin who takes the life of the chief of a state does not thereby render himself famous for ever. So it is with the Kaiser, for he will be forgotten. There will be remembered his name and one or two small things; but of his character and his accomplishments it will merely be reflected in passing that he was a degenerate and was mad, and so no more. He is to be pitied. Above all, he is to be treated with contempt, and that is what history will do with him, for he enters the grand pageant of events as a miserable hare-brained impostor, thoroughly out of harmony with all the colour and boldness of character that stamps the great. He jars in the community of history. He is so small. What the others conceived to do with grand schemes, by the exercise of subtle ability and powers, he attempted by mere destruction on the most colossal scale. It was such a little way of being emperor. There is nothing else by which to remember him. Therefore by people of the present and by posterity he will simply be regarded with contempt, with the most utter contempt that humanity ever bestowed on any being. His horrors will inspire no wonder, no marvelling. We shall not step back from him as from Attila or Nero. History will turn its back upon this intruder as a company of gentlemen turn their backs upon a scoundrel who has unwittingly gained admission among them. He knows it now, that even his monstrosity has failed to impress, that even in German history he becomes smaller than an ant in comparison with the blood-and-iron Bismarck, that the soldiers whom before the war he sent to pass their time in the shadows of retirement because in some point of etiquette they had offended him, are now so mighty in Germany that he is as nothing to them, and that he dare speak no word of remonstrance to one of them—Hindenburg. So has the Kaiser fallen; he lives his failure. Even if Germany won the war he would be just the same failure, for he is discovered. In the contempt that is cast upon him is his punishment. It is difficult to imagine what else will be done to him. It matters little, except as a warning to other mad rulers. Mr Beck thinks he should be deprived of his crown. Is that a punishment? Such is our servility to old traditions, to the conservative view of kings, to the old doctrine that they are in touch with the Deity, that we may even now be capable of thinking that it is a tremendous thing to take away the crown from this miserable Hohenzollern, that this, indeed, as Mr Beck suggests, would be adequate punishment for the sinking of the *Lusitania*, for the murder of Nurse Cavell, and for the countless crimes this maniac has perpetrated. We are invited to believe that if humanity can screw up its courage to the extent of depriving him of his crown, humanity will have done well, bravely, nobly. The millions of the salt of the earth who have given their lives for its purification will have been avenged by this! The glorious dead are to have honour done to their memory by this mere dethronement! It is absurd. If left to itself the democracy could doubtless do something better, even though the futility of attempting to make the punishment fit the crime is clearly perceived. The democracy distrusts this gentle consideration of the felon ruler. In this fearful war truth is being poured upon a world of shams like molten metal from the ladles of heaven, and this protection of the criminal king is an anachronism that makes the people uneasy and uncertain of the future. They know he will be protected. There are some among us who have shouted out that the criminal Hohenzollerns should be strung up on the gallows; but the common man knows of islands with palaces upon them, with courts and retinues of servants, with every conceivable form of luxury and unlimited money for the purchase of every desire, and the common man is not always easy in this thought. He must for his peace of mind fall back upon reflection of the horrors of punishment by contempt, the contempt of the whole world such as has never been bestowed on a living thing before.

* * *

Posterity, then, we may safely assume, will never discuss the Kaiser as it will discuss Napoleon, and discussion is what William chiefly wished of posterity. He will be a nine-days' wonder, and nothing more. So, if there is to be any character-studying and telling of typical stories, it must be done quickly, for already their popularity wanes. We tire of William. He was better once. As a boy and a young man he seemed to have some fair spirit in him; but in later years continual thinking of his grandfather, of Germania, and of the clicking of soldiers' heels, and his endeavour to associate such things and himself as well with some new scheme of

German religion, clearly drove him mad. All who have Kaiser tales to tell seem in a hurry to tell them now, because they fear that their time is short, and that these stories will not mellow like wine. It is curious to find, among the many and varied volumes on the Kaiser that I have read of late, how very rarely indeed does he make a good imperial figure, even when the narrator is endeavouring to put him forward with some impressiveness. On the other hand, there are so many stories of a different kind. Mr Edward Legge, who often states modern historical circumstances with a good authority, repeats to us now in a new book a story one seems to remember faintly from many years ago, that King Edward once knocked the Kaiser down! Let us hope he did. King Edward, we know, was the best of gentlemen; we know that he and the Kaiser hated each other, and one would like to think that he showed his contempt for his nephew in some more British and practical manner than that by which kings generally exhibit such feelings. It is said that during one of William's visits to Windsor the Kaiser and King Edward had an altercation resulting from something said by the former. So exasperated was the King by his nephew's grossly insulting words that, losing all control over himself, he sprang to his feet and knocked the Kaiser down. There is nothing inherently improbable, says Mr Legge, in this story. It is unlikely that any one would have taken the trouble to invent it, or could have imagined it at a time when the Kaiser was so frequently visiting England (often uninvited); when, moreover, he was being obsequiously flattered by public and Press. 'It was openly talked about in London,' says this author, 'and the marvel is that, to the best of my knowledge, it never got into print; neither did the numerous instances of the Emperor's insolence to King Edward.' Among many other stories and statements that Mr Legge sets down about the Kaiser, he quotes in facsimile a letter that William wrote to an English friend in 1889 soon after he had ascended the throne, in which he said: 'What a long time has passed since we were able to spend our afternoons together on the Havel or on the veranda of the little villa! I often wish those old times back again. What a succession of joys and sorrows have passed over our family! It is indeed a fact hardly ever heard of to lose one's grandfather and father within the space of a few months. What men! And here am I suddenly placed by Providence on the mightiest throne of the world to be the guardian of the European peace. It is indeed enough to make any one pause and breathe; and yet what a splendid task for me to work night and day to administer to the wants and wishes of my people, and to think that the magnificent Army obeys my commands!' Something has happened since then. All have not found it possible to treat this man—so deeply endowed with a sense of his own supreme mightiness, and yet without the loftiness and real dignity to carry it well—with the precise consideration that seemed to be demanded from humility. There was Cecil Rhodes, who knew what empires were. He went to see the Kaiser once, and was treated to the usual wearying enumeration of the wonders of the German army, navy, and other forces. After a time Cecil Rhodes looked at the clock, and, holding out his hand, said simply, 'Well, good-bye! I've got to go now, as I have some people coming to dinner'! It appears that the Kaiser's motto is, '*Rast ich, so rost ich*,' meaning, 'If I rest, I rust.' Those who have entered his study have noticed a large placard enjoining upon all and sundry the observance of these recommendations: 'Be strong in grief. Do not wish for that which you cannot obtain, or for that which is not worth the trouble of getting. Be satisfied with what you have got. Seek the best of everything. Take the pleasures of Nature and Humanity as they are. In your hours of bitterness repose your confidence in some good person. Devote yourself with all your heart and strength to what you do for others, even if you get no thanks. He who is distrustful deceives others and injures himself. It is our duty to consider every man good until he has proved himself to be the contrary. Those who observe these rules and practise them will be happier, freer, and prouder, and their lives will be always pleasant.'

* * *

Shortly before the war broke out Prince Leopold of Bavaria paid a private visit to the Kaiser. The Prince had a great appetite, drank red wine extensively, smoked strong cigars incessantly, and sat up half the night playing poker with officers of the Prussian Guard, or with any members of the Imperial household who were willing to gamble heavily with him, the result being that he lost about five hundred pounds. He was not the kind of guest the Kaiser liked, and, also, his respect for the All-Highest was not of that fineness that would recommend him. In the exuberance of good spirits, induced by deep draughts of Rhenish wine, he would joke with the Emperor in a manner that placed his Majesty in a rather ludicrous position before his entourage, and there was nothing that roused the Kaiser's anger so much as the fact that he was being laughed at. One night at dinner the Prince suddenly burst out laughing without any apparent reason. The Kaiser looked at him severely; whereupon the Prince at once apologised, saying, 'I have seen the point of that jest your Majesty told me this morning, and I could not help laughing.' The Kaiser was furious, and not the less so because the company could not restrain its laughter, knowing so well how deeply hidden

the points of the Kaiser's jests sometimes are. On the last night of his visit the Prince proposed the health of his host. He did not make a speech; he simply stood up and said, 'I have the honour to propose the health of your Majesty, and may God confound all your enemies.' When he sat down he said to an elderly officer sitting next to him, 'For his Majesty will never be able to do so himself.' He had but the poorest opinion of the Supreme War Lord's qualities as general. The above is a story that I have seen in a very interesting and in some ways remarkable book written by Miss Edith Keen, who had seven years' experience at the Prussian court in the capacity of companion to the Princess Margarethe of Prussia, and was there up to the time of the opening of the war and for a few weeks afterwards, having some difficulty in getting back to England. The book, entitled *Seven Years at the Prussian Court*, is written with great intelligence and reasonableness, and apart from its mere anecdotal side, in which it is strong, it gives us engrossing information concerning certain aspects of the German spying system, and of things that happened in Germany just before the war began and immediately afterwards. Among the Kaiser tales, it is stated that the All-Highest frequently went to play tennis at the Crown Prince's palace, and when a lady at the Imperial court was asked if it would be contrary to etiquette to win a set from the Emperor, the answer was, 'No; but it would be contrary to reason; only a mad person would do such a thing.' Miss Keen was in the service of the Princess Leopold of Prussia, the mother of the Princess Margarethe, and sister of the German Empress, and it appears that the first-named princess was in the habit of paying frequent visits to England incognito, when the companion sometimes accompanied her. Miss Keen has little doubt now that the Princess Leopold was engaged in spying operations. She used to stay at a first-class hotel when in London; but when she went to seaside places like Littlehampton and Exmouth she made curious arrangements with a view to preserving secrecy about herself, staying in third-rate lodgings with some attendant, while her suite were put up at the best hotel in the place. Once her identity was discovered through an accident, and, in a fury, she declared that the consequences might be serious. The Princess and her entourage made a curious spectacle when they were all gathered together on the sands at Littlehampton. She would be attired in one of her oldest gowns; with her would be the Fraülein von Stromberg and the Baroness Knesebeck, in their smartest dresses; and about them would be grouped a crowd of men-servants and maids. 'On one occasion,' says the narrator, 'I heard some people discussing us when we were all out on the sands at Littlehampton. The conclusion they arrived at was that we were a theatrical party. I wonder what they would have thought if they had known that the leading lady was a sister of the German Empress, and nearly related by marriage to King George.' Yes, one may wonder. All this was happening under our very noses. The Princess was a good cyclist, and as by court rules she was not allowed to cycle in Germany except in the private royal parks, she did as much of it as possible in England, and 'would do fifty or sixty miles a day without being in the least fatigued at the end of it.' And no doubt it was very useful to her. She had a strong dislike to sleeping on strange beds, and one of her curious habits was to carry her own about with her, bedclothes and all, wherever she went. This was a very interesting woman, but no doubt it will be some time before we see her on the sands of Littlehampton again.

THE DEFINITE OBJECT.

CHAPTER XXI.—HOW M'GINNIS THREATENED, AND—WENT.

THUS the Spider, crouching in the dark beneath a certain broken window, with Spike beside him, was presently aware of the sickening sounds of furious struggling close at hand, and of a hoarse, panting voice that cursed in fierce triumph—a voice that ended all at once in a ghastly strangling choke; and, recognising this voice, the Spider hunched his great shoulders and bore Spike to a certain remote spot where stood a solitary lamp-post. Here he waited, calm-eyed and chewing placidly, one arm about the fretful Spike.

And presently Ravenslee joined them; the shabby hat was gone, and there was a smear of blood upon his cheek; also, he laboured in his breathing, but his eyes were joyous.

'Bo', what about Bud?'

'Oh, he 's lying around somewhere.'

'Hully chee! d' ye mean'——

'He tried gouging first, but I expected that; then he tried to throttle me, but I throttled a little harder. He 's an ugly customer, as you said; but'—Ravenslee laughed and glanced at his bloody knuckles—'I don't think he 'll be keen to rough it with me again just yet.'

'Bo', I guess you can be pretty ugly too. Say, when you laugh that way I feel—kind o' sorry for Bud.'

'Why, what 's wrong with Spike?'

'Dunno. I guess they 've been slingin' dope into him. And he 's copped it pretty bad from Young Alf, too. Look at that eye!'

'Spike!' said Ravenslee, shaking him—'Spike,

what is it? Buck up, old fellow!' But Spike only stared dazedly and moaned.

'It's dope all right,' nodded the Spider, 'or else Bud's mixed th' drinks on him.'

'Damn him!' said Ravenslee softly, 'I wish I'd throttled a little harder.'

'I guess you give Bud all he needs for the present,' said Spider grimly; 'anyway, I'm goin' t' see. The kid ain't hurt none. Get him home t' bed an' he'll be all right. S'long, Geoff.'

'Good-night, Spider, and—thank you. Oh, by the way, who's Heine?'

'Heine's a Deutscher, Geoff. Heine's about as clean as dirt an' as straight as a corkscrew. Why, he'd shoot his own mother if ye paid him, like he did—— But say, what d' you know about him, anyway?'

'Well, for one thing, I know he's been arrested in Jersey City.'

'Heine! Pinched? Say, bo', whatcher givin' us—who says so?'

'Bud, and'——

But the Spider, waiting for no more, had turned about and was running back across the open lot.

'Mr Geoffrey, prayer is a wonderful prop to a anxious 'eart!' said Mrs Trapes, leaning over the banisters to greet him as he ascended. 'Mr Geoffrey, my 'ands has been lifted in prayer for ye this night as so did me behoove, an' 'ere you are safe back with—that b'y. A prayer prayed proper, an' prayed by them as ain't plaguin' the Lord constant about their souls an' other diseases, is always dooly regarded. Yes, sir, a occasional petition is always heard an' worketh wonders, as the—— My land, Mr Geoffrey, look at yer face!'

'I know, Mrs Trapes. Has she come in yet?'

'Not yet. An' glad I am. You're all bleedin'. Stoop yer 'ead a bit—there!' and very tenderly she stanched the cut below the curly hair with an apron clean and spotless as usual. 'An' the b'y—lord, what's come to 'im?'

'A black eye—two, I'm afraid. Anyhow, I'll look after him and get him into bed before she comes. Can you keep her away till I've done so?'

'I'll try. Poor lad!' she sighed, touching Spike's drooping head with bony fingers; 'if she wasn't 'is sister I'd be sorry for 'im!'

So Ravenslee took Spike in hand, bathing his bruised and battered features, and setting ice-water to his puffy lips, which the lad gulped thirstily. Thereafter he revived quickly, but grew only the more morose and sulky.

'All right,' he muttered, 'I'll go t' bed; only—leave me—see?'

'Can't I help you?'

'No; you lemme alone. Oh, I know—you think I'm soused, but I ain't; I—I'm not drunk, I tell ye. I wish I was. I ain't no kid, so lemme alone; an' I ain't drunk. What if me legs is shaky? So 'u'd yours be if you'd got—what I got. It was dat last swing t' de jaw as done me; but I ain't drunk, 'n' I ain't a kid t' be undressed,—so chase ye'self an' lemme alone!'

'All right, Spike—only, get to bed, like a good chap, before your sister comes.'

'You leave my sister alone; she ain't that kind; an' she ain't for you, anyway.'

'That will do, Arthur. Get into bed! I'll give you five minutes!' So saying, Ravenslee turned away; but as he closed the door his quick ear detected the clink of glass, and, turning, he saw Spike draw a small flask from his pocket.

'Give me that stuff, old fellow.'

'Oh, you can't con me! I ain't a kid, so you lemme alone!' and Spike raised the flask to his lips; but in that instant it was snatched away. Spike staggered back to the wall and leaned there, passing his hand to and fro across his brow as though dazed, then stumbled out into the room beyond.

'Gimme it, Geoff! gimme it!' he panted. 'You won't keep it—no, bo'. Bud slipped it to me after I came to. Gimme it, Geoff. I want t' forget—so be a sport an' give it me—you will, won't ye?'

Ravenslee shook his head; whereat the boy broke out more passionately, 'Oh, don't ye see, Geoff—can't ye understand? I—I was knocked out t'-night—I took th' count! I—I'm done for; I had me chance an' I didn't make good! I—didn't—make good!' As he spoke the lad hid his bruised face within his hands, while great sobs shook him.

'Why, Spike—why, Arthur, old chap, never mind.'

'Gimme th' bottle, Geoff! Be a pal an' gimme th' stuff. I want t' forget!'

'This wouldn't help you.'

'Give it me, d'ye hear—I want it. I'll have it, anyway—I 'll'—— Spike's voice failed, and, cowering back, he sank into a chair at sight of her who stood within the doorway so very silent and pale of lip.

'Ah, don't, Hermy—don't look at me like that,' he whispered; 'your eyes hurt me! I ain't drunk—this time!'

'Oh boy!' she sighed; 'oh boy—after all your promises!'

Spike rose with hands stretched out appealingly; but, even so, he swayed slightly, and, seeing this, she shivered.

'Is it th' fightin' you mean, Hermy? Why, I did it all for you, Hermy—all for you. I wanted t' be a champion, 'cause all champions are rich. I wanted t' make you a real lady—t' take you away from Mulligan's; but now—I'm only—a "has-been." I've lost me chance. Oh Hermy, I'm done for. I—oh Geoff, I—think I'll go to bed.'

So Ravenslee set down the flask, and, clasping an arm about Spike's swaying form, led him from the room, while Hermione stood rigid and watched them go. But when the door had closed

behind them she bowed her head upon her hands and sobbed miserably, until, spying the half-emptied flask through her tears, she sprang forward, and, snatching it from the table, dashed it passionately to the floor.

'Oh dear God of Heaven!' she whispered, sinking to her knees, 'not that way—oh, save him from that—keep him from treading that path!' With head bowed upon her folded hands she knelt thus awhile, until a sound in the passage aroused her, and, rising to her feet, she turned and confronted Bud M'Ginnis.

He stood upon the threshold, and though his glowing, eager eyes dwelt yearningly upon her beauty, he made no motion to enter the room. Upon one cheek the skin was torn and grazed from nose to ear, and upon his powerful throat were vivid marks that showed fierce and red, and these seemed to worry him, for even while he stared upon her loveliness his hand stole up to his neck, and he touched these glowing blotches gently with his fingers.

'God, Hermy,' said he at last, 'you get more beautiful every day!' She was silent; but, reading the fierce scorn in her eyes, he laughed softly and leaned nearer. 'Some day, Hermy, you'll be all mine! Oh, I can wait; there's others, an' you're worth waitin' for, I guess. But some day you'll come t' me—you shall—you must! Meantime, there's others, but some day it'll be you, an' you only—when you're my wife. Ah, marry me, Hermy; I could give you all you want, an' there'd never be any one else for me—then!'

Her eyes still met his unflinchingly, only she drew away from his nearness, shivering a little; seeing which, he frowned and clenched one hand—the other had wandered up to his throat again.

'Won't ye speak t' me?' he demanded savagely; then, shrugging his great shoulders, he continued in gentler tones, 'I ain't here t' quarrel, Hermy; I only come t' see if th' kid got home all right.'

Hermione's firm, red lips remained tight-closed.

'Did he?'

Hermione slowly inclined her head.

'Say now, Hermy,' he went on, and his voice grew almost wheedling, 'there was a guy here the other night—a stranger, I guess; one o' these tired, sleepy guys; one o' the reg'lar soft-talkin' nancy-boys—who is he?' Hermione only sighed wearily, whereat his voice grew hoarse with passion, and he questioned her fiercely. 'Who is he, eh—who is he? What was he doin' around here, anyway? Well, can't ye talk? Can't ye speak?'

Hermione only looked at him, and before those calm, fearless eyes he burned in a wild yet impotent rage.

'Won't talk, hey?' he questioned between grinding teeth. 'Well, now, see here, Hermy, if you let this guy come any love-business with you behind me back it'll be his finish, an' he can blame you for it! An' see here again—watch out for young Arthur. Oh!' he cried, seeing her flinch, 'you think you've got that kid tied to ye, you think you've got him, I guess; but you ain't! I've got him—right here!' and, holding out his hand, M'Ginnis slowly clenched it into a fist. 'I've got th' kid, see—an' he's goin' th' way I want him—he's got to, see?'

'Ah!' she cried, her scorn and fearless pride shattered to trembling pleading at last—'oh, what do you mean—oh, what do you mean?'

'I mean as I want ye, an' I'm goin' to have ye!' he answered. 'I mean that instead of "no" you're goin' t' give me "yes"—for th' kid's sake!'

'What do you—mean?' she said again between quivering lips, her eyes full of a growing terror.

'Mean?' he continued relentlessly, viewing her trembling loveliness with hungry eyes. 'Well—that's what I mean!' and he pointed to the broken flask upon the floor. 'If you want t' see it in his face more an' more, if you want t' smell it in his breath—say "no!" If you want t' see his hands begin t' shake, if you want t' hear his foot come stumblin' up th' stair—say "no!" I guess you remember what it's like—you've seen it all before. Well, if ye want Arthur t' grow into what his drunken father was before him, say "no!"'

'Go away!' she moaned; 'go away!'

'Oh, I'll go, but first I'll tell you this.'

'I think not, Mr Flowers—no, I'm sure you won't!' Ravenslee's voice was soft and pleasant, as usual; but before the burning ferocity of his eyes, the merciless line of that grim, implacable mouth, before all the hush and deadly purpose of him, the loud hectoring of M'Ginnis seemed a thing of no account. Beholding this pale, set face, Hermione, sighing deep, shrank away; even M'Ginnis blenched as, very slowly, Ravenslee approached him, speaking softly the while.

'Get out, Mr Flowers; get out! Don't say another word—no, not one, if only because of that dog-gone fool Heine! Now go, or, so help me God, this time I'll kill you!'

Hermione leaned her shaking body against the table. And yet, could it be fear that had waked this new glory in her eyes, had brought this glowing colour to her cheek, had made her sweet breath pant and hurry so? Fear?

M'Ginnis stood rigid, watching Ravenslee advance. Suddenly he tried to speak, yet uttered no word; he raised a fumbling hand to his bruised and swollen throat, striving again for speech, but choked instead; and, uttering a sound hoarse and inarticulate, he swung upon his heel and strode blindly away. Then Ravenslee turned—turned to find Hermione sunk down beside the table, her burning face hidden between her arms, her betraying eyes fast shut.

'You are tired,' he said gently; 'that infernal—er—I should say Mr Flowers—and other unpleasant things have upset you, haven't they?'

Hermione made a motion of assent, and Ravenslee continued, softer than before, 'I wanted you to make up your mind to come away to-night; but—I can't ask you now—can I? It—it wouldn't be—er—the thing, would it?'

Hermione didn't answer or lift her head, and, stooping above her, he saw how she was trembling; but her eyes were still fast shut.

'You—you're not afraid—of me, are you. Hermione?'

'No.'

'And you're not—crying, are you?'

'No.'

'Then I'd—better go, hadn't I? To Mrs Trapes, and supper—stewed beef, I think, with—er—carrots and onions.'

Her head was still bowed, and his tone was so light, his voice so lazy, how was she to know that his hands were quivering, or see how the passion of his yearning was shaking him, fighting for utterance against his iron will? How was she to know anything of all this until, swiftly, lightly, he stooped and kissed the shining glory of her hair? In a while she raised her head; but then she was alone.

CHAPTER XXII.—TELLS OF AN EARLY MORNING VISIT AND A WARNING.

RAVENSLEE dreamed that he was in a wood—with Hermione, of course. She came to him, through the leafy twilight, all aglow with youth and love, eager to give herself to his embrace. And from her eyes love looked at him unashamed; love touched him in her soft caressing hands, came to him in the passionate caress of her scarlet mouth; love cradled him in the clasp of her white arms. And the sun, peeping down inquisitively through the leaves, showed all the beauty of her, and made a rippling splendour of her hair. But now the woodpecker began tap-tapping soft and insistent somewhere out of sight, a small noise, yet disturbing, that followed them wheresoever they went. Thus they wandered, close entwined, and ever the wood grew darker until they came at last to a mighty tree whose sombre, far-flung branches shut out the kindly sun. And, lo! within this gloom the woodpecker was before them—a most persistent bird this, tap-tapping louder than ever—whereat Hermione, seized of sudden terror, struggled in his embrace, and, pointing upward, cried aloud and was gone from him. Then, looking where she had pointed, he beheld no woodpecker, but the hated face of Bud M'Ginnis.

Ravenslee blinked drowsily at the wall where purple roses bloomed, at the fly-blown text in the tarnished frame with its noble legend,

'LOVE ONE ANOTHER,'

and sighed. But in his waking ears was the tap of the woodpecker loud and persistent as ever! Wherefore he started, stared, sat up suddenly, and, glancing towards the window, beheld a large cap and a pair of shoulders he thought he recognised. 'Why, Spider!' he exclaimed, 'what the'——

'Sufferin' Mike!' sighed the Spider plaintively, 'here I've been knockin' at your all-fired winder—knockin' an' knockin', an' here you've been snorin' an' snorin'.'

'No! did I snore, Spider?'

'Bo', you sure are a bird for snorin'.'

'Confound it!' said Ravenslee, frowning, 'I must break myself of it.'

'Thinkin' o' gettin' married, bo'?'

'Married? What the'——

'She'll soon get useter it, I guess—they all do!' said the unabashed Spider. 'Anyway, if you didn't snore exactly, you sure had a strangle-hold on the snooze-business all right. Here's me crawled out o' me downy little cot t' put ye wise t' Bud's little game, an' here's you diggin' into the feathers t' beat th' band!'

'But the window was open; why didn't you come in right away?'

'Not much, bo'; I ain't the kind o' fool as makes a habit o' wakin' your kind out o' their beauty-sleep sudden; no more I ain't a guy as takes liberties in strange bedrooms—see?'

'Well, come in, Spider. Sit on the bed; I haven't a chair to offer. By the way, I have to thank you'——

'Whaffor?'

'Breaking that window.'

'Oh, I guess it wasn't a bad wheeze.'

'It gave me the chance I wanted, Spider.'

'Which you sure gripped with both mitts, bo'!'

'Now have a cigar—in that coat pocket.'

'Not me, Geoff! Smoke's bad for the wind; that's why I've took t' gum.' Saying which, the Spider proceeded to take out and open a packet of that necessary adjunct, and, having posted it into his mouth piece by piece, fell to grim mastication.

'Bo',' said he suddenly, 'you come away without your roof last night.'

'Eh?' said Ravenslee, blinking drowsily. 'My what?'

'Your lid, bo'.'

'You mean my old hat?'

'That's what I'm tryin' t' tell you; an' say, that sure is the hardest bean-cover I ever spotted; made of iron, is it? Where'd you find it?'

'At some dim and distant day it originated in England, I believe.'

'Well, that lid would turn a pole-axe, sure; that's why I brought it back. It's out on the fire-escape now.'

'Very kind of you, Spider; but'——

'Bo', you're goin' t' need that hat an' a soot o' tin underwear from now on, unless—well, unless you pack yer trunk an' clear out o' Hell's Kitchen on th' jump.'

'Why so?'

'Well, you certainly handed Bud a whole lot more 'n he 's ever had before, an' it 's a full house to a pair o' dooces he ain't lookin' for no more from you just yet. But then Bud ain't no pet lamb, nor yet a peace conference, an' it 's four aces to a bum-flush he means t' get back at ye some way—an' get ye good!'

'Oh!' said Ravenslee, yawning.

'And, oh, some more!' nodded the Spider. 'It 's sure comin' t' you. When I got back las' night, there 's Bud settin' against th' wall lookin' like an exhibit from the Morgue, fightin' for breath t' cuss you with. 'N' say, you sure had done him up some, which I wasn't nowise sad or peeved about—no, sir! Me an' Bud 's never been what you might call real kittenish an' playful together. But it seems you ain't only soaked an' throttled him good an' plenty, but he 's gone an' let out t' you about that guy Heine, an' consequently you 've gotter be kept from openin' yer mouth—see? Consequently, it 's you for a sudden an' hasty hike.'

'Oh!' Ravenslee said again.

'Twice,' nodded the Spider, 'with a F an' a L thrown in—that 's what you 'll be, Geoff, if you try t' buck Bud an' th' gang. So here I've shinnied up yer fire-escape to put ye wise an' lend a hand to make yer swift getaway.'

CHEMISTRY AND THE WAR.

By F. ROWLINSON.

The study of chemistry is so closely bound up with success in industry, war, and the arrestment of disease that it is essential to a wealthy, healthy, and peaceful nation.—SIR WILLIAM RAMSAY.

MUCH has been said about the lack of intelligent appreciation on the part of our legislators, military authorities, and manufacturers of the supreme importance of scientific knowledge and method. Much more might be said; but this is not a time for recrimination—rather is it an occasion to indicate and to emphasise the manifold activities of the trained chemist in connection with the war. Handicapped by the conservatism of our capitalists, impeded by the estrangement between science and commerce, the chemical branch of technology has striven hard, and until recently vainly, for a recognition of its services to the country. The army, the navy, the civil population—the whole nation, in short—owe a debt of consideration to the chemists possessed of the requisite knowledge and creative skill successfully to combat a nation whose undivided attention has been given to the advancement of this branch of industrial science. From coal, from oil, from cotton, from wood, the patient chemist extracts materials which serve him as sources of the modern explosives, of beautiful dyes, of delicate flavourings, and of pain-destroying drugs to ease the sick and the wounded. The Government has now come to recognise the absolute dependence of our military, naval, and industrial resources upon the chemist; and now more use of chemical advice is being made by them than has hitherto been conceived possible.

In 1856 Sir William H. Perkin, an Englishman, then only a youth of eighteen, patented a process for the production of a mauve dye from aniline. This discovery was the foundation of one of the most famous industries of the world—the coal-tar derivative industry. Year by year it has become more important and more profitable; and the industry, founded by an Englishman, and first established in England, is now carried on principally in Germany. Our manufacturers were too careless or short-sighted even to trouble to maintain the start given to them—a start in itself worth millions of pounds. Furthermore, Germany, eager for war and spoiling for world power, seized upon, encouraged, and perfected an industry which was unique in being highly profitable in peace and of vital importance in time of war. Germany realised that the coal-tar industry is the basis of synthetic chemistry, and that the whole future of chemistry is comprised in synthesis. Coal, heated in a closed retort, yields gas, tar, and coke. Coke is used in millions of tons in connection with metallurgical processes, particularly in the manufacture of iron and steel. The distillation of the tar yields light and heavy oils. These, together with benzol extracted from the gas, form the foundations of the derivative industry. They yield anthracene, naphthalene, benzene, toluene, phenol, the sources respectively of alizarin, synthetic indigo, the aniline dyes, and, of vital importance nowadays, the high explosives. From a dozen direct derivatives we get perhaps a hundred intermediate products. To the final manufactured articles there is practically no limit. At the outbreak of the war there were no less than one thousand individual coal-tar colours, each a definite chemical compound and not a mixture. Of the fine chemicals used in photography and medicine there were almost as many. We have mentioned toluene and phenol as examples of coal-tar products used to make high explosives. By the action of various acids upon these two, T.N.T. and lyddite respectively are made. Benzol, besides its use as a source of benzene and toluene, has become a formidable rival as a cheaper substitute for petrol, and the benzol industry in this country has increased at an incredible speed within the last few years.

Ammonia salts are also coal distillation products indispensable to alkali manufacturers and to farmers.

The raw materials for the production of propellants, a second class of explosives used in the war, are derived from the soapworks, from cotton, and from wood. Glycerine, cotton, and acetone (a distillation product of wood, as benzol is of coal) are manufactured, under the supervision of the explosives chemist, into nitroglycerine and gun-cotton, and finally into gelignite, cordite, and dynamite. It is terribly exacting work, this of the explosives chemist. A false step, a hasty movement, a careless gesture even, and irreparable damage to life and property is wrought. It is no work for fools; the chemist takes his life into his hands when he investigates the mighty forces latent in materials of the most innocent nature. Both disruptant and propellent explosives are 'nitro' compounds, and need for their manufacture sulphuric and nitric acids. These same acids are also required in the coal-tar derivative industry. In this fact lies at once the secret of Germany's preparedness for war and the difficulty of successfully establishing the coal-tar dye industry in this country until the end of the war. Thus Germany will have ample opportunities for 'dumping' before we make our belated efforts. Steps must be taken to prevent this 'dumping;' but that is a matter for our legislators rather than our chemists. Thanks to the British navy, the beds of Chile, the chief source of nitrates, are always open to us and closed to our enemies; no shortage of nitric acid can be feared. Thanks, too, to the flourishing alkali and heavy chemical industries of the Widnes and Birmingham districts, we shall always have abundance of sulphuric acid. Mention of the alkali industry suggests the utilisation of the vast chlorine industry dependent upon the salt deposits of Cheshire for the manufacture of asphyxiating gases for use at the front.

Having dealt at length upon the coal-tar industry and its bearing upon the manufacture of explosives, we may now consider the application of chemical knowledge to the manufacture of other munitions of war.

In metallurgy the influence of the chemist is becoming more and more marked. Iron and steel, not to speak of the other metals, must be systematically tested at every stage of their manufacture in order to withstand the tremendous strains put upon them. None but perfect materials can be used. This careful watching and testing requires the services of specially trained metallurgical chemists; and, despite the utmost efforts of Krupp, Britain is in this respect inferior to no other country. An illustration suffices. Of the many different microscopic varieties and compounds existing in iron and steel, all, without exception, have been discovered and defined by the metallurgists of Sheffield and our other great iron centres. Within the last few years new steel alloys have been discovered, and these have given us what are practically new metals, so much do they excel ordinary steels. In the contest between the projectile and armour these alloys have been of great utility. Metallurgical chemists are now giving their attention to electrical methods of manufacture. Aluminium is perhaps the best example of the successful application of electrolysis to metallurgy. Steel and iron of the finest quality are now made in increasing quantities wherever electrical power is cheap. Electrical methods are firmly established for the manufacture of bleach, soda, carborundum, and many other chemicals; and electro-metallurgy bids fair to become one of the most important branches of electro-chemistry.

To multiply instances of the successful application of chemical technology to industries connected with the manufacture of munitions would be tedious. Sufficient has been said to indicate the dependence of the art of fighting on the science of chemistry. There are further applications, not so intimately connected with the war, but yet of great importance to the welfare of the nation. The extraordinary conditions imposed by the war have only emphasised a problem which would, sooner or later, have become insistent—that is, the problem of our food-supply. Chemistry has already come to the aid of the agriculturist by endeavouring to supply artificially defects of the soil. Bacterial change of nitrogenous animal refuse into nitrates available for the delicate assimilation of the plant is a long and tedious process, fascinating perhaps to the student, but wasteful in the eyes of the busy farmer. For this slow natural fertilisation of the soil a more rapid artificial one may be substituted. Nitrates from Chile and sulphate of ammonia from the gas and coke industries supply the requisite nitrogen by tons. Phosphates, another necessity to the plant, are supplied as basic slag, bone-meal, and superphosphate. Chemistry has already done this much for our food-supply; but what of the future? Nitrates from South America are now approaching exhaustion; ammonia will become scarcer and scarcer as our coal-supplies give out. And yet the cry will be all the time for more food! We have around us in the air an inexhaustible stock of nitrogen, but in an unavailable form. The problem of how to make it available is being even now attacked, and, to some extent, solved. Nitrolime, *Kalkstickstoff*, and other fertilisers are being made from the air. By passing air through a whirling electric arc, a portion, never exceeding a small percentage, burns, forming nitric acid, which may be utilised either for explosives or for agricultural purposes. The process is coming into use wherever water-power is cheap and electricity may be generated at low cost. Norway, in particular, is developing

this process, which, although wasteful, has a very bright future. Once given a method by which all the nitrogen of the air may be fixed in an economical manner, the food-supply of the world need cause us little worry. Intensive modes of cultivation will become general. One acre will yield the produce of two or three as things are now. Completely synthetic plant-foods are an industrial possibility. Synthetic animal foods will not be far distant. Calves' milk artificially made was exhibited at the last Royal Agricultural Show, and found favour. The future of chemistry is bound up in synthesis. When we can reproduce in our laboratories the infinite complexity of nature's products, chemistry will have achieved its aim.

In the near future a trade war with our enemies will be waged. Let us examine the position and rôle of chemistry in this 'after-war.' Britain has no equal in the production of 'heavy' chemicals, but with 'fine' chemicals she is at present utterly behindhand. The prevailing shortage of drugs, organic acids and their salts, and coal-tar derivatives indicates the extent to which we have been relying upon enemy countries for such things. But steps are already being taken to promote this most important branch of chemical industry, so that at the end of the war we may hope to start upon more equal terms. Simultaneously with the development of the synthetic products industry will come the growth of many dependent industries, notably the contact process of sulphuric acid manufacture. Glass, too, for ordinary, for chemical, and for optical use has hitherto been chiefly a foreign industry. There is no reason why Britain should not produce a glass quite equal to any foreign product, provided that the commercial enterprise and capital are forthcoming. After all, the formulæ of Jena and such glasses are now known to our chemists.

In the trades and industries indicated above, much experimental research will be necessary and much money must be spent before we shall be as proficient as our rivals. What is needed immediately is more technical education, more sympathy between capital and student. After some training at college and a technical university, the average student comes out into the world, and is given a situation in some badly equipped works 'laboratory,' usually a converted office or disused outbuilding, with purely makeshift apparatus. Here all ambition, all originality, all inclination for research are stifled under the humdrum monotony of routine work at forty shillings per week. Most works have a chemist on sufferance only; his work is unappreciated by, and therefore useless to, the departmental managers. Of the three chief branches of industrial chemistry, analytical, manufacturing, and research, only the second is recognised and paid in a fitting manner. The principal reason for this lack of encouragement is that the other two are not productive; a week's, a month's, or even a year's work in the case of the research chemist is perhaps represented by a few figures only. The manufacturing chemist can show for his efforts a concrete and visible result. Hence only this branch gets the recognition it deserves. The work of the analytical and research chemists must have dignity added to it, and must be popularly recognised as one of the professions.

When we have a better understanding between our capitalists, legislators, manufacturers, and students, together with a spirit of co-operation between the works and the university, we may hope to bring about the union of science and industry. The country will then be prepared and ready for combat against all comers, be they military foes, trade rivals, or deadly diseases.

JIM OF JACKADDER.

CHAPTER II.

IT was April, the month of the first rains, and the country-side was green with the tender living green of early autumn in Australia. One fine Sunday afternoon Jim Flood harnessed his shaggy bush-pony between the shafts of a ramshackle old trap, and prepared to set out for the township. It was his custom on such occasions to leave Vi'let May shut up in the hut in the safe keeping of the watchful Poodle. The dog had developed a rare fidelity, and his devotion to the child was marked, although his affection did not prevent him from stealing her bread-and-butter whenever a favourable opportunity offered.

To-day Jim carefully trod out the glowing embers of the fire, and set Poodle on guard; then he kissed Vi'let May loudly and demonstratively. 'Be a good little gel till daddy comes back,' he urged.

'Oo! oo!—'oo fevvers tickle,' remonstrated Vi'let May, making a grab at the obnoxious whiskers with one small hand.

Jim laughed uproariously. 'Feathers! Bless the child! Don't git inter no mischief, me darlint; an' don't go huggin' the old dog, 'cos o' them narsty biters. I must remember to git some soft soap at the store nex' time I goes in of a week-day. Good-bye, my pretty.'

'Dood-bye,' said Vi'let May, laying violent hands on the tail of the faithful Poodle. 'Me likes lollies.'

'You're a young smoodger; that's wot you

are,' quoth Jim with a grin. 'No lollies to-day, pet, 'cos why—it 's Sunday, an' the store 's shut. —Take care o' the little lassie, Poodle.'

Poodle tried hard to wag his tail by way of response, but, alas! it was in chancery.

Jim drove direct to the tin shanty where Mrs Fitzpatrick dwelt alone. She earned a scanty livelihood by scouring the garments of the charitably disposed of Gillingup, who, pitying the widow's forlorn condition, were moved to throw her a crust in the shape of their soiled clothing.

'Though the pore woman 's had dirty linen enough of her own to wash in her day, goodness knows!' said the caustic Mrs Mudge, whose own laundry would have represented the smallest item of her weekly expenditure had she not 'washed' at home. Indeed, the old lady had 'no time' for philanthropy, also no inclination, as she hesitated not to affirm.

It cost Jim of Jackadder considerable mental effort to make up his mind to any definite course of action; before all things, he was a recluse, and naturally, as such, a perfect stickler for stagnation. He had been over three months now trying to persuade himself to restore the lost Vi'let May to her rightful custodian. To-day, however, the light of resolve was in his dull-blue eye, and lest that resolve should become suddenly weakened, he urged forward his shaggy pony to the utmost limit of its endurance.

Mrs Fitzpatrick was at home; she was just brewing herself a nice, strong cup of tea, a woman's panacea for all ills, when Jim knocked at the door.

'Lor', Mr Flood,' she said, her tired, bleached face colouring painfully; 'it 's quite an age since I seen yer! Won't yer come inside an' sit down?'

Jim entered the close, untidy little room. He held his battered wideawake hat firmly clutched in both hands. He saw nothing of the squalor and dirt of the establishment; he had eyes only for the woman he had once loved —whom he still loved, for Jim of Jackadder was slow to change; there was nothing volatile about him.

'Moll, my gel,' he murmured, scorning preliminaries, 'I 've come to arst yer if yer 'll marry me. I know it ain't long since pore Dan went away with all flesh; but it 's no use denyin' of it, lass, 'e weren't a good 'usband to yer, and I—I come to offer myself, Moll—to see if I can't do betterer by yer. I ain't doin' too bad now. Will yer 'ave me, Molly? This is fer the second time o' arstin',' he concluded, with some hazy recollection of banns and Sunday mornings in the old church at home, far away across the seas.

If Mrs Fitzpatrick had been at all genteelly constituted she would probably have hidden her face in her hands, and murmured something half-audible concerning the extreme suddenness of the proposal. As it was, she merely sighed and said, 'I believe you 're a real good man, Jim. I could wish now things 'ad fallen out otherwise than they did; but it 's no use grumblin'. To tell the truth, I 've 'ad a fair sickener o' men an' marriage. I reck'n I 'll run in single 'arness fer the rest o' the road, be it long or short. If on'y my little Vi' had 'a' lived things might 'a' bin so different.'

Jim's jaw set firmly. All the obstinacy of his nature—and it was considerable, both in quantity and quality—asserted itself. Mrs Fitzpatrick sobbed quietly into her apron. She was less demonstrative than of yore, Jim thought; even her grief was subdued.

'Afore you give me "no" fer a back answer,' he remarked decisively, 'I 'd like you to drive out along o' me to my old shanty. There 's a—there 's a little summut—a—a—trifle—yes, a val'able trifle' (he was so pleased with this phrase that he repeated it)—'a val'able trifle—out yonder wot ought be rights to be yers; then, when you see it, I 'll take "yes" or "no" from you, same as yer 'eart an' conscience may dictate. I give yer my gospel word on it, Moll.'

Mrs Fitzpatrick gazed upon him in genuine astonishment. He had not the appearance of a man who had been drinking.

'I 've got the old 'orse an' trap waitin' outside,' continued Jim thickly. 'Wot d' yer say, lass; shall we drive over to my place?'

Mrs Fitzpatrick hesitated; then, without another word, rose, put on her hat at a small cracked mirror that hung against the wall, and signified her assent to the proposition by a brief nod of the head.

The drive was accomplished in silence. They met nobody by the way. If only the excellent Mrs Mudge could have seen them thus seated together in the same trap! Jim betrayed the agitation of his feelings by whistling beneath his breath and belabouring the pony until the dust flew in clouds from that luckless animal's matted coat.

On arriving at the hessian hut he helped Mrs Fitzpatrick to alight, and, throwing wide the door, said, 'Walk right in, Moll, my gel. I 'll be with yer in two ticks.'

She stood shivering apprehensively upon the threshold. Poodle dashed out, baying 'deep-mouthed welcome.' For the second time in their acquaintanceship, Jim lifted his hob-nailed blucher, and the dog fled, howling, into the scrub.

'Mammy! Mammy!'

The conscience-stricken Jim stood upon one leg and screwed his forefingers into his ears. 'She 's cryin',' he muttered distractedly. 'I know the pore woman 's cryin'. Lord, 'ow the womenfolk do take to tears, to be sure—like ducks to water!'

Suddenly he flung his hat far from him, thrust his hands desperately into his moleskins,

and strode straight into the hut. Mrs Fitzpatrick was down on the floor, her arms about Vi'let May, sobbing and laughing in an ecstasy of mingled feelings.

'Glad she didn't see fit to faint or do nothink more fool'ardy than cry,' remarked the stolid Jim aloud.

Mrs Fitzpatrick sprang to her feet and wheeled round upon him, her eyes ablaze. ''Ow could you dare? 'Ow dared you, Jim Flood?' she cried, stamping her foot angrily.

'Daddy, lemme feel in 'oo's pocket.—Dis my daddy, mammy,' announced Vi'let May, twisting free of her mother's detaining hold, and making direct for Jim.

Jim gripped convulsively at his beard. 'Know it weren't a right thing to do, Moll, me gel,' he said huskily—'quite contrariways; but it 's God's truth I couldn't make up me mind to part with the little un. D—n it, woman! you had Dan—fer what 'e was worth—you 'ad 'er, the little lass, fer three long years. Wot more could you arst? Are you to 'ave all the good things, an' me starve my blamed soul out—back 'ere, with nothink to care fer but a thievish old dog an' a blanky bob-tail gohanna? S'elp me, 'eaven, the thing don't balance! And I loved yer all along, Molly,' he added, and dropped his shock head.

'Daddy 's clyin' like mammy!' lisped Vi'let May gleefully. 'Pore daddy—pore mammy!'

Jim looked up, abashed. 'Well, wot 's it to be, lass—peace or war? Will yer give me my answer now?' he said hoarsely.

Mrs Fitzpatrick laughed, a happy, rippling little laugh, which came curiously from the pinched lips of the prematurely aged, haggard-featured woman. 'I reck'n you got yer answer, Jim,' she said softly. 'Vi 's settled it fer us, orright. We 'll just 'ave to share 'er between us, I s'pose.'

Jim of Jackadder took Molly in his arms and kissed her full on the mouth.

THE END.

KIEFF, THE CAPITAL OF THE COSSACKS.

MOST travellers who have visited Russia in peace or war know something of the gloomy city of Petrograd and the more splendid fortress of Moscow, but few have occasion to see Kieff, the ancient capital of the Cossacks, and in many respects the most attractive city in the Russian dominions. Neither of its greater rivals can compare with it for beauty. Kieff has what they lack. It has perspective. The river that flows past the churches of Moscow is an insignificant stream, and even the majesty of the Neva, frozen or otherwise, is lost by those who see it from the quays of Petrograd, while to the rest of a city that never rises above river-level it is invisible. From the heights of Kieff, on the other hand, the silvery course of the rolling Dnieper may be traced for miles in either direction; and the first view from the train of the monastery, its domes all burnished gold in the morning sun, is the most stately of its kind in all the Russias, and has few equals, and no superior, in Europe.

Kieff is a sacred city. Its monastery is a Holy of Holies. Not only were some of its greatest treasures removed into Asia for safety in the dark hour when the enemy seemed certain to break through the devoted line of its defenders, but every arrangement was made to defend its walls to the last man, and then to fire it, affording Mackensen the spectacle that Napoleon looked on from the Sparrow Hills a century before. Fortunately such extreme measures were not called for. The roar of German guns will never be heard in the Krestatik; the treasure is safe; and the only evidence of war in this beautiful little city is a great increase of business, a continual coming and going of officers and men, and the requisitioning of every palace for the merciful work of the *Krasny Krest*, or Red Cross. Indeed, its proximity to the front has brought new prosperity to this city of the Ukraine, which a few years ago languished in a state of torpor that suggested the Turkish meaning of its name. All that is changed. The Krestatik, its main street, which descends from the Merchants' Garden at much the same gradient as the Cannebière at Marseilles, is thronged at all hours of the day and at most hours of the night. The garden itself was packed all the summer with officers and their ladies, dining, promenading, listening to the sad music of Chopin and Tschaikowsky on a magnificent string orchestra. The hospitals, alas! are full also, and hundreds of Sisters of Mercy hurry to and fro on their errand of comfort.

Yet Kieff is not down-hearted. Having survived its one hour of panic, it has braced itself to face further sacrifice in the calm certainty that Right will prevail over Might. Situated so near the firing-line, it has become a base depot for all war material; and it even has its museum of souvenirs from the trenches, the modern machinery of murder of the latest German pattern being displayed side by side with ancient yataghans and scimitars that recall the more gallant warfare of other days, when the Mongol swarmed across the Dniester and overthrew the Cossack defenders for a spell, making himself master of the sanctuary till once more evicted by the faithful. Although so near the battle zone, Kieff kept its head far more successfully than either Petrograd or Moscow. The price of clothing and provisions never before rose to such fabulous

figures, and it was always possible to procure necessaries that had long since become unobtainable farther north. Those whose war service took them through Kieff should be grateful for the memory of a very beautiful old city that lies out of bounds for the average peace-time tourist. After the grim horror of the fighting zone, it was a rest for body and soul to tarry a few days in those hilly streets, and to recall, in the unbroken peace of the monastery, those far-off days when the Cossacks, now a splendid contribution to the fighting forces of Russia, lived under their own Hetman and were to all intents and purposes a nation unto themselves.

THE MONTH: SCIENCE AND ARTS.

NEW TREATMENT FOR BATTLEFIELD BURNS.

MARVELLOUS cures of men horribly burnt on the battlefield have been effected at a special hospital near Paris, to which the worst of these cases are sent. The treatment, which was invented by a French doctor, consists in spraying the burnt flesh with a mixture of paraffin and resin made liquid by heating it to a temperature of 160° F. A waxlike coating is formed, over which thin strips of cotton are laid, and painted with the hot mixture. This treatment is said to give ease very quickly, the pain disappearing entirely in about twenty-four hours. So effective is the sealing of the wounds in every way that the flesh soon grows again, with a covering of new skin, and very few traces of the burns are discernible after recovery.

TIDAL POWER AS A SUBSTITUTE FOR DEAR COAL.

Owing to the high price of coal in Ireland at the present time, considerable interest is being taken in the practicability of utilising the water-power running to waste in many Irish rivers. In a paper read recently before the Association of Municipal Authorities in Ireland, the author, Mr J. P. M'Andrew, estimated that fifty thousand horse-power could be recovered for eight months in the year, and twenty thousand to forty thousand during the dry season. The most interesting Irish power scheme, however, is the utilisation of the tide into and out of Strangford Lough, as proposed by Mr Alfred W. Brown. This sheet of water has an area at low tide of about twenty square miles, while the entrance to the sea is only a quarter of a mile across in places, and could easily be dammed. It is obvious that an enormous amount of power is running to waste in this entrance, through which a huge volume of water passes four times in every twenty-four hours. Now, if a dam was built and turbines and electric generators were installed, when the tide had fallen, say, six feet in the sea, while the Lough was still at high-tide level, the water could be run through the turbines and thus produce electricity. This operation could go on for, roughly, six hours, or until the tide rose far enough to reduce the fall to below working limits. Possibly as much as one hundred thousand horse-power might be obtained in this way for twelve hours out of the twenty-four. Power in this intermittent form, however, can never be utilised to the best advantage; but by splitting up the Lough into several reservoirs it is quite possible to obtain it continuously. The electricity generated could easily be transmitted to Belfast, where it would be used for industrial purposes. Practically all the coal used in Ireland has to be imported from Great Britain; consequently the price is always high, and in view of the shortage of shipping which must prevail for years after the war, this tidal power scheme is worthy of careful consideration.

SUBSTITUTES FOR RUBBER BICYCLE-TIRES IN GERMANY.

The scarcity of rubber and the partial commandeering of rubber bicycle-tires have caused a number of other kinds of tires to appear on the German market, says the *Scientific American*. One of these is made of closely coiled steel-wire, with the ends welded together. This device, although it runs fairly well from the cyclist's point of view, cuts into the road surfaces, and is noisy in action. Wooden tires, made either in one piece or of a sectional design, are quite common, and they appear to give satisfaction, although the addition, in some types, of shock-absorbing springs on the fork would seem to indicate rather severe vibration. One form of wooden tire has its outer surface covered with strips of leather, while steel springs are introduced between the tire and the wheel-rim. The outfit includes shock-absorbing springs on the forks to minimise the vibration. The nearest approach to a rubber tire consists of two parts, the inner one being a cloth tube filled with a preparation resembling rubber, while the outer cover is of canvas. This type is sold at about fifty shillings, but its life is short. For durability at a low cost the sectional wood tires, at about six shillings each, are said to be the best. Evidently the 'pneumatic' is in no danger of losing its laurels owing to war inventions.

WAR CAUSES A RETURN TO WOODEN SHIPBUILDING.

One very remarkable development caused by the war is a return to the building of wooden ships, owing to the scarcity and the high price of steel, and the hope that wooden vessels will not so readily sink if struck by a torpedo or a

mine. This movement is very marked in the United States, where a great many wooden vessels are under construction with carrying capacities up to four thousand tons. Not only can wooden ships be built in about half the time taken for the construction of steel vessels, but their cost at the present time is also only about half. It must be remembered that on the Pacific coast of the United States, where many of these vessels are being built, there are unlimited supplies of timber close to the shipyards. This is a very important point, as enormous quantities are required, and much of it must be in the form of very large balks. For instance, squared timbers two feet each way by one hundred feet in length are by no means uncommon. Owing to this fact a return to the building of wooden ships is unlikely to take place in this country, as most of the timber would have to be imported, and the cost would probably be as high as for steel. In Scandinavia, however, where timber is plentiful, wooden ships are now being built in large numbers. Almost all of these vessels are sailing-ships, with oil-engines for propelling them in calms or against adverse winds. It is between fifty and sixty years since large wooden vessels ceased to be built in this country, the British battleship *Howe*, of four thousand two hundred and forty-five tons burden, completed in 1860, being one of the last.

THE CULTIVATION OF SPONGES.

Sooner or later all industries for the collection of wild products are in danger of extinction owing to the exhaustion of the supplies, and when this is threatened efforts are made to breed or grow the products artificially. This development has taken place in both the fur and the oyster industries, which were originally dependent upon natural sources of supply. Recently a similar development has come about in the sponge-fisheries, and sponges are now grown in beds on much the same lines as oysters are cultivated. Live sponges can be cut up into a number of 'slips,' to use a horticultural term, which will grow into full-sized sponges. The growth of sponges is, however, rather slow, and the cuttings have to be planted out for some three years before they are fit for the market. Certain conditions have also to be maintained to ensure success, and these include the absence of sand, protection from some kinds of fish, and a bed to which fresh water from rivers does not penetrate under any circumstances. Then, of course, the water must be shallow enough to allow of the sponges being easily dredged for the market when full-grown. For planting out, a full-sized sponge is cut into ten parts, each of which is attached to a concrete disc ten inches across by two inches thick, aluminium wire being used to make the connection. This process was originated by Dr H. F. Moore of the U.S. Bureau of Fisheries, and it is being carried out on a large scale by an Englishman, Mr Charles W. Chase, whose company expects to market some two million sponges a year, once its beds are fully stocked.

AEROPLANES FOR INDIAN MAILS AND PASSENGERS.

In a lecture recently delivered in Delhi, Lord Montagu of Beaulieu stated his conviction that the mails between Britain and India, together with a certain number of passengers, would be carried by aeroplanes within the next ten years. By going straight from point to point, the present shortest route, *viâ* Brindisi or Marseilles, would be reduced by some fourteen hundred miles, and it should be possible to carry the Indian mails to London in thirty-six hours. Passengers would require certain hours during the day for rest; consequently the passenger service would be rather slower, fifty-nine hours being suggested between Peshawar and London. Another route indicated by the lecturer started at Karachi, and touched at Basra, Alexandria, Malta, Gibraltar, and Land's End, either the sea or British territory being passed over throughout. This route is naturally longer, and the passage would take about five days. Mail services might be run continuously, the direction at night being indicated by lighthouses, while the landing-places would be suitably lit up. One of the most interesting forecasts made by Lord Montagu was that the passenger fares would eventually be less than those now charged by the shipping companies.

HOW TO IMPROVE OUR CANALS.

The popular notion about British canals is that they would now be carrying a large and remunerative traffic if the railway companies had not bought them up and practically closed them down many years ago. This view is by no means correct, as a reference to the report of the Royal Commission on Canals and Inland Waterways will at once show. It is true that before railways came in, canals did a flourishing business in competition with road-traffic, as water-carriage was the less costly, at any rate for heavy goods and large consignments. Our canals, as at present constructed, never could have successfully competed with railways, except for traffic between wharves on the canal-banks and for comparatively short distances. As a matter of fact, canals in the Birmingham to Wolverhampton district do carry a large amount of traffic under these conditions at rates which compare favourably with those charged by the railway companies; moreover, much of that canal system is owned and kept in working order by a railway company. The traffic is, however, almost entirely local, the amount passing between the Midlands and the coast being practically negligible. What Midland manufacturers want is cheap water-carriage to the seaports, where their goods can be shipped

to all parts of the world. At present they are handicapped when compared with their Continental rivals by high railway rates, and this feature will be still more important in future owing to the keen fight British firms will have to make for their share of the export trade to countries such as China and South America. Existing canals are much too small to allow of low rates for transport, which can only be realised when comparatively large boats are used. French canals will accommodate boats carrying three hundred tons each, whereas only one-tenth of that load (thirty tons) can be passed over the British canal systems. The French Government spent many millions upon canals, and we shall have to do the same unless we wish to see some of our richest inland industrial districts deserted owing to high railway rates to the seaports. Our canals will have to be reconstructed after the war to take barges of at least three hundred tons, and these craft must be propelled by oil-engines instead of being drawn by the old-fashioned horse. In the meantime some improvements are being made with a view to easing the congestion of traffic on the railways, but these developments are only justified by the peculiar conditions, and no adequate financial return can be expected.

ECONOMIC ORNITHOLOGY.

At a time like this, when it is imperative to husband all our available food-resources, a report issued by the Board of Agriculture as to the diet of certain birds is of special interest and importance. So far back as 1908 a committee was appointed by the British Association for the Advancement of Science to ascertain experimentally what foods were most largely consumed by the starling, the chaffinch, and the rook respectively, with a view to determining the doubtful question as to which were the farmer's friends, and which were his enemies. The work of investigation, which was conducted in co-operation with the Board of Agriculture, was carried out at two stations, the University of Manchester and the Agricultural College at Wye. Only adult birds were dealt with, and the investigators regret the absence of records of the food of nestlings, 'a very important point in deciding whether any particular bird is harmful or beneficial to the agriculturist and horticulturist.' Of the four hundred and eighty-six starlings examined at Manchester, injurious insects, largely weevils and leather-jackets, were found in the crops of three hundred and sixty-five, and thus, though a fair proportion of grain was also found, these birds had rendered valuable service to the farmer. 'The starling, if not too abundant, must certainly be regarded as a friend of the agriculturist.' From the seven hundred and forty-eight birds examined at Wye, the observers came to the conclusion that starlings are 'undoubtedly most beneficial, on account of the great number of destructive insects and snails that they devour,' while the grain taken was 'in such small quantities as almost to be negligible.' The three hundred and fifty-seven chaffinches inspected at Manchester showed that these birds take large quantities of some of the most troublesome weed seeds, such as chickweed, dock, hawkweed, and knotgrass; but that the proportion of seeds of value is 'surprisingly small in view of the general impression prevailing as to the destructive habits of the chaffinch.' From the five hundred and twenty-seven birds dissected at Wye, the investigators found it 'extremely difficult to form any judgment regarding the economic status of the chaffinch,' but from the food contents discovered they were inclined to look upon the harm it did as being balanced by the good. With regard to the rook, the observers at the northern station do not express themselves so decidedly as their colleagues in the south. The three hundred and thirty-two birds dealt with at Manchester merely led the examiners to say that the percentage of animal food taken from April to September is large, and that it is made up mainly of injurious insects (mostly wireworms and leather-jackets), but that during the rest of the year the percentage of grain is high. On the other hand, as a result of their examination of two hundred and seventy-seven birds, the Wye investigators decided that adult rooks, at least, do more harm than good, as the number of injurious insects they destroy in summer does not compensate for the large amount of grain they consume during the rest of the year. Of other common British birds, it has long been known that the wood-pigeon is almost wholly harmful to agricultural interests, as it devours large quantities of grain, and only rarely eats injurious insects; while the ubiquitous sparrow, except during the breeding season, when it feeds its young exclusively on an insect diet, is to be regarded as one of the farmer's worst enemies.

A NEW ANTISEPTIC.

Widespread interest has been aroused by the report addressed to the Medical Research Committee by a small group of specialists in bacteriology attached to the Bland-Sutton Institute of Pathology in connection with the Middlesex Hospital. In their report, recently published in the *British Medical Journal*, the investigators bring forward weighty considerations which make them believe that in the yellow colouring matter known as flavine an antiseptic has been discovered which is greatly superior to those in general use. It has long been recognised that the employment of ordinary antiseptics is attended by certain grave disadvantages, which may be thus briefly summarised. (1) While destroying disease germs, and thus fulfilling the purpose for which they are intended, they have unfortunately a harmful influence on the bodily tissues

with which they come in contact, and thus tend to retard healing. (2) When mixed with blood-serum, as they must be when applied to a wound, they lose much of their power as germ-destroyers, for the serum itself absorbs a large part of their substance, and leaves only a small portion free to act upon the germs. (3) They arrest the work of the phagocytes or leucocytes, those natural germ-eaters found in the blood, which would otherwise take an important share in the destruction of morbid matter. (4) Even though they act satisfactorily upon the surfaces with which they come into immediate contact, ordinary antiseptics, by their lack of penetrating power, cannot reach the deeper-seated structures. None of these serious disadvantages attends the use of flavine. Its value as a germ-destroyer is increased rather than diminished in the presence of blood-serum; when diluted to the proper working strength it has no harmful effect upon the bodily tissues, nor does it interfere with the beneficent work of the phagocytes; and by its greater penetrative power it reaches deep-seated structures which are never reached by the antiseptics commonly in use. As the conclusions arrived at by the investigators have been confirmed by the results obtained in general hospital practice and in the treatment of wounded soldiers, it would appear that means have only to be found of manufacturing the new antiseptic at a reasonable cost to ensure its general adoption. It is satisfactory to know that arrangements have already been made for its commercial production on an extended scale.

THE APPETITE OF SOLDIERS IN TRAINING.

The prescribed weekly rations of bread and meat for our soldiers in training, if properly prepared and secured to each individual, would appear to be sufficient to meet the needs of the average man at ordinary times. But under certain conditions they may prove insufficient fully to satisfy the cravings of the embryo soldier. A young man accustomed for some years to a sedentary or semi-sedentary occupation, when suddenly called upon to undergo a hard physical training in the open air, is apt to have for a time a quite abnormal appetite. His frame is in many cases being rapidly developed; he is, for the time being, in the position of a growing boy, who needs food not only to repair the waste that is continually going on in the bodily tissues, but also to allow of the growth of new tissue. Hence the soldier, during his time of training, not infrequently develops an appetite far surpassing all his previous records in that direction. Then is the time that he longs most for parcels of food from home or from kind friends, not only to give a pleasant variety to his necessarily somewhat monotonous diet, but also fully to appease the pangs of hunger. This phase naturally passes off when exercise has fully developed the frame, and the fully trained soldier possesses, as a rule, but the normal, healthy appetite of the man who spends his days in vigorous exercise in the open air.

DON'TS IN NURSING INFLUENZA.

The worth of a book is not always to be measured by its price, and the small brochure published under the above title is likely to prove of much greater value to the purchaser than the threepenny-piece which it costs. Written by an experienced nurse, Miss Rachel Neuman, it warns both patient and nurse of 'the things they ought not to do,' and of the grave dangers attending the neglect of proper precautions in all influenza cases. With good reason it draws special attention to the risks that are often unwittingly run in the early and the convalescent stages. But this little book by no means confines itself to negative precepts. It explains in considerable detail how to relieve the symptoms usually attendant upon an attack of *La grippe*, how the comfort of the patient may be best promoted, and how he should be fed at each stage of the illness. Even the most experienced of home-nurses will find much valuable information in the recipes and the full instructions for the preparation of invalid-dishes given in this useful little manual.

To Correspondents who wish fuller information regarding new inventions mentioned here, addresses will be furnished, when possible, provided a stamped and addressed envelope or post-card be sent to the Editor, 339 High Street, Edinburgh.

THE COMING OF DAWN.

Dawn stepped from out her bath of mist and dew,
And trod the eastern hills, whereon there blew
A faint, cold, faltering wind whose rising power
Whispered that mystic Night drew near his hour.
Softly she stole on silver-sandalled feet
Between the sleeping flowers. So tensely sweet
An incense was the perfume of her breath
That tired Night swooned in ecstasy to death.

Then was Earth's stillest moment. From below,
Impatient, eager, watched the sun to know
When he might flaunt his banner o'er the skies—
Yet waited still, and found in Dawn's gray eyes
No signal. Wistful seemed they, sad and wide,
While sweet compassion in her bosom cried—
So, pausing, leaned she on the waning moon,
Fearing to wake the weary world too soon.

MAY WALPOLE-SMITH.

*** TO CONTRIBUTORS.

1*st*. All communications should be addressed 'To the Editor, 339 High Street, Edinburgh.'

2*nd*. For its return in case of ineligibility, postage-stamps should accompany every manuscript.

3*rd*. To secure their safe return if ineligible. ALL MANUSCRIPTS, whether accompanied by a letter of advice or otherwise, *should have the writer's Name and Address written upon them* IN FULL.

4*th*. Poetical contributions should invariably be accompanied by a stamped and directed envelope.

SEVENTH SERIES

A QUIET WEEK-END.

By Arthur O. Cooke.

CHAPTER I.

ONE may get on quite well with boys, and even feel enthusiasm in the cultivation of their minds, yet bear composedly a temporary absence from their company. It was, therefore, entirely without regret that, at midday on a certain Friday in November, I dismissed the class in English literature over which I presided at a private school in western London, knowing I should not meet it again until the following Tuesday. For Monday was the mid-term holiday. I thus had three clear days and more before me, and this extra relaxation coincided with an invitation from my friend James Dare.

Had I, on that November afternoon, been gifted with the doubtful benefit of second-sight, I should most certainly have felt less happy than I did when, settled comfortably in a corner seat, I felt the afternoon express from Paddington glide smoothly from beneath the station roof and gather speed upon its western way.

In happy ignorance I laid some newspapers beside me, took up one to wile me through the ugly suburbs of West London, soon to lay it down as first the autumn-tinted woods, and then the silver windings of the Thames, competed for my gaze.

I had not seen James Dare for eighteen months, and had not even heard from him till a few days before, when I had found his invitation in a letter at my club. We had last met quite unexpectedly in Paris on an afternoon in spring, had dined together with entire satisfaction and at small expense at a snug restaurant within the Palais Royal; had dined as well, Dare justly said, as any man need wish to dine who was not king or millionaire. Dare left that evening for Marseilles upon a journey to the East; on pleasure, so he said. But I knew Dare, and felt that 'pleasure' might, from him, mean many things—important business, very likely danger, almost certainly adventure of some kind.

We had met casually for the first time some years before, had liked each other, and had grown into fast friends. Dare liked me, he was good enough—and frank enough—to say, because I was a first-rate listener and possessed an open and receptive mind. His rather saturnine and sombre personality, though it might not appeal to every taste, pleased mine. Moreover, he was a most instructive companion. He had read largely, travelled widely, often in strange company, and was a master of much curious lore of many kinds. Now, added to my pleasurable anticipations, was the curiosity to see in what conditions he had 'settled down.'

I could with difficulty picture Dare as settling down, yet those were his own words. During his recent absence, as I have already said, I had received no word of him. And now his silence had been broken from an unexpected quarter. He had, he wrote, been settled for some months in Wiltshire, and he asked me to come down and spend a quiet week-end there.

The heading of his letter told me little. 'Pool Farm, Staple Junction, R.S.O.,' it read. Was he in lodgings, or had he himself, impelled by some strange freak, turned farmer? No, I could not picture Dare a Wiltshire agriculturist. There was but little use in speculating; I must wait and see.

It was just dusk as we ran into Staple Junction, and I saw Dare standing on the platform as my carriage passed. Though very short, not more than five feet four or five, he was a man whom it was easy to pick out amid a crowd; broad-browed, thin-faced, clean-shaven, with a sallow, parchment-coloured skin and long, fair, waving hair. He was perhaps five-and-forty—something older than myself. I saw that he still had his trick of standing, seemingly half-musing, with his right hand at his chin. His pale-blue eyes, too, glanced from beneath half-lowered lids in the old way. He evidently saw me, though he made no sign of recognition; for he followed down the platform, coming straight to my compartment door. He pressed my hand as I descended, but still hardly spoke.

I gave my bag and suit-case to a porter, and Dare led the way outside. There a spring-cart was standing, and in this the porter placed my luggage.

'I didn't think it quite worth while to bring the car,' Dare said; 'I know that you like walking. It is a dry evening, and the place is barely more than half a mile away. A neigh-

 [All Rights Reserved.]

bour happened to be sending to the station, and his cart will bring your bags.'

So we exchanged the well-lit station for the twilight roads. Staple is but a junction only, with no dwelling but the station-master's cottage near at hand. Soon the road we were following darkened further, having thick plantations on each side.

'I'm very glad to see you once more,' said Dare when we were fairly on our way. 'Whether or not I am justified in asking you down at the present moment is another matter, for I'm extremely busy.'

'You mustn't let me interrupt you,' I said, not offended by the somewhat doubtful wording of my welcome. I knew Dare.

'I sha'n't,' he answered with decision. 'I'm at work all day; at night I feel the need of talking of my work. Now, you are a suitable victim, for more than one reason. In the first place, I know your tongue won't wag. That is important, for what I am doing just now is—decidedly private.'

This information did not greatly surprise me. I knew that my friend was a master of more than one branch of science, and especially of chemistry. To those who looked but casually upon Dare's way of life, he might well seem to be completely idle, wandering here and there at will. But I was well aware, though he had never told me in so many words, that he was frequently consulted by distinguished men, and even by the Government. In time of war it was thus not surprising that he should announce himself as being employed on secret and important work.

'Yes,' he went on, 'at night I want to review to myself and to an attentive listener the work of the past day. Now, without flattery, you are particularly receptive. Having no specially absorbing hobby of your own, you can display—for I do not believe that it is mere polite assumption on your part—a keen and intelligent interest in the hobbies or the work of other people. I should imagine, indeed I feel certain, that the interest you show is temporary only—purely fleeting. That does not matter, for it serves my purpose. You are not offended?'

'Not in the least,' I said.

At the same time, I felt that his description of me was too true to be altogether palatable. He was quite right—had touched with an unerring finger on a trait of weakness in my character. My interest in the work or play of others was quite genuine, even enthusiastic—for the time. What sciences, what languages, had I not made up my mind that I would study, only to abandon the idea within a week! What plans had I not formed, what books had I not meant to write! Books never written, plans not destined to be carried out. And I should doubtless form such plans and make such resolutions yet again.

'You are not farming, then?' I said.

'Not I,' Dare answered; 'although, mind you, in the present crisis few men are more usefully employed than those who make two blades of grass grow where one grew before. The farmer is just now about the most important man we have. No, I'm not farming; and the place I rent is not a farm. It was; but all the land except a small orchard has been lately added to another holding, and most of the buildings also. I rent the house, with some of the immediately adjacent buildings. It is secluded—which, you know, is to my taste; and it is also cheap.'

Thus talking, we passed through a little village, and a quarter of a mile beyond it reached Pool Farm. So far as I could judge in the darkness, it was of no small antiquity; perhaps Georgian, even Jacobean. One wall rose up directly from the path beside the road, as did a lofty garden wall, through which we entered a small flower-garden by a wooden door. Behind the house, adjoining it, was a considerable range of buildings, and beyond these were more buildings and a rickyard full of stacks.

Dare opened the garden door and the house door with a latchkey, and first led me to a snugly curtained dining-room, where dinner was already partly laid; then to a comfortable bedroom, where I found my belongings. The house was very quiet; there was hardly any sign of life.

I knew Dare was in many ways eccentric, but reflected with some satisfaction that I had not noticed any of his whims invade the regions of gastronomy. Nor was I to be disappointed now. He gave me a good dinner, excellently served, with absolutely first-rate claret and some choice old port. The service was performed by the most silent-footed man I think I ever saw, who seemed to take his orders from Dare's eyes. When coffee had been brought I chanced to comment upon this.

'He takes his orders from my eyes, or sometimes from the movement of my lips, because he has to,' Dare replied; 'the man is deaf and dumb. But I can talk to him on my fingers, while elaborate instructions I most generally write down.'

I made some exclamation of surprise.

'Yes; and, like others similarly afflicted, he is of great intelligence—and also faithful, I believe. He has a good place here, is glad to have it, and will not imperil it by gossiping. His sister does the cooking and the housework—also deaf and dumb.'

In due time pipes were lighted, and we drew our chairs up to the fire in a room across the stone-flagged hall. Dare had just moved across the room to get some matches, and was sitting down, when suddenly he checked himself and looked at me.

'Let's see; you're fond of animals, I think?'

'Oh yes, I like them well enough,' I said

rather indifferently, for the question seemed *à propos* of nothing.

Dare checked himself again; he had been going towards the door. 'My dear fellow, I hope you are not one of those people who will say with a smug face that they are "fond of animals in their right place"!'

'Well, I don't know,' I answered; 'in a way, I may be of that mind myself. I like a good horse in the stable, a handsome group of cattle in the field, and a dog as a companion for a walk or on the hearth-rug at one's feet. Have you a dog? By all means, have him in.'

Dare smiled a curious smile.

'No, I've no dog; but there's a little pussy-cat that we'll have in, if you don't mind.'

He crossed the hall. I heard him open some door which I could not see; then he emitted a low and very penetrating whistle, and came back into the room.

For a few seconds nothing happened. Then I heard a sound as of the rush of soft, swift, heavy steps along what seemed a passage. Swiftly came the rush of the soft footsteps in the hall, and then there bounded in Dare's 'little pussy-cat.'

'Never surprise the British public, my boy; they don't like it.' Such, I believe, was the advice once given to a fellow-writer by the late James Payn. I think I share the British public's prejudice, especially when surprise assumes the form which Dare now sprang on me. His little pussy-cat was a superb black leopard, evidently fully grown! For the first moment of its entering the great creature fawned on Dare, purred loudly, rubbed its neck against his hand and knees; then, as it caught sight of me, its manner changed. With flattened ears and lashing tail it uttered a low growl, and crouched as if about to spring.

'Don't move; and, above all things, don't look frightened. Keep your eyes on hers,' said Dare in his cool, level voice. 'Nothing excites these creatures more than any agitation shown by people near.—Down, then, Bagheera; quiet, little girl; lie down!'

He enforced these commands with a smart box on the ear, and the brute slowly sank upon the floor beside him, still with her green and scintillating eyes on me, and still with angry twitchings of her tail.

'Just shut the door, if you don't mind,' said Dare, his hand still on her neck.

I did so, repressing a strong inclination to shut myself outside and parley through the key-hole for the restoration of the leopard to her proper quarters. I really felt much nearer anger than I had ever yet felt with Dare. Was I a lion-tamer, that I should thus find myself, without a moment's warning, called to pass an evening in a wild beast's den?

However, I braced myself to meet the ordeal of the creature's company, and came back to my seat. Dare soothed the leopard till she deigned to tolerate my presence. She prowled about the room a little, coming every now and then to Dare to be caressed and stroked; and presently she stretched herself at ease upon the rug before the fire.

'What on earth possessed you to adopt such a beast as a pet, Dare,' I asked; 'and where did you get it? I have never seen so dark a one before, and always thought that Kipling must have been romancing when he paints Bagheera in his *Jungle Tales*.'

'Oh no; black leopards do exist, as you can see. I got Bagheera at a London wild-beast dealer's; happened to be in his place one day, saw her, and took a fancy to her on the spot. Why, I can really hardly say. But is she not a splendid brute?'

She certainly was. The creature lay stretched on her side at our feet—or, rather, at Dare's feet—the tip of her tail gently switching, and her great paws curling and uncurling lazily. Head, back, sides, and tail were practically coal-black, though I saw the groups of leopard spots which showed like silk on velvet in the flickering fire-light. If Dare but spoke to her, or touched her shining coat, the roar of her contented purring filled the quiet room.

'So you are busy?' I said presently.

'Extremely busy, and on very pressing work.'

'For Government?'

'For Government. I'll tell you what I'm doing, or, rather, trying to do. I've not entirely succeeded, but I think I'm on the track. It is a question of those poisonous and asphyxiating gases that the Germans use.'

'What is your game? Retaliation by like agents, or a nullification of their effects?'

'Oh, the latter; we are already retaliating in like manner, or shall do so soon. No, I am dealing especially with the means of counteracting'—here Dare spoke a word of many syllables which I will not attempt to spell—'that particular gas, or, rather, blend of gases, which was discovered a few years ago by an old professor of chemistry at Heidelberg. I was in Heidelberg just then, and knew him pretty well.

'He was rather a visionary old soul, engrossed in his own work, as every scientist should be. Moreover, he was never satisfied. He discovered this blend of gases, which is one of the most deadly that our men have had to face. It acts especially on the'—— And here again Dare gave me copious details, wholly technical and almost entirely polysyllabic. 'Having discovered and perfected this, he forthwith turned his mind towards the discovery of some counteracting power; something, especially, which, even in the open air, would suddenly reduce the poisonous blend to its first harmless elements—for they are harmless taken separately.

'He did all this purely with a scientific aim; of any interest in the possible results of his

inventions, I believe that he had practically none. Had he discovered the dispersive, we may call it, which he sought, he would then have proceeded searching for an anti-antidote, and so on in an endless chain.'

'Then I gather that he did not discover the antidote—or dispersive.'

'No; for he died when he believed himself quite near success.'

'Poisoned by his own gases?' I inquired.

'A less appropriate end. He was run over by a carriage in the street.'

'And his incompleted discoveries perished with him?'

'No—fortunately not. So far as he had carried them, they passed to me.'

'I see; you worked together, you and he.'

'We had done so in certain other matters; not in that. The old man—if you don't mind, I think that I won't give his name—did not like his friends to know of his discoveries till they were complete. But I had gleaned some notion of the work that he was busy with, and how far it had gone. I frequently worked with him in his laboratory, and we had many things in common.

'We had just left the place together, and had parted to take opposite directions, when the accident occurred. I ran to him at once, and had him carried back into his rooms; but he died in a few minutes without recovering consciousness. When I left half-an-hour later I possessed full data of his work so far as it had gone.'

'You mean you—— No, of course; I beg your pardon, Dare.'

'Precisely,' went on Dare, with his composure absolutely unruffled. 'I appropriated, or, if you prefer it—for why use a long word when a shorter one will do?—I *stole* the papers bearing on the work. You think the act a crime?'

I murmured something vague, which I believe was, 'Not at all.'

'In life,' said Dare, 'and more especially in really serious matters, one must take broad views. I ask you to consider the matter calmly, not from a lawyer's point of view, or that of our most excellent policeman who is just now passing down the road outside Here was a man who had discovered—you might say created, if you like—a most terrible agent of torture and destruction, as both you and I have lived to see, and thousands of poor fellows have unfortunately lived to feel. The German Government—the War Office—had been placed by the inventor in possession of this hellish thing; that much I chanced to know. The inventor goes a step further. He tries to discover, was indeed far advanced on the road to discovering, an effective counteractive to his first invention's diabolical effects. The German minister of war would probably become possessor of that too. With what result? To place in German hands, and in their hands alone, the secret of nullifying to a great extent the frightful effects of the gases. Possession of that secret would bestow on them a fearful power in the case of war. And, mark you, I knew well that war with Britain was to come some day; one couldn't live in Germany with open eyes and not know that. Oh yes, I know that politicians did so, as you say; but politicians usually see only what will fit into their own theories.

'Well,' Dare continued, 'what would you have done? Would you have left those papers, of incomparable value, to fall into German hands, or taken them, that Britain might make use of them when need arose? I took them—stole them, if you like—and I should do the same again. I rather think that even *murder* would have been well justified in such a case.'

(*Continued on page 378.*)

FROM FLINT TO STEEL.

IN THE SOMME VALLEYS.

By Edwin L. Arnold.

OUR soldiers in France have, at the moment, other things to think of than remote predecessors in the art of war. Were it otherwise, they might well meditate on the fact that under their feet, embedded in the gravels of the Somme valley, lie the oldest implements of combat known to humanity—the battered spear and axe-heads of men who fought for forgotten causes in the very dimmest vistas of the past. Between the flint axes of palæolithic man and the 'Jack Johnsons,' or giant shells, of to-day twenty or thirty thousand years have intervened; and what a vista they represent of struggle, of a terrible progress in the science of destruction, quite outstripping reason or the ability of our kind to set up a tribunal which all men might respect and obey!

It was fifty years ago that an unassuming French surgeon, searching amongst the gravel quarries of the Somme, noticed some nodules of worked flint, dug from the solid material, of such unusual form that even the workmen handled them with curiosity and speculated on their origin. M. Boucher de Perthes, the ex-doctor in question, went further. He collected all the flints he could get, with many others at later

dates, and meditated upon them at home. In a few months the result of his reflections was given to an incredulous world in the announcement that these flints showed human workmanship, and set back the first appearance of man in western Europe for an immense period.

Up to that time the calculations of Bishop Ussher, placing the commencement of our story at six thousand years ago, had been generally accepted; the Frenchman's theory, at a stroke of the pen, pre-dated the beginning of the narrative twenty thousand or thirty thousand years at the very least. It was not surprising, under the circumstances, that he found little acceptance and few disciples. All kinds of ingenious criticisms were urged against the soundness of his conclusions. One sceptic had the temerity to declare the implements were merely natural forms of broken stone, an idea untenable when M. Boucher de Perthes's collections were practically examined. Another savant suggested that if actually the result of human handicraft, they might have fallen into the ancient river gravels from upper and far more modern strata. Monsieur de Perthes met this objection by inviting the doubter to dig an axe-head or two from the pits, and satisfy himself personally as to whether they were not embedded in virgin and unfissured gravel.

For ten years he was a prophet without honour in any country; but at the end of that time Sir Joseph Prestwich, Sir John Evans, and the late Lord Avebury visited the Somme valley, unearthing implements for themselves, and with their acknowledgments of the genuineness of the finds a new science arose. Flint arrow-heads and axes had been actually known for a long while previously. Both were considered by scientists as merely early British weapons; while in popular tradition the former were called elf-shafts, and the latter thunderbolts, or, in Scotland, purgatory-hammers—that is, the objects with which the dead knocked for admittance at the doors of the nether world. But the ancient, and still active, Somme battlefields revolutionised our views of palæontology. In the half-century which has since elapsed, our horizon has immensely extended beyond the limits which the French surgeon indicated to us. From Boucher de Perthes's river-drift men we have followed the traces of their ancestors backwards to an antiquity that even he never dreamed of. The drift men's weapons, or stone implements of daily utility, were enshrined in the now high and dry beaches of still existing streams. But we have found other implements in the disjointed beds of great rivers that no longer exist in any form, rivers whose courses ran over the tops of present-day mountains, and drained the valleys not only of another age, but of a completely different European geography. No man ventures to say how old our oldest implements are, but there is no reason why a million years should not have passed since some of them were fashioned by human hands.

In the other direction, descending from the river-drift folk to historic times, the path of our knowledge has gradually broadened and brightened until, in comparison with the shadowy palæolithic man on the dawn of the past, the neolithic man of only ten thousand or twelve thousand years ago seems a quite ordinary and familiar individual. The latter's handicraft in stone is scattered in profusion all over the world, and, with many other remains which he has left, we can patch together his daily life with some approach to accuracy. We see him at first a nomad wandering in small parties over the uplands and along the shores of his ancient world, living by hunting and fishing, or, on the coast, largely on mollusca, whose discarded shells still indicate by vast mounds his seaside resorts. Later on he began to grow corn, and domesticated animals, the dog and the cow being his greatest acquisitions in this direction. For the protection of the cows he enclosed scores of hill-tops, while miles of wolf-banks along the Surrey hillsides even to-day show the constant war he waged with beasts of prey. Cattle in the south of England, if left to themselves, still have a tendency to go to the uplands at sunset, and thus avoid the traditional terrors of the wolf-haunted hollows.

Then, from somewhere, probably from the East, came invaders who had a knowledge of metals—copper at first, then bronze, then iron—and they overran and absorbed the users of simple stone. It was a gradual revolution, flint and bronze being used together for a long period. Indeed, the Stone Age in this country may be said to have lasted down to the time when Irish kerns shot flint-tipped arrows against the soldiers of Queen Elizabeth. It continued until a few years ago amongst many native races of the Pacific, and so little was metal understood by the aborigines of Australia a generation since that when they first saw long iron nails they took them to be some kind of very hard wood, and planted them in their gardens in the hope that they might sprout. But gradually metal conquered, and the immensity of the flint implement industry, a million years more or less of an art that seems to us now so barbarous and insufficient, died away. The latest workers in it were by no means the most skilful. The collector notes with interest in his cabinets that as bronze and iron in turn gained the ascendency, the skill of the flint-flaker became debased. His products had come to be called for only by the poor and nomadic; he could not turn out work as good as his predecessor ten thousand years previously.

Indeed, it was our friends of the Somme gravels who were the master craftsmen. Not only did they make the finest weapons, but they possessed artistic instincts in other directions,

which disappeared as completely in the time of their descendants as the glories of ancient Greece were lost in the days of her humiliation. Everything they left in the open, save their stone weapons, has perished; but on the roofs of French caverns are still to be seen drawings, tinted in red or black pigment, of the animals they knew best, characterised throughout by remarkable vigour. They wore many kinds of ornaments, and the hard stalagmite floors of the same caves have preserved for us carvings in bone or ivory of unexpected excellence. Whether the palæolithic men of twenty thousand years ago died out, or whether they became merged in later races, is not certain; but under the feet of contending armies to-day the implements of chase and warfare they left for later generations to discover unquestionably attest the immensity of the human story and the unalterableness of its essential characteristics.

THE DEFINITE OBJECT.

By JEFFERY FARNOL.

CHAPTER XXII.—*continued.*

RAVENSLEE sighed and settled his head more comfortably on his pillow. 'You think I ought to go, Spider?'

'I don't think—I know! Your number's up, Geoff—it's you against th' field; an', bo', they're some field!'

'You think there's real danger, then?' inquired Ravenslee, staring up at the fly-blown text with shining eyes.

'As real as—death, bo'!'

'Not so long ago I regarded Death as my best friend.'

'How much?' demanded the Spider, suspending mastication.

'Nothing, Spider; a mere passing thought.'

'Well, I'm tellin' ye they'll get ye sure—it'll be th' water or a forty-four bullet, or a black-jack or a knife; but you'll get it one way or another.'

'Sounds cheering!'

'An' it ain't over-pleasant t' be sand-bagged.'

'No, Spider.'

'Nor t' feel a lead-pipe wrapped round th' back o' yer bean?'

'No, indeed, Spider.'

'Nor yet t' feel a stiletta diggin' between yer shoulders or over yer collar-bone?'

'Worst of all, Spider.'

'Well, you'd best pack yer little trunk an' fade away, bo'!'

Ravenslee sat up suddenly and looked at the Spider with eyes very bright and wide. 'Not for all the gangs that ever ganged!' said he softly.

'Eh!' exclaimed the Spider, staring; 'what's yer game?'

'I'm going to try to buck this gang clean out of existence.'

'You are, eh?'

'I am.'

'Bo',' sighed the Spider, shaking his head, 'you ain't a ordinary fool—you're a damned fool!'

'And you're going to help me, Spider!'

'Not me, bo'—not me. I'm only just an ordinary fool!'

'Well, we'll let it go at that,' said Ravenslee, and, lying back, he yawned again.

'Don't do that, bo'—don't do that!' exclaimed the Spider. 'I'm thinkin' what you'll look like after you've been floatin' around in th' river—a week, say. You'd best get out o' Hell's Kitchen, bo'—don't stop to ask where to, but—go there.'

'My Spider,' said Ravenslee, shaking his head, 'in Hell's Kitchen I should have to leave all that makes life worth while, so—I shall stay, of course, and chance the—er—river and things.'

'Well, I guess it's your trouble,' said the Spider, 'not mine.'

'But I want it to be yours too, Spider. You see, I'm counting on you to help me smash this gang.'

'Bo', it looks like you're goin' t' do a hell o' a lot o' countin'—an' then some more—before you count me in on this fool game. Say'—he paused to stare at Ravenslee, keen-eyed and with jaws clamped rigid—'you ain't a fly-cop—one o' those sleuthy gum-shoe men, are ye?'

'No.'

'Well, you ain't one o' those fool amateur guys doin' the dare-devil detective act like you read about in th' magazines, are ye?'

'No more than you are one of those dirty gang-loafers you hear about round O'Rourke's, and that's why you're going to help me root 'em out.'

'Sufferin' Pete!' sighed the Spider, 'here I keep tellin' you I ain't on in this act, an' here you keep on ringin' me in frequent all the same.'

'Because you are a man, Spider Conolly, and white all through, and because to smash up this gang is going to be man's work.'

'Well, it sure ain't no job for Sophy the Satin-skinned Show-girl, nor yet for two nice quiet little fellers like you an' me.'

'We sha'n't be quite alone, Spider.'

'That's some comfortin', anyway!'

'There will be Joe Madden, for one.'

'Joe Mad'—— The Spider very nearly bolted his wad of chewing-gum; then he rose and stood staring at Ravenslee very round of eye. 'So you know Joe Madden, the best all-round champion that ever happened, eh?'

'I box with him every day.'

'Hully chee!' exclaimed the Spider, and chewed fervently in silent astonishment. Suddenly he lifted his head and stood as one that hearkens to distant sounds, and, crossing stealthily to the window, climbed out.

'What 's the matter?'

'Mother Trapes, bo'—she 's just rollin' out o' th' feathers, an' she 's quite enough for me—always has me fazed to a frazzle. If she caught me here it 'u'd be th' gimlet-eye for mine—so here 's where I fade away.'

'Anyway, come and have tea here with me to-night, Spider, unless you think I am—er—too dangerous to visit just now on account of M'Ginnis.'

'Dangerous?' repeated the Spider, scowling. 'Bo', when I get a call t' free food with a guy like you, danger gets lost in th' shuffle an' forgotten. I 'll be there. Now here 's your bean-cover—catch! S' long!' And, nodding, Spider promptly vanished down the fire-escape.

CHAPTER XXIII.—CHIEFLY CONCERNING A LETTER.

'SUNDAY!' said Mrs Trapes sententiously. 'Sunday is a holy day to some folks, an' a holiday for other folks, but t' folks like me an' Hermy it sure ain't no day o' rest an' gladness—like the hymn-book says.'

'Isn't it?' said Ravenslee, pushing away his coffee-cup, and glancing toward the loud-ticking clock upon the sideboard.

'It sure ain't!' nodded Mrs Trapes, quick to note the look. 'Hermy an' me ain't much given to Sunday observance, Mr Geoffrey. Ye see, there 's always meals t' be cooked an' washin'-up t' be done, an' clo'es t' be mended p'r'aps. I 've darned many a 'eart-felt prayer into a wore-out pair o' stockin's before now, an' offered up many a petition t' the throne o' grace with my scrubbin'-brush sloshin' over the floor. Anyway, Hermy 'n' me ain't never had much time for church-goin' or prayer-meetin's or mindin' our souls in our best frocks an' bonnets—no, sir! We jest have t' get on with our work—sewin' an' cookin' an' washin'—mindin' the welfare o' other folks' bodies. So, while them as has time an' inclination sing their praises t' the Lord on their knees, Hermy an' me take out our praises in work, an' have t' leave our souls t' God. An', oh, well, I guess He 'll take care o' 'em all right, don't ye think?'

'I certainly do!' nodded Ravenslee.

'O' course, my soul ain't all it should be—a bit stained here an' there, p'r'aps—a bit th' worse for wear, Mr Geoffrey; but Hermy's—well, there, I guess it 's jest as sweet as a flower still, an' white—ah, as white as that tablecloth. An' talkin' about her soul, what about her body, Mr Geoffrey?'

Ravenslee started. 'Her body?' said he, staring. 'Well, since you ask, I should say it is like her soul—very sweet and white and'——

'Sure!' nodded Mrs Trapes; 'but, bein' only flesh an' blood after all—bein' only miserable clay like yours an' mine, Mr Geoffrey, it 'll always need food t' nourish it, clo'es t' keep it warm, an' a roof t' shelter it. Well, if she was t' be s' mad as t' marry a pea-nut man, what about food an' clo'es an' a roof?'

'I think they could be managed, Mrs Trapes.'

'What! out o' pea-nuts?'

'No—er—the fact is, I 've given 'em up.'

Mrs Trapes sniffed. 'Ye don't say!' she remarked dryly. 'Think o' that, now!'

'The fact is, Mrs Trapes, I—well, suppose I were to confess to you that I 'm not quite so poor as I seem, what should you say?'

'Why, I should say as I knew that about three weeks ago, Mr Geoffrey.'

'Oh, did you?' said Ravenslee, staring. 'How in the world did you find out?'

'Why, Mr Geoffrey, I 'll tell ye how. I got eyes an' I got ears, an' sometimes I can see a bit with my eyes an' hear with my ears—that 's how! Oh, I 've watched ye, Mr Geoffrey, I 've watched ye careful, because—well, because I sure love Hermy, an' 't would jest break my 'eart t' see her fallin' in love with a rogue!'

'So you think—that she is—falling in love, then?' inquired Ravenslee slowly.

'Well, Hermy 's Hermy, an' she 's wrote you two letters, to me knowin'.'

'No, only one, Mrs Trapes.'

'Now, Hermy ain't the kind o' girl t' write twice to a man unless'——

'But she has only written me one letter, Mrs Trapes—the one she left with you last week.'

'Oh, well—here 's the other!' said Mrs Trapes, laying before him an envelope addressed in the handwriting he had come to know so well.

'Why didn't you give it to me before?' he inquired.

'Her orders, Mr Geoffrey.'

'Orders?'

'Orders!' nodded Mrs Trapes. 'She come in here last night an' give it me after you was gone t' bed. "Ann dear," she says, "don't let him have it till half after ten t'-morrer," she says. An' it 's nearly eleven now—so there 's yer letter!'

'But,' said Ravenslee, 'why on earth'——

'P'r'aps th' letter 'll tell you, Mr Geoffrey.

S'pose you read it while I clear away your breakfast-things!'

Hereupon Ravenslee opened the letter and read these words:

'My dear,—It would be my joy to trust myself to you utterly, to go with you to the world's end if you would have it so. Only, I'm afraid that I am not quite what you would have me. I'm afraid that I might sometimes do things that would remind you that I had been only a scrub-woman. I'm afraid that some day you might regret. Were I to answer you now I should answer you selfishly—so, please, you must give me time to think, for both our sakes. Love has never come near me before, and now I am a little afraid, for love is not little and tender and babyish, but great and strong and very fierce and masterful—that is why I am afraid of it. So I must go away from you, from the sound of your voice, the touch of your hand—to think it all out. My work will take me to Englewood to-morrow, and I want you to wait for your answer until I come back, for then I shall have decided one way or the other. But in Englewood the memory of your words will be with me still. Oh, did you mean all, quite all, you said, and did you say quite all you meant to say; did you—did you? For indeed it has seemed to me that if you really meant all you said, you might have said a little more—just a little more. This is a dreadfully long letter, and very badly expressed, I know, but I dare not read it through. But what I have written is written from my heart. Hermione.

'*P.S.*—I shall be in Englewood three whole days.'

'Will strawberry jam an' angel cake an' a bunch or so o' watercress be enough, Mr Geoffrey?'

Ravenslee sat staring down at the letter, rubbing his square, fresh-shaven chin as one very much at a loss. '"Might have said a little more—just a little more,"' he muttered, his gaze focussed upon a certain line.

'Will watercress an' angel cake an' a pot o' strawberry jam soot, Mr Geoffrey?'

'Now I wonder what the dickens she can mean?' mused Ravenslee.

'She means jest strawberry jam an' angel cake an' watercress, fer tea—fer your visitors,' said Mrs Trapes with a patient sigh.

'Visitors!' repeated Ravenslee, glancing up. 'Why, yes, they'll be here about four o'clock.'

'An' will watercress an' angel cake an'——

'Quite enough! Certainly! Admirable!' exclaimed Ravenslee. 'But what beats me,' he continued, staring down at the letter again, 'is what she can mean by writing this.'

'Not knowin' what she's wrote, I can't say.'

'Mrs Trapes, I know you are Hermione's best and staunchest friend, and lately I have ventured to hope you are mine too. As such, I want you to read this letter; see if you can explain it.'

So Mrs Trapes took the letter; and when she had read it through, folded it together with hands very gentle and reverent, and stood awhile staring out into the sunlit court. 'My land!' she said at last, her harsh voice grown almost soft, 'love's a wonderful thing, I reckon. No wonder your eyes shine so. Yes, love's a great an' wonderful thing—my land!'

'But can you explain,' said Ravenslee as he took back the letter—'can you tell me what she means by'——

'Shucks, Mr Geoffrey! That sure don't want no explainin'. When you said all you did say to her, did ye say anything about "wife" or "marriage"?'

'Why, of course I did!'

'Sure?'

'Yes—er—that is—I think so.'

'Not sure, then?'

'Well, I may have done so—I must have done so; but really I—er—forget.'

'Forget!' Mrs Trapes snorted. 'Now look-a-here, Mr Geoffrey, what d'ye want with Hermy? Is it a wife you're after, or only'——

'Mrs Trapes!' Ravenslee was upon his feet, and before the sudden glare in his eyes Mrs Trapes gaped and for once fell silent. 'Mrs Trapes,' said he, still frowning a little, 'really you—you almost made me angry.'

'My land,' said she, 'I'm kind o' glad I didn't—quite!' and her sniff was eloquent.

'You see,' he went on, glancing down at the letter again, 'I've learned to love and reverence her so much that your suggestion hurt rather.'

'Why, then, Mr Geoffrey, I'm sorry. But if your love is so big an' true as all that—if you want her t' be a wife t' you—why in the 'tarnal didn't ye speak out an' tell her so?'

'I'll go and tell her so this minute.'

'Ye can't. She's gone t' Bronx Park with that b'y, 'n' won't be back all day.'

'Damn!' exclaimed Ravenslee.

'Sure!' nodded Mrs Trapes. 'Keep on; it'll do ye good. But, anyway, what ye got t' say'll keep, I guess—ay, it'll gush out all the stronger fer bein' bottled up a day or two.'

'I can write,' he suggested.

'You can—but you won't—you'll tell her with your two lips; a woman likes it better spoke—if spoke proper. I should! With arms entwined an' eyes lookin' into eyes, an'—oh, shucks! Will angel cake an' strawberry jam'——

'They'll be ample, and—thank you, dear Mrs Trapes!'

(*Continued on page 372.*)

SCIENCE AND THE DIVINING-ROD.

By PAUL TYNER.

SCIENCE has at last passed definite sentence of death on the divining-rod, so far as the official decision of a national government can speak for science. In a special report by Mr Arthur J Ellis, of the United States Geological Survey, after a very exhaustive examination not only of the literature of the subject, but also of first-hand evidence, he arrives at the conclusion that the idea that the presence of water, or of bodies of mineral, may be detected by means of a forked twig of hazel, rowan, or peach, held between the balls of the thumbs, must be relegated to the realm of hoary but baseless superstitions.

This American Government expert insists that while there can be no question that water has frequently been found at places designated by the water-finders, or 'water-witchers,' employed for the purpose by settlers in the arid sections of the south-west—and for years they have been doing a thriving trade—the spots selected have been usually those which a keen-eyed layman would have readily picked out without the assistance of the hazel twig, or of the Y-shaped metallic rod of steel, brass, or copper, often adopted as a modern substitute.

As an instance of the fallibility of the 'water-witcher,' Mr Ellis cites the experience of a land company in New Mexico which drove several artesian wells that were to furnish a new community with water. Soon afterwards several of the wells went dry, and the company was much criticised for not having retained the services of a certain 'water-witcher,' famous in that section, before boring the wells. Had they done so, it was declared, the mistakes would have been avoided and the landowners' money saved. To meet this criticism, the land company requested the 'water-witcher' to walk blindfold over the section. In every instance the divining-rod proved undependable, the 'water-witcher' declaring that the dry wells contained water, and that the wells containing water were dry!

Some idea of the widespread interest evoked by the use of the divining-rod is suggested by the fact that attached to this official report is a bibliography of more than two hundred books on the subject, going back to Agricola, Sperlingius, and Kirchmayer. In Agricola's *De re Metallica*, early European miners are described as 'wandering hither and thither through mountainous regions,' with the divining-rods held in front of them, confident that the moment they placed their feet on a vein of ore or over it, the forked branch would turn and twist.

Not only in ancient times, but down to our own day, especially in remote districts of Spain and Italy, as in Cornwall and Wales, faith in the divining-rod was really a supernatural belief in the powers of the wizard who wielded it as a sort of magic wand. He often used strange incantations and weird gestures, invoking the aid of God, or of Satan.

Nor have we lacked respectable authorities who believed that the ancient superstition embodied at least a suggestion of scientific verity. Andrew Lang in his *Custom and Myth*, and Sir William Barrett in *Proceedings of the Society for Psychical Research*, 1897, following on Dr Mayo and Chevreul, seem inclined to believe that the so-called occult power of the divining-rod is based on scientific principles, a special phase of the universal law of attraction and repulsion being illustrated in its movement. It is suggested that as the willow or the hazel tree is observed to droop its branches over water flowing beside the bank on which it is planted, or over beds of metalliferous ore, so a branch or a twig would show the same elective affinity.

Towards the close of the seventeenth century in France, by a sort of natural evolution, the use of the divining-rod was extended from the finding of bodies of ore in the earth to the finding of buried treasure, and thence to the discovery of those guilty of witchcraft and other crimes. In 1692 a nation-wide sensation was caused by Jacques Aymer, a young peasant of Brittany, who was said to have brought a notorious criminal to confession and the bar of justice by means of the divining-rod. He was summoned to Paris, where he was showered with attentions (and fees) by fashionable men and women of the Court, and even by royalty itself. His services were for a time in brisk demand by those desiring to recover lost or stolen money, jewels, or letters. It was declared that Aymer's powers extended, indeed, to the discovery of secret enemies or rivals. He was remarkably successful in many cases, and the fame of his wonderful divining-rod spread all over Europe. At last, however, he was exposed as a clever fraud by the sceptical and learned Prince de Condé, who set a trap for him, and made it plainly appear that Jacques was simply a youth of unusual shrewdness and cunning in ferreting out hidden things—a sort of natural Sherlock Holmes, born several centuries in advance of his time.

Very similarly, our American geological expert seeks, like the Prince de Condé, to annihilate faith in the divining-rod as a means of locating underground streams or ore-veins, by attributing the occasional and even frequent successes of these metal and water finders to accurate guesses, made possible by keen and shrewd powers of observation and some local knowledge.

It may well be doubted, however, whether or not this judgment will be generally accepted as

final. There are men who to the best scientific training add long practical experience in the mining world, and who, while laughing at the idea of any 'supernatural' element in the matter, frankly declare that 'there must be something in it,' when the divining-rod is discussed. Henry J. Hoover, the famous American mining engineer, who has lately distinguished himself as the organising and administrative genius of the relief-work in Belgium and northern France, in a monograph on the subject suggests that the phenomena may be accounted for by some subtle law of magnetic attraction as yet only dimly understood, but affording a fascinating field for the scientific investigator. John H. Hammond, another American mining engineer who for years was the right-hand man of Cecil Rhodes in the management of the Rand Mines, is of much the same opinion, as, indeed, was Cecil Rhodes himself. Among mining men it is well known that several of the richest gold, silver, and copper mines in the world have been located by men of no scientific training with the aid of the divining-rod. Among these properties were the famous Callao Mines in Venezuela, the Comstock Lode in Nevada, and the Independence Mine at Cripple Creek, Colorado. The writer heard the story of the discovery of the ore-body which later became famous as 'The Independence' from the discoverer's own lips in 1898, just before he sold the property to the Rothschilds for five million pounds in cash, and after he had taken from it, in the previous five years, no less than four million pounds. At the time of the discovery he had been earning a living as a carpenter in the mines; but a strike had been declared, and the carpenters demanded an advance of a shilling a day over the three dollars (12s. 6d.) they had been receiving. Having time on his hands, and having heard much about the virtues of the divining-rod, he made for himself one of copper, and went prospecting, with the result that he located the richest 'find' in Colorado. Now it so happened that the very expert on whose report the Rothschilds afterwards purchased this property had then recently been over the whole ground, as it was said, 'with a fine-tooth comb,' and had declared that no foot of it would ever produce anything but a low-grade ore, hardly worth mining and milling.

An old friend of the writer's, Mr Walter J. Barnett, of San Francisco, had a remarkable experience of the virtues of the divining-rod. He was a lawyer in a large way of business, and several years ago came into possession (in lieu of a cash fee) of a large tract of land in southern California close to tide-water. It seemed a hopelessly barren and sandy waste. The only hope of making it productive was through irrigation, and the only hope of irrigation was through the drilling of artesian wells, for it was entirely out of the line of the big water companies that bring the melted snows down from the mountains of the coast range. Where to drill on a tract some twenty square miles in extent was a problem. 'As an experiment,' he resorted to a 'water-witcher,' and being by this time interested in the possibilities, he accompanied the 'witcher' to the place, and next morning at daybreak they started to walk across the tract in a diagonal line from north-east to south-west. In a trance-like state the 'witcher' trudged on, holding the divining-rod straight before him by its prongs, but very loosely. At noon, wilting under the pitiless sun, and worn and weary, they were about to make a stop for lunch and rest, when the 'witcher' suddenly became much agitated with the moving of the wand. 'This is the place you must dig,' he declared; 'there's no water here, but there's something just as good!'

Borings were made, and the tract was proved to contain one of the richest coal-beds on the Pacific Coast. Mr Barnett and his associates obtained handsome fortunes from the working of the collieries. Incidentally, the 'water-witcher' was handsomely rewarded. It is to be noted in this case that the 'water-witcher' was not a geologist—not even acquainted with the topography or formation of the tract of land, and that he was looking for water, not coal.

It seems to me that a more comprehensive study of the problem of the divining-rod will suggest that its solution is to be found on the psychological, rather than the physical, side—better, perhaps, through a clearer understanding of the right relations between the psychological and the physical. Some twenty years ago, a young American, Irving Bishop, astonished all Europe by feats of what he called 'mind-reading.' In London, a clever student of anatomy and physiology, named Stuart Cumberland, duplicated many of Bishop's marvellous feats by what he called 'muscle-reading.' In the light of our later knowledge of physiological psychology summed up in Havelock Ellis's phrase, 'No emotion, no muscle; no muscle, no emotion,' we can see that, like the knights in the old story of the shield which had gold on one side and silver on the other, *both* were right.

Emerson gives us more than a hint of the direction in which we may hopefully explore, if we would banish all superstition on the subject and bring the phenomena of the divining-rod into the clear light of true scientific knowledge. He tells us that in every man there exists the same sort of correspondence with outer nature as exists between thirst in the stomach and water in the spring, and that a man's success consists in the right marriage of his faculties with outer nature. So we say some men are born sailors, others born botanists, or geologists, or merchants, or doctors, or lawyers. The wand of hazel, of course, only serves as conveyer and magnifier of the *movement* of attraction between the mind, or 'nature,' of the man, and the water or metal in the earth, its first feeble

registration in the muscles of his hand being as intuitive or even instinctive as the movement of a bee or a butterfly towards the flower containing that which it seeks. While it must be admitted that these 'gifts' are more highly developed in certain men than in others, there is nothing 'supernatural' about the existence of the gift and its development by exercise.

One of the wealthiest men in southern Alabama owes his rise to affluence to just such a gift. While earning a living as a labourer in a sawmill, he discovered that he had a 'gift' for quickly telling the quantity of merchantable timber contained in a tract of forest land while walking through it. In course of time he set up a small sawmill of his own, and used his gift on a small scale. A few years ago the 'Lumber Trust' bought him out for a million dollars, and, in exchange for a contract for his exclusive services as timber prospector, agreed to pay him a salary of one hundred thousand dollars (twenty thousand pounds) a year for life. The man was of the 'poor white' class, an illiterate, and came by all his knowledge of timber and forestry *instinctively*, the instinct being developed by *use* in contact with nature.

Not all the genius in humanity blossoms in art or literature, religion or philosophy. There are Raphaels and Mozarts of the fields, the woods, and the seas.

WHITE RATS WITH PINK EYES.

By ÆSCULAPIUS.

I.

NOT only in life is a man's character apt to be viewed at close range in the navy. Sometimes it is even put up for sale by public auction after he is dead and gone. That is what it practically amounts to when his unclaimed kit comes under the hammer on board his Majesty's ships. So unyielding are the traditions of the lower-deck in this respect that popularity counts for everything. In the absence of that essential, a cloth of gold outfit would not bring as much as the threadbare remnants of a mate they liked. Such a defunct one's effects are snapped up enthusiastically at one moment, and returned as a gift the next; so that the auction assumes a sort of 'proverbial loaves and fishes' character. In the end, the items paid for resemble more the contents of a moderate-sized shop than a kit-bag which a naval rating carries on his shoulder.

II.

It fell to the lot of Lieutenant Deans, R.N.R., of H.M.S. *Alcibiades*, to carry out the Admiralty order concerning Carmelo's earthly belongings. Deans, in peace-time, circles the globe in the Blue Funnel Line; and despite the fact that he wore a flaming red beard, his messmates nicknamed him 'the Bulgarian,' on account of his bluster. This, however, was mostly 'put on;' and, indeed, if his early progenitors were Bulgars, his later ones had strayed a long way from home, for Joe Deans himself came from Wolverhampton.

The sale was held after lunch on the upper-deck of the *Alcibiades*, abaft the battery. Lieutenant Deans stood on a box in front of a raised table, which he rapped vigorously with a carpenter's mallet. Surrounding him, in various attitudes of vantage, were hundreds of able seamen, stokers, and 'daymen.' The assistant-paymaster, a writer, and Ship's Corporal Dobbin, with a scar showing on his left cheek, were in attendance; while a few commissioned officers looked on from the outskirts of the crowd.

III.

'There is no need to ask if you remember Carmelo, our late lamented ship's cook,' Deans began; 'his history is enshrined in the hearts of us all. I came in contact with Carmelo only occasionally, but the least I can say for him is that he was one of the "whitest" men I ever met.'

The ship's company, ever ready to seize on a pretext for 'skylarking,' guffawed a bit at this juncture. Carmelo was very dusky in appearance even for a Maltese.

'What in thunder do you mean, making comedy out of a serious matter?' Deans roared, scowling at them fiercely. 'I reckon you didn't act like that when you went to Carmelo, with your tails between your spindle-legs, begging him to fry your "stand-easies,"' he said, with some heat, referring to the hundred and one odds and ends, other than rations, which find their way to the galley. 'I'll warrant, too, you got the best "buttered" eggs from him you ever tasted in your life,' he went on. 'What am I offered for this cholera-belt?' he asked, taking up the first available thing at hand.

'Two bob!' an engine-room artificer said timidly.

'Two bob!' repeated Deans contemptuously. 'What are you giving us? Why, with this belt you'll be able to go on the beach in comfort.'

The men sniggered again. The *Alcibiades* was off Mudros in the then late spring of 1915. Before being allowed to land on that station, they must naturally be protected against enteric and cholera. The E.R.A. in question, being an anti-inoculationist, was not likely to leave the ship at all.

'How much am I offered?' Deans persisted. 'Let us get on with the work.'

'Five bob!' a seaman-gunner bid.

'Now you're talking,' Deans assured them. 'Bear in mind that the proceeds are going to Carmelo's invalid sister in Malta. Will any one raise the five bob?'

Eventually the thing was knocked down to a stoker at seven bob. After that the auction went swimmingly, and fifty pounds were realised. Staff-Surgeon O'Brien paid three pounds for Carmelo's 'ditty-box.'

IV.

The 'ditty-box' which came into O'Brien's possession in such a curious manner ranks among the most precious belongings of a man on the lower-deck. There is just about space enough for it in his kit-bag, and it is the only receptacle he has for stowing away under lock and key his money, letters, and other similar things. Of course, Carmelo's valuables had been sent on to his sister; but the box itself was interesting from the point of view that its former owner was something of an artist. Among other little frescoes, Carmelo had painted on the plain deal lid a floral offering to St Paul, the patron saint of Malta, with the superscription, '*In te confido.*'

Unhappily, Carmelo did not confide entirely in his patron saint; otherwise St Paul would surely have warned him, in some way or other, of the baleful consequences of card-playing. In that case Carmelo might not have been entangled in a chain of events, the first link of which was forged when Commander Daubeny sent for the master-at-arms several months before.

V.

'You sent for me, sir?' the master-at-arms, whose name was Tulliver, said on that occasion.

'Yes, I did, master-at-arms. What is this I hear about gambling going on in this ship?'

'I haven't noticed anything myself, sir,' Tulliver replied.

'Well, I got wind of it in a roundabout way, and I want it suppressed. Do you understand?'

'Yes, sir.'

'That's all, then,' the commander said; and Tulliver went for'ard to the police-office, to acquaint his subordinates with the unpleasant news.

Tulliver's assistants were Ship's Corporals Dobbin and Fogg. It so happened that during the past few days there had been a series of petty thefts on the mess-deck, and the aggressive Fogg sniffed games of chance in the air, because the two frequently go hand-in-hand aboard ship. When, therefore, the master-at-arms told his corporals what Commander Daubeny had said, Fogg exclaimed triumphantly, 'I told you so.' The easy-going Dobbin, on the other hand, accepted the situation complacently, muttering something about 'keeping a sharp eye on them in future.'

VI.

The ship's company accepted Tulliver and Dobbin in the nature of necessary evils; but Fogg they looked upon as their bitter enemy. Fogg was all for organising a sort of secret service on board for the purpose of detecting delinquency. There are always men who will 'tell tales out of school,' and Fogg wished to make use of the material which offered in this direction. The master-at-arms, however, would not countenance any such measures. Notwithstanding his chief's disapproval, Fogg thought he could secure some kudos by 'rounding up' misdoers on his own. With this end in view, he arranged for a number of his cronies to act as spies in various parts of the ship. It was their duty to play the part of casual onlookers whenever there was anything doing. In this way they might learn that an innocent-looking cribbage-board was simply a blind to cover nap, or that a quiet rubber screened banker, baccarat, or some other game which was being played for money, a settlement being effected on the spot or whenever a safe opportunity offered.

VII.

In some subtle fashion, possibly owing to the compressed life which they live, espionage is always felt at once by men on the lower-deck. A wave of uneasiness passed over the ship's company, and the buzz went round that Fogg had spies out. They retaliated by posting scouts some distance off from where any sky-larking was under way. The object of these improvised sentinels was to have the approach of an enemy signalled in some simple manner. Fogg tumbled to this manœuvre, and, urged on by the excitement of the chase, he told off some of his people to watch these scouts. Soon there was a 'barbed-wire entanglement' of spies and scouts, and listening-posts, so to speak, and men began to look upon each other with hostility, and to wonder who was friend and who was foe.

VIII.

Fogg's methods were singularly unsuccessful until one of his minions told him to look out for a 'show' in X casemate during the first dog-watch. Fogg waited till it was well after the appointed hour, and then went up on the boat-deck, immediately over the armoured chamber in question. Thrusting his head down the hood of the casemate, at a dangerously unstable angle, he made out that a game was going on, and that Carmelo sat with his back to him, exposing his 'hand.' There was silver, too, near him; but the other players were beyond Fogg's limited range of vision. Fogg was endeavouring to increase it, when he received a thumping good whack from behind that made him lose his already frail balance, and take a header down to the steel

landing below. Fogg saw stars, and for the moment became oblivious of his surroundings. When he opened his eyes again the place was empty.

IX.

Extricating himself as quickly as he could, Fogg went to the galley. By this time Carmelo had arrayed himself in his cook's cap and white apron, and his mellow voice was bursting into operatic song, for he had been a regular patron of the opera-house in Malta before joining the service.

'Come with me before the officer of the watch,' Fogg said roughly.

Carmelo obeyed.

'Will you see this petty officer caught gambling?' Fogg asked.

The officer of the watch nodded his acquiescence.

'Off cap,' Fogg said to Carmelo. He then related what he had seen.

'What have you got to say to this?' the officer of the watch asked Carmelo.

'There is nothing to be said,' the latter answered, shrugging his shoulders.

'Put his name down in the report for to-morrow morning,' the officer of the watch ordered; and Carmelo went back to his galley.

X.

A couple of hours later Fogg was tactless enough to wrangle with Carmelo over a pork-chop, which the ship's corporal claimed was not cooked sufficiently; and it ended by Carmelo throwing it in his face. Fogg promptly said, 'Come with me again to the quarter-deck.'

The watch had changed in the interval, and Lieutenant Deans was keeping the second 'dog.' They arrived at an inopportune moment. Deans stood at the starboard gangway, with his right hand in the act of saluting, and a telescope under his left arm, waiting for the quartermaster to 'pipe' a post-captain over the ship's side. Unfortunately the quartermaster's whistle was blocked, and the only sound it emitted was an inglorious wheeze. Deans was furious, and administered a verbal drubbing to the quartermaster. Then he spotted Fogg, with his face bespattered with gravy, and the offending dish in his hand.

'What's all this I see?' Deans demanded, tugging fiercely at the ends of his moustache. 'Don't stand there like a petrified ape,' he said, frowning on Fogg; 'if you're a man, bring the culprit before me, so that I may deal out rough justice to him.'

Fogg stepped up lively, with Carmelo in tow, and told Deans what had occurred.

'What's your version of the affair, Carmelo?'

'What would you have done, sir?' Carmelo began appealingly. 'After all, we're all human.'

'Not all, my lad,' Deans said pointedly, for he heartily disliked Fogg.

'He's always complaining, sir,' Carmelo went on. 'This time he abused me about his chop, after running me in for playing baccarat in the first "dog."'

'I'm sorry to hear this, Carmelo,' said Deans, who was very fond of a game himself. 'Gambling is the road to ruin.'

'He came, too, sir,' Carmelo continued, 'at a time when me and my mates were simply frantic with the work in hand. You can't imagine, sir, how difficult it is to please several hundred men. These are not the simple days of hard-tack and plum-duff, sir, and some of these people seem to think the ship's galley has all the facilities of the Piccadilly grill,' declared Carmelo, who had a cousin working there; 'and you can come along any night you please, sir, and see their bits of "stand-easy" lying all over the place. I always try to do my best, sir, and that's all I have to say. I'm willing to apologise for what I did, sir, and to supply him with another pork-chop,' he concluded, making a grimace, because he had all the easterner's dislike for that form of meat.

'I think the reparation suggested is a fair one, especially as there's a charge against Carmelo already. What do you think, now, Fogg?' Deans asked coaxingly.

'I suppose it'll be all right,' Fogg answered uneasily, wiping the grease off his face with his handkerchief, and heaving overboard the unsavoury cause of the fracas.

XI.

Carmelo found a massive young stoker waiting for him when he got back. It was his pal Struldbrug, whose head always seemed to be leering at the world in general, owing to a deformity of the neck. It was worse than usual on this occasion, because all the whispering about espionage had reacted on his peculiar temperament in a much more pronounced way than on the rest of the ship's company, many of whom contented themselves with saying, 'I'm fed up on this sort of thing.' Struldbrug, therefore, was not in a frame of mind to view Carmelo's troubles with equanimity. In fact, the news of Fogg running in his friend a second time worked him up into a towering rage, which took an unusual form. Leaving Carmelo, he went along to the stokers' mess, and snatching up his own pet tortoise, he crashed down the stoke-hold, and would have thrown the unoffending thing into the furnace had he not been prevented by one of his messmates. In the struggle, however, his hand was injured, and Staff-Surgeon O'Brien was sent for, and applied a surgical dressing.

XII.

O'Brien had another hurried call to the sick-bay late that night. Ship's Corporal Dobbin

had been stabbed, and lay on the operating-table, bleeding from a wound in the face. There was no need to ask how it was done, for the master-at-arms stood by with a sword-bayonet in his hand, the point of which was stained red.

'No doubt the scoundrel attempted the "macaroni stroke," which gets at the vital parts of the neck,' the staff-surgeon remarked, inserting a few sutures into his patient's cheek. 'What 's Dobbin's story?'

Fogg spoke up. 'Dobbin and I sling our hammocks, sir, in a sort of blind alley near the police-office. My proper billet is the outer one; but I have a cold in the head, as you know, sir,' he continued, repressing a sneeze, 'and when I complained of the draught, Dobbin let me take his billet for the night. A few minutes after midnight his moans woke me up. I was just in time to help him out of his hammock, and the weapon fell out from between the blankets. I called for assistance immediately, and we carried him in here. The bayonet was taken from the ordinary rack, but we don't know who the blighter is,' Fogg concluded, as O'Brien finished bandaging Dobbin's head, and gave instructions to Sick-Berth Steward Endewick for the night.

XIII.

In the morning the boatswain's mate piped the order to 'clear mess-deck' and 'everybody to come aft.' When the ship's company were assembled on the quarter-deck, the captain spoke to them briefly on the subject everybody had in mind.

'You all know what happened last night,' he said. 'It seems that we 've not only got to run the gauntlet of enemy mines and torpedoes, but we 're not safe in our hammocks from our own messmates. Hitting a man when he is down is bad enough,' the captain declared, 'but stabbing him in his sleep is about the most contemptible thing I 've ever come across. Now, one of your number has done it, and I expect you to find him.'

The 'disperse' was then sounded, and the men doubled off the quarter-deck. The skipper had given them his ultimatum, but complying with it seemed about as difficult of accomplishment as finding a needle in a haystack. They had so little to go on. There was no apparent reason for any one 'doing in' the good-natured Dobbin. If, as seemed more likely, it was intended to smite Fogg, every other man was his enemy.

The mess-deck, however, have a way of doing things that is all their own. Just as all these off-duty undercurrents had not been reflected in the war routine of the ship, so there was nothing now to show that any unusual machinery had been set in motion. Some kind of swift and deadly pressure was unquestionably exerted, for eight bells had scarcely struck when Master-at-Arms Tulliver announced that Stoker Struldbrug had confessed. The captain ordered him to be placed under restraint pending his trial by court-martial. Meanwhile Carmelo had been sentenced to ten days' cells for gambling.

XIV.

'Temperature in the cells fifty-eight degrees, sir,' Ship's Corporal Fogg said. The two prisoners were up for their morning inspection before the staff-surgeon, clad in thick canvas suits.

'Any complaints?' O'Brien asked mechanically.

'No, sir,' Carmelo answered.

'Yes, sir,' Struldbrug said. 'It 's too cold, sir; the teeth of the white rats with pink eyes are chattering with cold in my cell, sir. Not that I cares for them, sir; I hate white rats with pink eyes, and I hate the men who breed them. It 's myself, sir, I 'm thinking of.'

'What 's this about white rats with pink eyes?' O'Brien asked in amazement.

'Haven't you seen them, sir?' Struldbrug said, a surprised look coming over his face. 'Why, there are hundreds of them on the mess-deck. Come to my cell, sir, and I 'll show you some big ones.'

The staff-surgeon went to the cell for the purpose of dressing his hand.

'Now, do you see that one, sir, with the beak nose? He joined up a year ago.'

'Where is he?' O'Brien inquired, humouring him.

'Can't you see his ugly head peeping out from under the blanket? He 's trying to keep warm. He 's not the only one, either; it 's full of them,' Struldbrug complained, lifting up the blanket. 'There isn't room enough for me at night. Now, that one with the mole on his cheek'——

'What do you mean, talking this rot, anyway?' O'Brien demanded.

'What rot?' the man asked, with a puzzled look.

'This stuff about white rats with pink eyes.'

'Do you know, sir,' the man said earnestly, 'it 's all they 're giving me to eat!'

The staff-surgeon regarded him thoughtfully. Struldbrug sat on a stool, his arms resting on his knees, and looked up at him with a careworn expression on his face, which was inclined to one side on account of his deformity. The whites of his eyes had the yellowish tinge of a prolonged stay aboard ship.

'How old are you?' O'Brien asked.

'Twenty-three, sir.'

'Where do you come from?'

'I 'm one of a large family,' Struldbrug said, 'and my father has a farm near Heswell, Cheshire.'

'How about'—— The staff-surgeon was going to ask him for some further particulars concerning his family history, when Struldbrug interrupted him.

'Ah, I know what you're driving at,' the man said, a cunning look coming over his face. 'No, we don't keep Cheshire cats. Father hates cats of all sorts; just like I hate white rats with pink eyes.'

'Oh, dry up about white rats with pink eyes!' O'Brien muttered irritably, as he left the cell.

XV.

A few days later the *Alcibiades* was making a 'sweep' of the North Sea with several other ships, when the two prisoners were marched up on deck for their daily airing. They walked in single file, the ship's corporal being in front, and the sentry behind. Carmelo looked as if he had not a care in the world, and Struldbrug appeared to enjoy the bracing air. A torpedo-destroyer made a diversion by blowing up a German mine. The four men stopped involuntarily to watch the column of spray which the explosion threw up from the sea, when suddenly Struldbrug made a tremendous leap, and was over the rail and into the sea, and Carmelo after him, before a hand could be raised to stop them. It may be that Carmelo was overwhelmed, partly by old instincts which diving for coins in Malta harbour had developed as a boy, partly by the impetuous desire which the average man has to save life, especially that of a friend.

The sentry on watch over the life-buoys released the levers, which let them drop into the sea, and sounded the alarm of 'Man overboard!' Unfortunately there were submarines in the vicinity, the ship was zigzagging as it was, and could not be stopped. The captain, however, signalled one of the destroyers to try to pick them up. Carmelo was seen to struggle manfully with the mad Struldbrug; but the latter must have got him in a death-grapple, for the destroyer reported that when she was able to manœuvre to the spot, there was nothing to be seen.

XVI.

The officers were having tea in the ward-room of the *Alcibiades*, when Lieutenant Deans crashed in, looking very much excited.

'I have it, sir,' he said to the staff-surgeon.

'Have what?' O'Brien asked. 'The plague?'

'No; "white rats with pink eyes."'

O'Brien groaned. 'Another case for Yarmouth,' he said, alluding to the Naval Lunatic Asylum at that place.

'No fear,' Deans exclaimed, calling for a pot of tea; 'there are more urgent cases,' he declared, looking significantly at several officers. 'What I'm trying to tell you is that I've found out what Struldbrug meant when he talked about white rats with pink eyes.'

'For goodness' sake, tell us, then!' O'Brien said impatiently.

'It's nothing more than the lower-deck term for informers.'

'I must say I never thought of asking them,' the staff-surgeon said. 'So that's how Struldbrug got white rats with pink eyes on the brain!' he mused.

'Cut it out!' the first-lieutenant said in disgust; 'I'm fed up on white rats with pink eyes! After all, Carmelo and his stoker pal are well out of this cursed war.'

UTILISING FOOD WASTE.

By T. Douglas.

AT the present time, when the question of food economy is so urgent, it is worth while inquiring if better use cannot be made of the refuse from houses, hotels, clubs, and other institutions. In the country and in town suburbs the coarse parts of vegetables, peelings, and scraps of food, that would be otherwise wasted, are frequently fed to poultry, and no better way of utilising household waste could be devised; but in the centres of towns, and too often in the suburbs, everything of this description is thrown into the dust-bin, where, in hot weather, it is apt to become a dangerous nuisance.

It ought to be possible to put this valuable material to a better use, and if even a moderate proportion of it could be worked up into a suitable food for pigs and poultry, it would take the place of thousands of tons of grain and offals, and to that extent diminish the amounts of these that require to be imported.

To attract the attention of the householder, the necessary treatment would have to be simple and inexpensive, and, from the nature of the case, it would involve (1) keeping the waste separate, (2) subjecting it to concentration, and (3) the production of an article that would keep. The first requirement is obvious; the second is important, because ordinary food waste contains anything from 75 to 90 per cent. of water, and the absence of this would greatly reduce the cost of handling and carriage. The third requirement would follow on the second, because dry materials keep indefinitely.

If we inquire into what has been done in the way of drying fruits and vegetables for the market, we may obtain a clue as to the best method of treating waste. The apparatus used is usually simple, cheap, efficacious, and economical in working, and is made in all sizes to meet both the largest and the smallest requirements. Even the householder has been catered for, and

his plant consists of a series of wooden frames, or trays, about three inches deep, and of any convenient size, each tray being fitted with a wire cloth or perforated metal bottom. When in use the frames are stacked on the top of one another. One end of each wooden frame is set at an angle to provide an opening for the readier escape of the vapour from the drying. It is an apparatus that any handy man could make for himself, and the writer has obtained very satisfactory results from a home-made plant of this description. The material to be dried is placed —not too thickly—in the trays, and these are mounted on each other, on the top of the cooler part of the kitchen-range, and left there until it is dry and crisp, when it can be stored in a sack or other receptacle, and a fresh lot put on. If some of the refuse is very wet, it should be put into a strong cloth to begin with, and the cloth folded over, and twisted from each end in opposite directions, until the excess of moisture is got rid of. Besides the ordinary vegetable and fruit refuse, such things as coffee-grounds, which are rich in feeding elements, could go in; also spent tea-leaves, which are not so rich, but the writer finds that poultry eat them readily. Fish bones and trimmings could also be dried. Such an apparatus would be very useful to fishmongers, who have generally to pay something to get quit of their refuse, while, if it was dried, it would be a valuable poultry food. Many people use gas-stoves almost entirely for cooking, and if a sheet-metal frame fifteen or eighteen inches in height, and open in front, was placed on the top of the stove, the drying-trays could be mounted on this, and the space within the metal frame would be sufficient for cooking purposes, and the waste heat passing upwards would dry the refuse.

On the larger scale, the drying apparatus consists of a coke-stove, with either one or two long covered metal flues connected to it and sloping steeply upwards. The flues are divided horizontally into a lower space for the hot gases from the stove, and an upper space to hold the trays of material to be dried. The trays are put in at the bottom of the flue, and pulled upwards by a simple hoisting-gear. The trays are removed one by one at the top of the flue when the contents are dry, and fresh trays are fed in at the bottom. A two-flued plant of this kind will dry a ton of fruit per day, and no doubt it would dry as much waste.

The dried material described above could be fed to pigs, but for poultry it should be ground into a meal, and, even for pigs, it would be better if ground. Besides, the grinding would considerably reduce the bulk, and facilitate carriage and handling. While there are plenty of small hand-mills to be had, the process of grinding in this way is slow and laborious, and some other way would have to be found of dealing with it. The writer would suggest boldly that the whole business should be taken over by the municipal authorities. It would probably pay; but if it did not, it would still be of great importance from the food economy point of view at the present time.

The proposal would be that the authorities should supply every producer of food-waste with a drying apparatus, large or small, in accordance with his requirements. As the waste would be reduced in drying by at least 75 per cent., there would be a considerable saving in the dust-removing department. A municipal mill would have to be established for grinding the collected dried food-waste, and if the grinding-plant was of the disintegrator type, bones could be included in the waste, and ground together with the rest of the material, in this way improving the value of the product as a food both for pigs and poultry.

The dried material would keep good for any reasonable time, and, being readily packed and handled, would no doubt soon become a regular merchantable article.

WINDERMERE IN WAR-TIME.

I'm thinking now, this war-time,
Of the woods round Windermere;
How green and cool and deep they sleep,
And how the crags uprear
To summer skies and summer clouds
Their buttresses of gray;
And I'm wondering, wondering ever,
If I'll go again that way.

It seems like a different planet,
Like a world beyond the dead,
With no sound of shell or cannon,
And no vaguely haunting dread;
You can sit there by the hour,
And the only thing you'll hear
Are the gray reeds all together
Whisp'ring wide on Windermere.

I'm thinking still this war-time
Of the woods round Windermere;
Though I know full well my thinking
Will not bring them very near;
But I seem to see the shadows
Lying far across the lake
When the red clouds gather westward
And the owls begin to wake.

And now I see the moon rise,
And, entangled in the trees,
Far up by rocks and valleys,
Lie her argent traceries;
And all the little sprites and elves,
That sleep by day and hide,
Go sailing on their fallen leaves
Adown the golden tide.

How freshly in the evening
Smell the woods round Windermere!
How many a cagèd whisper
Wanders fluttering to the ear!
And in the mists the phantoms
Seem to rise and melt away
Of mighty men in Flanders
That do dream of it alway.

THE BRITISH EMPIRE OF TO-DAY.

By W. V. ROBERTS.

THE assembling of the War Council of the Empire in London this year is an epoch-marking event in British history, a great stride towards that Imperial federation which has been the dream of patriots in all time. This does not mean, of course, the full realisation of Tennyson's ideal of 'The Parliament of man, the federation of the world.' But it does mean an outward and visible sign of the closer knitting together under the Crown of nearly four hundred and forty millions of people who form more than a fourth of the whole population of the globe, and who occupy over thirteen million square miles, or more than a fifth of the entire surface of the globe.

There has been nothing like this in ancient or modern annals. The Roman Empire, for example, is popularly believed to have embraced much of the then known world. But Gibbon computes that its population at the time of the Emperor Claudius numbered only about one hundred and twenty millions, or not much more than a quarter of the British Empire to-day; and he puts its area at one million six hundred thousand square miles—not half that of the Dominion of Canada. Modern comparisons suffer equally. The population of the Chinese Empire ranks next to that of the British. In the absence of a trustworthy census it is difficult to be exact, but its peoples are variously estimated at from two hundred and seventy millions to four hundred millions, crowded together in an area less than a third of that of the British Empire. In Russia the conditions are reversed, the population being estimated at one hundred and seventy-four millions, and the area in square miles at nearly nine millions. The United States of America are smaller again, the population being ninety-two millions, and the square miles about three millions. Before the war the German Empire in Europe extended to only two hundred and eight thousand seven hundred and eighty square miles, with a population of about sixty-five millions. Wherever one turns, therefore, the British Empire is, in size and numbers, without a compeer.

Another remarkable fact is found in the way in which the British Empire differs from all others in being distributed all over the world. Lord Palmerston knew something about that, and one cannot help recalling his famous sentence, 'I never could understand my latitudes and longitudes, or make out where the British Empire isn't.' Those words were spoken more than fifty years ago, and since then the development of the Empire has been profound. A few of the changes may be noted. Canada was created a Dominion under the British North America Act of 1867, nine provinces and two territories being now included in it. The establishment of the Commonwealth of Australia was proclaimed in 1901, its six constituent states being New South Wales, Victoria, Queensland, South Australia, Western Australia, and Tasmania. The colony of New Zealand was converted into a Dominion in 1907; and in 1910 the Cape of Good Hope, Natal, the Transvaal, and the Orange River Colony were constituted the Union of South Africa, with the happy result that all are so proud of to-day. These four are the great 'self-governing' dominions, and to them must be added Newfoundland, our oldest colony. John Cabot discovered it in 1497. Between that date and to-day may be traced all the changes in administration that have brought so much lustre to British rule—the development of the most complete form of self-government, combined with ever-growing loyalty to the Crown. Five Prime Ministers—Sir Robert L. Borden, Canada; Mr W. M. Hughes, Australia; General Botha, South Africa; Mr W. F. Massey, New Zealand; and Sir E. P. Morris, Newfoundland—are all members of the Privy Council, the final tribunal of appeal in the Empire; and three of them at least, Sir R. Borden, Mr Hughes, and Mr Massey, had attended meetings of the Cabinet in Downing Street before invitations to the War Council of the Empire were issued.

In India also there has been progress. It was Lord Palmerston who conceived the scheme, although other minds carried it through, whereby the rule of the Crown was substituted for that of the Company, an immense gain to the native races. Other changes led up to the India Councils Act of 1909, under which twenty-seven out of sixty members of the Legislative Council must be elected, so that the popular voice may be heard when important changes are proposed. This year India has been invited to send three representatives to the War Council,

 [*All Rights Reserved.*]

so that its great place in the Empire is generously admitted.

But beyond the self-governing Dominions and India, one must not forget the West Indies and the other dependencies and possessions, administered mainly through the Colonial Office. Here we have some forty high commissioners, commissioners, governors, commanders-in-chief, and commandants, and a further form of government under the two chartered companies of British South Africa and British North Borneo. It is in considering these dependencies and possessions that one is sometimes puzzled to know, in Lord Palmerston's phrase, 'where the British Empire isn't.' One may start from the Isle of Man and go on to the Channel Islands, Gibraltar, Malta, Cyprus. Then one may tarry a long time over Africa—the west coast possessions of Gambia, Sierra Leone, the Gold Coast, and Nigeria; the East African Protectorate, Zanzibar, Somaliland, Uganda, and Nyasaland; the states comprised in the South African Union and the huge territory (Rhodesia, &c.) under the sway of the British South Africa Company; not forgetting Mauritius and the Seychelles. One may next turn to the North American continent —Canada and Newfoundland; or to the West Indies—Jamaica, the Bahamas, the Leeward and Windward Islands, Barbados, Trinidad and Tobago, Cayman Islands, and Turks and Caicos Islands, with British Guiana and British Honduras. In the South Atlantic we do not fail to remember Ascension, the Falkland Islands (which have figured so prominently in the present war), and St Helena, the last home of Napoleon. While viewing New Zealand, and the states in the Commonwealth of Australia, we must bear in mind that there still remain Papua, Fiji, and many other Pacific islands, the Straits Settlements, the Federated Malay States, Hong Kong, Wei-hai-wei, and British North Borneo. Finally, there are all the glories of India and Ceylon. One is almost amazed in trying to recall what the British Empire is, and where it is. Its unity in diversity is almost incomprehensible.

That point of diversity, however, is worth noting, for, whereas the Russian and Chinese dominions and the United States of America are each composed of one continuous tract of territory, the British Empire is scattered all over the globe, and stretches from the Arctic Ocean in the north almost to the Antarctic in the south. The physical conditions, therefore, differ greatly from those found in any other empire of the world. The sea divides, but it also unites, the British Empire, thanks to a great mercantile marine and a supreme navy. But physical conditions suggest much also in relation to climate. Mr R. H. Scott, in his book on meteorology, remarks that, looking to the extremes of air temperature found at different places (−81° at Werchojansk, and 127° in the shade in Australia), it follows that man can stand a difference of something like 212°. That is the range between zero and the boiling-point of water. Yet it is a range which may be nearly, if not wholly, traced in air temperature within the limits of the British Empire, and it is under such conditions that rule is maintained from year to year.

But climate also has an important bearing upon race. Neither in China, Russia, Germany, nor the United States of America are differences of race so marked as in the British Empire. The population of the Empire is now placed at nearly four hundred and forty millions, or close on twenty millions more than when the census was taken six years ago. Of this huge total only about sixty-two millions are whites; of these again some forty-six millions are located in the United Kingdom, and about sixteen millions are to be found in the five self-governing Dominions. In Australia, with only one hundred thousand aboriginals in a population of five millions, and in New Zealand, with fifty thousand Maoris and others in a population of one million one hundred thousand, the colour question does not arise. In Canada there are only some two hundred thousand coloured subjects in a population of eight millions. In the South African Union, however, the coloured races outnumber the whites by three to one; in India there are but three hundred thousand whites in a total of over three hundred and fifteen millions; and in the rest of the Empire the whites are estimated at only a quarter of a million among the millions of other races. Perhaps the last fact is the most tremendous of all, speaking more eloquently than words of the British genius for government. A little while ago there was some objection in South Africa to British Indian labour, but that was met; and nowhere else has any real difficulty arisen out of difference of race or colour, no matter what the climate or physical conditions. Is there any other government of which so much can be said? Is it not indeed a wonderful tribute to British methods that a native chief in Togoland contributed one hundred and one pounds ten shillings to the National Relief Fund because of 'deep thankfulness for the release of his people from German rule'?

A corollary to variety of race is variety of language. It is not easy to say precisely how many languages and dialects are spoken in the world, but the majority of them probably are known in the British Empire. It is true that the language difficulty is not great in the United Kingdom, in Australia, and in New Zealand. In Canada it is mainly a question of knowing English and French, especially in certain provinces. But in India the magnitude of the problem becomes apparent at once, for there are two hundred and twenty vernacular languages to be faced—Hindustani, Bengali, Bihari, Pun-

jabi, Tamil, and other tongues, with all their offshoots. In Africa likewise there is a perfect babel of languages. The British and Foreign Bible Society, for example, stock the Scriptures at Johannesburg in a hundred tongues, not to serve an occasional purpose, but to meet a steady demand. So it is in the islands, settlements, and stations commonly spoken of as the 'other possessions' of Britain. In Malta there is a dialect supposed to have been derived from the Carthaginian and Arabic tongues; while away in the Straits Settlements the language of the people is Chinese or Malayan—matters which all have to be taken into account in the daily task of government.

Nor must one overlook the differences in religion or creed. Stay-at-home people are apt to think of these only in relation to the Christian faith; but a census of the Empire has placed the seven religions with the greatest number of adherents among British subjects in an order that is surprising—Hindu, two hundred and eight millions; Mohammedan, sixty-three millions; Christian (of all denominations), fifty-eight millions; Buddhist, twelve millions; Primitive Animistic (Pagan), nine millions; Sikh, over two millions; and Jain, one and a quarter millions. Professor Estlin Carpenter describes the Sikhs as disciples of Nának (1469–1538), whose faith touches Hinduism on one side and Mohammedanism on the other. The Jain religion is somewhat akin to Buddhism. But the point to be noticed is that the British Empire is not only Christian; it is also a great Hindu and a great Mohammedan Empire—an Empire, in fact, composed of all nations and kindreds, and peoples and tongues.

Yet neither physical conditions, nor conditions of climate, nor differences in race, language, and religion, could prevent that outburst of loyalty on the declaration of war that has been the wonder of the world. Mr Walter Long said recently that before the war the links that bound the Empire together were links of gold. That was true; but there was something more—an indefinable and omnipotent sentiment which no gold could buy. Yet, as a matter of cold, hard fact, the links of gold were very real. The self-governing Dominions and the Crown Colonies had before the war come to the London market and had borrowed gold to the amount of over three hundred and sixty millions sterling at from 3 to 4 per cent. interest, and the security was so good that the Government decreed by statute that trust money could properly be invested therein. The large municipal and other corporations of the Empire had similarly borrowed some thirty-three millions sterling, and the Empire of India had borrowed one hundred and sixty-four millions sterling, secured on its own revenues. Such links were indeed links of gold. They stand to-day, and there is a very general hope that they will be extended in respect of trade, defence, and foreign relations. But on these points opinion is often vague.

Take the question of trade. In 1913, the last full year of uninterrupted commerce before the war, only 26·2 per cent. of British Empire trade was inter-Imperial, the other 73·8 per cent. being with foreign countries. But press the matter further. Almost exactly three-fourths of British imports consisted of food, drink, tobacco, and raw materials; while more than three-fourths of British exports consisted of articles wholly or mainly manufactured. The significance of such facts in relation to the Empire is obvious. We import principally food and raw materials, and export principally manufactures. Food and raw materials are what the Dominions are best able to send us; and manufactured goods, which we produce, are what they most need in exchange. Hence the possibility of the extension of Empire trade. Wheat furnishes an apt illustration. In 1913 we imported fifty-five million hundredweights of wheat from foreign countries, and only fifty million hundredweights from the overseas Dominions. Now Australia desires to grow and send us more wheat. Mr Hughes, the Australian Premier, when in London last year, bought up a number of steamships in order to establish an Australian line for the express purpose of sending more Australian produce to the Mother-Country. Canada desires to send more, and British India will send all that is possible. So with beef, mutton, butter, cheese, fruit, wool, hides, and other commodities. Mention of hides reminds us of South Africa. Viscount Bryce, in his *Impressions of South Africa*, argues that, while not showing signs of becoming a manufacturing country, that Dominion will become a great grazing country, and should continue to export wool, goats' hair, and hides in large quantities; possibly also meat and dairy produce. Well, in 1913 South Africa sent us more hides than any other British possession; and in January of this year Sir Thomas Smartt, a member of the South African Parliament and leader of the Unionist Party there, proposed at Capetown that the Union Government should appoint a scientific commission to survey the resources of the country. Cotton is certainly a commodity which experts think could be grown largely within the Empire.

The development of agriculture and of food of various kinds presupposes an increased demand for machinery and other manufactured goods. Germany was before the war a large buyer of British goods, and Russia may be a large buyer in years to come. But there is room for a greatly enlarged trade with the Dominions, in response to the food products that we buy. Of certain agricultural machinery to the value of one million six hundred and twenty-eight thousand two hundred and thirty-two pounds exported from this country in 1913, an amount to

the value of only one hundred and seventy-eight thousand two hundred and thirty pounds went to our great Dominions. With a view to improve matters the Trade and Industry Committee of the Royal Colonial Institute has been in communication with Governments and Chambers of Commerce in the Colonies, urging that it should be obligatory on all Governments and municipal bodies to buy Empire-made goods, and to place all contracts, so far as possible, with British firms. This year it is announced that replies received from twenty-eight Governments and twenty-one Chambers of Commerce and Boards of Trade go to prove that the Empire is united in the desire to assist.

Questions of Imperial defence and of foreign relations are, of course, matters which will specially come up for consideration before the War Council of the Empire. As the Council will largely shape conditions and terms, it may be assumed that the problem of the future will be mainly one of the continuing and developing that upon which the representatives have agreed. But whichever way one turns, the Empire outlook as the result of the war is distinctly promising. Mr Froude, in his *Oceana*, expressed the opinion that one free people cannot continue to govern another free people. Here, however, there is no question of governing by way of dominance. It is a question of joint action and joint administration in the promotion of the interests of the commonweal; and thus it may be that a War Council of the Empire will in due time give place to a Peace Council that will make for the good not only of the Empire, but of the whole world.

THE DEFINITE OBJECT.

CHAPTER XXIV.—HOW THE OLD UN AND CERTAIN OTHERS HAD TEA.

'OLD UN,' said Joe, halting his aged companion in the middle of the second flight to wag a portentous finger—'Old Un, mind this now; if there should 'appen to be cake for tea, don't go makin' a ancient beast o' yourself with it; no slippin' lumps of it into your pocket on the sly, mind, because if I ketch you at it'——

'Don't be 'arsh, Joe—don't be 'arsh! Cake comes soft t' me pore old teef.'

'An' mind this again; if there should be any jam about, no stickin' yer wicked old fingers into it an' lickin' 'em behind my back.'

'You lemme an' the jam alone, Joe; it's a free country, ain't it? Very well, then.'

'Free country be blowed! You mind what I say, you venerable old bag of iniquity, you!'

''Niquity yerself!' snarled the Old Un, and, snapping bony finger and thumb under Joe's massive chin, turned and went on up the stairs, his smart straw hat cocked at a defiant angle, his brilliant shoes creaking loudly at every step.

'Oh, gorramighty!' he panted, halting suddenly on the fifth landing to get his breath, 'these perishin' stairs 'as ketched my wind, Joe. It's worse 'n th' treadmill! Is there many more of 'em?'

'Only six flights,' nodded Joe grimly.

'Six!' wailed the Old Un. 'Lord, it 'll be the death o' me!'

'Well, it's about time you was dead,' nodded Joe.

'Dead ye'self!' snarled the old man. 'I'm a better figger of a man than ever you was.'

'An' you would come,' continued Joe serenely, as he deftly resettled the old fellow's sporty bow-tie; 'ye fair plagued me to bring ye along, didn't ye, old packet o' vindictiveness?'

'Well, an' here I am, Joe, an' here I mean t' stay; no more climbin' fer me; I'm tired, me lad—tired!' Saying which, the Old Un spread his handkerchief on a convenient stair and proceeded to seat himself thereon with due regard for his immaculately creased trousers.

'Well,' growled Joe, 'of all the perverse old raspers that ever I did see!'

'That's enough, Joe—that's enough!' exclaimed the Old Un, fanning himself with his rakish hat. 'Jest bend down an' flick the dust off me shoes with your wipe, like a good lad, will ye? That's the worst o' these 'ere patent-leathers; they looks well, but they ketches th' dust, Joe; they ketches the dust oncommon bad. So jest give 'em a flick over; me pore old back's too stiff t' let me reach 'em, what wi' me rheumatiz an' a floatin' kidney or so.'

'Kidneys!' snarled Joe, drawing out a large bandana handkerchief and polishing the old man's natty shoes until they shone resplendent; 'what's the matter wi' yer blessed kidneys now?'

'Don't I tell ye—they floats, Joe—they floats!'

'Float!' growled Joe. 'Float—where to?'

''Ere, there, an' everywhere, Joe; I can feel 'em. They're always a-gettin' theirselves all mixed up any'ow. Oh, it's a norrible complaint to 'ave kidneys like mine as gets theirselves lost.'

'Wish they'd lose you along wi' 'em!' growled Joe, shaking the dust from his handkerchief.

'Joe,' said the old man, putting on his hat and blinking up at him beneath its jaunty brim—'Joe, sometimes I fair despise ye!'

'Well, despise away,' nodded Joe; 'only, get up—stand up on them dodderin' old pins o' yourn.'

'Not me,' declared the Old Un; 'I ain't goin'

to climb no more o' these perishin' stairs—no, not for ye nor nobody. 'Ere I am, me lad, an' 'ere I sits till you give me a piggy-back up to the top—me bein' a pore old cove with rheumatiz—I demands it.'

'You'll what?' growled Joe, hard-breathing and indignant.

'Demand it, Joe—a pore old feller wi' kidneys—an' every other ailment as flesh is hair to—a piggy-back, Joe—a piggy-back!'

Without another word Joe stooped, and, lifting the old man beneath one arm, bore him up the stairs, regardless of his croaking protestations and fierce invective.

'I said a piggy-back. Oh, you blightin' perisher, I said a piggy-back!' he snarled, his resplendent shoes twinkling in futile kicks. 'Oh Joe, there's times when I fair 'ates ye!' Thus, despite virulent curses and feeble kickings, Joe bore him on and up until, as he climbed the last flight, he was arrested by an exclamation from above, and, glancing upwards, beheld a tall, sharp-featured woman who leaned over the rail.

'Oh, land o' my fathers!' exclaimed Mrs Trapes, 'what's the matter—what you got there? Who are ye?'

'The matter, ma'am!' answered Joe, for by this time the Old Un had cursed himself quite breathless. 'The matter's contrariness. What I 'ave under my arm, ma'am, is a old reprobate—and I'm Joe Madden, ma'am—come to take tea with my—come, as you might say, a-visitin' to Mr Geoffrey. P'r'aps you'll'——

'Don't 'eed 'im, ma'am; never 'eed 'im!' croaked the Old Un, who had regained his wind by now; ''e's a perishin' pork pig, that's wot 'e is.—Joe, you blighter, put me down.—It's me as the guv expects—it's me as 'as come a-visitin'.—Joe, put me down, you perisher.—Joe's only a hoaf, ma'am; a nass, ma'am. Joe ain't used to perlite serciety; Joe don't know nothin'.—Put me down, Joe, like a good lad!'

At this juncture Ravenslee appeared; whereupon Joe, having reached the topmost landing, set the old man upon his natty feet and fell to straightening his smart clothes with hands big but gentle.

'Sir,' explained Joe, answering Ravenslee's smiling look, 'old Sin an' Sorrer here wouldn't walk up, which forced me to'——

But now the Old Un, feeling himself again, cut in on his own account. 'Ma'am,' said he, flourishing off his hat to Mrs Trapes, ''ere's me an' me lad Joe come to tea—my best respex an' greetin's, ma'am.—How do, guv? I do 'ope as you ain't forgot th' cake.'

'Oh, we've plenty of cake, Old Un!' laughed Ravenslee.

'An' watercress an' jam!' nodded Mrs Trapes.

'Guv,' said the old man, gripping Ravenslee's hand, 'God bless ye for a true man an' a noble sport.—Ma'am, you're a angel! Jam, ma'am—you're a nymp—you're two nymps.

> I oft would cast a rovin' eye
> Ere these white 'airs I grew, ma'am,
> To see a 'andsome nymp go by;
> But none s'fair as you, ma'am.

An' there's me 'and on it, ma'am.'

'My land!' ejaculated Mrs Trapes, staring; then all at once she laughed, a strange laugh that came and went again immediately, yet left her features a little less grim than usual, as, reaching out, she grasped the old man's feeble hand. 'I guess you're only bein' p'lite,' said she, 'but jest for that ye're sure goin' t' eat as much cake an' jam as your small insides can hold.' So saying, she led the way into her small and very neat domain, and ushered them into the bright little parlour, where the Spider sat already enthroned in that arm-chair whereon sunflowers rioted. In keeping with the chair, the Spider was somewhat exotic as to socks and tie, and he seemed a trifle irked by stiff cuffs and collar as he sat there staring at the green-and-yellow tablecloth, and doing his best not to tread upon the pink hearthrug.

'Joe,' said Ravenslee, 'this is Spider Conolly, who knocked out Larry M'Kinnon at San Francisco last year in the sixty-ninth.—Spider, I want you to shake hands with'——

'Bo',' exclaimed the Spider, rising reverently and taking a step toward Joe's massive figure, quite forgetful of the pink hearthrug now, 'you don't have t' tell me nothin'; I guess I know th' best all-round fightin'-man, the greatest champion as ever swung a mitt, when I see him! T' shake his hand 'll sure be'——

'Young feller, me lad,' cried the Old Un, reaching out nimbly and catching the Spider's extended hand, 'you got a sharp eye, a true eye—a eye as can discrimpinate, like—ah, like a flash o' light. You're right, me lad; I was the best fightin'-man, the greatest champeen as ever was—sixty odd years ago. Ho yus, I were the best of 'em all, an' I ain't to be sniffed at now. So shake me 'and, me lad—an' shake—hard!'

The Spider's grim jaw relaxed and his eyes opened very wide as the Old Un continued to shake his hand up and down. 'But say,' said he faintly at last, 'I don't'——

'No more don't I,' nodded the Old Un. 'What's the old song say?

> I don't care if it rains or snows,
> Or what the day may be,
> Since 'ere's a truth I plainly knows,
> Love, you'll remember me.'

'But say,' began the bewildered Spider again—'say, I reckon'——

'So do I,' nodded the Old Un.

> 'I reckon up my years o' life,
> An' a good long life 'ave I.
> Ye see, I never had a wife,
> P'r'aps that's the reason why.

So take it from me, young feller, me cove, don't

'ave nothin' to do with givin' or takin' in marriage.'

'Marriage?'

'Marriage ain't good for a fightin'-cove; it spiles him—it shakes 'is nerve—it fair ruinates 'im. When love flies in at the winder champeenships fly up the chimbley—never t' come back no more. So beware o' wives, me lad.'

'Wives!' repeated the Spider, lifting free hand to dazed brow. 'I—I ain't never'——

'That 's right!' nodded the Old Un heartily, shaking the Spider's unresisting hand again; 'marriage ain't love an' love ain't marriage. Wot 's the old song say?

> Oh, love is like a bloomin' rose,
> But marriage is a bloomin' thorn.
> A 'usband 's full o' bloomin' woes,
> An' 'eaves a bloomin' sigh each morn.'

'Why, Old Un,' exclaimed Ravenslee, 'that 's a very remarkable verse!'

'My land!' ejaculated Mrs Trapes, squaring her elbows in the doorway, 'I suspects he 's a poet—an' him sech a nice little old gentleman!'

'A poet, ma'am!' exclaimed the Old Un indignantly. 'Not me, ma'am, not me—should scorn t' be. I 'm a 'ighly respected old fightin'-man, I am, as never went on th' cross:

> A fightin'-man I, ma'am,
> An' wish I may die, ma'am,
> If ever my backers I crossed.
> An' what 's better still, ma'am,
> Though I fought many a mill, ma'am,
> Not one of 'em ever I lost.'

'My land!' exclaimed Mrs Trapes again; 'what a memory!'

'Memory, ma'am!' growled Joe; 'that ain't memory. 'E makes 'em up as 'e goes along.'

'Joe,' said the Old Un, glaring, 'if the lady weren't here—an' axin' 'er pardon—I 'd punch you in the perishin' eye'ole for that!'

'All right, old vindictiveness,' sighed Joe; 'an' now, if you 'll let go of Spider Conolly's fist, I 'd like to say 'ow do. Sit down an' give some one else a chance to speak. Sit down, you old bag o' wind.'

'Bag o''—— The old man dropped the Spider's nerveless hand to turn to Mrs Trapes with a gloomy brow. 'You 'eard that, ma'am—you 'eard this perishin' porker call me a bag o'—— Joe, I blush for ye!—Ma'am, pore Joe means well, but 'e can't 'elp bein' a perisher; but'—and here the old man raised and shook a feeble old fist—'I 've a good mind t' ketch 'im one as would put 'im t' sleep for a fortnight; I 've a good mind'——

But Mrs Trapes caught that tremulous fist, and, drawing the Old Un's arm through her own, turned to the door. 'You come along wi' me,' said she; 'you shall help me t' get the tea, you shall carry in th' cake an'——

'Cake!' exclaimed the Old Un. 'Oh, j'yful word—ma'am, you 're a—a lydy! An' there 's jam, ain't there?'

'Strawberry!'

'Straw—oh, music t' me ears, ma'am—you 're a nymp—lead me to it!' So saying, the Old Un followed Mrs Trapes out into the kitchen, while the Spider stared after him open-mouthed.

'Sufferin' Pete!' he murmured; then, inhaling a long, deep breath, turned to grasp Joe's mighty outstretched hand. Then, drawing their chairs together, they sat down, and Ravenslee, by an adroit question or two, soon had them talking—the Spider quick and eager, and chewing voraciously; Joe soft-voiced and deliberate, but speaking with that calm air of finality that comes only of long and varied experience. So, while Ravenslee smoked and listened, they spoke of past battles, of fights and fighters old and new; they discoursed learnedly on ring-craft; they discussed the merits of the crouch as opposed to the stiff leg and straight left; they stood up to show tricks of foot and hand—cunning shifts and feints; they ducked and sidestepped and smote the empty air with whirling fists to the imminent peril of the owl that was a parrot, which moth-eaten relic seemed to watch them with his solitary glass eye.

And ever the Spider's respect and admiration for the mild-eyed, quiet-spoken champion waxed and grew. 'Bo'!' said he, dexterously catching the toppling bird, glass case and all, for the second time, and addressing Ravenslee with it clasped to his heart—'bo',' he repeated, his eyes shining, 'I guess Joe Madden, the greatest battler of 'em all, is—Joe Madden still. I 've always wanted t' meet with him; an' say—I wouldn't ha' missed him for a farm.'

'Is that so?' exclaimed Mrs Trapes, entering the room at this moment with the teacloth. 'Well, now, you jest put 'im down—you jest put that bird back again, Spider Conolly!'

'Yes, ma'am,' quoth the Spider, all abashed humility.

'What you doin' with it, anyway?' she demanded, elbows jutted ominously. 'It 's lost an eye, an' a cat got it once an' sp'iled it some, but I treasure it for reasons o' sentiment, an' if you think you kin steal it'——

'Not 'im, ma'am—not 'im!' piped the Old Un from the doorway; 'it ain't the pore lad's fault—it 's Joe's; blame it all on to Joe. Joe 's got a bad 'eart, ma'am; a black, base-'earted perisher is Joe—so no jam for Joe, ma'am, an' only one slice o' cake.'

But here Ravenslee hastened to explain, whereupon Mrs Trapes's grimness abated and her bristling elbows subsided; and now, perceiving how the abashed Spider, meeting her eye, flushed, plucked at his cuffs, and shuffled his feet, she reached out to pat his broad and drooping shoulders.

'Mister Conolly,' she said, 'for harsh words spoke in haste I craves now your pardon, an' I craves it—humble. Am I forgive?'

The Spider, flushing redder than ever, rose

to his feet, seized her hand, shook it, and muttered, 'Sure!'

And when the table was laid, the Old Un proposed, and was duly seconded, thirded, and fourthed, that Mrs Trapes be elected into the chair to pour out the tea, which she proceeded to do forthwith, while the Old Un, seated at her right hand, kept a wary eye roving between jam-dish and angel cake. And now, by reason of the unwonted graciousness of Mrs Trapes, of Ravenslee's tact and easy assurance, and the Old Un's impish hilarity, all diffidence and restraint were banished and good-fellowship reigned supreme, though the Spider was interrupted in the midst of a story by the Old Un suddenly exclaiming, 'Keep your 'and out o' the jam, Joe!'

And Joe was, later, rendered speechless, hard-breathing, and indignant by the Old Un turning to Mrs Trapes with the shrill warning, 'Ma'am, Joe's 'ad two 'elpin's o' cake an' got 'is 'orrid eye on what remains!'

Nevertheless, the meal was in all ways a success, and Ravenslee was reaching for his pipe when Mrs Trapes, summoned to the front-door by a feverish knocking, presently came back, followed by Tony, whose bright eyes looked wider than usual as he saluted the company.

'Hey, Geoff, me tell-a you piece-a da-noos!' he cried excitedly; 'big-a piece-a da-noos! Da cops go-a pinch-a Bud-a M'Ginn'!'

'Bud! Bud!' stammered the Spider; 'have they pinched Bud? Is this the straight goods, Tony?'

'Sure—they got-a heem this-a morn in Jersey City. 'N' say, he theenk-a eet a frame-up—he theenk-a Geoff set-a de cops for-a take heem.'

'The hell he does!' exclaimed the Spider, starting to his feet.

'So he send-a da word to Soapy,' continued Tony, his eyes rolling, 'an' now all-a da gang's out layin' for-a Geoff. So when Geoff go-a out on da street—bingo!—dey snuff hees light out.'

'Not much they won't!' said the Spider, buttoning up his coat and turning to the door. 'I'll mighty soon fix this, I guess.'

'Do you think you can, Spider?' inquired Ravenslee. 'If you're going to have any trouble, don't bother about'——

'Bo',' said the Spider, squaring his big jaw, 'get onto this—here's where I chip in with ye. From now on we're on this game together, an' I ain't a guy as'll lay down his hand till I'm called—an' called good; see? You said it was goin' to be a man's work. By Jiminy Christmas! it looks like you're right. Anyway, I stand in with you, that's sure. Put it there, bo'!'

'But,' said Ravenslee as their hands gripped, 'I don't want you to take any chances on my account, or run any'——

'Fudge, bo', fudge! I ain't takin' no chances.'

'Well, I'm coming along to see you don't!' said Ravenslee, reaching for his hat.

'Not on your life, bo'; you'd queer the whole show. Ye see, they're a tough crowd, an' apt t'act a bit hasty now an' then; 'sides, they might think you're heeled, and they know I don't never carry a gun. They all know me.'

'Still, I'm coming, Spider.'

'Ye can't, bo'; Mrs Trapes ain't goin' t' let ye. Look at her!'

'You never spoke a truer word since you drawed the vital air, Spider Conolly!' nodded Mrs Trapes, hands on hips and elbows at the 'engage.' 'If Mr Geoffrey stirs out this day he's jest gotter trample over my mangled remains, that's all!'

Now hereupon, heeding the glitter in her eye, and noting the inexorable jut of her elbows, Ravenslee sat down and went on filling his pipe.

'Ye see, bo', I know as it wasn't you as give Bud away; an' the boys'll listen t' my say so—you bet they will. So here's where I ooze away. S'long, all!'

But now the Old Un, having bolted the last handful of cake, got upon his legs and clutched the Spider's coat in talon-like fingers. ''Old 'ard, young feller, me lad!' he cried; 'if there's any chance of a scrap comin' off, wot about me?—Gimme me 'at, Joe, an' get yourn; if I don't knock some on 'em stone-cold, call me a perishin' ass!'

'Why, since you say so, old blood an' bones,' said Joe, his mild eye brightening, 'we will step along with the Spider a little way, if the guv'nor'll excuse us?'

'Certainly, Joe,' nodded Ravenslee, 'on condition that you do just as the Spider says.'

'You mean, sir?'

'No fighting, Joe—at least, not yet.'

'Trust me, sir! What ain't to be—yet, is to be sometime, I 'opes,' sighed Joe.

'Good-bye, guv, good-bye!' croaked the Old Un; 'if I don't put some o' they perishers in the 'orspitals an' the infirmaries, I ain't the man I was.

> Oh, used am I to war's alarms,
> I 'unger for the fray.
> Though beauty clasps me in 'er arms,
> The trumpet calls away.'

So, having made their adieux, the three took their departure; though once, despite Joe's objurgations, the Old Un must needs come back to kiss Mrs Trapes's toil-worn hand with a flourish, which left her voiceless and round of eye until the clatter of their feet had died away. Then she closed the door and fixed Ravenslee with her stoniest stare. 'Mr Geoffrey,' she demanded, 'why did they call you "guv'nor," and wherefore "sir"?'

Ravenslee, in the act of lighting his pipe, had paused for a suitable answer, when Tony, who had remained mute in a corner, stepped forward and spoke: 'Say, Geoff, I gott-a bit-a—more noos. Old-a Finlay-a want-a spik with-a you.'

'Old Finlay—with me?'

'Sure. Old-a Finlay-a go die-a very queek, an' he want-a spik with-a you first.'

'Dying! Old Finlay dying?' questioned Ravenslee, rising.

'Sure! He go die-a ver' queek.'

'I 'll come!'

'An' I guess,' said Mrs Trapes—'yes, I opine as I 'll come along wi' ye, Mr Geoffrey.'

Old Martin Finlay lay propped up by pillows, his great, gaunt, useless body seeming almost too large for the narrow bed wherein he lay, staring up great-eyed at Ravenslee—live eyes in a dead face.

'It 's dyin' I am, sorr,' said he faintly, 'an' it 's grateful is ould Martin for the docthers an' medicine you 've paid for. But it 's meself is beyand 'em all—an' it 's beyand 'em I 'm goin' fast—she 's waitin' for me—me little Maggie 's houldin' out her little hand to me—she 's waitin' for me—beyand, Holy Mary be praised! An' she 's waited long enough, sorr, my little Maggie as I loved so while the harsh words burned upon me tongue—my little Maggie! I was bitter cruel to my little girl; but you 've been kind to me, an', sorr, I thank ye. But,' continued the dying man, slow and feebly, 'it aren't to thank yez as I wanted ye, but to give yez somethin' in trust for Miss Hermy. Ye see, sorr, I sha'n't be here when she comes back to-night; I 'll be with—little Maggie when the hour strikes—my little Maggie!—Norah, wife, give it to him.'

Silently Mrs Finlay moved across the room, opened a drawer, and, turning, placed in Ravenslee's hand a ring, a heavy gold ring curiously wrought into the form of two hands clasping each other.

'It was my Maggie's!' continued Martin, 'an' I guess she valleyed it a whole lot, sorr. I found it hid away with odds an' ends as she treasured. But she don't want it no more—she 's dead, ye see, sorr—I killed her—drowned, sorr—I drowned her. Cruel an' hard I was—shut her out onto the streets, I did, an' so—she died. But before the river took—— Oh Blessed Mary—Oh Mother o' God—pity! Before she went to heaven Miss Hermy was good t' her; Miss Hermy loved her, an' tried t' comfort her; but only God could do that, I reckon, so she went t' God. But Miss Hermy was kind when I wasn't, so, sorr, it 's give her that ring ye will, plaze, an' say as poor Martin died blessin' her. An' now it 's go I 'll ask ye, sorr, for God's callin' me to wipe away me tears an' sorrers an' bind up me broken heart—so lave me to God an'—my little Maggie.'

Very softly Ravenslee followed Mrs Trapes out of the room; but they had not reached the front-door when they heard a glad cry, and thereafter a woman's sudden, desolate sobbing.

'Go on, Mr Geoffrey,' whispered Mrs Trapes, 'but I guess I 'd better stay here a bit.'

'You mean?'

'As poor Martin 's sure found his little girl again.'

TROUT-FISHING IN JEMPTLAND.

By G. Lindesay.

FOR the wandering angler the wild and picturesque country in the Swedish province of Jemptland, where the Indal River has its sources, possesses many attractions, more especially in the months of July and August. The innumerable hill-lochs which lie among the mountains and moorlands on the Norwegian frontier, and the larger lakes farther to the east, each of which contributes its quota to the formation of this great water-system, differ greatly in character; while the trout and char with which they abound exhibit a diversity of taste in the matter of lures which is always interesting and often very puzzling.

What may be described as the first large catchment lake is Skalsjö, two thousand feet above sea-level, about twenty miles in circumference. It has a clean, rocky bottom, the water is beautifully clear, and it holds quantities of magnificent trout and char, which are captured in hundreds by the natives in autumn by means of nets; there are also extensive areas admirably adapted as regards depth for fly-fishing. But although I have drifted over these for miles time and again under favourable weather conditions, and have trolled hour after hour for days together all round this beautiful upland lake, with both natural and artificial baits, I never made a fifteen-pound basket upon it, or captured a trout weighing more than five pounds. The char were nearly impossible, and the only way of picking up a few very moderate-sized individuals was by using a small Devonshire minnow. In bright sunshine these fish could be seen in great shoals swimming along near the surface, but nothing would induce them to take a fly.

Into a bay on the southern side of Skalsjö a tributary discharges through a glen so deep and narrow that the sun rarely penetrates its recesses, and great snowdrifts lie in it throughout the entire summer. This stream, in spite of the low temperature of its water, contains beautiful trout, but they are hard to catch. Up among the wastes, some four or five miles from its mouth, lies a fine loch, called, from the number of islands on its surface, Hohusjö. It holds plenty of trout of a free-rising disposition; and there are always Lapps in its immediate neighbourhood from whom a draught of fresh reindeer milk can be obtained. When judiciously

blended with sound Scotch whisky, it forms an admirable pick-me-up.

One of the best lochs in this district is Stor Björn Sjö ('Great Bear Lake'), only about three miles to the east of the Norwegian frontier. Here I have seen trout rising well to the fly in June during a heavy snowstorm; but under ordinary weather conditions the angler can generally secure between twenty and thirty pounds any day in the month of July. On the way home to Skalstugan, the lonely upland farm where he who would explore these parts must put up, there are three or four moorland tarns which are well worth trying.

The next large lake on the main water-system is very similar in character to Skalsjö, and the river between these two is so rapid that it is of little use for fishing. Below Midstugsjö, however, it assumes a much more interesting aspect, and before Staltjernstugan, the next road station, is reached, there are three or four miles of very pretty trout water. This is an excellent centre of operations for the angler, and from it better sport can be had than from Skalstugan. The house stands close to a tiny lakelet with a grassy meadow on one side; beyond, the forest stretches away for miles.

Into this little sheet of water the river flows, and up the lowest rapid, as I was not long in finding out, the better-sized fish were in the habit of making their way towards evening to a deep, rocky pool immediately above in search of smaller members of their species. Fortunately, however, they did not despise the artificial fly, and many a goodly two and three pounder found its way into my creel with the assistance of a small Black Palmer. The cannibalistic tendencies of these speckled beauties were very pronounced, for it often happened that a small fish which had got hooked was seized by a big one when being dragged ashore. I never succeeded in securing one when attached in this precarious manner; they invariably shook themselves free when just beyond the reach of the landing-net.

After passing through a rocky gorge below the lakelet at Staltjernstugan, the river discharges over a fall into another small extension, which is connected with a large sheet of water, Bodsjö, farther on, by two canal-like channels of dead water. Up these in time of flood the trout from the lake make their way to the foot of the fall aforesaid, and there they lie in wait for the food swept down to them. One day, after rain, I caught here in a couple of hours forty-five pounds with the fly. There was nothing under a pound; most of them were between one and a half and two and a half pounds, and one weighed three and a quarter pounds. Two of one and a half and two and a quarter pounds I succeeded in landing at the same cast. In the afternoon I got thirty pounds of similar-sized fish in the neighbourhood of the house, and three or four char.

Throughout nearly the whole of its extensive area Bodsjö is well adapted for fly-fishing. The bottom consists for the most part of soft, muddy sand, in which abundance of insect life develops; and there are plenty of sheltering weeds—too many, indeed, for the angler's comfort as the season advances. In addition to the stream which flows into it past Staltjernstugan, this lake receives another and much larger confluent which comes in from the south. The characteristics of the Kvarnström are rather those of a salmon than a trout river, abounding as it does in heavy rapids and spacious pools; but throughout nearly the whole of its course the forest comes down so closely on both banks that it is in reality only fishable when low, and even then some deep and rather dangerous wading is necessary. A fair number of moderate-sized trout are always to be got on it with the fly; but far and away the best lure is the Devonshire minnow, with which, casting from the left bank, I used to catch from fifty to ninety pounds a day of beautiful fish, running from one to two and a half pounds a piece.

About a mile up from Bodsjö there is a splendid pool immediately below a fine fall, which can be conveniently fished from a low, gravelly island in its midst. A delightful spot this to smoke the pipe of peace in midday sunshine. The air is sweet with the perfume of the surrounding pine forests and of wild flowers innumerable, the surface of the foam-flecked water which dances and sings on its way is dimpled with the rises of many trout, and the roar of the foss is the only sound that breaks the stillness. '*Se der!*' said the big Swede who accompanied me, in the middle of a yarn, one day; and following the direction of his gaze, I saw a mighty elk emerging from among the trees on the opposite bank. For a short space he stood there, an imposing figure, and, with his great antlers thrown back, surveyed the beautiful scene; then he disappeared once more in the depths of the woodland.

On the short stretch of water between the foss and Bodsjö, a distance, as above stated, of about a mile, I made all my best bags. The estuary itself, a wide, streamy flat, sometimes presented an extraordinary sight, hundreds upon hundreds of trout and char ('roding') feeding upon the insects as they rose from their birthplace at the bottom of the river to the surface. They were very difficult to tempt with artificial flies, even when presented on fine tackle; but I generally succeeded in adding a few to the day's bag before starting off home in the boat.

Above the foss, between it and Gefsjön, there are some fine pools on the Kvarn, into which the heavy trout from the lake above descend for spawning purposes in autumn. The largest of these which I ever secured weighed twelve pounds; but I was several times smashed in the boulder-strewn rapids by bigger fish.

A QUIET WEEK-END.

CHAPTER II.

I DID not see my way to contradict him. I had always known that he held theories of life that were a little startling to a law-abiding person like myself. One had to take Dare as he was, or not at all.

'So,' Dare went on, 'I had the papers. Other matters intervened just then, and they were laid aside. When war broke out a year ago, I took my information to our War Office, and was cold-shouldered—naturally, of course. The man I saw quite laughed at the idea of poisonous gases being used. They *were* used, as we now know but too well. I interviewed the War Office again, lighted by sheer good luck upon a highly placed official with some rudiments of common-sense—Heaven knows what brought him there!—and now I'm hand and glove with them. Let me just tell you how far I have got. You are not very thoroughly acquainted with the chemistry of gases, are you, though?'

'I know nothing of the chemistry of anything,' I answered promptly.

'So much the better; you will bring an absolutely open mind to bear on what I say.'

Into that open mind, or, rather, perhaps upon my open and attentive ears, Dare forthwith poured a flood of learned talk. Yet he was such a master of his subject, and possessed in such a high degree the art of putting things both clearly and attractively to the lay mind, that I was interested, and even dimly understood. When he had finished, I had gained some knowledge of the path that he was treading, and could appreciate to some extent his nearness to his goal.

It was an hour and more past midnight when we moved to go to bed.

'Will eight o'clock suit you for breakfast?' Dare inquired as we rose. 'Six hours of sleep will do for me, now that this talk to-night has braced me up and cleared my brain. But by all means have yours later if you like.'

I said that eight would suit me, and then added, looking at Bagheera, 'Where does this pet pass the night?'

'Upon your door-mat, if you like,' replied her master, with a half-malicious gleam of his own special humour shooting from beneath his heavy lids. 'You won't insist? Then she shall go to her own quarters.—Come, old girl.'

He left the room with the great cat. A door was opened and then shut, and I could hear his footsteps for some instants till they died away.

'Now,' said my friend the following morning as we lit our after-breakfast pipes—the sweetest pipe of all the day—'I'll say good-bye to you till seven to-night. I know you can amuse yourself. Here,' he continued, walking to the wall, 'you'll find an Ordnance map of the immediate district; let me recommend the downs. Or Willchester, four miles off, is a quaint old town. The woman in the kitchen will, if you write down your orders, get your lunch at any time you choose, or she will put you up some sandwiches. Please make yourself entirely at home. But first I'll show you round the place.'

He led the way into the hall and through the door by which Bagheera had arrived the night before. The house itself formed the base and part of one side of an L. In line with the kitchen and dairy stretched a long range of what had formerly been carriage-houses, loose-boxes, and stalls. Beyond this was a rickyard with more buildings formerly belonging to the farm.

Dare had, it seemed, now got the house upon a seven years' lease, with a free hand to make such minor alterations as he pleased. These had evidently been pretty extensive; he had thrown open doors and constructed boarded passages, till he could make the range of the entire premises dry-shod. There was a great room, formerly a barn, in which he had installed his writing-desk and apparatus for experiments. More apparatus stood in other rooms at hand. Bagheera had her quarters in a loose-box opening from the passage; next door to her was a well-fitted garage with a motor-car.

'Well, I shall see you, then, at dinner-time—seven sharp,' said Dare, dismissing me. With this he disappeared.

It was a promising November morning, hazy and still, and with a parting veil of high, light cloud across the sky. I chose the downs in preference to the antique charms of Willchester, and, well supplied with sandwiches, had covered nearly twenty miles by three o'clock. I found a quaint old coaching inn which furnished tea, and reached Pool Farm soon after six.

'I have accomplished an important step to-day,' said Dare when, dinner finished, we were in the study with our pipes alight and the great leopard stretched upon the rug. 'You followed all I said last night; I will continue from the point where I left off.'

He did so; but I fear I proved a somewhat less attentive listener than upon the previous night. I was just comfortably weary, the result of a long day in the fresh winter air, and there were points in his discourse which I failed to grasp. But I could follow him sufficiently to gather that he seemed upon the brink of a complete success.

The following day—the Sunday—passed in the same way with Dare. 'Work of necessity, you know,' he said with a dry smile, and disappeared at nine o'clock. I loitered in the house

and garden all the morning; then, when my solitary lunch was over—for Dare ate a sandwich at his desk—I traced a fresh route on the Ordnance map, and started forth. The walk proved pleasant, and it was again quite dusk before I returned to the house.

My homeward way lay on the side of Pool Farm opposite to that on which the village stood, and ended by a footpath leading through a wood and then across a field adjoining the small orchard which Dare rented with the house. The wood was entered by a wicket-gate; the coppice seemed neglected, with dense clumps of thorns and brambles growing everywhere among the trees.

In passing through the gate I noticed a broad, single wheel-track on the ground—a track as of a motor-bicycle. It kept the path for some few yards, then disappeared. I thought it curious for a moment, then dismissed it from my mind.
